Britannica ENCYCLOPEDIA OF WORLD RELIGIONS

Encyclopædia Britannica

First published in 1768, *Encyclopædia Britannica* has long been the standard by which all other reference works are judged. It represents a tradition of excellence that was built, over the centuries, on meticulous scholarship and unmatched attention to detail. Today, Encyclopædia Britannica, Inc., produces a range of fine products for reference, education, and learning in different media and in many different languages. Wherever you see the Britannica name—in print, on the Internet, CD-ROM, or DVD—it is your guarantee of quality, accuracy, and authority.

Religion has been one of the great uplifting and unifying forces of human history. The word itself derives from an ancient Latin term meaning “to bind together,” and the religions of the world have often brought diverse groups together in pursuit of higher moral or spiritual goals. In this way religion has not only strengthened the bonds of community but also provided many of the basic moral principles on which societies have been built. The world’s art and literature have been greatly shaped by religion, and modern theater traces its origins to ancient and medieval religious rituals. Not least important, religion provides comfort and consolation and a guide for understanding life’s trials and triumphs, wonders and tragedies. Religion has also been one of the most divisive and destructive forces in history. The Crusades and the Muslim invasions of India are perhaps the best-known examples of this tendency, but there have been numerous other incidents of violence and social unrest inspired by religious hatred. In the modern world, religion has been used to justify the oppression of women, the destruction of monumental works of art, and the murder of countless thousands of innocent people.

The fundamental importance of religion in human history and everyday life calls for a deeper understanding of the religions of the world, and it is the purpose of this volume to aid in this effort. Based on *Merriam-Webster’s Encyclopedia of World Religions*, published in conjunction with Encyclopædia Britannica in 1999, the *Britannica Encyclopedia of World Religions* is a handy, one-volume compendium covering the significant people, beliefs, and practices of the various religions of the world. Many of its articles have been revised and updated to reflect changes in scholarship or to document other changes in religious belief and practice. The focus of the volume remains truly global, however, reflecting the editors’ intention to provide for each of the world’s religions a comprehensive overview of its current state and a thorough survey of its historical development. The volume includes articles on the major religions of the world, discussions of their various subgroups, and introductions to new religious movements that have emerged in recent times. There are articles on the founders of the world’s religions; biographies of theologians, saints, and other inspirational figures; and discussions of sacraments, holy days, and dogmas. The already extensive coverage of the earlier edition has been complemented by new articles on a variety of subjects, including popes Benedict XVI and Urban II, the Taliban, fundamentalism, the Western Wall, and the Crusades.

The roughly 3,500 entries in the volume were either written specifically for this encyclopedia or drawn from *Encyclopædia Britannica*; in both cases they reflect the high standards of scholarship with which *Britannica* has long been associated. The articles are drawn together by an intricate system of cross-references and are augmented by numerous photographs and illustrations, including 32 color plates organized by theme. There are several maps showing the geographic distribution of the world’s religions as well as missionary routes, holy sites, and other historical and cultural developments. The maps themselves have been revised and updated for this volume. Finally, the extensive scholarly bibliography of *Merriam-Webster’s Encyclopedia of World Religions* has been substantially revised and updated to guide the interested reader to the latest and most definitive studies on a wide range of topics.

The *Britannica Encyclopedia of World Religions* will provide all readers, regardless of background, with a deeper appreciation of the religious experience of people throughout history and across the globe. We at Encyclopædia Britannica are confident that you will find this volume a valuable addition to your reference library.

The *Britannica Encyclopedia of World Religions* was prepared for publication by a team of dedicated Britannica staff members. In alphabetical order, they are: Marilyn Barton, Steven Bosco, Nancy Donohue Canfield, Gavin Chiu, Kimberly L. Cleary, Jeannine Deubel, Brian Duignan, Annie Feldmeier, Carol Gaines, Kim Gerber, Kurt Heintz, Steven Kapusta, Larry Kowalski, Lara Mondae, Lorraine Murray, Kathy Nakamura, Cate Nichols, Theodore Pappas, Dennis Skord, Sylvia Wallace, Bruce Walters, Mark Wiechec, and Megan Williams.

MICHAEL FRASSETTO, EDITOR

The *Britannica Encyclopedia of World Religions* seeks to respond in a systematic way to the growing importance of religion in the contemporary world. We have entered the new millennium in the middle of a conversation that has been building to a crisis throughout the 20th century between people who live religion and people who study it, sometimes to justify it, sometimes to challenge it, sometimes to satisfy their curiosity about it. Religious faith is an explicitly contested issue in politics—locally (prayer in school), nationally (the influence of Christian values upon legislative and judicial policy), and internationally (Islam being the most prominent but by no means the only religion in the headlines)—but many participants in these encounters are genuinely trying to understand one another's positions. This book is intended not only for people who believe in religion but also for people who do not, in the hopes of establishing a sound body of knowledge about religion to be used in formulating a common ground for both types of people to stand on in their ongoing conversation.

Religion has always been a matter of life and death, not only in terms of its own functions (baptism and burial) but also as a rallying point for deciding the life—more often the death—of large groups of people labeled infidels. Generally speaking, however, in the past it was deemed sufficient to know one's own religion in order to go to war to defend it against infidels; now we have begun to understand that we need a broader—dare we say encyclopedic?—understanding of other peoples' religions if we want *not* to go to war, and not to be infidels ourselves.

The growing prominence of newspaper and television coverage of religious factors embedded in world-shaking events taking place around the globe has unfortunately not been matched by an equally deepening, or even broadening, understanding of those issues. The pressures on politicians and journalists to make judgments about religion quickly, often on the basis of ludicrously inadequate knowledge, has eroded rather than nurtured the public availability of reliable information. And the presence of an enormous and steadily growing body of misinformation on the Internet is surely part of the problem, not part of the solution. This is precisely the moment, therefore, to assemble a body of knowledge that is as objective and authoritative as possible, and the critical need for such knowledge explains why so many encyclopedias of religion have appeared in recent years. We need to know, for instance, not only how many Muslims there are in the world (in the United States they are more numerous than Episcopalians), but how many different ways there are to be a Muslim, and what the different groups among them believe and do.

It might be argued, however, that religion is not a fitting subject for an encyclopedia, that religion—so formless, so subjective, such a moving target—cannot be pinned down within a genre that promises organized, comprehensive factual data. The very phrase “from A to Z”—or, to use the religious phrase, “alpha to omega”—promises a totality that we cannot deliver. The present volume answers that challenge, as the English-speaking world has long regarded the *Encyclopædia Britannica* as the ultimate source of dispassionate, authoritative knowledge. A parallel authority existed in the Middle Ages, when disputes were often settled by resorting to what was called the *Sortes Virgilianes*, or “Virgil's Lottery.” Faced with an important decision, one would close one's eyes, open a volume of Virgil at random, and place one's finger upon the page, to a line which was then read out to give the advice that was sought. I grew up in a home where the dinner table was often hastily cleared, in mid-course, to make way for a volume of the *Britannica* to be thrown down, sometimes with considerable force, and opened to a passage which was then read forth to silence an opponent: “There, you see? I told you so.”

But it behooves us to make a distinction between facts, objectivity, and authority. The scales have fallen from our postmodern eyes; we have become aware of our epistemological nakedness, and we have been told that there is no such thing as objective knowledge. But even the philosopher-historian R.G. Collingwood, a champion of this view, admitted that, though the story of Caesar's assassination can be told in various ways, there are ways in which it cannot be told: it cannot be said that Caesar killed Brutus. In dismissing the argument that, because complete objectivity is impossible in these matters, one might as well let one's sentiments run loose, the economist Robert Solow likened it to saying that, because a

perfectly aseptic environment is impossible, one might as well conduct surgery in a sewer. Within this sort of commonsense limit, there are facts, and an encyclopedia tries to gather them and to check them; the better the encyclopedia, the more likely the facts are to accord with other conventions of evidence.

But the selectivity of that gathering and of those conventions is what is at stake in the game of objectivity, for the sort of objectivity needed for religion is different from that needed for science. Scholars of religion have made a self-conscious effort to be more objective than the chemist, *plus royalistes que le roi*—or, in Martin E. Marty's formulation, "more holier than thou." If one is going to teach a highly charged subject like religion, one must be more aware, not less aware, of the impossible goal of pure objectivity. It behooves scholars of religions to play by the rules of the game of scholarship—to learn languages, read commentaries, examine firsthand reports, and take into consideration the various biases of the many people in the chain of transmission that ends with us. Scholars of religions have long been fighting a war on two fronts over what is now recognized as the dead carcass of objectivity. The enemy are the covert truth claims of theological approaches to religion that masquerade as nontheological approaches, whether these be self-justifying at the expense of other peoples' religions (bigotry) or self-denigrating at the expense of one's own religion (mindless moral relativism). But the scholar of religions must also be on guard against the overt objections of super-rationalists, who oppose the study of religion in any form or who would allow it to be studied only within the sterile confines of an objectivity that is in any case impossible and is probably not even desirable. The super-rationalists feel that the same basic rules should apply to all subjects, including religion; the mental computer follows the same synapses, and we merely make the software softer. But such attempts to play the game of objectivity on the playing fields of the hard sciences often neglect the more subtle but equally genuine sort of objectivity that both scholars of religion and religious believers can bring to their conversations, a critical judgment that makes them aware of the claims of their own faith. This is the spirit in which the present volume has been prepared.

For we cannot simply rely upon even good encyclopedias from the recent past. Time erodes old subjectivities and creates new criteria of objectivity. Every attempt to include religion within an encyclopedia, from Diderot to the *Britannica*, was inevitably tarred with the prejudices and skewed by the agendas of the age in which it was written; it is this shift in perspective, even more than the accumulation of new "factual" knowledge, that has necessitated constant updating. As our knowledge and attitudes change in time, we look back on each previous attempt as "subjective" and strive to do better; like the paradox of Archimedes, or Achilles and the tortoise, we never reach the ever-receding horizon of objectivity, but we get closer with each new attempt.

Because we live in a postmodern age and have come to understand the limits of objectivity even in science, let alone in religion, the present volume's dogged attempts to provide authoritative, if not objective, knowledge is particularly valuable. Neither facts nor objectivity, but authoritative writing is what an encyclopedia strives for, and to be not merely a fact-checking service but a learned and responsible guide over the shifting sands of factual evidence. The scholars whom we have assembled in this volume are leaders in their fields, whose opinions have the status of something like facts, who know enough about what they are writing about to select what is most likely to be true and most likely to be important, and who are challenged by the prestige of *Britannica's* reputation for solid knowledge and by the hope of applying those standards to the ever-elusive field of religion. We have tried to extricate ourselves from the massive force-field of Western, Christian (mainly Protestant) ways of viewing the world and to include classes of people other than white, male elites. We have tried to be inclusive of various approaches as well as a broad variety of topics, to codify information in a way that makes it accessible to various interpretations, and to acknowledge the subjectivity of the selection of the facts that we have included even while making every effort to ascertain that they are, in fact, facts.

WENDY DONIGER, CONSULTING EDITOR

his book contains entries for historical and legendary figures, religious movements, divinities and supernatural characters, ritual implements, place-names, theological concepts, and other ideas connected in some way with religion. For the most part the presentation of information in these entries requires little explanation, but the following notes will assist the reader.

Entry names

In most cases, vernacular usage has governed spelling. For languages not written in the Roman alphabet, the following conventions have been adopted:

Russian and other nonromanized languages have been transcribed using the systems followed in the *Encyclopædia Britannica*. The languages of modern and classical India are transcribed in accordance with accepted scholarly usage, though some terms that are widely used in English-speaking countries (such as SHIVA and KRISHNA) follow the conventional spelling.

Chinese names are romanized under the Wade-Giles system, with the alternate Pinyin romanization also given. In Japanese and Korean names, with few exceptions, the distinction between family and personal names is observed. (In those languages normal name order places the family name first; hence in this work no comma usually appears between family and personal name as it does in an inverted English name—as, for example, Yamazaki Ansai. Entries on individuals from modern times, however, may appear with the family name followed by a comma—*i.e.*, MOON, SUN MYUNG.)

Alphabetization

Alphabetization is letter-by-letter, not word-by-word. Thus ACTA SANCTORA falls between ACTAEON and ACTS OF THE APOSTLES. The order of entries is determined by ordinary rules of alphabetization applied to the entry names and by the following additional rules:

Diacritical marks, marks of punctuation, hyphenation, and spaces within titles are ignored, as are Roman numerals.

Names beginning with M', Mac, or Mc are alphabetized according to their spelling.

Cross-references

Cross-references are indicated by SMALL CAPITALS. Cross-references have been used extensively in an attempt to demonstrate the interconnections between various ideas. Only the first occurrence of a word within a given article will be designated as a cross-reference. In some instances, the cross-reference is not exactly identical with the entry title, but the reference should be apparent to the reader. Personal names are not inverted in these cross-references in running text—MARTIN LUTHER directs the reader to the entry LUTHER, MARTIN.

Dates in text

In general, dates following the titles of works indicate the date of first publication. The date following mention of a foreign-language title is the year in which the book was first published in the original language. For ancient works, the "publication date" is problematic. Dates of composition are given in these cases.

We have chosen to use the abbreviations BCE/CE ("Before the Common Era"/"Common Era"), rather than the more traditional BC/AD, in recognition of the pre-suppositions which lie behind the latter terms. The article MILLENNIALISM, by contrast, does occasionally list dates AD, as such a designation is intrinsic to the material that article is discussing.

Translations in text

For non-English-language works, the date of publication is usually followed by a translation in roman type. Italicized titles within parentheses indicate that the work has been published in English. For example, in the MARTIN BUBER entry, an untranslated work is treated in this manner: *Chassidischen Bücher* ("Hasidic Books," 1927). Another work that was translated into English is treated in this

manner: *Ich und Du* (1923; *I and Thou*). In this example, 1923 indicates the date of publication of the original German text and *I and Thou* is the title of the English translation. Of course, the English-language version will not always be a literal rendering of the original title.

Etymologies

Etymologies in this book are meant to provide historical and philological background for the study of religion. The book provides etymologies for some common nouns, but for most proper nouns, such as personal or geographical names, etymologies have not been given. Etymologies for the names of gods are given only where the etymology is reasonably certain. Ordinarily, etymologies are enclosed in parentheses and placed after the pronunciation and before the body of the entry. In some entries the origin of the word is discussed in the text, and there a parenthetical etymology will be lacking unless it provides additional data.

Pronunciation

This book provides pronunciation respellings for most entry words. The only entry words without respellings are familiar words and place-names, such as the first two words in SEVEN AGAINST THEBES, the last word in CH'ENG-CHU SCHOOL, and all the words in KINGS OF ROME. Connectives are replaced by ellipses in transcriptions: HARUT AND MARUT \ha-'rüt . . . ma-'rüt\. The pronunciation for all words without respellings may be found in *Merriam-Webster's Collegiate Dictionary, Eleventh Edition*. Pronunciation respellings are also included for most alternative spellings and other variant forms. Original names and the full patronymic forms of Arabic names are not usually transcribed:

IBN SĪNĀ \,i-bən-'sē-nā\, *also called* Avicenna \,a-və-'se-nə\, *Arabic in full* Abū 'Alī al-Ḥusayn ibn 'Abd Allāh ibn Sīnā

Foreign-language names are generally respelled to approximate their native pronunciation, unless an anglicized pronunciation is in widespread use. A variant, sometimes preceded by the label *Angl*, is added for names with familiar anglicizations and for names and terms that are likely to be anglicized because of the difficulty they present. Additional notes on pronunciation are found in the following Guide to Pronunciation.

The following paragraphs set out the value of the pronunciation symbols in English and other languages. Symbols which are not letters of the English alphabet are listed first. Sounds discussed are also rendered in symbols from the International Phonetic Alphabet (IPA) where appropriate.

\ \

Pronunciation respellings are printed between reversed virgules. Pronunciation symbols are printed in roman type, and language labels and other descriptors are printed in italics.

\', \

A high-set stress mark precedes a syllable with primary (strongest) stress; a low-set mark precedes a syllable with secondary (medium) stress. Stress in English words is manifested especially as a change in intonation; in other languages stress may be realized as a marked jump in pitch (up or down), increased energy, or lengthening of syllables. Some languages, such as French, show few distinctions between stressed and unstressed syllables except in phrases. Chinese and Vietnamese distinguish words by differing pitches of syllables. Japanese words are spoken with intonational contours that are very unlike English stress. These various prosodic features are approximated by renderings in terms of English stress.

\-|

Hyphens are used in respellings to separate syllables. The placement of these hyphens is based on phonetic and orthographic criteria and may not match the phonological syllabication of a given language.

\, ;|

Pronunciation variants are separated by commas; groups of related variants are separated by semicolons.

\ə\

is a neutral vowel found in unstressed syllables in English as in *anoint*, *collide*, *data* (IPA [ə]).

\'ə, ə\

as in *cut*, *conundrum* (IPA [ʌ]).

\ə\

is a high, unrounded, centralized vowel as in Russian *bylo* 'was (neut.)', Turkish *kız* 'girl', Chinese *shih* 'lion,' and Japanese *netsuke* 'netsuke' (IPA [i, ɪ, u]). This is not a distinctive vowel of English, but it may be heard as a variant of the unstressed vowels \i\ and \ə\, as in the last syllables of *biologist* and *matches*. In anglicized pronunciations \ə\ may be replaced in Turkish names by \i\, in Russian names by \i\ or \ē\, and in Chinese names by \ər\ or \ir\; the vowel may be dropped entirely in anglicizations of Japanese names.

\əi\

as in Welsh *lleuad* 'moon' (IPA [əi]) or in Welsh *eira* 'snow' (IPA [əi]). Neither of these diphthongs occur in English. The first is produced as a sequence of \ə\ and \ə\ and the second as a sequence of \ə\ and \ē\ or \i\ . Both sounds may be anglicized as \ā\.

\'ər, ər\

further, **merger**, **bird** (IPA [ɜ, ɝ]). In names from India the vowel, which appears in English spelling as *a*, is much the same as the vowel of *cut* (IPA [ʌ]).

\a\

as in **rap**, **cat**, **sand**, **lamb** (IPA [æ]). This vowel may be reduced to \ə\ in unstressed syllables.

\ā\

as in **way**, **paid**, **late**, **eight**. In English pronunciation this symbol stands for a diphthong (IPA [ei, eɪ]). In most other languages this symbol should be understood as a short or long monophthong of the front mid-high vowel (IPA [e, e:]). In anglicized pronunciations the English diphthong may be substituted.

\ä\

as in **opt**, **cod**, **mach** (IPA [ɑ]). The low, back, unrounded vowel of American English is often pronounced with some lip-rounding in British English when the vowel is spelled with the letter *o* (IPA [ɒ]). This may be reduced to \ə\ in unstressed syllables.

\ā\

as in French *chat* 'cat,' *table* 'table' (IPA [a]). This sound is also found in some Eastern dialects of American English, as in the pronunciation of *car* in the speech of some Bostonians; it is also the initial element of the diphthong \i\ in words like *wide* or *tribe*. The sound \ā\ can be characterized as a vowel produced with the tongue in a position midway between that of \a\ and \ä\, or as the vowel \ə\ produced with the jaws somewhat further apart. In Arabic the vowel \ā\ may be fronted somewhat to \a\ or even \ē\ when it occurs as a short vowel in closed syllables. In anglicized pronunciations \ā\ may be replaced by \ä\ or \a\.

\ar\

as in **air**, **care**, **laird** (IPA [ær]). In many American dialects this may also be pronounced as \er\ (IPA [ɛr]).

\au\

as in **out**, **loud**, **tout**, **cow** (IPA [au, au]).

\b\

as in **bat**, **able**, **rib** (IPA [b]). This symbol is also used to transcribe a sound in names from India which appears in English spelling as *bh* and which in the original language is a voiced aspirate (IPA [bʰ]).

\b\

as in the “soft” *b* or *v* of Spanish *hablar* ‘speak’ or *Avila* ‘Avila’ (IPA [β]). This sound is a voiced bilabial fricative, formed by setting the mouth in the position for \b\ but separating the lips just enough to allow the passage of breath as with \v\. The sound \b\ may be anglicized as \v\.

\ch\

as in **chair**, **reach**, **catcher** (IPA [tʃ]).

\d\

as in **day**, **red**, **ladder** (IPA [d]). This symbol is also used to transcribe two other sounds in names from India. One appears in English spelling as *dh* and in the original language is a voiced aspirate (IPA [dʰ]). The other appears in transliteration as *ḍ* and in the original language is a retroflex sound, produced with the tip of the tongue curled back toward the hard palate (IPA [ɖ, ɗ]). (See also the section on \t\ below.)

\e\

as in **egg**, **bed**, **bet** (IPA [ɛ]). This symbol is also used sometimes to transcribe the short monophthongal front mid-high vowel found in some languages (IPA [e]). This vowel may be reduced to \ə\ or \i\ in unstressed syllables.

\ē, ē\

as in **eat**, **reed**, **fleet**, **pea** (IPA [i, iː]). This sound may be diphthongized in some dialects of English, but it is a monophthong in most other languages.

\ē\

as in **penny**, **genie** (IPA [i, ɪ]). In some English dialects the unstressed \ē\ is pronounced as a vowel similar to \i\.

\f\

as in **fine**, **chaff**, **office** (IPA [f]).

\g\

as in **gate**, **rag**, **eagle** (IPA [g]). This symbol is also used to transcribe a sound in names from India which appears in English spelling as *gh* and which in the original language is a voiced aspirate (IPA [gʰ]).

\g̃\

as in Spanish *lago* ‘lake’ (IPA [ɣ]). This sound is a voiced velar fricative, produced by setting the mouth in the position for \g\ but separating the tongue from the hard palate just enough to allow the passage of breath as with the sound \k̃\. The sound \g̃\ may be anglicized as \g\.

\h\

as in **hot**, **ahoy** (IPA [h]). This sound appears only at the beginning of syllables in English; in languages such as Arabic and Persian this sound may also be found at the end of a syllable.

\hl\

as in Welsh *llaw* ‘hand’ or Icelandic *hlaup* ‘slide’ (IPA [tʃ]). This sound is a voiceless \l\; it can be approximated by producing \h\ while holding the mouth in the position for \l\. The sound \hl\ may be anglicized as \l\.

\hr\

as in Welsh *rhad* ‘free’ or Icelandic *hraun* ‘lava’ (IPA [r̥]). This sound is a voiceless consonantal \r\; it can be approximated by producing \h\ while holding the mouth in the position for \r\. The sound \hr\ may be anglicized as \r\.

\hw\

as in **wheat**, **when** (IPA [w]). In some dialects of English this sound is replaced by \w\.

\i\

as in **ill**, **hip**, **bid** (IPA [ɪ]). This vowel may be reduced to \ə\ in unstressed syllables.

\ī\

as in **aisle**, **fry**, **white**, **wide** (IPA [ai, aɪ, ai, ai]).

\ir\

as in **hear**, **inferior**, **mirror**, **pierce** (IPA [ɪr]). In some American dialects this may be pronounced as \ēr\ (IPA [ɪr, i:r]) in many words. The pronunciation \ēr\ also occurs in words and names from India spelled with the combination *ir*.

\j\

as in **jump**, **fudge**, **budget** (IPA [dʒ]).

\k\

as in **kick**, **baker**, **scam**, **ask** (IPA [k]). This symbol is used also to respell the voiceless uvular stop of Arabic and Persian (IPA [q]), which appears in English spellings as the letter *q*. For the latter sound the tongue is brought in contact with the soft palate rather than the hard palate.

\k̃\

as in **loch**, **Bach**, German *Buch* (IPA [x]), and German *ich* ‘I’ (IPA [ç]). This sound is a voiceless velar or palatal fricative, which is produced by setting the mouth in the position for \k\ but separating the tongue from the hard palate just enough to allow the passage of breath. The symbol \k̃\ is used also to respell the voiceless pharyngeal fricative of Arabic and Persian (IPA [ħ]), which appears in English spellings as *h*. In European names \k̃\ may be anglicized as \k\; in Arabic, Persian, and Hebrew names it may be anglicized as \h\.

\l\

as in **lap**, **pal**, **alley** (IPA [l, ɫ]). In some contexts this sound may be heard as a syllabic consonant (IPA [l̩]),

which in this book is respelled as \-əɫ, as at **Babel, Tower of** \ˈbā-bəl, ˈba-.

\m\

as in **make, jam, hammer** (IPA [m]).

\n\

as in **now, win, banner** (IPA [n]). In some contexts this sound may be heard as a syllabic consonant (IPA [ŋ]), which in this book is respelled as \-ən, as at **Armageddon** \,är-mə-ˈge-dən. In Japanese names this symbol used at the end of syllables represents the uvular nasal sound in that language. The symbol \n\ is also used to transcribe a sound in names from India which appears in transliteration as *ṇ* and which in the original language is pronounced as a retroflex sound (IPA [ɳ, ɳ̌]).

\ñ\

is used to show nasalization of the preceding vowel, as in French *en* \äñ\ 'in'.

\ŋ\

as in **ring, singer, gong** (IPA [ŋ]). In English this sound appears only at the end of a syllable, but in non-European languages it may occur at the beginning of a syllable followed either by a vowel or another consonant. In these contexts \ŋ\ may be anglicized as \əŋg\.

\o\

as in **oak, boat, toe, go** (IPA [o, o:, ou]). This sound is a diphthong in most dialects of English, but it is a monophthong in most other languages. In the Received Pronunciation of British English the diphthong is \əu\ (IPA [əu]), where the initial element is a central mid vowel.

\o\

as in **hawk, bawl, caught, ought, Utah** (IPA [ɔ]). In some dialects of American English this sound is replaced by \ä. The vowel \o\ may be reduced to \ə\ in unstressed syllables.

\œ\

as in French *neuf* 'new' and German *Köpfe* 'heads' (IPA [œ]). This vowel can be approximated by producing the vowel \e\ while rounding the lips as if pronouncing the vowel \ö. The sound \œ\ may be anglicized as \ər\ with a very light \r\ sound.

\œ\

as in French *deux* 'two' and German *Löhne* 'wages' (IPA [ø]). This vowel can be approximated by producing the vowel \ä\ while rounding the lips as if pronouncing the vowel \ö. The sound \œ\ may be anglicized as \úr\ or \ər\ with a very light \r\ sound.

\oi\

as in **oyster, toy, foil** (IPA [ɔi, oi]).

\or\

as in **core, born, oar** (IPA [ɔr]). In some American dialects this may also be pronounced as \ör\ (IPA [or]) in many words.

\p\

as in **pet, tip, upper** (IPA [p]).

\r\

as in **rut, tar, error, cart**. What is transcribed here as \r\ in reality represents several distinct sounds. As an English consonant \r\ is produced with the tongue tip slightly behind the teethridge (IPA [ɹ]). As a semi-vowel in words like *cart* and *fore* \r\ appears as retroflexion of the tongue tip in some dialects and as a transitional vowel like \ə\ in the so-called "R-dropping" dialects of American and British English.

In other languages \r\ represents a stronger consonant, such as a trill or tap of the tongue tip against the teethridge (IPA [r, r]) or a trill of the back of the tongue against the soft palate (IPA [ʀ]). These \r\ sounds may all be anglicized with the \r\ of English.

\s\

as in **sink, bass, lasso, city** (IPA [s]).

\sh\

as in **shin, lash, pressure** (IPA [ʃ]).

\t\

as in **top, pat, later** (IPA [t]). In some contexts, as when a vowel or \r\ precedes and an unstressed vowel follows, the sound represented in English spelling by *t* or *tt* is pronounced in most American speech as a voiced flap produced by tapping the tongue tip against the teethridge (IPA [ɾ]). In similar contexts the sound represented by *d* or *dd* has the same pronunciation. The symbol \t\ is also used to transcribe a sound in names from India which appears in transliteration as *ṭ* and which in the original language is pronounced as a retroflex sound (IPA [ɽ, ɽ]).

\th\

as in **third, bath, Kathy** (IPA [θ]).

\th̃\

as in **this, other, bathe** (IPA [ð]).

\ü\

as in **ooze, blue, noon** (IPA [u, u:, uɔ]). This sound is a diphthong in most dialects of English, but it is a monophthong in most other languages.

\u\

as in **wool, took, should, put** (IPA [u]).

\ũ\

as in German *Bünde* 'unions,' *füllen* 'to fill' (IPA [ʏ]). This vowel can be approximated by producing the

GUIDE TO PRONUNCIATION

vowel \i while rounding the lips as if pronouncing the vowel \u . The sound \u may be anglicized as \y\u or \u .

\u

as in German *kühl* 'cool' and French *vue* 'view' (IPA [y]). This vowel can be approximated by producing the vowel \e while rounding the lips as if pronouncing the vowel \u . The sound \u may be anglicized as \y\u or \u .

\v

as in *veer*, *rove*, *ever* (IPA [v]).

\w

as in *well*, *awash* (IPA [w]).

\y

as in *youth*, *yet*, *lawyer* (IPA [j]). In some languages the consonant \y may occur after a vowel in the same syllable, as in French *famille* \f\u-'m\u 'family.' The pronunciation of \y in these contexts is the same as at the beginning of a syllable in English.

\j

is used to show palatalization of a preceding consonant, as in French *campagne* \k\u-'p\u 'country' and Russian *perestroika* $\text{\p'i-r'i-'str\u-k\u}$ 'restructuring' (IPA [j]). A palatalized consonant is produced with the body of the tongue raised as if in the position to pronounce \y . In anglicized pronunciations \j may be sounded as the consonantal \y of English when it falls in the middle of a syllable or as \-y\u at the end of French words. In anglicizations of Russian and other Slavic names it may be omitted entirely.

\z

as in *zoo*, *haze*, *razor* (IPA [z]).

\zh

as in *pleasure*, *decision* (IPA [ʒ]).

AARON \ˈar-ən, ˈer-ə\ (fl. c. 14th century BCE), the founder and head of the Jewish PRIESTHOOD, who, with his brother MOSES and sister Miriam, led the Israelites out of Egypt. The figure of Aaron as found in the PENTATEUCH is built up from several different sources of religious tradition. He has appeared in varying roles in the thought and traditions of Christianity.

Aaron is described in the OLD TESTAMENT book of EXODUS as a son of Amram and Jochebed (Exodus 6:20; Numbers 26:59) of the tribe of Levi (Exodus 4:14), three years older than his brother Moses. He acted together with his brother in the desperate situation of the Israelites in Egypt (Exodus 5; 6:26; 7–12) and took an active part in the Exodus (Exodus 16; 17:10; 19:24). Although Moses was the actual leader, Aaron acted as his “mouth” (Exodus 4:16). The two brothers went to the pharaoh together, and it was Aaron who told him to let the people of Israel go, using his magic rod in order to show the might of YAHWEH. When the pharaoh finally decided to release the people, Yahweh gave the important ordinance of the PASS-OVER, the annual remembrance of the Exodus, to Aaron and Moses (Exodus 12). But Moses alone went up on MOUNT SINAI (Exodus 19:20), and he alone was allowed to come near to Yahweh. Moses later was ordered to “bring near” Aaron and his sons, and they were anointed and consecrated to be priests by a perpetual statute (Exodus 27:21). Aaron’s sons were to take over the priestly garments after him. Aaron is not represented as an entirely holy and blameless person, however. It was he who, when Moses was delayed on Mount Sinai, made the GOLDEN CALF that was idolatrously worshipped by the people (Exodus 32).

Once a year, on YOM KIPPUR (the Day of Atonement), Aaron was allowed to come into the HOLY OF HOLIES, the most sacred part of the TABERNACLE, or SANCTUARY, in which the Hebrew tribes worshiped, bringing his offering (Leviticus 16). Together with his sister Miriam, Aaron spoke against Moses because he had married a foreigner (a Cushite woman, Numbers 12:1); but, in the rebellion of Korah the LEVITE, Aaron stood firmly at the side of Moses (Numbers 16). According to Numbers 20, Aaron died on the top of Mount Hor at the age of 123; in Deuteronomy 10, which represents another tradition, he is said to have died in Moserah and was buried there.

Aaron in Jewish and Christian thought. Aaron is a central figure in the traditions about the Exodus, though his role varies in importance. At the beginning he seems to be coequal with Moses, but after the march out of Egypt he is only a shadow at Moses’ side. Moses is obviously the leading figure in the tradition, but it is also clear that he is pictured as delegating his authority in all priestly and cultic matters to Aaron and “his sons.”

Aaron continued to live as a symbol in Jewish religion and traditions. In the QUMRĀN sect, a Jewish community that flourished just before and contemporary with the birth of CHRISTIANITY, Aaron was a symbol for a strong priesthood.

At the end of time, men of the community should be set apart, as a select group in the service of Aaron. Only the sons of Aaron should “administer judgment and wealth,” and, according to the MANUAL OF DISCIPLINE, two MESSIAHS were expected, a priestly one of Aaron, and one of Israel. According to a fragment found near Qumrān, the priest would have the first seat in the banquets in the last days and bless the bread before the messiah of Israel; here “the sons of Aaron” have the highest position.

In the TALMUD and MIDRASH (Jewish commentative writings), Aaron is seen less as a symbol than as the leading personality at the side of Moses. The relationship between the two brothers is painted as prototypical in the Haggadah (the nonlegal parts of the Talmud and Midrash; see HALAKHAH AND HAGGADAH). In the Mishnaic treatise Avot (Avot 1:12) Rabbi HILLEL praised Aaron as a man of goodwill who wanted to teach his fellowmen the Law.

Many attempts have been made to explain Aaron’s participation in the episode of the golden calf (SIFRA to Deuteronomy 307). According to some exegetes, Aaron had to make the calf in order to avoid being killed. In the 11th century, the French commentator RASHI contended that the calf was a symbol of the leader, Moses, who was at that time on the mountain. The relationship between Moses and Aaron is also discussed in the Talmud. Some traditionists have wondered why Aaron, and not Moses, was appointed HIGH PRIEST. The answer has been found in an indication that Moses was rejected because of his original unwillingness when he was called by Yahweh. It also seems to have been hard for some traditionists to accept that Aaron was described as older than Moses.

The first Christian communities accepted Aaron, “the sons of Aaron,” or “the order of Aaron” as symbols of the highest priesthood. But in the Letter to the Hebrews, Christ is described as a high priest according to the order of MELCHIZEDEK, which was set against “the order of Aaron” (Hebrews 5:2–5; 7:11–12). Of the CHURCH FATHERS, Cyril of Alexandria says that Aaron was divinely called to a priesthood and that he was a type of Christ. Gregory the Great translates the name Aaron as “mountain of strength” and sees in him a redeemer who mediated between God and man.

AARONIC PRIESTHOOD \a-ˈrā-nik, e-\, in JUDAISM, hereditary priesthood descended from AARON. See KOHEN.

AARONIC PRIESTHOOD, Church of Jesus Christ of Latter-day Saints (MORMON) priests whose primary concern is church finances and administration.

ABBESS, the superior of certain communities of nuns. The first historical record of the title is on a Roman inscription dated c. 514.

Current CANON LAW stipulates that to be elected, an abbess must be at least 40 years old and a professed nun for at

Aaron's rod (in the form of a serpent) swallows up the serpents of Pharaoh's sages and sorcerers, Nuremberg Bible (1483)

By courtesy of The Bridgeman Art Library

least 10 years. She is solemnly blessed by the diocesan bishop in a rite similar to that of the blessing of ABBOTS. Her blessing gives her the right to certain pontifical insignia: the ring and sometimes the CROSIER. In medieval times abbesses occasionally ruled double monasteries of monks and nuns and enjoyed various privileges and honors.

ABBOT, *Late Latin and Greek* abbas, the superior of a monastic community of certain orders—e.g., BENEDICTINES, CISTERCIANS, and TRAPPISTS. The word derives from the Aramaic *ab* ("father"), or *aba* ("my father"), which in the SEPTUAGINT (the Greek translation of the OLD TESTAMENT) and in NEW TESTAMENT Greek was written *abbas*. Early Christian Egyptian monks renowned for age and sanctity were called *abbas* by their disciples, but, when MONASTICISM became more organized, superiors were called *proestos* ("he who rules") or *hēgoumenos* in the East and the Latin equivalent, *praepositus*, in the West. ST. BENEDICT OF NURSIA (c. 480–c. 547) restored the word *abbas* in his rule, and to this early concept of spiritual fatherhood through teaching he added authority over temporal matters as well.

An abbot is elected by the chapter of the monastery by secret ballot. He must be at least 30 years old, professed at least 10 years, and an ordained priest. He is elected for life except in the English congregation, where he is elected for a term of 8–12 years. The election must be confirmed by the Holy See or by some other designated authority. The bishop of the DIOCESE in which the monastery is situated confers the abbatial blessing, assisted by two abbots. Chief among the privileges of an abbot are the rights to celebrate the liturgy, to give many blessings normally reserved to a bishop, and to use the pontifical insignia.

In Eastern monasticism, self-governing monasteries are ruled by several elder monks, whose leader is called abbot.

‘ABD AL-GHANĪ \‘āb-dūl-gā-‘nē\, in full ‘Abd al-Ghanī ibn Ismā‘il al-Nābulusī (b. March 19, 1641, Damascus—d. March 5, 1731), Syrian mystic writer.

Orphaned at an early age, ‘Abd al-Ghanī joined the Islamic mystical orders of the QĀDIRĪYA and the NAQSHBANDĪYA. He

then spent seven years in isolation, studying mystic expressions of divine experiences. His written works include discourses on SUFISM, travel accounts, poetry, eulogies, correspondence, PROPHECY, and dream interpretation. A key element in his Sufi writing is the concept of *wahdat al-wujūd* ("divine existential unity" of God and the universe and, hence, of man). His travel accounts are considered by many to be the most important of his writings; the descriptions of his journeys in Syria, Egypt, and the Hijaz in Arabia, provide vital information on the customs, beliefs, and practices of the peoples and places he visited.

‘ABD ALLĀH IBN AL-‘ABBĀS \‘āb-dūl-‘lā-‘i-bān-‘al-‘āb-‘bas\, also called Ibn ‘Abbās (b. c. 619—d. 687/688, aṭ-Ṭā‘if, Arabia), a Companion of the Prophet MUHAMMAD, one of the greatest Islamic scholars and the first exegete of the QUR‘AN.

Ibn ‘Abbas is renowned for his knowledge of both sacred and profane tradition and for his critical interpretations of the Qur‘an. From his youth he gathered information concerning the words and deeds of Muhammad from other Companions and gave classes on the interpretation of the Qur‘an. His commentaries on the Qur‘an were later collected into a book (TAFSĪR) and incorporated into the commentaries of AL-BUKHĀRĪ and AL-TABARĪ.

‘ABD AL-QĀDIR AL-JĪLĀNĪ \‘āb-dūl-‘kā-dir-‘al-jē-‘lā-nē\ (b. 1077/78, Nif, Persia—d. 1166, Baghdad), traditional founder of the QĀDIRĪYA order of SUFISM, a mystical branch of ISLAM.

Al-Jīlānī studied Islamic law in Baghdad and first appeared as a preacher in 1127. His reputation as a teacher attracted numerous disciples, and he is said to have converted many Jews and Christians. He reconciled the mystical nature of the Sufi calling with the sober demands of Islamic law. His concept of Sufism was as of a JIHAD waged against egotism and worldliness in order to submit to God's will. He retains a popular following from Senegal to India and Indonesia among those who consider him a divine mediator and miracle worker. His tomb in Baghdad is visited by Muslims from many lands.

‘ABDUH, MUHAMMAD \‘āb-‘dū-, -‘dū\ (b. 1849, Egypt—d. July 11, 1905, near Alexandria), religious scholar, jurist, and liberal reformer who led the late 19th-century movement in Egypt and other Muslim countries to revitalize Islamic teachings and institutions.

‘Abduh attended the mosque school in Ṭanṭā and subsequently AL-AZHAR UNIVERSITY in Cairo, receiving the degree of *‘ālim* (scholar) in 1877. In 1872 he fell under the influence of Jamāl ad-Dīn al-Afghānī, the revolutionary pan-Islamic Persian preacher, who stimulated ‘Abduh's interest in theology, philosophy, and politics. Afghānī was expelled for political reasons from Egypt in 1879 and ‘Abduh was exiled to his village, but the next year he became editor of the government's official gazette, which he used to preach resistance to Anglo-French political encroachment and the need for social and religious reform. He was implicated in ‘Urābī Pasha's rebellion against foreign control in 1882 and

was again exiled. Rejoining Afghānī in Paris for several months in 1884, ‘Abduh helped publish the revolutionary journal *Al-‘Urwa al-wuthqā* (“The Firmest Bond”). He then taught for three years in an Islamic college in Beirut.

In 1888 ‘Abduh was permitted to return to Egypt, where he was appointed a judge in the National Courts of First Instance; in 1891 he became a judge at the Court of Appeal. In 1899, with British help, he became MUFTI of Egypt. He effected reforms in the administration of Islamic law (see SHARĪ‘A) and of religious endowments and issued advisory opinions on such controversial matters as the permissibility of eating meat slaughtered by Christian and Jewish butchers and of accepting interest paid on loans. ‘Abduh also lectured at al-Azhar and, against conservative opposition, induced reforms in the administration and curriculum there. He established a benevolent society that operated schools for poor children. On the Legislative Council he supported political cooperation with Britain and legal and educational reform in Egypt; these views earned him the approval of the British, but the hostility of the *khedive* (ruling prince) ‘Abbās Ḥilmī and of the nationalist leader Muṣṭafā Kāmil.

In addition to his articles in the official gazette and *Al-‘Urwa al-wuthqā*, ‘Abduh’s most important writings included *Risālat al-tawḥīd* (“Treatise on the Oneness of God”); a polemic on the superiority of Islam to Christianity in Islam’s greater receptivity to science and civilization; and a commentary on the Qur’an, completed after his death by a disciple. In theology ‘Abduh sought to establish the harmony of reason and revelation, the freedom of the will, and the primacy of the ethical implications of religious faith over ritual and dogma. He asserted that a return to the pristine faith of the earliest age of Islam would both restore the Muslims’ spiritual vitality and provide an enlightened criterion for the assimilation of modern scientific culture.

In matters of Islamic law regarding family relationships, ritual duties, and personal conduct, ‘Abduh promoted considerations of equity, welfare, and common sense, even when this meant disregarding the literal texts of the Qur’an. ‘Abduh has been widely revered as the chief architect of the modern reformation of Islam.

ABEL \ˈā-bəl\, second son of ADAM AND EVE, who was slain by his older brother, CAIN (GENESIS 4:1–16). Abel, a shepherd, offered the Lord the firstborn of his flock. God respected Abel’s sacrifice but did not respect that offered by Cain. In a rage, Cain murdered Abel, then became a fugitive because of the curse placed upon the ground (a curse of infertility) onto which Abel’s blood had spilled.

Genesis makes the point that divine authority backs self-control and brotherhood but punishes jealousy and violence. In the NEW TESTAMENT the blood of Abel is cited as an example of the vengeance of violated innocence (Matthew 23:35; Luke 11:51).

ABELARD, PETER \ä-bä-ˈlär, *Angl* ˈa-bə-ˈlärð\ (b. 1079, Le Pallet, Brittany [now in France]—d. April 21, 1142, Priory of Saint-Marcel, Burgundy [now in France]), French theologian and philosopher.

The outline of Abelard’s career is described in his famous *Historia calamitatum* (“History of My Troubles”). He was born the son of a knight and sacrificed his inheritance in order to study philosophy in France. Abelard provoked quarrels with two of his masters, Roscelin of Compiègne and Guillaume de Champeaux. Roscelin was a nominalist who asserted that universals (terms such as “red,” or

“beauty,” by which objects can be grouped) are nothing more than mere words; Guillaume upheld a form of Platonic Realism according to which universals exist independently of the objects they describe. Abelard brilliantly elaborated a philosophy of language that, while showing how words could be used significantly, stressed that language itself is not able to demonstrate the truth of things (RES) that lie in the domain of physics.

Abelard traveled as one of the exponents of Aristotelian logic who were called the Peripatetics. While teaching in Paris he was tutoring the young Héloïse, niece of Canon Fulbert. Abelard and Héloïse began having an affair and had a son whom they called Astrolabe. They then married secretly. To escape her uncle’s wrath Héloïse withdrew into the convent of Argenteuil outside Paris. Abelard suffered castration at Fulbert’s instigation. He then embraced the monastic life at the royal abbey of Saint-Denis near Paris and forced the unwilling Héloïse to become a nun at a convent in Argenteuil.

At Saint-Denis Abelard extended his reading in theology. His reading of the BIBLE and of the writings of the CHURCH FATHERS led him to make a collection of quotations that seemed to represent inconsistencies of teaching by the church. He arranged his findings in a compilation entitled *Sic et non* (“Yes and No”); and in it he formulated basic rules with which students might reconcile apparent contradictions of meaning and distinguish the various senses in which words had been used over the course of centuries. He also wrote the first version of his book called *Theologia*, which was formally condemned as heretical and burned by a council held at Soissons in 1121. Abelard’s dialectical analysis of the mystery of God and the TRINITY was held to be erroneous, and he was placed in the abbey of Saint-Médard under house arrest. He returned to Saint-Denis but a dispute with that community caused Abelard to

Peter Abelard (right) and Héloïse; from Letters of Abbess Héloïse, c. 1500

© The British Library/Heritage-Images

flee. In 1125 he accepted election as ABBOT of the remote Breton monastery of Saint-Gildas-de-Rhuys. There, too, his relations with the community deteriorated, and, after attempts had been made upon his life, he returned to France.

About 1135 Abelard went to the Mont-Sainte-Geneviève outside Paris to teach and write. He produced further drafts of his *Theologia* in which he analyzed the sources of belief in the Trinity. He also wrote a book called *Ethica*, or *Scito te ipsum* ("Know Thyself"), a short masterpiece in which he analyzed the notion of SIN and reached the drastic conclusion that human actions are in themselves neither good nor bad. What counts with God is a man's intention; sin is not something done; it is uniquely the consent of a human mind to what it knows to be wrong. He also wrote *Dialogus inter philosophum, Judaeum et Christianum* ("Dialogue Between a Philosopher, a Jew, and a Christian") and a commentary on St. Paul's letter to the Romans, the *Expositio in Epistolam ad Romanos*, in which he outlined an explanation of the purpose of Christ's life and death, which was to inspire men to love him by example alone.

On the Mont-Sainte-Geneviève Abelard drew crowds of pupils; he also, however, aroused deep hostility and was resoundingly condemned at a council held at Sens in 1140, a judgment confirmed by Pope Innocent II. He withdrew to the great monastery of Cluny in Burgundy. There, under the skillful mediation of the abbot, Peter the Venerable, he made peace with his opponents and retired from teaching.

ABHIDHAMMA PIṬAKA \ʼə-bē-ˈdə-mə-ˈpi-tə-kə\ (Pāli: "Basket of Special Doctrine," or "Further Doctrine"), Sanskrit Abhidharma Piṭaka \ʼə-bē-ˈdər-mə, -ˈdär-\, the third—and historically the latest—of the three "baskets," or collections of texts, that together comprise the Pāli canon of THERAVĀDA Buddhism. The other two collections are the SUTTA PIṬAKA and the VINAYA PIṬAKA. Unlike those, however, the seven *Abhidhamma* works are not generally claimed to represent the words of the BUDDHA GOTAMA; nevertheless, they are highly venerated.

This work of doctrinal material represents a development in a rationalistic direction of summaries or numerical lists that had come to be used as a basis for meditation—lists that, among the more mystically inclined, contributed to the PRAJÑĀPĀRAMITĀ literature of MAHĀYĀNA Buddhism.

The *Abhidhamma* corpus has had a checkered history. It was not accepted as canonical by the MAHĀSĀNGHIKA school, the forerunners of Mahāyāna. Various Mahāyāna texts have been classified as *Abhidhamma*, including the *Prajñāpāramitā-sūtras* in Tibet and, in China, the *Diamond Sūtra* (see DIAMOND CUTTER SUTRA).

The Pāli *Abhidhamma Piṭaka* encompasses the following texts, or *pakaraṇas*: (1) *Dhammasaṅgaṇi* ("Summary of Dharma"), a psychologically oriented manual of ethics; (2) *Vibhaṅga* ("Division," or "Classification"), a kind of supplement to the *Dhammasaṅgaṇi*; (3) *Dhātukathā* ("Discussion of Elements"), another supplementary work; (4) *Puggalapaññatti* ("Designation of Person"), largely a collection of excerpts from the *Sutta Piṭaka*, classifying human characteristics in relation to stages on the Buddhist path; (5) *Kathāvatthu* ("Points of Controversy"), attributed to Moggaliputta, president of the third Buddhist Council (3rd century BCE), the only work in the Pāli canon assigned to a particular author; historically one of the most important of the seven, the *Kathāvatthu* is a series of questions from a non-Theravāda point of view, with their implications refuted in the answers; (6) *Yamaka* ("Pairs"), a series of questions on psychological phenomena, each dealt with in two

opposite ways; (7) *Paṭṭhāna* ("Activations," or "Causes"), a complex and voluminous treatment of causality.

ABHIDHAMMATTHA-SAṄGAHA \ʼə-bē-də-ˈmət-tə-ˈsəŋ-gə-hə\ (Pāli: "Summary of the Meaning of *Abhidhamma*"), one of the most important THERAVĀDA Buddhist manuals of psychology and ethics. A digest of the *Abhidhamma* corpus of the Theravāda tradition, it was composed in India or in Burma (Myanmar), the chief center for *Abhidhamma* studies. Written in Pāli by the monk Anuruddha, it dates from no earlier than the 8th century CE and probably from the 11th or 12th.

A handbook rather than an expository work, it deals in less than 50 pages with the entire seven texts of the ABHIDHAMMA PIṬAKA and has been the subject of an extensive exegetical literature in the centuries since its composition. The subject matter of the *Abhidhammattha-saṅgha* includes enumerations of the classes of consciousness, the qualities of matter, the varieties of rebirth, and a number of meditation exercises. Its purpose is to elicit a realization of the impermanence of all things, leading to enlightenment.

ABHIDHARMAKOŚA \ʼə-bē-ˈdər-mə-ˈkō-shə, -ˈdär-\, also called *Abhidharmakośa-Śāstra* \-ˈshäs-trə\ (Sanskrit: "Treasury of Higher Law"), Chinese A-P'i-Ta-Mo Chü-She Lun, Japanese Abidatsuma-Kusha-Ron, an introduction to the seven *Abhidharma* (Pāli: *Abhidhamma*) treatises in the SARVĀSTIVĀDA canon and a systematic digest of their contents, dealing with a wide range of philosophical, cosmological, ethical, and salvational doctrine.

Its author, VASUBANDHU, who lived in the 4th or 5th century CE in the northwestern part of India, wrote the work while he was still a monk of the Sarvāstivāda order, before he embraced MAHĀYĀNA, on whose texts he was later to write a number of commentaries. As a Sarvāstivāda work the *Abhidharmakośa* is one of few surviving treatments of scholasticism not written in Pāli and not produced by Theravādins. The product of both great erudition and considerable independence of thought, the *Abhidharmakośa* authoritatively completed the systematization of Sarvāstivāda doctrine and at the same time incorporated Mahāyānist tendencies. It provides much information on doctrinal differences between ancient Buddhist schools.

Translated into Chinese within a century or two after it was written, the *Abhidharmakośa* has been used in China, Japan, and Tibet as an authoritative reference on matters of doctrine. In China it provided the basis for the Abhidharma (Chinese Chü-She; Japanese Kusha) sect.

ABHINAVAGUPTA \ə-bi-nə-və-ˈgüp-tə\ (c. 10th–11th century, Kashmir, India), philosopher, ascetic, and outstanding representative of the "recognition" (*pratyabhijñā*) school of Kashmir Śaivite (see ŚAIVISM) monism. This school conceived of the god SHIVA (who is ultimate reality), the individual self, and the universe as essentially one. Abhinavagupta was a prolific writer on philosophy and aesthetics. Among Abhinavagupta's most notable philosophic works are the *Īśvara-pratyabhijñā-vimarsinī* and the more detailed *Īśvara-pratyabhijñā-nivṛti-vimarsinī*, both commentaries on works by an earlier philosopher, Utpala.

He is also well known for his *Tantrāloka* ("Light on the *Tantras*"). His enduring contributions to Hindu thought include his conception of Shiva as self-veiling and simultaneously self-manifesting, a process of play that creates the possibility for the religious practitioner to recognize Shiva through heightened self-consciousness. Through his inter-

ABLUTION

pretation of RASA (aesthetic sentiment), Abhinavagupta was a key figure in elaborating resonances between aesthetics and the theory of religious experience.

ABLUTION, a prescribed washing of the body or items such as clothing or ceremonial objects, with the intent of purification or dedication. Water, sometimes mixed with salt or other ingredients, is most commonly used, but washing with blood is not uncommon, and cow urine has been used in India.

The follower of SHINTŌ rinses hands and mouth with water before approaching a shrine. Monks of the THERAVĀDA Buddhist tradition wash themselves in the monastery pool before meditation. The upper-caste Hindu bathes in water before performing morning worship (*pūjā*) in the home. Jewish law requires washing of the hands after rising in the morning and before meals that include bread—as well as ritual immersion of the entire body for new converts to JUDAISM, for women prior to marriage and after each menses, and for men at the beginning of the Sabbath. (See also TOHORAH and MIKVEH.) Roman Catholic and some Eastern Orthodox priests prepare themselves for the EUCHARIST by ritual washing of the hands. Among some Brethren sects in the United States, ceremonial foot washing is performed on certain occasions. Muslim piety requires that the devout wash their hands, feet, and face before each of the five daily prayers; the use of sand is permitted where water is unavailable. (See also TAHARA.)

Ablution may carry a wide range of meanings. The stain of ritual uncleanness may be felt to be physically real; the act of cleansing may be only symbolic of desired purity of soul; or the two attitudes may be combined.

ABRAHAM \ˈā-brə-ˌham\, *Arabic* Ibrahim \i-brā-ˈhēm\ (fl. early 2nd millennium BCE), first of the Hebrew PATRIARCHS and a figure revered by JUDAISM, CHRISTIANITY, and ISLAM. According to the book of GENESIS, God called Abraham to found a new nation in CANAAN.

The most that can be done to compile a biography of Abraham is to apply the interpretation of modern historical

findings to biblical materials so as to arrive at a probable judgment as to the background of events in his life.

According to the biblical account, Abram ("The Father [or God] Is Exalted"), who is later named Abraham ("The Father of Many Nations"), a native of Ur in Mesopotamia, is called by God (YAHWEH) to leave his own country and people and journey to an undesignated land, where he will become the founder of a new nation. He obeys the call and (at 75 years of age) proceeds with his barren wife, Sarai, later named SARAH ("Princess"), his nephew Lot, and other companions to Canaan (located between Syria and Egypt).

There he receives promises and a COVENANT from God that his "seed" will inherit the land and become a numerous nation. He has a son, Ishmael, by his wife's maidservant HAGAR and a legitimate son by Sarah, ISAAC, who is to be the heir of the promise. Yet Abraham is ready to obey God's command to sacrifice Isaac as a test of his faith, which he is not required to consummate in the end because God substitutes a ram for Isaac.

Geographically, the saga of Abraham unfolds between two landmarks, "Ur of the Chaldeans" (Ur Kasdim) of the family, or clan, of Terah and the cave of Machpelah. For the most part, scholars agree that Ur Kasdim was the Sumerian city of Ur, today Tall al-Muqayyar (or Mughair), about 200 miles southeast of Baghdad.

At Sarah's death, Genesis relates that Abraham purchased the cave of Machpelah near Hebron, together with the adjoining ground, as a family burial place. It is the first

clear ownership of a piece of the promised land by Abraham and his posterity. Toward the end of his life, he sees to it that his son Isaac marries a girl from his own people back in Mesopotamia rather than a Canaanite woman. In the story of Genesis, Abraham dies at the age of 175 and is buried next to Sarah in the cave of Machpelah.

Abraham is pictured in Genesis with various characteristics: a righteous man, with wholehearted commitment to God; a man of peace (in settling a boundary dispute with his nephew Lot), compassionate (he argues and bargains with God to spare the people of SODOM AND GOMORRAH), and hospitable (he welcomes three visiting ANGELS); a quick-acting warrior (he rescues Lot and his family from a raiding

Abraham Guarding His Sacrifice, painting by James Tissot

party); and an unscrupulous liar (to save himself he passes off Sarah as his sister and lets her be picked by the Egyptian pharaoh for his harem). He appears as both a man of great spiritual depth and strength and a person with common human weaknesses and needs. Still, it was Abraham who received messages from God—not in dreams or visions, but in ordinary speech.

In Judaism, Abraham is taken as the model of virtue for his having observed all the commandments though they had not yet been revealed by God. Abraham was the first to acknowledge the one true God; this he did by process of reason, as portrayed by Rabbi Isaac in connection with the Genesis verse 12:1, "Now the Lord said to Abraham, 'Go [from your country and your kindred and your father's house to the land that I will show you]'" In GENESIS RABBAH (c. 450 CE) Rabbi Isaac compared Abraham to the case of someone who was traveling from one place to another when he saw a great house on fire. He said, "Is it possible to say that such a great house has no one in charge? The owner of the house then looked out and said to him, 'I am the one in charge of the house.'" Thus, since Abraham our father [took the initiative and] said, 'Is it possible for the world to endure without someone in charge?' the Holy One, blessed be He, [responded and] looked out and said to him, 'I am the one in charge of the house, the Lord of all the world.'" Therefore, within Judaism, not only is Abraham the first man to recognize the true God, on some level his very righteousness causes God to begin the process of revelation.

It was also from Abraham that ISRAEL received the divine power to communicate with God. It is he who is credited with founding the morning prayer (the daily service involving recitation of the SHEMA and the Eighteen Benedictions; see AMIDAH) and originating the commandments involving show-fringes on garments and phylacteries. Abraham is also the founder of the rite of CIRCUMCISION for the Jews—"entry into the covenant of Abraham our father" refers to circumcision. See also AKEDAH.

For Christianity, Abraham has always stood as the father of all believers (Romans 4:11). His faith, his willingness to trust in God, has been the model of all the saints of subsequent periods (Hebrews 11), and "it was reckoned to him for righteousness" (Romans 4:3) as the ground of his justification before God, whether by faith without works (Romans 3) or by faith and works (James 2). The obedience expressed in his willingness to sacrifice Isaac made Abraham, in the words of SØREN KIERKEGAARD, "the knight of infinite resignation," and was read as the typological prophecy of "He [God] who did not spare his own Son but gave him up for us all" (Romans 8:32). "Abraham's bosom" (Luke 16:22) was, for the Gospels as it had already been for Judaism, a name for eternal life in heaven, and the declaration attributed to Jesus, "Before Abraham was, I am" (John 8:58), is one of the strongest affirmations anywhere in the NEW TESTAMENT of his eternal identity with the God of Israel as the great "I AM WHO I AM" (EXODUS 3:14).

The figure of Abraham in Islam was formulated from biblical and rabbinic narratives current in Arabia, Syria, Iraq, and Egypt during the 7th to 8th centuries CE. The QUR'AN, which mentions the name of Abraham more than 60 times (compared to around 130 times for MOSES, some 20 times for JESUS CHRIST, and less than 10 times for MUHAMMAD), depicts him as the prototypical prophet—the intimate of God, who endured opposition from his own people to promote true religion (e.g., Qur'an 3:65–68, 4:125, 6:74–83). The Qur'an also credits him with building God's "house" in MECCA (the KA'BA) with the assistance of his son Ishmael (Ismā'īl), and

instituting the HAJJ (Qur'an 2:125–28). Indeed, Islamic tradition generally ascribes the foundation of the hajj rites to Abraham and his family, including the stoning of the three pillars at Mina and the celebration of the sacrificial feast that marks the end of the hajj.

Islamic hagiographies included Abraham in the lineages of Muhammad and other major prophets. He was also one of the extraordinary beings encountered by Muhammad during his ascension (MI'RĀJ). Sufis later saw in Abraham a model for generosity because of his willingness to sacrifice his own son, and for perseverance because of his enduring the fires of affliction out of love for God.

ABRAHAM, ISRAEL \ˈā-brə-hamz\ (b. Nov. 26, 1858, London, Eng.—d. Oct. 6, 1925, Cambridge), one of the most distinguished Jewish scholars of his time, the author of *Jewish Life in the Middle Ages* (1896).

In 1902, after teaching at Jews' College, London, Abrahams was appointed reader in Talmudics (rabbinic literature) at the University of Cambridge. From 1888 to 1908 he was editor, jointly with Claude G. Montefiore, of the *Jewish Quarterly Review*. Although of strict Orthodox upbringing, Abrahams was among the founders of the Liberal movement, an Anglo-Jewish group that stressed the universality of Jewish ethics, minimized ritual and custom, and originally eschewed ZIONISM.

In *Jewish Life in the Middle Ages*, Abrahams concluded that Christian medievalism had a lasting effect on the Jews, particularly in deepening the process of Jewish isolation from the rest of society. *Studies in Pharisaism and the Gospels*, 2 vol. (1917–24), includes a series of essays based on an examination of the NEW TESTAMENT treatment of JUDAISM. Abraham's work *Chapters on Jewish Literature* (1899) surveyed the period from the fall of Jerusalem in 70 CE to the death of the Jewish philosopher MOSES MENDELSSOHN in 1786.

ABRAXAS \ə-ˈbrak-səs\, also spelled abrasax \ˈa-brə-saks\, sequence of Greek letters considered as a word and inscribed on charms, AMULETS, and gems in the belief that it possessed magical qualities. Second-century Gnostic sects, as well, personified Abraxas and initiated a cult sometimes related to worship of the sun god. BASILIDES of Egypt, an early 2nd-century Gnostic teacher, viewed Abraxas as the supreme deity and the source of divine emanations, the ruler of all the 365 heavens, or circles of creation—one for each day of the solar year, 365 being the numerical value of the Greek letters in "abraxas."

ABSALOM \ˈab-sə-ləm\ (fl. c. 1020 BCE, Palestine), third and favorite son of DAVID, king of ISRAEL and JUDAH.

In 2 Samuel 13–19 Absalom was attractive, insolent, lawless, and doomed to a tragic fate. He is first mentioned as murdering his half brother Amnon, David's eldest son, in revenge for the rape of his sister Tamar. For this he was

ABSOLUTION

banished for a time. Later Absalom organized a revolt against David, and enjoyed initial success. When David fled with a few of his followers to Jordan, the usurper pursued them with his forces but was completely defeated in "the forest of Ephraim" (apparently west of Jordan). JOAB, Absalom's cousin, found Absalom entangled by the hair in an oak tree, and killed him. To David, the loss of his son, worthless and treacherous as he was, brought grief that outweighed his own safety and restoration.

ABSOLUTION, in CHRISTIANITY, the pronouncement of remission (forgiveness) of SINS to the penitent. In ROMAN CATHOLICISM and EASTERN ORTHODOXY, penance is a SACRAMENT and the power to absolve lies with the priest, who can grant release from the guilt of sin. In the NEW TESTAMENT the GRACE of forgiveness is seen as originating in JESUS CHRIST and being subsequently extended to sinners by members of the Christian PRIESTHOOD. In the early Christian church, the priest publicly absolved repentant sinners after they had confessed and performed their penance in public. During the Middle Ages, however, private CONFESSION became the usual procedure, and thus absolution followed in private. The priest absolved the penitent sinner using the formula, "I absolve thee from thy sins in the name of the Father and of the Son and of the HOLY SPIRIT." The Eastern Orthodox churches generally employ a formula such as "May God, through me, a sinner, forgive thee . . ."

In Protestant churches, absolution is usually a public rather than a private declaration. In general, Protestant churches have tended to confine absolution to prayers for forgiveness and the announcement of God's willingness to forgive all those who truly repent of their sins. In these denominations, absolution is neither a judicial act nor a means by which the forgiveness of sins is conferred but is, instead, a statement of divine judgment and divine forgiveness. Nevertheless, a formula for the public confession of sins and the public pronouncement of forgiveness is included in most Christian liturgies.

ĀBU, MOUNT \ə-ˈbū-, city, southwestern Rājasthān state, northwestern India, situated on the slopes of a mountain of the Ārāvālī Range for which it is named. It is an important PILGRIMAGE site in JAINISM and is regarded as one of the several *tīrtha-kṣetras* ("crossing grounds"), where liberated ARHATS (saints who are not considered to be *tīrthañkaras*) are said to have reached MOKṢA, or final emancipation. The medieval Jain temples at nearby Dilwara, built of white marble, are known for their exceptional beauty, especially the Tejpal temple, built about 1200 CE, which is known for the delicacy and richness of its carving.

ABŪ ḤANĪFA \ə-ˌbū-ha-ˈnē-fä-, in full Abū Ḥanīfa al-Nuʿmān ibn Thābit (b. 699, Kufa, Iraq—d. 767, Baghdad), Muslim jurist and theologian whose systematization of Islamic legal doctrine (see SHARĪʿA) was acknowledged as one of the four canonical schools of Islamic law. The school of Abū Ḥanīfa acquired such prestige that its doctrines were applied by a majority of Muslim dynasties and are widely followed today in India, Pakistan, Turkey, Central Asia, and Arab countries.

Abū Ḥanīfa's native city was an intellectual center of Iraq, and he belonged to the *mawālī*, the non-Arab Muslims, who stimulated intellectual activity in Islamic lands. In early youth he was attracted to theological debates, but later, disenchanted with theology, he turned to law and for about 18 years was a disciple of Ḥammād (d. 738), then the

most noted Iraqi jurist. After Ḥammād's death, Abū Ḥanīfa became his successor. He also learned from the Meccan traditionist 'Aṭā' (d. c. 732) and the founder of the SHĪʿITE law, Ja'far al-Šādiq (d. 765).

By Abū Ḥanīfa's time a vast body of legal doctrine had accumulated from attempts to apply Islamic norms to legal problems, but a uniform code was lacking. Abū Ḥanīfa discussed each legal problem with his students before formulating any doctrine, attempting not only to address actual problems but to solve problems that might arise in the future. Because of his somewhat rationalist orientation and his reserve about traditions that were not well authenticated, his school was sometimes denounced as the school of *ra'y* (independent opinion), as opposed to that of HADĪTH (authoritative tradition).

As a speculative jurist, Abū Ḥanīfa imposed systematic consistency on legal doctrine. His decisions emphasize systematic over material considerations, disregarding established practices and judicial and administrative convenience in favor of systematic and technical legal considerations. Compared with those of his contemporaries, the Kufan ibn Abi Laylā (d. 765), the Syrian Awzāʿī (d. 774), and the Medinese Mālik (d. 795), his doctrines are more carefully formulated and consistent and his technical legal thought more highly developed and refined.

ABYDOS \ə-ˈbī-dəs-, Egyptian Abdu, Coptic Ebot, modern al-ʿArabāt al-Madfuna, prominent sacred city and one of the most important archaeological sites of ancient Egypt. The site, located in the low desert west of the Nile near al-Balyanā, was a royal NECROPOLIS of the first two dynasties and later a PILGRIMAGE center for the worship of OSIRIS.

Excavations at Abydos at the end of the 19th century by Emile-Clément Amélineau and Sir Flinders Petrie uncovered a series of pit tombs, apparently belonging to the kings of the first two dynasties of Egypt. Doubt has subsequently been raised as to whether these tombs actually held the pharaohs whose names they bore. Some of the 2nd-dynasty pharaohs, however, may in fact have been buried at Abydos, where imposing brick funerary enclosures were built at the northwestern end of the necropolis area.

The tutelary deity of the necropolis was the jackal god, called Khenti-amentiu in the Old Kingdom; in the 5th dynasty, his cult was gradually absorbed by that of Osiris, and the city soon became the focal point of the cult of Osiris. Abydos became a place of pilgrimage for pious Egyptians, who desired above all else to be buried as close as possible to the recognized tomb of Osiris, which was located at Abydos. For those who could not afford to be buried there, stelae were set up, inscribed with the dead man's name and titles and a prayer to the god. Thousands of these stelae have been found in the city's cemeteries.

The pharaohs, though now buried near their city of residence rather than at Abydos, encouraged the cult of the deified king at Abydos, and they took special care to embellish and enlarge the temple of Osiris there. Some pharaohs had a cenotaph or a MORTUARY TEMPLE at Abydos. The temple of Seti I, one of the most beautiful of all such temples, included seven sanctuaries, approached through two broad hypostyle halls. In a long gallery leading to other rooms is a relief showing Seti and his son Ramses making offerings to the cartouches of 76 of their dead predecessors beginning with Menes. Behind the temple of Seti I is a structure known as the Osireion; it is an underground hall containing a central platform with 10 monolithic pillars surrounded by a channel of water.

Around and between the various temples of Abydos is a vast complex of cemeteries used in every period of early Egyptian history, from the prehistoric age to Roman times.

ACESTES \ə-'ses-tēz\, in Greek mythology, legendary king of Segesta (*Greek* Egesta) in Sicily. His mother, Egesta, had been sent from Troy by her parents to save her from being devoured by a sea serpent. Going to Sicily she met the river god Crimisus, by whom she became the mother of Acestes.

Acestes appears notably in the *Aeneid*, offering hospitality to AENEAS when he lands in Sicily. Acestes' function is to emphasize the mythological connection of Sicily with Troy; in Greek legend Aeneas, whose descendants founded Rome, traveled no farther than Sicily. In the *Aeneid* Acestes brings the funeral games of ANCHISES, Aeneas' father, to a climax by shooting into the air an arrow that becomes a comet, a sign of Anchises' eternal life.

ACHILLES \ə-'ki-lēz\, in Greek mythology, son of the mortal PELEUS, king of the MYRMIDONS, and the NEREID, or sea NYMPH, THETIS. He was the greatest Greek warrior in the Trojan War. A non-Homeric tale relates that Thetis dipped the infant Achilles in the waters of the River STYX, making him invulnerable but for the part of his heel by which she held him—the proverbial "Achilles' heel."

As a youth Achilles, who was fated to die in battle, was sent to Scyros, where he was dressed as a girl and hidden among the king's daughters (one of whom, Deidamia, bore him a son, NEOPTOLEMUS). The Greeks discovered him when Achilles could not resist examining a display of weapons.

In the 10th year of the war at Troy a quarrel with AGAMEMNON occurred when Achilles insisted that Agamemnon restore Chryseis, his prize of war, to her father, a priest of APOLLO, in order to stop a god-sent plague. Agamemnon retaliated by claiming Achilles' favorite slave girl, Briseis.

Achilles refused further service, and the Greeks were lost without him until Patroclus, Achilles' favorite companion, entered the fighting in Achilles' armor. The Trojan hero HECTOR slew Patroclus, and Achilles obtained new armor from the god HEPHAESTUS and slew Hector. After dragging Hector's body behind his chariot, Achilles eventually returned it to Hector's father, PRIAM. The *Iliad* makes no mention of the death of Achilles, though the *Odyssey* mentions his funeral. Later traditions stated that Achilles was slain by Priam's son PARIS, whose arrow was guided by Apollo.

ACIS \ä-'sis\, in Greek mythology, the son of Pan (FAUNUS) and the NYMPH Symaethis. He was a beautiful shepherd of

Sicily, the lover of the NEREID Galatea. His rival, POLYPHEMUS the CYCLOPS, surprised them together and crushed him with a rock. His blood, gushing forth from beneath, was metamorphosed by Galatea into a river bearing his name, Acis or Acinius (the modern Jaci) at the base of Mount Etna. The story is in no other extant source but Ovid.

ACOLYTE (from Greek: *akolouthos*, "server," "companion," or "follower"), in ROMAN CATHOLICISM, a person permitted to assist in liturgical celebrations, especially the eucharistic liturgy. The first probable reference to the office is c. 189–199, and it was mentioned frequently in Roman documents after the 4th century. Acolytes also existed in North Africa but were unknown outside Rome and North Africa until the 10th century, when they were introduced throughout the Western church. The COUNCIL OF TRENT (1545–63) defined the order and hoped to reactivate it on the pastoral level, but it became only a step leading to the PRIESTHOOD. A directive of Pope Paul VI decreed that the office of acolyte should no longer be called a minor order but a ministry and that it should be open to laymen.

In the Eastern church, the order was not accepted. In Anglican and Lutheran churches, acolytes are generally laypersons who light the candles at church services.

ACONTIUS \ə-'kän-shē-əs, -shəs\, in Greek legend, a youth who, in love with the daughter of a noble family, wrote "I swear to wed Acontius" on an apple and threw it at her feet. She picked the apple up and read the words aloud, thus binding herself by

an OATH that caused her to fall ill whenever she attempted to marry another. In response to an oracle she finally married Acontius.

ACOSMISM \ä-'käs-mi-zəm\, in philosophy, the view that God is the sole and ultimate reality and that finite objects and events have no independent existence. Acosmism has been equated with PANTHEISM, the belief that everything is God. G.W.F. Hegel coined the word to defend Benedict de Spinoza, who was accused of ATHEISM for rejecting the traditional view of a created world existing outside God. Hegel argued that Spinoza could not be an atheist because pantheists hold that everything is God, whereas atheists make a goddess world the sole reality.

Acosmism has also been used to describe the philosophies of Hindu VEDĀNTA, BUDDHISM (although Buddhism is not, in fact, an acosmic religion), and Arthur Schopenhauer.

ACOSTA, URIEL \ä-'kös-tə\, *original name* Gabriel Da Costa (b. c. 1585, Oporto, Port.—d. April 1640, Amsterdam,

Achilles killing Penthesilea during the Trojan War, interior of an Attic cup, c. 460 BCE; in the Antikensammlung, Munich

The Mansell Collection

Neth.), rationalist who became an example for Jews as a martyr to intolerance in his own religious community.

The son of an aristocratic family of Marranos (Spanish and Portuguese Jews forcibly converted to ROMAN CATHOLICISM), Acosta studied CANON LAW. Convinced that there was no salvation through the Roman Catholic church, he turned to JUDAISM. After converting his mother and brothers to his beliefs, they fled to Amsterdam. After CIRCUMCISION, he took Uriel as his given name.

Acosta soon decided that the prevailing form of Judaism was not biblical but rather an elaborate structure based on rabbinic legislation. He formulated 11 theses (1616) attacking RABBINIC JUDAISM as nonbiblical, for which he was excommunicated. Acosta then prepared a larger work condemning rabbinic Judaism and denying the immortality of the soul (1623–24). Acosta found it impossible to bear the isolation of EXCOMMUNICATION, though, and he recanted. Excommunicated again after he was accused of dissuading Christians from converting to Judaism, he made a public recantation in 1640 after enduring years of ostracism. After writing a short autobiography, *Exemplar Humanae Vitae* (1687; "Example of a Human Life"), he shot himself. *Exemplar* depicted revealed religion as disruptive of natural law and a source of hatred and superstition. In contrast, he advocated a faith based on natural law and reason.

ACTAEON \ak-'tē-ən\, in Greek mythology, a Boeotian hero and hunter. According to Ovid's *Metamorphoses*, Actaeon accidentally saw the virgin goddess ARTEMIS naked while she was bathing on Mount Cithaeron; she changed him into a stag and he was pursued and killed by his own hounds. In another version, he offended Artemis by boasting that his skill as a hunter surpassed hers.

The story was well known in antiquity, and several of the tragic poets presented it on the stage (e.g., Aeschylus' lost *Toxotides*, "The Archeresses").

ACTA SANCTORUM \ak-tə-saŋk-'tō-rəm\ (Latin: "Acts of the Saints"), vast collection of biographies and legends of the Christian saints.

The idea was conceived by Heribert Rosweyde, who intended to publish, from early manuscripts, 18 volumes of lives of the saints with notes attached. In 1629, with the death of Rosweyde, Jean Bolland was chosen to continue the work. Bolland and his associate Henschenius (Godefrid Henskens) modified and extended the original plan of the *Acta*; he arranged the saints according to the date of the observance of their deaths, included doubtful cases (but with notes), and added indexes, chronologies, and histories to each chapter. The parts completed during Bolland's life were *January* (2 vol., 1643) and *February* (3 vol., 1658), containing the biographies and legends of the saints whose feast days fell in those two months.

In his researches Bolland corresponded and traveled widely, investigating previously unexamined sources in Italian libraries. His work was continued by Henschenius and Papebroch (Daniel van Papenbroeck). From this core of hagiographers would develop the Bollandists, a small group of Belgian JESUITS who still edit and publish the *Acta Sanctorum*. In addition to the extensive amounts of biographical material that is of importance for both ecclesiastical and general history, this work is distinguished for its use of the principles of historical criticism.

ACTS OF THE APOSTLES, THE, abbreviated as *Acts*, fifth book of the NEW TESTAMENT, an invaluable history of

the early Christian church that also throws light on the epistles of PAUL THE APOSTLE.

Acts was written in Greek, presumably by the Evangelist LUKE, whose gospel concludes where Acts begins, namely, with Christ's ASCENSION into heaven. Therefore, New Testament scholarship has come to view "Luke-Acts" as one book in two volumes. Acts was apparently written in Rome, perhaps between 70 and 90 CE. After an introductory account of the descent of the HOLY SPIRIT on the Apostles at PENTECOST (interpreted as the birth of the church), Luke pursues as a central theme the spread of CHRISTIANITY to the GENTILE world under the guiding inspiration of the Holy Spirit. He also describes the church's gradual drawing away from Jewish traditions. The missionary journeys of St. Paul are given a prominent place because this close associate of Luke was the preeminent apostle to the Gentiles.

'ĀDA \ä-də\ (Arabic: "custom"), in Islamic law, a local custom that is given a particular consideration by judicial authorities even when it conflicts with some principle of Islamic law (SHARĪ'A). Muslim communities developed their 'ādas before accepting ISLAM and did not abandon them entirely afterward. Thus among the Minangkabau in Indonesia, where many Muslims still retain traditions of other religions, a matriarchate is recognized, contrary to the Sharī'a; in parts of India, Muslims adopt children, forbidden by canon law, and then again circumvent the Sharī'a by providing them with an inheritance. Such 'ādas are accepted by religious courts as legitimate local laws that must be respected in order to foster harmony in the community.

ADAB \ä-dab, 'ä-däb, 'ä-däb\, Islamic concept and literary genre distinguished by its broad humanist concerns; it developed during the height of 'Abbāsīd culture in the 9th century and continued through the Muslim Middle Ages.

The original sense of the word was "norm of conduct," or "custom," derived in ancient Arabia from ancestors revered as models, but the term later acquired a connotation of good breeding, courtesy, and urbanity. *Adab* became the knowledge of poetry, oratory, tribal history, rhetoric, grammar, and philology that qualified a man to be called well-bred, or *adīb*. Such men produced an erudite *adab* literature of humanity and human achievements. They included such writers as the 9th-century essayist al-Jāhīz of Basra and his 11th-century follower Abū Ḥayyān al-Tawḥīdī, the 9th-century Kūfan critic, philologist, and theologian Ibn Qutayba; and the 11th-century poet al-Ma'arrī.

As the golden age of the 'Abbāsīds declined, however, the boundaries of *adab* narrowed into belles lettres: poetry, elegant prose, anecdotal writing (*maqāmāt*). In the modern Arab world *adab* merely signifies literature.

ADAD \ä-dad, 'ä-däd\, weather god of the Babylonian and Assyrian pantheon. The name may have been brought into Mesopotamia by Amorites. His Sumerian equivalent was ISHUR and the West Semitic was HADAD.

Adad's rains caused the land to bear grain, wine, and food; hence his title Lord of Abundance. His storms and hurricanes, evidences of his anger, brought darkness, want, and death. The bull and the lion were sacred to him. Adad's father was the heaven god ANU, but he is also designated as the son of BEL, Lord of All Lands and god of the atmosphere. His consort was Shalash, which may be a Hurrian name. The symbol of Adad was the cypress, and six was his sacred number. In Babylonia, Assyria, and Aleppo in Syria, he was also the god of oracles and DIVINATION.

ADAM AND EVE \ˈɑ-dəm . . . ˈēv\, in the Judeo-Christian and Islamic traditions, the parents of the human race.

In the BIBLE there are two accounts of their creation. According to the PRIESTLY CODE (P) of the 5th or 6th century BCE (GENESIS 1:1–2:4a), God, or ELOHIM, on the sixth day of Creation created all the living creatures and, “in his own image,” man both “male and female.” God then blessed the couple, told them to be “fruitful and multiply,” and gave them dominion over all other living things. According to the YAHWIST SOURCE (J) of the 10th century BCE (Genesis 2:4b–7, 2:15–4:1, 4:25), God, or YAHWEH, created Adam when the earth was still void, forming him from dust of the ground (*ha-ʿadamah*) and breathing “into his nostrils the breath of life.” God then gave Adam the primeval GARDEN OF EDEN to tend but, on penalty of death, commanded him not to eat of the fruit of the “tree of knowledge of good and evil.” Subsequently God created other animals but, finding these insufficient, put Adam to sleep, and from his rib fashioned Eve. The two were innocent until Eve yielded to the temptations of the serpent and Adam joined her in eating the forbidden fruit, whereupon they both recognized their nakedness and donned fig leaves as garments. God recognized their transgression and proclaimed their punishments—for the woman, pain in childbirth and subordina-

tion to man, and, for the man, the need to work the ground in toil and sweat for his subsistence.

Their first children were CAIN and ABEL. Abel, the keeper of sheep, was highly regarded by God and was killed by Cain out of envy. Another son, SETH, was born to replace Abel, and the two human stems, the Cainites and the Sethites, descended from them. Adam and Eve had “other sons and daughters,” and death is said to have come to Adam at the age of 930.

Important works within JUDAISM that treat the Genesis story include GENESIS RABBAH. That work states that through Adam’s SIN the perfection of Adam and all creation was lost (Genesis Rabbah 11:2; 12:6). Originally, Adam and Eve were created upright like the ANGELS (Genesis Rabbah 8:11), as fully developed adults (Genesis Rabbah 14:7), and were created last so as to have dominion over all earlier creation (Genesis Rabbah 19:4). At the time of Adam’s creation some angels anticipated Adam’s love and mercy, others the falsehood and strife he would bring. The philosopher PHILO JUDAEUS (d. 45–50 CE) said that the two creation narratives told of two distinct Adams, a heavenly Adam created in God’s image, and another formed from the dust of the earth. This second Adam, though his mind was in the image of God, succumbed to physical passions by eating the fruit, and subsequently his intellectual capacity degraded.

In the Christian NEW TESTAMENT, Paul sees Adam as a forerunner to Christ, “a type of the one who was to come” (Romans 5:12). As Adam initiated the life of humans upon earth, so Christ initiates the new human life. Because of the sin of Adam, death came upon all men; because of the righteousness of Christ, life is given to all men. Thus it was Adam’s sin and not failure to observe the Law that made the GENTILES sinners; therefore, all people stand in need of the GRACE of Christ. In later Christian theology, this view developed into the concept of ORIGINAL SIN.

In the QUR’AN (especially *sūras* 2, 7, 15, 17, and 20), Allāh created Adam from clay but exalted him with such knowledge that the angels were commanded to prostrate themselves before him. All did but the angel IBLĪS (SATAN), who subsequently in the Garden tempted both Adam and his “wife” to eat of the forbidden fruit. Allāh then sent them down on earth, where their progeny were doomed to live as enemies, but offered Adam and his progeny eternal guidance if they would follow only him. According to Qur’anic teachings, Adam’s sin was his alone and did not make all people sinners. Later Islamic traditions have Adam descending from paradise to Ceylon (Sarandīb) and Eve descending to Jidda in Arabia; after a separation of 200 years, they met near Mount ‘Arafāt and began conceiving children. The first two sons, Qābīl and Hābīl, each had a twin sister, and each son married his brother’s sister. Qābīl subsequently killed Hābīl. Later, Shīth was born without a sister and became Adam’s favorite and his spiritual heir (*wasī*). Eve eventually bore 20 sets of twins, and Adam had 40,000 offspring before he died.

ADAPA \ˈä-dä,-pä\, in Mesopotamian mythology, legendary sage and citizen of Eridu. Adapa was endowed with vast intelligence by EA (Sumerian: Enki), the god of wisdom. One day while he was fishing, the south wind blew so violently that Adapa was thrown into the sea. In his rage he broke the wings of the south wind, which then ceased to blow. ANU (Sumerian: An), the sky god, summoned him to receive punishment, but the god Ea, who was jealous of Adapa, cautioned him not to touch the bread and water that would be offered. When Adapa came before Anu, the two heavenly

doorkeepers TAMMUZ and NING-ISHZIDA interceded for him and explained that as Adapa had been endowed with omniscience he needed only immortality to become a god. Anu then offered Adapa the bread and water of eternal life, but he refused it, and mankind became mortal.

ADHĀN \a-'than\, Muslim call to Friday public worship and to the five daily times of prayer proclaimed by the MUEZZIN as he stands at the door or side of a small mosque or in the MINARET of a large one. Modern calls to prayer are commonly taped for broadcast over public address systems, radio, and television.

The *adhān* was originally a simple "Come to prayer," but, according to tradition, MUHAMMAD consulted his followers with a view to investing the call with greater dignity. The matter was settled when 'Abd Allāh ibn Zayd dreamed that the faithful should be summoned by a crier. The standard Sunnite (see SUNNI) *adhān* can be translated as: "God is most great. I testify that there is no god but God. I testify that Muhammad is the Prophet of God. Come to prayer. Come to salvation. God is most great. There is no god but God." The first phrase is proclaimed four times, the final phrase once, and the others twice, the worshipers making a set response to each phrase. SHĪTES add, "I testify that 'Ali is close to God (*walī Allāh*)" after testifying that Muhammad is the Prophet, and they say, "Come to the best of actions" after the call to salvation. These phrases are each repeated twice.

ĀDI-BUDDHA \ä-dē-'būd-də, -bū-də, -bū-də\, among some sects of MAHĀYĀNA BUDDHISM, the first, or self-existing, Buddha, from whom are said to have evolved the five DHYĀNI-BUDDHAS. Though the concept of an Ādi-Buddha was never generally popular, a few groups, particularly in Nepal, Tibet, and Java, elevated VAIROCANA to the position of Ādi-Buddha or named a new deity, such as Vajradhara or Vajrasattva, as the supreme lord. The Ādi-Buddha is represented in painting and sculpture as a crowned Buddha, dressed in princely garments and wearing the traditional ornaments of a BODHISATTVA.

ĀDI GRANTH \ä-dē-'grənt, -'grən-tə\ (Punjabi: "Original Book"), the primary scripture of SIKHISM. The core of the *Ādi Granth* consists of hymns composed by NĀNAK (1469–1539), a Sikh GURŪ and the founder of the tradition. By the late 17th century, when the text reached its canonical form, the *Ādi Granth* included over 6,000 hymns and poems, of which over 4,500 were written by six Sikh Gurūs. The rest are attributed to bards associated with the 16th-century Sikh court and 15 non-Sikh saint-poets known in Sikh tradition as Bhagats ("devotees"). The language of these hymns might be called "sant bhāṣā," the lingua franca of medieval poets of northern India.

Sikh priest with the Ādi Granth

Foto Features

The text of the *Ādi Granth* is divided into three parts. It opens with a liturgical section comprising three daily prayers, to be recited at sunrise, sunset, and at the end of the day. The second section constitutes the main body of the text, and is divided into 31 separate subsections organized according to the musical mode (*rāga*) assigned for their singing. The final section includes hymns that are intended to be recited but are not set to music.

Gurū GOBIND SINGH (1666–1708, Gurū 1675–1708), the 10th Gurū of the Sikhs, is believed to have elevated the *Ādi Granth* to a unique position at the time of his death. He discontinued the lineage of living Gurūs and substituted for it the teaching authority of the *Ādi Granth*. Sikhs therefore customarily call the *Ādi Granth* the Śrī Gurū Granth Sāhib ("Honorable Gurū in book form"). Since Gurū Gobind Singh's time, the *Ādi Granth* has played the commanding role in Sikh devotional and ceremonial life. It is the Gurū to which reference is made when Sikh places of worship are called GURDŪWĀRĀS ("houses of the Gurū"), occupying the central place both in the physical space itself and in every liturgy celebrated there. With few exceptions, Sikh homes contain the complete text of the *Ādi Granth* or a smaller version of it (*gūṭkā*). The printed edition of the *Ādi Granth*, in its standard pagination, contains 1,430 pages.

ĀDITI \ä-di-tē, 'ä-\ (Sanskrit: "the Boundless"), in the Vedic phase of Hindu mythology, the personification of the infinite. She is referred to as the mother of many gods, especially her sons, the Ādityas, who are a class of celestial deities. She supports the sky, sustains all existence, and nourishes the earth and thus is often represented as a cow.

The Ādityas vary in number from 6 to 12. VARUṆA is their chief, and they are called like him "upholders of *ṛta* ('divine order')." In post-Vedic texts they include VISHNU in his AVATAR as the dwarf Vāmana and Vivasvat as the sun.

ADMETUS \ad-'mē-təs\, in Greek legend, son of Pheres, king of Pherae. Desiring the hand of Alcestis, the daughter of PELIAS, king of Iolcos, Admetus was required to harness a lion and a boar to a chariot. APOLLO yoked them, and Admetus obtained Alcestis. Finding that Admetus was soon to die, Apollo persuaded the Fates to prolong his life, on the condition that someone could be found to die in his place. Alcestis consented, but she was rescued by HERACLES, who successfully wrestled with Death at the grave.

ADONIS \ə-'dä-nis, -'dō-\, in Greek mythology, a youth of remarkable beauty, the favorite of the goddess APHRODITE. Traditionally, he was the product of an incestuous union between Smyrna/Myrrrha and her father, the Syrian king Theias. Charmed by his beauty, Aphrodite put the newborn infant Adonis in a box and handed him over to the care of PERSEPHONE, the queen of the Underworld, who afterward refused to give him up. An appeal was made to ZEUS, who decided that Adonis should spend a third of the year with Persephone and a third with Aphrodite, the remaining third being at his own disposal. Adonis became an enthusiastic hunter and was killed by a wild boar. Aphrodite pleaded for his life with Zeus, who allowed Adonis to spend half of each year with her and half in the underworld.

Annual festivals called Adonia were held at Byblos and elsewhere in honor of Adonis. The name Adonis is believed to be of Phoenician origin (from 'adōn, "lord").

ADOPTIONISM \ə-'däp-shə-,ni-zəm\, either of two Christian heresies: one, developed in the 2nd and 3rd centuries, is also known as Dynamic MONARCHIANISM and came to be called Adoptionism only in modern times; the other began in the 8th century in Spain and was concerned with the teaching of Elipandus, archbishop of Toledo. Wishing to distinguish in JESUS CHRIST the operations of each of his natures, human and divine, Elipandus referred to Christ in his humanity as "adopted son" in contradistinction to Christ in his divinity, who is the Son of God by nature. The son of MARY, assumed by the Word, thus was not the Son of God by nature but only by adoption.

In 798 Pope Leo III held a council in Rome that condemned the Adoptionism of Felix, bishop of Urgel (whose support Elipandus had gained), and anathematized him. Felix was forced to recant in 799 and was placed under surveillance. Elipandus remained unrepentant, however, and continued as archbishop of Toledo, but the Adoptionist view was almost universally abandoned after his death. A version of Adoptionism was temporarily revived in the 12th century in the teachings of PETER ABELARD.

ADRET, SOLOMON BEN ABRAHAM \ä-'dret\, Hebrew Rabbi Shlomo Ben Abraham Adret, acronym Rashba \räsh-'bä\ (b. 1235, Barcelona, Spain—d. 1310, Barcelona), spiritual leader of the Spanish Jewish community (known as El Rab de España ["the Rabbi of Spain"]); he is remembered partly for his controversial decree of 1305 threatening to excommunicate all Jews less than 25 years old (except medical students) who studied philosophy or science.

As a leading scholar of the TALMUD, Adret received inquiries on Jewish law from all over Europe, and his replies (more than 3,000 of which remain) strongly influenced the later development of codes of Jewish law. Adret's other writings include commentaries on the Talmud and polemics defending it against attacks by non-Jews.

Late in life, Adret became embroiled in a quarrel between the followers of the medieval Jewish philosopher MAI-

MONIDES and the members of a conservative, antirationalist movement led by ASTRUC OF LUNEL, who believed that the followers of Maimonides were undermining the Jewish faith through their use of allegory in interpreting the BIBLE. Although Adret's ban against the study of philosophy and science did not bring about an end to such studies, it precipitated a bitter controversy among Jews in Spain and southern France that continued during his last years.

ADVAITA \əd-'vī-tə\ (Sanskrit: "Nondualism"), most influential of the schools of VEDĀNTA, a central philosophy of India. It has its historical beginning with the 7th-century thinker Gauḍapāda, author of the *Māṇḍūkya-kārikā*, a commentary in verse form on the *Māṇḍūkya Upaniṣad*.

Gauḍapāda, responding to the MAHĀYĀNA Buddhist philosophy of *śūnyavāda* ("emptiness"), argued that there is no duality; the mind, awake or dreaming, moves through MĀYĀ (illusion); and only nonduality (*advaita*) is the final truth. This truth is concealed by the ignorance of illusion. There is no becoming, either of a thing by itself or of a thing out of some other thing. There is ultimately no individual self or soul (JĪVA), only ĀTMAN (the ultimate self).

The philosopher Śaṅkara (c. 700–750) built further on Gauḍapāda's foundation, principally in his commentary on the *Vedānta Sūtras*, the *Śārīraka-mīmāṃsā-bhāṣya* ("Commentary on the Study of the Embodied Self"). Śaṅkara argued that the *Upaniṣads* teach the nature of BRAHMAN (the absolute). Fundamental for Śaṅkara is the tenet that only the nondual Brahman is ultimately real. The experience of selfhood is our primary means of access to this truth: self is not different from Brahman. To perceive this identity is to be released from the illusory thrall (*māyā*) of reality at its penultimate levels, filled with distinctions and dualities.

Śaṅkara points to scriptural texts, either stating identity ("You are that") or denying difference ("There is no duality here"), as declaring the true meaning of a Brahman without qualities (NIRGUṆA). Other texts that ascribe qualities (SAGUṆA) to Brahman refer not to the ultimate nature of Brahman but to its personality as God (ĪŚVARA).

Human perception of Brahman as differentiated and plural stems from a certain beginningless ignorance (*ajñāna*, *avidyā*) that follows almost necessarily from the conditions of existence. Yet the empirical world is not totally unreal, for it is a misapprehension of the real Brahman.

Śaṅkara had many followers who continued and elaborated his work, notably the 9th-century philosopher Vācaspati Miśra. The Advaita literature is extremely extensive, playing a major role in Hindu thought.

ADVENT (from Latin: *adventus*, "coming"), the Christian church's period of preparation for the celebration of the birth of JESUS CHRIST at CHRISTMAS and also of preparation for the SECOND COMING of Christ. It begins on the Sunday nearest to November 30 (St. Andrew's Day) and is the beginning of the church year. It is uncertain when the season was first observed; the Council of Tours (567) mentioned an Advent season.

Although a penitential season, Advent is no longer kept with the strictness of LENT, and fasts are no longer required. In many countries it is marked by a variety of popular observances, such as the lighting of Advent candles.

ADVENTIST \əd-'ven-tist, ad-; 'ad-,ven-\, member of any of a group of Protestant Christian churches arising in the United States in the 19th century and distinguished by

their doctrinal belief that the SECOND COMING OF JESUS CHRIST is close at hand. Adventism is rooted in Hebrew and Christian prophetism, messianism, and millennial expectations recorded in the BIBLE (see MILLENNIUM; MILLENNIALISM). Adventists believe that at Christ's Second Coming he will separate the saints from the wicked and inaugurate his millennial (1,000-year) kingdom.

History. It was in an atmosphere of millennialist revival in the United States that WILLIAM MILLER (1782–1849) began to preach. After a period of skepticism, he had a religious conversion and began to study the books of Daniel and REVELATION TO JOHN and to preach as a BAPTIST. He concluded that Christ would come, in conjunction with a fiery conflagration, sometime between March 21, 1843, and March 21, 1844, and was encouraged in his views by a number of clergymen and numerous followers.

When Christ did not return on the first appointed date, Miller and his followers set a second date, Oct. 22, 1844. The quiet passing of this day led to what is called the "Great Disappointment" among Adventists and the convening of a Mutual Conference of Adventists in 1845. Those who met, however, found it difficult to shape a confession and form a permanent organization.

Among those who persisted after the failure of Miller's PROPHECY were Joseph Bates, James White, and his wife, Ellen Harmon White. These Adventists, called Millerites in the press, believed that Miller had set the right date, but that they had interpreted what had happened incorrectly. Reading Daniel, chapters 8 and 9, they concluded that God had begun the "cleansing of the heavenly sanctuary"—*i.e.*, an investigative judgment that would be followed by the pronouncing and then the execution of the sentence of judgment. What actually began in 1844, then, in their view, was an examination of all of the names in the Book of Life. Only after this was completed would Christ appear and begin his millennial reign. Although they did not set a new date, they insisted that Christ's Advent was imminent. They also believed that observance of the seventh day, Saturday, rather than Sunday, would help to bring about the Second Coming. These Millerites founded an official denomination, the SEVENTH-DAY ADVENTISTS, in 1863.

Other Adventist bodies emerged in the 19th century as a direct or indirect result of the prophecy of William Miller. These included the Evangelical Adventists (1845), Life and Advent Union (1862), Church of God (Seventh Day; 1866), Church of God General Conference (Abrahamic Faith; 1888), and the Advent Christian Church. These Advent Christians rejected the teachings of the Seventh-day Adventists about SABBATH observance and dietary laws. They were congregational in polity and coordinated work in the United States and throughout the world through the Advent Christian General Conference of America. In 1964 the Advent Christian Church united with the Life and Advent Union.

Beliefs and practices. Seventh-day Adventists accept the authority of both the OLD TESTAMENT and the NEW TESTAMENT. In their interpretation of Christ's ATONEMENT they follow a doctrine of ARMINIANISM, which emphasizes human choice and God's election rather than God's sovereignty, as in CALVINISM. They also argue that Christ's death was "provisionally and potentially for all men," yet efficacious only for those who avail themselves of its benefits.

In addition to the emphasis upon the Second Advent of Christ, two other matters set them apart from other Christians. First, they observe Saturday, rather than Sunday, as the Sabbath. This day, according to the Bible, was institut-

ed by God since the Creation, and the commandment concerning Sabbath rest is a part of God's eternal law. Second, they avoid eating meat and taking narcotics and stimulants, which they consider to be harmful. Although they appeal to the Bible for the justification of these dietary practices, they maintain that these are based upon the broad theological consideration that the body is the temple of the HOLY SPIRIT and should be protected.

Institutions. Adventists stress tithing and therefore have a high annual giving per capita that allows them to carry on worldwide missionary and welfare programs. Sending out its first missionary, John Nevins Andrews, in 1874, Seventh-day Adventism expanded into a worldwide movement, with churches in nearly every country by the late 20th century. In the early 21st century the church had more than 12,000,000 members.

The General Conference of Seventh-day Adventists, the church's main governing body, has its headquarters in Silver Spring, Md., and meets every five years. Local conferences provide pastoral oversight for the local congregations, which are governed by elected lay elders and deacons. The General Conference supervises evangelism in more than 500 languages, a large parochial school system, and a number of hospitals. Publishing houses are operated in many countries, and Adventist literature is distributed door-to-door by volunteers.

AEACUS \ˈē-ə-kəs\, in Greek mythology, son of ZEUS and Aegina, the daughter of the river god Asopus. Aeacus was celebrated for justice and in Attic tradition became a judge of the dead. His successful prayer to Zeus for rain during a drought was commemorated by a temple at Aegina, where a festival, the Aiakeia, was held in his honor.

AEDON \ā-ˈē-dän\, in Greek mythology, a daughter of Pandareus of Ephesus. She was the wife of the king of Thebes. Envious of her sister-in-law, NIOBE, who had many children, she planned to murder Niobe's son, but by mistake killed her own son, Itylus. Turned by ZEUS into a nightingale, her song is a lament for her dead son.

AEGIS, also spelled *egis*, plural *aegises*, or *egises*, in ancient Greece, supernatural item, possibly a leather cloak or breastplate, generally associated with ZEUS, the king of the gods. Zeus's daughter ATHENA was most prominently associated with it, but occasionally another god used it—*e.g.*, APOLLO in the *Iliad*. As early as Homer the aegis was decorated with golden tassels.

AENEAS \ē-ˈnē-əs, i-\, mythical hero of Troy and Rome, son of the goddess APHRODITE and ANCHISES. Aeneas was a member of the royal line at Troy and cousin of HECTOR. Homer implies that Aeneas did not like his position of subordinate to Hector, and from that suggestion arose a later tradition that Aeneas helped to betray Troy to the Greeks. The more common version, however, made Aeneas the leader of the Trojan survivors after Troy was taken by the Greeks. In any case, Aeneas survived the war.

As Rome expanded over Italy and the Mediterranean, its patriotic writers began to construct a mythical tradition that would at once dignify their land with antiquity and satisfy a latent dislike of Greek cultural superiority. The fact that Aeneas, as a Trojan, represented an enemy of the Greeks and that tradition left him free after the war made him peculiarly fit for the part assigned him, *i.e.*, the founding of Roman greatness.

It was Virgil who gave the various strands of legend related to Aeneas the form they have possessed ever since. The family of Julius Caesar, and consequently of Virgil's patron Augustus, claimed descent from Aeneas, whose son ASCANIUS was also called Iulus. Virgil created his masterpiece, the *Aeneid* (written c. 29–19 BCE), portraying the journeying of Aeneas from Troy westward to Sicily, Carthage, and finally to the mouth of the Tiber in Italy.

When Troy fell, Virgil recounts, Aeneas was commanded by Hector in a vision to flee and to found a great city overseas. Aeneas gathered his family and followers and took the household gods (small images) of Troy, but, in the confusion of leaving the burning city, his wife disappeared. Her ghost informed him that he was to go to a western land where the Tiber River flowed. He then embarked upon his long voyage, touching at Thrace, Crete, and Sicily and meeting with numerous adventures that culminated in shipwreck on the coast of Africa near Carthage. There he was received by DIDO, the widowed queen. They fell in love, and he lingered there until he was sharply reminded by MERCURY that Rome was his goal. Guilty and wretched, he immediately abandoned Dido, who committed suicide, and Aeneas sailed on until he finally reached the mouth of the Tiber. There he was well received by LATINUS, the king of the region, but other Italians, notably Latinus' wife and TURNUS, leader of the Rutuli, resented the arrival of the Trojans and the projected marriage alliance between Aeneas and Lavinia, Latinus' daughter. War broke out, but the Trojans were successful and Turnus was killed. Aeneas then married Lavinia and founded Lavinium.

AEOLUS \ˈē-ə-ləs\, in Greek mythology, controller of the winds and ruler of the floating island of Aeolia. In the *Odyssey* he gave ODYSSEUS a favorable wind and a bag in which the unfavorable winds were confined. Odysseus' companions opened the bag; the winds escaped and drove them back to the island.

AEON \ˈē-ən, ˈē-än\, also spelled *eon* (Greek: "age," or "lifetime"), in Gnosticism and Manichaeism, one of the orders of spirits, or spheres of being, that emanated from the Godhead and were attributes of the nature of the absolute.

The first aeon emanated directly from the unmanifest divinity and was charged with a divine force. As successive emanations of aeons became more remote from divinity they increased in number while they were charged with successively diminished force. At a certain level of remoteness, the possibility of error invaded the activity of aeons; in most systems, such error was responsible for the creation of the material universe. For many, JESUS CHRIST was the most perfect aeon who redeemed the error embodied in the material universe; the HOLY SPIRIT was usually a subordinate aeon. In certain systems, aeons were regarded positively as embodiments of the divine; in others, they were viewed negatively as vast media of time, space, and experience through which the human soul must painfully pass to reach its divine origin.

Aeon is also an important and frequently used term in the canonical books of the NEW TESTAMENT, where, with cognates, it occurs more than 100 times. In this usage, its original meaning was "age," it is, however, also translated in certain instances as "world."

ÆSIR \ˈā-zir, ˈa-, -sir\, Old Norse *Æsir*, singular *Áss*, in GERMANIC RELIGIONS, one of two main groups of deities. The other was called VANIR. Four of the Aesir were common to

the Germanic nations: ODIN, god of war and poetry, magician, and chief of the Aesir; FRIGG or Freya, Odin's wife; TYR, god of war; and THOR, whose name was the Germanic word for thunder. Some of the other important Aesir were BALDER, Bragi, and possibly HEIMDALL.

ÆTHRA \ˈēth-rə\, in Greek mythology, daughter of King Pittheus of Troezen and wife of Aegeus, king of Athens. She became mother of THESEUS by either Aegeus or POSEIDON. Later she guarded HELEN after she had been stolen from Sparta by Theseus; in retribution Aethra was made Helen's slave and followed her to Troy. Freed after the war, Aethra killed herself in grief for her son.

AFRICAN GREEK ORTHODOX CHURCH, religious movement in East Africa that represents a prolonged search for a more African-oriented form of CHRISTIANITY. It began when an Anglican in Uganda, Reuben Spartas, heard of the independent, all-black African Orthodox Church in the United States and founded his own African Orthodox Church in 1929. In 1932 he secured ORDINATION by the U.S. church's archbishop from South Africa, whose episcopal orders traced to the ancient Syrian Jacobite (MONOPHYSITE) Church of India. However, after concluding that the U.S. body was heterodox, the African Church added the term Greek and from 1933 developed an affiliation with the Alexandrian patriarchate of the Greek Orthodox church (*see* EASTERN ORTHODOXY).

In 1966 tensions arising from missionary paternalism, inadequate material assistance, and young Greek-trained priests who were not particularly African-oriented led Spartas and his followers into secession. The churches belonging to this new group, the African Orthodox Autonomous Church South of the Sahara, have asserted their African autonomy and accommodated to African customs (including polygamy and CLITORIDECTOMY [ritual circumcision of females]). At the same time, their vernacular versions of the Liturgy of St. John Chrysostom and use of vestments and ICONS represent a search for the connection with the primitive church.

AFRICAN METHODIST EPISCOPAL CHURCH, African-American Methodist denomination in the United States, formally organized in 1816. It developed from a congregation formed of African-Americans who withdrew in 1787 from St. George's Methodist Episcopal church in Philadelphia because of racial discrimination. They built Bethel African Methodist Church in Philadelphia, and in 1799 Richard Allen was ordained its minister by Bishop Francis Asbury of the Methodist Episcopal Church.

In 1816 Allen convoked African-American leaders of Methodist churches from several Middle Atlantic states to consider the future form of church organization among African Methodists of African origin. The outcome was the creation of the African Methodist Episcopal Church, and the selection and consecration of Allen as its first bishop. The new denomination soon established itself in other states, chiefly in the North, and then after the American Civil War also in the South. It also assumed a mandate to spread the gospel to the African continent, as well as to communities with African roots such as Haiti, where its first missionary was sent in 1827. As part of its mission, the African Methodist Episcopal Church founded colleges and seminaries, the best known of which is Wilberforce University in Wilberforce, Ohio (1856). Its more than 8,000 churches have a total membership of some 3,500,000.

AFRICAN RELIGIONS

ny a t-
tempt to generalize about the nature of “African religions” risks implying that there is homogeneity among all African cultures. In fact, Africa is a vast continent encompassing both geographic variation and tremendous cultural diversity.

Each of the more than 50 modern nations that occupy the continent has its own particular history and each in turn comprises numerous ethnic groups with different languages and unique customs and beliefs. African religions are as diverse as the continent is varied. Nevertheless, long cultural contact, in degrees ranging from trade to conquest, has forged some fundamental commonalities among religions within subregions, allowing for some generalizations to be made about the distinguishing features of indigenous religions. (Religions such as ISLAM or CHRISTIANITY that were introduced to Africa are not covered in this article.)

Although they often have been described as fixed and unchanging, in fact African indigenous traditions, like all religions, exhibit both continuity with the past and innovation. In the face of recent social, economic, and political upheavals, African religions have adapted to the changing needs of their communities.

WORLDVIEW AND DIVINITY

No single body of orthodox RELIGIOUS BELIEFS and practices can properly be identified as African. However, it is possible to identify similarities in worldviews and ritual processes across geographic and ethnic boundaries. Generally speaking, African religions hold that there is one creator God, maker of a dynamic universe. Myths commonly relate that after setting the world in motion, the Supreme Being withdrew and remains remote from the concerns of human life. The Dinka of The Sudan recount a myth, reiterated in many traditions across the continent, that explains that when the first woman lifted her pestle to pound millet, she struck the sky, causing God to withdraw. The story explains that although this withdrawal introduced toil, sickness, and death, it also freed humans from the constraints of God’s immediate control. In fact, cults to the “high God” are notably absent from many African religions. Instead, prayers of petition or sacrificial offerings are directed toward secondary divinities, who are messengers and intermediaries between the human and sacred realms.

Traditional Dogon ceremony associated with the end of the harvest, Tirelli, Mali

Patrick Syder—Lonely Planet Images/Getty Images

In West Africa, among the Ashanti of Ghana, elders regularly pour LIBATIONS and offer prayers to Nyame, the Creator, giving thanks and seeking blessing. But it is the veneration of matrilineal ancestors that is most significant in Ashanti ritual life, since they are considered the guardians of the moral order. According to the mythology of the Dogon of Mali, the Creator, Amma, brought the world into existence by mixing the primordial elements with the vibration of his spoken word. However, the principal cult is not to Amma but to the Nommo, primordial beings and first ancestors. In Nigeria the Yoruba hold that the Almighty Creator, Olorun, oversees a pantheon of secondary divinities, the *orisha*. Devotion to the *orisha* is active and widespread, but Olorun has neither priests nor cult group. Similarly, in the great lakes region of East Africa, the Supreme Being, Mulungu, is thought to be omnipresent but is sought in prayer of last resort; clan divinities are appealed to for intervention in most human affairs.

RITUAL AND RELIGIOUS SPECIALISTS

African religiousness is not a matter of adherence to a doctrine. Its focus is pragmatic, concerned with supporting fecundity and sustaining the community. African religions therefore emphasize maintaining a harmonious relationship with the divine powers within the cosmos, and their rituals attempt to harness cosmic powers and channel them for the good. Ritual is the means by which a person negotiates a responsible relationship within the community and with the ancestors, the spiritual forces within nature, and the gods.

The cults of the divinities are visible in the many shrines and altars consecrated in their honor. Shrines and altars are generally not imposing or even permanent structures. They can be as insubstantial as a small marker in a private courtyard. Right relations with the divinities are maintained through prayers, offerings, and sacrifices. The shedding of blood in ritual sacrifice releases the vital force that sustains life, and it precedes most ceremonies in which the ancestors or divinities are called upon for blessing. Blood sacrifice expresses the reciprocal bond between divinity and devotee.

Ancestors also serve as mediators by providing access to spiritual guidance and power. Death is not a sufficient condition for becoming an ancestor. Only those who lived a full measure of life, cultivated moral values, and achieved social distinction may attain this status. Ancestors are thought to reprimand those who neglect or breach the moral order by troubling the errant descendants with sickness or misfortune until restitution is made. When serious illness strikes, then, it is assumed that the cause is to be traced to interpersonal and social conflict. It is a moral dilemma as much as a biological crisis.

Ritual often marks a transition between physiological stages of life (such as puberty or death) coupled with a change in social status (as from child to adult). Such RITES OF PASSAGE are natural occasions for initiation, a process of socialization and education that enables the novice to assume the new social role. Initiation also involves the gradual cultivation of knowledge about the nature and use of sacred power. The Sande secret society of the Mande-speaking peoples is an important example, because its religious vision and political power extend across Liberia, Sierra Leone, Côte d'Ivoire, and Guinea. Sande initiates girls by teaching them domestic skills and sexual etiquette, as well as the religious significance of womanhood and female power. The society's sacred mask of the spirit Sowo reveals in iconographic form the association of women with water spirits and attests to the creative power of both. Among the mask's most striking features are the coils of flesh at the neck, representing concentric rings of water from which women, initially water spirits themselves, first emerged. The neck coils function like the HALO in Western art, signifying the wearer as human in form but divine in essence.

CIRCUMCISION and CLITORIDECTOMY are common and widespread rites of initiation. Although the surgical removal of the clitoris and parts of the labia minora is more radical and more dangerous than male circumcision, both forms of genital mutilation are understood to be important means by which gender is culturally defined. Within some cultures there exists the belief that genital surgery removes

all vestiges of ANDROGYNY, as the anatomical parts correlating with the opposite sex are cut away. Cosmogonic myths justify the surgery as reiterating primordial acts that promoted fecundity. In this way religions define the sacred status of sex and fertility.

Possession trance is the most dramatic and intimate contact that occurs between devotee and divinity. In most cases possession is actively sought, induced through the ritual preparation of the participant. Techniques that facilitate this altered state of consciousness range from inhaling vapors of medicinal preparations to rhythmic chanting, drumming, and dancing. Although this practice may in some cases be reserved for religious specialists or priests, among the devotees of the *vodun* ("divinities") in Benin, any initiate may become a receptacle of the gods. The possessed are referred to as "horsemen," because they are "mounted" by the spirits and submit to their control. Once embodied, the presiding god engages the congregation in dialogue and delivers messages.

Contact with the divinities is not always so direct; mediators between the human and divine realms are often necessary. Specialists range from simple officiants at family altars to prophets, sacred kings, and diviners. Certain priests are invested with powers that identify them more fully with the gods. Thus, for the Dogon the *hogon* is not just a simple officiant but a sacred persona. His saliva is the source of the life-giving humidity, and his foot must not touch the earth directly or the ground would dry up. Such persons must submit to a number of ritual interdictions, because their ritual purity guarantees the sustained order of the world.

The power of a king is often derived from the association of kingship with the forces of nature. In Swaziland the king is both a political and a ritual leader; the ritual renewal of his office is performed in conjunction with the summer solstice, when the celestial bodies are at their most powerful. The king is purified and washed, and the water running off his body is thought to bring the first rains of the new season. Among the Yoruba a succession of kings became deified, and

The faces of Arusha boys from Tanzania are painted in preparation for the coming of age circumcision ceremony
George Holton—Photo Researchers

their histories were infused with myths about a royal pantheon of secondary divinities. Such is the case of Shango, once the king of Oyo, who now is an *orisha* associated with thunder.

Diviners are ritual specialists who have mastered a learned technique for reading signs that communicate the will of the divinities. Typically, diviners possess a gift of clairvoyance and are therefore considered to share in the power of insight that is usually reserved to the spirits. Divinatory ritual is the centerpiece of African religions, because it opens to all a channel of mediation with the gods. According to the Yoruba, 401 *orisha* "line the road to heaven." Diviners identify the personal *orisha* to which an individual should appeal for guidance, protection, and blessing.

Witches are also humans with intermediating power; however, theirs is ambiguous and therefore dangerous and must be controlled. The Gelede ritual masquerades of the Yoruba are lavish spectacles designed to represent and honor the "Great Mothers," elderly women considered to possess the secret knowledge of life itself, and the power of transformation. While considered "witches," the Great Mothers are not, however, the personification of evil. They can be beneficent, bringing wealth and fertility, or they can invoke disaster in the form of disease, famine, or barrenness. Because their power to intercede surpasses that of the ancestors or the divinities, they are called the "owners of the world." Gelede is therefore executed to appease the witches, in order to marshal their secret powers for the benefit of society. However, throughout Africa much misfortune is ultimately explained as the work of WITCHCRAFT, and diviners are sought to provide protective medicines and AMULETS.

MYTHOLOGY

In African oral cultures it is myths that embody philosophical reflections, express ultimate values, and identify moral standards. Unlike Western mythology, African myths are not recounted as a single narrative story, nor is there any established corpus of myth. Instead, myths are embedded and transmitted in ritual practice.

African mythology commonly depicts the cosmos anthropomorphically (*see* ANTHROPOMORPHISM). The human body is a microcosm and incorporates the same primordial elements and essential forces that make up the universe. Because the human body is conceived as the twin of the cosmic body, twinship is a predominant theme in much West African myth and ritual. According to COSMOGONY shared by the Dogon, Bambara, and Malinke peoples of Mali, the primordial beings were twins. Twins therefore represent the ideal. Every individual shares in the structure of twinship, in that the placenta is believed to be the locus of one's destiny and the soul's twin. Following a birth, the placenta is buried in the family compound and watered for the first week of the child's life. Among the Ashanti of Ghana, twins are permanently assigned a special status akin to that of living shrines, because as a sign of abundant fertility they are repositories of sacredness. For the Ndembu of the Democratic Republic of the Congo, by contrast, twins represent an excess of fertility more characteristic of the animal world than the human, and rituals are undertaken to protect the community from this anomalous condition.

The trickster is a prevalent type of mythic character in African mythology. Tricksters overturn convention and are notorious for pursuing their insatiable appetites and shameless lusts, even at the price of disaster. Yet even as the trickster introduces disorder and confusion into the divine plan, he paves the way for a new, more dynamic order. To the Fon of Benin, Legba is such a trickster. He is a troublemaker who disrupts harmony and sows turmoil. However, Legba is not viewed as evil but rather as a revered transformer. Like other such trickster figures, Legba presides over DIVINATION. Called the "linguist," he translates for humans the otherwise cryptic messages of Mawu, the Supreme Being. Through divination, he also allows for new possibility. Tricksters thus communicate an important paradox: The cosmos, although grounded in a divinely ordained order, is characterized by constant change.

NEW RELIGIONS, INDEPENDENT CHURCHES, AND PROPHETIC MOVEMENTS

New religious movements have proliferated in sub-Saharan Africa in the wake of European colonialism as one response of Africans to the loss of cultural, economic, and political control. Independent, or indigenous, churches have arisen largely in reaction against European Christian MISSIONS. The independent churches established in the 20th century have played a significant role in the postcolonial struggle for national independence. Religious vision and fervor, combined with the will for political self-determination, have inspired new movements throughout Africa. Today, independent churches constitute more than 15% of the total Christian population in sub-Saharan Africa.

The Harrist church was one of the first to receive the sanction and support of the state. Its founder, William Wadé Harris, was a prophet-healer who claimed that the angel GABRIEL visited him while he was in prison for participating in a political revolt in his native Liberia. After his release Harris moved to neighboring Côte d'Ivoire (where the European Christian missions had not been very successful) in order to lead his own vigorous evangelical campaign. (See HARRIS MOVEMENT.)

In contrast with indigenous religious systems, which are generated and sustained by the community, Christian prophetic movements are organized around an individual. However, these movements are like indigenous religions in that they are preoccupied with healing. Prophets are considered charged by God with the task of purifying the people and struggling against witchcraft. Public CONFESSIONS, EXORCISMS, and purifying BAPTISMS are dominant features. In the Democratic Republic of the Congo Simon Kimbangu inaugurated a healing revival in 1921 that drew thousands of converts to Christianity. Kimbangu's powerful ministry was viewed as a threat by Belgian colonial authorities, who arrested him. His imprisonment only stirred the nationalist fervor of his followers. The KIMBANGUIST CHURCH survived and was eventually recognized by the state. In 1969 the church, which now has more than 4 million adherents, was admitted to the WORLD COUNCIL OF CHURCHES.

In contrast, neotraditional movements retain elements of indigenous African belief and ritual within the context of Christian liturgy. These syncretic cults incorporate important aspects of African religious expression, such as the practice of secrecy characteristic of the Sande societies in West Africa, and fundamental beliefs, such as the reliance upon the intervention of ancestral spirits. An example is the Bwiti cult originating with the Fang of Gabon, which fused traditional ancestral cults with Christian symbolism and theology and messianic prophetic leadership. Such new African churches have tried to sustain a sense of community and continuity, even amidst rapid and dramatic social change.

Some scholars regard the new African religions as manifestations of social or religious protest—by-products of the struggle for political self-determination and the establishment of independent nation-states. However, the persistence and proliferation of indigenous religions suggest that they possess the necessary openness to experimentation and renewal to enable Africans to accommodate the changing character and needs of their communities.

AFRICAN RELIGIONS, ART OF, artistic expression that alludes to RELIGIOUS BELIEFS and supports rituals of indigenous African faiths. Both African religion and African art have been subject to problematic interpretations based on evolutionary theories that were borrowed from biology and inappropriately applied to the social sciences and humanities. As a result, they have been characterized as “primitive.” Additionally, in being perceived as “traditional” expressions, they have been deemed static and timeless. Assuming African art to be produced by anonymous, untrained artisans, Western museums have typically treated it as “artifact,” housing it in museums of natural history rather than fine arts. In fact, although both African religion and African art do draw on indigenous legacies, they also allow for innovation and for the imaginative appropriation of new forms.

Generalizations about African aesthetics, without specific reference to peoples or their compositions, are perilous. However, one consistent aesthetic criterion is the achievement of balance between total abstraction and naturalistic representation. Realistic portraiture is avoided; instead, through stylized representation the African artist aims at achieving vividness and equilibrium. African sculptures successfully convey spiritual power precisely because they are not bound by resemblance.

Much African art aims at actualizing spiritual forces, not merely representing them. Moreover, objects do not embody power in their own right. They must be activated by an act of consecration or through repeated ritual. Statuettes called “FETISHES” give substance to invisible spiritual intermediaries. The Lobi of Burkina Faso carve such figures, which they call *bateba*. Once activated, the *bateba* can be invoked for aid but will die if neglected.

Masks and masquerading bring the plastic arts of sculpture and textiles into dynamic conjunction with the performing arts of music and dance. Whereas Westerners associate masks with disguise and pretense and tend to assume that masks represent spirits of the dead, this interpretation does not do justice to the complexity of masking traditions. In fact, the majority of figures depicted are not “spirits” but ancestors, CULTURE HEROES, and gods; significant events in which these mythic beings figure are sometimes reenacted in performances. Some masks are not anthropomorphic figures at all but complex superstructures representing cosmic dynamics or the cosmic order. Their forms are predicated on cosmological ideas as much as on formal, aesthetic qualities.

Another important intersection of art and religion is the sculptural representation of deities. In Nigeria, Shango, the Yoruba thunder god, is known for his unpredictable anger, likened to thunderbolts. His two-headed ax expresses his vital force and the ambiguity of power. Priests of Shango (both male and female) who experience possession trance carry staffs representing their dramatic access to Shango's power. The staff depicts a woman kneeling in supplication, while the symbolic two-headed ax extends from her head. The dark color of the staff represents the trance itself, the hidden quality of spiritual knowledge.

Nonfigurative art objects also mediate spiritual power. The stools of the Ashanti of Ghana provide earthly homes for departed kings and other ancestors. Made of wood from trees believed to be the abode of spirits, the stools are ceremonially blackened with a mixture of kitchen soot, spiders' webs, and eggs. The elements respectively represent wisdom, subjugation of enemies, and peace, honoring the function of the immortal guardians of social order.

Thus, African art objects belong to a broader realm of ritual experience and lose meaning when displayed as emblems of aesthetic judgment alone. On the other hand, preoccupation with context to the detriment of appreciation of style fails to do justice to the power of the form through which meaning is expressed.

ĀGAMA \ˈä-gə-mə\ (Sanskrit: “tradition, received teachings”), post-Vedic SCRIPTURES conveying ritual knowledge that are considered to have been revealed by a personal divinity. Śaivite scriptures, dating probably to the 8th century, are particularly so designated, in contrast to the Vaiṣṇava Samhitās and Śākta TANTRAS (see ŚAIVISM, VAIṢṆAVISM, and ŚĀKTISM). The texts are grouped according to the sects that follow a particular āgamic tradition—e.g., the Śaiva-siddhānta or, on the Vaiṣṇava side, PĀNCARĀTRA. The *āgamas* provide vital information on the earliest codes of temple building, image making, and religious procedure.

AGAMEMNON \ə-gə-ˈmem-nən\, in Greek legend, king of Mycenae in Argos. He was the son (or grandson) of ATREUS and the brother of MENELAUS. After the murder of Atreus by a nephew, Aegisthus, Agamemnon and Menelaus took refuge with Tyndareus, king of Sparta, whose daughters, Clytemnestra and HELEN, they respectively married. By Clytemnestra, Agamemnon had a son, ORESTES, and three daughters, IPHIGENEIA (Iphianassa), ELECTRA (Laodice), and Chrysothemis. Menelaus succeeded Tyndareus, while Agamemnon recovered his father's kingdom.

After PARIS (Alexandros) carried off Helen, Agamemnon called on the chieftains of Greece to unite in war against the Trojans. He himself furnished 100 ships and was chosen commander of the combined forces. The fleet assembled at the port of Aulis in Boeotia but was prevented from sailing by calms or contrary winds that were sent by the goddess ARTEMIS because Agamemnon had in some way offended her. To appease the wrath of Artemis, Agamemnon sacrificed his own daughter Iphigeneia—although, in some versions of the myth an animal was substituted and Iphigeneia survived.

After the capture of Troy, Agamemnon returned with CASSANDRA, the daughter of PRIAM, as his war-prize, but upon arrival he was murdered by Clytemnestra and her lover Aegisthus. When his son Orestes had grown to manhood he returned and avenged his father by killing Clytemnestra and Aegisthus.

AGAPE \ə-ˈgä-pä, ä-, -pē; ˈä-gə-pä, chiefly Brit ˈa-gə-pē\, Greek *agapē*, in the NEW TESTAMENT, the fatherly love of God for mankind, and mankind's reciprocal love for God. The term necessarily extends to the love of one's fellow man. The CHURCH FATHERS used *agape* to designate both a rite (using bread and wine) and a meal of fellowship to which the poor were invited. The historical relationship between the *agape*, the Lord's Supper, and the EUCHARIST is uncertain. Some scholars believe the *agape* was a form of the Lord's Supper and the Eucharist the sacramental aspect of that celebration. Others interpret *agape* as a fellowship meal held in imitation of gatherings attended by Jesus and his disciples; the Eucharist is believed to have been joined to this meal later but eventually to have become totally separated from it. The possibility that Jesus may have given a new significance to Jewish ritual gatherings of his day has complicated the problem of interpretation.

AGDISTIS: see GREAT MOTHER OF THE GODS.

AGGADAH \ä-gä-'dä, ä-'gä-də\; see HALAKHAH AND HAGGADAH.

AGLAUROS \ä-'glör-əs\, in Greek mythology, eldest daughter of the Athenian king CECROPS. Aglauros died with her sisters by leaping from the Acropolis after seeing the infant Erechthonius, a human with a serpent's tail. Aglauros had a SANCTUARY on the Acropolis in which young men of military age swore an OATH to her as well as to ZEUS and to other deities. The honor, however, may have stemmed from another legend—that Aglauros had sacrificed herself for the city during a protracted war.

AGNI \'äg-nē\ (Sanskrit: "Fire"), in HINDUISM, a fire god second only to INDRA in the VEDIC mythology of ancient India. He is equally the fire of the sun, of lightning, and of the hearth—hence, of all three levels in the Vedic COSMOLOGY. As the fire of sacrifice, he is the mouth of the gods, the carrier of the oblation, and the messenger between human and divine. Agni is ruddy-hued and has two faces—one beneficent and one malignant. In the *Ṛg VEDA* he is sometimes identified with RUDRA, the forerunner of the later god SHIVA. Though Agni has no independent sect in modern Hinduism, he is invoked in many ceremonies, and where Vedic rites persist, as in weddings, his presence is central.

AGNOSTICISM (from Greek: *agnōstos*, "unknowable"), the doctrine that humans cannot know the existence of anything beyond the phenomena of their experience. The term has come to be equated in popular parlance with skepticism about religious questions.

Agnosticism both as a term and as a philosophical position gained currency through its espousal by Thomas Huxley (1825–95), who is thought to have coined the word agnostic (as opposed to "gnostic") in 1869 to designate one who repudiated traditional Judeo-Christian THEISM and yet disclaimed doctrinaire ATHEISM, in order to leave such questions as the existence of God in abeyance.

There are thus two related but nevertheless distinct viewpoints suggested by the term. It may mean no more

Agni with characteristic symbol of the ram; in the Guimet Museum, Paris
Giraudon—Art Resource

than the suspension of judgment on religious questions about God's existence for lack of critical evidence. But Huxley's own elaboration on the term makes clear that the suspension of judgment on questions about God's existence was thought to invalidate Christian beliefs about "things hoped for" and "things not seen." Huxley's role in the struggle over the teachings of Charles Darwin helped to establish this connotation as the primary one in the definition of agnosticism. When such prominent defenders of the Darwinian hypothesis as Clarence Darrow likewise labeled themselves as agnostics, the writers of popular apologetic pamphlets found it easy to equate agnosticism with hostility to conventional Christian tenets.

AGNUS DEI \'äg-nüs-'dä-ē, 'än-yüs-; 'äg-nəs-'dä, -'dē-ī\ (Latin), *English* Lamb of God, designation of JESUS CHRIST in Christian liturgical usage. It is based on the saying of JOHN THE BAPTIST: "Behold, the Lamb of God, who takes away the sin of the world!" (John 1:29). In the liturgy of ROMAN CATHOLICISM the Agnus Dei is employed in the following text: "Lamb of God, who takest away the sins of the world, have mercy upon us! Lamb of God, who takest away the sins of the world, have mercy upon us! Lamb of God, who takest away the sins of the world, grant us peace!" It comes between the LORD'S PRAYER and the EUCHARIST and unites the sacrifice of the liturgy to the sacrifice of Christ on the Cross as the Lamb of God, calling to mind the sacrifice of the lamb in the cultus of the OLD TESTAMENT. The churches of the ANGLICAN COMMUNION and of LUTHERANISM have both retained the Agnus Dei in their eucharistic rites.

The name is also applied to figures of Christ as the Lamb of God, especially to waxen disks impressed with this figure and blessed by the pope.

AGRIONIA \ä-grē-'ō-nē-ə\ (from Greek: *agriōs*, "wild," or "savage"), in ancient GREEK RELIGION, a festival celebrated annually in Boeotia and elsewhere in honor of DIONYSUS. Myth states that the daughters of Minyas, king of Orchomenus, having ignored the rites of the god, were driven mad by Dionysus and ate the flesh of one of their children; as punishment they were turned into bats or birds.

AHAB \'ā-hab\, also spelled Achab (fl. 9th century BCE), seventh king of the northern kingdom of Israel (reigned c. 874–c. 853 BCE), according to the OLD TESTAMENT (1 Kings 16:29–22:40), and son of King Omri (1 Kings 16:29–30). External to the BIBLE, the reign of Ahab is mentioned in the monolith inscription of King Shalmaneser III of Assyria and in the Moabite Stone, although the latter does not specifically name Ahab.

Omri left to Ahab an empire that comprised not only territory east of the Jordan River, in Gilead and probably Bashan, but also the land of Moab, whose king was tributary (according to the Moabite Stone). The southern kingdom of JUDAH, if not actually subject to Omri, was certainly a subordinate ally. Ahab's marriage to JEZEBEL, daughter of Ethbaal of Sidon, revived an alliance with the Phoenicians that had been in abeyance since the time of SOLOMON.

Throughout Ahab's reign, however, a fierce border war was waged with Syria (1 Kings 20ff.) in which Israel, in spite of occasional victories, proved the weaker, and in the meantime Mesha, king of Moab, successfully revolted and occupied the southern portions of the territory of GAD. The forces of Israel retained enough strength to contribute the second-largest contingent of soldiers to the combined armies that checked the westward movement of Shal-

maneser III at Karkar. After the Assyrians were repulsed, however, the alliance broke up, and Ahab met his death fighting the Syrians in a vain attempt to recover Ramoth-Gilead (1 Kings 22:34–37; 2 Chronicles 18).

Jezebel attempted to set up the worship of the Canaanite god BAAL in the capital city of Samaria and to maintain the Oriental principle of the absolute power and authority of the sovereign (1 Kings 16:31–33). This roused the hostility of a conservative party which held to traditional Hebrew democratic conceptions of society and adhered to the worship of the national god, YAHWEH. As representative of this party, the prophet ELIJAH protested against both the establishment of the Baal priests and Ahab's judicial murder of Naboth (1 Kings 18, 21:17–29). To the reign of Ahab may be traced the beginning of that sapping of the national life which led to the condemnations of the 8th-century prophets and to the downfall of Samaria.

AHAZ \ə-ˈhaz\, also spelled Achaz \ə-ˈkaz\, Assyrian Jehoahaz \jī-ˈhō-ə-ˈhaz\ (fl. 8th century BCE), king of JUDAH (c. 735–720 BCE) who became an Assyrian vassal (2 Kings 16; 2 Chronicles 28; Isaiah 7–8).

Ahaz's kingdom was invaded by Pekah, king of ISRAEL, and Rezin, king of Syria, in an effort to force him into an alliance with them against Assyria. Acting against the counsel of the prophet ISAIAH, Ahaz appealed for aid to Tiglath-pileser III, king of Assyria. Assyria defeated Syria and Israel, and Ahaz presented himself as a vassal to the Assyrian king. Soon Assyria exacted a heavy tribute and the Assyrian gods were introduced into the TEMPLE OF JERUSALEM.

AHIMSĀ \ə-ˈhim-sā-, -ˈhi-ˈ\ (Sanskrit: “noninjury”), the fundamental ethical virtue of the Jains of India, highly respected in HINDUISM and BUDDHISM as well. In modern times, MAHATMA GANDHI developed his theory of passive political resistance on the principle of *ahimsā*.

In JAINISM, *ahimsā* is the standard by which all actions are judged. For householders observing the small vows (*anuvrata*), the practice of *ahimsā* requires that they not kill any animal life, but for ascetics observing the great vows (*mahāvratā*), *ahimsā* requires that no knowing or unknowing injury be inflicted on any living substance. Living matter (*jīva*) includes humans, animals, insects, plants, and atoms, and the same law governs the entire cosmos. The interruption of another *jīva*'s spiritual progress increases one's own karmic load and delays one's liberation from the cycle of rebirths. Many Jain practices, such as not eating or drinking after dark or the wearing of cloth mouth-covers (*mukhavastrikā*) by monks, are based on this principle.

AHĪR \ə-ˈhir\, cattle-tending CASTE widespread in northern and central India. Their name connects them to the Ābhīras of Sanskrit literature, who are mentioned in the epic MAHĀBHĀRATA. Certain scholars have contended that these cattlemen, once concentrated in southern Rajasthan and Sind, played an important role in the early development of the god KRISHNA as the cowherd; others dispute the notion. However one resolves the historical issue, residents of the Braja (Vraja) region in Uttar Pradesh, where Krishna is regarded as having spent his pastoral boyhood, often identify him as an Ahīr.

AHITHOPHEL \ə-ˈhi-thə-ˌfel\, in the OLD TESTAMENT, one of King DAVID's most trusted advisers who took a leading part in the revolt of David's son ABSALOM. Ahithophel's defection was a severe blow to David. Having consulted Ahithophel

about his plans to proceed against David, Absalom then sought advice from Hushai, another of David's counselors. Hushai betrayed Absalom's cause by deliberately proposing an inferior scheme, which Absalom accepted. Ahithophel, recognizing that Hushai had outwitted him, foresaw the disastrous defeat of Absalom's forces and took his own life (2 Samuel 15:31–37; 16:20–17:23).

AH KIN \ˈah-ˈkən\ (Mayan: “He of the Sun”), regular clergy of the Yucatec Maya in PRE-COLUMBIAN MESO-AMERICAN RELIGIONS. The Yucatec title Ah Kin (from *ah*, “the holder of a certain position” and *kin*, “sun, day, feast day”) might be loosely translated “the day-priest,” or “the calendar-priest.” The Ah Kin are known historically for their performance in the ritual sacrifice of victims, whose hearts were offered to the Mayan gods. The chief priest (Ah Kin Mai) served in the various capacities of administrator, teacher, healer, astronomer, adviser to the chief, and diviner. The office of Ah Kin was hereditary, passing from priests to their sons, but training was also extended to the sons of the nobility who showed inclinations toward the PRIESTHOOD.

AHL AL-BAYT \ä-həl-äl-ˈbīt, ä-l-äl-\ (Arabic: “People of the House”), designation in ISLAM for the holy family of the Prophet MUHAMMAD, particularly his daughter FĀṬĪMA, her husband ʿALĪ (who was also Muhammad's cousin), and their descendants.

SHĪʿITES closely identify this family with the IMAMS, whom they regard as the legitimate holders of authority in the

Exercising the principle ahimsā, a Jain feeds grain to crows in a New Delhi marketplace as a service to God

Reuters—Kamal Kishore/Archive Photos

Muslim community, the infallible bearers of sacred knowledge, and the source of messianic deliverance in the end time. Since the 12th and 13th centuries most SUFI orders have included members of the Prophet's family in their elaborate spiritual lineages (*silsilas*), which they trace back to the Prophet through 'Alī

Aside from MECCA, shrines containing the remains of members of the Prophet's family and their heirs are the most popular Muslim PILGRIMAGE centers. These include the shrines of 'Alī in NAJAF (Iraq), ḤUSAYN in KARBALĀ' (Iraq) and Cairo (Egypt), 'ALĪ AL-RIDĀ in MASHHAD (Iran), and Mu'tin al-Dīn Chistī in Ajmer (western India). In many Muslim societies people known as SHARĪFS and SAYYIDS hold privileged status by descent from the holy family. Among those claiming such status in the 20th century were King Ḥasan II of Morocco (b. 1929), King Hussein of Jordan (1935–99), Saddam Hussein of Iraq (b. 1937), and ABŪ'L-'ALĀ' MAWDŪDĪ of India/Pakistan (1903–79). See also TARIQA; ZIYARA.

AHL AL-KITĀB \ä-həl-äl-kē-'tab, ä-l-äl-\ (Arabic: "People of the Book"), in Islamic thought, those who are possessors of divine books (*i.e.*, the TORAH, the GOSPEL, and the AVESTA of ZOROASTRIANISM), as distinguished from those whose religions are not based on divine revelations.

The Prophet MUHAMMAD gave many privileges to *Ahl al-kitāb* that are not to be extended to others, including freedom of worship; thus, during the early Muslim conquests, Jews and Christians were not forced to convert to ISLAM. Muslim authorities are responsible for the protection of *Ahl al-kitāb*, for, "he who wrongs a Jew or a Christian will have myself [the Prophet] as his indicter on the day of judgment." After Muhammad's death, his successors sent instructions to their generals and provincial governors not to interfere with *Ahl al-kitāb* in their worship and to treat them with full respect.

Muslim men may marry women from *Ahl al-kitāb* even if the latter choose to remain in their religion; Muslim women, however, are not allowed to marry men from *Ahl al-kitāb* unless they convert to Islam. The children resulting from such mixed marriages must be raised as Muslims, according to the SHARĪFA.

AHL-E ḤAQQ \ä-hə-le-'hāk, ä-le-\ (Arabic: "People of Truth," or "People of God"), also mistakenly called 'Alī Ilāhīs, or 'Aliyu'llāhīs ("Adherents to the Divinity of 'Alī"), secret, loosely organized, syncretistic religion appearing in the 15th century. Their beliefs were derived largely from ISLAM. The religion is centered in western Iran and Iraq and is especially prevalent among the Kurds and Turkmens. They retain the 12 IMAMS of ITHNĀ 'ASHARĪYAH Shi'ism and certain aspects of Islamic MYSTICISM. Influenced by extremist SHĪ'ITE groups (GHULĀT), they preach seven successive manifestations of God and the transmigration of souls, which pass through 1,001 incarnations and in the process receive the proper reward for their actions. The ultimate purification (becoming "luminous") is limited to those who in the initial creation were destined to be good and were created of yellow, rather than black, clay. On the Day of Judgment the good will enter Paradise and the wicked will be annihilated. Their rites include animal sacrifice.

The chief source of information about the sect are the *Furqān al-akhbār* and the *Shāhnāma-ye ḥaqīqāt*, written in the late 19th or early 20th century by Hājī Ni'matallāh.

AḤMAD BĀBĀ \ä'k-məd-'bä-bä\, in full Abū al-'Abbās Aḥmad ibn Aḥmad al-Takrūrī al-Massūfī (b. Oct. 26, 1556,

Arawān, near Timbuktu, Songhai Empire—d. April 22, 1627, Timbuktu), jurist, writer, and a cultural leader of the western Sudan.

A descendant of a line of jurists, Aḥmad Bābā was educated in Islamic culture, including jurisprudence. His *fatwās* (legal opinions) are noted for their clarity of thought and clear exposition of Islamic judicial principles (see SHARĪFA). He also compiled *Nail al-ibtihāj*, a biographical dictionary of the famous MĀLIKĪ LEGAL SCHOOL (one of the four schools of Islamic law) jurists; this work is still an important source of information concerning the lives of Mālikī jurists and Moroccan religious personalities.

AḤMADIYA \ä'h-mä-'dē-ə\, a modern Islamic sect and the generic name for various SUFI (Muslim mystic) orders. The sect was founded in Qādiān, the Punjab, India, in 1889 by MĪRZĀ GHULĀM AḤMAD (c. 1839–1908), who claimed to be the *mahdī* (see MAHDI), the Christian MESSIAH, an incarnation of the Hindu god KRISHNA, and a reappearance (*burūz*) of MUHAMMAD. The sect preaches, among other tenets, that JESUS feigned death and RESURRECTION but in actuality escaped to India, where he died at the age of 120, and that JIHAD represents a battle against unbelievers to be waged by peaceful methods rather than by violent military means.

On the death of the founder, Mawlāwī Nūr-al-Dīn was elected by the community as *khalīfa* ("successor"). In 1914, when he died, the Aḥmadiya split. The original, Qādiānī, group recognized Ghulām Aḥmad as prophet (*nabīā*) and his son Ḥaḍrat Mīrzā Bashīr al-Dīn Maḥmūd Aḥmad as the second CALIPH. The new Lahore society, however, accepted Ghulām Aḥmad only as a reformer (*mujaddid*).

The Qādiānīs relocated to Rabwah, Pakistan, in 1947; there are also communities in India and West Africa as well as in Great Britain, Europe, and the United States. They are a highly organized community with a considerable financial base. They are zealous missionaries, preaching Aḥmadī beliefs as the one true ISLAM, with Muhammad and Mīrzā Ghulām Aḥmad as prophets.

Members of the Lahore group are also proselytizers, though more concerned in gaining converts to Islam than to their particular sect. Led from its inception by Mawlānā Muhammad 'Alī until his death in 1951, the sect has been active in English- and Urdu-language publishing and in liberalizing Islam.

Aḥmadiya also designates several Sufi orders, the most important of which is that of Egypt named after Aḥmad al-Badawī, one of the greatest saints of Islam (d. 1276). Al-Badawī achieved great fame for his knowledge of Islamic sciences, but he eventually abandoned speculative theology and devoted himself to contemplation in seclusion. Soon he became known as a miracle-working saint and had thousands of followers. He arrived in Ṭantā (north of Cairo, Egypt) in 1236. His followers were also called Suṭūḥīya from *aṣḥāb al-saṭḥ* (the people of the roof); according to one anecdote, when al-Badawī arrived at Ṭantā, he climbed upon the roof of a private house and stood motionless looking into the sun until his eyes became red and sore. This action was then imitated by some of his followers. After al-Badawī's death, the Aḥmadiya was headed by 'Abd al-'Āl, a close disciple who ruled the order until his death in 1332. Before his death, 'Abd al-'Āl ordered a shrine built on al-Badawī's tomb, which was later replaced by a large mosque.

The Aḥmadiya order, which is representative of certain types of dervishes, faced great opposition from Muslim legalists, who, in general, opposed all Sufism, and from political figures who felt threatened by the order's tremendous

popular influence. The Aḥmadiya is one of the most popular orders in Egypt, and the three yearly festivals in honor of al-Badawī are major celebrations. Numerous minor orders are considered branches of the Aḥmadiya and are spread all over the Islamic world. Among these are the Shinnāwiya, the Kannāsiya, the Bayyūmiya, the Sallāmiya, the Ḥalabīya, and the Bundāriya.

AḤMAD KHAN, SAYYID \ˈa-mad-ˈkän\, also called Sir Sayyid (b. Oct. 17, 1817, Delhi—d. March 27, 1898, Aligarh, India), Muslim educator, jurist, and author, founder of the Anglo-Mohammedan Oriental College at Aligarh, Uttar Pradesh, India (now called ALIGARH MUSLIM UNIVERSITY), and the principal motivating force behind the revival of Indian ISLAM in the late 19th century. In 1888 he was made a Knight Commander of the Star of India.

After a limited education Aḥmad Khan became a clerk with the East India Company in 1838. He qualified three years later as a subjudge and served in the judicial department at various places.

His career as an author (in Urdu) started at the age of 23 with religious tracts. In 1847 he brought out a noteworthy book, *Āthār al-ṣanādīd* ("Monuments of the Great"), on the antiquities of Delhi. Even more important was his pamphlet, "The Causes of the Indian Revolt." During the Indian Mutiny of 1857 he had taken the side of the British, but in this booklet he laid bare the weaknesses and errors of the British administration that had led to countrywide dissatisfaction and eventual rebellion. The booklet had considerable influence on British policy. Meanwhile, he began a sympathetic interpretation of the BIBLE, wrote *Essays on the Life of Mohammed* (1870), and wrote several volumes of a modernist commentary on the QUR'AN. In these works he sought to harmonize the Islamic faith with the scientific and politically progressive ideas of his time.

In 1867 he was transferred to Benares (now VARANASI), a city with great religious significance for the Hindus. About the same time a movement started at Benares to replace Urdu, the language cultivated by the Muslims, with Hindi. This movement and the attempts to substitute Hindi for Urdu in the publications of the Scientific Society convinced Aḥmad Khan that the paths of the Hindus and the Muslims must diverge. Thus, during a visit to England (1869–70) he prepared plans for a great educational institution, described as "a Muslim Cambridge." On his return he set up a committee for the purpose and also started an influential journal, *Tahdhīb al-akhlāq* ("Moral Reform"), for the "uplift and reform of the Muslim"; out of these efforts grew Aligarh Muslim University. In 1886 he organized the All-India Muhammadan Educational Conference, which met annually at different places to promote education and to provide the Muslims with a common platform. Until the founding of the Muslim League in 1906, it was the principal national center of Indian Islam.

Aḥmad Khan advised the Muslims against joining active politics. He argued that, in a country where communal divisions were all-important and education and political organization were confined to a few classes, parliamentary democracy would work only inequitably. Muslims, generally, followed his advice and abstained from politics until several years later when they had established their own political organization.

AḤMED YESEVĪ \äk-ˈmet-ye-se-ˈvē\, also spelled Aḥmad Yasawī \äk-ˈmed-yä-sä-ˈvē\ (b. second half of the 11th century, Sayrām [now in Kazakhstan]—d. 1166, Yasī, Turkistan

[now Turkmenistan]), poet and Sufi (see SUFISM) mystic who exerted a powerful influence on the development of mystical orders throughout the Turkish-speaking world.

Legends indicate that his father died when the boy was young and his family moved to Yasī, where he began his mystical teaching, hence his name. He is said to have gone to Bukhara to study with the great Sufi leader Yūsuf Hamadānī and other famous mystics. Finally he returned to Yasī. The extant work attributed to the poet is the *Divān-i Ḥikmet* ("Book of Wisdom"), containing poems on mystical themes. Scholars believe that they are probably not his though they are probably similar in style and sentiment to what he wrote. Legends about his life were spread throughout the Turkish Islamic world, and he developed a tremendous following. The conqueror Timur erected a magnificent mausoleum over his grave in 1397/98, which attracted pilgrims who revered him as a saint.

Aḥmed Yesevī wrote poetry for the people, and his mystical order was a popular Islamic brotherhood that also preserved ancient Turco-Mongol practices and customs in their ritual. His poetry deeply influenced Turkish literature, paving the way for the development of mystical folk literature.

AHRIMAN \ah-rē-ˈman; ˈär-i-mən, -män\, *Avestan* Angra Mainyu ("Destructive Spirit") \aŋ-ˈra-mīn-ˈyü\, the evil spirit in the dualistic doctrine of ZOROASTRIANISM. His essential nature is expressed in his principal epithet—Druj, "the Lie." The Lie expresses itself as greed, wrath, and envy. To aid him in attacking the light, the good creation of AHURA MAZDĀ, Ahriman created DEMONS embodying envy and similar qualities. Believers expect Ahriman to be defeated in the end of time by Ahura Mazdā. PARSIS tend to see Ahriman as an ALLEGORY of human evil.

AḤSĀ'Ī, AḤMAD AL- \äl-äk-ˈsä-ē, -sī\, in full Shaykh Aḥ-mad ibn Zayn al-Dīn Ibrāhīm al-Aḥsā'ī (b. 1753, Al-Ḥasa, Arabia [now in Saudi Arabia]—d. 1826, near Medina), visionary and founder of the SHĪ'ITE Muslim Shaykhī sect of Iran and Iraq.

After nearly 50 years of study and travel in eastern Arabia and Iraq, al-Aḥsā'ī taught religion in Yazd and Kirman-shah, Persia. His interpretation of Shi'ism attracted many followers, including the Qajar rulers, but also aroused controversy. He claimed knowledge directly from visions of MUHAMMAD and the IMAMS, and he was influenced by the thought of MULLĀ ṢADRĀ (d. 1640), the leading Shi'ite gnostic at the school of Isfahan. Al-Aḥsā'ī argued for the existence of an archetypal level of reality (*Hūrqalyā*) in the cosmos between the divine realm and the earth. Some *Uṣūlī* (rationalist) Shi'ite authorities objected to his opinions on Muhammad's heavenly ascent (MĪRĀJ), the concealment of the Imam MAḤDĪ, and human resurrection; he maintained that each involved individual spirit bodies existing in the intermediate world, rather than physical ones. Al-Aḥsā'ī challenged scholarly Shi'ite doctrines on God and the imams by contending that the imams were originally beings of divine light who participated in the creation of the world. Moreover, he refuted the authority of *Uṣūlī* jurists, who regarded themselves as spiritual caretakers of the Shi'ite community during the Imam Maḥdī's absence.

Al-Aḥsā'ī's final breach with Shi'ite authorities occurred between 1822 and 1824, when a group of authorities residing in Iran and the holy cities in Iraq formally denounced him as an infidel. Following his excommunication, the shaykh left KARBALĀ' and died during a pilgrimage to MECCA.

When he died, however, he was still widely regarded as a leading religious authority. His successor as the leader of the Shaykhīs was Sayyid Kāz-im Rashtī (d. 1843).

AHURA MAZDĀ \ə-ˈhūr-ə-ˈmaz-də, -ˈmāz- \ (Avestan: “Wise Lord”), also spelled Ormizd \ˈör-,mizd \, or Ormazd \ˈör-,māzd \, supreme god in ancient Iranian religion, especially in the religious system of the Iranian prophet ZOROASTER (7th century–6th century BCE). Ahura Mazdā was worshiped by the Persian king Darius I (reigned 522 BCE–486 BCE) and his successors as the greatest of all gods and protector of the just king.

According to Zoroaster, Ahura Mazdā created the universe and the cosmic order that he maintains. He created the twin spirits SPENTA MAINYU and Angra Mainyu (AHRI-MAN)—the former beneficent, choosing truth, light, and life, the latter destructive, choosing deceit, darkness, and death. The struggle of the spirits against each other makes up the history of the world.

In ZOROASTRIANISM, as is reflected in a collection of texts called the AVESTA, Ahura Mazdā is identified with the beneficent spirit and directly opposed to the destructive one. The beneficent and evil spirits are conceived as mutually limiting, coeternal beings, the one above and the other beneath, with the world in between as their battleground. In late sources (3rd century CE onward), Zurvān (“Time”) is made the father of the twins Ormazd and Ahriman (Angra Mainyu) who, in orthodox Mazdaism, reign alternately over the world until Ormazd’s ultimate victory.

Something of this conception is reflected in MANICHAISM, in which God is sometimes called Zurvān, while Ormazd is his first emanation, Primal Man, who is vanquished by the destructive spirit of darkness but rescued by God’s second emanation, the Living Spirit.

‘Ā’ISHA \ˈä-ē-shə \, in full ‘Ā’isha bint Abī Bakr, byname Umm al-Mu’minīn (“Mother of the Faithful”) (b. 614, Mecca, Arabia [now in Saudi Arabia]—d. July 678, Medina), the third and most favored wife of the Prophet MUHAMMAD.

All Muhammad’s marriages had political motivations, and in this case the intention seems to have been to cement ties with ‘Ā’isha’s father, Abū Bakr, who was one of Muhammad’s most important supporters. ‘Ā’isha’s personal charm secured her a place in his affections that was not lessened by his subsequent marriages. It is said that in 627 she accompanied the Prophet on an expedition but became separated from the group. When she was later escorted back to MEDINA by a man who had found her in the desert, Muhammad’s enemies claimed that she had been unfaithful.

Ahura Mazdā, from a doorway of the main hall of the Council Hall, Persepolis, Persia

By courtesy of the Oriental Institute, the University of Chicago

Muhammad, who trusted her, had a revelation asserting her innocence and publicly humiliated her accusers.

When Muhammad died in 632, ‘Ā’isha remained politically inactive until the time of ‘Uthmān (644–656; the third CALIPH), during whose reign she played an important role in fomenting opposition that led to his murder in 656. She led an army against his successor, ‘ALĪ, but was defeated in the Battle of the Camel. (The engagement derived its name from the fierce fighting that

centered around the camel upon which ‘Ā’isha was mounted.) She was captured by her opponents but was allowed to live quietly in Medina. She is credited with having transmitted up to 1,210 HADITH and having possession of an early codex of the QUR’AN.

AJANTA CAVES \ə-ˈjən-tə \, Buddhist rock-cut cave temples and monasteries, near Ajanta village, north-central Mahārāshtra state, western India, celebrated for their wall paintings. The temples are hollowed out of granite cliffs on the inner side of a 70-foot ravine in a river valley. The group of some 30 caves was excavated between the 1st century BCE and the 7th century CE and consists of two types, *caityas* (“sanctuaries”) and *VIHARAS* (“monasteries”). The fresco-type paintings depict Buddhist legends and divinities with a beautiful exuberance and vitality that is unsurpassed in Indian art.

AJAX THE GREATER, Greek Aias, in Greek legend, son of Telamon, king of Salamis, described in the *Iliad* as being of great stature and colossal frame, second only to ACHILLES in strength and bravery. He engaged HECTOR (the chief Trojan warrior) in single combat and, with the aid of the goddess ATHENA, rescued the body of Achilles from the hands of the Trojans. He competed with the Greek hero ODYSSEUS for the armor of Achilles but lost, which so enraged him that it caused his death. Ajax was the tutelary hero of the island of Salamis, where he had a temple and an image and where a festival called Aianteia was celebrated in his honor.

AJAX THE LESSER, Greek Aias, in Greek legend, son of Oileus, king of Locris. In spite of his small stature, he held his own among the other heroes before Troy; but he was also boastful, arrogant, and quarrelsome. For his crime of dragging King PRIAM’s daughter CASSANDRA from the statue of ATHENA and violating her, he barely escaped being stoned to death by his Greek allies. Voyaging homeward, his ship was wrecked, but he was saved. For boasting of his escape, he was cast by POSEIDON into the sea and drowned. Ajax was

worshiped as a hero by the Opuntian Locrians (who lived on the Malian Gulf in central Greece), who always left a vacant place for him in their battle line.

AKALAṆKA \ə-kə-ˈlāŋ-kə\ (fl. 8th century), an important DIGAMBARA logician within JAINISM. Accounts of his life, composed several centuries after he lived, claim that he and his brother secretly studied in a Buddhist monastery in order to learn Buddhist doctrine. They were discovered to be Jains, and his brother was killed by the Buddhists. Akalaṅka fled to the court of the king of Kaliṅga. There by a combination of magic and logic he defeated a prominent Buddhist monk in public debate and so established the superiority of Jainism.

Akalaṅka is credited with laying the foundation for the developed form of Jain logic. He provided Jain logic with an effective doctrine of PRAMĀṆAS, or proofs, that served as a bridge between earlier Jain logic and non-Jain schools of logic. This allowed Akalaṅka to debate non-Jains on logical grounds that were acceptable to both sides. In particular, he used these tools to counter the influence of the Buddhist logician DHARMAKĪRTI. Later Jain philosophers adopted and built upon the system developed by Akalaṅka.

AKĀLĪ DAL \ə-ˈkā-lē-ˈdəl\, also called Shiromani Akālī Dal (Punjabi: “Followers of the Timeless One” [God]), Sikh political party in British and independent India (see also SIKHISM). The title Akālī refers to 18th-century Sikh soldiers made famous by the courage they displayed when they gathered to fight against the Mughals and later the Afghans. The modern Akālī Dal came into existence in 1920 as Sikh volunteers took up the responsibility of reforming the administration of Sikh GURDWĀRĀS (temples). When the SHIROMANĪ GURDWĀRĀ PRABANDHAK COMMITTEE (SGPC) was established in 1925 as the authoritative Sikh body for specifically religious matters, the Akālī Dal came to see itself in a parallel way as the sole protector of the political interests of the Sikh community. It was given the task of representing Sikh interests—unsuccessfully, many felt—in the negotiations that preceded the partition of the Punjab in 1947.

The Akālī Dal has historically found itself in conflict with the central government of India in Delhi. Its sustained efforts led to the founding in 1966 of the present-day state of Punjab, where Sikhs are in the majority and Punjabi is the official language. The Akālī Dal was the only political party that offered stiff resistance to Prime Minister Indira Gandhi’s effort to stifle democratic institutions in the Punjab in the mid-1970s. Drawing its support principally from the Sikh peasantry, it is the oldest regional political party on the Indian political scene. It has been in and out of power at the state level from the late 1960s onward.

AKĀL TAKHAT \ə-ˈkāl-ˈtə-kət\, Takhat also spelled Takht \ˈtə-k-tə\ (Punjabi: “Throne of the Timeless One [God]”), shrine facing the GOLDEN TEMPLE in AMRITSAR, the most sacred religious site of SIKHISM. The origin of the Akāl Takhat is traditionally associated with Gurū HARGOBIND (1595–1644, Gurū 1606–44), the sixth Sikh GURŪ. He is believed to have held court at this spot, executing his responsibilities as the temporal leader of the Sikh community. During the 18th century the Akāl Takhat served as the place for Sikh leaders to gather and discuss issues confronting the community.

With the Punjab Gurdwara Act of 1925, the management of historic Sikh GURDWĀRĀS (temples) came under the newly created SHIROMANĪ GURDWĀRĀ PRABANDHAK COMMITTEE

(SGPC). Since then the Akāl Takhat has functioned as the primary place from which to announce decisions of the SGPC. A *hukamnāmā* (“order”) issued from the Akāl Takhat is considered mandatory for all Sikhs. In the 1980s, under the leadership of the charismatic SANT JARNAIL SINGH BHINDRANWALE, Sikh militants working for the creation of KHALISTAN, an independent Sikh state, made the Akāl Takhat their base. Sant Bhindranwale was killed in a battle between his followers and Indian army troops in 1984. In this confrontation, the Akāl Takhat was irreparably damaged; it was demolished and a new one was constructed in its place. Some within the Sikh community have felt that the Akāl Takhat should be taken from the control of the SGPC, so that the moral authority of the Akāl Takhat would be uncompromised by any sectarian or political agenda.

AKBAR \ˈak-bər, -bār\, in full Abū-al-Faṭḥ Jalāl-al-Dīn Muḥammad Akbar (b. Oct. 15, 1542, Umarkot, Sind, India—d. 1605, Āgra), greatest of the Mughal emperors of India (reigned 1556–1605), who extended Mughal power over most of the Indian subcontinent. Akbar is also noted as the founder of the DĪN-I ILĀHĪ (Persian: “Divine Faith”), an elite eclectic religious movement, which never numbered more than 19 adherents.

Akbar was the son of the emperor Humāyūn and at the age of 13 was made governor of the Punjab. When Humāyūn died in 1556 the succession was in doubt until Hemu, a rebellious Hindu minister, was defeated by a Mughal force at Panipat.

At Akbar’s accession his rule extended over little more than the Punjab and the area around Delhi, but he gradually consolidated and extended his rule over Mālwa and the Hindu Rājput states. One of the notable features of Akbar’s government was the extent of Hindu, and particularly Rājput, participation. Rājput princes attained the highest ranks, as generals and as provincial governors, in the Mughal service. Discrimination against non-Muslims was reduced by abolishing the taxation of pilgrims and the tax payable by non-Muslims in lieu of military service.

In 1573 Akbar conquered Gujarāt, and he then annexed Bengal in 1576. Toward the end of his reign, Akbar embarked on a fresh round of conquests. Kashmir was subjugated in 1586, Sind in 1591, and Qandahār in 1595. Mughal troops now moved south of the Vindhya Mountains into the Deccan in peninsular India. By 1601 Khāndesh, Berār, and part of Ahmadnagar were added to Akbar’s empire.

Akbar possessed a powerful and original mind and encouraged free intellectual debate within his court. His inquiries into Christian doctrines misled the JESUIT missionaries he invited to his court into thinking that he was on the point of conversion. He persuaded the Muslim jurists at his court to accept him as arbiter on points of Islamic law in dispute among them. He encouraged religious discussions between Muslims, Hindus, PARSIS, and Christians that were continued by a small group of courtiers who shared with Akbar a taste for MYSTICISM, and who developed a set of doctrines and ceremonies known as the Divine Faith (Dīn-i Ilāhī). The Dīn-i Ilāhī was essentially an ethical system, prohibiting such SINS as lust, sensuality, slander, and pride and enjoying the virtues of piety, prudence, abstinence, and kindness. The soul was encouraged to purify itself through yearning for God, CELIBACY was condoned, and the slaughter of animals was forbidden. There were no sacred SCRIPTURES or a priestly hierarchy. In its ritual, it borrowed heavily from ZOROASTRIANISM, making light (Sun and fire) an

object of divine worship and reciting, as in HINDUISM, the 1,000 Sanskrit names of the Sun.

In practice, however, the Dīn-i Ilāhī functioned as a personality cult contrived by Akbar around his own person. Members of the religion were handpicked by Akbar according to their devotion to him. Because the emperor styled himself a reformer of ISLAM, there was some suggestion that he wished to be acknowledged as a prophet also. The ambiguous use of formula prayers (common in SUFISM) such as *Allāhu akbar*, “God is most great,” or perhaps “God is Akbar,” hinted at a divine association as well.

Akbar’s religion was generally regarded by his contemporaries as a Muslim innovation or a heretical doctrine; two sources from his own time—both hostile—accuse him of trying to found a new religion. The influence and appeal of the Dīn-i Ilāhī were limited, though it survived in the religious thinking of Akbar’s great-grandson Dārā Shikōh (1615–59), who wrote Persian translations of sacred Hindu scriptures. The ideas of both men triggered a strong conservative reaction in Indian Islam, particularly during the reign of Aurangzeb (ruled 1658–1707), who put his brother Dārā Shikōh to death.

AKEDAH \ä-kä-’dä (Hebrew: “Binding”), referring to the binding of ISAAC as related in GENESIS 22. ABRAHAM bound his son Isaac on an altar at Moriah, as he had been instructed by God. An ANGEL stopped Abraham when he was about to slay his son and replaced Isaac with a ram; this is the last of the 10 trials to which God subjected Abraham. Abraham here exemplifies obedience and Isaac embodies the martyr in JUDAISM. Because 2 Chronicles 3:1 refers to Moriah as the mountain on which the Temple is built, the story further explains the site of the TEMPLE OF JERUSALEM. Building the Temple there invokes the binding of Isaac as source of merit: God is asked to remember Abraham’s faithfulness and thereby to show mercy to his children. The sounding of the ram’s horn, or SHOFAR, is also meant to elicit remembrance in the New Year (ROSH HASHANAH) rite. On fast days, SYNOGUE prayer includes, “Remem-

ber for us the covenant and loving kindness and oath that you swore to Abraham our father on Mount Moriah, consider the binding with which Abraham our father bound his son Isaac on the altar, suppressing his compassion so as to do your will, so may your compassion outweigh your anger against us.”

CHRISTIANITY found in the binding of Isaac an archetype for the sacrifice of Jesus (TERTULLIAN, *Adversus Marcionem* 3:18). ISLAM (QUR’AN 37:97–111) points to the Akedah as the embodiment of submission—in that version, however, it was Ishmael and not Isaac (who was not yet born) that was the proposed victim.

AKH \’äk\, in EGYPTIAN RELIGION, the spirit of a deceased person and, with the KA and BA, a principal aspect of the soul. By enabling the soul to assume temporarily any form it desired, for the purpose of revisiting the earth or for its own enjoyment, the *akh* characterized the soul of a deceased person as an effective entity in the next world. The *akh*-soul was generally represented as a bird and could appear to the living as a ghost.

AKIBA BEN JOSEPH \ä-’kē-və-ben-’jō-səf, ə-’kē-bə-, -’jō-zəf\ (b. c. 40 CE—d. c. 135, Caesarea, Palestine [now in Israel]), one of the most important early rabbinic authorities in both legal and exegetical matters. In the MISHNAH and TOSEFTA far more legal statements are ascribed to him than to any other authority of any generation. Additionally, he is

The binding of Isaac (Akedah), from a handmade Midrash (1888)

The Jewish Museum—Art Resource

depicted as having a unique approach to interpreting SCRIPTURE, owing to his belief that as the BIBLE is derived from God, it therefore contains no redundancies. Accordingly, he is said to have ascribed significance and purpose to every element of the text, including spelling and orthography. Thus, he found meaning in seemingly redundant words, odd spellings, and even single letters occurring in the Bible.

Rabbinic sources depict Akiba as central in the early organization of Tannaitic law and refer to his "Great Mishnah compilation." The idea that Akiba organized a collection of Tannaitic laws is reflected in and developed by the Talmud BAVLI Sanhedrin 86a, which asserts that all anonymous rules in the Mishnah, Tosefta, and SIFRA reflect Akiba's legal perspective. While this clearly is not in any way literally true—frequently Akiba is cited in dispute with anonymous statements—it highlights later rabbinic masters' perception of Akiba's importance.

While early rabbinic sources cite Akiba's legal pronouncements, later texts develop a detailed story of his life: the stories relate his birth into a humble family, that in his youth he was unlearned and an enemy of scholars, and that he worked as a shepherd for Kalba Savua, the wealthiest man in Jerusalem, and became interested in study of TORAH when, against her father's wishes, Kalba Savua's daughter Rachel agreed to marry him if he would devote himself to study. According to Talmudic legend, Akiba fulfilled Rachel's request by leaving her for 24 years, eventually returning, the Talmud claims, with 24,000 of his own students. Ultimately, Akiba headed an academy in Benei Berak.

Akiba is said to have enthusiastically welcomed the BAR KOKHBA revolt and to have seen in Bar Kokhba the long-awaited MESSIAH, a belief that distinguished him from his rabbinic colleagues. During the revolt, for continuing publicly to teach Torah, Akiba was imprisoned by the Romans and finally tortured to death. His death is recorded as follows (Babylonian Talmud Berakhot 61b):

The hour at which they brought Akiba out to be put to death was the time for reciting the Shema prayer [which proclaims the unity of God]. They were combing his flesh with iron combs while he was accepting upon himself the yoke of the Kingdom of Heaven. His disciples said to him, "Our master, to such an extent?" He said to them, "For my whole life I have been troubled by this verse [Deuteronomy 6:5, 'and you shall love the Lord your God with all your heart, and] with all your soul,' [meaning] even though he takes your soul. I wondered when I shall have the privilege of carrying out this commandment. Now that it has come to hand, should I not carry it out?" He held on to the word "One" [in the statement "the Lord is One"] until his soul expired. An echo came forth and said, "Happy are you, Rabbi Akiba, that your soul expired with the word 'one.'" . . . An echo went forth and proclaimed, "Happy are you, Rabbi Akiba, for you are selected for the life of the world to come."

AKṢOBHYA \ək-'shō-byə\, in MAHĀYĀNA and VAJRAYĀNA BUDDHISM, one of the five "self-born" Buddhas. See DHYĀNI-BUDDHA.

ĀLAYA-VIJĀNA \ä-lə-yə-vig-'nyä-nə\ (Sanskrit: "Store of Consciousness"), in BUDDHISM, key concept of the Vijñānavāda (YOGĀCĀRA) school. The school maintains that

Albertus Magnus, detail of a fresco by Tommaso da Modena, c. 1352; in the Church of San Nicolo, Treviso
Alinari—Art Resource

no external reality exists but that knowledge, and therefore a knowable, exists; thus, knowledge itself is the object of consciousness. The Vijñānavādans postulate a higher consciousness with a universe that consists of an infinite number of possible ideas that lie inactive. This latent consciousness projects an interrupted sequence of thoughts, while it itself is in restless flux until the KARMA, or accumulated consequences of past deeds, is destroyed. This consciousness creates the illusive force (MAYA) that determines the world of difference and produces the erroneous notions of an I and a non-I in humans. That duality is conquered only by enlightenment (BODHI), which transforms a person into a BUDDHA.

ALBERTUS MAGNUS, SAINT \al-'bər-təs-'mag-nəs\, *English* Saint Albert the Great \al-'bərt\, *byname* Albert of Cologne \kə-'lɒn\ (b. c. 1200, Lauingen an der Donau, Swabia [Germany]—d. Nov. 15, 1280, Cologne; canonized Dec. 16, 1931; feast day November 15), DOMINICAN bishop and philosopher best known as a teacher of ST. THOMAS AQUINAS and as a proponent of Aristotelianism. He was the most prolific writer of his century and established the study of nature as a legitimate science within the Christian tradition. By papal decree in 1941, he was declared the patron saint of all who cultivate the natural sciences.

Albertus, the eldest son of a German lord, attended the University of Padua and joined the Dominican order there in 1223. He continued his studies at Padua and Bologna and in Germany and then taught theology. Sometime before 1245 he was sent to the convent of Saint-Jacques at the University of Paris, where he came into contact with the works of Aristotle, newly translated from Greek and Arabic, with commentaries (by IBN RUSHD [Averroës]).

It was probably at Paris that Albertus began working on a monumental presentation of the entire body of knowledge of his time. He wrote commentaries on the BIBLE and on all the known works of Aristotle, both genuine and spurious, paraphrasing the originals but frequently adding “digressions” in which he expressed his own observations, “experiments,” and speculations. The term experiment for Albertus indicates a careful process of observing, describing, and classifying. Apparently in response to a request that he explain Aristotle’s *Physics*, Albertus undertook—as he states at the beginning of his *Physica*—“to make . . . intelligible to the Latins” all the branches of natural science, logic, rhetoric, mathematics, astronomy, ethics, economics, politics, and metaphysics. While he was working on this project, which took about 20 years to complete, he probably had among his disciples Thomas Aquinas.

Albertus distinguished the way to knowledge by revelation and faith from the way of philosophy and of science; the latter follows the authorities of the past according to their competence, but it also makes use of observation and proceeds by means of reason and intellect to the highest degrees of abstraction. For Albertus these two ways are not opposed. All that is really true is joined in harmony. Although there are mysteries accessible only to faith, other points of Christian doctrine are recognizable both by faith and by reason—*e.g.*, the doctrine of the immortality of the individual soul. He defended this doctrine in several works against the teaching of the Latin followers of Ibn Rushd, who held that only one intellect, which is common to all human beings, remains after the death of man and who were accused of teaching a doctrine of double truth.

Albertus’ works represent the entire body of European knowledge of his time not only in theology but also in philosophy and the natural sciences. His importance for medieval science essentially consists in his bringing Aristotelianism to the fore against reactionary tendencies in contemporary theology. (On the other hand, without feeling any discrepancy in it, he also gave the widest latitude to Neoplatonic speculation.) He is accorded a preeminent place in the history of science because of this achievement.

ALBIGENSES \al-bə-’jen-sēz\, also called Albigensians \al-bə-’jen-sē-anz\, the heretics—especially the CATHARI—of 12th–13th-century southern France. The name, apparently given to them at the end of the 12th century, is hardly exact, for the movement centered at Toulouse and in nearby districts rather than at Albi (ancient Albige). The HERESY, which had penetrated into these regions probably by trade routes, came originally from eastern Europe. *See also* BOGOMILS; PAULICIANS.

It is exceedingly difficult to form any very precise idea of the Albigensian doctrines because present knowledge of them is derived from their opponents and from the very rare and uninformative Albigensian texts which have come down to us. What is certain is that, above all, they formed an anti-sacerdotal party in permanent opposition to the ROMAN CATHOLIC church and raised a continued protest against the corruption of the clergy of their time.

The first Catharist heretics appeared in Limousin between 1012 and 1020. Protected by William IX, duke of Aquitaine, and soon by a great part of the southern nobility, the movement gained ground in the south, and in 1119 the Council of Toulouse in vain ordered the secular powers to assist the ecclesiastical authority in quelling the heresy. The movement maintained vigorous activity for another 100 years, until Pope INNOCENT III, having tried pacific con-

version, in 1209 ordered the CISTERCIANS to preach the crusade against the Albigenses. This Albigensian Crusade, which threw the whole of the nobility of the north of France against that of the south and destroyed the Provençal civilization, ended, politically, in the Treaty of Paris (1229), which destroyed the independence of the princes of the south but did not extinguish the heresy, in spite of the wholesale massacres of heretics. The INQUISITION, however, operating unremittingly in the south at Toulouse, Albi, and other towns during the 13th and 14th centuries, succeeded in crushing it.

ALBO, JOSEPH \’äl-bō\ (b. c. 1380, Monreal?, Aragon [Spain]—d. c. 1444), Jewish philosopher and theologian of Spain who is noted for his classic work of Jewish dogmatics, *Sefer ha-’iqqarim* (1485; “Book of Principles”).

Albo participated in the Disputation of Tortosa (1413–14), a definitive confrontation between Spanish Jews and Christians, in which he distinguished himself by his ability to explain Jewish SCRIPTURES. The *Sefer ha-’iqqarim*, completed in Castile about 1425 (although not published for some 60 years), was probably intended as a work of Jewish APOLOGETICS in the face of Christian criticism. In this work Albo sought to enumerate those fundamental dogmas or articles of faith of JUDAISM that are essentially derived from the divine law and can thus be eternally valid for other religions as well. *Sefer Ha-ikkarim* (1929–30), edited and translated by Isaac Husik, was the first translation into English.

ALCINOUS \al-’si-nō-əs\, in Greek mythology, king of the Phaeacians (on the legendary island of Scheria), son of Nausithoüs, and grandson of the god POSEIDON. In Homer’s *Odyssey* he entertained ODYSSEUS, who had been cast by a storm on the island. Scheria was identified with Corcyra, where Alcinoüs was revered as a hero. In the Argonautic legend, Alcinoüs lived on the island of Drepane, where he received JASON and MEDEA in their flight from Colchis.

ALCITHOË \al-’si-thō-ē\, in Greek legend, the daughter of Minyas of Orchomenus, in Boeotia. She and her sisters once refused to participate in Dionysiac festivities. Later Dionysiac music clanged about them, the house was filled with fire and smoke, and the sisters were metamorphosed into bats and birds. According to Plutarch, the sisters, driven mad for their impiety, cast lots to determine which one of their children they would eat. According to legend, their female descendants were pursued at the AGRIONIA by a priest of DIONYSUS who would kill the one he caught.

ALCMAEON \alk-’mē-ən\, also spelled Alcmeon, in Greek myth, the son of the seer Amphiaraus and his wife Eriphyle. When Amphiaraus set out with the expedition of the SEVEN AGAINST THEBES, which he knew would be fatal to him, he commanded his sons to avenge his death by slaying Eriphyle (who had been bribed by Polyneices with the necklace of HARMONIA to persuade her husband to fight) and by undertaking a second expedition against Thebes. After leading the Epigoni (the sons of the Seven) in the destruction of Thebes, Alcmaeon carried out his father’s injunctions by killing his mother, but as a punishment he was driven mad and pursued by the ERINYES (goddesses of vengeance) from place to place.

On his arrival at Psophis in Arcadia, he was purified by its king, Phegeus, whose daughter Arsinoë (or Alpheisiboea) he married, making her a present of the fatal necklace and the robe of Harmonia, which brought misfortune to all who

possessed them. The land was cursed with barrenness, and an oracle declared that Alcmaeon would not find rest until he reached a spot on which the sun had never shone at the time he slew his mother. Such a spot he found at the mouth of the Achelous River, where an island had recently been formed. There he settled and, forgetting his wife, married Callirrhoë, the daughter of the river god. Phegeus and his sons, however, pursued and killed Alcmaeon. On his death, Callirrhoë prayed that her two young sons might grow to manhood at once and avenge their father. Her prayer was granted, and her sons, Amphoterus and Acarnan, slew Phegeus. After his death Alcmaeon was worshipped at Thebes; his tomb was at Psophis.

'ALENU \ä-'lä-nü\ (Hebrew: "it is our duty"), the opening word of an ancient Jewish prayer recited at the end of the three periods of daily prayer since the Middle Ages. The first section is a prayer of thanks for having set Israel apart for the service of God; the second section, omitted by those who follow the rite of the SEPHARDI, expresses a hope for the coming of the messianic age, when GENTILES will accept the one God. The *'alenu* ends with the phrase: "And the Lord will become king over all the Earth; on that day the Lord will be one and his name one" (Zechariah 14:9).

Though tradition ascribes the *'alenu* to JOSHUA, it is often credited to Abba Arika, also known as Rav (3rd century CE), the head of a Jewish academy at Sura in Babylonia. The *'alenu* was originally part of the additional (*musaf*) service for ROSH HASHANAH (New Year) and was later added to the YOM KIPPUR (Day of Atonement) liturgy. On the High Holy Days it is included in the AMIDAH, the main section of the daily prayers, and is repeated in full by the CANTOR. The version used in the ASHKENAZI (German) ritual was censored by Christian church authorities, who interpreted a sentence as a slighting reference to Jesus and so ordered its deletion. REFORM JUDAISM may use a modified form of the *'alenu* that is called Adoration in the ritual.

ALEXANDRIA, SCHOOL OF \,a-lig-'zan-drē-ə\, first Christian institution of higher learning, founded in the mid-2nd century CE in Alexandria, Egypt. Under its earliest known leaders (Pantaenus, CLEMENT OF ALEXANDRIA, and ORIGEN), it became a center of the allegorical method of biblical interpretation (see ALLEGORY), espoused a rapprochement between Greek culture and Christian faith, and asserted orthodox Christian teachings against heterodox views in an era of doctrinal flux.

ALEXANDRIA, SYNOD OF (362 CE), the most important of the meetings of Christian bishops held in Alexandria, Egypt. It was summoned by the bishop of Alexandria, ATHANASIUS. It allowed clergy that were readmitted to communion after making common cause with Arians to return to their former ecclesiastical status, provided they had not themselves subscribed to ARIANISM. The SYNOD stated explicitly that the HOLY SPIRIT, not a created being, is of the same substance (*homoousios*) as the Father and the Son (see HOMOIOUSIAN), and it clearly defined the Christological terms "person" and "substance."

ALFASI, ISAAC BEN JACOB \äl-'fä-sē\, *Alfasi* also spelled Al-Phasi, also called Rabbi Isaac Fasi, or (by acronym) RIF (b. 1013, near Fès, Morocco—d. 1103, Lucena, Spain), Talmudic scholar who wrote a codification of the TALMUD known as *Sefer ha-Halakhot* ("Book of Laws"), which ranks with the great codes of MOSES MAIMONIDES and KARO.

Alfasi lived most of his life in Fès (from which his surname was derived), where he wrote his digest of the Talmud, the rabbinical compendium of law, lore, and commentary. In 1088, in fear of the local government, he fled to Spain, where, in Lucena, he became head of the Jewish community and established a noted Talmudic academy. Alfasi provoked a rebirth of Talmudic study in Spain, and his influence was instrumental in moving the center of such studies from the Eastern to the Western world.

His codification deals with the Talmud's legal aspects, or HALAKHAH (Hebrew Law), including civil, criminal, and religious law. It omits all homiletical passages as well as portions relating to religious duties practicable only in Palestine and is unusual for its focus on the actual text. His commentaries summarize the thought of the geonim who presided over the two great Jewish academies in Babylonia between the middle of the 7th and the end of the 13th century. In addition, his work played a major role in establishing the primacy of the BAVLI (the Babylonian Talmud), as edited and revised by three generations of ancient sages, over the YERUSHALMI (the Palestinian Talmud), the final compilation of which had been interrupted by external pressures. Alfasi's *Sefer ha-Halakhot* is still important in YESHIVA studies.

ĀLĀH \ä'l-hä\, major oral epic of North India whose principal characters are sometimes claimed to be REINCARNATIONS of the heroes of the MAHĀBHĀRATA in the Kālī age (the fourth age in Hindu beliefs; see YUGA).

'ALĪ \ä-lē, 'ä-; ä-'lē\, *in full* 'Alī ibn Abī Ṭālib (b. c. 600, Mecca—d. January 661, Kūfa, Iraq), cousin and son-in-law of MUHAMMAD, and fourth CALIPH (successor to Muhammad), reigning from 656 to 661. The question of his right to the caliphate resulted in the split in ISLAM into SUNNI and SHI'ITE branches. He is revered by the Shi'ites as the first IMAM, the true successor to the Prophet.

'Alī was the son of Abū Ṭālib, chief of a clan of the QURAYSH. When his father became impoverished, 'Alī was taken under the care of his cousin Muhammad, then still a businessman in MECCA, who himself had been cared for by 'Alī's father as a child. When Muhammad began his career as a prophet, 'Alī, though only 10 years old, became one of the first converts to Islam. Later, he married Muhammad's daughter FĀṬĪMA, who bore him two sons, ḤASAN and ḤUSAYN.

'Alī is said to have been a courageous fighter in the expeditions Muhammad conducted to consolidate Islam. He was also one of Muhammad's scribes and led several important missions. When the inhabitants of Mecca finally accepted Islam without a battle, it was 'Alī who smashed their idols in the KA'BA (holy shrine).

Muhammad died on June 8, 632. Some say he had nominated 'Alī as his successor while he was returning from his "farewell pilgrimage" to Mecca. Others maintain that Muhammad died without naming a successor. 'Alī, while attending the last rites of the Prophet, was confronted by the fact that Abū Bakr, Muhammad's closest friend and the father of 'Ā'ISHA, one of the Prophet's wives, had been chosen as caliph. 'Alī did not submit to Abū Bakr's authority for some time, but neither did he actively assert his own rights, possibly in order to prevent bloody tribal strife. He retired and led a quiet life in which religious works became his chief occupation. The first chronologically arranged version of the QUR'AN is attributed to him, and his knowledge of HADITH aided the caliphs in various legal problems.

Depiction of Muhammad (left) declaring 'Alī his successor, according with the Shi'ite tradition

The Granger Collection

'Alī became caliph following the murder of 'Uthmān, the third caliph. His brief reign was beset by difficulties due mostly to the corrupt state of affairs he inherited. He based his rule on the Islamic ideals of social justice and equality, but his policy was a blow to the interests of the Quraysh aristocracy of Mecca who had grown rich in the Muslim conquests. In order to embarrass 'Alī they demanded that he bring the murderers of 'Uthmān to trial; when he refused, a rebellion against him was instigated in which two prominent Meccans along with 'Ā'isha took a leading part. This rebellion, known as the Battle of the Camel (the camel ridden by 'Ā'isha), was quelled. A second rebellion was on the point of being crushed when its leader, Mu'āwiya, a kinsman of 'Uthmān and the governor of Syria, proposed arbitration. 'Alī was forced by his army to accept adjudication, greatly weakening his position. Soon he had to fight some of the very people who had earlier forced him to accept arbitration but now denounced it. Known as Khawārij (Seceders), they were defeated by 'Alī in the Battle of Nahrawān. Meanwhile, Mu'āwiya followed an aggressive policy, and by the end of 660 'Alī had lost control of Egypt and of the Hijaz. While praying in a mosque at Kūfa in Iraq a Khārijite, intent on avenging the men slain at Nahrawān, struck 'Alī with a poisoned sword. Two days later 'Alī died and was buried at Nujaf, near Kūfa. His mausoleum became one of the principal Shi'ite pilgrimage centers. See GHULĀT.

'Alī's political discourses, sermons, letters, and sayings, collected by ash-Sharif ar-Raḏī (d. 1015) in a book entitled

Nahj al-balāghah ("The Road of Eloquence") with commentary by Ibn Abī al-Ḥadīd (d. 1258), are well known in Arabic literature. Muslims consider him to be an embodiment of the virtues of justice, learning, and mystical insight. In popular piety he is regarded as an intercessor with God, and certain quasi-gnostic groups maintain that he is the Perfect Man. Some, like the 'Alawī of Syria, even hold that he is a human incarnation of God.

'ALĪ AL-RIDĀ \ä-'lë-äl-rë-'dä\, in full Abū al-Ḥasan ibn Mūsā ibn Ja'far 'Alī al-Riḏā (b. 765/768/770, Medina, Arabia [now in Saudi Arabia]—d. 818, Ṭūs, Iran), eighth IMAM of the Twelver SHI'ITES, noted for his piety and learning until 817, when the CALIPH al-Ma'mūn, in an attempt to heal the division between the majority SUNNIS and the Shi'ites, appointed him his successor. The appointment aroused varying reactions—few of them, even among the Shi'ites, wholly favorable—and Iraq rose up in rebellion. Al-Ma'mūn gradually changed his policy. The court party set out from Merv for Baghdad, and on the way 'Alī al-Riḏā died, after a brief illness, at Ṭūs. Shi'ite historians attribute his death to poison, possibly administered by the caliph himself. His shrine (MASHHAD) at Ṭūs became a PILGRIMAGE place and gave its name to the city (Mashhad, or Meshed, in Iran). Many miracles are attributed to 'Alī al-Riḏā by the Shi'ites.

ALĪGARH MUSLIM UNIVERSITY \ə-lë-'gər, 'a-lë-'gär\, also known as Anglo-Mohammedan Oriental College, or Anglo-Muhammadan Oriental College, the first center of Islamic and Western higher education in India. Located in Aligarh, southeast of Delhi, it was founded as a school in May 1875 by the Muslim educator, jurist, and author AHMAD KHAN out of his desire to found "a Muslim Cambridge." After his retirement in 1876, Ahmad Khan devoted himself to enlarging it into a college. Raised to university status in 1920, partly through the efforts of Aga Khan III, the university became the intellectual cradle of the Muslim League and the Muslim state of Pakistan. A separate women's college was added in 1926. Aligarh's curriculum encompasses modern humanities and sciences as well as traditional Islamic learning.

ALKA \'äl-kə\ (Lithuanian: "sacred precinct"), also called *alkas*, in ancient BALTIC RELIGION, an open-air religious site—forest, hill, river—that was sacred. Trees could not be cut in such forests, sacred fields could not be plowed, and fishing was not allowed in the holy waters. The rituals of various religious cults, involving animal sacrifice and human CREMATION, took place at the *alkas*. The sense of the ancient *alka* is preserved in the modern Lithuanian word *alkvietė*, meaning any holy place or site of worship.

ALKALAI, JUDAH BEN SOLOMON HAI \ä-l-kə-'li\ (b. 1798, Sarajevo, Bosnia, Ottoman Empire [now Bosnia and Herzegovina]—d. 1878, Jerusalem, Palestine), Sephardic RABBI and an advocate of Jewish colonization of Palestine.

Alkalai was taken to Jerusalem at an early age, and there he was reared and educated for the rabbinate. At 25 he became rabbi of a congregation of SEPHARDI in Semlin (now Zemun, Yugos.), a border town of the Austrian Empire across the Sava River from Belgrade. There he wrote a book arguing that a physical "return to Israel" (*i.e.*, to Eretz Yisra'el, the Holy Land in Palestine) was a precondition for redemption (salvation), instead of the symbolic "return to Israel" by means of repentance and resuming the ways of God. This doctrine was unacceptable in ORTHODOX JUDAISM and

generated much controversy. His second book was a reply to heated attacks on his proto-Zionist views.

After the Damascus Affair, an anti-Semitic outburst of 1840, Alkalai took to admonishing Jews that the event was part of a divine design to awaken Jews to the reality of their condition in exile. Believing that Jews should migrate nowhere but to Palestine, he traveled in England and about Europe seeking support, but his efforts came to naught. Finally in 1871 he left his congregation at Semlin and went to Palestine, where he created a society for settlement. It too failed. But Alkalai's writings did have some effect, particularly one book, *Goral Ladonai* (1857; "A Lot for the Lord"). These and his personal migration helped pave the way for the ZIONISM of THEODOR HERZL and others.

ALLĀH ʾā-lā, ʾa-, -lā; ʾā-lā\ (Arabic: "God"), the one and only God in ISLAM. Etymologically, the name Allāh is probably a contraction of the Arabic *al-Ilāh*, "the God." *Allāh* is the standard Arabic word for "God" and is used by Arabic-speaking Christians as well as by Muslims.

Allāh is the pivot of the Muslim faith. The QUR'AN constantly preaches Allāh's reality, his inaccessible mystery, his "beautiful" names, and his actions on behalf of his creatures. Three themes preponderate: (1) Allāh is creator, judge, and rewarder; (2) he is unique (*wāḥid*) and inherently one (*aḥad*); and (3) he is omnipotent and all-merciful. God is the "Lord of the Worlds," the most high, "nothing is like unto him," and this in itself is to the believer a request to adore Allāh as protector and to glorify his powers. God, moreover, is most compassionate, the originator of what is good and beautiful in the world; he "loves those who do good" (Qur'an 2:195), and is "closer than the jugular vein" (Qur'an 50:16). In SUFISM, he is the beloved with whom the mystic seeks union.

Muslim piety has collected, in the Qur'an and in the HADITH, the 99 "most beautiful names" (*al-asmā al-ḥusnā*) of God, and these names have become objects of devoted recitation and meditation. Among the names of Allāh are the One and Only, the Living One, the Subsisting (*al-Ḥayy al-Qayyūm*), the Real Truth (*al-Ḥaqq*), the Sublime (*al-ʿAzīm*), the Wise (*al-Ḥakīm*), the Omnipotent (*al-ʿAzīz*), the Hearer (*al-Samīʿ*), the Seer (*al-Baṣīr*), the Omniscient (*al-ʿAlīm*), the Witness (*al-Shāhid*), the Protector (*al-Wakīl*), the Benefactor (*al-Raḥmān*), the Merciful (*al-Raḥīm*), and the Constant Forgiver (*Ghaffūr, Ghaffār*).

The profession of faith (SHAḤĀDA) by which a person is introduced into the Muslim community consists of the affirmation that there is no god but Allāh and that MUHAMMAD is his prophet. For pious Muslims, every action is opened by an invocation of the divine name (*basmala*). The formula *in shā'a Allāh*, "if God wills," appears frequently in daily speech. This formula is the reminder of an ever-present divine intervention in the order of the world and the actions of human beings. Muslims believe that nothing happens and nothing is performed unless it is by the will or commandment of Allāh. The personal attitude of a Muslim believer, therefore, is a complete submission to God, "whom one does not question" but whom one knows according to his (Qur'anic) word to be a fair judge, at once formidable and benevolent, and the supreme help. In essence, the surrender to God (*islām*) is the religion itself.

ALLEGORY, a work of written, oral, or artistic expression that uses symbolic fictional figures and actions to convey truths or generalizations about human conduct or experience. Like metaphor, an allegory expresses spiritual, psy-

chological, or abstract intellectual concepts in terms of material and concrete objects. Fable and PARABLE are short, simple forms of allegory.

Allegory is a method of interpretation that encourages the discovery of meaning below the surface of a text; it was, consequently, particularly attractive to those authors who combined belief in the oracular truth of the BIBLE with a degree of discomfort at the contents of certain biblical books. Law, history, PROPHECY, poetry, and even JESUS' parables yielded new meanings when allegorized. The Song of Songs was read, not as a poem celebrating the love of a man and a woman, but as an allegory of the love of God for his people. The battles in the Book of Joshua were understood as pointing to the warfare of Christians "against the spiritual hosts of wickedness in the heavenly places" (Ephesians 6:12). In the Gospel parables, meanwhile, in the story of the good SAMARITAN (Luke 10:30-37) an allegorical meaning was sought for the thieves, the Samaritan's beast, the inn, the innkeeper, and the two pence.

Closely allied to allegorical interpretation, if not indeed a species of it, is typological interpretation, in which certain persons, objects, or events in the OLD TESTAMENT are seen to set forth at a deeper level persons, objects, or events in the NEW TESTAMENT. ADAM, for example (regarded as a historical person), was thought to prefigure Christ in his human aspect, JOSHUA to prefigure the victorious militant Christ. NOAH'S ark (GENESIS 6:14-22) was interpreted to typify the church, outside which there is no salvation; ISAAC carrying the wood for the sacrifice (Genesis 22:6) typifies Jesus carrying the cross; Rahab's scarlet cord in the window (Joshua 2:18-21) prefigures the blood of Christ; and so on. These are not merely sermon illustrations but rather aspects of a hermeneutical theory that maintains that this further significance was designed (by God) from the beginning.

Allegorical thinking is most fully reflected in the period of its greatest vogue, the High Middle Ages. The early CHURCH FATHERS sometimes used a threefold method of interpreting texts, encompassing literal, moral, and spiritual meanings. This was refined and commonly believed to have achieved its final form in the medieval allegorist's "fourfold theory of interpretation." This method also began every reading with a search for the literal sense of the passage. It moved up to a level of ideal interpretation in general, which was the allegorical level proper. Still higher, the reader came to the topological level, which told him where his moral duty lay. Finally, since Christian thought was apocalyptic and visionary, the method reached its apogee at the anagogic level, at which the reader was led to meditate on the final cosmic destiny of all Christians and of himself as a Christian hoping for eternal salvation.

ALL SAINTS' DAY, the day commemorating all the saints of the Christian church, both known and unknown, celebrated on November 1 in the Western churches and on the first Sunday after PENTECOST in the Eastern churches. Its origin cannot be traced with certainty, and it has been observed on various days in different places. The first evidence for the November 1 date of celebration and of the broadening of the festival to include all saints as well as all martyrs occurred during the reign of Pope Gregory III (731-741), who dedicated a chapel in St. Peter's, Rome, on November 1 in honor of all saints. In 800, All Saints' Day was kept by Alcuin on November 1, and it also appeared in a 9th-century English calendar on that day. In 837 Pope Gregory IV ordered its general observance. In medieval England, the festival was known as All Hallows, and its eve is

All Souls' Day, which Peruvians celebrate as the Day of the Dead, feasting the dead in a cemetery

Photo by Victor Englebert—Photo Researchers

still known as HALLOWEEN, which has become a secular holiday in its own right in the United States.

ALL SOULS' DAY, in ROMAN CATHOLICISM, church day for commemorating baptized Christians who are believed to be in PURGATORY because they have died with the guilt of lesser SINS on their souls. It is celebrated on November 2. Roman Catholic doctrine holds that the prayers of the faithful on earth will help cleanse these souls in order to fit them for the vision of God in heaven.

From antiquity certain days were devoted to intercession for particular groups of the dead. The institution of a day for a general intercession on November 2 is due to Odilo, Abbot of Cluny (d. 1048). The date, which became practically universal before the end of the 13th century, was chosen to follow ALL SAINTS' DAY. Having celebrated the feast of all the members of the church who are believed to be in heaven, the church on earth turns, on the next day, to commemorate those souls believed to be suffering in purgatory.

Latin American countries celebrate All Souls' Day, calling it the Day of the Dead (El Día de los Muertos). The day combines indigenous pre-Christian celebrations honoring the dead with Roman Catholic beliefs. On this day Latin Americans visit grave sites of deceased family members, picnic there, and hold other festivities. There is a rich tradi-

tion of associated folk art, including food, sculpture, and graphic arts representing skeletons, skulls, and the spirits of the dead.

ALMOHADS \ˈal-mə-ˌhadz\, *Arabic* al-Muwaḥḥidūn ("Those Who Affirm the Unity of God"), Berber confederation that created an Islamic empire in North Africa and Spain (1130–1269), founded on the religious teachings of IBN TŪMART (d. 1130).

A Berber state arose in Tinnel in the Atlas Mountains of Morocco c. 1120, inspired by Ibn Tūmart and his demands for puritanical moral reform and a strict concept of the unity of God (TAWḤĪD). In 1121 Ibn Tūmart proclaimed himself the MAHDĪ, and, as spiritual and military leader, began the wars against the ALMORAVIDS. Under his successor, 'Abd al-Mu'min, the Almohads brought down the Almoravid state in 1147, subjugating the Maghrib, and captured Marrakech, which became the Almohad capital. Almohavid domains in Andalusia, however, were left virtually intact until the CALIPH Abū Ya'qūb Yūsuf (reigned 1163–84) forced the surrender of Seville in 1172; the extension of Almohad rule over the rest of Islamic Spain followed. During the reign of Abū Yūsuf Ya'qūb al-Manṣūr (1184–99), serious Arab rebellions devastated the eastern provinces of the empire, while in Spain the Christian threat remained constant, despite al-Manṣūr's victory at Alarcos (1195). Then, at the battle of Las Navas de Tolosa (1212), the Almohads were dealt a shattering defeat by a Christian coalition from Leon, Castile, Navarre, and Aragon. They retreated to their North African provinces, where soon afterward the Ḥafṣids seized power at Tunis (1236), the 'Abd al-Wādids took Tilimsān (Tlemcen) (1239), and, finally, Marrakech fell to the Marinids (1269).

The original puritanical outlook of Ibn Tūmart was soon lost. The building of richly ornamented Andalusian monuments in the manner of the Almoravids began with Ibn Tūmart's successor 'Abd al-Mu'min. Neither did the movement for a return to traditionalist ISLAM survive; both the mystical Sufis (*see* SUFISM) and the philosophical schools represented by IBN ṬUFAYL and IBN RUSHD (Averroës) flourished under the Almohad kings.

ALMORAVIDS \al-'mōr-ə-ˌvidz\, *Arabic* al-Murābiṭūn ("Those Dwelling in Fortified Convents," or "Warrior-Monks"), confederation of Berber tribes—Lamtūnah, Gudālah, Massūfah—of the Ṣanhājah clan, whose religious zeal and military enterprise built an empire in northwestern Africa and Muslim Spain in the 11th and 12th centuries. These Saharan Berbers were inspired to improve their knowledge of Islamic doctrine by their leader Yaḥyā ibn Ibrāhīm and the Moroccan theologian 'Abd Allāh ibn Yasīn. Under Abū Bakr al-Lamtūnī and later Yūsuf ibn Tāshufīn, the Almoravids merged their religious reform fervor with the conquest of Morocco and western Algeria as far as Algiers between 1054 and 1092. They established their capital at Marrakech in 1062. Yūsuf assumed the title of *amīr al-muslimīn* ("commander of the Muslims") but still paid homage to the 'Abbāsīd CALIPH in Baghdad. He moved into Spain in 1085, as the old caliphal territories of Córdoba were falling before the Christians and Toledo was being taken by Alfonso VI of Castile and Leon. At the Battle of al-Zallāqah, near Badajoz, in 1086 Yūsuf halted an advance by the Castilians but did not regain Toledo.

The whole of Muslim Spain, however, except Valencia, eventually came under Almoravid rule. In the reign (1106–42) of 'Alī ibn Yūsuf the union between Spain and Africa

was consolidated, but the Almoravids were a Berber minority at the head of the Spanish-Arab empire, and while they tried to hold Spain with Berber troops and the Maghrib with a strong Christian guard, they could not restrain the Christian reconquest that began with the fall of Saragossa in 1118. In 1125 the ALMOHADS began a rebellion in the Atlas Mountains and after 22 years of fighting emerged victorious. Marrakech fell in 1147. Almoravid leaders survived only for a time in Spain and the Balearic Isles.

ALOAD \ə-'lō-,ad\, *Greek* *Aloda*, or *Aloeida*, in Greek myth, name for either Otus or Ephialtes, the gigantic twin sons of Iphimedeia by the god POSEIDON. The Aloads fought against the Olympian gods and endeavored to storm Olympus, but APOLLO destroyed them before they reached manhood. In a later myth they sought ARTEMIS (goddess of wild animals, vegetation, and childbirth) and HERA (wife of ZEUS) in marriage, whereupon Artemis appeared between them in the shape of a stag, which they attempted to kill but instead slew each other.

ALPHA AND OMEGA, first and last letters of the Greek alphabet, which, within CHRISTIANITY, have come to signify the comprehensiveness of God, implying that God includes all that can be. In the NEW TESTAMENT book REVELATION TO JOHN, the term is used as the self-designation of God and of Christ. The reference in Revelation likely had a Jewish origin, based on such OLD TESTAMENT passages as Isaiah 44:6 ("I am the first and the last"). In rabbinic literature, the word *emet* ("truth"), composed of the first and last letters of the Hebrew alphabet, is "the seal of God" and carries somewhat the same connotation as Alpha and Omega.

ALTAR, raised structure or place that is used for sacrifice, worship, or prayer.

Altars probably originated when certain localities (a tree, a spring, a rock) came to be regarded as holy or as inhabited by spirits or gods, whose intervention could be solicited by the worshiper. The worshiper's gifts to propitiate or please the gods were placed on an altar nearby. In some religions a stone or heap of stones or a mound of earth probably sufficed for this purpose. With the institution of sacrifice in sanctuaries and temples, elaborate altars were built of stone or brick on which the victim was killed and its blood channeled off or its flesh burned. The altars used in ancient Israel consisted of a rectangular stone with a basin hollowed out on its top. The four corners of the basin terminated in projections; these "horns" came to be regarded as the altar's holiest part, so that anyone clinging to them was immune from molestation. The altars used elsewhere in the Middle East ranged from small upright stands for burning incense to the great rectangular stone altars built in Egyptian temples during the period of the New Kingdom.

The ancient Greeks built altars at the entrances and in the courtyards of their houses, in marketplaces and public buildings, and in sacred groves in the countryside. There were city altars, on which fire continually burned, and temple altars, which were built in front of the temple rather than within it. The great altar of ZEUS at Pergamum (now in the Berlin State Museum) has fine examples of the relief sculptures with which the Greeks decorated their altars. Lofty, imposing altars were used for powerful gods such as Zeus or ATHENA, while lower altars were thought more suitable for such domestic deities as HECATE.

When the Christians began to build churches, a wooden altar table was placed in the choir or in the apse. These al-

tars gradually came to be built of stone, and the remains of martyrs were customarily reburied beneath them. In Western churches from as early as the 4th century, the altar was covered by a canopy-like structure, the baldachin, which rested on columns placed around the altar. The altar was further ornamented by an altarpiece, a screen or wall behind it covered with paintings or sculptures. During the Middle Ages side altars were built in the larger Western churches so that multiple masses could be celebrated, sometimes simultaneously.

ALTIS \al-tis\, in GREEK RELIGION, a sacred grove or precinct in OLYMPIA, Greece. It was an irregular, walled, quadrangular area measuring more than 200 yards on each side. In it were the temples of ZEUS and of HERA; the principal altars and votive offerings; the small treasuries built by various Dorian states; and the administration buildings for the Olympic Games, which were held nearby. Outside the sacred place were the stadium, hippodrome, baths, and other accommodations for visitors.

ĀĪVĀR \āi-'vār, 'al-\, any of a group of South Indian mystics who in the 6th to 9th centuries wandered from temple to temple singing ecstatic hymns in adoration of the god VISHNU. The tradition is that there were 12 ĀĪvārs. The songs of the ĀĪvārs rank among the world's greatest devotional literature. Among the followers of SHIVA, the counterparts of the ĀĪvārs were the Nāyanārs.

The name ĀĪvār means, in the Tamil language in which they sang, "one who is immersed—drowned—in Vishnu." Their BHAKTI (religious devotion) was intensely passionate. The ĀĪvārs are sometimes described as falling unconscious in rapture before images of Vishnu enshrined in local temples, and the locative elements in their poetry are notable.

The most famous of the ĀĪvārs is NAMMĀĪVĀR who lived from 880–930 CE and composed four works. The best known of these works, and indeed one of the best-known works of *bhakti* in South India of any period or language, is the *Tiruvāymoḷi*, a 1,102 verse poem to Vishnu. The hymns of the ĀĪvārs were gathered in the 10th century by Nāthamuni, a leader of the ŚRĪ VAIṢṆAVA sect. The collection is called *Nālayira Prabandham* ("Collection of 4,000 Songs").

AMALEKITE \a-mə-'le-'kit, ə-'ma-lə-\, member of an ancient nomadic tribe or tribes, described in the OLD TESTAMENT as relentless enemies of Israel (EXODUS 17:8–13; NUMBERS 14:44–45; JUDGES 3:12–14; 6:3–5; 1 SAMUEL 15:2–5; 27:8–9; 30:1–2, 11–20; 2 SAMUEL 1:1–10; 8:12), even though they were closely related to EPHRAIM, one of the TWELVE TRIBES OF ISRAEL. Their district was south of JUDAH and probably extended into northern Arabia (1 Samuel 15:7). The Amalekites harassed the Hebrews during their Exodus from Egypt and attacked them at Rephidim near MOUNT SINAI, where they were defeated (Exodus 17:8–13). They were among the nomadic raiders defeated by GIDEON (Judges 6:1–8:32) and were condemned to annihilation by Samuel (1 Samuel 15:2–3). Their final defeat occurred in the time of HEZEKIAH (1 Chronicles 4:43).

AMALTHAEA \a-mal-'thē-ə\, in Greek (originally Cretan) mythology, the foster mother of ZEUS. She is represented as the goat that suckled the infant god in a cave in Crete or as a NYMPH who fed him the milk. Amalthea filled one of the goat's horns with flowers and fruits and presented it to Zeus, who placed it, together with the goat, among the stars. The horn, commonly known as the CORNUCOPIA, was

a symbol of inexhaustible plenty and became the attribute of various divinities and of rivers as fertilizers of the land.

AMARĀVATI \ə-mə-'rā-və-tē, ä-\, also spelled Amara-vathi, town, east-central Andhra Pradesh state, southern India. Situated on the Krishna River, it was an ancient Buddhist center. Its monasteries and university attracted students from throughout India and the Far East. The Buddhist STUPA at Amarāvati was one of the largest in India, though only traces of it now remain. Amarāvati is known for the relief sculptures that were a part of its great Buddhist shrine, although most of these are now in museums.

AMAR CHITRA KATHĀ \ə-'mər-'chi-trə-'kə-tā, ə-'mər-\, extremely popular contemporary Indian comic book series (in English and some vernacular languages) depicting episodes from the epics RĀMĀYAṆA and MAHĀBHĀRATA, and the lives and exploits of deities, sages, prophets, saints, and mortal religious leaders from all of India's major religious traditions. The series also includes biographies of India's most celebrated political leaders and freedom fighters.

AMAR DĀS \ə-'mər-dās, -'mər-\ (b. 1479, Khadur?, India—d. 1574, Goindwāl), in SIKHISM, the third GURŪ (1552–74). Amar Dās was responsible for a major phase of consolidation and expansion of the early Sikh community. He founded the town of Goindwāl (originally, Govindvāl ["town of God"]), on the main route from Lahore to Delhi, as the center of Sikh authority. He strengthened the existing institutions of Sikh SCRIPTURE, liturgy, and *langar* ("community kitchen"), and introduced a religio-administrative structure of 22 *manjīs* (literally, "cots," in function "seats"), which created the possibility of effective governance for the entire, increasingly far-flung Sikh community. Persons appointed to occupy these seats in distant areas were to provide doctrinal guidance for their constituents, encourage the entry of others into the Sikh community, and serve as links between the local congregations and the center at Goindwāl. In order to enhance the cohesion between distant congregations and Goindwāl, Gurū Amar Dās created pat-

terns of PILGRIMAGE calibrated to a newly formed Sikh calendar. By incorporating two preexisting festivals, Vaisākhi (at the time of the spring harvest) and DĪVĀLĪ (at the fall harvest), and changing their orientation, he established two major occasions when all Sikhs were encouraged to come to Goindwāl and participate in communal celebrations.

AMATERASU \ä-mä-tä-'rā-sü\, in full Amaterasu Ōmikami (Japanese: "Heaven-illuminating Great Divinity"), celestial sun goddess from whom the Japanese imperial family claims descent, and an important SHINTŌ deity. She was born from the left eye of her father, IZANAGI, who bestowed upon her a necklace of jewels and placed her in charge of *Takamagahara* ("High Celestial Plain"), the abode of all the KAMI (objects of worship in Shintō and other indigenous religions of Japan). One of her brothers, the storm god SUSANOO, was sent to rule the sea plain. Before going, Susanoo went to take leave of his sister. As an act of good faith, they produced children together, she by chewing and spitting out pieces of the sword he gave her, and he by doing the same with her jewels. Susanoo then began to behave very rudely—he broke down the divisions in the rice fields, defiled his sister's dwelling place, and finally threw a flayed horse into her weaving hall. Amaterasu withdrew in protest into a cave, and darkness fell upon the world.

The other 800 myriads of gods conferred on how to lure the sun goddess out. They collected cocks, whose crowing precedes the dawn, and hung a mirror and jewels on a *sakaki* tree in front of the cave. The goddess Amenouzume began a dance on an upturned tub, partially disrobing herself, which so delighted the assembled gods that they roared with laughter. Amaterasu became curious how the gods could make merry while the world was plunged into darkness and was told that outside the cave there was a deity more illustrious than she. She peeped out, saw her reflec-

tion in the mirror, heard the cocks crow, and was thus drawn out from the cave. The *kami* then quickly threw a *shimenawa*, or sacred rope of rice straw, before the entrance to prevent her return to it. This episode is the model for the later Shintō renewal ritual (see MATSURI).

Amaterasu's chief place of worship is the GRAND SHRINE OF ISE, the foremost Shintō shrine in Japan. She is manifested there in a mirror that is one of the three Imperial Treasures of Japan (the others being a jeweled necklace and a sword).

AMAZON, in Greek mythology, member of a race of women warriors. The story of the Amazons probably originated as a variant of a tale recurrent in many cultures, that of a distant land organized oppositely from one's own. The ascribed habitat of the Amazons necessarily became more remote as Greek geographic knowledge developed. Traditionally, one of the labors required of the Greek hero HERACLES was leading an expedition to obtain the girdle of the Amazons' queen (Hippolyte).

Subsidiary tales grew up to explain why, if the whole nation consisted of women, it did not die out in a generation. The most common explanation was that the Amazons mated with men of another people, kept the resulting female children, and sent the male children away to their fathers. In another tale, THESEUS attacked the Amazons either with Heracles or independently. The Amazons in turn invaded Attica but were finally defeated, and at some point Theseus married one of them, ANTIOPE.

Ancient Greek works of art often depicted combats between Amazons and Greeks; that between Theseus and the Amazons was a particular favorite. As portrayed in these works, the Amazons were similar in model to the goddess ATHENA, and their arms were the bow, spear, light double ax, a half shield, and, in early art, a helmet. In later art they were more like the goddess ARTEMIS and wore a thin dress, girded high for speed.

According to some accounts, the Amazon River was named by the 16th-century Spanish explorer Francisco de Orellana for the fighting women he claimed to have encountered on what was then the Marañon River.

AMBEDKAR, BHIMRAO RAMJI \ə-m-'bād-kər\ (b. April 14, 1891, Mhow, India—d. Dec. 6, 1956, New Delhi), most in-

Amazon of the type known as "Mattei," Roman copy after an original attributed to the Athenian sculptor Phidias, c. 440 BCE; in the Vatican Museum

Alinari—Art Resource

fluent leader of the DALIT ("Oppressed") groups, also identified as the Harijans ("Children of God"), UNTOUCHABLES, or scheduled-caste or low-caste Indians.

Born of an untouchable MAHAR family of western India, he was as a boy humiliated by his high-caste schoolfellows. Awarded a scholarship by the Gaekwar (the ruler) of Baroda, he studied at Columbia University (Ph.D.) and the University of London (D.Sci.), passing the bar from Gray's Inn. He entered the Baroda Public Service at the Gaekwar's request, but, again ill-treated by colleagues, he turned to legal practice and teaching. He soon established his leadership among the scheduled CASTES, founded several journals on their behalf, instituted depressed-classes conferences, and succeeded in obtaining special representation for them in the legislative councils of the government.

In 1947 Ambedkar became the law minister of the government of India. He took a leading part in the framing of the Indian constitution, outlawing discrimination against untouchables. He resigned in 1951, disappointed at his lack of influence in the government. In October 1956, in despair because of the perpetuation of untouchability in Hindu practice, Ambedkar honored a vow he had made two decades earlier and renounced HINDUISM to become a Buddhist. Some 200,000 fellow untouchables joined him at a ceremony in Nagpur. This began a revitalization of BUDDHISM in India that has been called "engaged Buddhism." Pictures and statues of Ambedkar are familiar features of the Indian public landscape. In many circles his status as a secular saint rivals that of GANDHI.

AMBROSE, SAINT \'am-,brōs-, -brōz\, *Latin* Ambrosius \am-'brō-zhəs, -zē-əs\ (b. c. 339 CE, Augusta Treverorum, Belgica, Gaul [Trier, Ger.]—d. 397, Milan; feast day December 7), bishop of Milan, biblical critic, and initiator of ideas that gave a model for conceptions of church-state relations.

Ambrose was reared in Rome by his widowed mother and his elder sister Marcellina, a nun. Duly promoted to the governorship of Aemilia-Liguria in c. 370, he lived at Milan and was unexpectedly acclaimed as bishop by the people of the city in 374. Ambrose was chosen as a compromise candidate to avoid a disputed election, and thus changed from an unbaptized layman to a bishop in eight days.

An imperial court frequently sat in Milan. In confrontations with this court, Ambrose showed a directness that combined the republican ideal of the prerogatives of a Roman senator with a vein of demagoguery. In 384 he secured the rejection of an appeal for tolerance by non-Christian members of the Roman senate, whose spokesman, Quintus Aurelius Symmachus, was his relative. In 388 he rebuked the emperor Theodosius for having punished a bishop who had burnt a Jewish *SYNAGOGUE*. On the other hand, he served as a loyal and resourceful diplomat. In his letters and in his funeral orations on the emperors Valentinian II and Theodosius, Ambrose established the medieval concept of a Christian emperor as a dutiful son of the church "serving under orders from Christ," and so subject to the advice and strictures of his bishop.

Ambrose's relations with the emperors formed only part of his commanding position among the lay governing class of Italy. He absorbed Greek learning, Christian and non-Christian alike—notably the works of PHILO JUDAEUS, ORIGEN, ST. BASIL THE GREAT of Caesarea, and Plotinus (see NEOPLATONISM). This learning he used in sermons expounding the BIBLE and, especially, in defending the "spiritual" meaning of the OLD TESTAMENT. He also composed important treatises, including *On the Holy Spirit*, *On the Duties of Ministers*, and *On the Mysteries*. Sermons, the dating of which unfortunately remains uncertain, were Ambrose's main literary output and remain an important source on the transmission of Greek philosophy and theology in the West. By such sermons Ambrose gained his most notable convert, AUGUSTINE, afterward bishop of Hippo in North Africa.

Ambrose introduced new Eastern melodies to the West with his HYMNS—e.g., "Aeterne rerum Conditor" ("Framer of the Earth and Sky") and "Deus Creator omnium" ("Maker of All Things, God Most High"). He advocated the most austere ASCETICISM: noble families were reluctant to let their marriageable daughters attend the sermons in which he urged upon them the crowning virtue of virginity.

Although Ambrose may have imposed his will on emperors, he never considered himself as a precursor of a polity in which the church dominated the state: for he acted from a fear that CHRISTIANITY might yet be eclipsed by a non-Christian nobility. In a near-contemporary mosaic in the chapel of S. Satiro in the church of S. Ambrogio, Milan, Ambrose appears as he wished to be seen: a simple Christian bishop clasping the book of Gospels. For Augustine, he was the model bishop: a biography was written in 412 by Paulinus, deacon of Milan, at Augustine's instigation.

AMEN \ä-'men, ä-,\ expression of agreement, confirmation, or desire used in worship by Jews, Christians, and Muslims. The meaning of the Semitic root from which it is derived is "firm," "fixed," or "sure," and the related Hebrew verb means "to be reliable" and "to be trusted." The Greek OLD TESTAMENT usually translates amen as "so be it"; in the English BIBLE it is often rendered as "verily," or "truly."

In its earliest use in the Bible, the amen occurred initially and referred back to the words of another speaker with whom there was agreement. It usually introduced an affirmative statement. The use of the initial amen, single or double in form, to introduce solemn statements of Jesus in the Gospels (77 times in the Gospels) had no parallel in Jewish practice. Such amens expressed the certainty and truthfulness of the statement that followed.

Use of the amen in Jewish temple liturgy as a response by the people at the close of a DOXOLOGY or other prayer uttered by a priest seems to have been common as early as

the time of the 4th century BCE. This Jewish liturgical use of amen was adopted by the Christians. JUSTIN MARTYR (2nd century CE) indicated that amen was used in the liturgy of the EUCHARIST and was later introduced into the baptismal service.

A final amen, added by a speaker who offered thanksgiving or prayers, public or private, to sum up and confirm what he himself had said, is found in the Psalms and is common in the NEW TESTAMENT. Jews used amen to conclude prayers in ancient times, and Christians closed every prayer with it. As HYMNS became more popular, the use of the final amen was extended.

Although Muslims make little use of amen, it is stated after every recital of the first SŪRA.

AMERICAN FRIENDS SERVICE COMMITTEE (AFSC), organization to promote peace and reconciliation through programs of social service and public information, founded by American and Canadian Friends (Quakers; see FRIENDS, SOCIETY OF) in 1917. In World War I, the AFSC helped conscientious objectors to find alternative-service possibilities, and this was continued during World War II. In peacetime the AFSC continued such national and international programs as community development, racial reconciliation, aid to migrant workers, relief to civilians in war-torn areas, and refugee work. Its program of Voluntary International Service Assignments (VISA) served as a model for the U.S. Peace Corps. In 1947 the AFSC was awarded the Nobel Prize for Peace jointly with the Friends Service Council, its British counterpart. AFSC headquarters are in Philadelphia.

AMERICAN HEBREW CONGREGATIONS, UNION OF, oldest American federation of Jewish congregations (founded 1873, Cincinnati, Ohio). In 2003, the group formally adopted the name Union for Reform Judaism.

The union was organized by Rabbi ISAAC MAYER WISE for the immediate purpose of establishing and supporting a seminary for the training of American-born RABBIS. Two years later the union established Hebrew Union College, the first successful rabbinic seminary in the United States. In 1950 this college merged with the Jewish Institute of Religion of New York, founded in 1922 by Rabbi Stephen S. Wise. Both institutions were long-time centers of REFORM JUDAISM and are still supported by the union.

The union organized five auxiliary groups: the National Federation of Temple Sisterhoods (1913), of Temple Brotherhoods (1923), of Temple Youth (1939), and of Temple Secretaries (1943) and the National Association of Temple Educators (1955). Each group operates independently within the union and promotes those activities that best suit it. The union has sponsored or cosponsored religious schools, teacher seminars, student study groups, and leadership training courses, often in cooperation with other groups.

The union, now numbering more than 900 Reform congregations (including several in Canada), is affiliated with the World Union for Progressive (Reform) JUDAISM and maintains headquarters in New York City.

AMESHA SPENTA \'ä-me-shə-'spen-tə\ (Avestan: "beneficent immortal"), *Pahlavi* amshaspend, in ZOROASTRIANISM, any of the six divine beings or ARCHANGELS created by AHURA MAZDĀ, the Wise Lord, to help govern creation. Three are male, three female. Ministers of his power against the evil spirit, AHRIMAN, they are depicted clustered about Ahura Mazdā on golden thrones attended by ANGELS. They are the everlasting bestowers of good. They are worshiped sepa-

rately and each has a special month, festival, and flower and presides over an element in the world order. In later Zoroastrianism each is opposed by a specific archfiend.

Of the six, Asha Vahishta (Avestan: Excellent Order, or Truth) and VOHU MANAH are by far the most important. Asha Vahishta is the lawful order of the cosmos according to which all things happen. He presides over fire, sacred to the Zoroastrians as the inner nature of reality. To the devotee he holds out the path of justice and spiritual knowledge. Vohu Manah (Avestan: Good Mind) is the spirit of divine wisdom, illumination, and love. He guided ZOROASTER'S soul before the throne of heaven. He welcomes the souls of the blessed in paradise. Believers are enjoined to "bring down Vohu Manah in your lives on earth" through profound love in marriage and toward one's fellowman. He presides over domestic animals. Khshathra Vairya (Desirable Dominion), who presides over metal, is the power of Ahura Mazda's kingdom. The believer can realize this power in action guided by Excellent Order and Good Mind. Spenta Armaiti (Beneficent Devotion), the spirit of devotion and faith, guides and protects the believer. She presides over earth. Haurvatāt (Wholeness or Perfection) and Ameretāt (Immortality), often mentioned together as sisters, preside over water and plants and may come to the believer in reward for participation in the natures of the other *amesha spentas*.

AMIDAH \,ä-mē-'dä, ä-'mē-dä\, plural Amidoth \,ä-mē-'döt\, or Amidot, Hebrew 'Amida ("Standing"), in JUDAISM, the main section of morning, afternoon, and evening prayers, recited while standing up. On weekdays the Amidah consists of 19 BENEDICTIONS: 3 paragraphs of praise, 13 of petition, and another 3 of thanksgiving. Some call this section of the daily prayer by the ancient name, *shemone 'esre* (Hebrew: "eighteen"), although the 19th benediction was added around 100 CE.

On SABBATHS and festivals and at NEW MOON services, the Amidah consists of the first 3 praises and the last 3 thanksgivings, but a special paragraph for the appropriate day replaces the usual 13 benedictions in the middle. Thus the Amidah at these services has only seven sections and is known as *bircath sheva*.

During the worship service, the Amidah is first recited by each individual as a silent prayer, giving any sinner a chance to atone without embarrassment. The prayer is then repeated aloud by the reader. All Jewish services include an Amidah.

- ◆ 1. "Blessed be Thou, O Lord, our God and God of our fathers, God of Abraham, God of Isaac, and God of Jacob, the great, the mighty, and the fearful God—God Most High—who bestowest goodly kindnesses, and art the Creator ["Koneh," which signifies primarily "Creator" and then "Owner"] of all, and rememberest the love of [or for] the Fathers and bringest a redeemer for their children's children for the sake of [His] Thy name in love. King, Helper, Savior, and Shield; blessed be Thou, Shield of Abraham."
- 2. "Thou art mighty forever, O Lord ["Adonai," not the Tetragrammaton]: Thou resurrectest the dead; art great to save. Sustaining the living in loving-kindness, resurrecting the dead in abundant mercies, Thou supportest the falling, and healest the sick, and settest free the captives, and keepest [fulfillest] Thy [His] faith to them

that sleep in the dust. Who is like Thee, master of mighty deeds [=owner of the powers over life and death], and who may be compared unto Thee? King sending death and reviving again and causing salvation to sprout forth, Thou art surely believed to resurrect the dead. Blessed be Thou, O Lord, who revivest the dead."

- 3. "Thou art holy and Thy name is holy, and the holy ones praise Thee every day. Selah. Blessed be Thou, O Lord, the holy God."
- 4. "Thou graciously vouchsafest knowledge to man and teachest mortals understanding: vouchsafe unto us from Thee knowledge, understanding, and intelligence. Blessed be Thou, O Lord, who vouchsafest knowledge."
- 5. "Lead us back, our Father, to Thy Torah; bring us near, our King, to Thy service, and cause us to return in perfect repentance before Thee. Blessed be Thou, O Lord, who acceptest repentance."
- 6. "Forgive us, our Father, for we have sinned; pardon us, our King, for we have transgressed: for Thou pardonest and forgivest. Blessed be Thou, O Gracious One, who multiplieth forgiveness."
- 7. "Look but upon our affliction and fight our fight and redeem us speedily for the sake of Thy name: for Thou art a strong redeemer. Blessed art Thou, O Lord, the Redeemer of Israel."
- 8. "Heal us and we shall be healed; help us and we shall be helped: for Thou art our joy. Cause Thou to rise up full healings for all our wounds: for Thou, God King, art a true and merciful physician: blessed be Thou, O Lord, who healest the sick of His people Israel."
- 9. "Bless for us, O Lord our God, this year and all kinds of its yield for [our] good; and shower down [in winter, "dew and rain for"] a blessing upon the face of the earth: fulfil us of Thy bounty and bless this our year that it be as the good years. Blessed be Thou, O Lord, who blessest the years."
- 10. "Blow the great trumpet for our liberation, and lift a banner to gather our exiles, and gather us into one body from the four corners of the earth; blessed be Thou, O Lord, who gatherest the dispersed of Thy [His] people Israel."
- 11. "Restore our judges as of yore, and our counselors as in the beginning, and remove from us grief and sighing. Reign Thou over us, O Lord, alone in loving-kindness and mercy, and establish our innocence by the judgment. Blessed be Thou, O Lord the King, who lovest righteousness and justice."
- 12. "May no hope be left to the slanderers; but may wickedness perish as in a moment; may all Thine enemies be soon cut off, and do Thou speedily uproot the haughty and shatter and humble them speedily in our days. Blessed be Thou, O Lord, who striketh down enemies and humblest the haughty."
- 13. "May Thy mercies, O Lord our God, be stirred over the righteous and over the pious and over the elders of Thy people, the House of Israel, and over the remnant of their scribes, and over the righteous proselytes, and over us, and

bestow a goodly reward upon them who truly confide in Thy name; and assign us our portion with them forever; and may we not come to shame for that we have trusted in Thee. Blessed be Thou, O Lord, support and reliance for the righteous."

14. "To Jerusalem Thy city return Thou in mercy and dwell in her midst as Thou hast spoken, and build her speedily in our days as an everlasting structure and soon establish there the throne of David. Blessed be Thou, O Lord, the builder of Jerusalem."

15. "The sprout of David Thy servant speedily cause Thou to sprout up; and his horn do Thou uplift through Thy victorious salvation; for Thy salvation we are hoping every day. Blessed be Thou, O Lord, who causest the horn of salvation to sprout forth."

16. "Hear our voice, O Lord our God, spare and have mercy on us, and accept in mercy and favor our prayer. For a God that heareth prayers and supplications art Thou. From before Thee, O our King, do not turn us away empty-handed. For Thou hearest the prayer of Thy people Israel in mercy. Blessed be Thou, O Lord, who hearest prayer."

17. "Be pleased, O Lord our God, with Thy people Israel and their prayer, and return [*i.e.*, reestablish] the sacrificial service to the altar of Thy House, and the fire-offerings of Israel and their prayer [offered] in love accept Thou with favor, and may the sacrificial service of Israel Thy people be ever acceptable to Thee. And may our eyes behold Thy merciful return to Zion. Blessed be Thou who restorest Thy [His] Shekinah to Zion."

18. "We acknowledge to Thee, O Lord, that Thou art our God as Thou wast the God of our fathers, forever and ever. Rock of our life, Shield of our help, Thou art immutable from age to age. We thank Thee and utter Thy praise, for our lives that are [delivered over] into Thy hands and for our souls that are entrusted to Thee; and for Thy miracles that are [wrought] with us every day and for Thy marvelously [marvels and] kind deeds that are of every time; evening and morning and noontide. Thou art [the] good, for Thy mercies are endless: Thou art [the] merciful, for Thy kindnesses never are complete: from everlasting we have hoped in Thee. And for all these things may Thy name be blessed and exalted always and forevermore. And all the living will give thanks unto Thee and praise Thy great name in truth, God, our salvation and help. Selah. Blessed be Thou, O Lord, Thy name is good, and to Thee it is meet to give thanks."

19. "Bestow peace, happiness, and blessing, grace, loving-kindness, and mercy upon us and upon all Israel Thy people: bless us, our Father, even all of us, by the light of Thy countenance, for by this light of Thy countenance Thou gavest us, O Lord our God, the law of life, loving-kindness, and righteousness, and blessing and mercy, life and peace. May it be good in Thine eyes to bless Thy people Israel in every time and at every hour with Thy peace. Blessed be Thou,

O Lord, who blestest Thy [His] people Israel with peace."

Sabbath. "Our God and God of our fathers! be pleased with our rest; sanctify us by Thy commandments, give us a share in Thy law, satiate us of Thy bounty, and gladden us in Thy salvation; and cleanse our hearts to serve Thee in truth: let us inherit, O Lord our God, in love and favor, Thy holy Sabbath, and may Israel, who hallows [loves] Thy name, rest thereon. Blessed be Thou, O Lord, who sanctifiest the Sabbath."

(As translated in "Shemoneh 'Esreh,"
The Jewish Encyclopedia [1907],
vol. 11, pgs. 270–272.)

There are numerous variations on the special benedictions that apply to festivals.

AMISH \ˈä-mish, ˈa-, ˈä-\, *also called* Amish Mennonite, member of a conservative Christian group in North America, primarily members of the Old Order Amish Mennonite Church. They originated in Europe as followers of Jakob Ammann, a 17th-century MENNONITE elder whose teachings caused controversy and SCHISM during the years 1693–97 among the Mennonites in Switzerland, Alsace, and south Germany. Ammann insisted that any Mennonite who had been excommunicated should be shunned or avoided by all other Mennonites and that anyone who told a falsehood should be excommunicated. He introduced washing of feet into the worship service and taught that church members should dress in a uniform manner, that beards should not be trimmed, and that it was wrong to attend services in a state church. Although he subsequently sought reconciliation with those who disagreed with him, the attempts failed. Amish settlements and congregations sprang up in Switzerland, Alsace, Germany, Russia, and Holland, but migration to North America in the 19th and 20th centuries and assimilation with Mennonite groups gradually eliminated the Amish in Europe.

The Amish began migrating to North America early in the 18th century and first settled in eastern Pennsylvania, where a large settlement is still found. Schisms and disruptions occurred after 1850 because of tensions between the "old order," or traditional Amish, and those who wished to adopt "new order" or progressive methods and organizations. During the next 50 years about two-thirds of the Amish either formed separate, small churches of their own or joined either the Mennonite Church or the General Conference Mennonite Church.

Those who continued the characteristic lifestyle of the Amish are primarily members of the Old Order Amish Mennonite Church. In the early 21st century there were about 1,200 Old Order Amish settlements in the United States and Canada, the largest in Pennsylvania, Ohio, Indiana, Iowa, Illinois, and Kansas. Their settlements are divided into autonomous congregations of about 75 baptized members. If the district becomes much larger it is again divided because the members meet in each other's homes. There are no church buildings. Each district has a bishop, two to four preachers, and an elder. The Amish differ little from the Mennonites in formal doctrine. Holy Communion is celebrated twice each year, and washing of feet is practiced by both groups. Adults are baptized and admitted to formal membership in the church at about age 17 to 20. Services are conducted in Palatine German, commonly known

AMITĀBHA

as Pennsylvania Dutch, with some English as well.

The Amish are known for their plain clothing and their plain way of life. They tend to live on largely self-sufficient family farms. The men wear broad-brimmed black hats, beards, and homemade plain clothes fastened with hooks and eyes instead of buttons. The women wear bonnets and long full dresses. No jewelry is worn. The Amish also shun telephones and electric lights and drive horses and buggies rather than automobiles.

AMITĀBHA \,ə-mē-'tä-bə\ (Sanskrit: "Infinite Light"), *Japanese Amida* \'ä-mē-dä\, *Chinese O-mi-t'ò* \'ə-'mē-'twò, 'ò-'mē-'tò\, in **BUDDHISM**, the great savior deity worshiped today principally by followers of **PURE LAND BUDDHISM** in Japan. As related in the **SUKHĀVĀTĪ VYŪHA SŪTRA** (the Indian text that was the fundamental **SCRIPTURE** of the Pure Land sects), it was many ages ago that a monk named Dharmākara made a number of vows, the 18th of which promised that, on his attaining buddhahood, all who believed in him and who called upon his name would be born into his paradise and would reside there in bliss until such time as they had obtained **NIRVANA**. Having accomplished his vows, the monk reigned as the Buddha Amitābha in the Western Paradise, called Sukhāvātī, the Pure Land.

The cult of Amitābha, which emphasizes faith above all else, came to the forefront in China about 650 CE and from there spread to Japan, where it led in the 12th and 13th centuries to the formation of the Pure Land school and the True Pure Land school, both of which continue to have large followings today. Amitābha as a savior figure was never as popular in Tibet and Nepal as he was in East Asia, but he is highly regarded in those countries as one of the five "self-born" buddhas who have existed eternally (*see* **DHYĀNI-BUDDHA**). According to this concept Amitābha manifested himself as the earthly **BUDDHA GOTAMA** and as **AVALOKITEŚVARA** (who is a **BODHISATTVA**). Some of the attributes given to Amitābha include: his color is red, his posture one of meditation (*dhyāna-mudrā*), his symbol the begging bowl, his mount the peacock, his consort Pāṇḍarā, his family Rāga, his element water, his sacred syllable "ba," or "āh," his **SKANDHA** (element of existence) *saṃjñā* (perceptions of sense objects), his direction the west, his sense perception taste, and his location in the human body the mouth.

Gavin Hellier—Robert Harding Picture Library/Getty Images

As a bestower of longevity, Amitābha is called Amitāyus (Sanskrit: "Infinite Life"). In China and Japan the two names are often used interchangeably, but in Tibet the two forms are never confounded, and Amitāyus is worshiped in a special ceremony in Tibetan Buddhism for obtaining long life. He is depicted wearing ornaments and a crown and holding the ambrosia vase from which spill the jewels of eternal life.

AMITĀYURBUDDHADHYĀNA SŪTRA \,ə-mē-'tä-yür-'bū-də-'dyä-nə-'sü-trə\ (Sanskrit: "Discourse Concerning Meditation on Amitāyus"), basic text of **PURE LAND BUDDHISM**, along with the larger and smaller **SUKHĀVĀTĪ VYŪHA SŪTRAS** (Sanskrit: "Description of the Western Paradise Sutras"). The sutra presents 16 forms of meditation as means of reaching the Pure Land and concludes that even the most wicked can attain this paradise by invoking the name of Amitāyus (**AMITĀBHA**).

The sutra was translated into Chinese under the title *Kuan-wu liang-shou ching* in 424 CE and has inspired many

Chinese commentaries. The Japanese version is entitled *Kammuryōju-kyō*. The Sanskrit original has been lost.

AMMONITE \ˈa-mə-nīt\, any member of an ancient Semitic people whose principal city was Rabbath Ammon, in Palestine. The book of *GENESIS* traces the origin of the tribe through Ammon (Ben-Ammi), the son of Lot by an incestuous union with one of his daughters (*Genesis* 19:36–38). The “sons of Ammon” were in a long-standing, though sporadic, conflict with the Israelites (*Deuteronomy* 2:16–37; *Judges* 11:4, 12–33). Archaeological data indicate that the city of Rabbath Ammon was a powerful city-state as early as the 18th century BCE.

With difficulty, the Ammonites’ fortress capital was captured by ISRAEL’S King DAVID. An Ammonite woman, one of many foreigners taken into King SOLOMON’S harem, was responsible for inducing the king to worship the Ammonite god Milcom (*1 Kings* 11:1).

During the reign of JEHOIAKIM (6th century BCE), the Ammonites allied themselves with the Chaldeans, Syrians, and others in an attack on JUDAH (*2 Kings* 24:2) and also harassed the Israelites when they attempted to rebuild the TEMPLE OF JERUSALEM after the BABYLONIAN EXILE. In the 2nd century BCE they were defeated by Judas Maccabeus (*see also* MACCABEES).

AMOGHAVAJRA \ə-ˈmō-gə-ˈvāj-rə\, 8th-century Indian Buddhist monk and missionary to China, a disciple of VAJRABODHI. In addition to the translations of Buddhist texts he made with his master, Amoghavajra is credited with introducing to China the important aspects of Esoter-

ic BUDDHISM (*see* VAJRAYĀNA), including the ceremony of Ulambana, or All Souls’ Day.

AMON \ˈä-mən\, also spelled Amun, Amen, or Ammon, Egyptian deity who was revered as king of the gods. Amon may have been originally a local deity at Khmun (Hermopolis) in Middle Egypt; his cult reached Thebes, where he became the patron of the pharaohs by the reign of Mentuhotep I (2008–1957 BCE). At that date he was already identified with the sun god RE of HELIOPOLIS and, as Amon-Re, was received as a national god. Represented in human form, sometimes with a ram’s head, or as a ram, Amon-Re was worshiped as part of the Theban triad including a goddess, MUT, and a youthful god, KHONS.

Amon’s name meant The Hidden One, and his image was painted blue to denote invisibility. This attribute of invisibility led to a popular belief during the New Kingdom (1539–c. 1075 BCE) in the knowledge and impartiality of Amon, making him a god for those who felt oppressed.

Amon’s influence was closely linked to the political well-being of Egypt. During the Hyksos domination (c. 1630–c. 1523 BCE), the princes of Thebes sustained his worship. Following the Theban victory over the Hyksos, Amon’s stature and the wealth of his temples grew. In the late 18th dynasty Akhenaton (Amenhotep IV) directed his religious reform against the traditional cult of Amon, but he was unable to turn people from their belief in Amon and the other gods; and, under Tutankhamen, Ay, and Horemheb (1332–1292 BCE), Amon was gradually restored as the god of the empire and patron of the pharaoh.

In the New Kingdom, religious speculation among Amon’s priests led to the concept of Amon as part of a triad (with PTAH and Re) or as a single god of whom all the other gods, even Ptah and Re, were manifestations. Under the sacerdotal state ruled by the priests of Amon at Thebes (c. 1075–c. 950 BCE), Amon evolved into a universal god who intervened through oracles in many affairs of state.

The succeeding 22nd and 23rd dynasties, the invasion of Egypt by Assyria (671–c. 663 BCE), and the sack of Thebes (c. 663 BCE) did not reduce the stature of the cult, which had acquired a second main center at Tanis in the Nile River delta. Moreover, the worship of Amon had become established among the Cushites of the Sudan, who were accepted by Egyptian worshippers of Amon when they invaded Egypt and ruled as the 25th dynasty (715–664 BCE). From this period onward, resistance to foreign occupation of Egypt was strongest in Thebes. Amon’s cult spread to the oases, especially Siwa in Egypt’s western desert, where Amon was linked with JUPITER. Alexander the Great won acceptance as pharaoh by consulting the oracle at Siwa, and he also rebuilt the SANCTUARY of Amon’s temple at Luxor. The early Ptolemaic rulers contained Egyptian nationalism by supporting the temples, but, starting with Ptolemy IV Philopator in 207 BCE, nationalistic rebellions in Upper Egypt erupted. During the revolt of 88–85 BCE, Ptolemy IX Soter II sacked Thebes, dealing Amon’s cult a severe blow. In 27 BCE a strong earthquake devastated the Theban temples, while in the Greco-Roman world the cult of ISIS and OSIRIS gradually displaced Amon.

AMOR \ˈä-mör, ˈä-ː\ *see* CUPID.

AMORA \ə-ˈmōr-ə\ (Hebrew and Aramaic: “interpreter,” or “reciter”), plural amoraim \ä-mō-ˈrä-im\, from the 3rd century CE, a Jewish scholar attached to one of several academies in Palestine (Tiberias, Sepphoris, Caesarea) or in Baby-

Amon, bronze statue, c. 750–550 BCE

By courtesy of the Brooklyn Museum

lonia (Nehardea, Sura, Pumbedita). The *amoraim* collaborated in writing the GEMARA, collected interpretations of and commentaries on the MISHNAH, TOSEFTA, and Baraitot (see BARAITA). Writing in various Aramaic dialects interspersed with Hebrew, the two groups of *amoraim* began work about 200 CE on the Gemara (or Mishnah commentary) section of the TALMUD. Because the Babylonian *amoraim* worked about a century longer than their counterparts in Palestine, completing their work about 600 CE, the Talmud BAVLI (“Babylonian Talmud”) was more comprehensive and, consequently, more authoritative than the Talmud YERUSHALMI (“Palestinian Talmud”), which lacks the Babylonian interpretations. In Palestine an ordained *amora* was called a RABBI; in Babylonia, a *rav*, or *mar*. See also TANNA.

AMOS \ˈā-məs\ (fl. 8th century BCE), the first Hebrew prophet to have a biblical book named for him. He foretold the destruction of the northern kingdom of ISRAEL (although he did not specify Assyria as the cause) and, as a prophet of doom, anticipated later OLD TESTAMENT prophets.

The little that is known about Amos’ life has been gleaned from his book, which was partly or wholly compiled by other hands. A shepherd by occupation and native of Tekoa (Amos 1:1; 7:14–15), 12 miles south of Jerusalem, Amos flourished during the reigns of King UZZIAH (c. 783–742 BCE) of JUDAH (the southern kingdom) and King Jeroboam II (c. 786–746 BCE) of Israel (Amos 1:1; 2 Kings 14:23–29). He actually preached for only a short time.

Under the influence of visions of divine destruction of the Hebrews by such natural disasters as locusts and fire (Amos 7:1–6), Amos traveled from Judah to the richer, more powerful kingdom of Israel, where he began to preach. The time is uncertain, but the Book of Amos puts the date as two years before an earthquake that may have occurred in 750 BCE. Amos castigated corruption and social injustice among Israel, its neighbors, and Judah; he asserted God’s absolute sovereignty, and he predicted the imminent destruction of Israel and Judah. After preaching at BETHEL, a famous shrine under the special protection of Jeroboam II, Amos was ordered to leave the country by Jeroboam’s priest Amaziah (Amos 7:12–13). Thereafter his fate is unknown.

Amos believed that God’s absolute sovereignty over humanity compelled social justice for all people, rich and poor alike (Amos 2:6–7a; 4:1; 5:11–12). Not even God’s chosen people were exempt from this fiat, and even they had to pay the penalty for breaking it (Amos 2:4–8, 12–16; 3:1–9:10); hence, Amos also believed in a moral order transcending nationalistic interests. So distinctive is his style of expression that the reader often can distinguish those portions genuinely by Amos from parts probably invented by others, such as the concluding optimistic section foretelling the restoration of the Davidic kingdom (Amos 9:11–15).

AMPHICTYONY \əm-ˈfɪk-tē-ə-nē\, also spelled amphictiony (from Greek *amphiktyones*, “dwellers around, neighbors”), in ancient Greece, association of neighboring states formed around a religious center. The most important was the Amphictyonic League (Delphic Amphictyony). Originally composed of 12 peoples dwelling around Thermopylae, the league was centered first on the shrine of DEMETER and later became associated with the Temple of APOLLO at DELPHI. Member states sent two kinds of deputies (*pylagorai* and *hieromnēmones*) to a council (*pylaiia*) that met twice a year and administered the temporal affairs of the shrines and their properties, supervised the treasury, and conducted the

PYTHIAN GAMES. In the 4th century BCE the league rebuilt the Delphic temple. Although primarily religious, the league exercised a political influence through its membership OATH, forbidding destruction of member cities or the cutting off of water supplies; the *hieromnēmones* could punish offenders and even proclaim a sacred war against them. Other important amphictyonies were the Delian and, in the Archaic period, the Calaurian (composed of states around the Saronic Gulf).

AMPHION AND ZETHUS \ˈam-fē-ən . . . ˈzē-thəs\, in Greek mythology, the twin sons of ZEUS by ANTIPOE. When children, they were left to die on Mount Cithaeron but were found and brought up by a shepherd. Amphion became a great singer and musician, Zethus a hunter and herdsman. As adults, they built and fortified Thebes, blocks of stone forming themselves into walls at the sound of Amphion’s lyre. Amphion married NIOBE and killed himself after the loss of his family.

AMPHITRITE \,am-fə-ˈtrī-tē\, in Greek mythology, the goddess of the sea, wife of the god POSEIDON. Poseidon chose Amphitrite from among her sisters as the NEREIDS performed a dance on the isle of Naxos. Refusing his offer of marriage, she fled to ATLAS, from whom she was retrieved by a dolphin sent by Poseidon. Amphitrite then became Poseidon’s wife; he rewarded the dolphin by making it a constellation. In art Amphitrite was represented either enthroned beside Poseidon or driving with him in a chariot drawn by sea horses or other sea creatures.

AMPHITRYON \əm-ˈfɪ-trē-ɹən, -ən\, in Greek mythology, son of Alcaeus, king of Tiryns. Having accidentally killed his uncle Electryon, king of Mycenae, Amphitryon fled with Alcmena, Electryon’s daughter, to Thebes, where he was cleansed of guilt by King Creon, his maternal uncle. Alcmena refused to marry Amphitryon until he had avenged the death of her brothers, all of whom except one had fallen in battle against the Taphians. Creon offered his help if Amphitryon would rid him of the uncatchable Cadmeian vixen. Amphitryon borrowed CEPHALUS’ invincible hound Laelaps, and ZEUS changed both Laelaps and the vixen to stone. The Taphians, however, remained invincible until Comaetho, the king’s daughter, out of love for Amphitryon, cut off her father’s golden hair, the possession of which rendered him immortal. On Amphitryon’s return to Thebes he married Alcmena.

When Amphitryon was once absent at war, Alcmena became pregnant by Zeus, who slept with her in the guise of her husband; she became pregnant again by her real husband upon his return. Thus she bore twin boys: Iphicles the son of Amphitryon, and HERACLES the son of Zeus.

AMRITSAR \,əm-ˈrɪt-sər\ (Punjabi: “Pool of Nectar”), seat of Sikhism, and one of the largest cities in east Punjab.

Established as a new settlement in the late 1570s, the town was originally named Rāmdāspur, taking its name from its founder, Gurū RĀMDĀS (GURŪ 1574–81), the fourth Gurū of the Sikhs. At the center of the town is the *amritsar*. This square tank serves as a reflecting pool for the GOLDEN TEMPLE (Darbār Sāhib), Sikhism’s most sacred structure. In the early 1630s, under pressure from the Mughal administration at Lahore, the religio-administrative center of Sikh life was shifted to the remote Shivālik hills, just south of the HIMALAYAS, but with the waning of Mughal power in the first quarter of the 18th century, Amritsar

once again became the axis of Sikh life. At the direction of Mahārājā Ranjīt Singh (1780–1839), the copper domes of the Darbār Sāhib were covered with gold-plated sheets. The city became a major center of trade, and after the arrival of the British it continued to develop, becoming one of the largest grain markets in northern India.

Its pivotal role in Sikh history is secured by the fact that it houses not only the Darbār Sāhib but also the AKĀL TAKHAT and the SHIROMANĪ GURDWARĀ PRABANDHAK COMMITTEE, and that it served as the center of inspiration and organization for SANT JARNAIL SINGH BHINDRANWALE'S efforts to create the independent nation of KHALISTAN in the early 1980s.

AMULET, also called talisman, an object, either natural or man-made, believed to be endowed with special powers to protect or bring good fortune. Amulets are carried on the person or kept in the desired sphere of influence.

Natural amulets are of many kinds: precious stones, metals, teeth and claws of animals, bones, plants, and so on. Man-made amulets, equally varied, include religious medallions and small figurines. Among believers amulets are thought to derive power from their connection with natural forces, from religious associations, or from being made in a ritual manner at a favorable time.

The MacGregor papyrus of ancient Egypt lists 75 amulets. One of the commonest was the SCARAB beetle, worn by the living and dead alike. The scarab symbolized life—perhaps because it pushed a ball of dung that was identified with the sun and was believed to contain the beetle's eggs, or perhaps because its hieroglyph was the same as that for the verb "to become"—and was thought to restore the dead person's heart in the next world. In Egypt the magic formulas originally recited over amulets to give them their power were eventually inscribed and worn themselves.

In the Middle Ages Christian amulets included relics of saints and letters said to have been sent from heaven. Among Jews the preparation of amulets became a rabbinic function. Muslims often carry verses from the QUR'AN, the names of God, or associated sacred numbers within small satchels. Christians may wear crosses or crucifixes, and statuettes of the MADONNA are found in some Roman Cath-

olic households. A popular type of amulet is the "good luck charm" such as the birthstone or rabbit's foot.

ANABAPTIST \,a-nə-'bap-tist\, also called Re-baptizer, member of a radical movement of the 16th-century Protestant REFORMATION. Its most distinctive tenet was adult BAPTISM. In the first generation of the movement, converts submitted to a second baptism, which was a crime punishable by death under the legal codes of the time. The Anabaptists denied that they were rebaptizers, for they repudiated their own infant baptism as a blasphemous formality. They considered the public CONFESSION of SIN and FAITH, sealed by adult baptism, as the only proper baptism. Following the Swiss Reformer HULDRYCH ZWINGLI, Anabaptists held that infants were not punishable for sin until an awareness of GOOD AND EVIL emerged within them, and that then they could exercise their own FREE WILL, repent, and accept baptism.

The Anabaptists also believed that the church was the community of the redeemed and should be separated from the state, which existed only for the punishment of sinners. Most Anabaptists opposed the use of the sword by Christians in the maintenance of social order and in the conduct of a just war. They also refused to swear civil oaths. For their beliefs thousands were put to death.

The Anabaptists did not aim to reform the medieval church. They were determined instead to restore the institutions and the spirit of the primitive church and were quite confident that they were living at the end of all ages. They readily recognized in their leaders divinely summoned prophets and apostles, and all converts stood ready to give a full account of their faith before the magistrates.

The Anabaptist movement originated in Zürich among a group of young intellectuals who rebelled against Zwingli's apparent subservience to the magistrates and his reluctance to proceed swiftly with a complete reform of the church. One of their leaders was Konrad Grebel, a highly educated humanist from a patrician family. The first adult baptisms took place at Zollikon, outside Zürich, at the beginning of 1525, and soon a mass movement was in progress.

The vehemence of the Anabaptist leaders and the revolutionary implications of their teaching led to their expulsion

Moroccan amulet for Shavuot, the Jewish harvest festival

Erich Lessing—Art Resource

ANĀHITI

from one city after another. This simply increased the momentum of an essentially missionary movement. Soon civil magistrates took sterner measures, and most of the early Anabaptist leaders died in prison or were executed.

THOMAS MÜNTZER was among those (sometimes called “spirituals”) who emphasized that the Anabaptists were living at the end of all ages. He was executed after leading Thuringian peasants in the revolt of 1525. His disciple Hans Hut (died in prison in Augsburg in 1527) was the principal radical Reformer in southern Germany.

Balthasar Hubmaier (executed in Vienna in 1528) was a leader in Nicholsburg, Moravia. Also in Moravia, where the ruling lords desired colonists and where many Anabaptists settled, a type of Anabaptism developed that stressed the community of goods modeled on the primitive church in Jerusalem. Under the leadership of Jakob Hutter the growing communes assumed his name. HUTTERITE groups survived and are now primarily located in the western United States and Canada.

Melchior Hofmann was the Anabaptist apostle in the Netherlands, where he developed a very large following. He taught that the world would soon end and that the new age would begin in Strasbourg, where he was imprisoned in 1533 and died c. 1543. Some of Hofmann’s followers came under the influence of the Dutchman Jan Mathijs (died 1534) and of John of Leiden (Jan Beuckelson; died 1535). The two leaders and many refugees settled in 1534 in Münster, Westphalia, where they gained control of the city, established a communistic theocracy, and practiced polygamy. The city was captured in 1535 by an army raised by German princes, and the leaders were tortured and killed.

Modern historians have come to see the episode at Münster as an aberration of the Anabaptist movement. In the years following the episode, however, classical Protestants and Catholics increased the persecution of Anabaptists throughout Europe

without discrimination between the belligerent minority and the pacifist majority. The pacifist Anabaptists in the Netherlands and north Germany rallied under the leadership of the former priest Menno Simons and his lieutenant, Dirk Philips. Their followers survived and were eventually accepted as the MENNONITE religious group.

ANĀHITI \ə-ˈnä-hē-tē\, also called *Anāhitā* \ə-ˈnä-hē-tā, -tə\, ancient Iranian goddess of fertility, royalty, and war. Possibly of Mesopotamian origin, her cult was made prominent by Artaxerxes II (reigned 404–359 BCE), and statues and temples were set up in her honor throughout the Persian empire. A common cult of the various peoples of the empire at that time, it persisted in Asia Minor long afterward. In the *AVESTA* she is called *Ardvī Sūrā Anāhitā* (“Damp, Strong, Untainted”); this seems to be an amalgam of two originally

Cylinder seal dating from the Achaemenid period, 6th–4th century BCE (above) and an imprint from that cylinder. The imprint shows a scene before either the queen or the goddess Anāhiti; in the Louvre, Paris

Erich Lessing—Art Resource

separate deities. In Greece Anāhiti was identified with ATHENA and ARTEMIS.

ANAN BEN DAVID \ä-'nän-,ben-dä-'vēd\ (fl. second half of the 8th century), Persian Jew, founder of the Ananites, an antirabbinical order from which the still-existing Karaite sect developed (*see* KARAISM).

Anan became prominent in the 760s, when he competed with his younger brother for the office of exilarch, head of the Jews of the BABYLONIAN EXILE. The office was hereditary, needing the confirmation of the ruling CALIPH, which Anan failed to obtain. He therefore declared himself antiexilarch and was jailed by the civil authorities. At his trial Anan pleaded that he had founded a new religion, one with similarities to ISLAM, and as a result was released and given government protection.

In 770 Anan wrote the definitive code of his order, the *Sefer ha-mitzvot* ("Book of Precepts"). Its unifying principle is its rejection of much of the TALMUD and of the rabbinic authority, which based its authority on the Talmud. Only the BIBLE is held to be valid, but it is interpreted with a mixture of freedom and literalism.

After Anan's death, his followers settled in Jerusalem. Eventually his sect developed into the order known as Karaism, which also was ascetically oriented and rejected Talmudic authority. When the State of ISRAEL was founded in 1948, several thousand Karaites settled there.

ĀNANDA \ä-'nən-də\ (Sanskrit: "joy," or "bliss"), in Indian philosophy of the UPANISHADS and the school of VEDĀNTA, an important attribute of the supreme being BRAHMAN. *Ānanda* is characteristically used in the *Taittirīya Upaniṣad* (c. 6th century BCE) to describe the nature of Brahman and, simultaneously, the highest state of the individual self. Such joy is identified with the joy that is brought to the self by its release from the usual entanglements of waking and bodily consciousness. In this sense *ānanda* continues to play an important role in various schools of Hindu philosophy, although its nature is differently interpreted.

ĀNANDA (fl. 6th century BCE, India), according to tradition, the first cousin of the BUDDHA GOTAMA, known as his "beloved disciple."

Ānanda was a monk and served as Gotama's personal attendant. According to the VINAYA PĪṬAKA texts, it was he who persuaded the Buddha to allow women to become nuns. According to Buddhist tradition Ānanda was the only one of the Buddha's intimate disciples who had not attained enlightenment when the Buddha died. The tradition goes on to recount that he attained that goal just before the first council, at which he recited from his memory of the Buddha's teaching the SUTTA PĪṬAKA (the "canonical" collection that contains the Buddha's sermons). A collection of verses ascribed to Ānanda himself is preserved in the *Theragāthā* segment of the *Sutta Pīṭaka*.

ANANKE \ə-'naŋ-kē\, in Greek literature, necessity or FATE personified. In Homer the personification has not yet occurred, although even the gods admit they are limited in their freedom of action. Ananke becomes rather prominent in post-Homeric literature, particularly in the mystic cult of Orphism, but is definitely known to emerge into a cult only at Corinth, where she was worshiped with Bia ("Might," or "Force"). Because of her unalterable nature it was pointless to render to her offerings or sacrifice—"Nothing is stronger than dread Necessity" was a Greek byword.

In literature she is associated with the NYMPH ADRASTEIA, the Moirai (or Fates, of whom she was the mother, according to Plato in *The Republic*), and similar deities. In Italy she does not appear to have been worshiped at all; the description of Necessitas (Ananke) in Horace's CARMINA is purely literary.

ANATH \ä-'nät\, *also spelled* Anat, chief West Semitic goddess of love and war, the sister of the god BAAL.

Considered a beautiful young girl, she was often designated "the Virgin" in ancient texts. Probably one of the best known of the Canaanite deities, she was famous for her youthful vigor and ferocity in battle, and consequently was adopted as a favorite by the Egyptian king Ramses II (reigned 1279–13 BCE). Although Anath was often associated with the god RESHEPH in ritual texts, she was primarily known for her role in the myth of Baal's death and resurrection, in which she mourned and searched for him and finally helped to retrieve him from the netherworld.

Egyptian representations of Anath show a nude goddess, often standing on a lion and holding flowers. During the Hellenistic Age, the goddesses Anath and ASTARTE were blended into one deity, called ATARGATIS.

ANĀTHAPIṆḌIKA \ə-'nä-tə-'pin-di-kə\, in Buddhist tradition, a banker of Sāvattthi (modern Śrāvastī) and early follower of the BUDDHA GOTAMA. Tradition states that Anāthapiṇḍika met the Buddha at Rājagaha and became deeply devoted to him. He invited the Buddha to his city, where he built for him a famous monastery at Jetavana, where the Buddha spent most of his time and delivered most of his sermons. He is depicted as an ideal layman within the Buddhist tradition.

ANATHEMA \ə-'na-thə-mə\ (Greek: "something set up or dedicated," in the Septuagint a translation of Hebrew *ḥērem* "thing dedicated [to consecration or destruction]"), in the OLD TESTAMENT, a creature or object set apart for sacrificial offering. Its return to profane use was strictly banned, and such objects, destined for destruction, thus became effectively accursed as well as consecrated (Leviticus 27:21, 28–29; Judges 1:17). Old Testament descriptions of religious wars call both the enemy and their besieged city anathema inasmuch as they were destined for destruction (Joshua 6:17–21; 1 Samuel 15:1–3).

In NEW TESTAMENT usage a different meaning developed. ST. PAUL used the word anathema to signify a curse and the forced expulsion of one from the community of Christians (Romans 9:3; 1 Corinthians 12:3; Galatians 1:8–9). In 431 CE ST. CYRIL OF ALEXANDRIA pronounced his 12 anathemas against the heretic NESTORIUS. In the 6th century anathema came to mean the severest form of EXCOMMUNICATION that formally separated a heretic completely from the Christian church and condemned his doctrines.

ANĀTMAN \ə-'nät-mən\ (Sanskrit: "non-self"), *Pāli* anatta, in BUDDHISM, the doctrine that there is in humans no permanent, underlying substance that can be called the soul. Instead, the individual is compounded of five factors of consciousness, known as SKANDHA, that are constantly changing. *Anātman* is a departure from the Hindu belief in ĀTMAN ("self"). In Buddhism, the absence of a self, ANITYA ("the impermanence of all being"), and DUKKHA ("suffering") are the three characteristics of all existence; recognition of these characteristics constitutes "right understanding," a component in the Path that leads to Enlightenment.

ANATOLIAN RELIGIONS

The religions of Anatolia comprise the beliefs and practices of the ancient peoples and civilizations of Turkey and Armenia, including the Hittites, Hattians, Luwians, Hurrians, Assyrian colonists, Urartians, and Phrygians. This area, Asia Minor, shows a remarkable continuity in its worship. Beginning in the Neolithic Period (c. 7000–6000 BCE) and continuing for some 6,000 years, the population venerated a divine pair, mother goddess and weather god, the former in association with the lion, the latter with the bull; a divine son, associated with the panther; and a god of hunting whose symbolic animal was the stag. To the ancients, for whom the essence of a thing lay in its name, this continuity was less obvious than it is today. The many names under which the deities were known at different times and places now appear of less religious significance than the constancy of the types.

PREHISTORIC PERIODS

The earliest evidence of religious beliefs has come to light at the mound of Çatal Hüyük, to the south of modern Konya in central Turkey. Here archaeologists have discovered remains of a Neolithic village of mud-brick houses, many of which can be identified as shrines. They date to about 6500–5800 BCE. Huge figures of goddesses in the posture of giving birth, leopards, and the heads of bulls and rams are modeled on some of the walls. Other walls contain frescoes showing hunt scenes or vultures devouring headless human corpses. A painting from the site also shows images of the dead being stripped of flesh by vultures in a mortuary outside the village before being buried under platforms in the houses. Stone and terra-cotta statuettes found in these shrines represent a female figure, sometimes accompanied by leopards, and a male either bearded and seated on a bull or youthful and riding a leopard. Based on a carved plaque found at this site, it appears that the main deity was a goddess, a mistress of animals, with whom were associated a son and a consort.

At Kültepe, Turkey, statuettes have been recovered; the majority are abstract, disk-shaped idols without limbs, and many of them have two, three, or even four heads—perhaps a representation of a divine family, a mother goddess with consort and child or children. Molds for a pair of male and female figures—the female

Erich Lessing—Art Resource

in most instances holds a baby—have been found at several sites at a somewhat later level.

Old Assyrian seal impressions contain an elaborate **ICONOGRAPHY** featuring a whole pantheon of deities, some recognizably Mesopotamian, others native Anatolian, distinguished by such features as dress, attendant animals, weapons, actions, and attitudes. Among them are several weather gods, all associated with a bull. A bull alone, carrying a **PYRAMID** upon its back, sometimes surmounted by a bird, is a particularly common motif. Other deities are a war god holding various weapons, a hunting god holding a bird or hare, a god in a horse-drawn chariot, another in a wagon drawn by boars, a goddess enthroned and surrounded by animals, a nude goddess, and several composite beings.

RELIGIONS OF THE HITTITES, HATTIANS, AND HURRIANS

Gods and myths. From 1700 to 1200 BCE the history of Asia Minor is well documented. The Hittites in the center, the Luwians in the south and west, and the Palaians in the north were speakers of related Indo-European languages. In the southeast were the Hurrians, comparatively late arrivals from the region of Lake Urmia. The Hattians, whose language appears to have become extinct, were most probably the earliest inhabitants of the kingdom of Hatti itself.

Each of these nations had its own pantheon, and individual cult centers had their own names for deities. It seems that the deity of each city was regarded as a distinct personality. There were also specialized weather gods, governing lightning, the clouds, rain, the palace, the royal person, the sceptre, and the the army. In the iconography, however, there was a well-defined and limited number of divine types.

The most widely worshiped Hittite deity was the weather god, and under the title “weather god of Hatti” he became the chief deity of the official pantheon, a great figure who bestowed kingship and brought victory in war. His name in Luwian, and probably also in Hittite, was **TARHUN** (Tarhund); in Hattic he was called **Taru**, and in Hurrian, **TESHUB**. As Tarhun’s spouse, the great goddess of the city of Arinna (which has not been located) was exalted as patroness of the state. Her name in Hattic was **Wurusemu**, but the Hittites worshiped her under the epithet **ARINNITTI**. She is a sun goddess, but she may originally have had **CHTHONIC** (underworld) characteristics. The king and queen were her **HIGH PRIEST** and priestess.

The weather god of another city, Nerik, was regarded as the son of this supreme pair, and they had daughters named **Mezzulla** and **Hulla** and a granddaughter, **Zintuhi**. **Telipinu** was another son of the weather god and had similar attributes. He was a central figure in the Hittite myths.

There was also a male sun god, a special form of whom was the “sun god in the water,” probably the sun as reflected in the waters of a lake. His name in Hittite was **Istanu**, borrowed from the Hattic **Estan** (Luwian **Tiwat**, Hurrian **Shimegi**). There was also a moon god (Hittite and Luwian **Arma**, Hurrian **KUSHUKH**), but he plays little part in the texts. According to official theology there also existed a sun god or goddess of the underworld. In this place resided the Sun on its journey from west to east during the night.

The god of hunting, denoted in text by the logogram **KAL**, appears frequently on Hittite monuments; he holds a bird and a hare, and he stands on a stag, his sacred animal. The war god also appears; his Hattic name was **Wurunkatti** (“King of the Land”), his Hurrian counterpart **Hesui**.

The Hittite goddess of love and war was called **Shaushka** in Hurrian. As a warrior goddess she was represented as a winged figure standing on a lion accompanied by doves and two female attendants.

Among the lesser deities, there was a mother goddess, **Hannahanna** “the grandmother,” closely associated with birth, creation, and destiny, plus many mountains, rivers, springs, and spirits of past kings and queens who had “become gods” at death.

In general, the gods were imagined to have their own lives, though also needing the service of their worshipers, who in turn were dependent on the gods for their well-being. The gods lived in their temples, where they had to be fed, clothed,

washed, and entertained; without this service from humans the gods might withdraw in anger and so cause life on earth to wither and die. One of the most characteristic rituals of the Hittites was the invocation by which a god who had absented himself was induced to return and attend to his duties.

A particularly well-attested type of Anatolian myth occurs in connection with the invocation of an absent god and tells how the god once disappeared and caused a blight on earth, how he was sought and found, and eventually returned to restore life and vigor. In one such myth the weather god withdraws in anger and the search is conducted by the sun god (whose messenger is an eagle), the father of the weather god, his grandfather, and his grandmother Hannahanna. In another version, the weather god goes down to the netherworld through a hole in the ground, apparently the hole from which the river Marassantiya (modern Kızıl İrmak, in Turkey) gushed forth, which suggests that this weather god may really have been a god of the underground waters.

Another myth, "The Slaying of the Dragon," connected with the Hittian city Nerik, was apparently recited at a great annual spring festival called Purulli. It tells how the weather god fought the dragon and was at first defeated but subsequently, by means of a ruse, succeeded in getting the better of him and then killing him.

Both an elaborate epic of the struggle against Ullikummi and a *Theogony*, though written in Hittite, are Hurrian in origin and refer to Hurrian and even Mesopotamian deities. The *Theogony* tells of the struggle for kingship among the

Principal religious centers of ancient Anatolia

Erich Lessing—Art Resource

gods. Alalu, after holding the kingship for nine years, was defeated by ANU (the Babylonian sky god) and went down to the netherworld. Anu in his turn, after nine years, gave way to Kumarbi, a Hurrian god, and went up to heaven. Eventually the weather god Teshub was born, and, though the god KAL apparently reigned for a period and the end of the tale is lost, it is certain that Teshub was the final victor, for there are many allusions to the “former gods” who were banished to the netherworld by him. The conception itself derives from Babylonia.

The “Song of Ullikummi” tells of a plot by Kumarbi to depose Teshub from his supremacy by begetting a monstrous stone as champion. Ullikummi, the stone monster, grows in the sea, which reaches his waist, while his head touches the sky; he stands on the shoulder of Upelluri, a GIANT who carries heaven and earth. Teshub is warned of the danger and goes out to battle in his chariot drawn by bulls, but he fails and appeals for help to the Babylonian god EA.

The latter orders the “former gods” to produce the ancient tool by which heaven and earth had once been cut apart (the only surviving hint of a Hittite CREATION MYTH), and with this he severs Ullikummi from the giant and so destroys his power. Again the end is lost, but it is certain that the final victory went to Teshub.

Rites and ceremonies. Hittite records give abundant evidence for a state religious cult. The king himself and all important state matters, including royal decrees and treaties, were placed under the protection of national deities. Confession and expiation formed the main themes of the extant royal prayers.

Many extant texts consist of descriptions of festivals in which the king or queen is the chief officiant. These festivals were numerous, but their names are largely unintelligible. Many of them were seasonal. The preliminary details, such as the robing of the king and his entry into the temple, accompanied by various dignitaries and by musicians playing their instruments, differed little from one festival to another. The festivals invariably culminated in LIBATIONS and frequently in a cultic meal. One such festival lasted 38 days and involved celebrations in a dozen different cities.

From tablets we know that the Hittites practiced a burial ritual for a king or queen that lasted 13 days; the body was cremated and the fire extinguished with potable liquids. The bones were then dipped in oil or fat and wrapped in cloth. A feast followed their placement on a stool in a stone chamber. Although CREMATIONS were practiced, burial of the body in an earthen grave was not uncommon. One site contains 72 burials, 50 of which were cremations. The other site contained only cremations, and the presence of some precious objects among them suggests that these might be burials of privileged persons.

RELIGIONS OF SUCCESSOR STATES

When Hattusa fell, about 1180 BCE, the Luwians moved eastward and southward into Cappadocia, Cilicia, and North Syria. Here they formed a number of small successor kingdoms. Shortly afterward the Phrygians crossed the Bosphorus from Thrace and occupied the center of the Anatolian plateau, cutting off in the extreme southwest a remnant of the Luwian people, who became known as the Lycians and maintained their reverence for the Luwian gods Tarhun, Runda, Arma, and Santa into classical times.

The East Luwians, whose rulers used the Hittite hieroglyphic script to record their deeds, worshiped these same deities; but their chief goddess was KUBABA, who only ap-

pears in the archives of Hattusa except as the local goddess of Carchemish in Syria. Her prominence was due to political factors, for Carchemish was then the leading Hittite city.

In the east, the Hurrians formed a new kingdom, Urartu, which rose to power from about 900 to 600 BCE. Their national god was HALDI, and he is associated with a weather god, Tesheba, a sun goddess, Shiwini, and a goddess, Bagbartu (or Bagmash-tu). Haldi is represented standing on a lion, Tesheba on a bull, Shiwini holding a winged sun disk above her head. The cult was practiced not only in temples but also in front of rock-hewn niches in the form of gates through which the deity was probably believed to manifest himself.

The Phrygian Mother goddess was Cybele, or Cybebe, a goddess of the mountains, out of which she was believed to manifest herself to her devotees. In Anatolia, Cybele's cult is marked by carved rock facades with niches or by rock-hewn thrones, on which the statue would be set; in front of these, the rites were celebrated in the open air. The high priest of Cybele was given the name of ATTIS, and—at least in later times—she was attended by a band of devotees called GALLI, whose orgiastic dancing, at the climax of which they castrated themselves, was notorious.

The cult myth of these rites told how Cybele (known at Pessinus as AGDISTIS, from Mount Agdos [or Mount Agdistis] in the vicinity) loved a beautiful youth named Attis. According to the earliest version, Attis was killed by a boar. All later versions, however, refer to wild revelry and castration, while in one version Attis is afterwards turned into a pine tree. The "Phrygian rites" introduced into Rome under the Emperor Claudius (reigned 41–54 CE) included the ceremonious felling of a pine tree to represent the dead youth and its transport in procession to the temple. Still later, the sacrifice of a bull or a ram and the belief in the resurrection of Attis were added to the cult.

Among other deities, the goddess Ma of COMANA, despite her name (Mother), was distinct from Cybele and was identified with the war goddess BELLONA. The god Men, who appears on numerous monuments of the Hellenistic period, was an equestrian moon god, later identified with Attis.

ANCAEUS \an-'sē-əs\, in Greek mythology, the son of ZEUS or POSEIDON and king of the Leleges of Samos. In the Argonautic expedition, after the death of Tiphys, the helmsman of the *Argo*, Ancaeus took his place. While planting a vineyard, Ancaeus was told by a seer that he would never drink of its wine. When the grapes were ripe, he squeezed the juice into a cup and, raising it to his lips, mocked the seer, who retorted with the words "There is many a slip between cup and the lip." At that moment it was announced that a wild boar was ravaging the land. Ancaeus set down the cup, leaving the wine untasted, hurried out, and was killed by the boar.

ANCESTOR WORSHIP, any of a variety of religious beliefs and practices concerned with the spirits of dead persons regarded as relatives, some of whom may be mythical.

The core of ancestor worship is the belief in the continuing existence of the dead and in a close relation between the living and the dead, who continue to influence the affairs of the living. The spirits of the dead are often thought to help the living, but they often are thought to do harm if not propitiated. Veneration is shown those persons who in their lifetimes held positions of importance, such as heads of families, lineages, clans, tribes, kingdoms, and other social groups. In some societies only the spirits of the recently deceased are given attention; in others, all ancestors, near and remote in time, are included. In still other societies, one ancestor may be the focus of attention, and he or she is often regarded as a hero. In most societies, ancestor worship was only one element of a complex of SUPERNATURALISM, and seldom a dominant feature.

The presence or absence of ancestor worship relates in a general way to the importance of KINSHIP in the societies concerned. Where continuity of kinship and inheritance of property are very important, elders are characteristically regarded with respect, and the persistence of bonds of affinity with ancestors is favored. In modern China and Japan, where the importance of kinship and the size of kin groups have declined, traditional practices of ancestor worship have correspondingly declined.

All of the behavior and practices that are customary with regard to other kinds of supernatural beings are found in rites of ancestral worship—veneration and propitiation in the forms of prayers, offerings, sacrifices, the maintenance of moral standards, and festivals of honor that may include pageantry, music, dance, and other forms of art. Perhaps the only truly distinctive ritual acts of ancestor worship are commemorative ceremonies, held annually or at other fixed intervals, and tending of graves, monuments, or other symbols commemorating them. Acts of piety toward ancestors reflect the idea that the spirits continue in some measure to be kin and are active participants in the life of the community. Whether ancestral spirits are themselves gods with powers or are intermediaries with higher powers, communion with them is a form of transcendence of ordinary states of existence, which may be a conscious or unconscious goal of the acts of devotion.

Ancestor worship in various forms was practiced among the ancient civilization of the Mediterranean, where cults of the dead sometimes also existed, and among later European peoples. Ancient EGYPTIAN RELIGION featured a cult of the dead but gave little attention to ancestral spirits except to those of royalty, which were venerated by the people and especially honored in rites observed by their royal descendants. In ancient GREEK RELIGION, ancestor worship overlapped with hero worship. Some ritual attention was given

to spirits of household heads and political leaders, and the spirits of men whose deeds were heroic were sometimes elevated to immortality and made the objects of rites of reverence. Ancient Celts, Teutons, Vikings, and Slavic groups also conducted rites of propitiation and sacrifice.

Among nonliterate societies, well-developed ancestor cults are limited principally to peoples of sub-Saharan Africa, Melanesia, and some tribal groups of India and adjacent parts of Asia. The greatest development was in AFRICAN RELIGIONS, where ancestral spirits are commonly an important part of the roster of supernatural beings. Among the civilizations of Asia, the classic examples of ancestor worship have been China and Japan. In both societies, however, reverence for, rather than worship of, ancestors is a more nearly accurate description of the beliefs and practices. The spread of modern European culture weakened, displaced, or otherwise put an end to ancestor worship as an overt practice in most nonliterate societies, and technological, social, and ideological changes discouraged its continuation in more modern societies. Yet its remnants continue to be periodically significant in a number of Latin American, African, and Asian cultures.

The 19th-century sociologist Herbert Spencer regarded fear and consequent propitiation of the souls of ancestors as the earliest form of religion, an interpretation that later scholars set aside as unverifiable. Modern scholarship has followed the trend of the social sciences in considering ancestor cults in relation to other elements of religious complexes, the social order, and the whole of culture. Through their symbolic representations of kinship and of the social hierarchy of kin groups, the beliefs and acts of ancestor worship may be seen as establishing and reinforcing ideas of social roles and identities, thereby contributing to psychological well-being and social harmony. But ideas about ancestors may also be seen sometimes to instill as well as to allay anxiety. In this connection ancestor worship may have an important moral significance by encouraging social conformity.

ANCHISES \an-'ki-sēz, aŋ-\, in Greek mythology, member of the royal family of Troy; he was king of DARDANUS on Mount Ida. The goddess APHRODITE met him and bore him AENEAS. For revealing the name of the child's mother, Anchises was killed or struck blind by lightning. In later legend and in Virgil's *Aeneid*, he was conveyed out of Troy on the shoulders of his son Aeneas.

ANDANIA MYSTERIES \an-'dā-nē-ə\, ancient Greek mystery cult, held in honor of the goddess DEMETER and her daughter Kore (PERSEPHONE) at the town of Andania in Messenia. An inscription of 92 BCE gives directions for the conduct of the rites, although it relates no details of the initiation ceremonies. The ritual was performed by certain "holy ones" of both sexes, who were chosen from the various tribes.

Initiation seems to have been open to men, women, and children, bonded and free, and all costumes were to be severely plain and of inexpensive material. An exception was made for those who were to be "costumed into the likeness of deities," possibly indicating that a pageant or drama was performed. There was a procession, precedence in which was strictly regulated, and the main ceremonial was preceded by sacrifices to a number of deities.

ANDREW, SAINT \an-'drü\ (d. traditionally 60/70 CE, Patras, Achaia [Greece]; feast day November 30), one of the

Twelve APOSTLES and brother of ST. PETER. He is the patron saint of Scotland and of Russia.

In the SYNOPTIC GOSPELS (Matthew, Mark, and Luke), Peter and Andrew were called from their fishing by Jesus to follow him, promising that he would make them fishers of men. In John's Gospel he is the first apostle named, and he was a disciple of ST. JOHN THE BAPTIST before Jesus' call.

Early Byzantine tradition (dependent on John 1:40) calls Andrew *protokletos*, "first called." Legends recount his missionary activity in the area about the Black Sea. Apocryphal writings centered on him include the Acts of Andrew, Acts of Andrew and Matthias, and Acts of Peter and Andrew. A 4th-century account reports his death by CRUCIFIXION, and late medieval accretions describe the cross as X-shaped. He is iconographically represented with an X-shaped cross.

ST. JEROME records that Andrew's relics were taken from Patras (modern Pátrai) to Constantinople (modern Istanbul) by command of the Roman emperor Constantius II in 357. From there the body was taken to Amalfi, Italy (Church of Sant' Andrea), in 1208, and in the 15th century the head was taken to Rome (St. Peter's, Vatican City). In September 1964 Pope Paul VI returned Andrew's head to Pátrai as a gesture of goodwill toward the Christians of Greece.

ANDROGYNY, in mythology, the state of having the characteristics of both male and female. Androgyny, as the union of male and female, can represent totality, completeness, or perfection; hence in some mythical traditions, a primal mythic being (*i.e.*, a creator or first human) is androgynous and thereby expresses in his or her person a union of disparate features or opposites. This does not express a chaotic hybrid but rather a creative totality (the "coincidence of opposites"). In other systems human procreation is explained in terms of a division of a complete, originally androgynous being (as in Plato's *Symposium* and in the Gnostic Gospel of Philip).

ANDROMACHE \an-'drä-mä-kē\, in Greek myth, the daughter of Eëtion (prince of Thebe in Mysia) and wife of HECTOR. All her relations perished in or shortly after the taking of Troy. When the captives were allotted, Andromache fell to NEOPTOLEMUS, the son of ACHILLES, whom she accompanied to Epirus and to whom she bore three sons. At Neoptolemus' death, HELENUS, the brother of Hector, inherited both Andromache and the kingdom. After the death of Helenus, Andromache returned to Asia Minor with her youngest son, Pergamus, who there founded a town named after himself.

ANDROMEDA \an-'drä-mə-də\, in Greek myth, daughter of King Cepheus and Queen Cassiope of Joppa in Palestine (called Ethiopia) and wife of PERSEUS. Cassiope offended the NEREIDS by boasting that Andromeda was more beautiful than they, so in revenge POSEIDON sent a sea monster to devastate Cepheus' kingdom. Since only Andromeda's sacrifice would appease the gods, she was chained to a rock and left to be devoured by the monster. Perseus flew by on PEGASUS, saw Andromeda, and asked Cepheus for her hand. Cepheus agreed, and Perseus slew the monster. At their marriage, however, her uncle Phineus tried to claim her as his betrothed. Perseus turned him to stone with MEDUSA's head. Andromeda bore Perseus six sons and a daughter.

ANEKĀNTAVĀDA \,ə-nā-kān-tə-'vā-də, -'kān-tə-'vā-\, literally the "doctrine of non-onesidedness," a basic Jain (*see* JAINISM) ontological assumption that recognizes that any entity is at once enduring, but also undergoes change that is both constant and inevitable. This doctrine states that all entities have three aspects: substance (*dravya*), quality (*guṇa*), and mode (*paryāya*). The substance serves as a substratum for multiple qualities which must be understood as constantly undergoing modification. Thus, any entity has an abiding, continuous nature, but its qualities are in a state of constant flux.

AṄGAD \'əŋ-gəd\, also called Lehna \lāh-'nä\, or Lahina \lə-hē-'nä\ (b. 1504, Matte di Sarai, India—d. 1552, Khadur), second GURŪ of the Sikhs (1539–52). Aṅ

gad was a *śakta* ("worshiper of the goddess," *see* ŚAKTI) before coming to the fold of Gurū NĀNAK, the founder of the Sikh community. He is known in the Sikh tradition for his loyalty to Gurū Nānak. Aṅgad was appointed Gurū in 1539 and was able to sustain the community after the death of Gurū Nānak and prepare it for later phases of expansion. In Sikh lore, Gurū Aṅgad is credited with having established a set of crucial institutions; he is also said to have originated the Punjabi script, Gurmukhi, in which the ĀDI GRANTH is written, and to have promoted the practice of community meals (*langar*) that broke down CASTE barriers. However, no historically credible documents support these attributions.

ANGEL (Greek: *angelos*, "messenger"), primarily in Western religions (*i.e.*, ZOROASTRIANISM, JUDAISM, CHRISTIANITY, and ISLAM), any of numerous spiritual beings, powers, or principles that mediate between the realm of the sacred and the profane realm of time and space.

Functioning as messengers or servants of the deity or as guardians of individuals or nations, angels have been classi-

fied into ranks or into hierarchies by theologians or philosophical thinkers, by sects that have become religions in their own right (for example, the DRUZE religion), and by syncretistic movements (for example, the dualistic sect GNOSTICISM).

The number of such celestial beings in the rankings—often 4, 7, or 12—was generally based on the theory of plane-

in the TALMUD are viewed as countless. These seven, noted in the noncanonical *First Book of Enoch* (chapter 20), are: Uriel (leader of the heavenly hosts and guardian of *sheol*, the Underworld); Raphael (guardian of human spirits); Raguel (avenger of God against the world of lights); Michael (guardian of ISRAEL); Sariel (avenger of the spirits, “who SIN in the spirit”); GABRIEL (ruler of paradise, the seraphim, and the cherubim); and Remiel, also called Jeremiel (guardian of the souls in *sheol*). Of these, two (Michael and Gabriel) are mentioned in the Old Testament and two others (Raphael and Uriel) in the APOCRYPHA, a collection of noncanonical works.

In rabbinic literature, angels are classified into two basic groupings, higher and lower. Included among the higher group are the cherubim and seraphim, winged guardians of God’s throne or chariot, and the *ofanim* (Hebrew: “wheels”), all of which are noted in the Old Testament. Among the sects associated with the DEAD SEA SCROLLS, the higher angels include the angels of light, darkness, destruction, and holiness.

Christianity developed a hierarchy of angels based on the Judaic tradition. In addition to angels, archangels, seraphim, and cherubim, five other spiritual angelic groups—named in the letters of Paul in the New Testament—were accepted in the church by the 4th century: virtues, powers, principalities, dominions, and thrones. Together they made up a hierarchy or choir of angels. As objects of devotion, special attention has been given to the archangels Michael, Gabriel, and Raphael in ROMAN CATHOLICISM and EASTERN ORTHODOXY.

Belief in angels (Arabic *malā’ika*) is a fundamental component of *imān* (faith) in Islam, often listed after belief in God (QUR’AN 2:285). Employing concepts of angelology familiar to Jews and Christians, the Qur’an speaks of winged angelic hosts gathered at God’s throne, praising him, blessing the Prophet MUHAMMAD, assisting the faithful in battle, greeting the righteous in paradise, and torturing the damned in hell. At Adam’s creation they voiced the fear that humans would “do evil and shed blood on earth” (Qur’an 2:30), but Adam, instructed by God, bested them in a naming contest. The Qur’an thus signals that humans rank above the angels and all other creatures in God’s eyes, an idea echoed later in SUFISM.

Angels with specific traits and names, such as the Spirit (*rūh*), usually identified with Gabriel (Arabic *JIBRĪL*), the angel of death (‘IZRĀ’ĪL), and the keeper of hell (Mālik) are mentioned in the Qur’an and Hadīth. By the 11th century, Muslim theologians and visionaries had constructed elaborate hierarchies of angels, described as luminous creatures responsible for carrying out God’s commands throughout the universe. Gabriel, perhaps the most esteemed archangel in the Islamic tradition, acts as intermediary between God and man and as bearer of revelation to the prophets, most notably to Muhammad. Muhammad could not at first identify the spirit that revealed itself to him, but once he accepted his calling, he recognized Gabriel as his constant helper. It was Gabriel who accompanied Muhammad on his night journey and ascension (MĪRĀJ). He is described variously as a black-haired man in white clothing, or as an awesome being with 600 wings, each pair so enormous that they crowd the space between East and West.

Many Muslims also believe in personal angels who record their good and evil deeds; they salute them at the conclusion of their prescribed daily prayers. The angels Munkar and Nakīr (not mentioned in the Qur’an) interrogate the dead in their graves, providing them a preview of

The archangel *Jibrīl* (Gabriel), Arabic miniature, 14th century
The Granger Collection

tary spheres in Hellenistic or Iranian ASTROLOGY or on the hierarchy derived from Oriental monarchical government. In Zoroastrianism, the AMESHA SPENTAS, or bounteous immortals, of AHURA MAZDĀ, the Good Lord, are arranged in a hierarchy of seven: SPENTA MAINYU (the Holy Spirit), VOHU MANAH (Good Mind), Asha (Truth), Ārmaiti (Right Mindedness), Khshathra Vairya (Kingdom), Haurvatāt (Wholeness), and Ameretāt (Immortality).

In Judaism, the hierarchy of angels—often called in the OLD TESTAMENT the “hosts of heaven” or the “company of divine beings”—is not strictly defined. In postbiblical Judaism—especially in apocalyptic literature, which describes God’s dramatic intervention in history—seven angels, sometimes called ARCHANGELS, lead the heavenly hosts that

the bliss or suffering they will experience after the final judgment. **IBLIS** (**SATAN**), who refused to bow to Adam with the angels (Qur'an 2:34), is sometimes regarded as a fallen angel. Among Twelver **SHĪ'ITES** it is believed that the **IMAMS** receive divine guidance through angelic intermediaries, and are protected by them. Angels' names are also invoked in talismans and **AMULETS** designed to protect the wearer from illness or evil, a practice that has roots among the pre-Islamic religions of Africa and Asia. *See also* **HĀRŪT AND MĀRŪT**; **JINN**.

ANGLICAN COMMUNION, religious body of national, independent, and autonomous churches throughout the world that evolved from the Church of England. The Anglican Communion is united by loyalty to the archbishop of Canterbury in England as its senior bishop and titular leader and by agreement with the doctrines and practices defined in the **BOOK OF COMMON PRAYER**. In the early 21st century it had more than 78 million members.

From the time of the **REFORMATION**, the Church of England followed explorers, traders, colonists, and missionaries into the far reaches of the known world. The colonial churches generally exercised administrative autonomy. It was probably not until the first meeting of the Lambeth Conference in 1867 that there emerged among the various churches and councils a consciousness of an Anglican Communion. Since its inception, the Lambeth Conference has been the principal cohesive factor in Anglicanism.

The **DIOCESE**, under the administration of a bishop, is the basic administrative unit throughout the Anglican Communion. The diocese is made up of parishes, or local church communities, each under the care of a pastor (rector). In many national churches, dioceses are grouped into provinces. In some, parishes may be grouped also below the diocesan level into rural deaneries and archdeacons.

The Anglican Communion has played a prominent role in the ecumenical movement that began in the 20th century. A milestone in Anglican–Roman Catholic relations was reached in 1982, when Pope **JOHN PAUL II** met with Robert Runcie, the archbishop of Canterbury, at Canterbury to discuss prospects for reconciliation between the two churches. Obstacles emerged in 1989, when the Communion began to ordain women as priests and bishops, and in 2003, when V. Gene Robinson, an openly gay man, was ordained bishop of New Hampshire, U.S. Robinson's consecration and the Communion's approval of blessing of same-sex unions provoked criticism from Anglican and non-Anglican churches. The most vigorous opposition came from the church in Africa, where more than half of all Anglicans lived in the early 21st century.

ANICCA \ə-ˈni-chə\, Buddhist doctrine of impermanence. *See also* **ANITYA**.

ANICONISM \,an-ˈi-kə-,ni-zəm\, opposition to the use of **ICONS** or visual images to depict living creatures or religious figures. Such opposition is particularly relevant to the Jewish, Islamic, and Byzantine artistic traditions.

The biblical Second Commandment (part of the First Commandment to Roman Catholics and Lutherans), "You shall not make yourself a graven image, or any likeness of anything," which had been intended as a protection against idol worship, came to have a restricting effect on Jewish art, though this effect varied in strength in different periods and was strongest on sculpture. Figural representations were absolutely prohibited in the early period of **ISLAM** and

under the Berber dynasties of Africa and the Mamlūks of Egypt and Syria, though under the 'Abbāsids and most of the **SHĪ'ITE** and Turkish dynasties, it was excluded only from public buildings. In the Byzantine Empire, during the **ICONOCLASTIC CONTROVERSY** (725–843), a ban was imposed on the representations of saintly or divine personages.

ANIMALS, MASTER OF THE, supernatural figure regarded as the protector of game in the traditions of early hunting peoples. The name was actually devised by Western scholars who have studied such hunting societies. In some traditions, the master of the animals is believed to be the ruler of the forest and guardian of all animals; in others, he is the ruler of only one species, usually a large animal of economic or social importance to the community. In some traditions he is pictured in human form, at times having animal attributes or riding an animal; in other traditions he is a giant animal or can assume animal form at will.

The master controls the game animals (or fish) or their spirits (in many myths, by penning them). He releases a certain number to the hunter as food. Only the allotted number may be killed, and the slain animal must be treated with respect. The master of the animals, if properly invoked, will also guide the hunter to the kill. The souls of the slain animals return to the master's pens and report their treatment. If this system is violated, the master will avenge an animal improperly slain, usually by withholding game. A ceremony then must be held to remove the offense or a **SHAMAN** sent to placate the master.

ANIMAL WORSHIP, veneration of an animal, usually because of its connection with a particular deity. The term was used by Western religionists in a pejorative manner and by ancient Greek and Roman polemicists against theriomorphic religions—those religions whose gods are represented in animal form. Most examples given of animal worship in early religions, however, are not instances of worship of an animal itself. Instead, the sacred power of a deity was believed to be manifested in an appropriate animal regarded as an **EPIPHANY** or incarnation of the deity.

The universal practice among hunting peoples of respect for and ceremonial behavior toward animals stems from the religious customs attendant on the hunt and not from worship of the animal itself. Another phenomenon that has been confused with animal worship is **TOTEMISM**, in which animal or plant categories fulfill a social classificatory system.

ANIMISM \ˈa-nə-,mi-zəm\, belief in spiritual beings that are capable of helping or harming human interests. In *Primitive Culture* (1871), **SIR EDWARD BURNETT TYLOR** proposed the term and the view that animism is the first stage in the development of religion.

To the intellectuals of the 19th century, profoundly affected by Darwin's new biology, animism seemed a key to the so-called primitive mind—human intellect at the earliest knowable stage of cultural evolution. At present this view is considered to be rooted in a profoundly mistaken premise, as all contemporary cultures and religions reflect a fully evolved human intelligence.

In order to undertake a systematic study of the evolution of religion, Tylor required a "minimum definition of religion" and found it in "the Belief in Spiritual Beings." If it could be shown that no people was devoid of such minimal belief, then it would be known that all of humanity already had passed the threshold into "the religious state of culture." He assembled ethnographic cases and arranged them

The Annunciation, detail from the *Maestà* altarpiece, 1311, by Duccio di Buoninsegna; in the Museo dell' Opera del Duomo, Siena, Italy

Art Resource

in series from what seemed to him the simplest or earliest to the most complex or recent. In this way he argued that religion had evolved from a "doctrine of souls" arising from reflection upon death, dreams, and apparitions to a wider "doctrine of spirits," which eventually expanded to embrace powerful DEMONS and gods. Tylor asserted that humans everywhere would be impressed by the vividness of dream images and would reason that dreams of dead kin or of distant friends were proof of the existence of souls. The simple belief in these spiritual beings independent of natural bodies would, he thought, expand to include more elaborate religious doctrines, accompanied by rites designed to influence powerful spirits. Tylor showed that animistic beliefs exhibit great variety and often are uniquely suited to the cultures and natural settings in which they are found.

The term animism covers a range of spirits, from sojourning ghosts and mortal witches to perennial beings, whose natures and dispositions to humanity are attributed by categories. Spirits represent particular powers and must be handled accordingly. When trouble is encountered, the responsible witch, demon, or disgruntled spirit must be identified by the diviner. The cure may rely upon ritual cleansing, propitiation, or even the overpowering of the malevolent force through supernatural counteragency.

ANITYA \ə-'ni-tyə\ (Sanskrit), *Pāli* *anicca* \ə-'ni-chə\, in BUDDHISM, the doctrine of impermanence, one of the ba-

sic characteristics of existence. *Anitya*, ANĀTMAN ("non-self"), and *DUKKHA* ("suffering") make up the *ti-lakkhaṇa*, or three characteristics of phenomenal existence. Recognition of this impermanence is one of the crucial components in a Buddhist's spiritual progress toward Enlightenment.

ANIUS \a-nē-əs\, in Greek myth, the son of the god APOLLO and of Rhoëo, a descendant of the god DIONYSUS. Rhoëo, when pregnant, had been placed in a chest and cast into the sea by her father; floating to the island of Delos, she gave birth to Anius, who became a seer and a priest of Apollo. Anius' three daughters, Oeno, Spermo, and Elais—that is, Wine, Seed, and Oil—were granted by Dionysus the gift of bringing these three crops to fruition. They supplied both the Greek expedition on its way to Troy and AENEAS in his flight from Troy to Italy.

ANKH \ˈæŋk, 'æŋk\, ancient Egyptian hieroglyph signifying "life," a cross surmounted by a loop. It is found in ancient tomb inscriptions, and gods and pharaohs are often depict-

ed holding it. The ank forms part of hieroglyphs for such concepts as health and happiness. The form of the symbol suggests perhaps a sandal strap as its original meaning, though it has been seen as representing a magical knot. As a cross, it has been extensively used in the symbolism of the COPTIC ORTHODOX CHURCH.

ANNUNCIATION, in CHRISTIANITY, the announcement by the angel GABRIEL to the Virgin MARY that by the power of the HOLY SPIRIT she would conceive a son to be called Jesus (Luke 1:26–38).

The Feast of the Annunciation is celebrated on March 25 (Lady Day). The feast is first mentioned in texts dating to the 7th century. The Annunciation had a particularly important place in the arts and church decoration of the early Christian and medieval periods and in the devotional art of the Renaissance and Baroque. Moreover, because the event coincides with the INCARNATION of JESUS CHRIST, it also represents a prelude to the redemption of the world.

ANSAR \ˈan-sär, an-ˈsär\, also called al-Anṣār (Arabic: "Helpers"), term originally applied to some of the COMPANIONS OF THE PROPHET Muhammad. As a result of MUHAMMAD and his followers leaving MECCA for MEDINA (the HIJRA), the Ansar came into being; these were Medinese who aided Muhammad and his followers (the Muhajirun, meaning "emigrants"). The Ansar were members of the two major Medinese tribes, the feuding al-Khazraj and al-Aws, whom Muhammad had been asked to reconcile when he was still a rising figure in Mecca. They came to be his devoted supporters, constituting three-fourths of the Muslim army at the BATTLE OF BADR (624). When no one of their number was chosen to the caliphate to succeed Muhammad, they declined in influence as a group and eventually merged with other Muslims who had settled in Medina.

The term Ansar was then revived in the 19th century for the followers of AL-MAHDĪ (Muhammad Ahmad ibn as-Sayyid ʿAbd Allāh) or for his successor or descendants. The Mahdī of Sudan deemed himself the divinely appointed restorer of ISLAM. The Ansar rose to prominence during the successful Sudanese wars and theocratic regime commanded by al-Mahdī from 1881 until his death in 1885. His disciple ʿAbd Allāh succeeded to the temporal rule. But, following initial victories, his forces were gradually hunted down by Anglo-Egyptian armies and almost entirely destroyed in the Battle of Omdurman (Sept. 2, 1898); he himself was killed in the final Battle of Umm Dabaykarat (Nov. 24, 1899). Leadership of the movement then passed to the Mahdī's son ʿAbd al-Raḥmān (d. 1959), who sought to make the Ansar into a religious and political force. He was succeeded as IMAM of the Ansar by his son Siddiq (d. 1961), who in turn was succeeded by a member of another branch of the family, Hadi ibn ʿAbd al-Raḥmān. When the latter was killed fighting the leftist revolutionary government of The Sudan in 1970, most members of the Mahdī family fled into exile.

ANSELM OF CANTERBURY, SAINT \ˈan-selm\ (b. 1033/34, Aosta, Lombardy—d. April 21, 1109, possibly at Canterbury, Kent, Eng., feast day April 21), founder of SCHOLASTICISM, a philosophical school of thought that dominated the Middle Ages.

Anselm received a classical education and was considered one of the better Latinists of his day. In 1057 he entered the BENEDICTINE monastery at Bec and in 1060 or 1061 took his monastic vows. His reputation for intellect and pi-

ety led to his election as prior of the monastery in 1063. In 1078 he became ABBOT of Bec.

In 1077 Anselm had written the *Monologium* ("Monologue"), an attempt to demonstrate the existence and attributes of God by reason alone rather than by the customary appeal to authorities. Moving from an analysis of the inequalities of various aspects of perfection, such as justice, wisdom, and power, Anselm argued for an absolute norm that is everywhere at all times, above both time and space, a norm that can be comprehended by the mind of man. Anselm asserted that that norm is God, the absolute, ultimate, and integrating standard of perfection.

Under Anselm, Bec became a center of monastic learning. He continued his efforts to answer questions concerning the nature and existence of God. His *Proslogium* ("Address," or "Allocution") established the ontological argument for the existence of God. In it he argued that even a fool has an idea of a being greater than which no other being can be conceived to exist; and that such a being must really exist, for the very idea of such a being implies its existence. (Anselm's argument was challenged by a contemporary monk, Gaunilo of Marmoutier, in the *Liber pro insipiente*, or "Book in Behalf of the Fool Who Says in His Heart There Is No God.")

During a visit to England, William II Rufus, the son and successor of Bec's benefactor, William the Conqueror, named Anselm archbishop of Canterbury (March 1093). Anselm accepted the position with an intention of reforming the English Church. He refused to be consecrated as archbishop until William acknowledged Urban II as the rightful pope against the ANTIPOPE Clement III. In fear of death from an illness, William agreed, and Anselm was consecrated Dec. 4, 1093. When William recovered, however, he demanded from the new archbishop a sum of money, which Anselm refused to pay lest it look like SIMONY (payment for an ecclesiastical position). This began an INVESTITURE CONTROVERSY—i.e., a controversy over the question as to whether a secular ruler or the pope had the primary right to invest an ecclesiastical authority, such as a bishop, with the symbols of his office—which continued for years. Anselm attended the Council of Bari (Italy) in 1098 and presented his grievances against the king to Urban II. Not until the Synod of Westminster (1107), was the investiture dispute settled, allowing Anselm to spend the last two years of his life in relative peace.

After the Council of Bari, he withdrew to the village of Liberi and completed the manuscript of *Cur Deus homo?* ("Why Did God Become Man?") in 1099. This work became the classic treatment of the satisfaction theory of redemption, according to which sinful but finite man could never make satisfaction to the infinite God and could thus expect only eternal death. The instrument for bringing man back into a right relationship with God is the God-man (Christ), by whose infinite merits man is purified in an act of cooperative re-creation.

ANSHAR AND KISHAR \ˈän-shär . . . ˈkē-shär\, in Mesopotamian mythology, the male and female principles, the twin horizons of sky and earth. Their parents were either Apsu and TIAMAT or LAHMU AND LAHAMU, the first set of twins born to Apsu and Tiamat. Anshar and Kishar, in turn, were the parents of ANU (An), the supreme heaven god.

ANTAEUS \an-ˈtē-əs\, in Greek myth, a GIANT of Libya, the son of POSEIDON and GAEA. He compelled all strangers who were passing through the country to wrestle with him.

Whenever Antaeus touched the earth (his mother), his strength was renewed, so that even if thrown to the ground, he was invincible. HERACLES, in combat with him, lifted him off the ground and crushed him to death.

ĀNTĀL \ˈān-tāl\, also spelled Andal (fl. 9th century?), best known of the ĀLVĀRS and the only female member of that select Vaiṣṇava (see VAIṢṆAVISM) family of poets. Her *Tiruppāvai*, a poem of loving adoration addressed to KRISHNA, is one of the most popular devotional works of Tamil poetry, and is performed annually in ŚRĪ VAIṢṆAVA temples. She herself represents a sort of “bridal MYSTICISM” directed toward VIṢṆU, and is one of the primary Hindu saints of South India.

ANTHESTERIA \ˌan-thə-ˈstir-ē-ə\, an Athenian festival in honor of DIONYSUS, held annually for three days in the month of Anthesterion (February–March) to celebrate the beginning of spring and the maturing of the wine stored at the previous vintage. On the first day LIBATIONS were offered to Dionysus from the newly opened casks. The second day was a time of popular merrymaking, but the state performed a secret ceremony in a SANCTUARY of Dionysus in the Lenaean, in which the wife of the king Archon went through a ceremony of marriage to Dionysus. It may have been believed that the souls of the dead emerged from the Underworld on these days; people chewed leaves of whitethorn and smeared their doors with tar to protect themselves from evil. The third day was given over to CHTHONIC (Underworld) rites.

ANTHONY OF EGYPT, SAINT \ˈan-thə-nē, ˈan-tə-\ (b. c. 251, Koma, near al-Minyā, Heptanomis [Middle Egypt], Egypt—d. Jan. 17?, 356, Dayr Mārī Antonios hermitage, near the Red Sea; feast day January 17), religious HERMIT and one of the earliest monks, considered the founder and father of organized Christian MONASTICISM.

A disciple of Paul of Thebes, Anthony began to practice an ascetic life at the age of 20 and after 15 years withdrew to Mount Pispir, where he lived from about 286 to 305. During the course of this retreat, he began his mythic combat against the Devil, withstanding a series of temptations famous in Christian theology and ICONOGRAPHY. (The temptations of Anthony have often been used as a subject in both literature and art, notably in the paintings of Hiëronymus Bosch, Matthias Grünewald, and Max Ernst.) About 305 he emerged from his retreat to instruct and organize the monastic life of the hermits who had established themselves nearby. When Christian persecution ended after the EDICT OF MILAN (313), he moved to a mountain in the Eastern Desert, between the Nile and the Red Sea, where the monastery Dayr Mārī Antonios still stands.

The monastic rule that bears Anthony's name was compiled from writings and discourses attributed to him in the *Life of St. Antony* (by Athanasius) and the *Apophthegmata patrum* and was still observed in the 20th century by a number of Coptic and Armenian monks. Anthony's popu-

St. Anthony of Egypt, by Albrecht Dürer, 1519
Culver Pictures

larity as a saint reached its height in the Middle Ages. The Order of Hospitallers of St. Anthony was founded near Grenoble, France (c. 1100), and this institution became a PILGRIMAGE center for persons suffering from the disease known as St. Anthony's fire (or ergotism). The black-robed Hospitallers, ringing small bells as they collected alms—as well as their pigs, allowed by special privilege to run free in medieval streets—became part of the later iconography associated with St. Anthony.

ANTHROPOMORPHISM \,an-thrə-pə-'môr-,fi-zəm\ (from Greek: *anthrōpos*, “human being,” and *morphē*, “form”), the attribution of human form or other human characteristics to any nonhuman object. In religion, the term is applied to any statement that depicts what is sacred as having a bodily form resembling that of human beings, or as possessing qualities of thought, will, or emotion that are continuous with those experienced by humans. Any reference to the divine as having a human body or a part of a human body is an anthropomorphism—*e.g.*, the hand, the eye, or the mouth of God. References to the mental aspects of humans are also regarded as anthropomorphisms—*e.g.*, the will, the mind, the compassion, and the love of God.

Good examples of anthropomorphisms in religion are those of the ancient Greeks and Romans, whose gods resembled humans in almost everything except their immortality, their places of residence, and their magical powers over nature. Xenophanes (6th–5th century BCE) attacked the anthropomorphism of Homer and Hesiod in ascribing “to the gods all deeds that are a shame and a disgrace among men: thieving, adultery, fraud.” Similarly, Plato repudiated the anthropomorphism of traditional Homeric mythology and instead asserted the idea, in accord with Xenophanes, that the divine is one, and beyond human powers of comprehension.

The classical Hebrew prophets, such as AMOS and ISAIAH, were vigorous critics of the anthropomorphism of their day, reminding their listeners, for example, that the moral judgments of God were not based upon the tribal preferences that influence human judgment. The prophets did not entirely abandon anthropomorphism, however, but freely employed refined anthropomorphic symbols as indispensable to their concept of God as personal. The author of the Book of Ecclesiastes carried the critique of anthropomorphism further, approaching the idea of an impersonal cosmic force in place of the Hebraic personal God.

The many gods of the Hindu tradition also often are conceived in anthropomorphic terms. It is a well established doctrine in HINDUISM that a god, out of his grace and as a boon to his devotees, willingly takes on human form in order to make himself more accessible to them. The god VISHNU, for example, incarnates periodically as one or another of his AVATARS. In the BHAGAVAD GĪTĀ, one of these avatars, KRISHNA, declares, “though myself unborn, undying, the lord of creatures . . . whenever sacred duty decays and chaos prevails, then I create myself.” Furthermore, deities of all sorts are thought also to be present in the form of the images and ICONS worshiped in the temple and at home, many of which are human in form.

While many thinkers have believed it possible to purge THEISM (belief in the existence of God) of all traces of anthropomorphism, others have regarded the latter as essential to theistic knowledge and language, since these areas are necessarily conditioned by human self-experience; the human subject invariably interprets nonhuman reality after analogies drawn from human experience. This problem

raises philosophical questions about the validity of theism, idealism, or any other form of knowledge.

ANTHROPOLOGY \,an-thrə-'pā-sə-fē\, philosophy based on the premise that the human intellect has the ability to contact spiritual worlds. It was formulated by RUDOLF STEINER, an Austrian philosopher, scientist, and artist, who postulated the existence of a spiritual world comprehensible to pure thought but fully accessible only to the highest faculties latent in all humans. The term, based on Greek *anthrōpos*, “human being,” and *sophia*, “wisdom,” suggests roots in both THEOSOPHY and philosophy. Steiner regarded human beings as having originally participated in the spiritual processes of the world through a dreamlike consciousness. Claiming that an enhanced consciousness can again perceive spiritual worlds, he attempted to develop a faculty for spiritual perception independent of the senses. He founded the Anthroposophical Society in 1912. The society, now based in Dornach, Switz., has branches and schools around the world.

ANTICHRIST, the chief enemy of JESUS CHRIST. The earliest mention of the name Antichrist—which was probably coined in Christian eschatological literature (that is, literature concerned with the end of time)—is in the letters of St. John (1 John 2: 18, 22; 2 John 7), although the figure does appear in the earlier 2 Thessalonians as “the lawless one.” The idea of a mighty ruler who will appear at the end of time and whose essence is enmity of God is older and was taken from JUDAISM.

Jewish ESCHATOLOGY had been influenced by Iranian and Babylonian myths of the battle of God and the Devil at the end of time. The OLD TESTAMENT conception of the struggle is found in the Prophecy of Daniel, written at the beginning of the Maccabean period (c. 167–164 BCE). The historical figure who served as a model for the Antichrist was Antiochus IV Epiphanes, the persecutor of the Jews, and he left a lasting impression upon the conception. Since then, ever-recurring characterizations of this figure are that he would appear as a mighty ruler at the head of gigantic armies, destroy three rulers (the three horns, Daniel 7:8, 24), persecute the saints (7:25), and devastate the Temple of God.

A Christian view of the Antichrist is given in 2 Thessalonians 2. Here the Antichrist appears as a tempter who works by signs and wonders and seeks to obtain divine honors; it is further signified that this “man of lawlessness” will obtain credence, especially among the Jews because they have not accepted the truth. This version of the figure of the Antichrist, who may now really for the first time be described by this name, appears to have been at once widely accepted in Christendom. The idea that Jews would believe in the Antichrist as punishment for not having believed in the true Christ seems to be expressed by the author of the Fourth Gospel (John 5:43). The conception of the Antichrist as a perverter of men led naturally to his connection with false doctrine (1 John 2:18, 22, 4:3; 2 John 7). In REVELATION TO JOHN the Antichrist is seen as a worker of wonders and a seducer.

In the Middle Ages the idea of the Antichrist developed into a powerful historical and political factor, especially in times of crisis. It became common for opponents, including popes and emperors, to call each other the Antichrist. Immense interest was focused on the person and date of the coming of the Antichrist and “the signs of the times” preceding it: upheavals in nature, wars, pestilence, famine, and other disasters. Preachers spread warnings of his coming in

ANTIGONE

order to call the people to repentance throughout the 14th and 15th centuries.

During the REFORMATION, the Reformers, especially MARTIN LUTHER, did not attack individual popes but the PAPACY itself as the Antichrist. This idea that evil was embodied in the head of the church itself, with the clergy as the "body of the Antichrist," became the most powerful weapon to discredit and denigrate the papacy.

After the Reformation, emphasis on the Antichrist figure gradually diminished. Among some modern Protestant theologians the Antichrist can be interpreted as whatever denies the lordship of Christ and tends to deify a political power—within either the church or the state. In premillennial theology the expectation of a personal Antichrist at the end of time remains strong. (See also MILLENNIALISM.)

ANTIGONE, in Greek mythology, the daughter born of the incestuous union of OEDIPUS and his mother, Jocasta. After her father blinded himself upon discovering that he had killed his father and married his mother, Antigone and her sister Ismene served as Oedipus' guides, following him from Thebes into exile until his death near Athens. Returning to Thebes, they attempted to reconcile their quarreling brothers—Eteocles, who was defending his position as king, and Polyneices, who was attacking Thebes. Both brothers were killed, and their uncle Creon became king. After giving Eteocles a state funeral, he condemned the corpse of the traitor Polyneices to lie unburied. Antigone, though, buried Polyneices secretly. For that she was ordered by Creon to be executed and was immured in a cave, where she hanged herself. Her beloved, Haemon, son of Creon, committed suicide. (This is according to Sophocles' *Antigone*, but according to Euripides, Antigone escaped and lived happily with Haemon.)

ANTILOCHUS \an-'ti-lə-kəs\, in Greek legend, son of NESTOR, king of Pylos. One of the suitors of HELEN, he accompanied his father to the Trojan War and distinguished himself as acting commander of the Pylians. When Nestor was attacked by MEMNON (king of the Ethiopians), Antilochus saved his father's life at the sacrifice of his own, thus fulfilling the oracle that had bidden him "beware of an Ethiopian." According to two different traditions, Antilochus was either slain by HECTOR or, alternately, by PARIS in the temple of the Thymbraean APOLLO together with his friend ACHILLES.

ANTINOMIANISM \an-ti-'nō-mē-ə-,ni-zəm\ (Greek: *anti*, "against"; *nomos*, "law"), doctrine according to which Christians are freed by GRACE from the necessity of obeying the Mosaic Law. The antinomians rejected the very notion of obedience as legalistic; to them the good life flowed from the inner working of the HOLY SPIRIT.

The ideas of antinomianism had been present in the early church, and some gnostic heretics believed that freedom from law meant license. The doctrine of antinomianism, however, grew out of the Protestant controversies on the law and the gospel and was first attributed to MARTIN LUTHER'S collaborator, Johann Agricola, whom Luther opposed on this issue. It also appeared in the Reformed branch of PROTESTANTISM. The left-wing ANABAPTISTS were accused of antinomianism, both for theological reasons and also because they opposed the cooperation of CHURCH AND STATE, which was considered necessary for law and order. For similar reasons, in the 17th century, Separatists, FAMILISTS, Ranters, and Independents in England were called antino-

mians by the established churches. The Evangelical movement at the end of the 18th century produced its own antinomians who claimed an inner experience and a "new life," which they considered the true source of good works.

ANTIOPE \an-'tī-ō-pē\, in Greek legend, the mother, by ZEUS, of the twins AMPHION AND ZETHUS. According to one account, her beauty attracted Zeus, who, assuming the form of a satyr, raped her. Pregnant and afraid of her father, she ran away and married Epopeus, king of Sicyon; she was later brought back and imprisoned by her uncle Lycus. On the way back from Sicyon, or after escaping from prison, Antiope bore Amphion and Zethus, who were brought up by herdsmen. Later she joined her sons, whereupon they killed Lycus and Dirce, his wife. Because of Dirce's murder, DI-ONYSIUS, to whose worship she had been devoted, caused Antiope to go mad. She wandered over all of Greece until she was cured and married by PHOCUS of Tithorea, on Mt. Parnassus.

Antiope was also the name of a daughter of ARES, the god of war, and a queen of the AMAZONS. The Greek hero THESEUS stole her for his wife.

ANTIPOPE, in ROMAN CATHOLICISM, one who opposes the legitimately elected bishop of Rome, endeavors to secure the papal throne, and to some degree succeeds materially in the attempt. This abstract definition is necessarily broad and does not reckon with the complexity of individual cases. The elections of several antipopes are greatly obscured by incomplete or biased records, and at times even their contemporaries could not decide who was the true pope. It is impossible, therefore, to establish an absolutely definitive list of antipopes. Historically, antipopes have arisen as a result of a variety of causes; the following are some examples:

1. Doctrinal disagreement.
2. Deportation of the pope. (The emperor Constantius II, a follower of the heretical doctrine ARIANISM, exiled Pope Liberius for his orthodoxy [355] and imposed the archdeacon Felix on the Roman clergy as Pope Felix II. Eventually, Liberius was allowed to return.)
3. Double elections arbitrated by the secular authority. (In 418 the archdeacon Eulalius was elected by a faction. The rest of the clergy, however, chose the priest Boniface I, who was eventually recognized by the emperor.)
4. Double elections and subsequent recourse to a third candidate.
5. Change in the manner of choosing the pope.

A great number of antipopes date to the moving of the official residence of the PAPACY from Rome to Avignon, France, in the 14th century. This led to a SCHISM (the Great Western Schism) beginning in 1378 that resulted in a papacy in Rome (regarded as canonical), a papacy in Avignon (regarded as antipapal), and eventually a third papacy established by the Council of Pisa (also regarded as antipapal). Unity was finally achieved by the election of Martin V on Nov. 11, 1417.

ANTI-SEMITISM, hostility toward or discrimination against Jews as a religious or racial group. The terms "anti-Semitic" and "anti-Semitism" are translations of German *antisemitisch* and *Antisemitismus*, which first appeared in Germany in the autumn of 1879 to designate the anti-Jewish campaigns then underway in central Europe; their coinage is often attributed to the agitator Wilhelm Marr, though Marr did not use the words in print before 1880.

Anti-Semitism has existed to some degree wherever Jews

A World War II era poster from Nazi-occupied France produced by an anti-Semitic group known as the Collaborationist Institute for the Study of Jewish Questions. The poster reads “Jews Kill in the Shadows/Mark Them to Recognize Them,” c. 1942

The Granger Collection

have settled outside of Palestine. By the 4th century CE, Christians had come generally to regard Jews as the crucifiers of Christ who, because of their repudiation of Christ and his church, had lost their homeland and were condemned to perpetual migration. When the Christian church became dominant in the Roman Empire, its leaders inspired many laws segregating Jews from Christians and curtailing Jews' religious rights.

In much of Europe during the Middle Ages, Jews were denied citizenship, barred from holding government and military posts, and excluded from membership in guilds and the professions. The claim that Jews sacrificed Christian children at PASSOVER was first made in the 12th century and, by the 1930s, had become part of Nazi propaganda, as did another instrument of 12th-century anti-Semitism—the compulsory yellow badge, which identified the wearer as a Jew. The segregation of Jewish urban populations into ghettos also dates from the Middle Ages and lasted until the 19th and early 20th centuries in much of Europe.

As some Jews became prominent in trade, banking, and moneylending, their success aroused the envy of the populace. This resentment prompted the expulsion of Jews from several countries or regions, including England (1290), France (14th century), Germany (1350s), Portugal (1496), Provence (1512), and the Papal States (1569). Persecutions

by the INQUISITION in Spain culminated in 1492 in the forced expulsion of that country's Jewish population. As a result the centers of Jewish life shifted from western Europe to Turkey, Poland, and Russia.

With the Enlightenment and the French Revolution Jews began to gain civil rights in western European countries. When Jewish economic and cultural successes once again aroused resentment and hostility and mixed with the reassertion of European nationalism, anti-Semitism acquired a racial character, as ethnically homogeneous peoples decried the existence in their midst of “alien” Jewish elements. Pseudoscientific theories asserting that the Jews were inferior to the so-called ARYAN races gave anti-Semitism new respectability and popular support, especially in countries where existing social or political grievances could be ostensibly blamed on Jews. In Germany and Austria in the late 19th century, anti-Semitism became an organized movement with its own political parties.

The Russian Empire had restricted Jews to western regions known as the PALE of Settlement ever since the 1790s. The empire's May Laws of 1882, enacted after widespread anti-Jewish riots had broken out in the Russian Pale the previous year, stripped Jews of their rural landholdings and restricted them to the towns and cities within the Pale. These measures spurred the emigration of several million Jews to the United States in the next four decades, plus a somewhat smaller emigration into western Europe.

In France the Dreyfus affair became a focal point for anti-Semitism. In 1894 Alfred Dreyfus, a highly placed Jewish army officer, was falsely accused of treason. His vindication was hampered by the French military and the bitterly anti-Semitic French press, and the controversy that ensued damaged the cohesion of French political life.

During the first decade of the 20th century, serious pogroms occurred in Kishinyov (now Chişinău, Moldova) in 1903 and 1905, and the Russian secret police published a forgery entitled *Protocols of the Learned Elders of Zion* that, as the supposed blueprint for a Jewish plot to achieve world domination, furnished propaganda for subsequent generations of anti-Semitic agitators. The widespread economic and political dislocations caused by World War I intensified anti-Semitism in Europe. In addition, the many Jewish Bolshevik leaders in the Russian Revolution of November 1917 gave anti-Semites a new focus for their prejudices in the threat of “Jewish Bolshevism.” German anti-Semites joined forces with revanchist nationalists in attempting to blame Jews for that country's defeat.

The storm of anti-Semitic violence in Nazi Germany under the leadership of Adolf Hitler in 1933–45 also inspired anti-Jewish movements elsewhere. Anti-Semitism was promulgated in France by the Cagouards (French: “Hooded Men”), in Hungary by the Arrow Cross, in England by the British Union of Fascists, and in the United States by the German-American Bund and the Silver Shirts.

The novelty of the Nazi brand of anti-Semitism was that it crossed class barriers. The idea of Aryan racial superiority appealed both to the masses and to economic and hereditary elites. In Germany anti-Semitism became official government policy—taught in the schools and elaborated in “scientific” journals and by a huge propaganda organization. In 1941 the liquidation of European Jewry became official party policy. An estimated 5,700,000 Jews were exterminated in such death camps as Auschwitz, Chełmno, Bełżec, Majdanek, and Treblinka during World War II.

After the Nazi defeat in 1945, anti-Semitism lost ground in western Europe and the United States, but developments

in the Soviet Union and the Middle East gave it new significance in those areas. Anti-Semitic discrimination remained a feature of Soviet society from Stalinist times.

The immigration of large numbers of Jews to Palestine in the 20th century and the creation of the State of Israel (1948) aroused new currents of hostility within the Arab world that had previously tolerated the Jewish communities, resulting in the adoption of many anti-Jewish measures throughout the Muslim countries of the Middle East. In response, most of those countries' Jews immigrated to Israel in the decades after the latter's founding.

ANTYEŞTI \ənt-'yāsh-tē\, funeral rites of HINDUISM, varying according to the CASTE and religious sect of the deceased but generally involving CREMATION followed by disposal of the ashes in a sacred river.

At the approach of death, relatives and BRAHMINS are summoned, MANTRAS and sacred texts are recited, and ceremonial gifts are prepared. After death the body is removed to the cremation grounds, which are usually located on the bank of a river. The eldest son of the deceased and the officiating priest perform the final cremation rites. For 10 days the mourners are considered impure and are subject to certain TABOOS. During this period they perform rites intended to provide the soul of the deceased with a new spiritual body with which it may pass on to the next life. Ceremonies include the setting out of milk and water and the offering of rice balls. At a prescribed date the bones are collected and disposed of by burial or by immersion in a river. Rites honoring the dead, called *śrāddha*, continue to be performed by the survivors at specified times.

ANU \ä-'nü\ (Akkadian), *Sumerian An*, in MESOPOTAMIAN RELIGION, the sky god. Anu, although theoretically the highest god, played only a small role in the mythology, hymns, and cults of Mesopotamia. He was the father not only of all the gods but also of evil spirits and DEMONS; Anu was also the god of kings and of the calendar. He was typically depicted in a headdress with horns, a sign of strength.

His Sumerian counterpart, An, dates from the oldest Sumerian period, at least 3000 BCE. Originally he seems to have been envisaged as a great bull, a form later envisioned as a separate mythological entity, the Bull of Heaven, which was owned by An. His holy city was Erech, in the southern herding region, and he may originally have belonged to the herders' pantheon. In Akkadian myth Anu was assigned a consort, Antum (Antu), but she seems often to have been confused with ISHTAR (Inanna).

ANUBIS \ə-'nü-bis\, also called Anpu \än-'pü\, ancient Egyptian god of the dead, represented by a jackal or a jackal-headed man. In the Early Dynastic period and the Old Kingdom, he enjoyed a preeminent (though not exclusive) position as lord of the dead but was later overshadowed by OSIRIS. Said to be the inventor of EMBALMING, his particular concern was with the funerary cult and the care of the dead; he first employed this art on the corpse of Osiris. In his later role as the "conductor of souls," he was sometimes identified by the Greco-Roman world with the Greek HERMES in the composite deity Hermanubis.

AN YU \än-'yü\, also known as An Hyang (b. 1243 CE—d. 1306), Korean scholar and educator of the Koryoc period (918–1392 CE) who helped to reconstitute the National Academy and establish a state treasury for national education. He is especially famed for his advancement of public

education based on CONFUCIANISM and NEO-CONFUCIANISM. In 1287 he accompanied King Chungnyol to the Mongol court in Peking where he encountered the texts of CHU HSI. Returning to Korea, An Yu privately studied these texts and promoted Korean national education based on the Neo-Confucian thought of these works. Eventually he became the director of the MUNMYO, the Korean national shrine to culture. Known as an opponent of Ch'an (ZEN) BUDDHISM in Korea, An Yu was the most famous Confucian scholar of his era.

APATURIA \ä-pə-'tūr-ē-ə, -'tyūr-\, Greek annual religious festival. At Athens it took place in the month of Pyanop-sion (October–November) and lasted three days, on which occasion the various phratries (clans) of Attica met to discuss their affairs. The name probably means the festival of "common relationship." The most important day was probably the third, Koureotis, when children born since the last festival were presented by their fathers or guardians; after an OATH had been taken as to their legitimacy, their names were inscribed in the register.

APAUSHA \ə-'pau-shə\, in ancient Iranian religion, a demonic star who in an important myth does battle with TISHTRYA over rainfall.

APHRAATES \ä-'frā-ə-'tēz\, *Syriac* Afrahat \ä-'frä-ät\ (fl. 4th century), Syrian ascetic and the earliest known Christian writer of the Syriac church in Persia.

Aphraates became a convert to CHRISTIANITY during the reign of the anti-Christian Persian king Shāpūr II (309–379), after which he led a monastic life, possibly at the Monastery of St. Matthew near Mosul, Iraq. Termed "the Persian Sage," Aphraates between the years 336 and 345 composed Syriac biblical commentaries, 23 of which have been preserved. They survey the Christian faith and are at times marked by a sharp polemical nature. Nine treatises against Jews, who were numerous in Mesopotamia and had established outstanding schools, are particularly acrimonious; they treat subjects such as EASTER, CIRCUMCISION, dietary laws, the supplanting of ISRAEL by GENTILES as the new chosen people, and Jesus' divine sonship.

Aphraates' writings are distinguished by their primitive biblical-theological tradition, unaffected by doctrinal controversies and linguistic complexity. Insulated from the intellectual currents of the Greco-Roman ecclesiastical world, Aphraates "Homilies," as they are known, manifest a teaching indigenous to early Syrian Christianity.

APHRODITE \ä-frə-'dī-tē\, in GREEK RELIGION, the goddess of sexual love and beauty. Because the Greek word *aphros* means "foam," the legend arose that Aphrodite was born from the white foam produced by the severed genitals of OURANUS, after his son CRONUS threw them into the sea, and Aphrodite was, in fact, widely worshiped as a goddess of the sea and of seafaring. She was also honored as a goddess of war, especially at Sparta, Thebes, Cyprus, and other places. Aphrodite was, however, primarily a goddess of love and fertility and even occasionally presided over marriage. Although prostitutes considered Aphrodite their patron, her public cult was generally solemn and even austere.

Aphrodite's worship came to Greece from the East, and many of her characteristics must be considered Semitic. Although Homer called her "Cyprian" after the island chiefly famed for her worship, she was already Hellenized by this time, and in Homeric mythology she was the daughter of

ZEUS and DIONE. In the *Odyssey*, Aphrodite was married to HEPHAESTUS, the lame smith god, though she played the field with the god of war, ARES (by whom she became the mother of HARMONIA).

Of Aphrodite's mortal lovers, the most important were the Trojan shepherd ANCHISES, by whom she became the mother of AENEAS, and the handsome youth ADONIS (in origin a Semitic deity and the consort of Ishtar-Astarte), who was killed by a boar while hunting and was lamented by women at the festival of Adonia. The cult of Adonis had Underworld features, and Aphrodite was also connected with the dead at DELPHI.

Aphrodite's main centers of worship were at Paphos and Amathus on Cyprus and on the island of Cythera, a Minoan colony, where her cult probably originated in prehistoric times. On the Greek mainland Corinth was the chief center of her worship. Her close association with EROS, the GRACES (Charites), and the Seasons (Horae) emphasized her role as a promoter of fertility. She was honored as Genetrix, the creative element in the world. Of her epithets, OURANIA (Heavenly Dweller) was honorific and applied to certain Oriental deities, and Pandemos (Of All the People) referred to her standing within the city-state. Among her symbols were the dove, pomegranate, swan, and myrtle.

APIS \ˈā-pis\ (Greek), *Egyptian* Hap, Hep, or Hapi, in ancient EGYPTIAN RELIGION, sacred bull deity worshiped at Memphis. The cult of Apis originated at least as early as the 1st dynasty (c. 2925–c. 2775 BCE). As Apis-Atum he was associated with the solar cult and was often represented with the sun-disk between his horns.

Apis was black and white and distinguished by special markings. Some sources said that he was begotten by a ray of light from heaven, and others that he was sired by an Apis bull. When a sacred bull died, the calf that was to be his successor was sought and installed in the Apieion at Memphis. His priests drew OMENS from his behavior, and his oracle had a wide reputation. When an Apis bull died, it was buried with great pomp at Saqqārah, in underground galleries known as the SARAPEUM. It was probably in Memphis that the worship of SARAPIS (after the Greek form Osorapis, a combination of OSIRIS and Apis in the image of an eastern Greek god) arose under Ptolemy I Soter (305–282 BCE). From Alexandria, it spread to become one of the most widespread oriental cults in the Roman Empire.

APOCALYPSE, in many religious traditions of the West, the period of catastrophic upheaval that is to precede the ending of time and the coming of God to sit in judgment upon

mankind. The term also refers to the literature containing prophecies about that time. (See also MILLENNIALISM.)

APOCALYPSE, FOUR HORSEMEN OF THE, in CHRISTIANITY, the figures who, according to the book of REVELATION TO JOHN (6:1–8), appear with the opening of the seven seals that bring forth the cataclysm of the APOCALYPSE. The first horseman rides a white horse, which scholars sometimes interpret to symbolize Christ; the second horseman rides a red horse and symbolizes war and bloodshed; the third rides a black horse and symbolizes famine; and the fourth horseman rides a pale horse and represents pestilence and death.

APOCALYPTICISM \ə-ˌpā-kə-ˈlɪp-tə-,si-zəm\, eschatological views and movements that focus on revelations about a sudden and cataclysmic intervention of God in history; universal judgment; the salvation of the faithful ELECT; and the eventual rule of the elect with God in a renewed heaven and earth. Arising in ZOROASTRIANISM, Apocalypticism was developed more fully in the ESCHATOLOGY of JUDAISM, CHRISTIANITY, and ISLAM.

APOCRYPHA, in biblical literature, works outside an accepted canon of SCRIPTURE. The history of the term's usage indicates that it referred to a body of esoteric writings that were at first prized, later tolerated, and finally excluded. In its broadest sense *apocrypha* has come to mean any writings of dubious authority.

In modern usage the Apocrypha is the term for ancient Jewish books that are called deuterocanonical works in ROMAN CATHOLICISM—*i.e.*, those that are canonical for Catholics but are not a part of the Hebrew BIBLE. (These works are also regarded as canonical within EASTERN ORTHODOXY.) When the Protestant churches returned to the Jewish canon (Hebrew OLD TESTAMENT) during the REFORMATION period (16th century), the Catholic deuterocanonical works became for the Protestants "apocryphal"—*i.e.*, noncanonical. In 19th-century biblical scholarship a new term was coined for those ancient Jewish works that were not accepted as canonical by either the Catholic or Protestant churches; such books are now commonly called PSEUDEPIGRAPHA ("Falsely Inscribed")—*i.e.*, books that were wrongly ascribed to a biblical author.

At the time when Greek was the common spoken language in the Mediterranean region, the Old Testament—the Hebrew Bible—was incomprehensible to most of the population. For this reason, Jewish scholars produced the SEPTUAGINT, a translation of the Old Testament books from various Hebrew texts, along with fragments in Aramaic, into Greek. That version incorporated a number of works

Apis, painted on the bottom of a wooden coffin, c. 700 BCE; in the Römer and Pelizaeus Museum, Hildesheim, Ger.

Bavaria Verlag

APOLLO

that later, non-Hellenistic Jewish scholarship at the Council of Jamnia (90 CE) identified as being outside the authentic Hebrew canon. The TALMUD separates these works as *Sefarim Hizonim* (Extraneous Books).

The Septuagint was an important basis for JEROME'S translation of the Old Testament into Latin for the VULGATE Bible; and, although he had doubts about the authenticity of some of the works that it contained—he was the first to employ the Greek word *apokryphos*, "hidden," "secret," in the sense "noncanonical"—he was overruled, and most of them were included in the Vulgate. On April 8, 1546, the COUNCIL OF TRENT declared the canonicity of nearly the entire Vulgate, excluding only the Third and Fourth Books of Maccabees, the Prayer of Manasseh, Psalm 151, and the First and Second Books of Esdras. Eastern Christendom, meanwhile, had accepted the Old Testament apocrypha as deuterocanonical—Tobit; Judith; the Wisdom of Solomon; and Ecclesiasticus (Wisdom of Jesus the Son of Sirach); Third Book of Esdras; First, Second, and Third Books of Maccabees; the Book of Baruch; and the Letter of Jeremiah.

Old Testament pseudepigrapha are extremely numerous and are attributed to various biblical personages from Adam to Zechariah. Some of the most significant of these works are the Ascension of Isaiah, the Assumption of Moses, the Life of Adam and Eve, the First and Second Books of Enoch, the Book of Jubilees, the Letter of Aristeas, and the Testaments of the Twelve Patriarchs.

All the NEW TESTAMENT apocrypha are pseudepigraphal, and most of them are acts, gospels, and epistles, though there are a number of apocalypses and some can be characterized as wisdom books. Some works relate encounters and events in mystical language and describe arcane rituals. Most of these works arose from sects that had been or would be declared heretical, such as, importantly, the Gnostics (see Gnosticism). In the early decades of CHRISTIANITY no orthodoxy had been established, and various parties or factions were vying for ascendancy and regularity in the young church. In this setting virtually all works that were advocating beliefs that later became heretical were destined to denunciation and destruction.

In addition to apocryphal works per se, the New Testament includes a number of works and fragments that are described by a second meaning of the term deuterocanonical: "added later." The Letter to the Hebrews attributed to Paul, who died before it was written, is one of these; others are the letters of James, Peter (2), John (2 and 3), and Jude, and the REVELATION TO JOHN. Fragments include Mark 16:9–20, Luke 22:43–44, and John 7:53 and 8:1–11. All are included in the Roman canon and are accepted by the Eastern Church and most Protestant churches.

APOLLO \ə-ˈpā-lō, byname Phoebus, in GREEK RELIGION, the most widely revered and influential of all the gods. Though his original nature is obscure, from the time of Homer he was the god who sent or threatened from afar, made humans aware of their guilt and purified them of it, presided

Apollo Belvedere, Roman copy of the Greek original attributed to Leochares, 4th century BCE; in the Vatican Museum, Rome
Alinari—Art Resource

over religious law and the constitutions of cities, and communicated through prophets and oracles his knowledge of the future and the will of his father, ZEUS. Even the gods feared him, and only his father and his mother, LETO, could endure his presence. Distance, death, terror, and awe were summed up in his symbolic bow; his other attribute, the lyre, proclaimed the joy of communion with Olympus through music, poetry, and dance. He was also a god of crops and herds, primarily as a divine bulwark against wild animals and disease, as his epithet *Alexikakos* (Averter of Evil) indicates. His forename *Phoebus* means "bright" or "pure," and the view became current that he was connected with the sun.

Among Apollo's epithets was *Nomios* (Herdsman), and he is said to have served King *Admetus* of Pherae in the capacities of groom and herdsman as penance for slaying Zeus's armorers, the Cyclopes. He was also called *Lyceus*, presumably because he protected the flocks from wolves (*lykoi*); because herdsman and shepherds passed the time with music, this may have been Apollo's original role.

Apollo apparently was of foreign origin, coming either from somewhere north of Greece or from Asia. Traditionally, he and his twin, ARTEMIS, were born on the isle of Delos. From there, according to the myths, Apollo went to Pytho (DELPHI), where he slew PYTHON, the serpent that guarded the area. He established his oracle by taking on the guise of a dolphin, leaping aboard a Cretan ship, and forcing the crew to serve him. Thus Pytho was renamed Delphi after the dolphin (*delphis*), and, by legend, the cult of Apollo Delphinus superseded that previously established there by GAEA. During the Archaic period (8th–6th century BCE), the fame of the Delphic oracle achieved pan-Hellenic status. The god's medium was the Pythia, a local woman over 50 years old, who, under his inspiration, delivered oracles in the main temple of Apollo. Other oracles of Apollo existed on the Greek mainland, Delos, and in Anatolia, but none rivaled Delphi in importance.

Although Apollo had many love affairs, they were mostly unfortunate: DAPHNE, in her efforts to escape him, was changed into a laurel, his sacred tree; Coronis (mother of ASCLEPIUS) was shot by Apollo's twin, Artemis, when Coronis proved unfaithful; and CASSANDRA (daughter of King PRAM of Troy) rejected his advances and was punished by being made to utter true prophecies that no one believed.

APOLOGETICS, in CHRISTIANITY, intellectual defense of the truth of the Christian religion, usually considered a branch of theology. In Protestant usage, apologetics can be distinguished from polemics, in which the beliefs of a particular Christian sect are defended. In ROMAN CATHOLICISM, however, the term is used to mean the defense of Catholic teaching in its entirety.

Apologetics has traditionally been positive in its direct argument for Christianity and negative in its criticism of opposing beliefs. Its function is both to fortify the believer against his personal doubts and to remove the intellectual stumbling blocks that inhibit the conversion of unbelievers. Apologetics has steered a difficult course between dogmatism, which fails to take seriously the objections of non-Christians, and the temptation to undermine the strength of defense by granting too much to the skeptic. Apologetics has rarely been taken as providing a conclusive proof of Christianity and some theologians have been skeptical about the value of apologetics to a religion based on faith.

In the NEW TESTAMENT, the thrust of apologetics was defense of Christianity as the culmination of the Jewish religion and its prophecies concerning a MESSIAH. In the early church, the APOLOGISTS, such as JUSTIN MARTYR and TERTULIAN, defended the moral superiority of Christianity over pre-Christian religions and pointed out Christianity's fulfillment of OLD TESTAMENT prophecies. In the later Middle Ages, apologetics focused on Christianity's superiority over the rival religions of JUDAISM and ISLAM. In the 13th century, however, THOMAS AQUINAS developed a still-influential defense of belief in God based on Aristotelian theories of a first cause of the universe.

During the Protestant REFORMATION apologetics was substantially replaced by polemics, in which many sects sought to defend their particular beliefs rather than Christianity as a whole. The "NATURAL THEOLOGY" of both JOHN CALVIN and PHILIPP MELANCHTHON, however, does represent a strain of genuine Reformation apologetics. (Natural theology is generally characterized as the project of establishing religious truths by rational argument and without reliance upon revelations, its two traditional topics being the existence of God and the immortality of the soul.)

In the 18th century, Joseph Butler, an English bishop, met the rising challenge of DEISM in the wake of advancing science by arguing that a supernatural Christianity was at least as reasonable and probable as any scientific doctrine could be. A later Englishman, William Paley, argued that a universe exhibiting design must have a designer, much as a watch implies a watchmaker.

In the 19th century the historical reliability of the Gospels came under attack, and apologists stressed the difficulty of accounting for the RESURRECTION of JESUS CHRIST and the rapid spread of Christianity if SUPERNATURALISM were denied. Moral arguments for Christianity based on the philosophy of Immanuel Kant also gained prominence as attacks on historical and metaphysical apologetics increased. Further objections to Christianity based on the theory of evolution, the views of the German philosopher Friedrich Nietzsche, Marxism, and psychoanalysis have been met by apologists either by attempts to refute the fundamentals on which they are based, or by turning aspects of the criticisms into new arguments favorable to Christianity.

In the 20th century such Protestant theologians as the Germans RUDOLF BULTMANN and PAUL TILICH abandoned the attempt to preserve the literal historical truth of the Gospels and focused on presenting Christianity as the best answer to the existential needs and questions of man. Other Protestants stress the need to make the ancient stories and symbols of Christianity meaningful to modern man in a "post-Christian" era dominated by materialistic ideologies. The German scholar KARL BARTH, however, expressed skepticism about the whole task of the apologetical system, insisting that Christianity must be rooted exclusively in faith. The Roman Catholic apologetical system of Thomas Aquinas and his intellectual successors has been profoundly influenced in the 20th century by the SECOND VATICAN COUNCIL. Contemporary apologetics in the Roman communion focuses principally on the community of believers, whose faith is under constant challenge by numerous competing views and value systems.

APOLOGIST, any of the Christian writers, primarily in the 2nd century, who attempted to provide a defense of CHRISTIANITY and criticisms of Greco-Roman culture. Many of their writings were addressed to Roman emperors, and it is probable that the writings were actually sent to government secretaries who were empowered to accept or reject them. Thus, some of the apologies assumed the form of briefs written to defend Christian practices and beliefs.

The Apologists usually tried to prove the antiquity of their religion by emphasizing it as the fulfillment of the prophecy of the OLD TESTAMENT; they argued that their opponents were really godless because they worshiped the false gods of mythology; and they insisted on the philosophical nature of their own faith as well as its high ethical teaching, claiming to follow in the best tradition of classical philosophers, especially of Socrates. Their works did not present a complete picture of Christianity because they were arguing primarily in response to charges proffered by their opponents.

The few manuscripts of the early Apologists that have survived owe their existence primarily to Byzantine scholars. In 914 Arethas, bishop of Caesarea Cappadociae, had a collection of early apologies copied for his library. Many of the later manuscripts were copied in the 16th century, when the COUNCIL OF TRENT was discussing the nature of tradition. The genuine writings of the Apologists were virtually unknown, however, until the 16th century.

APOPIS \ə-ˈpō-pis\, also called *Apep*, *Apepi*, or *Rerek*, ancient Egyptian DEMON of chaos, who had the form of a serpent and was the foe of the sun god, RE. Each night Apopis encountered Re at a particular hour in the sun god's ritual journey through the Underworld in his divine bark. SETH, who rode as guardian, attacked him with a spear and slew him, but the next night Apopis, who could not be finally killed, was there again to attack Re. The Egyptians believed that they could help maintain the order of the world and assist Re by performing rituals against Apopis.

APOSTASY (from Greek *apostasia*, "defection," "revolt"), the total rejection of CHRISTIANITY by a baptized person who, having at one time professed the faith, publicly rejects it. It is distinguished from HERESY, which is limited to the rejection of one or more Christian doctrines by one who maintains an overall adherence to JESUS CHRIST.

A celebrated controversy in the early church concerned sanctions against those who had committed apostasy during persecution and had then returned to the church when Christians were no longer being persecuted. Some early Christian emperors added civil sanctions to ecclesiastical laws regarding apostates. In the 20th century, the Roman Catholic Code of CANON LAW still imposed the sanction of EXCOMMUNICATION for those whose rejection of the faith fit the technical definition of apostasy. But the absence of civil sanctions and an increasing tolerance of divergent viewpoints have tended to mitigate the reaction of believers to those who reject Christianity.

The term apostasy has also been used to refer to those who have abandoned the monastic and clerical states without permission. Additionally, apostasy may also refer to the rejection or renunciation of any faith; ISLAM and JUDAISM are non-Christian faiths in which the term is used.

APOSTLE (from Greek *apostolos*, "person sent"), any of the 12 disciples chosen by JESUS CHRIST; the term is also applied to others, especially PAUL, who was converted to CHRISTIANITY a few years after Jesus' death. In Luke 6:13 it is stated that Jesus chose 12 from his disciples "whom he named apostles," and in Mark 6:30 the Twelve are called Apostles. The full list of the Twelve is given with some variation in Mark 3, Matthew 10, and Luke 6 as: PETER; JAMES and JOHN, the sons of Zebedee; ANDREW; Philip; Bartholomew; MATTHEW; THOMAS; James, the son of Alphaeus; Thaddaeus, or Judas, the son of James; Simon the Cananaean, or the Zealot; and JUDAS ISCARIOT.

The privileges of the Twelve were to be in continual attendance on their master and to be the recipients of his special teaching and training. Three of them, Peter, James, and John, formed an inner circle who alone were permitted to witness such events as the raising of Jairus' daughter (Mark 5:37; Luke 8:51), the TRANSFIGURATION (Mark 9; Matthew 17; Luke 9), and the agony of Jesus in the Garden of GETHSEMANE (Mark 14:33; Matthew 26:37).

Special importance seems to have been attached to the number 12, which some scholars interpret as a reference to the 12 tribes of Israel. When a gap was left by the defection and death of the traitor Judas Iscariot, immediate steps were taken to fill it by the election of Matthias (Acts 1).

Paul himself received the title of Apostle, apparently on the ground that he had seen the Lord and received a commission directly from him. This appears to be in agreement with the condition in Acts that a newly appointed Apostle should be capable of giving eyewitness testimony to the RESURRECTION. According to some early Christian writers,

however, some were called apostles after the period covered by the NEW TESTAMENT. The word also has been used to designate a high administrative or ecclesiastical officer.

APOSTLES' CREED, also called *Apostolicum*, a statement of faith used in the Roman Catholic, Anglican, and many Protestant churches. It is not officially recognized in the Eastern Orthodox churches. According to tradition, it was composed by the Twelve Apostles, but it actually developed from early interrogations of CATECHUMENS (persons receiving instructions in order to be baptized) by the bishop. An example of such interrogations used in Rome about 200 has been preserved in the *Apostolic Tradition* of Hippolytus. The bishop would ask, "Dost thou believe in God the Father almighty?" and so forth through the major Christian beliefs. Stated affirmatively, these statements became a creed; such creeds were known as baptismal creeds.

The present text of the Apostles' Creed is similar to the baptismal creed used in the church in Rome in the 3rd and 4th centuries. It reached its final form in southwestern France in the late 6th or early 7th century. Gradually it replaced other baptismal creeds and was acknowledged as the official statement of faith of the entire Catholic church in the West by the time of Pope INNOCENT III (1198–1216).

A modern English version of this creed (as used in the Roman Catholic church) is the following:

- ◆ I believe in God, the Father almighty, creator of heaven and earth.
- I believe in Jesus Christ, his only Son, our Lord.
- He was conceived by the power of the Holy Spirit and born of the Virgin Mary.
- He suffered under Pontius Pilate, was crucified, died, and was buried.
- He descended to the dead.
- On the third day he rose again.
- He ascended into heaven, and is seated at the right hand of the Father.
- He will come again to judge the living and the dead.
- I believe in the Holy Spirit, the holy Catholic Church, the communion of saints, the forgiveness of sins, the resurrection of the body, and the life everlasting. Amen. ◆

APOSTOLIC CONSTITUTIONS, formally *Ordinances of the Holy Apostles Through Clement*, largest collection of ecclesiastical law that has survived from early CHRISTIANITY. The full title suggests that these regulations were drawn up by the Apostles and transmitted to the church by CLEMENT of Rome at the end of the 1st century. In modern times it is generally accepted that the constitutions were actually written in Syria about 380 CE and that they were the work of one compiler, probably an Arian (one who believes that Christ, the Son of God, is not fully divine but rather a created being).

The work consists of eight books. The first six are an adaptation of the *Didascalia Apostolorum*, written in Syria about 250 CE. They deal with Christian ethics, the duties of the clergy, the eucharistic liturgy, and various church problems and rituals. Book 7 contains a paraphrase and enlargement of the DIDACHE (*Teaching of the Twelve Apostles*) and a Jewish collection of prayers and liturgical material. In book 8, the first two chapters seem to be based on a lost work of

Hippolytus of Rome, *Concerning Spiritual Gifts*. Chapters 3–22 apparently are based on Hippolytus' *Apostolic Tradition* and contain an elaborate description of the Antiochene liturgy, including the so-called Clementine liturgy. This is a valuable source for the history of the MASS. Chapters 28–46 of book 8 contain a series of canons, and chapter 47 comprises the so-called *Apostolic Canons*, a collection of 85 canons derived in part from the preceding constitutions and in part from the canons of the councils of Antioch (341) and Laodicea (c. 360).

APOSTOLIC SUCCESSION, in CHRISTIANITY, the doctrine that bishops represent an uninterrupted line of descent from the APOSTLES of JESUS CHRIST. According to this doctrine, bishops possess special powers handed down to them from the Apostles; these consist primarily of the right to ordain priests, to consecrate other bishops, and to rule over the clergy and church members in their DIOCESE. In ROMAN CATHOLICISM bishops also have the right to confirm church members.

The origins of the doctrine are obscure, and the NEW TESTAMENT records are variously interpreted. Those who accept apostolic succession as necessary for a valid ministry argue that it was necessary for Christ to establish a ministry to carry out his work and that he commissioned his Apostles to do this (Matthew 28:19–20). The Apostles in turn consecrated others to assist them and to carry on the work. Supporters of the doctrine also argue that evidence indicates that the doctrine was accepted in the very early church. About 95 CE CLEMENT, bishop of Rome, in his letter to the church in Corinth (FIRST LETTER OF CLEMENT), expressed the view that bishops succeeded the Apostles.

A number of Protestant Christian churches believe that the apostolic succession and church government based on bishops are unnecessary for a valid ministry. They argue that the New Testament gives no clear direction concerning the ministry, that various types of ministers existed in the early church, that the apostolic succession cannot be established historically, and that true succession is spiritual and doctrinal rather than ritualistic or juridical.

Roman Catholic, Eastern Orthodox, Old Catholic, and some other Christian churches accept the doctrine and believe that the only valid ministry is based on bishops whose office has descended from the Apostles. This does not mean, however, that each of these groups necessarily accepts the ministries of the other groups as valid.

APOTHEOSIS \ə-ˈpā-thē-ˈō-sis, ˌa-pə-ˈthē-ə-sis\, elevation to the status of a god. The term (from Greek *apotheoun*, "to make a god," "to deify") recognizes that some individuals

Faience bowl decoration with an Egyptian apotropaic eye, from Lachish, 15th–13th century BCE; in the Israel Museum, Jerusalem

Erich Lessing—Art Resource

may cross the dividing line between divine and human.

Ancient GREEK RELIGION was especially disposed to belief in heroes and DEMIGODS. Worship after death of historical persons or worship of the living as true deities occurred sporadically even before the conquests of Alexander the Great brought Greek life into contact with Oriental traditions. Ancient monarchies often enlisted the support of divine or semidivine individuals.

The corresponding Latin term is *consecratio*. The Romans, up to the end of the republic, had accepted only one official apotheosis, the god QUIRINUS having been identified with Romulus. The emperor Augustus, however, broke with this tradition and had Julius Caesar recognized as a god; Julius Caesar thus became the first representative of a new

class of deities proper. The practice was steadily followed and was extended to some women of the imperial family and even to imperial favorites. The public practice of worshipping an emperor during his lifetime, except as the worship of his GENIUS, was in general confined to the provinces. The most significant part of the ceremonies attendant on an imperial apotheosis was the liberation of an eagle, which was supposed to bear the emperor's soul to heaven.

APOTROPAIC EYE \ə-pə-trō-ˈpā-ik\, a painting of an eye or eyes used as a symbol to ward off evil. It is seen in many cultures, for instance, the symbol commonly appears on Greek black-figured drinking vessels called kylikes ("eye cups"), from the 6th century BCE. The exaggeratedly large eye on these cups may have been thought to prevent dangerous spirits from entering the mouth with the wine. The apotropaic eye is also seen in Turkish and Egyptian art.

AQHAT EPIC \ˈäk-ˌhät\, ancient West Semitic legend probably concerned with the cause of the annual summer drought. The Aqhat Epic is known only in fragmentary form from three tablets in Ugaritic dating to c. 14th century BCE that were excavated from the tell of Ras Shamra in northern Syria. The epic records that Danel, a sage and king of the Haranamites, had no son until the god EL finally granted him a child, whom Danel named Aqhat. Some time later Danel offered hospitality to the divine craftsman KOTHAR, who in return gave Aqhat one of his marvelous bows. That bow, however, had been intended for the goddess ANATH, who became outraged that it had been given to a mortal. Anath made Aqhat a variety of tempting offers, including herself, in exchange for the bow, but Aqhat rejected all of them. Anath then lured Aqhat to a hunting party where she, disguised as a falcon, carried her henchman,

Yatpan, in a sack and dropped him on Aqhat. Yatpan killed Aqhat and snatched the bow, which he later carelessly dropped into the sea. Because of the blood shed in violence, a famine came over the land, leading Aqhat's sister and father to discover the crime and to set about avenging it. The conclusion is not known, however, because the text breaks off at that point.

AQSA MOSQUE, AL- \æl-ʔk-sà\, mosque regarded by most Muslims since the 12th century as the third holiest (after those of MECCA and MEDINA), located on the edge of the Old City in Jerusalem. It is part of "the noble SANCTUARY" (*al-haram al-sharif*), which covers the site where the TEMPLE OF JERUSALEM once stood (the area is also known as the Temple Mount). Its name was derived from a passage in the QUR'AN (17:1) that speaks of MUHAMMAD's miraculous Night Journey (ISRĀ') from the Sacred Mosque (in Mecca) to the blessed "most distant Mosque" (*al-masjid al-aqsa*), which became identified as the mosque in Jerusalem. According to some Islamic traditions Muhammad led other prophets in prayer there prior to his ascension (MĪRĀJ).

The al-Aqsa Mosque was built by the Umayyad ruler al-Walid (d. 715), who also built the great mosque at Damascus. The plans of al-Aqsa Mosque can be reconstructed with a fair degree of certainty despite subsequent alterations and repairs. The mosque consisted of an undetermined number of naves (possibly as many as 15) parallel to each other in a north-south direction. It has a large internal space with a multiplicity of internal supports and an axial nave (a wider aisle on the axis of the building), which served both as a formal axis for compositional purposes and as a ceremonial one for the prince's retinue. The building was heavily decorated with marble, mosaics, and woodwork. There was no courtyard because the esplanade of the former Jewish temple served as the open space in front of the building.

In the 20th century al-Aqsa Mosque, together with the DOME OF THE ROCK, served as the symbolic focal point for the Palestinian nationalist movement. Palestinian leaders are interred nearby. After Israel gained control of east Jerusalem in June 1967, in accordance with the Israel Law for the Protection of the Holy Places, administration of the HARAM area remained in the hands of the Muslim authorities. The site is still maintained by the Jordanian ministry for religious endowments.

ARABIAN RELIGIONS, the religions practiced by the Arab tribes before the time of the Prophet MUHAMMAD and the embracing of ISLAM (7th century CE). These religions were polytheistic, and while some deities were held in common among various tribes and even with non-Arab peoples, and certain religious practices were likewise shared, there was also much local particularity. Knowledge of these religions remains incomplete. The principal sources are incised rock drawings (the oldest of which, dating back several millennia, suggest cults of the bull and of the ostrich), rock inscriptions in several Arabic dialects, monuments, and lesser archaeological remains, including written documents. Contemporary Jewish, Greek, and other writers make mention of Arabic gods and practices, and the QUR'AN and other Islamic writings and practices also preserve elements of the pre-Islamic religions.

Most of the gods of the Arab tribes were sky gods, often associated with heavenly bodies (chiefly the Sun and the Moon), and to them were ascribed powers of fecundity, protection, or revenge against enemies. At the head of the

South Arabian pantheon was 'Athtar, associated with VENUS and corresponding to the Mesopotamian ISHTAR.

'Athtar had superseded the ancient supreme Semitic god Il or EL, whose name survives nearly exclusively in theophoric names (names derived from or compounded with the name of a god; for example, Herodotos, meaning "given by Hera"). 'Athtar was a god of the thunderstorm, dispensing natural irrigation in the form of rain. When qualified as Shariqān, "the Eastern One" (possibly a reference to Venus as the Morning Star), he was invoked as an avenger against enemies.

Next to 'Athtar, who was worshiped throughout South Arabia, each kingdom had its own national god, of whom the nation called itself the "progeny" (*wld*). In Saba' the national god was Almaqah (or Ilmuqah), a protector of artificial irrigation, lord of the temple of the Sabaeen federation of tribes. The symbols of the bull's head and the vine motif that are associated with him are indicative of a sun god, a male consort of the sun goddess. In Ma'in the national god Wadd ("Love") originated from North Arabia and probably was a moon god: the magic formula *Wd'b*, "Wadd is [my?] father," written on AMULETS and buildings, is often accompanied by a crescent moon with the small disk of Venus. In Ḥaḍramawt the national god Syn was also a sun god. The sun goddess Shams was the national deity of the kingdom of Ḥimyar. Other aspects of Shams are certainly concealed in some of the many and still obscure South Arabian female divine epithets.

As to the various lesser or local deities, the nature and even the gender of many remain unknown. In Qatabān, Anbay and Ḥawkam are invoked together as (the gods) "of command and decision[?]." The name Anbay is related to that of the Babylonian god NABU, while Ḥawkam derives from the root meaning "to be wise." They probably represent twin aspects of Babylonian Nabu-Mercury, the god of fate and science and the spokesman of the gods. In Ḥaḍramawt, Ḥawl was probably a moon god. In Ma'in, Nikraḥ was a healer patron; his shrine, located on a hillock in the middle of a large enclave marked by pillars, was an asylum for dying people and women in childbirth.

North Arabian gods are named for the first time in the annals of the 7th-century BCE Assyrian king Esarhaddon, in which he reports having returned to the oasis of Adumatu (Dūmat al-Jandal) the idols previously confiscated as war booty by his father, Sennacherib. Among the gods named by Esarhaddon are 'Atarsamāin, 'Atarqurumā, Nukhay, and Ruldayu. Herodotus wrote that the Arabs worshiped as sole deities Alilat, whom he identifies with both OURANIA and APHRODITE, and Orotalt, identified with DIONYSUS. Ruldayu and Orotalt are phonetic transcriptions of the same name, Ruḍā, a sun god. In the Nabataean kingdom the counterpart of Dionysus was the great god nicknamed dū-Sharā (Dusares), "the one of Sharā" from the name of the mountain overlooking Petra. He was a rival to Shay' al-Qawm, "the Shepherd of the People," he "who drinks no wine, who builds no home," the patron of the nomads and also worshiped by the Liḥyānites. Nukhay, perhaps a solar god, was worshiped by the Thamūdaeans and Ṣafaites.

Al-Ilāt, or Allāt ("the Goddess"), was known to all pantheons. She is a daughter or a consort, depending on the region, of al-Lāh or ALLĀH ("the God"), Lord of the KA'BA in MECCA. Al-Ilāt formed a trio with the goddesses al-'Uzzā ("the Powerful") and Manāt (or Manawat, "Destiny"). Among the Nabataeans al-'Uzzā was assimilated to Venus and Aphrodite and was the consort of Kutbā' or al-Aktab ("the Scribe"; MERCURY); among the Thamūdaeans, howev-

er, she was assimilated to 'Attarsamay (or 'Attarsam). Manāt was depicted as NEMESIS in the Nabataean ICONOGRAPHY. The three goddesses were called the "Daughters of Allāh" in pre-Islamic Mecca, and they are mentioned in the Qur'an (53:19–22).

The sanctuaries, sometimes carved in the rock on high places, consisted of a ḤARAM, a sacred open-air enclosure, accessible only to unarmed and ritually clean people in ritual clothes. There the baetyl, a "raised stone," or a statue of the god, was worshiped. The Nabataeans originally represented their gods as baetyls on a podium, but later they gave them a human appearance.

The stone-built temples of the Nabataeans and South Arabians were more elaborate structures, consisting of a rectangular walled enclosure, near one end of which was a stone canopy or a closed cella or both, which contained the altar for sacrifices or the idol of the god. The Ka'ba in Mecca, which became the sacred shrine of the Muslims, has a similar structure: it is a closed cella (which was full of idols in pre-Islamic times) in a walled enclosure, with a well. A baetyl, the Black Stone, is inserted in the wall of the Ka'ba; it is veiled by a cloth cover (the *kiswah*).

To the gods were offered, on appropriate altars, sacrifices of slaughtered animals, LIBATIONS and fumigations of aromatics, votive objects, or persons dedicated to serve in the temple. A ritual slaughter of enemies in gratitude for a military victory is mentioned at the rock SANCTUARY of the sun goddess of Himyar.

In addition to the northwestern Arabian *Kāhin*, "soothsayer," several kinds of priests and temple officials appear in Liḥyānite, Nabataean, and South Arabian inscriptions, but their respective functions are not clear. North Arabian queens and ancient Qatabānian rulers bore priestly titles. In Saba', some priests (*rshw*) of 'Athtar, recruited on a hereditary basis from three clans, took office in turn for seven years as *kabir* (Semitic for "Great," or "Mighty"), in charge of the collection of the tithe and of the rites aimed at obtaining rain.

The priests interpreted the oracles, which, throughout Arabia, were mostly obtained by cleromancy (*istiḡsām*): the answer (positive, negative, expectative, and so on) to a question asked of the god was obtained by drawing lots from a batch of marked arrows or sticks. Among the many other forms of DIVINATION known from pre-Islamic Arabia, only oneiromancy, or divination by means of dreams (possibly after incubation in the temple), is well attested in Sabaeen texts.

Throughout pre-Islamic Arabia, "truces of God" allowed people to attend in security the yearly PILGRIMAGES to important shrines. The rites included purification and the wearing of ritual clothing, sexual abstinence, abstention from shedding blood, and circuits performed (*tawāf*, *dawār*) around the sacred object; they were concluded by the slaughter of animals, which were eaten in collective feasts. Today such practices still form the core of the Islamic pilgrimage to Mecca.

The sovereigns of Saba' performed a rite called "hunting the game of 'Athtar and the game of Kurūm." This rite was aimed at obtaining rain, and that is also the aim of a formal tribal ibex hunt still performed today in Ḥaḍramawt (an ancient South Arabian kingdom that occupied what are now southern and southeastern Yemen and the present-day Sultanate of Oman [Muscat and Oman]). *Istisqā'*, a collective rogation for rain with magical rites, in times of acute drought, is mentioned by the Muslim tradition and in two Sabaeen texts. The rite is still part of the Islamic ritual.

South Arabian texts confessing offenses against ritual cleanliness, along with data from classical sources and the Muslim tradition on pre-Islamic customs, contribute to outline an ancient Arabian code of ritual cleanliness similar to that of the Leviticus and of Muslim jurisprudence.

ARACHNE \ə-'rak-nē\ (Greek: "Spider"), in Greek mythology, the daughter of Idmon of Colophon in Lydia. Arachne was a skillful weaver who challenged ATHENA. The goddess wove a tapestry depicting the gods in majesty, while that of Arachne showed their amorous adventures. Enraged at the perfection of her rival's work, Athena tore it to pieces, and in despair Arachne hanged herself. But the goddess out of pity loosened the rope, which became a cobweb; Arachne herself was changed into a spider.

ARAHANT \ə-rə-ḥənt\ (Pāli), *Sanskrit* arhat \ə-r-ḥət, 'ār-\ ("one who is worthy"), in BUDDHISM, a perfected person, one who has gained insight into the true nature of existence and has achieved NIRVANA (spiritual enlightenment). The *arahant*, having freed himself from the bonds of desire, will not be reborn again.

The state of an *arahant* is considered in the THERAVĀDA tradition to be the proper goal of a Buddhist. Four stages of attainment are described in Pāli texts: (1) the state of the "stream-enterer"—*i.e.*, a convert (*sotāpanna*)—achieved by overcoming false beliefs; (2) the "once-returner" (*sakadā-gāmin*), who will be reborn only once again, a state attained by diminishing lust, hatred, and illusion; (3) the "never-returner" (*anāgāmin*), who, after death, will be reborn in a higher heaven, where he will become an *arahant*, a state attained by overcoming sensuous desire and ill will, in addition to the attainments of the first two stages; and (4) the *arahant*. Except under extraordinary circumstances, a man or woman can become an *arahant* only while living in a monastery. Those who become *arahants* serve as especially efficacious "fields of merit" for those who have not yet attained the final goal.

MAHĀYĀNA Buddhists criticize the *arahant* ideal on the grounds that the BODHISATTVA is a higher goal of perfection, for the bodhisattva vows to remain within the cycle of rebirths in order to work for the good of others. This divergence of opinion is one of the fundamental differences between the Theravāda and Mahāyāna traditions.

In China, as well as in Korea, Japan, and Tibet, *arahants* (Chinese: *lohan*; Japanese: *rakan*) were often depicted on the walls of temples in groups of 16. They represent 16 close disciples of the BUDDHA GOTAMA who were entrusted by him to remain in the world in order to provide people with objects of worship.

ĀRANYAKAS \ä-'rən-yə-kəz\ (Sanskrit: "Books of the Forest"), a later development of the BRĀHMAṆAS, or expositions of the VEDAS, which were composed in India in about 700 BCE. The *Āranyakas* are attached only to the ṚG VEDA and the *Yajur Veda*. Traditionally the *Āranyakas* have been distinguished from the *Brāhmaṇas* through the characterization that they contain information on secret rites to be carried out only by certain persons, especially those who had withdrawn into the forest at the onset of the third stage of life recognized in the classical Hindu system of ASHRAMS. While it is true that the *Āranyakas* are given over to explanations of the symbolic and allegorical meanings of Vedic ritual, this does not markedly separate them either from the earlier *Brāhmaṇas* or from the UPANISHADS, many of which were composed later.

Ara Pacis, Rome
Alinari—Arts Resource

ARA PACIS \ˈā-rə-ˈpā-sis; ˈā-rə-ˈpā-chis, -kis\, also called Ara Pacis Augustae (Latin: “Altar of the Augustan Peace”), shrine consisting of an altar in a walled enclosure erected in Rome by the emperor Augustus and dedicated on Jan. 30, 9 BCE. The sculptures on the walls and the altar representing the shrine’s dedication ceremonies, scenes from Roman legend, and floral motifs are among the finest examples of Roman art.

ĀRATĪ \ˈār-ä-tē\; see PŪĀ.

ARBAʿ KANFOT \är-ˈbä-kän-ˈföt\, also spelled arbaʿ kanfoth (Hebrew: “four corners”), also called ṭallit qaṭan \tä-ˈlēt-kä-ˈtän\, or tallith katan (“small shawl”), Jewish religious garment that apparently came into use during times of persecution as a substitute for the larger and more conspicuous prayer shawl (ṬALLIT). Both garments have fringes (*tzitzit*) on the four corners. The *ṭallit*, however, generally falls across the head, neck, and shoulders, while the *arbaʿ kanfot* has an opening for the head so that it can be worn beneath the upper garments. Orthodox male Jews, including children, wear the *arbaʿ kanfot* during the day to fulfill the requirement of wearing fringes (Numbers 15:37–41) as reminders of God’s commandments.

ARCHANGEL, any of several rulers or princes of ANGELS in the hierarchy of angels of the major Western religions, especially JUDAISM, CHRISTIANITY, and ISLAM, and of certain syn-

cretic religions, such as Gnosticism. They include GABRIEL, Michael, Raphael, and Uriel in Judeo-Christian tradition.

ARCHBISHOP, in the Christian church, a bishop who, in addition to his ordinary episcopal authority in his own DIOCESE, usually has jurisdiction (but no superiority of order) over the other bishops of a province. It seems to have been introduced in the Eastern church in the 4th century as an honorary title of certain bishops. In the Western church it was little known before the 7th century, and it did not become common until the Carolingian emperors revived the right of METROPOLITANS (bishops presiding over a number of dioceses) to summon provincial SYNODS. The metropolitans then commonly assumed the title of archbishop to mark their preeminence over the other bishops. The COUNCIL OF TRENT (1545–63) reduced the powers of the archbishop, which had been quite extensive in the Middle Ages.

In the Orthodox and other churches of the East, the title of archbishop is far more common than in the West, and it is less consistently associated with metropolitan functions. In EASTERN ORTHODOXY there are also autocephalous archbishops who rank between bishops and metropolitans.

In the Protestant churches of continental Europe, the title of archbishop is rarely used. It has been retained by the LUTHERAN bishop of UPPSALA, who is metropolitan of Sweden, and by the Lutheran bishop of Turku in Finland.

In the Church of England (see ANGLICAN COMMUNION) the ecclesiastical government is divided between two archbishops: the archbishop of Canterbury, who is called the “primate of all England” and metropolitan of the province of Canterbury, and the archbishop of York, who is called the “primate of England” and metropolitan of York.

ARCHITECTURE AND RELIGION: *see* SACRED ARCHITECTURE.

ARCHON \ˈär-ˌkän, -kən\ (Greek: “Ruler,” “Leader”), in GnosticisM, any of a number of world-governing powers that were created with the material world by a subordinate deity called the DEMIURGE (Creator).

Because the Gnostics regarded the material world as evil or as the product of error, Archons were viewed as maleficent forces. They numbered 7 or 12 and were identified with the seven planets of antiquity or with the signs of the zodiac. Sometimes the Demiurge and the Archons were identified with the God, the ANGELS, and the law of the OLD TESTAMENT and hence received Hebrew names. The recurring image of Archons is that of jailers imprisoning the divine spark in human souls held captive in material creation. The gnosis sent from the realms of divine light beyond the universe through the divine emanation (AEON) JESUS enabled Gnostic initiates to pass through the spheres of the Archons into the realms of light.

ARDHANĀRĪŚVARA \är-də-nä-ˈrēsh-və-rə\ (Sanskrit: “Lord Who Is Half Woman”), composite male-female figure of the Hindu god SHIVA, together with his consort PĀRVATĪ. The right (male) half of the figure is adorned with the traditional ornaments of Shiva. Half of the hair is piled in matted locks, half of a third eye is visible on the forehead, a tiger skin covers the loins, and serpents are used as ornaments. The left (female) half shows hair well combed and knotted, half of a TILAK (a round dot) on the forehead, one breast, a silk garment caught with girdles, and the foot tinted red with henna.

According to most authorities the figure signifies that the male and female principles are inseparable. A popular explanation, as given in the *Śiva Purāṇa*, is that BRAHMĀ created male beings and instructed them to create others, but they were unable to do so. Brahmā realized his omission and created females. Another legend states that the sage (ṛṣi) Bhr̥ṅgi had vowed to worship only one deity and so failed to circumambulate and to prostrate himself before Pārvatī. Pārvatī tried to force him to do so by asking to be united with her lord, but the sage assumed the form of a beetle and continued to circle only the male half, whereupon Pārvatī became reconciled and blessed Bhr̥ṅgi.

ARES \ˈä-rēz, ˈar-ēz\, in GREEK RELIGION, god of war or, more properly, the spirit of battle. Unlike his Roman counterpart, MARS, his worship was not extensive. From at least the time of Homer, who established him as the son of ZEUS and HERA, Ares was one of the Olympian deities; his fellow gods and even his parents, however, were not fond of him (*Iliad* v, 889 ff.). Nonetheless, he was accompanied in battle by his sister ERIS (Strife) and his sons (by APHRODITE) Phobos and Deimos (Panic and Rout). Also associated with him were two lesser war deities: Enyalios, who is virtually identical with Ares himself, and Enyo, a female counterpart.

Ares' worship was largely in the northern areas of Greece, and his cult had many interesting local features. At Sparta a nocturnal offering of dogs—an unusual sacrificial victim, which might indicate a CHTHONIC (Underworld) deity—was made to him as Enyalios. During his festival at Geronthrae in Laconia, no women were allowed in the sacred grove, but at Tegea he was honored in a special sacrifice by only women as Gynaikothoinas (“Entertainer of Women”). At Athens he had a temple at the foot of the Ar-eopagus (“Ares' Hill”).

The mythology surrounding the figure of Ares is not extensive. He was associated with Aphrodite from earliest times; in fact, Aphrodite was known locally (e.g., at Sparta) as a war goddess, apparently an early facet of her character. Occasionally, Aphrodite was Ares' legitimate wife, and by her he fathered Deimos, Phobos, and HARMONIA. By AGLAURUS, the daughter of CECROPS, he was the father of Alcippe. He was the father of at least two of HERACLES' adversaries: Cycnus and Diomedes of Thrace.

ARETHUSA \,ar-i-ˈthü-sə\, in Greek mythology, a NYMPH who gave her name to a spring in Elis and to another on the island of Ortygia, near Syracuse.

The river god Alpheus fell in love with Arethusa, who was in the retinue of ARTEMIS. Arethusa fled to Ortygia, where she was changed into a spring. Alpheus, however, made his way beneath the sea and united his waters with those of the spring. In an earlier form of the legend, it was Artemis, not Arethusa, who was the object of the river god's affections and who escaped by smearing her face with mire, so that he failed to recognize her.

The story probably originated from the fact that Artemis Alpeiaia was worshiped in both Elis and Ortygia and also that the Alpheus in its upper part runs underground.

ARGONAUT, in Greek legend, any of a band of 50 heroes who went with JASON in the ship *Argo* to fetch the Golden Fleece.

Jason's uncle ATHAMAS had two children, Phrixus and Helle, by his first wife, the goddess Nephele. Ino, his second wife, hated the children and persuaded Athamas to sacrifice Phrixus as the only means of alleviating a famine. But before the sacrifice, Nephele appeared to Phrixus, bringing a ram with a golden fleece on which he and his sister Helle tried to escape over the sea. Helle fell off and was drowned in the strait that after her was called the Hellespont. Phrixus safely reached the other side, and, proceeding to Colchis on the farther shore of the Euxine (Black) Sea, he sacrificed the ram and hung up its fleece in the grove of ARES, where it was guarded by a sleepless serpent.

Jason's uncle PELIAS had usurped the throne of Iolcus in Thessaly, which rightfully belonged to Jason's father, Aeson. Pelias promised to surrender his kingship if Jason would retrieve the Golden Fleece. Jason called upon the noblest heroes of Greece to take part in the expedition. According to the original story, the crew consisted of the chief members of the Minyans; later, other and better-known heroes, such as Castor and Polydeuces, were added.

The Argonauts underwent various trials on their voyage to Colchis. At the entrance to the Euxine Sea the Argonauts met Phineus, the blind and aged king whose food was constantly polluted by the Harpies. After being freed by the winged sons of BOREAS, Phineus told them the course to

Arethusa on a silver coin, c. 413 BCE; in the National Archaeological Museum, Syracuse, Sicily
Konrad Helbig

Colchis and how to pass through the Symplegades—two cliffs that clashed constantly together. Jason sent ahead a dove that was damaged between the rocks, but the *Argo* slipped through while the rocks were rebounding. From then the rocks became fixed and never closed again.

When the Argonauts finally reached Colchis, they found that the king, Aeëtes, would not give up the fleece until Jason yoked the king's fire-snorling bulls and plowed the field of Ares. That accomplished, the field was to be sown with dragon's teeth from which armed men were to spring. Aeëtes' daughter, MEDEA, who had fallen in love with Jason, gave him a salve that protected him from the bulls' fire and advised him to cast a stone at the newborn warriors to cause them to fight to the death among themselves. After these tasks were accomplished, Aeëtes still refused to give over the fleece. Medea, however, put the serpent to sleep, and Jason was able to abscond with the fleece and Medea. Aeëtes' pursuit was foiled when Medea killed her brother and tossed his body parts into the sea for her father to gather. Eventually the *Argo* reached Iolcos and was placed in a grove sacred to POSEIDON in the Isthmus of Corinth.

ARGUS PANOPTES \ˈär-gəs-pan-ˈäp-tēz\ (Greek: "All Seeing"), figure in Greek myth described as the son of Inachus, Agenor, or Arestor or as an aboriginal hero (autochthon). His surname derives from the hundred eyes in his head or all over his body. Argus was appointed by the goddess HERA to watch the cow into which IO had been transformed, but he was slain by HERMES. His eyes were transferred by Hera to the tail of the peacock.

ARHAT, in BUDDHISM, a perfected person, one who has gained insight into the true nature of existence and has achieved NIRVANA (spiritual enlightenment). See ARAHANT.

ARIADNE \,är-ē-ˈad-nē\, in Greek mythology, daughter of Pasiphaë and the Cretan king MINOS. She fell in love with THESEUS and gave to him either a clew (a ball of thread) or glittering jewels with which to retrace his passage through the Labyrinth. Here versions of the tale diverge: she was abandoned by Theseus and hanged herself; Theseus carried her to Naxos and left her there to die or to marry the god DIONYSUS; or she died in childbirth on Cyprus.

ARIANISM \ˈär-ē-ə-ni-zəm\, Christian HERESY first proposed early in the 4th century by the Alexandrian presbyter ARIUS. It affirmed that JESUS CHRIST is not truly divine but a created being. Arius' basic premise was that God alone is self-existent and immutable. Thus, the Son, who is a created being (not self-existent) and a being who grew and changed (not immutable) cannot be God. The Son must, therefore, be deemed a creature who has been called into existence out of nothing and has had a beginning. Moreover, the Son can have no direct knowledge of the Father since the Son is finite and of a different order of existence.

According to its opponents, especially the bishop ATHANASIUS, Arius' teaching reduced the Son to a DEMIGOD, reintroduced POLYTHEISM (since worship of the Son was not abandoned), and undermined the Christian concept of redemption since only he who was truly God could be deemed to have reconciled man to the Godhead.

The controversy seemed to have been brought to an end by the COUNCIL OF NICAËA (325 CE), which condemned Arius and his teaching and issued a creed to safeguard orthodox Christian belief. This creed states that the Son is *homoousion tō Patri* ("of one substance with the Father"), thus de-

claring him to be all that the Father is: He is completely divine. In fact, however, this was only the beginning of a long-protracted dispute (see HOMOIOUSIAN).

From 325 to 337 the Arian leaders, exiled after the Council of Nicaea, tried, with some success, to return to their churches and sees and to banish their enemies. From 337 to 350 Constans, sympathetic to the orthodox Christians, was emperor in the West, and Constantius II, sympathetic to the Arians, was emperor in the East. At a church council held at Antioch (341), an affirmation of faith that omitted the *homoousion* clause was issued.

In 350 Constantius became sole ruler of the empire, and under his leadership the Nicene party (orthodox Christians) was largely crushed. The extreme Arians then declared that the Son was "unlike" (*anomoios*) the Father. These anomoeans succeeded in having their views endorsed at Sirmium in 357, but their extremism stimulated the moderates, who asserted that the Son was "of similar substance" (*homoiousios*) with the Father. Constantius supported this view, which was approved in 360 at Constantinople; all previous creeds were rejected.

After Constantius' death (361), the orthodox Christian majority in the West consolidated its position. The homoiousian majority in the East began to realize its fundamental agreement with the Nicene party. When the emperors Gratian (367–383) and Theodosius I (379–395) took up the defense of orthodoxy, Arianism collapsed. In 381 the second ecumenical council met at Constantinople. Arianism was proscribed, and a statement of faith which came to be known as the NICENE CREED was approved.

Although this ended the heresy in the empire, Arianism continued among some of the Germanic tribes to the end of the 7th century. In modern times some Unitarians (see UNITARIANISM) are virtually Arians in that they are unwilling either to reduce Christ to a mere human being or to attribute to him a divine nature identical with that of the Father. The JEHOVAH'S WITNESSES regard Arius as a forerunner of CHARLES TAZE RUSSELL, the founder of their movement.

ARINNITTI \,ä-ri-ˈni-tē\, *Hittian* Wurusemu, Hittite sun goddess, the principal deity and patron of the Hittite empire and monarchy. Her consort was the weather god Taru. Arinnitti's precursor seems to have been a mother-goddess of Anatolia, symbolic of earth and fertility. Arinnitti's attributes were righteous judgment, mercy, and royal authority. The powerful Hittite queen Puduhepa adopted Arinnitti as her protectress; the queen's seal showed her in the goddess' embrace. See ANATOLIAN RELIGIONS.

ARION \ə-ˈrī-ən\, semilegendary Greek poet and musician of Methymna in Lesbos. He is said to have invented the dithyramb (choral poem or chant performed at the festival of DIONYSUS). His father's name, Cycleus, indicates the connection of the son with the cyclic or circular chorus of the dithyramb. None of his works survives, and only one story about his life is known.

After a successful performing tour of Sicily and Magna Graecia, Arion sailed for home. The sailors resolved to kill him and seize the wealth he had collected. Arion begged permission to sing a song and sang a dirge accompanied by his lyre. He then threw himself overboard; but he was miraculously carried to shore by a dolphin. Thus he proceeded to Corinth, arriving before the ship. There Arion's friend Periander, tyrant of Corinth, summoned the sailors and demanded what had become of the poet. Upon testifying that he had remained behind, they were suddenly confronted by

Arion himself. The sailors confessed and were punished, and Arion's lyre and the dolphin became the constellations Lyra and Delphinus.

ARISTAEUS \,ar-i-'stē-əs\, in GREEK RELIGION, a divinity whose worship was widespread but whose character in myth is somewhat obscure. The name is derived from the Greek *aristos*, "best." Aristaeus—son of APOLLO and CYRENE, a nymph—was born in Libya but later went to Thebes, where he received instruction from the MUSES in the arts of healing and PROPHECY and became the son-in-law of CADMUS and the father of ACTAEON. After much travel, he reached Thrace, where he finally disappeared near Mt. Haemus.

Aristaeus is said to have introduced the cultivation of bees, the vine, and the olive and was the protector of herdsmen and hunters. He was often identified with ZEUS, APOLLO, and DIONYSUS. He was represented as a young man dressed like a shepherd and sometimes carrying a sheep.

ARIUS \'ar-ē-əs\ (b. c. 250, Libya—d. 336, Constantinople [now Istanbul, Turkey]), Christian priest of Alexandria, Egypt, whose teachings gave rise to a theological doctrine known as ARIANISM, which, for affirming the created, finite nature of Christ, was denounced by the early church as a major HERESY.

An ascetical leader of a Christian community in the area of Alexandria, Arius attracted a large following with a message integrating NEOPLATONISM, which accented the absolute oneness of the divinity as the highest perfection, with a literal, rationalist approach to the NEW TESTAMENT. This view was publicized about 323 through the poetic verse of his major work, *Thalia* ("Banquet"), and was widely spread by popular songs written for laborers and travelers.

The COUNCIL OF NICAEA, in May 325, declared Arius a heretic after he refused to sign the formula of faith stating that Christ was of the same divine nature as God. Influential support from colleagues in Asia Minor succeeded in effecting Arius' return from exile and his readmission into the church after consenting to a compromise formula. Shortly before he was to be reconciled, however, Arius died.

ARIYA-PUGGALA \'ə-rē-ə-'pūg-gə-lə\ (Pāli: "noble being"), Sanskrit *arya-pudgala* \'ə-rē-ə-'pūd-gə-lə\, in THERAVĀDA BUDDHISM, a person who has attained one of the four levels of holiness. A first type of holy person, called a *sotapanna-puggala* ("stream-enterer"), is one who will attain NIRVANA after no more than seven rebirths. Another type of holy person is termed a *sakadagamin* ("once-returner"), or one who is destined to be reborn in the human world only once more before reaching nirvana. A third type of *ariya-puggala* is the *anagamin* ("never-returner"), or one who will not be reborn in the human realm and will enter the realm of the gods at the time of death. The never-returner, however, is still not considered to have reached nirvana.

According to Theravāda Buddhism the highest level of holiness is reached by the ARAHANT, one who has reached final and absolute emancipation from all rebirths in any human or superhuman realm. The *arahant*—a model person for Theravāda Buddhists—is to be distinguished from the personal ideal of the MAHĀYĀNA schools, the BODHISATTVA. The latter is a holy person who has reached enlightenment but refuses to enter nirvana, choosing rather to teach his insights until all creatures have similarly been liberated.

ARJAN \'ər-jən, 'är-\ (b. 1563, Goindwāl, Punjab, India—d. May 30, 1606, Lahore, Punjab, Mughal Empire [now in Pa-

kistan]), fifth GURŪ of the Sikhs (1581–1606). Gurū Arjan took over the leadership of the community from his father, Gurū RĀMDĀS, in 1581 and successfully expanded it. He updated the text of Sikh SCRIPTURE and prepared the *Kartārpur Potḥī*, the volume upon which the canonical ĀDI GRANTH is largely based. He also completed the construction of the GOLDEN TEMPLE (also called the Darbār Sāhib) and was instrumental in founding four important Sikh towns in central Punjab. He was a prolific poet and created hymns of great lyrical quality. SIKHISM grew considerably during his tenure, posing a threat to the local Mughal administration. This caused the provincial Mughal ruler to summon him to Lahore, where he died in official custody, the first martyr of the tradition.

ARJUNA \'ər-jū-nə, '-är\, one of the five Pāṇḍava brothers, heroes of the Indian epic, the MAHĀBHĀRATA. Arjuna's hesitation before a massive battle that would cause him to kill

The hermitage by the Gaṅgā, detail of a granite relief, possibly showing the penance of Arjuna, from Mahā-balipuram, Tamil Nadu, early 7th century CE

Photograph, P. Chandra

ARK

his kinsmen and would also cause unthinkable destruction on the race, became the occasion for his friend and charioteer, the god KRISHNA, to deliver a discourse on duty, or the right course of human action. These verses are collectively known as the BHAGAVAD GĪTĀ, one of the most celebrated religious texts of India. Arjuna's stature as an exemplar of skill, duty, and compassion, as well as a seeker of true knowledge, makes him a central figure in Hindu myth and theology.

ARK, also called Ark of the Law, Hebrew Aron, or Aron ha-Qodesh ("Holy Ark"), in Jewish SYNAGOGUES, an ornate cabinet that enshrines the sacred TORAH scrolls used for public worship. Because it symbolizes the HOLY OF HOLIES of the ancient TEMPLE OF JERUSALEM, it is the holiest place in the synagogue and the focal point of prayer. The ark is reached by steps and is commonly placed so that the worshiper facing it also faces Jerusalem. When the scrolls are removed for religious services, the congregation stands, and a solemn ceremony accompanies the opening and closing of the ark doors.

ASHKENAZI (German-rite) Jews cover the doors of the ark with a richly embroidered cloth (*parocheth*), while SEPHARDIC (Spanish-rite) Jews place the cloth inside. Before or near the cabinet hangs the eternal light (*ner tamid*), and generally an inscription of the TEN COMMANDMENTS (often in abbreviated form) or some other relevant sacred text is placed above the doors.

ARK OF THE COVENANT, Hebrew Aron Ha-Berit, in JUDAISM and CHRISTIANITY, the chest that in biblical times housed the two tablets of the Mosaic Law (EXODUS 25:16; 40:20; 1 Kings 8:9). The ARK rested in the HOLY OF HOLIES in-

side the TABERNACLE of the ancient TEMPLE OF JERUSALEM and was seen only by the HIGH PRIEST of the Israelites on YOM KIPPUR, the Day of Atonement (Exodus 30:10; Leviticus 16).

The LEVITES carried the Ark with them during the Hebrews' wanderings in the wilderness (Numbers 10:33). Following the conquest of CANAAN, the Ark resided at SHILOH (1 Samuel 3–6), but from time to time it was carried into battle by the Israelites (Numbers 10:35–36; 1 Samuel 4:3–9). Taken to Jerusalem by King DAVID (2 Samuel 6), it was eventually placed in the Temple by King SOLOMON (1 Kings 8:6). The final fate of the Ark is unknown.

ARKONA \är-'kō-nə\, West Slavic citadel-temple of the god SVANTOVIT, dating from the 9th–10th century CE and destroyed in 1168/69 by Christian Danes when they stormed the island of Rügen in the southwestern Baltic. Saxo Grammaticus, the 12th-century Danish historian, wrote that the Arkona was a log-built temple topped by a red roof and surrounded by a wooden fence, splendidly carved and bearing various painted symbols; the inner temple chamber had partitions of heavy tapestry. In this inner sanctum loomed the statue of Svantovit, which had four heads and throats joined together facing in opposite directions. Saxo mentions that not only the Wends but also Scandinavian neighbors paid tribute to Svantovit. When the statue was cut and removed, the Danes carried away seven boxes of treasures (gifts to the god). Excavations in 1921 proved the actual existence of the temple. Repeated excavations in 1969–70 revealed an earlier layer of the SANCTUARY dated to the 10th and possibly 9th century CE. See also SLAVIC RELIGION.

ARMAGEDDON \,är-mə-'ge-dən\, in the NEW TESTAMENT, place where the kings of the earth under demonic leadership will wage war on the forces of God at the end of world history. The word Armageddon occurs in the BIBLE only once, in the REVELATION TO JOHN (16:16: "the place which is called in Hebrew Armageddon"). No such Hebrew word is known, however, and the name has been variously interpreted, perhaps most plausibly as "Mountain of Megiddo." The Palestinian city of Megiddo was probably used as a symbol for such a battle because of its strategic importance. Megiddo was the scene of many battles, and Revelation seems to imply that the "hill" on which the city fortress stood, or the "mountain" heights behind it, had become a symbol of the final battlefield where God's heavenly armies will defeat the demon-led forces of evil. Other biblical references suggest Jerusalem as the site of this battle.

ARMENIAN RITE, the system of liturgical practices and discipline observed by both

the Armenian Apostolic (Eastern Orthodox) Church and the Armenian Catholics. The Armenians were converted to CHRISTIANITY by St. Gregory the Illuminator about 300 CE. The liturgy used by churches of the Armenian rite—the Liturgy of St. Gregory Illuminator—is usually divided into five parts: (1) the prayers of preparation in the sacristy, (2) the prayers of preparation in the SANCTUARY, (3) the preparation and consecration of the gifts, (4) the liturgy of the CATECHUMENS, and (5) the liturgy of the faithful, culminating in Communion.

Churches of the Armenian rite, unlike Byzantine churches, are generally devoid of ICONS and, in place of an ICONOSTASIS (screen), have a curtain that conceals the priest and the altar during parts of the liturgy. The Communion itself is given in two species (bread and wine), as in other Orthodox churches. For its worship services the Armenian rite is dependent upon such books as the *Donatuzitz*, the order of service; the *Badarakamaduitz*, the book containing all the prayers used by the priest; the *Giashotz*, the book of midday, containing the Epistle and Gospel readings for each day; and the *Z'amagirq*, the book of hours, containing the prayers and psalms of the seven daily offices, primarily matins, prime, and vespers.

ARMILUS \ä'r-mə-ləs\, in Jewish mythology, an enemy who will conquer Jerusalem and persecute Jews until his final defeat at the hands of God or the true MESSIAH. His destruction symbolizes the ultimate victory of good over evil in the messianic era. Some sources depict Armilus as partially deaf and partially maimed, the frightful offspring of SATAN or evil creatures. Parallel legends exist in the figures of the ANTICHRIST and of AHRIMAN, the Persian god of evil.

ARMINIANISM \ä'r-'mi-nē-ə-,ni-zəm\, a theological movement in CHRISTIANITY that represents a reaction to the Calvinist doctrine of PREDESTINATION (see also CALVINISM). The movement, named for JACOBUS ARMINIUS, who became involved in a highly publicized debate with his colleague Franciscus Gomarus, a rigid Calvinist, began early in the 17th century and asserted that God's sovereignty and man's FREE WILL are compatible. For Arminius, God's will as unceasing love was the determinative initiator and arbiter of human destiny. The movement that became known as Arminianism, however, tended to be more liberal than was Arminius himself.

Dutch Arminianism was originally articulated in the Remonstrance (1610), a theological statement signed by 45 ministers and submitted to the Dutch states general. The SYNOD OF DORT (1618–19) was called by the states general to pass upon the Remonstrance. The five points of the Remonstrance asserted that: (1) election (and condemnation on the day of judgment) was conditioned by the rational faith or nonfaith of man, (2) the ATONEMENT, while qualitatively adequate for all men, was efficacious only for the man of faith, (3) unaided by the HOLY SPIRIT, no person is able to respond to God's will, (4) GRACE is not irresistible, and (5) believers are able to resist SIN but are not beyond the possibility of falling from grace. The crux of REMONSTRANT Arminianism lay in the assertion that human dignity requires an unimpaired freedom of the will.

The Dutch Remonstrants were condemned by the Synod of Dort and suffered political persecution for a time, but by 1630 they were legally tolerated. They have continued to exert liberalizing tendencies in Dutch Protestant theology.

In the 18th century, JOHN WESLEY was influenced by Arminianism. Arminianism was an important influence in

METHODISM, which developed out of the Wesleyan movement. A still more liberal version of Arminianism went into the making of American UNITARIANISM.

ARMINIUS, JACOBUS \ä'r-'mi-nē-əs\ (b. Oct. 10, 1560, Oudewater, Neth.—d. Oct. 19, 1609, Leiden), theologian and minister of the Dutch REFORMED CHURCH who opposed the strict Calvinist teaching on PREDESTINATION and who developed a system of belief known later as ARMINIANISM.

Arminius attended school at Utrecht and continued his education at the universities of Leiden (1576–82), Basel, and Geneva (1582–86). After brief stays at the University of Padua, in Rome, and in Geneva, he returned to Amsterdam. He was ordained there in 1588. In 1603 Arminius was called to a theological professorship at Leiden, which he held until his death. These last six years of his life were dominated by theological controversy, in particular by his disputes with his colleague Franciscus Gomarus.

Arminius was forced into controversy against his own choice. He had earlier affirmed the Calvinist view of predestination, which held that those elected for salvation were chosen prior to Adam's fall, but gradually predestination came to seem too harsh a position because it did not allow human decision a role in the achieving of salvation. Hence Arminius came to assert a conditional election, according to which God elects to life those who will respond in faith to the divine offer of salvation. In so doing, he meant to place greater emphasis on God's mercy.

After his death some of his followers gave support to his views by signing the Remonstrance, a theological dictum that was debated in 1618–19 at the SYNOD OF DORT, at which all the delegates were supporters of Gomarus. REMONSTRANT Arminianism was condemned by the synod, the Arminians present were expelled, and many others suffered persecution. In 1629, however, the works of Arminius (*Opera theologica*) were published for the first time in Leiden, and by 1630 the Remonstrant Brotherhood had achieved legal toleration. It was finally recognized officially in the Netherlands in 1795. In its emphasis on the GRACE of God, Arminianism influenced the development of METHODISM in England and the United States.

ART AND RELIGION, one of the best tools with which to examine and discover the similarities and differences of WORLD RELIGIONS. By making concrete some of the cognitive dimensions of a religion, art also allows for the study of the tradition's structure. But the significance of religious art is not merely tied to the religious ideas contained in such art—the extent of artistic representations in a specific tradition also allows for the understanding of the significance of political, economic, and craft constraints on a religion in a particular historical period.

Art obviously expresses, “rationalizes,” the central conceptions of a religion. It encompasses the structure of a religion from its cosmological myths to representations of doctrine and ritual practice. But religious art does not always act in concert with theology. It must be remembered that cathedrals, Hindu temples, and the Taj Mahal were not built in a day and presuppose a vast network of interrelated political, economic, and social relations that must all be taken into account in any understanding of a particular artistic tradition.

Scholars have often focused on a specific symbol or element in religious art, reading the work as if it were a code in which a particular representation always and invariably has the same specific meaning, regardless of the period or

ARTEMIS

context. It is often stated, for example, that a Hindu temple always faces East, and the direction East is then interpreted as a reference to the rising sun and the powers of nature. This focus, however, usually distorts the meaning of both the work of art and the religious tradition in which it was executed; the meaning of the symbol as well as of the work itself is constituted by a web of relations between various symbols, *i.e.*, the symbol's meaning is constituted by its position with respect to other symbols in the same cultural system. Symbols in themselves lack meaning. In the above example, the geographic representation East bears cosmological significance in that it is the abode of the gods in HINDUISM. Its opposite is the West, the domain of the anti-gods and darkness. Moreover, East/West is opposite North/South, which is the domain of human beings and the ancestors. The Hindu temple facing East is thus a complex microcosm framed by the four huge temple gates found in most South Indian temples.

For a general discussion of principles of artistic representation, *see* ICONOGRAPHY; SYMBOL. For surveys of traditional categories of art, *see* SACRED ARCHITECTURE and MUSIC AND RELIGION. The art of particular religious traditions is treated in the following articles: AFRICAN RELIGIONS, ART OF; JUDAISM, ART OF; CHRISTIANITY, ART OF; BUDDHISM, ART OF.

ARTEMIS \ˈär-tə-mis\, in GREEK RELIGION, the goddess of wild animals, the hunt, vegetation, and of chastity and childbirth. Artemis was the daughter of ZEUS and LETO and the twin sister of APOLLO. Her character and function varied greatly from place to place, but, apparently, behind all forms lay the goddess of wild nature, who danced, usually accompanied by NYMPHS, in mountains, forests, and marshes. Besides killing game she also was believed to protect it, especially the young; hence her title Mistress of Animals.

Artemis may originally have developed out of ISHTAR (INANNA) in the East. Many of her local cults, such as that of Artemis Orthia at Sparta, preserved traces of other deities, often with Greek names.

While the mythological roles of other prominent Olympians evolved in the works of the poets, the lore of Artemis developed primarily from cult. Dances of maidens representing tree nymphs (dryads) were especially common in Artemis' worship as goddess of vegetation, a role especially popular in the Peloponnese. Throughout the Peloponnese, bearing such epithets as Limnaea and Limnatis (Lady of the Lake), Artemis supervised waters and lush wild growth, attended by nymphs of wells and springs (NAIADS). In parts of the peninsula her dances were wild and lascivious.

Outside the Peloponnese, Artemis' most familiar form was as Mistress of Animals. Poets and artists usually pictured her with the stag or hunting dog, but the cults showed considerable variety. For instance, the Tauropolia festival at Halae Araphenides in Attica honored Artemis Tauropolos (Bull Goddess), who received a few drops of blood drawn by sword from a man's neck.

The frequent stories of the love affairs of Artemis' nymphs may have originally been told of the goddess herself. The poets after Homer, however, stressed Artemis' chastity. The wrath of Artemis was proverbial. Yet Greek sculpture avoided Artemis' unpitying anger as a motif; in fact, the goddess herself did not become popular as a sculptural subject until the 4th century BCE.

ARTHA \ˈär-tə\ (Sanskrit: "purpose," "meaning," "wealth," or "property"), in HINDUISM, the pursuit of material advantage, one of the four traditional aims in life. The sanction

for *artha* rests on the assumption that—setting aside the exceptional few who can proceed directly to the final aim of MOKṢA—material well-being is a basic necessity and is an appropriate pursuit for a householder (the second of the four life stages). Furthermore, *artha* is closely tied to the activities of statecraft, which maintains the general social order and prevents anarchy. Still, *artha* must always be regulated by the superior aim of DHARMA, or righteousness.

ARVAL BROTHERS \ˈär-vəl\, *Latin* Fratres Arvales \ˈfrä-trēz-är-ˈvā-lēz\, in ancient Rome, college or PRIESTHOOD whose chief original duty was to offer annual public sacrifice for the fertility of the fields. The brotherhood was almost forgotten in republican times but was revived by Augustus and probably lasted until the time of Theodosius I (reigned 379–395). It consisted of 12 members, elected for life from the highest ranks, including the emperor during the principate. Literary allusions to them are scarce, but 96

Alinari—Art Resource

of the *acta*, or minutes, of their proceedings, inscribed on stone, were found in the grove of the Dea Dia near Rome.

ARYAN \ˈar-ē-ən, ˈer-, ˈär-\ (from Sanskrit: *ārya*, “noble”), prehistoric people who, scholars once assumed, invaded and settled in Iran and northern India. It was postulated that from their language, also called Aryan, the Indo-European languages of South Asia descended. In the 19th century the term was used as a synonym for “Indo-European” and also, more restrictively, to refer to the Indo-Iranian languages. In the 20th century, however, the entire notion that there was an “Aryan invasion” of the Indian subcontinent has been disputed by Hindu nationalists and by a large number of scholars as a fallacy of colonial Orientalism. While the idea that there was an Aryan invasion enjoys less popularity than it once did, the exact status of Indo-Aryan languages in relation to other ancient language groups in the Indian subcontinent has remained a subject of continuing debate, as has the closely related question of cultural diffusion and interaction. Such questions gain special significance from the fact that the VEDAS and their attached literature belong to the Indo-Aryan language family. At issue is their intrinsic relation to India and the fact that in Vedic literature the term *ārya* is used to distinguish privileged members of society from others.

During the 19th century there arose a notion—propagated most assiduously by the Comte de Gobineau and later by his disciple Houston Stewart Chamberlain—of an “Aryan race,” those who spoke Indo-European languages, who were considered to be responsible for all human progress, and who were also morally superior to “Semites,” “Yellows,” and “Blacks.” The Nordic, or Germanic, peoples came to be regarded as the purest “Aryans.” This notion, which had been repudiated by anthropologists by the second quarter of the 20th century, was seized upon by Adolf Hitler and the Nazis and made the basis of the German government policy of exterminating Jews, Gypsies, and other “non-Aryans.”

ARYA-PUDGALA: *see* ARIYA-PUGGALA.

ARYA SAMAJ \ˈär-yə-sə-ˈmäj\, Sanskrit *Ārya Samāja* (“Society of Noble Ones”), vigorous reform sect of modern HINDUISM, founded in 1875 by DAYANANDA SARASVATI, whose aim was to reestablish a regard for the VEDAS as revealed truth. He rejected all later accretions to the Vedas as degenerate but, in his own interpretation, included much post-Vedic thought, such as the doctrines of KARMA and of rebirth.

The Arya Samaj has always had its largest following in West and North India. It is organized in local *samājas* (“societies”) that send representatives to provincial *samājas* and to an all-India *samāja*. Each local *samāja* elects its own officers in a democratic manner.

The Arya Samaj opposes IDOLATRY, animal sacrifice, ANCESTOR WORSHIP, a CASTE system based on birth rather than on merit, untouchability, child marriage, PILGRIMAGES, priestly craft, and temple offerings. It upholds the infallibility of the Vedas, the doctrines of karma and rebirth, the SANCTITY OF THE COW, the importance of the individual SACRAMENTS (SAMSKĀRAS), the efficacy of Vedic oblations to the fire, and programs of social reform. It has worked to further the education of girls and women and to encourage intercaste marriages; has built missions, orphanages, and homes for widows; and has undertaken famine relief and medical work. It has also established a network of schools and colleges. From its beginning it was an important factor in the

growth of nationalism. It has been criticized, however, as overly dogmatic and militant and as having exhibited hostility toward both CHRISTIANITY and ISLAM.

ASAHARA, SHOKO \ä-sä-ˈhä-rä-ˈshō-,kō\, *original name* Chizuo Matsumoto (b. March 2, 1955, Kumamoto prefecture, Japan), founder of AUM SHINRIKYO (“Supreme Truth”), a radically millenarian new religious movement in Japan (*see* MILLENNIALISM; NEW RELIGIOUS MOVEMENTS).

Asahara was born with severely impaired vision and was sent to a school for the blind. After graduating in 1975 and failing to gain admission to medical school, he studied acupuncture and pharmacology. He opened his own pharmacy in Chiba, specializing in Chinese medicaments. In 1982 he was arrested for selling fake remedies; after his conviction for fraud his business went bankrupt.

During this period Asahara became a member of a small new religion, Agonshu, a movement with strong Hindu and Buddhist elements. In 1984, after a period of spiritual soul-searching, he established his own new religion, Aum Shinsen-no-kai, later known as Aum Shinrikyo. Asahara began preaching on street corners, teaching YOGA, and healing through the use of herbal medicines.

By 1989, when the Tokyo metropolitan government granted Aum Shinrikyo legal status as a religious organization, Asahara had begun calling himself the “Holy Pope,” “Savior of the Country,” and “Tokyo’s Christ.” The sect claimed to have 30,000 followers in Japan and abroad. In 1990 Asahara fielded a list of 25 candidates for the lower house of the Diet (the Japanese parliament) with the idea that their victory would give him the prime ministership. All of them, however, were defeated.

This failure led to a shift in Aum theology and strategies. Aum’s belief system was based on the millenarian conviction that the modern period is a prelude to the end of humanity and the beginning of a cosmic cycle. Asahara predicted a series of disasters that would foreshadow the end of the world. Accordingly, Aum members began gathering arms and supplies of the nerve gas sarin. In 1995 they released the gas in the Tokyo subway system, killing 12 people and injuring 5,000. Asahara and members of his sect were arrested. Investigations revealed that the movement had been developing biological weapons and had acquired more than one billion dollars (U.S.) in assets, which it used to influence the government, various segments of the economic establishment, and criminal organizations. In 2004 Asahara was found guilty of masterminding the subway attack and sentenced to death.

ASALLUHE \ä-säl-ˈlü-kä\, in MESOPOTAMIAN RELIGION, Sumerian deity, city god of Ku’ar, near Eridu in the southeastern marshland region. Asalluhe was active with the god Enki (Akkadian: EA) in rituals of LUSTRATION (purification) magic and was considered his son. He may originally have been a god of thundershowers, as his name, “Man-Drenching Asal,” suggests; he would thus have corresponded to the other Sumerian gods ISHKUR and NINURTA. In incantations Asalluhe was usually the god who first called Enki’s attention to existing evils. He was later identified with MARDUK of Babylon.

ĀSANA \ä-sə-nə\ (Sanskrit: “sitting posture”), in the YOGA system of Indian philosophy, an immobile posture that a person assumes in an attempt to isolate the mind by freeing it from attention to bodily functions. It is the third of the eight prescribed stages intended to lead the aspirant to

samādhi, the trancelike state of perfect concentration. As many as 32 or more different *āsanas* have been enumerated, perhaps the most common being the *padmāsana* ("lotus posture"). In the visual arts of India, *āsana* refers to the posture of seated figures or to the seats on which they sit.

ASAṄGA \ˈä-səŋ-gə\ (fl. 4th–5th century CE, b. Puruṣapura, India), an influential Buddhist philosopher who is often recognized as the founder of the YOGĀCĀRA school of idealism.

Asaṅga was the eldest of three brothers, the sons of a BRAHMIN court priest at Puruṣapura, all of whom became monks in the SARVĀSTIVĀDA order. Dissatisfied with the Sarvāstivāda doctrinal concepts of *śūnyatā* ("EMPTINESS") and *puḍgala* ("person"), he turned to the MAHĀYĀNA tradition for which he developed a new interpretation. Asaṅga and the Yogācāra school that he initiated held that the external world exists only as mental images that have no real permanence. A "storehouse" of consciousness (the *ālaya-vijñāna*) contains the trace impressions of the past and the potentialities of future actions. Asaṅga's great contribution was his analysis of the *ālaya-vijñāna* and setting forth of the stages (*bhūmi*) leading to Buddhahood. Among his important works is the *Mahāyāna-saṃgraha* ("Compendium of the Mahāyāna").

ASCANIUS \a-ˈskā-nē-əs\, in Roman legend, son of the hero AENEAS and founder of Alba Longa, near Rome. In different versions, Ascanius is placed variously in time. Those set earlier cite the Trojan Creusa as his mother. After the fall of Troy, Ascanius and Aeneas escaped to Italy, where Aeneas founded Lavinium, the parent city of Alba Longa and Rome. Ascanius became king of Lavinium after his father's death. Thirty years after Lavinium was built, Ascanius founded Alba Longa and ruled it until he died. In the Roman historian Livy's account, however, Ascanius was born to Aeneas and Lavinia after the founding of Lavinium. Ascanius was also called Iulus, and the gens Julia (including the family of Julius Caesar) traced its descent from him.

ASCENSION, in Christian belief, the ascent of JESUS CHRIST into heaven on the 40th day after his RESURRECTION. In the first chapter of THE ACTS OF THE APOSTLES, after appearing to the Apostles on various occasions during a period of 40 days, Jesus was taken up in their presence and was then hidden from them by a cloud, a frequent biblical image signifying the presence of God. Although the Ascension is alluded to in other books of the NEW TESTAMENT, the emphasis and the imagery differ. In The Gospel According to John, the glorification described by the Ascension story seems to have taken place immediately after the Resurrection.

The meaning of the Ascension for Christians is derived from their belief in the glorification and exaltation of Jesus following his death and Resurrection. The Ascension indicates a new relationship between Jesus and his Father and between him and his followers, rather than a simple physical relocation from earth to heaven. The Ascension of Jesus is mentioned both in the Apostles' Creed, a Western profession of faith used for BAPTISM in the early church, and in the NICENE CREED. The feast of the Ascension ranks with CHRISTMAS, EASTER, and PENTECOST in the universality of its observance among Christians. The feast has been celebrated 40 days after Easter in both Eastern and Western CHRISTIANITY since the 4th century.

A distinctive feature of the feast's liturgy in the Western churches is the extinguishing of the Paschal candle after the Gospel has been read, as a symbol of Christ's leaving

the earth. Despite the suggestion of separation indicated in this act, the whole liturgy of Ascensiontide, through the 10 days to Pentecost, is marked by joy in the final triumph of the risen Lord. One of the central themes of the feast is the kingship of Christ, and the implication that the Ascension was the final redemptive act conferring participation in the divine life on all who are members of Christ.

In the Middle Ages various ritual practices that came to be associated with the feast included a PROCESSION, in imitation of Christ's journey with his Apostles to the Mount of Olives, as well as the raising of a crucifix or a statue of the risen Christ through an opening in the church roof.

The view of the Ascension presented by Christian art has varied. In a 5th-century painting, Christ is seen climbing a hill and grasping the hand of God, that is, God is pulling Christ into heaven. A version of the Ascension developed in Syria in the 6th century emphasizes Christ's divinity, showing him frontally, standing immobile in a mandorla, or almond-shaped aureole, elevated above the earth and supported by ANGELS. He holds a scroll and makes a gesture of BENEDICTION. This type of Ascension, which follows the Roman tradition of representing the APOTHEOSIS of an emperor, often figured prominently in the monumental decoration of Byzantine churches. By the 11th century, the West had also adopted a frontal representation. In the Western version, however, the humanity of Christ is emphasized: he extends his hands on either side, showing his wounds. He is usually in a mandorla but is not always supported or even surrounded by angels; thus, he ascends to heaven by his own power. The Ascension remained important as a devotional subject in the art of the Renaissance and Baroque periods, both of which retained the ICONOGRAPHY of Christ displaying his wounds.

ASCETICISM, the practice of the denial of physical or psychological desires in order to attain a spiritual ideal or goal.

Originally a concept referring to physical proficiency, Greek *askēsis* (literally, "exercise," "training," from the verb *askeō*, "I prepare, fashion, practise, exercise") and its derivatives came to be applied to mental, moral, and spiritual abilities. Among the Greeks the notion of intellectual training was applied to the realm of ethics in the ideal of the sage who is able to act freely to choose or refuse a desired object or an act of physical pleasure. This kind of *askēsis*, involving training the will against a life of sensual pleasure, was exemplified by the Stoics (ancient Greek philosophers who advocated the control of the emotions by reason). The view that one ought to deny one's lower desires—understood to be the sensuous, or bodily desires—in contrast with one's spiritual desires that were considered to be virtuous aspirations, became a central principle in ethical thought, particularly evident in the work of Plato and the Neoplatonic philosophers.

The value of asceticism in strengthening an individual's mental and physical discipline has been a part of many religions and philosophies throughout history. Many factors were operative in the rise and cultivation of religious asceticism: the fear of hostile influences from DEMONS; the view that one must be in a state of ritual purity in order to enter into communion with the divine; the desire to invite the attention of sacred beings to the self-denial being practiced by their suppliants; the idea of earning pity, compassion, and salvation by merit using self-inflicted acts of ascetical practices; the sense of guilt and SIN that prompts the need for ATONEMENT; the view that asceticism is a means to gain access to supernatural powers; and the power of dualistic

concepts that have been at the source of efforts to free the spiritual part of humanity from the defilement of the body. Among HINDUISM, BUDDHISM, and CHRISTIANITY, there is a further conceptualization of earthly life as transitory, which prompts a desire to anchor one's hope in liberation from the suffering of such life.

Abstinence and fasting are by far the most common of all ascetic practices, though CELIBACY has been regarded as the first commandment in all strictly ascetic movements. Other common practices include abdication of worldly goods, neglect of personal hygiene, the reduction of movement, and the deliberate inducement of pain. Pain-producing asceticism has appeared in many forms, including exhausting or painful exercises, self-laceration, particularly castration, and FLAGELLATION, which developed into a mass movement in Italy and Germany during the Middle Ages and is still practiced by some local Christian and Islamic sects.

Asceticism in the form of seclusion, physical discipline, and the quality and quantity of food prescribed has played an important role in connection with the puberty rites and rituals of admission to the tribal community. Isolation was and is practiced by young men about to achieve the status of manhood in the Blackfoot and other Native American tribes of the northwestern United States. On important occasions, such as funerals and war, TABOOS involving abstinence from certain food and cohabitation were imposed. For the priests and chiefs these taboos were much stricter.

In India, in the late Vedic period (c. 1500 BCE–c. 200 BCE), the ascetic use of TAPAS ("heat," or austerity) became associated with meditation and YOGA, inspired by the idea that *tapas* brings enlightenment. This view of *tapas* gained in importance among the Yogas and the Jainas. According to JAINISM, liberation becomes possible only when all passions have been exterminated. In Jainism and Buddhism a monastic system evolved, with monks and nuns devoted to rigorous asceticism in the quest of perfection and in the pursuit of chastity and truthfulness. Complete detachment from all possessions and connections in Jainism made paramount the MENDICANT life of meditation and spiritual exercises dependent upon the fulfillment of vows of poverty.

In Christianity all of the types of asceticism have found realization. Abstinence, fasts, and vigils were common in

In the Philippines, ritual asceticism is practiced by flagellants during Good Friday observances

the lives of the early Christians, but some ramifications of developing Christianity became radically ascetic. During the first centuries ascetics stayed in their communities, assumed their role in the life of the church, and centered their asceticism on martyrdom and celibacy. Though asceticism was rejected by the leaders of the Protestant REFORMATION, certain forms of asceticism did emerge in CALVINISM, PURITANISM, PIETISM, early METHODISM, and the OXFORD MOVEMENT. Related to asceticism is the Protestant work ethic, which consists of a radical requirement of accomplishment symbolized in achievement in one's profession and, at the same time, demanding strict renunciation of the enjoyment of material gains acquired legitimately.

The adherents of early ISLAM knew only fasting, which was obligatory in the month of RAMADĀN. MONASTICISM is rejected in the QUR'AN. Nonetheless, ascetic forces among Christians in Syria and Mesopotamia were assim-

ilated by Islam in the ascetic movement known as ZUHD (self-denial) and later in that of SUFISM, which incorporated ascetic ideals and methods.

ASCLEPIUS \ə-'sklē-pē-əs\, *Greek* Asklepios, *Latin* Aesculapius \,es-kyū-'lā-pē-əs, ,ēs-\, Greco-Roman god of medicine, son of APOLLO and the NYMPH Coronis. CHIRON the CENTAUR taught him the art of healing. At length ZEUS, afraid that Asclepius might render all men immortal, slew him with a thunderbolt. Homer, in the *Iliad*, mentions him only as a skillful physician; in later times, however, he was honored as a hero and eventually worshiped as a god. Because it was supposed that Asclepius effected cures of the sick in dreams, the practice of sleeping in his temples became common.

Asclepius' usual attribute was a staff with a serpent coiled around it. A similar but unrelated emblem, the CADUCEUS, with its winged staff and intertwined serpents, is frequently used as a medical emblem but represents the staff of HERMES.

ASERET YEME TESHUVA \ä-'ser-et-ye-'mä-tə-shü-'vä\, *English* Ten Days of Penitence, the first 10 days of the Jewish religious year, *i.e.*, the 1st through the 10th of the month of Tishré.

ASGARD \ʼaz-,gärd, ʼas-\, *Old Norse* Ásgardr, in Norse MYTHOLOGY, the dwelling place of the gods. Legend divided Asgard into 12 or more realms, including VALHALLA, the home of ODIN and the abode of heroes slain in earthly battle; Thrudheim, the realm of THOR; and Braidablik, the home of BALDER. Each important god had his own palace in Asgard, and many Germanic peoples believed that these mansions were similar in design to those of their own nobility. Asgard could be reached from earth only by the bridge Bifrost (the rainbow). *See also* GERMANIC RELIGION.

ASHʼARĪ, ABŪ AL-HASAN AL- \al-ʼä-shä-rē\ (b. 873/874, Basra, Iraq—d. c. 935/936, Baghdad), Arab Muslim theologian noted for having integrated the rationalist methodology of the speculative theologians into the framework of orthodox ISLAM. He founded a theological school that later claimed as members such celebrated authors as AL-GHAZĀLĪ and IBN KHALDŪN.

It is generally agreed that al-Ashʼarī belonged to the family of the celebrated COMPANION OF THE PROPHET Abū Mūsā al-Ashʼarī (d. 662/663), though some theologians opposed to his ideas contest the claim. Since this would have made him by birth a member of the Arab-Muslim aristocracy of the period, he must have received a careful education. Basra was at that time one of the centers of intellectual ferment in Iraq, which, in turn, was the center of the Muslim world.

His works, especially the first part of *Maqālāt al-Islāmiyīn* ("Teachings of the Islamists"), and the accounts of later historians record that al-Ashʼarī very early joined the school of the great theologians of that time, the Muʼtazilites. He became the favorite disciple of Abū ʼalī al-Jubbāʼī, head of the Muʼtazilites of Basra in the late 9th and early 10th centuries, and remained a Muʼtazilite until his 40th year. During that period of his life, he undertook the composition of a work in which he gathered the opinions of the diverse schools on the principal points of Muslim theology. This work, the first volume of the current edition of the *Maqālāt*, is valuable for what it records of Muʼtazilite doctrines. It remains one of the most important sources for retracing the history of the beginnings of Muslim theology.

At the age of 40, by which time he had become a specialist in theology and was well known for his oral controversies and his written works, al-Ashʼarī quit his master, al-Jubbāʼī, abandoned Muʼtazilite doctrine, and was converted to a more traditional, or orthodox, Islamic theology. It had become apparent to him that, in his former disputations, the reality of God as well as that of man had become so sterilized and desiccated that it had become little more than matter for rational manipulation.

Al-Ashʼarī proclaimed his new faith publicly and started combating his former colleagues. He even attacked his old master, al-Jubbāʼī, refuting his arguments in speech and writing. It was then, perhaps, that he took up again his first work, the *Maqālāt*, to add to the objective exposition rectifications more conformable to his new beliefs. In this same period, he composed the work that marks clearly his break with the Muʼtazilite school: the *Kitāb al-Lumaʼ* ("The Luminous Book").

It was not until his former master died in 915 that al-Ashʼarī decided to establish himself in Baghdad. He soon became aware of the importance assumed by a group of faithful of the SUNNA, the disciples of AḤMAD IBN ḤANBAL. Soon after, he composed, or perhaps put the last touches to, one of his most famous treatises, the *Ibānah ʼan uṣūl al-dīyānah* ("Statement on the Principles of Religion"), which contains passages venerating the memory of Ibn Ḥanbal.

In the years that followed, al-Ashʼarī focused his theological reflection on certain positions of the mystic AL-MUḤĀSIBĪ and of two theologians, Ibn Kullāb and Qalanisī, laying the bases for a new school of theology. After he died, his disciples slowly disentangled the main lines of doctrine that eventually became the stamp of the Ashʼarite school.

ASHER \ʼa-shər\, one of the TWELVE TRIBES OF ISRAEL that in biblical times constituted the people of ISRAEL who later became the Jewish people. The tribe was named after the younger of two sons born to JACOB (also called Israel) and Zilpah, the maidservant of Jacob's first wife, LEAH (GENESIS 30:12). After the Israelites took possession of the Promised Land, JOSHUA assigned territory to each of the tribes (Joshua 13–19). The tribe of Asher apparently settled among the Phoenicians in the upper region of Palestine, beyond the tribe of ZEBULUN and west of the tribe of NAPHTALI.

Following the death of King SOLOMON (922 BCE), the Israelites separated into the northern Kingdom of Israel (representing 10 tribes) and the southern Kingdom of JUDAH (1 Kings 11:26ff.; 2 Chronicles 10). When the northern kingdom was conquered by the Assyrians in 721 BCE, the 10 tribes, including Asher, were partially dispersed (2 Kings 17:5–6; 18:9–12). In time they were assimilated by other peoples and thus disappeared as distinctive units. Jewish legends refer to them as the TEN LOST TRIBES OF ISRAEL.

ASHERAH \ə-ʼshē-rə\, ancient West Semitic goddess. Her full name was probably "She Who Walks in the Sea," but she was also called "Holiness," and, occasionally, Elath, "the Goddess." In Ugaritic tradition, Asherah's consort was EL, and by him she was the mother of 70 gods. As MOTHER GODDESS she was widely worshiped throughout Syria and Palestine, although she was frequently paired with BAAL, who often took the place of El in practical cult; as Baal's consort, Asherah was usually given the name BAALAT.

The word *asherah* in the OLD TESTAMENT was used in reference to the goddess and to a wooden cult object associated with her worship.

ASHI \ä-ʼshē\ (b. c. 352 CE—d. c. 427), preeminent Babylonian AMORA, or interpreter of the MISHNAH.

Ashi was head of the Jewish Academy at Sura, Babylonia, and was one of two chief editors who fixed the canon of the Babylonian TALMUD. Under Ashi's leadership the academy, which had been closed since 309, was revived, and the gigantic task of collating scattered notes, sayings, legislative opinions, and homiletic lore was conducted for more than 30 years. Ashi headed the Sura Academy for more than 50 years, and he also established the nearby city of Mata Mehasya as the focus of amoraic learning. One of his sons, Tabyomi, succeeded him at the Sura Academy. After an interruption of several decades, Ashi's work was completed by a staff of scholars from the academy.

ASHKENAZI \äsh-kə-ʼnä-zē, əsh-kə-ʼna-\ (from the Hebrew *Ashkenaz*, meaning "Germany"), plural Ashkenazim \-zim, -zēm\, any of the Jews who lived in the Rhineland valley and in neighboring France before their migration eastward to Poland, Lithuania, and Russia after the Crusades (11th–13th century). After the 17th-century persecutions in eastern Europe, large numbers of these Jews resettled in western Europe, where they assimilated with other Jewish communities. In time, all Jews who had adopted the "German rite" SYNAGOGUE ritual were referred to as Ashkenazim to distinguish them from Sephardic (Spanish rite) Jews. Ash-

kenazi differ from SEPHARDI in their pronunciation of Hebrew, in cultural traditions, in synagogue cantillation (chanting), in their widespread use of Yiddish (until the 20th century), and especially in synagogue liturgy.

Today Ashkenazim constitute more than 80 percent of all the Jews in the world, numbering more than 11,000,000 in the late 20th century. In Israel the numbers of Ashkenazim and Sephardim are roughly equal, and the chief rabbinate has both an Ashkenazic and a Sephardic chief RABBI on equal footing.

ASHRAM \ˈāsh-rəm, -rām\, also spelled *ashrama*, Sanskrit *āśrama* ("ascetic's dwelling," "place or mode of life associated with religious exertion"), in HINDUISM, any of the four stages of life through which the "twice-born" Hindu ideally will pass. The stages are those of (1) the student (*brahmacārī*), who is devoted and obedient to the teacher; (2) the householder (*gṛhastha*), who works to sustain the family and to help support priests, while also fulfilling duties toward gods and ancestors; (3) the HERMIT (*vanaprastha*), who withdraws from concern with material things and pursues ascetic and yogic practices; and (4) the homeless MENDICANT (SANNYĀSĪ), who renounces all possessions to wander and beg for food, concerned only with the eternal. In the classical system, the vigorous pursuit of MOKṢĀ (spiritual liberation) is reserved for those persons who are in the last two stages of life. In practice, however, many *sannyāsīs* have never married, a fact which shows that even as an ideal the four-ashram system has been questioned.

It developed as a theological construct in the 1st millennium CE—an upper-caste, male ideal only rarely achieved in personal or social reality.

In a second meaning, the term *āśrama*, familiarly spelled *ashram* in English, denotes a place of refuge, especially one removed from urban life, where spiritual and/or yogic disciplines are pursued. Often these ashrams are associated with the presence of a central teaching figure, a GURU, who is the object of common adoration on the part of other ashram residents. The guru may or may not belong to a formally constituted order or spiritual community.

ASHUR \ˈä-,shūr\, in MESOPOTAMIAN RELIGION, city god of Ashur and national god of Assyria. In the beginning he was perhaps only a local deity of the city that shared his name. From about 1800 BCE, however, he was identified with the Sumerian ENLIL (Akkadian: BEL), while under the Assyrian king Sargon II (reigned 721–705 BCE), he was brought into association with Anshar, the father of An (Akkadian: ANU) in the CREATION MYTH. Under Sargon's successor Sennacherib, attempts were made to transfer to Ashur the primeval

Asherah, detail from an ivory box from Minat al-Bayḏā near Ras Shamra, Syria, c. 1300 BCE; in the Louvre, Paris
Giraudon—Art Resource

achievements of MARDUK, as well as the whole ritual of the NEW YEAR FESTIVAL of Babylon, no doubt as part of the political struggle between Babylonia and Assyria. The Assyrians believed that he granted rule over Assyria and supported Assyrian arms against enemies; detailed written reports from the Assyrian kings about their campaigns were even submitted to him. He appears a mere personification of the interests of Assyria as a political entity, with little character of his own.

‘ĀSHŪRĀ \ə-ˈshūr-ə\, Muslim holy day observed on the 10th of Muḥarram, the first month of the Islamic year (Gregorian date variable). ‘Āshūrā was originally designated in 622 by MUHAMMAD, soon after the HIJRA, as a day of fasting from sunset to sunset, probably patterned after the Jewish Day of Atonement, YOM KIPPUR. When relations between Jews and Muslims became strained, however, Muhammad made RAMAḌĀN the Muslim month of fasting, leaving the ‘Āshūrā fast a voluntary observance, as it has remained among the Sunnites (see SUNNI).

Among the SHĪTES, ‘Āshūrā is a major festival, the *tazia* (*taʿziyah*), commemorating the martyrdom of ḤUSAYN, son of ‘ALĪ and grandson of Muhammad, on the 10th of Muḥarram, AH 61 (Oct. 10, 680), in KARBALĀ (present-day Iraq). It is a period of expressions of grief and of PILGRIMAGE to Karbalā; passion plays are also presented, commemorating the death of Husayn, in Iran. Shiʿites in the Middle East, South Asia, and even the Americas observe this holiday with processions and assemblies, inspired by the slogan, "Every day is ‘Āshūrā, every place is Karbalā." Such observances played a pivotal role in toppling the regime of Muhammad-Rezā Shāh during the Iranian Revolution (1978–79).

ASH WEDNESDAY, in the Western Christian church, the first day of LENT, occurring 6½ weeks before EASTER—between February 4 and March 11, depending on the date of Easter. In the early church, the length of the Lenten celebration varied. In the 7th century, 4 days were added before the first Sunday in Lent in order to establish 40 fasting days, in imitation of JESUS' fast in the desert.

In Rome penitents began their period of public penance on the first day of Lent. They were sprinkled with ashes, dressed in sackcloth, and obliged to remain apart until they were reconciled with the Christian community on MAUNDY THURSDAY, the Thursday before Easter. When these practices fell into disuse (8th–10th century), they were symbolized by placing ashes on the heads of the entire congregation. This practice continues in ROMAN CATHOLICISM, using ashes obtained by burning the palms used on the previous PALM SUNDAY. Worship services are also held on Ash Wednesday in the churches of the ANGLICAN COMMUNION, in LUTHERAN-

ASIA MINOR, RELIGIONS OF

ISM, and in some other Protestant churches. In EASTERN ORTHODOXY, churches begin Lent on a Monday and therefore do not observe Ash Wednesday.

ASIA MINOR, RELIGIONS OF: *see* ANATOLIAN RELIGIONS.

ASKR AND EMBLA \ˈäs-kər . . . ˈem-blä\, in Norse mythology, the first man and first woman, respectively, parents of the human race. They were created from tree trunks found on the seashore by three gods—ODIN, HOENIR, and LODUR. Odin gave them breath, or life, Hoenir gave them understanding, and Lodur gave them their senses and outward appearance. Whereas Odin is a well-known god, almost nothing is known of his companions.

ASMODEUS \ˌaz-mə-ˈdē-əs, -as-\, Hebrew Ashmedai \äsh-mə-ˈdī\, in Jewish mythology, the king of DEMONS. According to the apocryphal book of Tobit, Asmodeus, smitten for Sarah, the daughter of Raguel, killed her seven successive husbands on their wedding nights. Following instructions given to him by the ANGEL Raphael, Tobias overcame Asmodeus and married Sarah.

The TALMUD (Pesahim 110a; Gittin 68a–b) relates that SOLOMON captured the demon and pressed him into slave labor during the construction of the First TEMPLE OF JERUSALEM. Other haggadic (*see* HALAKAH AND HAGGADAH) legends (*e.g.*, Numbers Rabbah 11:3) depict Asmodeus as a more beneficent figure.

AŚOKA \ə-ˈshō-kə, -sō-\, *also spelled* Ashoka (d. 238? BCE, India), last major emperor in the Mauryan dynasty of India. His vigorous patronage of BUDDHISM during his reign (c. 265–238 BCE) furthered the expansion of that religion throughout India. Following his successful but bloody conquest of the Kalinga country on the east coast, Aśoka renounced armed conquest and adopted a policy that he called “conquest by DHARMA (principles of right life).”

In order to gain wide publicity for his teachings and his work, Aśoka made them known by means of oral announcements and also engraved them on rocks and pillars at suitable sites. These inscriptions—the ROCK EDICTS and Pillar Edicts (*e.g.*, the lion capital of the pillar found at Sarnath, which has become India’s national emblem)—provide information on his life and acts. Aśoka visited Buddhist holy sites, commended particular Buddhist teachings, and sought to ensure proper order in the Buddhist monastic community. He sent “dharma ministers” and Buddhist emissaries to various areas within his realm and beyond.

In the centuries following Aśoka’s death, the Buddhist community generated many legends about him that played an important role in their understanding and evaluation of political authority. His support for Buddhism was vividly dramatized, for example, in the legendary accounts that describe his construction of 84,000 STUPAS (funerary monuments) throughout his realm and the festival of the great gift, at which he gave all of his wealth to the Buddhist SANGHA. In some contexts, particularly in the THERAVĀDA tradition of Sri Lanka and mainland Southeast Asia, Aśoka has been depicted as an ideal king who could serve as a positive model for Buddhist rulers. In other Buddhist contexts he became a figure whose role as an ideal was modified by a recognition of the ambiguities inherent in the exercise of secular power. But throughout Buddhist history all across Asia he has been remembered as an embodiment of Buddhist secular virtues and an example of a ruler who supported and guided the Buddhist community.

ĀSRAVA \ˈäs-rə-və, ˈäsh-\, in Buddhist philosophy, the illusion stemming from the mind and the senses. *See* KILESA.

ASSEMBLIES OF GOD, Pentecostal denomination of the Protestant church, considered the largest such denomination in the United States. It was formed by a union of several small Pentecostal groups at Hot Springs, Ark., in 1914. The council of some 120 clergy who effected this union adopted a polity blending Congregational (*see* CONGREGATIONALISM) and PRESBYTERIAN elements. The council elected an Executive Presbytery to serve as the central administrative group.

Except for pronouncing that “the Holy inspired SCRIPTURES are the all-sufficient rule for faith and practice . . . and we shall not add to or take from them,” that first General Council postponed action on the matter of a definitive doctrinal statement. Subsequently, however, a *Statement of Fundamental Truths* was adopted. The document demonstrated that the Assemblies of God are Trinitarian (believing in God as Father, Son, and HOLY SPIRIT) and Arminian (accepting the doctrines of both GRACE and FREE WILL; *see* ARMINIANISM).

They also subscribed to two ordinances (BAPTISM by total immersion in water and the Lord’s Supper), held a view of sanctification (becoming holy) that may be described as “progressive,” or gradual, rather than “instantaneous” in regard to moral purity, and, finally, were strongly premillennial (believing in the doctrine of Christ’s Second Advent before the 1,000-year reign of Christ and his saints).

In addition to extensive foreign missions, the denomination conducts home missions among foreign-language groups in America’s urban centers, on Native American reservations, in prisons, and among the deaf and the blind. They also operate the Gospel Publishing House at the church headquarters in Springfield, Mo., two colleges of arts and science—Southern California College (Costa Mesa) and Evangel College (Springfield, Mo.)—and regional Bible institutes.

ASSUMPTION (Late Latin: *assumptio*, “act of taking up”), in the theology of ROMAN CATHOLICISM and EASTERN ORTHODOXY, doctrine that MARY, the mother of JESUS CHRIST, was taken (assumed) into heaven, body and soul, following the end of her life on earth. There is no explicit mention of the Assumption in the NEW TESTAMENT.

The development of this doctrine is closely related to a feast that passed from a general celebration in Mary’s honor to one celebrated on August 15 commemorating her dormition, or falling asleep. The feast, which originated in the Byzantine Empire, was brought to the West, where the term Assumption replaced Dormition to reflect increased emphasis on the glorification of Mary’s body as well as her soul. Although the Dormition had been a frequent iconographic theme in the East, there was an initial unwillingness to accept apocryphal accounts of the Assumption. By the end of the Middle Ages, however, there was a general acceptance in both the East and the West.

The doctrine was declared dogma for Roman Catholics by Pope PIUS XII in the *Munificentissimus Deus* on Nov. 1, 1950. The Assumption is not considered a revealed doctrine among the Eastern Orthodox and is considered an obstacle to ecumenical dialogue by many Protestants.

The Assumption as a theme in Christian art originated in western Europe during the late Middle Ages, and since the 13th century the Assumption has been widely represented in church decoration. Characteristic representations of the

Assumption show the Virgin, in an attitude of prayer and supported by ANGELS, ascending above her open tomb, around which the Apostles stand in amazement. Through the 15th century she was shown surrounded by an almond-shaped aureole; in the 16th century this was replaced by a cluster of clouds.

AṢṬACHĀP \əsh-tā-'chāp\ (Hindi: "Eight Seals"), group of 16th-century Hindi poets, four of whom are claimed to have been disciples of VALLABHA, and four of his son and successor, Viṭṭhalnāth. The greatest of the group was SŪRDĀS, who is remembered as a blind singer and whose descriptions of the exploits of the child-god KRISHNA are particularly well known. Other members of the Aṣṭachāp group were Paramānanddās, Nanddās, Kṛṣṇadās, Govindsvāmī, Kumbhandās, Chītasvāmī, and Caturbhujdās. Unlike Sūrdās, whose association with the Vallabhite community may well have been invented by Vallabhites after the fact, many of the other Aṣṭachāp poets do betray a clear sectarian affiliation. Poems written by the Aṣṭachāp form the core group of hymns sung to Krishna in Vallabhite temples.

ASTARTE \ə-'stār-tē\, also spelled *Ashtart* \əsh-'tärt\, great goddess of the ancient Near East, chief deity of Tyre, Sidon, and Elath. She was worshiped as Astarte in Egypt and UGARIT and among the Hittites, as well as in CANAAN. Her Akkadian counterpart was ISHTAR. Later she became assimilated with the Egyptian deities ISIS and HATHOR, and in the Greco-Roman world with APHRODITE, ARTEMIS, and JUNO. Astarte, goddess of love and war, shared so many qualities with her sister, ANATH, that they may originally have been seen as a single deity. Hebrew scholars now feel that the goddess Ashtoreth mentioned so often in the BIBLE is a deliberate compilation of the Greek name Astarte and the Hebrew word *boshet*, "shame," indicating contempt for her cult. Ashtaroth, the plural form of the goddess's name in Hebrew, became a term denoting goddesses and paganism.

SOLOMON, married to foreign wives, "went after Ashtoreth the goddess of the Sidonians" (1 Kings 11:5). Later the cult places dedicated to Ashtoreth were destroyed by JOSIAH. Astarte/Ashtoreth is the Queen of Heaven to whom the Canaanites had burned incense and poured LIBATIONS (Jeremiah 44).

ĀSTIKA \ās-ti-kə\, in Indian philosophy, any orthodox school of thought, defined as one that accepts the authority of the VEDAS. The six orthodox philosophic systems are those of Sāṃkhya and YOGA, NYĀYA and Vaiśeṣika, and Mīmāṃsā and VEDĀNTA.

The term *āstika* comes from the Sanskrit *asti*, which means "there is." Contrasted to the *āstika* systems are the *nāstika* (Sanskrit: from *na asti*, "there is not"), the individuals and schools that do not accept the reality (that is, the "there is-ness") of an underlying ground of being such as the BRAHMAN concept in HINDUISM. Included among the *nāstika* schools are the Buddhists, Jains, the ascetic Ājīvikas, and the materialistic Cārvākas.

ASTROLOGY, type of DIVINATION that consists in interpreting the influence of planets and stars on earthly affairs in order to predict or affect the destinies of individuals, groups, or nations.

Astrology originated in Mesopotamia, perhaps in the 3rd millennium BCE, but attained its full development in the Western world much later, within the orbit of Greek civilization of the Hellenistic period. It spread to India in its old-

The Twelve Signs of the Zodiac and the Sun, Ermengol de Beziars, Breviary d'Amour, Provençal codex (13th century); in the Biblioteca Real, El Escorial, Madrid, Spain
Giraudon—Art Resource

er Mesopotamian form. Islamic culture absorbed it as part of the Greek heritage, and passed it on to European culture in the Middle Ages, when western Europe was strongly affected by Islamic science.

The Egyptians also contributed, though less directly, to the rise of astrology. In order that the starry sky might serve them as a clock, the Egyptians selected a succession of 36 bright stars whose risings were separated from each other by intervals of 10 days. Each of these stars, called *decans* by Latin writers, was conceived of as a spirit with power over the period of time for which it served; they later entered the zodiac as subdivisions of its 12 signs.

Once established in the classical world, the astrological conception of causation invaded all the sciences, particularly medicine and its allied disciplines. The Stoics, espousing the doctrine of a universal "sympathy" linking the human microcosm with the macrocosm of nature, found in astrology a virtual map of such a universe.

Throughout classical antiquity the words astronomy and astrology were synonymous. In the first Christian centuries the modern distinction between astronomy, the science of stars, and astrology, the art of divination by the stars, began to appear. As against the omnipotence of the stars, CHRISTIANITY taught the omnipotence of their Creator. To the determinism of astrology Christianity opposed the freedom of the will. But within these limits the astrological worldview was accepted. To reject it would have been to reject the whole heritage of classical culture, which had assumed an

astrological complexion. Even at the center of Christian history, Persian MAGI were reported to have followed a celestial OMEN to the scene of the Nativity.

Although various Christian councils condemned astrology, the belief in the worldview it implies was not seriously shaken. In the late Middle Ages, a number of universities, among them Paris, Padua, Bologna, and Florence, had chairs of astrology. The revival of ancient studies by the humanists only encouraged this interest, which persisted into the Renaissance and even into the REFORMATION.

In pre-Imperial China, the belief in an intelligible cosmic order had found expression in charts that juxtaposed natural phenomena with human activities and fate. When Western astronomy and astrology became known in China through Arabic influences in Mongol times, their data were integrated into the Chinese astrological corpus. In the later centuries of Imperial China it was standard practice to have a HOROSCOPE cast for each newborn child and at all decisive junctures in life.

In the West, it was the Copernican revolution of the 16th century that dealt the geocentric worldview of astrology its shattering blow. As a popular pastime, however, astrology has continued into modern times.

ASTRUC OF LUNEL \äs-'trük . . . lū-'nel\, *original name* Abba Mari ben Moses ben Joseph, *also called* Don Astruc, or ha-Yareah ("The Moon") (b. 1250?, Lunel, near Montpellier, France—d. after 1306), anti-rationalist Jewish zealot who incited Rabbi SOLOMON BEN ABRAHAM ADRET of Barcelona, the most powerful rabbi of his time, to restrict the study of science and philosophy, thereby nearly creating a schism in the Jewish community of Europe.

Although Astruc revered MAIMONIDES, who had attempted to reconcile Aristotle's philosophy with JUDAISM, he deplored what he considered the excesses of Maimonides' followers, who, he believed, undermined the Jewish faith by interpreting the BIBLE via ALLEGORY. In a series of letters, Astruc persuaded Rabbi Adret to issue a ban in 1305 forbidding, on pain of EXCOMMUNICATION, the study or teaching of science and philosophy by those under the age of 25. This ban provoked a counterban by other Jewish leaders against those who followed Adret's proscription. A threatened schism among the Jewish communities of France and Spain was averted only in 1306, when Philip IV expelled the Jews from France. Astruc then settled in Perpignan, the mainland capital of the kingdom of Majorca, and vanished from view. But he published his correspondence with Rabbi Adret, which primarily concerned the restrictions on studies. *Minhat qenaot* ("Meal Offering of Jealousy"), as the collected correspondence is entitled, reveals much of the religious and philosophical conflicts of Judaism in that era. The epithet ha-Yareah is derived from his polemical work *Sefer ha-yareah* ("The Book of the Moon"), the title of which refers to the town of Lunel (French *lune*, meaning "moon").

ASTYANAX \ä-'stī-ə-'naks\, in Greek myth, son of HECTOR and ANDROMACHE; he was also known as Scamandrius, after the River Scamander. After the fall of Troy he was hurled from the battlements of the city by NEOPTOLEMUS. According to medieval legend, however, he survived the war and founded the line that led to Charlemagne.

ASURA \'ä-'sü-'rə\, *Avestan* ahura (Sanskrit: "lord"), in Hindu mythology, class of beings defined by their opposition to the DEVAS, or *suras* (gods). In its oldest Vedic usage,

asura refers to a human or divine leader. Increasingly its plural form predominated, designating a class of beings opposed either to the Vedic gods or to those who opposed them. Later these *asuras* came to be understood as DEMONS. This pattern was reversed in Iran, where *ahura* came to mean the supreme god and the *daevas* became demons. In Hindu mythology, when the *asuras* and the *devas* together were CHURNING THE MILK-OCEAN in order to extract from it the *amṛta* (elixir of immortality), strife arose over the possession of the *amṛta*. This conflict is never ending.

AŚVAGHOṢA \,äsh-və-'gō-shə, -sə\, *also spelled* Ashvaghosa (b. 80? CE, Ayodhya, India—d. 150?, Peshāwar), philosopher and poet who is considered India's greatest poet, before Kālidāsa, and the father of Sanskrit drama.

Aśvaghōṣa was born a BRAHMIN. It is known that he was an outspoken opponent of BUDDHISM until, after a heated debate with a noted Buddhist scholar on the relative merits of the Hindu religion and Buddhism, he accepted Buddhism and became a disciple of his erstwhile opponent.

A brilliant orator, Aśvaghōṣa is said to have spoken at length on MAHĀYĀNA Buddhist doctrine at the fourth Buddhist council, which he reportedly helped organize. His fame lay largely in his ability to explain the intricate concepts of Mahāyāna Buddhism. Among the works attributed to him are the BUDDHACARITA ("The Life of Buddha") in verse, the *Mahālaṅkāra* ("Book of Glory"), and—though his authorship of this text is far less likely—the *Mahāyāna-śraddhotpāda-śāstra* ("The Awakening of Faith in the Mahāyāna").

AŚVAMEDHA \,äsh-və-'mā-də, äsh-wə-\, *also spelled* ashvamedha, or ashwamedha (Sanskrit: "horse sacrifice"), grandest of the Vedic religious rites of ancient India, performed by a king to celebrate his preeminence. The ceremony is described in detail in various Vedic writings, particularly the *Śatapatha Brāhmaṇa*. A hand-picked stallion was allowed to roam freely for a year under the protection of a royal guard. If the horse entered a foreign country, its ruler had either to fight or to submit. If the horse was not captured during the year, it was brought back to the capital accompanied by the rulers of the lands it entered, and then sacrificed at a great public ceremony. The wandering horse was said to symbolize the sun in its journey over the world and, consequently, the power of the king over the whole earth. On successfully carrying out a horse sacrifice, the king could assume the title of *cakravartin* ("universal monarch"). The rite ensured the prosperity and fertility of the entire kingdom.

In historical times the practice was condemned by the Buddha and seems to have suffered a decline, but it was revived by Puṣyamitra Śuṅga (reigned 187–151 BCE). Samudra Gupta (c. 330–c. 380 CE) issued coins in commemoration of his successful completion of an *aśvamedha*. It may have continued as late as the 11th century, when it is said to have taken place in the Cōla Empire.

ATALANTA \,ä-tə-'lan-tə\, in Greek mythology, a renowned and swift-footed huntress, probably a parallel and less important form of the goddess ARTEMIS. Traditionally, she was the daughter of Schoeneus of Boeotia or of Iasus and Clymene of Arcadia. She was left to die at birth but was suckled by a she-bear; later she took part in the Calydonian boar hunt and, more famously, offered to marry anyone who could outrun her—but those whom she overtook she speared.

In one race Hippomenes (or Milanion) was given three of the golden apples of the HESPERIDES by APHRODITE; when he dropped them, Atalanta stopped to pick them up and so lost the race. Their son was Parthenopaeus, who later fought as one of the SEVEN AGAINST THEBES after the death of King OEDIPUS. Atalanta and her husband, proving ungrateful to Aphrodite, copulated in a shrine of the goddess Cybele (or of ZEUS), for which they were turned into lions.

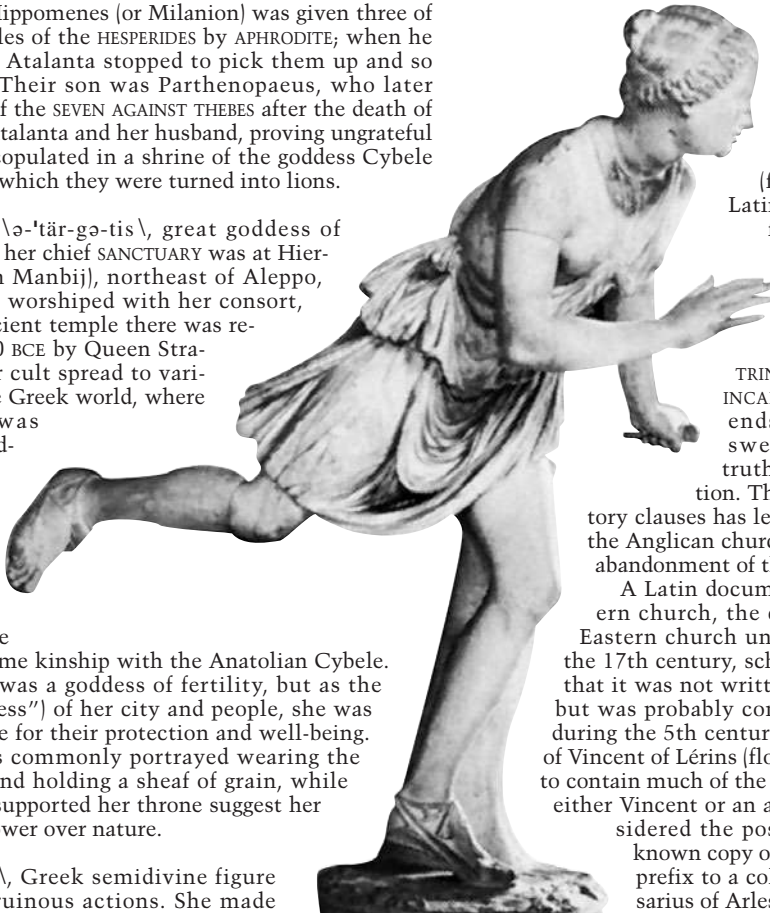

ATARGATIS \ə-ˈtär-gə-tis\, great goddess of northern Syria; her chief SANCTUARY was at Hierapolis (modern Manbij), northeast of Aleppo, where she was worshiped with her consort, HADAD. Her ancient temple there was rebuilt about 300 BCE by Queen Stratonice, and her cult spread to various parts of the Greek world, where the goddess was generally regarded as a form of APHRODITE.

In nature she resembled her Phoenician counterpart, ASTARTE; she also showed some kinship with the Anatolian Cybele. Primarily she was a goddess of fertility, but as the *baalat* (“mistress”) of her city and people, she was also responsible for their protection and well-being. Hence she was commonly portrayed wearing the mural crown and holding a sheaf of grain, while the lions who supported her throne suggest her strength and power over nature.

ATE \ˈā-tē, ˈä-\, Greek semidivine figure who induced ruinous actions. She made ZEUS take a hasty OATH that resulted in the hero HERACLES becoming subject to Eurystheus, ruler of Mycenae. Zeus then cast Ate out of Olympus; she remained on earth, working evil and mischief. She was followed by the Litai (“Prayers”—personifications of the supplications offered up to the gods), the old and crippled daughters of Zeus, who repaired the harm done by her.

ATHALIAH \,a-thə-ˈli-ə\, also spelled Athalia, in the OLD TESTAMENT, the daughter of AHAB and JEZEBEL and wife of Jehoram, king of JUDAH. After the death of Ahaziah, her son, Athaliah usurped the throne and reigned for seven years. She massacred all the members of the royal house of Judah (2 Kings 11:1–3), except Joash. A successful revolution was organized in favor of Joash, and she was killed.

ATHAMAS \ˈa-thə-məs\, in Greek mythology, king of the prehistoric Minyans in the ancient Boeotian city of Orchomenus. His first wife was the goddess Nephele. But later Athamas became enamored of Ino, the daughter of CADMUS, and neglected Nephele, who disappeared in anger. Athamas and Ino incurred the wrath of the goddess HERA because Ino had nursed DIONYSUS. Athamas went mad and slew one of his sons, Learchus; Ino, to escape, threw herself into the sea with her other son, Melicertes. Both were afterward worshiped as marine divinities—Ino as LEUCOTHEA, Melicertes as Palaemon. Athamas fled from Boeotia and fi-

nally settled at Phthiotis in Thessaly.

ATHANASIAN CREED \,a-thə-ˈnā-zhən, -shən\, also called Quicumque Vult \kwī-ˈkəm-kwē-ˈvult\

(from the opening words in Latin), a Christian profession of faith in about 40 verses. It is regarded as authoritative in ROMAN CATHOLICISM and in some Protestant churches. It has two sections, one dealing with the TRINITY and the other with the INCARNATION, and it begins and ends with warnings that unswerving adherence to such truths is indispensable to salvation. The virulence of these damna-

tory clauses has led some critics, especially in the Anglican churches, to secure restriction or abandonment of the use of the creed.

A Latin document composed in the Western church, the creed was unknown to the Eastern church until the 12th century. Since the 17th century, scholars have generally agreed that it was not written by ATHANASIUS (died 373) but was probably composed in southern France during the 5th century. In 1940 the lost *Excerpta* of Vincent of Lérins (flourished 440) was discovered to contain much of the language of the creed. Thus, either Vincent or an admirer of his has been considered the possible author. The earliest known copy of the creed was included as a prefix to a collection of homilies by Caesarius of Arles (died 542).

ATHANASIUS, SAINT \,a-thə-ˈnā-zhəs, -shəs\ (b. c. 293 CE, Alexandria—d. May 2, 373, Alexandria; feast day May 2), theologian, ecclesiastical statesman, and Egyptian national leader; he was the chief defender of Christian orthodoxy in the 4th-century battle against ARIANISM, which promulgated that the Son of God was a creature of like, but not of the same, substance as God the Father.

He was the chief defender of Christian orthodoxy in the 4th-century battle against ARIANISM, which promulgated that the Son of God was a creature of like, but not of the same, substance as God the Father.

ATHARVA VEDA \ə-tär-və-ˈvā-də\, collection of hymns and incantations that forms the fourth and final collection (Samhitā) of Vedic utterances.

ATHEISM, the critique and denial of belief in God. As such, it is the opposite of THEISM, which affirms the reality of God and seeks to demonstrate His existence. Atheism is to be distinguished from AGNOSTICISM, which leaves open the question whether there is a God or not; for the atheist, the nonexistence of God is a certainty.

Atheism has emerged recurrently in Western thought. Plato argued against it in the *Laws*, while Democritus and Epicurus argued for it in the context of their materialism. Niccolò Machiavelli in the 16th century contributed to atheism in the political sphere by affirming the independence of politics from morals and religion. The 18th century witnessed the emergence of atheism among the French Encyclopedists, who combined British EMPIRICISM with René

ATHENA

Descartes's mechanistic conception of the universe. David Hume, in his *Dialogues Concerning Natural Religion* (1779), argued against the traditional proofs for the existence of God, as did Immanuel Kant. Neither Hume nor Kant were atheists, but their restriction of human reason to sense experience undercut NATURAL THEOLOGY and left the existence of God a matter of pure faith. In the 19th century, atheism was couched in the materialism of Karl Marx and others and pitted against the metaphysical position of SPIRITUALISM. Modern atheism takes many different forms other than that of materialism. In short, atheism has been rooted in a vast array of philosophical systems.

One of the most important 19th-century atheists was LUDWIG FEUERBACH (1804–72), who put forward the argument that God is a projection of man's ideals. Feuerbach associated his denial of God with the affirmation of man's freedom: the disclosure that God is mere projection liberates man for self-realization. Marx drew on Feuerbach's thesis that the religious can be resolved into the human, though he also held that religion reflects socioeconomic order and alienates man from his labor product and, hence, from his true self. Charles Darwin (1809–82) developed a scientific theory of natural history that challenged the Judeo-Christian concept of God. Later, SIGMUND FREUD (1856–1939) drew on Darwinian themes when he discussed the historical development of the religious mindset. According to Freud, belief in God represents a childlike psychological state in which the image of a father-figure is projected upon the forces of nature.

A third strain in modern atheism is the existentialist. Friedrich Nietzsche (1844–1900) proclaimed the "death of God" and the consequent loss of all traditional values. The only tenable human response, he argued, is that of nihilism—without God, there is no answer to the question of purpose and meaning in life. In Nietzsche's view, the death of God freed humanity to fulfill itself and find its own essence. In the 20th century Jean-Paul Sartre, Albert Camus, and others continued the theme. Human freedom, according to Sartre, entails the denial of God, for God's existence would threaten our freedom to create our own values through free ethical choice.

ATHENA \ə-'thē-nə\, also spelled *Athene* \ə-'thē-nē\, in ancient GREEK RELIGION, protectress of Athens, goddess of war,

handicraft, and practical reason. She was probably a pre-Hellenic goddess taken over by the Greeks.

In the myths Athena was the daughter of ZEUS and Metis, whom Zeus had swallowed while she was pregnant so that Athena would be born from the father only. Athena sprang in full battle armor from Zeus' forehead, in some versions after HEPHAESTUS had split open Zeus' head with an ax. She was thought to have had neither husband nor offspring. She may not have been described as a virgin originally, but virginity was attributed to her very early and was the basis for the interpretation of her epithets Pallas and Parthenos.

Athena was the goddess of crafts and skilled pursuits in general, especially known as the patroness of spinning and weaving. That she ultimately became allegorized to personify wisdom and righteousness was a natural development of her patronage of skill. In Homer's *Iliad*, Athena was presented in particular as the goddess of martial skill, and in numerous scenes she inspired and fought alongside the Greek heroes. Athena's moral and military superiority to the other warlike divinity of Greece, ARES, derived in part from the fact that she represented the intellectual and civilized side of war and the virtues of justice and skill, whereas Ares largely represented mere blood lust. In the *Iliad*, Athena was the divine form of the heroic, martial ideal: she personified excellence in close combat, victory, and glory, and wore upon her shield the AEGIS of Zeus which inspired irresistible fear in her opponents. Athena appears in the *Odyssey* as the tutelary deity of ODYSSEUS, and myths from later sources portray her similarly as helper of PERSEUS and HERACLES (Hercules). As the guardian of the welfare of kings, Athena equally represented the qualities of good counsel, prudent restraint, and practical insight.

In post-Mycenaean times the city, especially its citadel, replaced the palace as Athena's domain. She was widely worshiped but had special importance at Athens, to which she gave her name. Her emergence there as city goddess, Athena Polias ("Athena of the City"), accompanied the ancient city-state's transition from monarchy to democracy. She was associated with birds, particularly the owl, and with the snake. Her birth and her contest with POSEIDON, the sea god, for the suzerainty of the city were depicted on the pediments of the PARTHENON. Athena's birthday festival, the

Roman marble copy (c. 130 CE) of the statue of Athena Parthenos by Phidias (438 BCE); in the National Archaeological Museum, Athens

Alinari—Art Resource

PANATHENAEA, concerned the growth of vegetation. The similarly purposed Procharisteria celebrated the goddess's rising from the ground with the coming of spring.

Two Athenians, the sculptor Phidias and the playwright Aeschylus, contributed significantly to the cultural dissemination of Athena's image. She inspired three of Phidias' sculptural masterpieces, including the colossal gold and ivory statue of Athena Parthenos which was housed in the Parthenon until the 5th century CE. Copies of this statue are still extant.

ĀTĪŚĀ \ə-'tē-shə \, also called *Dīpaṅkara* \dē-'pəŋ-kə-rə \ (b. 982—d. 1054, Nyethang, Tibet [now Nyetang, China]), Indian Buddhist reformer whose teachings formed the basis of the Tibetan Bka'-gdams-pa ("Those Bound by Command") sect, founded by his disciple 'Brom-ston.

Ātīśa left India for Tibet around 1040. He established monasteries there and wrote treatises emphasizing the three schools of BUDDHISM: the THERAVĀDA, the MAHĀYĀNA, and the VAJRAYĀNA. He taught that the three schools follow in this succession and must be practiced in this order.

ATLANTIS \ət-'lan-tis \, also spelled *Atalantis* \a-tə-'lan-tis \, or *Atlantica* \ət-'lan-ti-kə \, legendary island of unknown location. The principal sources for the legend are two of Plato's dialogues, *Timaeus* and *Critias*. Plato described Atlantis as an island larger than Asia Minor and Libya combined, situated just beyond the Pillars of HERACLES (the Straits of Gibraltar). It was the home of an advanced civilization, but the island was eventually swallowed up by the sea as a result of earthquakes. Atlantis is probably merely a legend, invented by Plato to make a point, but the idea has seized the imagination of innumerable authors since then, who have variously located it in the Black Sea or the waters off of South America.

ATLAS \ʼat-ləs \, in Greek mythology, son of the TITAN Iapetus and the NYMPH Clymene (or Asia) and brother of PROMETHEUS (creator of mankind). Atlas was said to support the weight of the heavens on his shoulders. Later the name of Atlas was transferred to a range of mountains in northwestern Africa, and Atlas was subsequently represented as the king of that district, turned into a rocky mountain by the hero PERSEUS, who showed him the GORGON's head. According to the Greek poet Hesiod, Atlas was one of the Titans who took part in their war against ZEUS, for which he was condemned to his heavenly burden.

ĀTMAN \ʼāt-mən \ (Sanskrit: "breath, self"), one of the basic concepts in Hindu philosophy, describing that eternal core of the personality that survives death and transmigrates to a new life or is released from the bonds of existence. Although in the early Vedic texts it occurred mostly as a reflexive pronoun (oneself), in the later UPANISHADS it develops into a philosophic topic: *ātman* is that which makes the other organs and faculties function and for which they function; *ātman* underlies all the activities of a person, as BRAHMAN (the absolute) underlies the workings of the universe. So fundamental is the sense of unchanging identity signified by *ātman* that it is familiarly identified with Brahman itself, especially by adherents of ADVAITA VEDĀNTA.

ĀTMĀRĀMJĪ \,āt-mā-'rām-jē \ (b. 1837, Lahera, Punjab—d. 1896, Gujranwala, Punjab), important Jain reformer and revivalist monk. He was born a Hindu but as a child came under the influence of Sthānakavāsī Jain monks and was

initiated as a Sthānakavāsī monk in 1854. He was renowned for his prodigious memory and intellectual skills. He pursued an independent study of Jain texts, in particular the Sanskrit commentaries on the Jain canon, commentaries which at that time Sthānakavāsī monks were discouraged from studying. As a result of his studies he became convinced that the Mūrtipūjak position on the worship of images of the Jinās (also called TĪRTHANKARAS, considered in JAINISM to be godlike saviors who have succeeded in crossing over life's stream of rebirths and have made a path for others to follow) was correct, and the iconoclastic position taken by the Sthānakavāsī was wrong. In 1876, along with 18 monk followers, he was reinitiated as a Mūrtipūjak monk in the Tapā Gacch in Ahmedabad, the major city of Gujarat, and given the new name Muni Ānandavijay. He was made *ācārya* (monastic leader) in a public ceremony in 1887 in Palitana—a center of Mūrtipūjak PILGRIMAGE in Gujarat—and he was given the name Ācārya Vijayānandasūri. Ātmārāmji came into contact with European scholars of Jainism, and as a result he was invited to the 1893 World's Parliament of Religions in Chicago—an invitation he declined, as any mode of travel besides walking barefooted would have violated monastic rules.

Ātmārāmji was a prolific author and tireless reformer. He defended the Mūrtipūjak position on image-worship against the Sthānakavāsīs; defended the position of full-fledged *saṃvegī* monks against the house-holding monks known as *yatis* who owned monasteries, traveled in vehicles, handled money, and followed many other practices perceived as lax by orthoprax Jains; and he argued in favor of the Tapā Gacch against other Mūrtipūjak *gacchs* (lineages) on a variety of details of monastic practices. The movement he helped spearhead led to a predominance of the Mūrtipūjak Tapā Gacch among Gujarati Jains. Monks in his direct disciplic lineage now number well over 500.

ATON \ʼä-tən, 'a-\, also spelled *Aten*, also called *Yati*, in ancient EGYPTIAN RELIGION, a sun god, depicted as the solar disk emitting rays terminating in human hands, whose worship briefly was the state religion. The pharaoh Akhenaton (reigned 1353–36 BCE) introduced the radical innovation that Aton was the only god. In opposition to the Amon-Re PRIESTHOOD of Thebes, Akhenaton built the city Akhetaton (now Tell el-Amarna) as the center for Aton's worship.

The most important surviving document of the new religion is the Aton Hymn, which focuses on the world of nature and the god's beneficent provision for it. The hymn opens with the rising of the sun: "Men had slept like the dead; now they lift their arms in praise, birds fly, fish leap, plants bloom, and work begins. Aton creates the son in the mother's womb, the seed in men, and has generated all life. He has distinguished the races, their natures, tongues, and skins, and fulfills the needs of all. Aton made the Nile in Egypt and rain, like a heavenly Nile, in foreign countries. He has a million forms according to the time of day and from where he is seen; yet he is always the same." The only person who knows and comprehends the god fully is said to be Akhenaton, together with his wife, Nefertiti. The hymn to the Aton has been compared in imagery to Psalm 104 ("Bless the Lord, O my soul").

The religion of the Aton is not completely understood. Akhenaton and Nefertiti worshiped only this sun god. For them he was "the sole god." Akhenaton had dropped his older name Amenhotep, and the name "Amon" was also hacked out of the inscriptions throughout Egypt. The fu-

ATONEMENT

nerary religion dropped Osiris, and Akhenaton became the source of blessings for the people after death. The figure of Nefertiti replaced the figures of protecting goddesses at the corners of a stone sarcophagus. But the new religion was rejected by the Egyptian elite after Akhenaton's death, and the populace had probably never adopted it in the first place. After Akhenaton's death, the old gods were reestablished and the new city abandoned.

ATONEMENT, process by which a person removes obstacles to his reconciliation with God. It is a recurring theme in religion and theology. Rituals of expiation and satisfaction appear in most religions as the means by which the religious person reestablishes or strengthens his or her relation to the holy or divine. Atonement is often attached to sacrifice, and both often connect ritual cleanness with moral purity and religious acceptability.

The term *atonement* developed in the English language in the 16th century from the phrase "at onement," meaning "being set at one," or "reconciliation." It was used in the various English translations of the BIBLE, including the KING JAMES VERSION (1611), to convey the idea of reconciliation and expiation, and it has been a favorite way for Christians to speak about the saving significance of the death of JESUS CHRIST. Various theories of the Atonement of Christ have arisen: satisfaction for the SINS of the world; redemption from the Devil or from the wrath of God; a saving example of true, suffering love; the prime illustration of divine mercy; a divine victory over the forces of evil. In Christian orthodoxy there is no remission of sin without "the shedding of [Christ's] blood" (Hebrews 9:26).

In JUDAISM vicarious atonement has little importance. For a traditional Jew, atonement is expiation for one's own sin in order to attain God's forgiveness. This may be achieved in various ways, including repentance, payment for a wrong action, good works, suffering, and prayer. Repentance and changed conduct are usually stressed as the most important aspects of atonement. The 10 "days of awe," culminating in the Day of Atonement (YOM KIPPUR), are centered on repentance.

ATREUS \ˈā-trūs, ˈā-trē-əs\, in Greek myth, the son of PELOPS and his wife, Hippodamia. Atreus was the elder brother of Thyestes and was the king of Mycenae.

A curse, said to have been pronounced by Myrtilus, a rival who died by Pelops' hand, plagued the descendants of Pelops. His sons Alcahous, Atreus, and Thyestes set upon a bloody course with the murder of their stepbrother Chrysipus, the son of Pelops' union with a NYMPH. After the crime the three brothers fled their native city of Pisa; Alcahous went to Megara, and Atreus and Thyestes stopped at Mycenae, where Atreus became king. But Thyestes either contested Atreus' right to rule or seduced Atreus' wife, Aërope, and thus was driven from Mycenae. To avenge himself, Thyestes sent Pleisthenes (Atreus' son, whom Thyestes had brought up as his own) to kill Atreus, but the boy was himself slain, unrecognized by his father.

When Atreus learned the identity of the slain boy, he recalled Thyestes to Mycenae in apparent reconciliation. At a banquet Atreus served Thyestes the flesh of Thyestes' own son (or sons), whom Atreus had slain in vengeance. Thyestes fled in horror to Sicyon; there he impregnated his own daughter Pelopia in the hope of raising one more son to avenge himself against his brother. Atreus subsequently married Pelopia and she bore Aegisthus, who was actually the son of Thyestes, her father.

Later, AGAMEMNON and MENELAUS—sons of Atreus and Aërope—found Thyestes and imprisoned him at Mycenae. Aegisthus was sent to murder Thyestes, but each recognized the other because of the sword that Pelopia had taken from her father and given to her son. Father and son slew Atreus, seized the throne, and drove Agamemnon and Menelaus out of the country.

ATTIS \ˈa-tis\, also spelled *Atys*, mythical consort of the GREAT MOTHER OF THE GODS (classical CYBELE, or Agdistis); he was worshiped in Phrygia, Asia Minor, and later throughout the Roman Empire, where he was made a SOLAR DEITY in the 2nd century CE. The worship of Attis and the Great Mother included the annual celebration of mysteries on the return of the spring season. Attis, like the Great Mother, was probably indigenous to Asia Minor, adopted by the invading Phrygians and blended by them with a mythical character of their own. According to the Phrygian tale, Attis was a beautiful youth born of Nana, the daughter of the river Sangarius, and the hermaphroditic Agdistis. Having become enamored of Attis, Agdistis struck him with frenzy as he was about to be married, with the result that Attis castrated himself and died. Agdistis in repentance prevailed upon ZEUS to grant that the body of the youth should never decay or waste. Attis has often been interpreted as a vegetation god, his myth expressing the rhythm of the seasons. See also ANATOLIAN RELIGIONS.

ATUM \ˈä-təm\, also called *Tem* \ˈtem\, or *Tum* \ˈtəm\, in ancient EGYPTIAN RELIGION, one of the manifestations of the sun and creator god, perhaps originally a local deity of HELIOPOLIS. Atum's myth merged with that of the great sun god RE, giving rise to the deity Re-Atum. When distinguished from Re, Atum was the creator's original form, living inside the Nun, the primordial waters of chaos. At creation he emerged to engender himself and the gods. He was identified with the setting sun and was shown as an aged figure who had to be regenerated during the night, to appear as KHEPRI at dawn and as Re at the sun's zenith. Atum was often identified with snakes and eels.

AUGEAS \ˈö-jē-əs, ö-ˈjē-əs\, also spelled *Augeias*, or *Augias*, in Greek mythology, king of the Epeians in Elis, a son of the sun god HELIOS. He possessed immense herds, and King Eurystheus imposed upon HERACLES the task of clearing out all of Augeas' stables unaided in one day. Heracles did so by redirecting the Alpheus River through them. Although Augeas had promised Heracles a tenth of the herd, he later refused, alleging that Heracles had acted only in the service of Eurystheus. Heracles thereupon led an army against him and slew Augeas and his sons.

AUGSBURG CONFESSION \ˈögz-ˌbɜrg\, *Latin* *Confessio Augustana*, the 28 articles that constitute the basic confession of LUTHERANISM, presented June 25, 1530, at the Diet of Augsburg to the emperor Charles V. The principal author was the Reformer PHILIPP MELANCHTHON, who drew on earlier Lutheran statements of faith. The purpose was to defend the Lutherans against misrepresentations and to provide a statement of their theology that would be acceptable to ROMAN CATHOLICS. The Catholic theologians replied with the so-called Confutation, which condemned 13 articles of the Confession, accepted 9 without qualifications, and approved 6 with qualifications. The emperor refused to receive a Lutheran counter-reply, but Melanchthon used it as the basis for his Apology of the Augsburg Confession

(1531). The unaltered 1530 version of the Confession has always been authoritative for Lutherans, but proponents of the eucharistic doctrine of HULDRYCH ZWINGLI and JOHN CALVIN received a modified edition prepared by Melancthon (the *Variata* of 1540).

The first 21 articles of the Unaltered Augsburg Confession set forth the Lutherans' overall doctrine. The remaining seven articles discuss abuses that had crept into the Western church in the centuries before the REFORMATION: Communion under one kind (the people received the bread only), enforced priestly CELIBACY, the MASS as an expiatory sacrifice, compulsory CONFESSION, human institutions designed to merit GRACE, abuses in connection with MONASTICISM, and the expanded authority claimed by the bishops.

The Confession, originally written in German and Latin, was translated into English in 1536 and was a definite influence on both the THIRTY-NINE ARTICLES of the ANGLICAN COMMUNION and the Twenty-five Articles of Religion of METHODISM.

AUGURY, prophetic divining of the future by observation of natural phenomena—particularly the behavior of birds and animals and the examination of their entrails and other parts, but also by scrutiny of man-made objects and situations. The term derives from the official Roman augurs, whose constitutional function was to discover whether or not the gods approved of a proposed course of action, especially political or military. Two types of divinatory sign, or OMEN, were recognized: the most important was that deliberately watched for, such as lightning, thunder, flights and cries of birds, or the pecking behavior of sacred chickens; of lesser importance was that which occurred casually, such as the unexpected appearance of animals sacred to the gods, or such other mundane signs as the accidental spilling of salt, sneezing, stumbling, or the creaking of furniture.

Cicero's *De divinatione* (*Concerning Divination*), dated probably 44 BCE, provides the best source on ancient divinatory practices. Both he and Plato distinguish between augury that can be taught and augury that is divinely inspired in ecstatic trance. The Chinese I CHING ("Book of Changes") interprets the hexagram created by the tossing of yarrow stalks. Among the vast number of sources of augury, each with its own specialist jargon and ritual, were atmospheric phenomena (aeromancy), cards (cartomancy), dice or lots (cleromancy), dots and other marks on paper (geomancy), fire and smoke (pyromancy), the shoulder blades of animals (scapulimancy), entrails of sacrificed animals (haruspicy), or their livers, which were considered to be the seat of life (hepatoscopy).

AUGUSTINE, SAINT \ˈɑː-gə-ˌstēn, ɑː-ˈgæs-tin\, also called Saint Augustine of Hippo (b. Nov. 13, 354 CE, Tagaste, Numidia—d. Aug. 28, 430, Hippo Regius), Roman Catholic bishop and theologian who left a profound impression on Christian thought. He was born to modestly prosperous parents in a small farming community in Roman north Africa. He benefited from the best education available and became a teacher. For some years he was a member of a Manichean church in Carthage. After traveling to Rome and then Milan, where he gained a teaching position in the university and fell under the influence of Bishop Ambrose and of Neoplatonic philosophy, he underwent a conversion experience and in 387 was baptized. He returned to Africa and in 396 was consecrated bishop of Hippo, a post he held until he died in 430, while the city was under siege by a Vandal army.

St. Augustine of Hippo, fresco by Sandro Botticelli, 1480; in the Church of Ognissanti, Florence

Alinari—Art Resource

Augustine was a memorable and persuasive preacher and a deft guardian and promoter of his church in difficult political times. He wrote incessantly: five million words of his books, letters, and sermons survive to this day. His best-known books, the *Confessions* (a meditation on God's GRACE as seen in Augustine's early life and priestly mission), *The City of God* (on the place of CHRISTIANITY in history), *On Christian Doctrine* (a manual for the preparation of preachers and the study of SCRIPTURE), and *On the Trinity* (on the fundamental Christian doctrines of God), are often translated and still read with profit. His 400 or more surviving sermons are perhaps his least-known works today, but they are in many ways the most distinctive, developing characteristic themes for a wide audience in brief compass, often full of verbal drama and beauty.

In one of his earliest surviving works, Augustine set out a pair of themes that remained remarkably consistent through his life. "What is it you seek to know?" is the question he posed to himself in an interior dialogue. "Just two things: God and the soul" is the reply. These themes proved inexhaustible for Augustine.

For Augustine, God is spirit and power, majesty and absent presence. God is invisible but ubiquitous; he allows humankind to stray and is inexorable in exacting justice

AUGUSTINE OF CANTERBURY, SAINT

but also boundless in mercy. The sum of qualities predicated of God by Augustine rarely adds up to a simple description, and the paradoxical complexity of that description leads to some of his most characteristic doctrines and their characteristic difficulties.

The human soul is scarcely less problematic: divine and animal, free and constrained, powerful and helpless. There has been much debate among scholars about Augustine's views on the origin of the soul, a topic he was careful to leave undecided. But soul for him is undeniably important, as it was for many of his Christian contemporaries, who strove to describe the nature and qualities of something they had never seen. How divine is soul? Does it descend from some other world into this one? Augustine seemed to think so. But how then does SIN come into the soul?

Augustine's biblical commentaries and sermons pursue these themes in various ways. The most austere works of his later years address what would later reemerge as the Calvinist doctrine of "double PREDESTINATION" (*i.e.*, God elects those who will be saved and selects at the same time those who will be damned). The doctrine is, however, hedged about with conciliatory gestures meant to soften the harshness of a judgmental God who could condemn people for a sin they inherited but did not themselves commit. The history of Christian theology in the West is marked by outbreaks of controversy around just this issue, with Augustine himself cited by all sides engaged in such quarrels.

But Augustine was not the most severe of moral judges. His Christianity has ample place for those who struggle imperfectly to better themselves, who fall and rise again. He opposed sects (notably MANICHAISM, DONATISM, and PELAGIANISM) that held a perfectionist view of human life. Augustine has a reputation, not unjustified, for a gloomy and restrictive view of sexuality, but among his contemporaries he numbered among the moderates.

Undoubtedly, the *Confessions* are Augustine's greatest literary work and the vehicle by which he has reached modern minds most effectively. The work is neither autobiography nor confession in a modern sense, but it contains elements of both. The deeds of his youth are rehearsed, very selectively, in order to relate a moral tale of fall into sin and rise to salvation. The conversion scenes offer a complex tableau of the forms of redemption of mind, body, and spirit that Augustine had experienced. The last books offer meditation on Scripture and in so doing bring together the life of the individual with the story of GENESIS and implicitly the history of Christianity. In the end, for Augustine, there is only one story in the world (creation, fall, redemption) and only two players (God and humankind).

In his lifetime, many quarreled with Augustine, and a few scorned him. But in the main, he won respect even among his enemies. No charge of unorthodoxy ever stuck for long, and even those who abandoned his doctrines of predestination in the Middle Ages and after generally did so respectfully and cautiously. For the Latin Middle Ages, he was the most authoritative Christian writer after PAUL. Once the REFORMATION sundered Christianity on the issue of freedom and predestination, the less rhetorical, more cautious THOMAS AQUINAS edged to the fore of official Catholic teaching, but Augustine remained and remains the more astonishing and the more enticing of the two.

AUGUSTINE OF CANTERBURY, SAINT, *also called* Austin (b. Rome?—d. May 26, 604/605, Canterbury, Kent, Eng.; feast day, England and Wales, May 26; elsewhere May

28), first archbishop of Canterbury and the apostle of England; he was the founder of the Christian church in southern England.

Augustine was prior of the BENEDICTINE monastery of St. Andrew, Rome, when Pope GREGORY I chose him to lead an unprecedented MISSION of about 40 monks to England, most of which was not yet Christian. They left in June 596, but, arriving in southern Gaul, they were warned of the perils awaiting them and sent Augustine back to Rome. There Gregory encouraged him with letters of commendation, and he set out once more. The entourage landed in the spring of 597 on the Isle of Thanet, off the southeast coast of England, and was well received by King Aethelberht. With his support, their work led to many conversions, including that of the king. The next autumn Augustine was consecrated bishop of the English by St. Virgilius at Arles.

Thousands of Aethelberht's subjects were reportedly baptized by Augustine on CHRISTMAS Day 597, and he subsequently dispatched two of his monks to Rome with a report of this extraordinary event and a request for further help and advice. They returned in 601 with the pallium (*i.e.*, symbol of METROPOLITAN jurisdiction) from Gregory for Augustine and with more missionaries, including the celebrated SS. Mellitus, Justus, and Paulinus.

Augustine founded Christ Church, Canterbury, as his cathedral and the monastery of SS. Peter and Paul (known after his death as St. Augustine's, where the early archbishops were buried), which came to rank as the second Benedictine house in all Europe. In 604 he established the episcopal sees of London (for the East Saxons), consecrating Mellitus as its bishop, and of Rochester, consecrating Justus as its bishop.

AUGUSTINIAN \,ŏ-gə-'sti-nē-ən\, *also called* Austin, in the ROMAN CATHOLIC church, member of any of the religious orders and congregations of men and women whose constitutions are based on the Rule of ST. AUGUSTINE, which was widely disseminated after his death, 430 CE. More specifically, the name designates members of two main branches of Augustinians, the Augustinian Canons and the Augustinian Hermits. Modern emphasis of the Augustinians has been on MISSION, educational, and hospital work.

The Augustinian Canons were, in the 11th century, the first religious order of men in the Roman Catholic church to combine clerical status with a full common life. The order flourished until the Protestant REFORMATION, during which many of its foundations perished. The French Revolution also put an end to a number of its houses.

The Augustinian Hermits were one of the four great MENDICANT orders of the Middle Ages. After being dispersed by the Vandal invasion of northern Africa (*c.* 428), a number of congregations of hermits who had been following the Rule of St. Augustine founded monasteries in central and northern Italy. These monasteries remained independent until the 13th century, when Pope Innocent IV in 1244 established them as one order and when Alexander IV in 1256 called them from their seclusion as hermits to an active lay apostolate in the cities. The order spread rapidly throughout Europe and took a prominent part in both university life and ecclesiastical affairs; perhaps its most famous member was the Protestant Reformer MARTIN LUTHER in the 16th century.

An offshoot of the Augustinian Hermits are the Augustinian Recollects, formed in the 16th century by FRIARS who desired a rule of stricter observance and a return to the eremitic ideals of solitude and contemplation.

AUM SHINRIKYO \ˈōm-ˈshēn-rē-,kyō, *Angl* ˈaʊm-shēn-ˈrē-\, ("Supreme Truth"), radical religious movement founded by SHOKO ASAHARA, combining elements of HINDUISM and folk BUDDHISM. It was founded in the millenarian expectation of a series of disasters that would bring an end to this world and inaugurate a new cosmic cycle. *See also* MILLENNIALISM; NEW RELIGIOUS MOVEMENTS.

Asahara had been a member of Agonshu, a small new religion that drew from Hinduism and Buddhism, but after a financial and spiritual crisis he founded his own new religion, Aum Shinsen-no-kai (later known as Aum Shinrikyo), which he incorporated in 1984. Asahara spent the next few years building his movement through preaching, teaching YOGA, and publishing books that predicted the coming of ARMAGEDDON as early as 1997. The sect's recruiting methods aroused suspicion, and it allegedly used sleep deprivation, isolation, and mind-altering drugs as a means of enforcing obedience among its followers. The movement was also accused of committing kidnappings, beatings, and even murder to stifle opponents and prevent government investigation. By 1989, however, Aum was recognized as an official religion; it claimed 10,000 followers in Japan and 20,000 abroad, mostly in Russia, and maintained regional offices in the U.S., Germany, and Sri Lanka. In 1990 Asahara, hoping to become prime minister, fielded candidates for the lower house of the Diet (the Japanese parliament), all of whom were defeated. This failure channeled the movement's energies in a new direction.

Many folk Buddhist millenarian sects saw the modern period as a prelude to the end of humanity and the beginning of a cosmic cycle; Asahara added Hindu elements to this belief. Presenting himself as an agent of the divine will, he predicted a series of disasters, such as war between Japan and the United States, that would foreshadow the final battle, Armageddon, and the end of the world in this corrupt age. In anticipation, Aum members gathered weapons and supplies of the nerve gas sarin, which they released into the Tokyo subway system in 1995, resulting in the deaths of 12 people. Asahara and members of his sect were arrested. In 1999 the group changed its name to Aleph, apologized for its crimes, and set up a compensation fund for victims. By 2004, Asahara and ten followers were found guilty of the subway attack in separate trials and sentenced to death.

AUNG SAN SUU KYI \ˈaʊŋ-ˈsæn-ˈsü-ˈchē\ (b. June 19, 1945, Rangoon, Burma [now Yangón, Myanmar]), Buddhist-oriented political leader of the democratic opposition to the military government in Myanmar and winner of the 1991 Nobel Prize for Peace.

Aung San Suu Kyi was the daughter of Aung San (a martyred national hero of independent Burma). After attending university and settling in England for several years, she returned to Burma (the name for her country that she preferred to use) and became the leader of the newly formed

Aung San Suu Kyi
Alison Wright/Corbis

National League for Democracy. Her party won 80 percent of the parliamentary seats in a 1990 election that was immediately abrogated by the military regime. During much of the 1990s Suu Kyi was kept under house arrest but continued to advocate nonviolent resistance and to call for the observance of human rights. She rebuffed government efforts that encouraged her to leave Burma and continued to be a major symbol of hope for those who opposed military rule in that country. During this time she also formulated a sociopolitical orientation grounded in Buddhist thought that was opposed to the brand of Buddhist traditionalism sponsored by the ruling generals.

AURGELMIR \ˈaʊr-gəl-,mir\; *see* YMIR.

AUROBINDO, ŚRĪ \,ó-r-ə-ˈbin-dō\, *original name* Aurobindo Ghose, Aurobindo *also spelled* Aravinda (b. Aug. 15, 1872, Calcutta, India—d. Dec. 5, 1950, Pondicherry), seer, poet, and Indian nationalist who originated the philosophy of cosmic salvation through spiritual evolution.

Aurobindo attended a Christian convent school in Darjeeling; while still a boy, he was sent to England for further schooling. At the University of Cambridge he became proficient in two classical and three modern-European languages. After returning to India in 1892 he took various administrative and professorial posts in Baroda and Calcutta and then turned to the study of YOGA and Indian languages, including classical Sanskrit.

In 1902 Aurobindo embarked on a course of action to free India from British rule. As a result of his revolutionary political activities, he was imprisoned in 1908. Two years later he fled to the French colony of Pondichéry (modern Pondicherry) in southeastern India, where he devoted the rest of his life solely to the development of his philosophy. In Pondichéry he founded an ASHRAM (retreat) as an international cultural center for spiritual development.

According to Aurobindo's theory of cosmic salvation, the paths to union with BRAHMAN are two-way streets, or channels: Enlightenment comes from above (thesis), while the spiritual mind (supermind) strives through yogic illumination to reach upward from below (antithesis). When these two forces blend, a gnostic individual is created (synthesis). This yogic illumination transcends both reason and intuition and eventually leads to the freeing of the individual from the bonds of individuality; by extension, all humankind will eventually achieve MOKṢĀ (liberation).

Aurobindo's complex and sometimes chaotic literary output includes philosophy, poetry, and drama. Among his works are *The Life Divine* (1940), *The Human Cycle* (1949), *On the Veda* (1956), *Collected Poems and Plays* (1942), and *Savitri: A Legend and a Symbol* (1950).

AUSEKLIS \ˈaʊ-se-kliis\ (Latvian), *Lithuanian* Aušrinė \aʊ-ˈshrʲi-nʲə\, in BALTIC RELIGION, the morning star and deity of the dawn. The Latvian Auseklis was a male god, the Lithuanian Aušrinė a female.

Related in name to the Vedic Uṣas and the Greek EOS, goddesses of dawn, Auseklis is associated in Latvian mythology with MĒNESS (Moon) and SAULE (Sun), being subordinate to the former and along with him a suitor of Saule's daughter, Saules meita. According to Lithuanian traditions Aušrinė had an adulterous relationship with the moon god, Mėnuo, for which Mėnuo was punished by the god Perkūnas (Latvian: PĒRKONS).

AUSTRALIAN ABORIGINAL RELIGION

T

he beliefs and ritual practices of the indigenous population of Australia, who are known as Aboriginals, show a unique contrast between the complexity of their social organization and religious life and the relative simplicity of their material technologies.

HISTORICAL AND CULTURAL CONTEXT

Aboriginals came originally from somewhere in Asia and have been in Australia for at least 40,000 years. The first settlement occurred during an era of lowered sea levels, when there was an almost continuous land bridge between Asia and Australia. By 30,000 years ago most of the continent was sparsely occupied.

By the time of European settlement in 1788, population densities ranged from about 1 to 8 square miles per person in fertile riverine and coastal areas to more than 35 square miles per person in the vast interior deserts. More than 200 different languages were spoken, and most Aboriginals were bilingual or multilingual. The largest entities recognized by the people were grouped around speakers of the same language, sometimes referred to by Europeans as "tribes." There may have been as many as 500 such groups. There was no consciousness of a shared national identity. However, the Aboriginal worldview tended to be expansive, with a perception of "society" as a community of common understandings and behaviors shared well beyond the confines of the local group.

The Aboriginals were hunter-gatherers who grew no crops and did not domesticate animals (apart from the dingo, a type of wild dog). The need to balance population with resources meant that most of the time people were dispersed into small food-gathering groups. But when food resources permitted, large gatherings would be organized, and much of the social and religious business of the society would be transacted over a two- to three-week period of intense activity.

RITUAL AND PRACTICE

The dreaming and totemic beliefs. The Aboriginal worldview centered on the "DREAMING," or "Dreamtime," a complex and comprehensive concept embodying the past, present, and future, as well as virtually every aspect of life. It includes the creative era at the dawn of time, when mythic beings shaped the land and

Spectrum Colour Library/Heritage-Images

populated it with flora, fauna, and human beings and left behind the rules for social life. After their physical death and transformation into heavenly or earthly bodies, the creative beings withdrew into the spiritual realm.

The Aboriginals saw their way of life as ordained by the creative acts of the Dreaming beings; everything that existed was

fixed for all time in the mythic past, and all that humans were asked to do was obey the law of the Dreaming and perform correctly the rituals upon which life depended. Aboriginals were constantly surrounded by the signs of existence and power of spiritual forces, as features of the landscape provided tangible proofs of the reality and powers of the Dreaming beings. Through dreams and other states of altered consciousness, the living could come into contact with the spiritual realm and gain strength from it, and a rich complex of myths, dances, and rituals bound the human, spiritual, and physical realms tightly together into a single cosmic order. Spirit beings acted as messengers to communicate with the living and to introduce new knowledge into human society.

Through Aboriginal systems of totemic belief, individuals and groups were linked to both the things of nature and the beings of the spiritual realm. **TOTEMISM** is a symbol system that connects individuals and groups to particular places and events and provides them with a unique account of their coming into being. It thus underpins individual identity while at the same time linking a person to many others who share similar associations. Many of the mythic beings in Australia were "totemic" in the sense of exemplifying in their own persons, in their outward form, the common life-force pervading particular species. Others, originating in human or near-human form, entered some physiographic feature or were metamorphosed as hills or rocks or turned into various creatures or plants.

Initiation. A child's spirit was held to come from the Dreaming in order to animate a fetus. In some cases, this was believed to occur through an action of a mythic being who might or might not be reincarnated in the child. Even when Aboriginals acknowledged a physical bond between parents and child, the most important issue for them was the spiritual heritage.

In general, puberty among girls was not ritually celebrated. In those areas in which it was celebrated, however, it was usually marked by either total or partial seclusion and by food **TABOOS**. Ritual defloration and hymen cutting were also practiced in a few areas. For a boy, his formal instruction as a potential adult began with the rite of initiation. All boys were initiated, the age at the first rite varying from 6 to 16, depending on the locale. Generally, once he had reached puberty and facial hair had begun to show, he was ready for the initial rituals.

Initiation was a symbolic reenactment of death and rebirth in order to achieve new life as an adult. The symbolism of death appeared as the novice left his camp, the women would wail and other noises would be made, symbolizing the voice of a mythic being who was said to swallow the novice and later vomit him forth into a new life. Initiation in Aboriginal Australia was a prelude to the religious activity in which all men participated. It meant, also, learning a wide range of things directly concerned with the practical aspects of social living, and the rites included songs and rituals having an educational purpose.

CIRCUMCISION was an important rite over the greater part of Australia. Subincision (the slitting of the underside of the penis) was especially significant in its association with secret-sacred ritual. Other rites included piercing of the nasal septum, tooth pulling, and the blood rite, the blood being used for anointing or sipping (red ochre was sometimes used as a substitute for blood). Hair removal, scarring, and playing with fire were also fairly widespread practices.

SACRED ART

Each cultural area had its own distinctive style of art. TJURUNGA (sacred object) art, consisting of incised patterns on flat stones or wooden boards, though, was fairly common throughout Australia. In central Australia, body decoration and elaborate headdresses on ritual occasions, using feather down, blood, and ochres, were especially striking. Everywhere, sacred ritual provided the incentive for making a large variety of objects, and the act of making them was itself one of the appropriate rites. Shaped and decorated receptacles for bones were common in eastern Arnhem Land. Also common were carved wooden figures of mythic beings and of contemporary persons for ritual use or as memorial posts for the dead.

Paintings in ochre on sheets of bark were used mostly for the instruction of novices. In western Arnhem Land, naturalistic patterns showing figures against an open background were the norm; there was also a unique kind of "X-ray" art that depicted the internal organs. Also widespread were cave and rock paintings or engravings, and SAND PAINTINGS associated with desert rituals.

Geographic distribution of Aboriginals

AUTOCEPHALOUS CHURCH \,ò-tò-'se-fə-ləs\, in the modern usage of the CANON LAW of EASTERN ORTHODOXY, a church that enjoys total canonical and administrative independence and elects its own PRIMATES and bishops. The term was used in medieval Byzantine law in its literal sense of "self-headed" (Greek: *autokephalos*), or independent, and was applied to individual DIOCESES that did not depend upon the authority of a provincial METROPOLITAN. Today the Orthodox archbishopric of Mount Sinai, with the historic monastery of St. Catherine, still enjoys this privilege.

Most modern Orthodox autocephalies are national churches, but some are limited only geographically and include the territories of several states. The autocephalous churches maintain canonical relations with each other and enjoy communion in faith and SACRAMENTS. There is between them a traditional order of precedence, with the ecumenical patriarchate of Constantinople (modern Istanbul) enjoying the first place.

The heads of individual autocephalous churches bear different titles: PATRIARCH (in Constantinople, Alexandria, Antioch, Jerusalem, Moscow, Georgia, Serbia, Romania, and Bulgaria), ARCHBISHOP (in Athens and Cyprus), or metropolitan (in Poland and America).

AUTOLYCUS \ò-'tä-lə-kəs\, in Greek mythology, the father of Anticleia, who was the mother of the hero ODYSSEUS. Later ancient authors made Autolycus the son of the god HERMES. He was believed to live at the foot of Mount Parnassus and was famous as a thief and swindler. One version of the story states that SISYPHUS, during a visit to Autolycus, recognized his stolen cattle; on that occasion Sisyphus seduced Autolycus' daughter Anticleia and hence Odysseus was really the son of Sisyphus, not of Laertes, whom Anticleia afterward married. The story sought to establish a close connection between Hermes, the god of theft and of cunning, and three persons—*i.e.*, Sisyphus, Odysseus, and Autolycus—who were seen as the incarnate representations of that practice and quality.

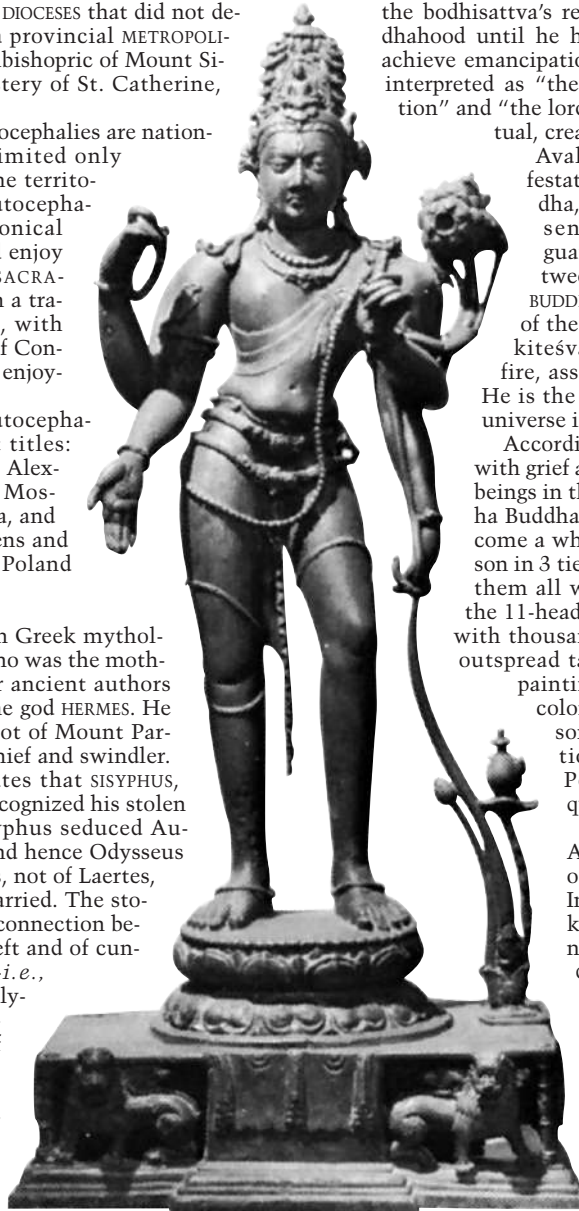

AVADĀNA \,ə-və-'dā-nə\, legendary material centering on the BUDDHA's explanations of events by a person's worthy deeds in a previous life. In the THERAVĀDA tradition the Pāli cognate (*Apadāna*) is the title of a "canonical" collection of such stories. *Avadānas* include the *Divyāvadāna* ("Divine Avadāna"), consisting of 38 legends, including some about the great Buddhist emperor AŚOKA, and the *Avadāna Śataka*, which contains 100 *Avadāna* stories.

AVALOKITEŚVARA \,ə-və-lò-ki-'tāsh-və-rə\ (Sanskrit: *avalokita*, "looking on"; *īśvara*, "lord"), Chinese Kuan-yin \,gwän-'yin, 'kwän-\, Japanese Kannon \,kän-'nön\, the BODHISATTVA of infinite compassion and mercy, possibly the most popular of all Buddhist deities, beloved throughout many areas of the Buddhist world. He supremely exemplifies the bodhisattva's resolve to postpone his own buddhahood until he has helped every being on earth achieve emancipation. His name has been variously interpreted as "the lord who looks in every direction" and "the lord of what we see" (that is, the actual, created world).

Avalokiteśvara is the earthly manifestation of the self-born, eternal Buddha, AMITĀBHA, whose figure is represented in his headdress, and he guards the world in the interval between the departure of the historical BUDDHA, Gotama, and the appearance of the future Buddha, MAITREYA. Avalokiteśvara protects against shipwreck, fire, assassins, robbers, and wild beasts. He is the creator of the fourth world, the universe in which we live.

According to legend, his head once split with grief at realizing the number of wicked beings in the world yet to be saved. Amitābha Buddha caused each of the pieces to become a whole head and placed them on his son in 3 tiers of 3, then the 10th, and topped them all with his own image. Sometimes the 11-headed Avalokiteśvara is represented with thousands of arms, which rise like the outspread tail of a peacock around him. In painting he is usually shown white in color (in Nepal, red). His female consort is the goddess TĀRĀ. His traditional residence is the mountain Potala, and his images are frequently placed on hilltops.

The height of the veneration of Avalokiteśvara in northern India occurred in the 3rd–7th century. In China (where he became known as KUAN-YIN) he was recognized as early as the 1st century CE and had become very popular by the 6th century. Representations of the bodhisattva in China prior to the Sung dynasty (960–1126) are unmistakably masculine in appearance. Later images display attributes of both genders. One interpretation of this development contends that the bodhisattva is neither male nor female but has transcended sexual distinctions, as he has all other dualities in the sphere of SAMSĀRA (the temporal world). According to this opinion, the flowing drapery and soft contours of the body seen in statues and paintings have been intentionally combined with a visible moustache to emphasize the absence of sexual identity. Furthermore, the LO-

Avalokiteśvara, bronze figure from Kurkihār, Bihār, 9th century

TUS SUTRA relates that Avalokiteśvara has the ability of assuming whatever form is required to relieve suffering and also has the power to grant children. Another point of view, while accepting the validity of this philosophical doctrine, holds that from at least the 12th century the popular devotional cult of Kuan-yin has superimposed onto the bodhisattva qualities of an indigenous Chinese goddess.

Among the followers of the PURE LAND sect, who look to rebirth in the Western Paradise of the Buddha Amitābha, Kuan-yin forms part of a ruling triad, along with Amitābha and the bodhisattva Mahasthāmaprāpta. Images of the three are often placed together in temples, and Kuan-yin is shown in paintings welcoming the dead to the Western Paradise. This cult of Kuan-yin is based on SCRIPTURES of the Pure Land school that were translated into Chinese between the 3rd and 5th centuries.

The bodhisattva was introduced into Tibet—where he is called Sphyan-ras gzigs (“With a Pitying Look”)—in the 7th century, where he quickly became the most popular figure in the pantheon. Ultimately many Tibetans came to believe that he was, and still is, successively reincarnated in each DALAI LAMA. He is credited with introducing the prayer formula *om maṇi padmehūṃ!* (frequently translated “the jewel is in the lotus”) to the people of Tibet.

The cult of Avalokiteśvara/Kuan-yin probably reached Japan (where he is called KANNON) by way of Korea soon after BUDDHISM was first introduced into the country; the earliest known images at the Hōryū-ji (*ji*, “temple”) in Nara date from the mid-7th century. The worship of the bodhisattva was never confined to any one sect and continues to be widespread throughout Japan.

As in China, some ambivalence exists about Kannon’s gender. In Japan Kannon’s ability to assume innumerable forms has led to seven major representations: (1) Shō Kannon, the simplest form, usually shown as a seated or standing figure with two hands; (2) jū-ichi-men Kannon, a two- or four-handed figure with 11 heads; (3) Senju Kannon, the bodhisattva with 1,000 arms; (4) Jun-tei Kannon, one of the least common forms, represented as a seated figure with 18 arms, sometimes related to the Indian goddess Cuntī (mother of 700,000 buddhas); (5) Fukū-kenjaku Kannon, a form popular with the Tendai (T’IEN-T’AI) sect, whose special emblem is the lasso; (6) Ba-tō Kannon, shown with a fierce face and a horse’s head in the headdress, probably related to the Tibetan protector of horses, Hayagrīva; (7) Nyo-i-rin Kannon, shown seated, with six arms, holding the wish-fulfilling jewel.

The virtues and miracles of Avalokiteśvara are accounted in many Buddhist *sūtras*. The *Avalokiteśvara Sūtra* was incorporated into the widely popular *Lotus Sūtra* in the 3rd century CE, though it continues to circulate as an independent work in China and is the main scripture of his cult worship there.

AVATAMSAKA SŪTRA \ə-və-ˈtəm-sə-kə-ˈsū-trə\, in full Mahāvaiṣṭya-Buddha Āvatamsaka-sūtra (Sanskrit: “The Great and Vast Buddha Garland Sutra”), also called Garland Sutra, MAHĀYĀNA Buddhist text that speaks of the deeds of the BUDDHA and of their resulting merits that blossom like a garland of flowers. The discourse begins with the Buddha’s Enlightenment, attended by a chorus of BODHISATTVAS (those destined to become enlightened) and divine beings. There follows a great assembly in the palace of the god INDRA, where the Buddha teaches that all beings have the BUDDHA NATURE, that all phenomena are mutually originating and interdependent, and that, finally, all is Buddha.

Scholars value the text for showing the evolution of thought from early Buddhism to fully developed Mahāyāna. Several versions of the text seem to have existed, one reputedly containing as many as 100,000 verses. A translation entitled *Hua-yen ching* first appeared in China around 400 CE and gave rise to the HUA-YEN (Kegon) sect.

AVATAR \ˈa-və-ˈtār\, Sanskrit *avatāra* \ə-və-ˈtār-ə\, *Hindī* *avatār* (“descent”), in HINDUISM, the appearance of a deity in human or animal form to counteract some particular evil in the world. The term usually refers to 10 “descents” of VISHNU, whose evolutionary sequence is unmistakable: Matsya (fish), Kūrma (tortoise), VARĀHA (boar), NARASIMHA (half man, half lion), VĀMANA (dwarf), PARASURĀMA (RĀMA with the ax), Rāma (hero of the RĀMĀYĀNA epic), KRISHNA (the divine cowherd), the BUDDHA GOTAMA, and KALKĪ (the incarnation yet to come). The number of Vishnu’s avatars can vary, and their identity alter, with individual texts and ICONS. Thus Krishna’s half-brother BALARĀMA sometimes replaces him in the 10-member sequence as the third Rāma; Krishna then sometimes replaces the Buddha. Equally important, there may be a resistance to understanding Krishna as in any way subordinate to Vishnu. In the BHAGAVAD GĪTĀ Krishna himself plays the supernal role normally associated with Vishnu. He tells ARJUNA: “Whenever there is a decline of righteousness and rise of unrighteousness then I send forth Myself. For the protection of the good, for the destruction of the wicked, and for the establishment of righteousness, I come into being from age to age.”

AVERROËS: see IBN RUSHD.

AVESTA \ə-ˈves-tə\, also called *Zend-Avesta* \zend-ə-ˈves-tə\, the primary scriptural collection of ZOROASTRIANISM, containing largely hymns, prayers, liturgical formulas, and appeals to righteousness ascribed to the prophet ZOROASTER (Zarathushtra). The extant Avesta is all that remains of a much larger body of SCRIPTURE, said to have been destroyed when Alexander the Great conquered Persia. The present Avesta was assembled from remnants and standardized under the Sasanian kings (3rd–7th century CE).

The Avesta is in five parts. Its religious core is a collection of ancient songs or hymns, the *Gāthās*, thought to be close to the words of Zoroaster himself. They form a middle section of the chief liturgical part of the canon, the *Yasna*, which contains the rite of the preparation and sacrifice of HAOMA. The *Visp rat* is a lesser liturgical scripture, containing homages to a number of Zoroastrian spiritual leaders. The *Vendidād*, or *Vidēvdāt*, is the main source for Zoroastrian law, both ritual and civil. It also gives an account of creation and the first man, YIMA. The *Yashts* are 21 mythic hymns to various YAZATAS (ANGELS) and ancient heroes. The *Khūrda Avesta* (or Little Avesta) is a group of minor texts, hymns, and prayers for specific occasions.

AVICENNA: see IBN SĪNĀ.

AVIGNON PAPACY \ä-vē-ˈnyō\, Roman Catholic PAPACY during the period 1309–77, when the popes took up residence at Avignon (now in France) instead of at Rome, primarily because of the current political conditions.

Distressed by factionalism in Rome and pressed to come to France by Philip IV, Pope Clement V moved the papal capital to Avignon, which at that time belonged to vassals

of the pope. In 1348 it became direct papal property. Although the Avignon papacy was overwhelmingly French in complexion (all seven of the popes during the period were French, as were 111 of the 134 CARDINALS created), it was not so responsive to French pressure as contemporaries assumed or as later critics insisted. During this time the Sacred College of Cardinals began to gain a stronger role in the government of the church; a vast reorganization and centralization of administrative offices and other agencies was effected; reform measures for the clergy were initiated; expanded missionary enterprises, which reached as far as China, were stimulated; university education was promoted; and numerous attempts were made by the popes to settle royal rivalries and to establish peace. Nevertheless, antagonism, especially in England and Germany, to the residency at Avignon damaged the prestige of the papacy.

After Gregory XI reestablished the papal capital in Rome, cardinals of the Sacred College selected a second pope, who assumed the vacant Avignon seat. This marked the onset of the Great SCHISM. A succession of such "ANTIPOPEs" were selected, and the Great Schism was not healed until 1417. The increased power and ambitions of the cardinals led, no doubt, to the Great Schism and to the subsequent emergence of CONCILIARISM, a theory that a general council of the church has greater authority than the pope and may, if necessary, depose him. Thus, the Avignon papacy also contributed to the religious, intellectual, and political climate which would foment the Protestant REFORMATION.

AYODHYA \ə-'yōd-yä\ (Sanskrit), *Hindī* Ayodhyā, city in south-central Uttar Pradesh state, northern India, on the Ghāghara (Gogra) River. An ancient city dating to roughly the 6th century BCE, Ayodhya is often regarded as one of the seven holiest places of HINDUISM, revered because of its association, in the great Indian epic poem RĀMĀYAṆA, with the birth and rule of RĀMA and with the rule of his father, Daśaratha.

Not until about the 14th century is there evidence that a firm association had been made between the physical place called Ayodhya and its mythic namesake in the *Rāmāyaṇa*. Rather, virtually all early writers, most of them Buddhist or Jain, refer to it as Sāketa and report that it was visited by the founders of both faiths. Its importance as a Buddhist center can be gauged from the statement of the Chinese Buddhist monk FA-HSIEN in the 5th century CE that there were 100 monasteries there. In that same century a Gupta emperor calling himself a *parama bhāgavata* (great devotee of VISHNU) moved his capital there from Pātaliputra, identifying the former Sāketa as Rāma's city, Ayodhya. The capital moved soon again, but subsequent centuries witnessed at least intermittent Vaiṣṇava patronage (see VAIṢṆAVISM), along with a significant presence of JAINISM and BUDDHISM. In 1226 Ayodhya became the capital of the province of Avadh under the Delhi sultanate, and it was not until the 18th century (under the Muslim nawabs of Avadh, who ruled from nearby Faizabad) that major Hindu construction resumed, although the city remained an important destination for Hindu PILGRIMAGE in the meantime.

In 1528, a lieutenant of the Mughal emperor Babur built the structure that has come to be called Bābri Masjid ("Babur's Mosque") on a site traditionally identified as Rāma's birthplace. Whether he destroyed a preexisting Hindu temple to do so has been the subject of deep dispute, both public and scholarly. That dispute is one of many focused on the site, especially since India's independence. In 1949, for example, an image of Rāma was said to have manifested

itself inside the mosque, causing a protracted legal struggle. (Many decades later, several Rāmānandī ascetics claimed responsibility for the act.) In 1990 riots in northern India followed the storming of the mosque by zealous Hindus intent on erecting a temple on the site; the ensuing crisis brought down the Indian government. Two years later, on Dec. 6, 1992, the mosque was demolished in a few hours by a crowd of Hindu militants organized by the VISHVA HINDU PARISHAD with support from the Rashtriya Swayamsevak Sangh and the BHARATIYA JANATA PARTY. It is estimated that more than 1,000 people—mostly Muslims—died in the rioting that swept through India following the mosque's destruction.

ĀYURVEDA \ä-yər-,vā-də\, in India, well-organized and highly articulated system of traditional medicine. Āyurveda is attributed to Dhanvantari, the physician of the pantheon of HINDUISM, who received it from BRAHMĀ. It is understood as one of the "limbs of the VEDA" (*vedāṅga*).

Indian medicine has a long history. Its earliest concepts are set out in the Vedas, especially in the metrical passages of the ATHARVA VEDA, which may possibly date as far back as the 2nd millennium BCE. The Vedas do make reference to magical practices for the treatment of diseases, but Āyurvedic practitioners take as their seminal texts the *Cāraka Saṃhitā* and *Suśruta Saṃhitā*, compiled roughly 1st–4th century CE. These texts analyze the human body in terms of earth, water, fire, air, and ether—which in turn yield the three bodily humors (*doṣas*): wind, bile, and phlegm. These then correspond to the three qualities or temperaments (*guṇas*) that pervade the universe. Thus, Āyurveda participates in a broader organization of knowledge that makes its appearance in a range of Hindu (and also BUDDHIST) religious texts. The early development of Āyurveda as a system owes a significant debt to traveling ascetics who also served as healers.

Āyurvedic medicine is still a favored form of health care in India, where a large percentage of the population use this system exclusively or combined with Western medicine, and Āyurvedic medicine has an increasingly important profile in the West. The Indian Medical Council was set up in 1971 by the Indian government to establish maintenance of standards for undergraduate and postgraduate education. It establishes suitable qualifications in Indian medicine and recognizes various forms of traditional practice, including the Āyurvedic system. India has roughly 100 colleges at which Āyurvedic medicine is taught.

Āyurvedic medicine has both preventive and curative aspects. The preventive component emphasizes the need for a strict code of personal and social hygiene, the details of which depend upon individual, climatic, and environmental needs. Bodily exercises, the use of herbal preparations, dietary controls, and YOGA form a part of the remedial measures. The curative aspect of Āyurvedic medicine involves the use of herbal medicines, external preparations, physiotherapy, and diet. It is a principle of Āyurvedic medicine that the preventive and therapeutic measures be adapted to the personal requirements of each patient.

ĀYYAPPAN \ä-yə-pən\, also called Sartavu, or Śāsta, in HINDUISM, a deity who is always and at all times celibate, generally depicted in a yogic posture, wearing a bell around his neck. His most prominent shrine is at Sabarimalai in the southern Indian state of Kerala, and he enjoys popularity mostly in Kerala, though the neighboring states of Tamil Nadu and Karnataka also house many Ayyappan

temples. Ayyappan may bear a historical relationship to the tutelary deity Aiyandar of Tamil Nadu. The most public aspect of the worship of Ayyappan is the annual PILGRIMAGE to Śabarimalai in which only men, pre-adolescent girls, and post-menopausal women are allowed to participate. Prior to the journey, pilgrims, who annually number around one million, are required to observe strict vows of CELIBACY and abstain from meat and intoxicants for a period of, traditionally, 41 days. Pilgrims climb barefoot to the hilltop where the shrine is located, and during the pilgrimage unity and brotherhood are emphasized, while linguistic and economic differences among participants are minimized, leading some to speculate that BUDDHISM influenced the worship of Ayyappan. A late Sanskrit text describes Ayyappan as the son of SHIVA and VISHNU (with the latter in his form as the enchantress Mohini). Abandoned by his parents with but a bell around his neck, he was adopted by a Pantalam king of Kerala, and, soon after, his divinity was recognized and a shrine erected to him. Other tales and songs in Malayalam and Kodagu describe his adoption by a local king. They focus on his later life, in which he grew to be a renowned warrior who first set out to defeat and was subsequently worshiped by the Muslim chieftain Vavar (to whom there is a shrine en route to Śabarimalai).

AZALĪ \a-za-'lĕ\, any member of the BĀBĪ movement (followers of a 19th-century Iranian prophet, the BĀB) who chose to remain faithful to the Bāb's teachings and to his chosen successor, Mirza Yaḥya, who was given the religious title Ṣoḅḥ-e Azal, after a split in the movement occurred in 1863. For about 13 years after the Bāb's execution, followers recognized Ṣoḅḥ-e Azal as their leader. In 1863, when Ṣoḅḥ-e Azal's half-brother BAHĀ' ULLĀH privately declared that he was "him whom God shall manifest"—a new prophet foretold by the Bāb—the community split. The Azalis rejected the claims of Bahā' Ullāh as premature, arguing that the world must first accept Bābī laws in order to be ready for the new prophet. Most Bābīs, however, favored Bahā' Ullāh and in 1867 a new religion, the BAHĀ'Ī FAITH, developed.

The Azalis, located now almost exclusively in Iran, have retained the original teachings of the Bāb's *Bayān* ("Revelation") and supplemented them with the instructions of Ṣoḅḥ-e Azal. The group has remained considerably smaller than the Bahā'īs and may number no more than a few thousand members.

AZAZEL \ə-'zā-zəl, 'a-zə-zel\, in Jewish myth, a DEMON or evil spirit to whom, in the ancient rite of YOM KIPPUR (Day of

Atonement), a SCAPEGOAT was sent bearing the SINS of the Jewish people. The ritual was carried out by the HIGH PRIEST in the Second Temple and is described in the MISHNAH. Two male goats were chosen for the ritual, one designated by lots "for the Lord," the other "for Azazel" (Leviticus 16:8). After the priest symbolically transferred all the sins of the Jewish people to the scapegoat, the goat destined "for Azazel" was driven into the wilderness and cast over a precipice to its death. Azazel was the personification of uncleanness and later was sometimes described as a fallen ANGEL.

AZHAR UNIVERSITY, AL- \əl-'āz-hār\, chief center of SUNNI Islamic learning in the world, centered on the mosque of that name in the medieval quarter of Cairo, Egypt. It was founded by the Fāṭimids in 970 CE and was formally organized by 988. The basic program of studies

Al-Azhar Mosque (domed building on the right), with adjoining buildings of al-Azhar University

Robert Frerck—Odyssey Productions

was, and still is, Qur'anic EXEGESIS, Islamic law, theology, and the Arabic language. Nineteenth- and twentieth-century efforts at modernization have resulted in the addition of medicine, science, engineering, agriculture, philosophy, and social sciences to the curriculum, now taught at its new supplementary campus at Naṣr City.

Al-Azhar attracts students from as far as China, Indonesia, Morocco, and Somalia. Women have been admitted since 1962 to a separate college in the university. Azharī SHAYKHS comprise the voice of "official ISLAM" in Egypt today through their publications, sermons, and broadcasts on radio and television.

AZTEC RELIGIONS: *see* PRE-COLUMBIAN MESO-AMERICAN RELIGIONS.

BA \ˈbä\, in ancient EGYPTIAN RELIGION, with KA and AKH, a principal aspect of the soul; it appears in bird form, expressing the mobility of the soul after death. Originally written with the sign of the jabiru bird, and thought to be an attribute of only the god-king, the *ba* was later represented by a man-headed hawk, often depicted hovering over the mummies of king and populace alike. Graves frequently had narrow passages for visitation by the *ba*.

BAAL \ˈbäl, ˈbäl\, god worshiped in many ancient Middle Eastern communities, especially among the Canaanites, who apparently considered him a fertility deity and one of the most important gods in the pantheon. As a Semitic common noun *baal* (Hebrew *baʿal*) meant “owner” or “lord.” Thus, “Baal” designated the universal god of fertility, and in that capacity his title was Prince, Lord of the Earth. He was also called the Lord of Rain and Dew, the two forms of moisture that were indispensable for fertile soil in CANAAN. In Ugaritic and OLD TESTAMENT Hebrew, Baal’s epithet as the storm god was He Who Rides on the Clouds. In Phoenician he was called Baal Shamen, Lord of the Heavens.

Knowledge of Baal’s characteristics and functions derives chiefly from a number of tablets uncovered from 1929 onward at UGARIT (modern Ras Shamra), in northern Syria, and dating to the middle of the 2nd millennium BCE. In the mythology of Canaan, Baal, the god of life and fertility, was locked in mortal combat with MOT, the god of death and sterility. If Baal triumphed, a seven-year cycle of fertility would ensue; but, if he were vanquished by Mot, seven years of drought and famine would ensue. Ugaritic texts tell of other fertility aspects of Baal, such as his relations with ANATH, his consort and sister, and also his siring a divine bull calf from a heifer.

But Baal was not exclusively a fertility god. He was also king of the gods, having seized the divine kingship from YAMM, the sea god.

The myths also tell of Baal’s struggle to obtain a palace comparable in grandeur to those of other gods. Baal persuaded ASHERAH to intercede with her husband EL, the head of the pantheon, to authorize the construction of a palace. The god of arts and crafts, KOTHAR, then built for Baal the most beautiful of palaces, spread over an area of 10,000 acres. The myth may refer in part to the construction of Baal’s own temple in the city of Ugarit. Near Baal’s temple was that of Dagon, given in the tablets as Baal’s father.

The worship of Baal was popular in Egypt from the later New Kingdom in about 1400 BCE to its end (1075 BCE). Through the influence of the Aramaeans, who borrowed the Babylonian pronunciation BEL, the god ultimately became known as the Greek Belos, identified with ZEUS.

Baal was also worshiped by various communities as a local god. The Old Testament speaks frequently of the Baal of a given place or refers to Baalim in the plural, suggesting local deities, or “lords,” of various locales. It is not known to

what extent the Canaanites considered those various Baalim identical, but the Baal of Ugarit does not seem to have confined his activities to one city, and doubtless other communities agreed in giving him cosmic scope.

For the early Hebrews, “Baal” designated the Lord of Israel, just as “Baal” farther north designated the Lord of Lebanon or of Ugarit. What later made the very name Baal anathema to the Israelites was the program of JEZEBEL, in the 9th century BCE, to introduce into Israel her Phoenician cult of Baal in opposition to the official worship of YAHWEH (1 Kings 18). By the time of the prophet HOSEA (mid-8th century BCE) the antagonism to Baalism was so strong that the use of the term Baal was often replaced by the contemptuous *boshet* (“shame”); in compound proper names, for example, ISHBOSHETH replaced the earlier Ishbaal.

BAALAT \ˈbā-ə-lat\, also spelled Baʿalat, or Baʿalath (from West Semitic: *baʿalat*, “lady”), common synonym for the special goddess of a region; also, the chief deity of Byblos. Very little is known of Baalat, “the Lady [of Byblos],” but because of the close ties between Byblos and Egypt, she was often represented with a typically Egyptian hairstyle, headdress, and costume, and by the 12th dynasty (1991–1786 BCE) she was equated with the Egyptian goddess HATHOR. To the Greeks Baalat was a form of the goddess ASTARTE.

BAʿAL SHEM \ˈbäl-ˈshem\, also spelled baalshem (Hebrew: “master of the name”), plural *baʿale shem*, in JUDAISM, title bestowed upon men who reputedly worked wonders and effected cures through secret knowledge of the ineffable names of God. During the 17th and 18th centuries, there appears to have been a proliferation of wonder-workers, *baʿale shem*, in eastern Europe. Traveling the countryside, these men were said to perform cures by means of herbs, folk remedies, and the TETRAGRAMMATON (four Hebrew letters signifying the ineffable name of God). They also inscribed AMULETS with the names of God to assist in their cures and were reported to be especially efficacious in exorcising DEMONS. Because the *baʿale shem* combined FAITH HEALING with practical QABBALAH (use of sacred formulas and amulets), they frequently clashed with physicians and were constantly ridiculed both by rabbinic authorities and by followers of the Jewish Enlightenment (HASKALAH).

Preminent among the *baʿale shem* was Israel ben Eliezer (d. 1760), commonly called BAʿAL SHEM TŌV (or simply the Besht), founder of the social and religious movement known as HASIDISM.

BAʿAL SHEM TŌV \ˈbäl-ˈshem-ˈtōv\ (Hebrew: “Master of the Good Name”), byname of Israel ben Eliezer, acronym Besht \ˈbesht\ (b. c. 1700, probably Tluste, Podolia, Pol.—d. 1760, Medzhibozh), in JUDAISM, charismatic founder (c. 1750) of HASIDISM. He was responsible for divesting QABBAL-

Ba above a dead man, from the Egyptian Book of the Dead

By courtesy of the trustees of the British Museum

AH of the rigid ASCETICISM imposed on it by ISAAC BEN SOLOMON LURIA in the 16th century.

As a young orphan the Besht held various semi-menial posts connected with SYNAGOGUES and Hebrew elementary religious schools. Later he retired to the Carpathian Mountains to engage in mystical speculation, meanwhile eking out his living as a lime digger. His reputation as a healer, or BA'AL SHEM, who worked wonders by means of herbs, talismans, and AMULETS inscribed with the divine name, began to spread. He later became an innkeeper and a ritual slaughterer and, about 1736, settled in the village of Medzhibozh, in Podolia (Poland). From this time until his death, he devoted himself almost entirely to spiritual pursuits.

The Besht made a deep impression on his fellow Jews by going to the marketplace to converse with simple people and by dressing like them. Such conduct by a holy man was fiercely condemned in some quarters but enthusiastically applauded in others. The Besht placed great value on this type of spiritual ministrations.

While still a young man, the Besht had become acquainted with such figures as Rabbi Nahman of Gorodënka and Rabbi Nahman of Kosov, already spoken of as creators of a new life, and with them he regularly celebrated the ritual of the three SABBATH meals. In time it became customary for them to deliver pious homilies and discourses after the third meal, and the Besht took his turn along with the others. Many of these discourses were later recorded and have been preserved as the core of Hasidic literature. When the Besht's spiritual powers were put to a test by other members of the group, he reportedly recognized a mezuzah (a small parchment inscribed with scriptural verses) as ritually "unfit" by means of his clairvoyant powers.

The Besht gradually renounced the strict asceticism of his companions, hoping instead to "prevail upon men to live by the light of these three things: love of God, love of Israel, and love of TORAH." His teaching centered on three main points: communion with God; service in ordinary bodily existence, proclaiming that every human deed done "for the sake of heaven" (even stitching shoes and eating)

was equal in value to observing formal commandments; and rescue of the "sparks" of divinity that, according to the Qabalah, were trapped in the material world.

A letter attributed to, but not signed by, the Besht affirms that the author made "the ascent of the soul," met the MESSIAH in heaven, and asked him when he would come. The answer he received was: "When your well-springs shall overflow far and wide"—meaning that the Besht had first to spread the teaching of Hasidism. According to one view, the story indicates that the advent was central in the Besht's belief; according to another, it effectively removes messianic redemption from central concern in the life that must be lived here and now.

During his lifetime, the Besht brought about a great social and religious upheaval. In an atmosphere marked by new rituals and religious ECSTASY, he created a new spiritual climate in small houses of prayer outside the synagogues.

The changes were further emphasized by the wearing of distinctive garb and the telling of stories. Though the Besht never visited Israel and left no writings, by the time he died, he had given to Judaism a new religious dimension in Hasidism that continues to flourish.

BĀB, THE \ˈbāb\, byname of Mīrzā ʿAlī Muhammad of Shiraz \mēr-ˈzā-a-ˈlē-mō-ˈham-mad . . . shē-ˈrāz\ (b. Oct. 20, 1819, or Oct. 9, 1820, Shiraz, Iran—d. July 9, 1850, Tabriz), merchant's son whose claim to be the Bāb (Arabic: "Gateway") to the hidden IMAM (the perfect embodiment of Islamic faith) gave rise to BĀBISM and made him one of the central figures of the BAHĀ'Ī FAITH.

At an early age ʿAlī Muhammad became familiar with the Shaykhī school of the SHĪʿITE branch of ISLAM and with its leader, Sayyid Kāzīm Rashtī, whom he met on a PILGRIMAGE. ʿAlī Muhammad borrowed heavily from the Shaykhīs' teaching in formulating his own doctrine, and they, especially Sayyid Kāzīm's disciple Mullā Ḥusayn, seem to have encouraged his proclamation of himself as the Bāb. Traditionally, the Bāb had been considered to be a spokesman for the 12th and last imam, or leader of Shīʿite Islam, believed to be in hiding since the 9th century; since that time,

Statuette of Baalat

By courtesy of the Louvre

others had assumed the title of Bāb. Such a proclamation fit in well with the Shaykhīs' interest in the coming of the MAHDĪ, or messianic deliverer.

On May 23, 1844, 'Alī Muhammad wrote and simultaneously intoned a commentary, the *Qayyūm al-asmā'*, on the SŪRA ("chapter") of Joseph from the QUR'AN. This event prompted 'Alī Muhammad, supported by Mullā Ḥusayn, to declare himself the Bāb. The same year he assembled 18 disciples, who along with him added up to the sacred Bābī number 19, and were called *ḥurūf al-ḥayy* ("letters of the living"). They became apostles of the new faith in the various Persian provinces.

Late in his active period, 'Alī Muhammad abandoned the title Bāb and considered himself no longer merely the "gateway" to the expected 12th imam (*imām mahdī*), but the imam himself, or the *qā'im*. Later he declared himself the *nuqṭah* ("point") and finally an actual divine manifestation. Among his followers, Bābīs and later AZALĪS, he is known as *noqṭey-e ūlā* ("primal point"), *ḥazrat-e a'lā* ("supreme presence"), *jamāl-e mobārak* ("blessed perfection"), and even *ḥaqq ta'ālā* ("truth almighty"). The Bahā'īs acknowledge him as a forerunner of Bahā' Ullāh—the founder of the Bahā'ī faith—but they do not use any of his titles except Bāb.

The six-year career of the Bāb was marked by a struggle for official recognition and by a series of imprisonments. He was suspected of fomenting insurrection, and some of his followers engaged in bloody uprisings. He had to do battle with the *mujtahids* and mullahs, who were unreceptive to the idea of a Bāb who would supersede their authority and provide another avenue to the Truth. His missionaries were arrested and expelled from Shiraz, and the Bāb was arrested near Tehran and imprisoned in the fortress of Māhkū (1847) and later in the castle of Chehrīq (1848), where he re-

mained until his execution. Assembling at the convention of Badasht in 1848, the Bāb's followers declared a formal break with Islam.

A committee of *mujtahids* decided he was dangerous to the existing order and demanded his execution. On the first volley from the firing squad he escaped injury; only the ropes binding him were severed, a circumstance that was interpreted as a divine sign. On the second volley he was killed and his body disposed of in a ditch. Several years later it was buried by the Bahā'īs in a mausoleum on Mt. Carmel, in Palestine.

The Bāb wrote much, not only in his native Persian but also in Arabic. Among the most important are the Arabic and the longer Persian versions of his *Bayān*. Although these are the holy books of Bābī revelation, all the writings of the Bāb and his successors are considered divinely inspired and equally binding. See also AHSĀ'Ī, AḤMAD AL-.

BABA-YAGA \bā-bä-'yā-gä\, also called Baba-Jaga, in Russian FOLKLORE, an ogress who steals, cooks, and eats her victims, usually children. A guardian of the fountains of the water of life, she lives with two or three sisters (all known as Baba-Yaga) in a forest hut which spins continually on birds' legs; her fence is topped with human skulls. Baba-Yaga can fly—in an iron kettle or in a mortar that she drives with a pestle—creating tempests as she goes. She often accompanies Death on his travels, devouring newly released souls.

BABEL, TOWER OF \bā-bəl, 'ba-\, in biblical literature, structure built in the land of Shinar (Babylonia) some time after the Flood. The story of its construction, given in GENESIS 11:1–9, appears to be an attempt to explain the existence of diverse human languages. According to Genesis, the

The Tower of Babel, oil painting by Pieter Bruegel the Elder, 1563

Babylonians wanted to build a mighty city and a tower "with its top in the heavens." God disrupted the work by so confusing the language of the workers that they could no longer understand one another. The city was never completed, and the people were dispersed over the face of the earth. The myth may have been inspired by the Babylonian tower temple north of the MARDUK temple, which in Babylonian was called Bab-ilu ("Gate of God"), Hebrew form Babel, or Bavel. The similarity in pronunciation of Babel and *balal* ("to confuse") led to the play on words in Genesis 11:9: "Therefore its name was called Babel, because there the Lord confused the language of all the earth."

BĀBISM \bā-bi-zəm\, religion that developed in Iran around Mīrzā 'Alī Muhammad, who claimed to be a *bāb* (Arabic: "gateway"), or divine intermediary, in 1844.

Its beliefs are set forth in the *Bayān* ("Exposition"), a holy book written by the BĀB that promotes a universal law in place of all existing religious legal codes. Babīs, followers of the Bāb, prefer to call themselves *ahl al-Bayān* ("People of the *Bayān*"). Although some of Bābism's provisions were milder than the SHARĪ'A, particularly in regard to the status of women, it permitted both offensive and defensive JIHAD as a means for propagating itself. It originated as a messianic movement in Twelver Shi'ism (see ITHNĀ 'ASHARĪYA), and after violent suppression by Iranian 'ULAMĀ' and forces of the state in the 1840s, it gave way to the BAHĀ'Ī FAITH, which holds 'Alī Muhammad to be the "Gateway" to BAHĀ' ULLĀH. See also MESSIANISM.

BABYLONIAN EXILE, also called *Babylonian Captivity*, the forced detention of Jews in Babylonia following the latter's conquest of the kingdom of JUDAH in 598/7 and 587/6 BCE. Not all the Jews were forced to leave Palestine; Jews left Babylonia to return to Palestine at various times; and some Jews chose to remain in Babylonia—this latter group constituting the first of numerous Jewish communities living permanently in the Diaspora.

The first deportation may have been in 597 BCE, when King JEHOIACHIN was deposed and apparently sent into exile with his family, his court, and thousands of workers, or it may have followed the destruction of Jerusalem by Nebuchadrezzar II in 586; if so, the Jews were held in Babylonian captivity for 48 years. The exile formally ended in 538 BCE, when the Persian conqueror of Babylonia, Cyrus the Great, gave the Jews permission to return to Palestine. Among those who accept a tradition (Jeremiah 29:10) that the exile lasted 70 years, some choose the dates 608 to 538, others 586 to about 516 (the year when the rebuilt Temple was dedicated in Jerusalem). See JERUSALEM, TEMPLE OF.

Although the Jews suffered greatly and faced powerful cultural pressures in a foreign land, they maintained their national spirit and religious identity. Elders supervised the Jewish communities, and EZEKIEL was one of several prophets who kept alive the hope of one day returning home. This was possibly also the period when SYNAGOGUES were first established, for the Jews observed the SABBATH and religious holidays, practiced CIRCUMCISION, and substituted prayers for former ritual sacrifices in the Temple.

BABYLONIAN TALMUD \tāl-'müd; 'tāl-,müd, 'tal-məd\; see BAVLI.

BACAB \bä-'káb\, in Mayan mythology, any of four divine brothers (or four manifestations of a single deity), who supported the multilayered sky from their assigned positions at the four cardinal points of the compass. They were probably the offspring of ITZAMNĀ (the supreme deity) and IXCHEL (the goddess of weaving, medicine, and childbirth). Each Bacab presided over one year of the four-year cycle. The four directions and their corresponding colors (east, red; north, white; west, black; south, yellow) played an important part in the Mayan religious and calendrical systems. See also PRE-COLUMBIAN MESO-AMERICAN RELIGIONS.

BACCHANALIA \,ba-kə-'nāl-yə, ,bä-\, also called *Dionysia* \,dī-ə-'ni-zhē-ə, -'nē-, -shē-\, in Greco-Roman religion, any of the several festivals of Bacchus (DIONYSUS). The most famous of the Greek Dionysia were in Attica and included the Lesser Dionysia, characterized by simple rites; the Lenaea, which included a festal procession and dramatic performances; the ANTHESTERIA, which was essentially a drink-

ing feast; the Greater Dionysia, accompanied by dramatic performances in the theater of Dionysus, which was the most famous of all; and the Oschophoria ("Carrying of the Grape Clusters").

The public Greek festivals were probably also celebrated in the Hellenic areas of lower Italy. A private, secret form of the Bacchanalia was introduced into Rome. According to the historian Livy the Bacchanalia were at first held in secret, attended by women only, on three days of the year. Later, admission was extended to men, and celebrations took place as often as five times a month. The reputation of these festivals as orgies led in 186 BCE to a decree of the Roman Senate that prohibited the Bacchanalia throughout Italy, except in certain special cases.

BACCHUS: see DIONYSUS.

BADB \'bīv, 'bāthv\, Irish war goddess. See MACHA.

BADR, BATTLE OF \'bä-dər\ (624), first military victory of MUHAMMAD. It seriously damaged Meccan prestige, while strengthening the political position of Muslims in MEDINA and establishing ISLAM as a force to be reckoned with in the Arabian Peninsula.

Since their emigration from MECCA (622), the Muslims in Medina had depended on constant raids on Meccan caravans for economic survival. When word of a particularly wealthy caravan escorted by Abū Sufyān, head of the Umayyad clan, reached Muhammad, a raiding party of about 300 Muslims, to be led by Muhammad himself, was organized. By filling the wells on the caravan route near Medina with sand, the Muslims lured Abū Sufyān's army to battle at Badr, near Medina, in March 624. Despite the superior numbers of the Meccan forces (about 1,000 men), the Muslims scored a complete victory. The success at Badr was recorded in the QUR'AN as a divine sanction of the new religion: "It was not you who slew them, it was God . . . in order that He might test the Believers by a gracious trial from Himself" (8:17). Those Muslims who fought at Badr became known as the *badriyūn* and make up one group of the COMPANIONS OF THE PROPHET.

BAECK, LEO \'bek\ (b. May 23, 1873, Lissa, Posen, Prussia [now Leszno, Pol.]—d. Nov. 2, 1956, London), RABBI IN REFORM JUDAISM, theologian, the spiritual leader of German Jewry during the Nazi period, and the leading liberal Jewish religious thinker of his time.

Baeck studied for the rabbinate in Breslau and Berlin, received his Ph.D. in philosophy at the University of Berlin in 1895, and was ordained in 1897 by the progressive Hochschule in Berlin. He was one of the two rabbis within the German Rabbinical Association who refused to condemn the Zionist (see ZIONISM) leader THEODOR HERZL (1860–1904) and the First Zionist Congress then meeting in Basel. Baeck first served as rabbi in Oppeln, Silesia (1897–1907), then in Düsseldorf (1907–12), and finally Berlin (1912–42).

The Essence of Judaism (1905) established Baeck as the leading liberal Jewish theologian. Baeck stressed the dynamic nature of religion, the ongoing development that is man's response to the categorical "Ought," the Divine Imperative. The influence of the German-Jewish philosopher Hermann Cohen (1842–1918) and of Neo-Kantianism is visible, but behind it stands the ethical rigorism of traditional rabbinic thought. The next edition of this work (1922), greatly expanded, articulated his "religion of polarity" with its dialectical movement between the "mystery"

of the divine presence in life and the “commandment” of the ethical imperative that comes in the encounter with God. Judaism was seen as the supreme expression of morality, a universal message expressed through the particular existence of Israel.

Traditional Jews disliked Baeck’s early (1901) claim that JESUS was a profoundly Jewish figure and his view in *The Gospel as a Document of Jewish Religious History* (1938) that the Gospels belonged with the contemporary works of rabbinical literature. Christians, on the other hand, felt challenged by his definition of Judaism as the “classic” rational faith confronting a “romantic” CHRISTIANITY of emotion, in his essay “Romantic Religion” (1922). Baeck’s final work, written in part while in a Nazi concentration camp, *This People Israel: The Meaning of Jewish Existence* (1955), moves from the essence of an “ism” to the concrete existence of a people and creates an approach to Jewish life that must be set alongside the thought of the great 20th-century Jewish religious philosophers MARTIN BUBER (1878–1965) and FRANZ ROSENZWEIG (1886–1929).

In 1933 the German Jewry organized into the Reichsvertretung der Juden in Deutschland (National Agency of Jews in Germany) under Baeck and Otto Hirsch (1885–1941). Millions of dollars were spent annually on emigration, economic help, charity, education, and culture. Meanwhile, at the conference table with the Nazis, Baeck and the others battled for time so that lives could be saved. The group expected that Jews would survive Hitler behind ghetto and prison walls—a tragic error of judgment, but extermination camps were as yet inconceivable. In both public and private, Baeck’s life was a pattern of moral resistance that, after five arrests, brought him to the Theresienstadt (Terezín) concentration camp. Baeck set up classes inside the camp, lecturing on Plato and Kant in a small barracks. This, too, was a way of resistance. There were also Christian inmates to whom Baeck served as pastor.

On May 8, 1945, the day before Baeck was to be executed, the Russians liberated Theresienstadt, and Baeck stopped the inmates from killing the guards. He settled in England and taught and lectured in Britain and the United States, including a term at Hebrew Union College in Cincinnati, Ohio. His final writings, notably *Individuum Ineffabile* (1948) and *This People Israel*, continued to express hope in humanity and the human situation as the area of the revelation.

BAETYLUS \ˈbē-tə-ləs, -tyə-, also spelled baetulus, in GREEK RELIGION, a sacred stone or pillar. Numerous holy stones existed in antiquity, generally attached to the cult of some particular god and looked upon as his abiding place or symbol. The most famous example is the holy stone at DELPHI, the Omphalos (“navel”), that reposed in the Temple of APOLLO there and supposedly marked the exact center of the earth. A second stone at Delphi was said to have been the

An example of a baetylus, the Omphalos at Delphi, ancient marble copy of an original now lost; in the Archaeological Museum, Delphi, Greece
Alinari—Art Resource

one that CRONUS, the TITAN, swallowed; it was thought to be ZEUS himself in his symbolic, or baetylic, form.

Sometimes the stones were formed into pillars or into groups of three pillars. Such columns were sometimes placed before a shrine; others were used as mileposts and often shaped into human form. The baetylus became the parent form for altars and iconic statuary.

BAHĀ’Ī FAITH \bə-ˈhī, bə-, religion founded in Iran in the mid-19th century by Mīrzā Ḥoseyn ‘Alī Nūrī, who is known as BAHĀ’ ULLĀH (Arabic: “Glory of God”). The cornerstone of Bahā’ī belief is the conviction that Bahā’ Ullāh and his forerunner, who was known as the BĀB, were manifestations of God, who in his essence is unknowable. Bahā’īs believe that all the founders of the world’s great religions have been manifestations of God and agents of a progressive divine plan for the education of the human race. Bahā’ Ullāh’s peculiar function was to overcome the disunity of religions and establish a universal faith. Bahā’īs believe in the oneness of humanity and devote themselves to the abolition of racial, class, and religious prejudices. Bahā’ī teaching is chiefly concerned with social ethics; the religion has no PRIESTHOOD and observes no formal SACRAMENTS in its worship.

The Bahā’ī religion originally grew out of BĀBISM, which was founded in 1844 by Mīrzā ‘Alī Muhammad of Shīrāz in Iran. He predicted the appearance of a new prophet or messenger of God who would overturn old beliefs and customs and usher in a new era; these beliefs originated within the SHĪ’ITE sect of ISLAM, which believed in the forthcoming return of the 12th IMAM (successor of MUHAMMAD), who would renew religion and guide the faithful. Mīrzā ‘Alī Muhammad assumed the title of the Bāb (Arabic: “Gateway”), and soon his teachings spread throughout Iran, provoking strong opposition from both the Shi’ite authorities and the government. The Bāb was arrested, incarcerated, and executed in 1850. Large-scale persecutions of his adherents, the Bābīs, followed and ultimately cost 20,000 lives.

One of the Bāb’s earliest disciples and strongest exponents was Mīrzā Ḥoseyn ‘Alī Nūrī, who had assumed the name of Bahā’ Ullāh. Bahā’ Ullāh was arrested in 1852 and jailed in Tehrān, Iran. He was released in 1853 and exiled to Baghdad, where his leadership revived the Bābī community. In 1863, shortly before being moved by the Ottoman government to Constantinople, Bahā’ Ullāh declared that he was the messenger of God foretold by the Bāb. An overwhelming majority of Bābīs acknowledged his claim and thenceforth became known as Bahā’īs. Bahā’ Ullāh was subsequently confined by the Ottomans in Adrianople (now Edirne, Turkey) and then in Acre in Palestine (now ‘Akko, Israel). Before Bahā’ Ullāh died in 1892, he appointed his eldest son, ‘Abd ol-Bahā (1844–1921), to be the leader of the Bahā’ī community and the authorized interpreter of his teachings. ‘Abd ol-Bahā actively administered the movement’s affairs and spread Bahā’ism to North America, Eu-

rope, and other continents. He appointed his eldest grandson, SHOĠHI EFFENDI RABBĀNĪ (1897–1957), as his successor. The Bahā'ī faith underwent a rapid expansion beginning in the 1960s, and by the late 20th century it had a worldwide representation comprised of more than 150 national spiritual assemblies (national governing bodies) and about 20,000 local spiritual assemblies. After an Islamic revolutionary government came to power in Iran in 1979, the 300,000 Iranian Bahā'īs there again fell victim to state-sanctioned persecution.

The writings and spoken words of the Bāb, Bahā' Ullāh, and 'Abd ol-Bahā form the SCRIPTURES of the Bahā'ī faith. Membership in the Bahā'ī community is open to all who profess faith in Bahā' Ullāh and accept his teachings. Every Bahā'ī is under the obligation to pray daily; to abstain from narcotics, alcohol, or any substances that affect the mind; to practice monogamy; to obtain the consent of parents to marriage; and to attend the Nineteen Day Feast on the first day of each month of the Bahā'ī calendar. If capable, those between the ages of 15 and 70 are required to fast from sunrise to sunset for 19 days each year. The Nineteen Day Feast, originally instituted by the Bāb, brings together the Bahā'īs of a given locality for prayer and the reading of scriptures. The feasts are designed to ensure universal participation in the affairs of the community and the cultivation of the spirit of brotherhood and fellowship. In Bahā'ī temples there is no preaching; services consist of recitation of the scriptures of all religions.

The Bahā'īs use a calendar established by the Bāb and confirmed by Bahā' Ullāh, in which the year is divided into 19 months of 19 days each, with the addition of 4 intercalary days (5 in leap years). The year begins on the first day of spring, March 21, which is one of several holy days in the Bahā'ī calendar.

The governance of the Bahā'ī community begins on the local level with the election of a local SPIRITUAL ASSEMBLY. The local assembly has jurisdiction over all affairs of the Bahā'ī community. Each year Bahā'īs elect delegates to a national convention that elects a national spiritual assembly with jurisdiction over Bahā'īs throughout an entire country. Periodically an international convention of national spiritual assemblies elects a supreme governing body known as the Universal House of Justice, which was established in 1963. This body applies the laws promulgated by Bahā' Ullāh and legislates on matters not covered in the sacred texts. The seat of the Universal House of Justice is in Haifa, Israel, in the immediate vicinity of the shrines of the Bāb and 'Abd ol-Bahā, and near the shrine of Bahā' Ullāh at Bahjī near 'Akko.

There are also appointive institutions, such as the continental counselors, and, at one time, the Hands of the Cause of God. The original members of the Hands of the Cause of God were appointed by Bahā' Ullāh and then by Shoghi Effendi. In 1973 the functions of the Hands of the Cause were taken over by the International Teaching Center. This group and the continental counselors are both appointed by the Universal House of Justice.

BAHĀ' ULLĀH \bə-'hā-ül-'lā\, also spelled Bahā' Allāh \bə-'hā-al-'lā\ (Arabic: "Splendor of God"), original name (Persian) Mīrzā Ḥoseyn 'Alī Nūrī, (b. Nov. 12, 1817, Tehran, Iran—d. May 29, 1892, Acre, Palestine [now 'Akko, Israel]), founder of the BAHĀ'Ī FAITH; he claimed to be the manifestation of the unknowable God.

Mīrzā Ḥoseyn was a member of the SHĪ'ITE branch of ISLAM. He subsequently allied himself with Mīrzā 'Alī Mu-

hammad of Shīrāz, who was known as the BĀB (Arabic: "Gateway") and was the head of the Bābis, a Muslim sect professing a privileged access to final truth. After the Bāb's execution by the Iranian government for treason (1850), Mīrzā Ḥoseyn joined Mīrzā Yaḥyā (also called Ṣoḥḥ-e Azal, his own half brother and the Bāb's spiritual heir, in directing the Bābi movement. Mīrzā Yaḥyā later was discredited, and Mīrzā Ḥoseyn was exiled by orthodox SUNNI Muslims successively to Baghdad, Kurdistan, and Constantinople (Istanbul). There, in 1867, he publicly declared himself to be the divinely chosen *imām* MAHDĪ ("rightly guided leader"), whom the Bāb had foretold. The resulting factional violence caused the Ottoman government to banish Mīrzā Ḥoseyn to Acre.

At Acre, Bahā' Ullāh, as he was by then called, developed the formerly provincial Bahā'ī doctrine into a comprehensive teaching that advocated the unity of all religions and the universal brotherhood of man. Emphasizing social ethics, he eschewed ritual worship and devoted himself to the abolition of racial, class, and religious prejudices. His place of confinement in Acre became a center of pilgrimage for Bahā'ī believers from Iran and the United States.

BAHINĀBĀI, BAHINI \bə-'hi-nā-'bā-ē\ (b. 1628 CE, Devago, in the Indian state of Maharashtra—d. 1700, Bahinābāi), poet-saint (*sant*), remembered as a composer of devotional songs (*abhangas*) in Marathi to the Hindu deity Viṭṭhal. Her work is preserved through oral performance (KĪRTAN), old handwritten manuscripts, and modern printed collections. Bahinābāi, in her autobiographical songs, describes herself as a devotee of another Marathi saint, TUKĀRĀM (1608–1649 CE), whom she met when her maternal family and her husband, a Brahmin astrologer, lived near Tukārām's village of Dehu. Bahinābāi (whose given name means "sister") records that her husband violently opposed her association with Tukārām because of Tukārām's low caste (ŚŪDRA). Her songs from this period describe her feeling of abandonment by her God and her struggle to perpetuate her faith; she also criticizes Brahmins who have lost their faith and, in a series of songs, defines a "Brahmin" as a person of good works and sincere devotion, regardless of caste. Though Bahinābāi's husband partially relented later, her contact with Tukārām occurred only in dreams, visions, and brief observances of his religious performances. Bahinābāi's verses both attack and defend a wife's duties (*strī-dharma*) in her community, exploring the struggle between those duties and her desire to follow Tukārām's spiritual example. Bahinābāi's songs suggest that she was very familiar with the BHAGAVAD GĪTĀ and UPANISHADS, as well as VEDĀNTA and SAMKHYĀ schools of thought, though she was most likely unable to read or to write. The transcription of her verses into old handwritten manuscripts is said to have begun with her son, Viṭhobā, who wrote them down from memory after her death.

BAHYA BEN JOSEPH IBN PAKUDA \bə-'yā-ben-'jō-səf-,i-bən-pā-'kü-dā, -'jō-zəf-\ (fl. second half of the 11th century), *dayyan*—i.e., judge of a rabbinical court—in Muslim Spain and author of a highly influential work of ethical guidance.

Via the Islamic mystics (see SUFISM), Bahya was influenced by NEOPLATONISM as to the nature of God and the soul's quest for him. From the Islamic system of dialectical theology called KALĀM he borrowed proofs for the existence of God. About 1080 Bahya wrote *Al-Hidāyah ilā-farā id al-qulūb* ("Duties of the Heart"). Critical of his predecessors who had emphasized the "duties of the body," or obligatory

BALAAM

outward actions such as religious ritual and ethical practice, Bahya looked to the “duties of the heart,” the attitudes and intentions that determine the state of a person’s soul and alone give value to one’s acts. In an inaccurate 12th-century translation into Hebrew by JUDAH BEN SAUL IBN TIBBON, *Hovot ha-levavot*, it became a classic of Jewish philosophic and devotional literature. An English translation, *Duties of the Heart* (1925–47; reprinted 1962), was completed by Moses Hyamson.

BALAAM \ˈbā-ləm \, non-Israelite prophet described in the OLD TESTAMENT (Numbers 22–24) as a diviner who is urged by Balak, the king of Moab, to place a curse on the people of ISRAEL. Balaam states that he will utter only what his god YAHWEH inspires, but he is willing to accompany the MOABITE messengers to Balak. He is met en route by an ANGEL of Yahweh, who is recognized only by Balaam’s ass, which refuses to continue. Then Balaam’s eyes are opened, and the angel permits him to go to Balak but commands him not to curse but to bless Israel. Despite pressure from Balak, Balaam remains faithful to Yahweh and blesses the people of Israel. In later literature (the Second Letter of Peter 2:15), however, Balaam is held up as an example of one who apostasized for the sake of material gain. In RABBINIC JUDAISM, some RABBIS venerate Balaam as a prophet comparable to MOSES (Numbers Rabbah 20:1, Tanha, Balak 1; SIFRE TO DEUTERONOMY), while others remember him as evil, haughty, and proud (Avot 5:19) and cite him as the reason the HOLY SPIRIT departed from the GENTILES. There is conjecture that Balaam represents JESUS in Haggadic (see HALAKHAH AND HAGGADAH) literature.

BALARĀMA \,bə-lə-ˈrā-mə \, in Hindu mythology, elder half-brother of KRISHNA. Sometimes Balarāma is considered one of the 10 AVATARS (incarnations) of the god VISHNU, one of the “three RĀMAS” alongside Paraśhurāma (Rāma with an axe) and Rāmacandra (hero of the RĀMĀYANA epic). Other legends identify him as the incarnation in human form of the serpent Śeṣa, and he may originally have been an agricultural deity. As early as the 2nd–1st century BCE he is depicted holding a plowshare and a pestle with a snake canopy above his head. In this early period he seems to appear in sculpture at least as frequently as Krishna himself. In paintings Balarāma is always shown with fair skin, in contrast to Krishna’s blue complexion. The stories associated with him emphasize his love of wine and his enormous strength.

BALDER \ˈbəl-dər, ˈbäl-\, *Old Norse* Baldr, in Norse mythology (see GERMANIC RELIGION), the son of ODIN and FRIGG. Beautiful and just, he was the favorite of the gods. The Icelandic scholar Snorri (c. 1220) relates in his EDDA how the gods amused themselves by throwing objects at him, knowing that he was immune from harm. However, the blind god Höd, deceived by the evil LOKI, killed Balder by hurling mistletoe, the only thing that could hurt him. The giantess Thökk, probably Loki in disguise, refused to weep the tears that would release Balder from Hell.

Some scholars believe that the passive, suffering figure of Balder was influenced by that of Christ. The Danish historian Saxo Grammaticus (c. 1200), however, depicts him as a warrior engaged in a feud over the hand of a woman.

BALL GAME, in PRE-COLUMBIAN MESO-AMERICAN cultures, ceremonial contest not unlike modern soccer. The object of the game was to propel a gutta-percha ball through the air without touching it with the hands; if it went through a

Mayan ball court from c. 775 CE, in Copán, Honduras
Imgard Groth

small hole in the carved stone disk, or hit that circular goal, the game was won. Tremendous exchanges of personal property resulted from such a victory—indeed, often life itself was forfeit in important contests. See TLACHTLI.

BALOR \ˈbā-lər \, in Celtic mythology, chief of the chaotic race of FOMOIRE—the demonic race that threatened the Irish people until they were subdued in the second great battle of MAG TUIRD (Moytura). When Balor was a boy, he looked into a potion being brewed by his father’s DRUIDS, and the fumes caused him to grow a huge, poisonous eye. The eye had to be opened by attendants, and it killed anything on which it gazed. Balor was eventually killed by his grandson, the god LUGUS (Lugh), in the climactic battle between the TUATHA DÉ DANANN, or race of gods, and the Fomoiré.

BALTIC RELIGION, beliefs and practices of the Balts, ancient inhabitants of the Baltic region of eastern Europe.

The study of Baltic religion has developed as an offshoot of the study of Baltic languages, in some respects the most conservative modern Indo-European language family. Just as these languages—Old Prussian, Latvian, and Lithuanian—correlate closely with the ancient Indian language Sanskrit, so does Baltic religion exhibit many features that conform to Vedic (ancient Indian) and Iranian ideas. Thus Baltic religious concepts help in the understanding of the formation and structure of the oldest phases of Indo-European religion.

The most important divinities in Baltic religion were the sky gods—DIEVS (the personified sky), PĒRKONS (the Thunderer), SAULE (the sun [female]), and MĒNESS (the moon [male]). A forest divinity, common to all Baltic peoples, is called in Latvian *Meža māte* and in Lithuanian *Medeinė* (“Mother of the Forest”). She again has been further differentiated into other divinities, or rather she was also given metaphorical appellations with no mythological significance, such as *Krūmu māte* (“Mother of the Bushes”), *Lazdu māte* (“Mother of the Hazels”), *Lapu māte* (“Mother of the Leaves”), *Ziedu māte* (“Mother of the Blossoms”), and even *Sēņu māte* (“Mother of the Mushrooms”). Forest animals are ruled by the Lithuanian *Žvėrinė* opposed to the Latvian *Meža māte*. The safety and welfare of buildings is cared for by the Latvian *Mājas gars* (“Spirit of the House”; Lithuanian *Kaukas*), the Latvian *Pirts māte* (“Mother of the Bath-

house"), and additionally Rijas māte ("Mother of the Threshing House").

There are a large number of beautifully described lesser mythological beings whose functions are either very limited or completely denoted by their names. Water deities are Latvian Jūras māte ("Mother of the Sea"), Ūdens māte ("Mother of the Waters"), Upes māte ("Mother of the Rivers"), and Bangu māte ("Mother of the Waves"; Lithuanian Bangpūtys), while atmospheric deities are Latvian Vēja māte ("Mother of the Wind"), Lithuanian Vėjopatis ("Master of the Wind"), Latvian Lietus māte ("Mother of the Rain"), Miglas māte ("Mother of the Fog"), and Sniega māte ("Mother of the Snow"). Even greater is the number of beings related to human activities, whose names only are still to be found, for example Miega māte ("Mother of Sleep") and Tirgus māte ("Mother of the Market").

Also important was the goddess of destiny or luck, LAIMA. The real ruler of human fate, she is mentioned frequently together with Dievs in connection with the process of creation. Although Laima determines a man's unchangeable destiny at the moment of his birth, he can still lead his life well or badly within the limits prescribed by her. She also determines the moment of a person's death.

The Devil, VELNS (Lithuanian Velnias), has a well-defined role. He is commonly represented as stupid, and Baltic FOLKLORE often represents the Devil as a German landlord. Another evil being is the Latvian Vilkacis, Lithuanian Vilkatas, who corresponds to the werewolf in the traditions of other peoples. The belief that the dead do not leave this world completely is the basis for both good and evil spirits. As good spirits the dead return to the living as invisible beings (Latvian *velis*, Lithuanian *vėlė*), but as evil ones they return as persecutors and misleaders (Latvian *vadātājs*, Lithuanian *vaidilas*).

The primary themes of Baltic mythology as it survives in folklore are the structure of the world and the enmity between Saule and Mēness. The four-line folk songs called *dainas*, which resemble Vedic verses, portray the world in dualistic terms, mentioning *šī saule* (literally "this sun"; metaphorically ordinary everyday human life) and *viņa saule* (literally "the other sun"; metaphorically the invisible world where the sun goes at night, which is also the abode of the dead). The notion of a sun tree, or WORLD TREE, is one of the most important cosmic concepts. This tree grows at the edge of the path of Saule, who in setting hangs her belt on the tree in preparation for rest. It is usually considered to be an oak but is also described as a linden or other kind of tree. The tree is said to be located in the middle of the world ocean or generally to the west.

Excavations have revealed circular wooden temples, approximately 15 feet in diameter, and a statue of a god may have been erected in the center. The existence of open-air holy places or sites of worship among the Balts is confirmed by both the earliest historical documents and folklore. Such places were holy groves, called ALKA in Lithuanian. Later the word came to mean any holy place or site of worship (Lithuanian *alkvietė*). The usual sites were little hills, where the populace gathered and sacrificed during holy festivals. Another important ritual site was the bathhouse, in which birth ceremonies and funerals were performed. Various places in the home were considered to be abodes of spirits, and each work site had its GUARDIAN SPIRIT, to whom sacrifices were offered.

Special rites evolved for the festivals of the summer solstice and the harvest and for beginning various kinds of spring work. Such spring work included sending farm ani-

mals to pasture or horses to forage for the first time, plowing the first furrow, and starting the first spring planting. The birth of a child was especially noted. Laima was responsible for both mother and child. One birth rite, called *pirtīžas*, was a special sacral meal in which only women took part. Marriage rites were quite extensive and corresponded closely to similar Old Indian ceremonies. Fire and bread had special importance and were taken along to the house of the newly married couple.

BANARAS: see VARANASI.

BANĀRSĪDĀS \bə-nār-sē-'dās\ (b. 1586—d. 1643), Jain mystic and poet (see JAINISM) who is credited with writing one of the first autobiographies in India, his *Ardhakathānaka*, or "Half a Tale." It is invaluable for information on daily life in urban north India during Mughal times.

Banārsīdās was born into a family of ŚVETĀMBARA Jain merchants in Agra. As a youth he was a libertine and an author of erotic Hindi verses. At age 19 he underwent a change, eventually becoming a wealthy merchant who followed all the forms of ritual and personal conduct expected of a pious, upright Jain. At age 35 he underwent another change, this time rebelling against all outward ritual forms, which he came to see as empty of any spiritual meaning. He was drawn toward a group of laymen, of a generally DIGAMBARA leaning, known as Adhyātma ("Innermost Soul"), who engaged in study and discussion of spiritual matters. This group also rejected the authority of all monks. In this context he was introduced by a Digambara lay scholar to the 9th-century *Gommaṣasāra* of Nemicandra, which explained the 14-rung (GUNASTHĀNA) path to liberation. This allowed Banārsīdās to re-accept image worship and other outward forms of ritual as lower stages on the spiritual ladder. He also encountered the *Samayasāra* of the 2nd–3rd century Digambara mystic KUNḌAKUNḌA, which explains a two-truth vision of reality as perceived from the worldly (*vyavahāra*) and absolute (*nīścaya*) perspectives. Banārsīdās wrote a Hindi version of it. He became a leader of the Adhyātma movement. While the movement itself died out within a century of Banārsīdās, its principles live on in the Digambara Terāpantha, which is still an influential sect in north India.

BANDĀ SINGH BAHĀDUR \bən-'dā-'siŋ-gə-'bə-hā-dər, -'siŋ-bə-'hā-dūr\ (b. 1670, Pūnch, India—d. June 1716, Delhi), in SIKHISM, first military leader to wage an offensive war against the Mughal rulers of India, thereby temporarily extending Sikh territory. Information about Bandā Singh's early life is scant. In his early life, he became a Vaiṣṇava ascetic. In 1708, GURŪ GOBIND SINGH met him in Nānded, a town on the banks of the Godāvarī River in southern India, baptized him as a KHĀLSĀ Sikh, and named him Bandā Singh. The Gurū sent Bandā Singh to the Punjab with the specific directive that he organize the Sikhs. It was under his command that they captured Sirhind, the most powerful Mughal garrison between Delhi and Lahore, in 1710.

Bandā Singh established his capital in nearby Mukhlispur ("city of the purified"), created an official seal, and struck new coins. The inscriptions on the seal and the coins indicate that Bandā Singh regarded ultimate authority as being vested with God and the Gurūs. Some years later Mughal forces ousted Bandā Singh from the Sirhind area, chased his army into the Shivalik hills, and eventually captured him in the Gurdāspur area. Along with several hundred men, Bandā Singh was taken to Delhi, where he was executed.

His military achievements earned him the epithet Bahādūr ("brave"), and emblazoned on the Sikh imagination that it was the prerogative of the Khālṣā Sikh to rule the Punjab.

BANNĀ', ḤASAN AL- \ˈhā-sān-āl-bā-ˈna\ (b. 1906, Mahmu-dīya, Egypt—d. February 1949, Cairo), Egyptian political and religious leader who established a new religious society, the MUSLIM BROTHERHOOD, and played a central role in Egyptian political and social affairs.

After attending the teaching school at Damanhūr, Ḥasan al-Bannā' enrolled at the Dār al-'Ulūm, a teacher-training school in Cairo, which also maintained a traditional religious and social outlook. He completed his training and in 1927 was assigned to teach Arabic in a primary school in the city of Ismailia (Al-Ismā'īliya), near the Suez Canal, which was a focal point for the foreign economic and military occupation of Egypt. In March 1928, with six workers from a British camp labor force, he created the Society of Muslim Brothers (Arabic: al-Ikhwān al-Muslimūn), which aimed at a rejuvenation of ISLAM, the moral reform of Egyptian society, and the expulsion of the British from Egypt. By the advent of World War II the Muslim Brotherhood had become a potent element on the Egyptian scene, attracting significant numbers of students, civil servants, and urban laborers.

Many of the members came to view the Egyptian government as having betrayed the interests of Egyptian nationalism. Ḥasan al-Bannā' tried to maintain a tactical alliance with the government, but in the turmoil of the postwar years many elements of the society passed beyond his authority, and members were implicated in a number of assassinations, notably that of Prime Minister an-Nuqrāshī in December 1948. With the connivance of the government, Ḥasan al-Bannā' himself was assassinated in the following year.

BAPTISM, in CHRISTIANITY, the SACRAMENT of regeneration and initiation into the Christian church; the word derives from the Greek verb *baptō*, "I dip, immerse." According to a theme of ST. PAUL THE APOSTLE, probably influenced by Jewish belief in the CIRCUMCISION of adult proselytes, baptism is death to a former life and the emergence of a new person, signified by the conferring of a new name; it is the total annulment of the SINS of one's past, from which one emerges a totally innocent person. At baptism, one becomes a member of the church and is incorporated into the body of JESUS CHRIST. The forms and rituals of the various churches vary, but baptism almost invariably involves the use of water and the Trinitarian invocation, "I baptize you: In the name of the Father, and of the Son, and of the HOLY SPIRIT." The candidate may be wholly or partly immersed in water, the water may be poured over the head of the one baptized, or a

Baptism in the Cathedral of Oaxaca, Mexico

Kathy Sloane—Photo Researchers

few drops may be sprinkled or placed on the head.

Ritual immersion has traditionally played an important part in JUDAISM, as a symbol of purification (in the MIKVAH, a RITUAL BATH) or as a symbol of consecration (in rituals of conversion, accompanied by special prayers). It was particularly significant in the rites of the ESSENES. According to the Gospels, ST. JOHN THE BAPTIST baptized Jesus Christ. Although there is no actual account of the institution of baptism by Jesus, the Gospel According to Matthew portrays the risen Christ issuing the "Great Commission" to his followers: "Go therefore and make disciples of all nations, baptizing them in the name of the Father and of the Son and of the Holy Spirit, teaching them to observe all that I have commanded you." Elsewhere in the NEW TESTAMENT, however, this formula is not used. Some scholars thus suggest that the quotation in Matthew reflects a tradition formed by a merging of the idea of spiritual baptism (as in Acts 1:5), early baptismal rites (as in Acts 8:16), and reports of PENTECOSTALISM after such rites (as in Acts 19:5–6).

Baptism occupied a place of great importance in the Christian community of the 1st century, but scholars disagree over whether it was to be regarded as essential to the new birth and to membership in the KINGDOM OF GOD or only as an external sign or symbol of inner regeneration. By the 2nd century, the irreducible minimum for a valid baptism appears to have been the use of water and the invocation of the TRINITY. Usually the candidate was immersed three times, but there are references to pouring as well. Most of those baptized in the early church were converts from Greco-Roman religions and therefore were adults.

In Catholicism, baptism is normally conferred by a priest, but the church accepts the baptism conferred by anyone having the use of reason "with the intention of doing what the church does." As the sacrament of rebirth it cannot be repeated. (In ROMAN CATHOLICISM, baptism is con-

ducted conditionally in case of doubt of the fact of baptism or the use of the proper rite.)

Two points of controversy still exist in modern times. One is baptism by pouring rather than immersion, even though immersion was probably the biblical and early Christian rite. The second is the baptism of infants. There is no certain evidence of this earlier than the 3rd century, and the ancient baptismal liturgies are all intended for adults. The liturgy and the instructions clearly assume an adult who accepts the rite; without this decision the sacrament cannot be received. The Roman Catholic church accepts this principle by introducing adults (GODPARENTS), who make the decision for the infant at the commission of the parents. It is expected that the children will accept the decision made for them and will thus supply the adult decision that was presumed.

During the REFORMATION the Lutherans, Reformed, and Anglicans accepted the Catholic attitude toward infant baptism. Baptism was, however, one of the most dramatic points differentiating radical reformers (such as the ANABAPTISTS) from the rest of PROTESTANTISM. Michael Sattler (c. 1500–27), MENNO SIMONS, and Balthasar Hubmaier (1485–1528) led the opposition to infant baptism.

In modern times the largest Christian groups that practice adult rather than infant baptism are the BAPTISTS and the Christian Church (DISCIPLES OF CHRIST).

BAPTIST, member of a group of Protestant Christians who share most of the basic beliefs of PROTESTANTISM but who hold as an article of faith that only believers should be baptized and that it must be done by immersion. The Baptists do not constitute a single church or denominational structure, but most of them adhere to a congregational form of church government.

Two groups of Baptists emerged in England during the PURITAN reform movement of the 17th century. While sharing the view that only believers should be baptized, the two groups differed with respect to the nature of the ATONEMENT of JESUS. Those who regarded the atonement as general (*i.e.*, for all persons) came to be called General Baptists. Those who interpreted it as applying only to the particular body of the ELECT acquired the name Particular Baptists.

The General Baptists trace their beginnings to the Baptist church founded in London c. 1611 by THOMAS HELWYS and his followers. They had returned from Amsterdam, where they had gone because of religious persecution. While in Amsterdam, they adopted the beliefs of their original leader JOHN SMYTH, who, by studying the NEW TESTAMENT, decided that only believers should be baptized. Through the work of the original London congregation, other General Baptist congregations were formed and the movement spread. In doctrine they followed ARMINIANISM. In the late 17th and 18th centuries, the General Baptists declined in numbers and influence. Churches closed and many members gravitated toward UNITARIANISM. The General Baptists were continued by a new group organized in 1770, the New Connection General Baptists, who had been influenced by the Methodist revival led by JOHN WESLEY (*see* METHODISM).

Particular Baptists originated with a Baptist church established in 1638 by two groups who left an Independent church (*i.e.*, churches not in communion with the Church of England) in London. Members of the new church believed that only believers (not infants) should be baptized. Doctrinally, they followed CALVINISM, which holds to the doctrine of a particular atonement, *i.e.*, that Christ died only for the elect (*see* PREDESTINATION).

The Particular Baptists grew more rapidly than the General Baptists, but growth subsequently slowed as the Particular Baptists emphasized their doctrine of salvation only for the elect and did not work to gain new members. After 1750, however, they were influenced by the Methodist movement, and new interests in evangelism and MISSIONS brought about renewed growth. Through the leadership of William Carey, the English Baptist Missionary Society was organized in 1792, and Carey went to India as the society's first missionary. Baptists were influential in the religious and political life of Great Britain in the 19th century, but membership and influence declined after World War I.

Baptist origins in the United States can be traced to ROGER WILLIAMS, who established a Baptist church in Providence in 1639 after being banished by the Puritans from Massachusetts Bay. Williams soon left and leadership passed to John Clarke. Though Rhode Island remained a Baptist stronghold, the center of Baptist life in colonial America was Philadelphia.

Baptist growth was spurred by the GREAT AWAKENING of the mid-18th century. Increases were especially dramatic in the Southern colonies, where Shubael Stearns established a church at Sandy Creek, N.C., in 1755. From this center revivalistic preachers fanned out across the southern frontier, establishing a Baptist dominance in the region that persists to the present. The membership of revivalistic Baptists continued to grow rapidly in the 19th century, assisted by lay preachers and a congregational church government well adapted to frontier settings.

Baptists in the United States were not united in a national body until 1814, when an increasing interest in foreign missions necessitated a more centralized organization. The General Convention was soon torn apart, however, by disension over slavery. A formal split occurred in 1845 when the Southern Baptist Convention was organized in Augusta, Ga., and was confirmed when the Northern Baptist Convention was organized in 1907. Southern Baptists and Northern Baptists (later American Baptists) developed distinct regional characteristics following the Civil War and still exhibit different tendencies in theology, ecumenical involvement, missionary activity, and worship.

African Baptist churches, now grouped primarily in two large conventions, constitute another major segment of Baptists in the United States. Organized by freed slaves after the Civil War, these churches have often served as the social and spiritual center of the African-American community. African-American Baptist churches and ministers, led by MARTIN LUTHER KING, JR., played a significant role in the Civil Rights movement of the 1960s. These churches and ministers continued as vital elements of organization through the 1980s, as was evident in the presidential candidacies (1984, 1988) of JESSE JACKSON.

Baptists maintain that authority in matters of faith and practice rests, under Christ, with the local congregation of baptized believers. These local congregations are linked voluntarily into state, regional, and national organizations for cooperative endeavors such as missions, education, and philanthropy. The larger organizations, however, have no control over the local churches. The separation of CHURCH AND STATE has historically been a major tenet of Baptist doctrine. Baptist worship is centered around the exposition of the SCRIPTURES in a sermon. Extemporaneous prayer and hymn-singing are also characteristic.

Baptists in the 20th century have provided leadership for diverse theological movements, notably WALTER RAUSCHENBUSCH in the SOCIAL GOSPEL movement, Harry Emerson Fos-

dick and Shailer Mathews in American MODERNISM, and BILLY GRAHAM in contemporary Evangelicalism.

BARAITA \bə-ˈrī-tə\ (Hebrew: “Outside Teaching”), plural Baraitot \bə-ˈrī-ˈtōt\, any of the ancient ORAL TRADITIONS of Jewish religious law that were not included in the MISHNAH attributed to Tannaite authorities. The Baraitot, dispersed singly throughout the YERUSHALMI (Palestinian) and BAVLI (Babylonian) talmuds, are often recognizable by such introductory words as “it was taught” or “the RABBI taught.” Since the Mishnah was selective and concisely phrased, Baraitot preserved oral traditions of Jewish law that might otherwise have been lost.

BARCLAY, ROBERT \ˈbär-klē, -klä\ (b. Dec. 23, 1648, Gordonstoun, Moray, Scot.—d. Oct. 3, 1690, Ury, Aberdeen), leader of the SOCIETY OF FRIENDS (Quakers) whose *Apology for the True Christian Divinity* (1678) became a standard statement of Quaker doctrines.

After returning to Scotland from his education in Paris, Barclay joined the Society of Friends in 1666. For a public debate at Aberdeen in 1675, he published *Theses Theologicae*, a set of 15 propositions of the Quaker faith. To amplify them further, he published the *Apology* three years later. This early and enduring exposition of Quaker beliefs defined Quakerism as a religion of the “inner light”—that light being the HOLY SPIRIT within the believer.

In 1677 Barclay and other Quaker leaders, including William Penn (1644–1718), visited Holland and northern Germany to promote the Quaker movement. Repeatedly imprisoned and persecuted at home, Barclay and Penn found a friend in James II, then duke of York. Their influence with him helped secure a patent for themselves and 10 other society members to settle in that area of present-day New Jersey, then called East Jersey. The group emigrated to America in 1682. After serving from 1682 to 1688 as nominal governor of East Jersey, Barclay returned to Scotland and died at his estate at Ury.

BARDESANES \,bär-də-ˈsā-nēz\, also called Bardaisan, or Bar Daiṣān \,bär-dī-ˈsän\ (b. July 11, 154, Edessa, Syria [now Urfa, Turkey]—d. c. 222, Edessa), a leading representative of Syrian GnosticisM. Bardesanes was a Christian missionary in Syria after his conversion in 179.

His chief writing, *The Dialogue of Destiny, or The Book of the Laws of the Countries*, recorded by a disciple, Philip, is the oldest known original composition in Syriac literature. Bardesanes attacked the fatalism of the Greek philosophers after Aristotle (4th century BCE), particularly regarding the influence of the stars on human destiny. Mingling Christian influence with Gnostic teaching, he denied the creation of the world, of SATAN, and of evil by the supreme God, attributing them to a hierarchy of deities.

Aided by his son Harmonius, Bardesanes wrote many of the first Syriac hymns to popularize his teachings. Their literary value earned for him renown in the history of Syriac poetry and music.

BAR KOKHBA \,bär-ˈkōk-bä\, original name Simeon bar Kosba, Kosba also spelled Koseba, Kosiba, or Kochba (d. 135 CE), Jewish leader who led an unsuccessful revolt (132–135 CE) against Roman dominion in Palestine.

In 131 the Roman emperor Hadrian decided upon a policy of Hellenization to integrate the Jews into the empire. CIRCUMCISION was proscribed, a Roman colony (Aelia) was founded in Jerusalem, and a temple to JUPITER Capitolinus

was erected over the ruins of the TEMPLE OF JERUSALEM. The Jews rebelled in 132, Simeon bar Kosba at their head. He was reputedly of Davidic descent, and a 4th-century story alleges that he was hailed as the MESSIAH by the greatest RABBI of the time, AKIBA BEN JOSEPH, who gave him the title Bar Kokhba (“Son of the Star”), a messianic allusion. Bar Kokhba took the title *nasi* (“prince”) and struck his own coins, with the legend “Year 1 of the liberty of Jerusalem.”

The Jews took Aelia by storm and badly mauled the Romans’ Egyptian Legion, XXII Deiotariana. In the summer of 134 Hadrian himself visited the battlefield and summoned the governor of Britain, Gaius Julius Severus, to his aid with 35,000 men of the Xth Legion. Jerusalem was retaken, and Severus gradually wore down and constricted the rebels’ area of operation, until in 135 Bar Kokhba was himself killed at Betar, his stronghold in southwest Jerusalem. The remnant of the Jewish army was soon crushed; Jewish war casualties are recorded as numbering 580,000, not including those who died of hunger and disease. Judaea was desolated, the remnant of the Jewish population annihilated or exiled, and Jerusalem barred to Jews thereafter.

In 1952 and 1960–61 a number of Bar Kokhba’s letters to his lieutenants were discovered in the Judean desert.

BARMEN, SYNOD OF \ˈbär-mən\, meeting of German Protestant leaders at Barmen in the Ruhr, in May 1934, to organize Protestant resistance to National Socialism (Nazism). The SYNOD was of decisive importance in the development of the German CONFESSING CHURCH. Representatives came from Lutheran, Reformed, and United churches, although some of the church governments had already been captured by men loyal to Adolf Hitler, and others had decided to limit their activities to passive resistance. The Pastors’ Emergency League, headed by Martin Niemöller, was the backbone of the active resistance.

At Barmen the representatives adopted six articles, called the Theological Declaration of Barmen, or the Barmen Declaration, that defined the Christian opposition to National Socialist ideology and practice. The major theological influence was that of KARL BARTH. The declaration was cast in the classical form of the great confessions of faith, affirming major biblical teachings and condemning the important heresies of those who were attempting to accommodate CHRISTIANITY to National Socialism.

BAR MITZVAH \,bär-ˈmits-və, ,bär-mēts-ˈvə\ (Hebrew: “One who is subject to the commandment”), plural Bar Mitzvot \,bär-mēts-ˈvōt\, Jewish religious ritual and family celebration commemorating a boy’s 13th birthday—this being the age that bestows on a Jewish male responsibility to keep the commandments and allows entry into the community of JUDAISM. The boy may henceforth don PHYLACTERIES (religious symbols worn on the forehead and left arm) during the weekday-morning prayers and may be counted an adult whenever 10 male adults are needed to form a quorum (*minyan*) for public prayers.

In a public act of acknowledging religious majority, the boy is called up during the religious service to read from the TORAH. This event may take place on any occasion following the 13th birthday at which the Torah is read but generally occurs on the SABBATH.

Most elements of the Bar Mitzvah celebration did not appear until the Middle Ages. REFORM JUDAISM replaced Bar Mitzvah, after 1810, with the confirmation of boys and girls together, generally on the feast of SHAVUOT. In the 20th century, however, many Reform congregations restored the

Bar Mitzvah ceremony at the Temple of Kehilath Jeshurun, New York City

Van Bucher—Photo Researchers

Bar Mitzvah rite. A separate ceremony has been instituted within Reform and CONSERVATIVE JUDAISM, and especially in RECONSTRUCTIONIST synagogues, to mark the adulthood of girls, called Bat Mitzvah.

BARROW: *see* BURIAL MOUND.

BARTH, KARL ^ˈbärt ^ˈb. ^ˈmay ¹0, ¹886, ^ˈbäsl, ^ˈswɪts.—d. Dec. 9/10, 1968, Basel), Swiss theologian, among the most influential of the 20th century, who initiated a radical change in Protestant thought, stressing the “wholly otherness of God” over the anthropocentrism of 19th-century liberal theology.

Barth was born in Basel, the son of Fritz Barth, a professor of NEW TESTAMENT and early church history at Bern. He studied at the universities of Bern, Berlin, Tübingen, and Marburg. After serving as a pastor in Geneva from 1909 to 1911, he was appointed to the working-class PARISH of Safenwil, in Aargau canton.

The 10 years Barth spent as a minister were the formative period of his life. Deeply shocked by the disaster that had overtaken Europe in World War I and disillusioned by the collapse of the ethic of religious idealism, he questioned the liberal theology of his German teachers and its roots in the rationalist, historicist, and dualist thought aris-

ing from the Enlightenment. Through study of the teaching of St. Paul in the Epistle to the Romans, he struggled to clarify the relation between JUSTIFICATION and social righteousness, which governed all he had to say in later life about the relation of the Gospel to the power of the state and the oppression of the poor.

His first major work, *Der Römerbrief* (1919; *The Epistle to the Romans*), established his position as a notable theologian with a new message about the sheer Godness of God and the unlimited range of his GRACE. The critical and explosive nature of his theology came to be known as “dialectical theology,” or “the theology of crisis”; it initiated a trend toward neoorthodoxy in Protestant theology. On the basis of this publication, Barth in 1921 was appointed professor of theology at the University of Göttingen; he was later appointed to chairs at Münster (1925) and Bonn (1930).

In 1934 he published *Nein! Antwort an Emil Brunner* (Eng. trans., “No!” in *Natural Theology* [1946]), a response to Brunner’s essay “Nature and Grace.” In his response, Barth traced the adoption of Germanic pre-Christian elements and ANTI-SEMITISM by the German Christian movement and its perversion of historic CHRISTIANITY. With the accession of Adolf Hitler to power in 1933, Barth became deeply involved in the church struggle. He was one of the founders of the so-called CONFESSING CHURCH, which reacted vigorously against Nazi nationalist ideology and the attempt to set up a German Christian church. The famous Barmen Declaration of 1934, largely based on a draft that Barth had prepared, expressed his conviction that the only way to offer effective resistance to the secularizing and paganizing of the church in Nazi Germany was to hold fast to true Christian doctrine. Barth’s refusal to take the oath of unconditional allegiance to the Führer cost him his chair in Bonn in 1935. He was quickly offered the chair of theology in his native Basel, however. From that date until the end of the war, he continued to champion the cause of the Confessing Church, of the Jews, and of oppressed people generally. After the war and the collapse of the Third Reich, Barth was much concerned about the future of Germany, declaring that, although responsible for the disasters to themselves and to the world, the Germans now needed friends to help them become a free people.

Barth was concerned to establish the truth that God can be known only in accordance with his nature and to reject the 19th-century view that saw an identity between the Spirit of God and religious self-consciousness. Drawing on the CHURCH FATHERS and the Reformers, Barth demanded a return to the prophetic teaching of the BIBLE (in Jeremiah and the writings of ST. PAUL THE APOSTLE), of which he believed the Reformers were authentic exponents. The essence of the Christian message for Barth was the overwhelming love of the absolutely supreme, transcendent God, who comes in infinite condescension to give himself to mankind in unconditional freedom and grace.

After the war Barth continued to interest himself

Karl Barth, 1965

Horst Tappe

keenly in current theological discussion, participating in controversies regarding BAPTISM, HERMENEUTICS, “demythologizing,” and others. His authority and prestige made a profound impression when he spoke at the opening meeting of the Conference of the WORLD COUNCIL OF CHURCHES in Amsterdam in 1948. Another notable event in his later years was a visit to Rome following the SECOND VATICAN COUNCIL (1962–65), of which he wrote in *Ad limina apostolorum*.

BARZAKH, AL- \āl-ˈbār-zāk\, in Islamic belief, the period between the burial of the dead and their final judgment.

It is a widespread Muslim belief that when someone dies the ANGEL of Death (*malāk al-mawt*) arrives, sits at the head of the deceased, and addresses the soul according to its known status. According to the *Kitāb al-rūh*—(“Book of the Soul”) written in the 14th century by the Hanbali theologian Muhammad ibn Abi-Bakr ibn Qayyim al-Jawziyah—wicked souls are instructed “to depart to the wrath of God.” Fearing what awaits them, they seek refuge throughout the body and have to be extracted by the angels, who then place the soul in a hair cloth. A full record is made, and the soul is then returned to the body in the grave. “Good and contented souls” are instructed “to depart to the mercy of God.” They leave the body, are wrapped by angels in a perfumed shroud, and are taken to the “seventh heaven,” where the record is kept. These souls, too, are then returned to their bodies.

Two angels colored blue and black, known as Munkar and Nakir, then question the deceased about basic doctrinal tenets. In a sense this trial at the grave (*fitnat al-qabr*) is a show trial, the verdict having already been decided. Believers hear it proclaimed by a herald, and in anticipation of the comforts of *al-janna* (the Garden, or “paradise”) their graves expand “as far as the eye can reach.” Unbelievers fail the test. The herald proclaims that they are to be tormented in the grave; a door opens in their tomb to let in heat and smoke from *jihannam* (“hell”), and the tomb itself contracts. The period between burial and the final judgment is known as *al-barzakh*. At the final judgment (*yaum al-ḥisāb*), unbelievers and the god-fearing are alike resurrected. Both are endowed with physical bodies, with which to suffer or enjoy whatever lies in store for them.

BASAVA \ˈbɑ-sə-ˌvɑ, ˈbəs-vɑ\, also spelled Basavanna (fl. mid-12th century, Karnataka region, South India), Hindu religious reformer, teacher, theologian, and administrator of the royal treasury of the Cālukya king. Basava is the subject of the *Basava Purāṇa*, one of the sacred texts of the Hindu Vīraśaiṇava (LĪNGĀYAT) sect. According to tradition, he was the founder of the Vīraśaiṇavas, but study of Cālukya inscriptions indicates that he in fact revived an existing sect.

Basava helped to spread the Vīraśaiṇava sect by teaching and by dispersing funds to Vīraśaiṇava guilds. His uncle, a prime minister, arranged his appointment as chief of the treasury, and for several years he and his faction enjoyed a great deal of popularity. But other factions at court were apparently resentful of his power and the flourishing of Vīraśaiṇava MENDICANTS under his patronage. As a result of their accusations, he fled the kingdom, dying soon thereafter. His poetry to SHIVA as “Lord of the meeting rivers” has earned him a place at the front rank of Kannada literature and the literature of Hindu devotion (BHAKTI) generally.

BASILICA \bɑ-ˈsi-li-kə, -ˈzi-\, in ROMAN CATHOLICISM and EASTERN ORTHODOXY, canonical title of honor given to church buildings that are distinguished either by their an-

tiquity or by their role as international centers of worship because of their association with a major saint, an important historical event, or, in the Orthodox Church, a national PATRIARCH. The title gives the church certain privileges, principally the right to reserve its high altar for the POPE, a CARDINAL, or a patriarch.

In architecture, “basilica” in its earliest usage designated any number of large, roofed public buildings in ancient Rome and pre-Christian Italy. Gradually, however, the word became limited to buildings with rectangular walled structures and an open hall extending from end to end, usually flanked by side aisles set off by colonnades (in large buildings often running entirely around the central area), and with a raised platform at one or both ends. One type of smaller secular basilica had side aisles extending the length of the sides only and an apse at one end. It was this type that the early Christians adopted for their churches. A later feature, the transept, a lateral aisle crossing the nave just before the apse, created the cross-shaped plan that became standard for churches in western Europe throughout the Middle Ages.

In the typical Early Christian basilica the nave rose considerably higher than the side aisles, the wall that supported the nave roof stood above the level of the side aisle roofs and could thus be pierced at the top with windows to light the center of the church. This high nave wall is called the clerestory. The apse opened from the nave by a great arch known as the triumphal arch. After the 10th century a round or square campanile, or bell tower, was added. The exterior of such a building was simple and was rarely decorated. The simplicity of the interior, however, provided surfaces suitable for elaborate ornamentation.

The basilica plan, with its nave, aisles, and apse, remained the basis for church building in the Western church. It gradually passed out of use in the Eastern church, however, eclipsed by the radial plan on which the EMPEROR JUSTINIAN I constructed the domed cathedral of HAGIA SOPHIA at Constantinople (now Istanbul).

BASILIDES \ˈbɑ-sə-ˈli-dēz, -zə-\ (fl. 2nd century CE, Alexandria), scholar and teacher, who founded a school of Gnosticism known as the Basilidians. He probably was a pupil of Menander in Antioch, and he was teaching in Alexandria at the time of the emperors Hadrian and Antoninus Pius.

In the 3rd century CLEMENT OF ALEXANDRIA wrote that Basilides claimed to have received a secret tradition—on which he apparently based his gnosis, or esoteric knowledge—from Glaucias, an interpreter of the ST. PETER THE APOSTLE. In addition to psalms and odes, Basilides wrote commentaries on the GOSPELS and also compiled a “gospel” for his own sect; only fragments of these writings have been preserved. Contradictory accounts of Basilides’ theology have been provided by Clement, as well as by the theologians Hippolytus of Rome and SAINT IRENAEUS, though his system of belief appears to have included elements of NEO-PLATONISM, the NEW TESTAMENT, and other Gnostic systems.

Basilides was succeeded by his son, Isidore, and the Basilidian school still existed in Egypt in the 4th century. Its followers were the first to keep the day of the BAPTISM of JESUS on January 6 or 10, celebrating it with an all-night vigil.

BASIL THE GREAT, SAINT \ˈbɑ-zəl, ˈbɑ-, -səl\, Latin Basilus \bɑ-ˈsi-lē-əs, -ˈzi-\ (b. c. 329 CE, Caesarea Mazaca, Cappadocia—d. Jan. 1, 379, Caesarea; Western feast day January 2; Eastern feast day January 1), early CHURCH FATHER who defended Christian orthodoxy against ARIANISM.

Basil was born of a distinguished Christian family of Caesarea. He studied at Caesarea and Constantinople and (c. 351–356) at Athens, where he formed a friendship with Gregory of Nazianzus. On returning home he began a secular career, but the influence of his pious sister Macrina, later a NUN and ABBESS, confirmed his earlier inclination to the ascetic life. With a group of friends, he established a monastic settlement on the family estate at Annesi in Pontus.

In 357 he made an extensive tour of the monasteries of Egypt, and in 360 he assisted the Cappadocian bishops at a SYNOD at Constantinople. He had been distressed by the general acceptance of the Arian Creed of the Council of Ariminum the previous year and especially by the fact that his own bishop, Dianius of Caesarea, had supported it. Shortly before the death of Dianius (362), Basil was reconciled to him and later was ordained PRESBYTER (priest) to assist Dianius' successor, the new convert EUSEBIUS. Tensions between the men led Basil to withdraw to Annesi. In 365 Basil was called back to Caesarea, when the church was threatened by the Arian emperor Valens. His theological and ecclesiastical policy thereafter aimed to unite against Arianism the former semi-Arians and the supporters of Nicaea under the formula "three persons (*hypostases*) in one substance (*ousia*)," thus preserving both unity and the necessary distinctions in the theological concept of the godhead. On Eusebius' death in 370, Basil became his successor, although he was opposed by some of the other bishops in the province.

As bishop of Caesarea, Basil was METROPOLITAN (ecclesiastical PRIMATE of a province) of Cappadocia. He founded charitable institutions to aid the poor, the ill, and travelers. When Valens passed through Caesarea in 371, Basil defied his demand for submission. In 372 Valens divided the province, and Basil considered this a personal attack, since Anthimus of Tyana thus became metropolitan for the cities of western Cappadocia. Basil countered by installing supporters in some of the border towns—GREGORY OF NAZIANZUS at Sasima and his own brother GREGORY OF NYSSA. This tactic was only partially successful, but Basil escaped the attacks that Valens launched on orthodox bishops elsewhere.

Basil's numerous and influential writings stemmed from his practical concerns as monk, pastor, and church leader. The *Longer Rules* and *Shorter Rules* (for monasteries) and other ascetic writings distill the experience that began at Annesi: they were to exert strong influence on the monastic life of Eastern Christianity (see EASTERN ORTHODOXY). Basil's preserved sermons deal mainly with ethical and social problems. The "Address to Young Men," defends the study of classical literature by Christians (Basil himself made considerable critical use of Greek philosophical thought). "Against Eunomius" defends the deity of the Son against an extreme Arian thinker, and "On the Holy Spirit" expounds the deity of the spirit implied in the church's tradition, though not previously formally defined. Basil is most characteristically revealed in his letters, of which more than 300 are preserved. Many deal with daily activities; others are, in effect, short treatises on theology or ethics; several of his Canonical Epistles, decisions on points of discipline, have become part of the CANON LAW of the Eastern Orthodox church. The extent of

Basil's actual contribution to the magnificent series of eucharistic prayers known as the Liturgy of St. Basil is uncertain. But at least the central prayer of consecration (setting apart the bread and wine) reflects his spirit and was probably in use at Caesarea in his own lifetime.

Basil's health was poor. He died soon after Valens' death in the Battle of Adrianople had opened the way for the victory of Basil's cause.

BASMALAH \ˈbās-mā-lə\, also called *tasmiya*, in ISLAM, the formula-prayer: *bīsm Allāh al-raḥmān al-raḥīm*, "in the name of God, the Merciful, the Compassionate." This invocation, which was first introduced by the QUR'AN, appears at the beginning of every Qur'anic SŪRA (chapter) except the ninth and is frequently recited by Muslims to elicit God's blessings on their actions. The *basmalah* also introduces all formal documents and transactions and must always preface actions that are legally required or recommended. An abbreviated version precedes certain daily rituals, such as meals. Magicians often use the *basmalah* in AMULETS, claiming that the prayer was inscribed in ADAM'S side, GABRIEL'S wing, SOLOMON'S seal, and JESUS CHRIST'S tongue.

BASTET \ˈbäs-,tet, ˈbas-\, also called *Bast*, or *Ubasti*, in EGYPTIAN RELIGION, goddess worshiped in the form of a lioness, and later a cat. Bastet's nature changed after the domestication of the cat around 1500 BCE. She was native to Bubastis in the Nile River delta but also had an important cult at Memphis. In the Late and Ptolemaic periods large cemeteries of mummified cats were created at both sites, and thousands of bronze statuettes of the goddess were deposited as votive offerings. Small figures of cats were also worn as AMULETS; this too was probably related to the cult of Bastet.

Bastet is represented as a lioness or as a woman with a cat's head: she carries an ancient percussion instrument, the *sistrum*, in her right hand; a breastplate (in Bastet's case, surmounted with the head of a lioness), in her left hand; and a small bag over her left arm. She wears an elaborately ornamented dress. Her cult was carried to Italy by the Romans, and traces have been found in Rome, Ostia, Nemi, and Pompeii.

BATHSHEBA \bath-'shē-bə\, in the OLD TESTAMENT (2 Samuel 11, 12; 1 Kings 1, 2), the beautiful daughter of Eliam and wife of Uriah the Hittite. She was seduced by DAVID and became pregnant. David then had Uriah killed and married her. Their first child died, but Bathsheba later gave birth to SOLOMON. When David was dying, Bathsheba successfully conspired with the prophet Nathan to block Adonijah's succession to the throne and to win it for Solomon, after which she occupied an influential position as the queen mother.

BĀṬINIYA \,bā-tē-'nē-ə\, in ISLAM, sects—the ISMĀ'ILĪS, in particular—that interpreted religious texts exclusively on the basis of their

Statuette of Bastet, Late Period to Ptolemaic period, c. 664–30 BCE

The British Museum/Heritage-Images

hidden, or inner, meanings (Arabic: *bāṭin*). This type of interpretation gained currency about the 8th century among certain esoteric SHĪ'ITE sects, especially the schismatic Ismā'īlīs, who believed that beneath every obvious or literal meaning of a sacred text lay a secret, hidden meaning, which could be arrived at through *ta'wīl* (interpretations by ALLEGORY). They further stated that MUHAMMAD was only the transmitter of the literal word of God, the QUR'AN, but it was the IMAM (divinely inspired leader) who was empowered to interpret, through *ta'wīl*, its true, hidden meaning.

Speculative philosophy and theology eventually influenced the Bāṭinīya, though they remained always on the side of esoteric knowledge; some Sufis were also placed among the Bāṭinīya for their insistence on an esoteric body of doctrine known only to the initiate (*see* SUFISM). Although the Ismā'īlīs had always acknowledged the validity of both *bāṭin* and *ẓāhir*, about the 12th century the Nusairīs (Nuṣayrīya) and the DRUZE came to accept only the hidden meanings and exalted the imam to extraordinary heights.

SUNNI Muslim scholars condemned the Bāṭinīya for interpretations that rejected the literal meaning and accused them of producing confusion and controversy through a multiplicity of readings, thereby allowing ignorant or mischievous persons to claim possession of religious truths. The Bāṭinīya were further labeled as enemies of Islam, bent upon destroying the Sunnis' conception of the faith.

BAU \ˈbaʊ\ (Sumerian), *also called* Nininsina, *Akkadian* Gula, or Ninkarrak, in MESOPOTAMIAN RELIGIONS, city goddess of Urukug in the Lagash region and, as Nininsina, the Queen of Isin, city goddess of Isin, south of Nippur.

Bau seems originally to have been goddess of the dog; as Nininsina she was long represented with a dog's head, and the dog was her emblem, though later she became a goddess of healing. She was a daughter of An, king of the gods, and the wife of Pabilsag, a rain god who was also called NINURTA, or Ningirsu.

BĀUL \ˈbā-ʊl\ (Bengali: "Madman"), member of an order of religious singers of Bengal known for their unconventional behavior and for the spontaneity of their mystical verse. There is little detailed information about the development of the order, as their songs began to be collected and written down only in the 20th century, but it is known to have existed since the 17th century and probably has deeper roots. The membership consists of both Hindus and Muslims, and the tenor of worship is syncretic (*see* SYNCRETISM, RELIGIOUS). According to Bāul doctrine, the Supreme is manifest in active form in menstrual blood and in passive form in semen. To unite these two aspects of divinity and reverse the process of creation leading to death and rebirth, Bāuls practice a sexual and yogic regimen. Their songs frequently speak of this discipline, but do so in symbolic language intended to obscure aspects of its meaning from the uninitiated. A major theme is the love between the human personality and the indwelling, personal divinity. Many Bengali authors have acknowledged an indebtedness of inspiration to Bāul verse.

BAVLI \ˈbäv-lē\, *also called* Talmud Bavli, or the Babylonian Talmud, or the Talmud, second and more authoritative of the two TALMUDS (the other Talmud being the YERUSHALMI) produced by RABBINIC JUDAISM. Completed about 600 CE, the Bavli served as the constitution and bylaws of Rabbinic JUDAISM.

Several attributes of the Bavli distinguish it from the Talmud Yerushalmi (Palestinian Talmud) and must be considered in accounting for its great intellectual influence. First, the Bavli shows how practical reason can work to make diverse issues and actions conform to a single principle. Second, it shows how applied logic discerns the regular and the orderly in the confusion and disorder of everyday conflict.

The Bavli in its 37 tractates is entirely uniform, stylistic preferences exhibited on any given page characterize every other page of the document, and diverse topics produce only slight differentiation in modes of analysis. The task of interpretation in the Talmudic writing was to uncover the integrity of the truth that God manifested in the one and unique revelation, the TORAH (both oral and written). By integrity was meant a truth that was unified and beyond all division. The message of the first document of the oral Torah, the MISHNAH, was the hierarchical unity of all being in the One on high. Since the Bavli's authorship undertook precisely the same inquiry, the way that the Mishnah and the Bavli deal with the problem of showing the integrity of truth illuminates for the reader how the two dominant documents of Judaism set matters forth.

The Mishnah's version of the integrity of truth focuses upon the unity of all being within a hierarchy. The Mishnah's overriding proposition is that all classes of things stand in a hierarchical relationship to one another, and, in that encompassing hierarchy, there is place for everything. The theological proposition that is implicit but never spelled out, of course, is that one God occupies the pinnacle of the hierarchy of all being—to that one God all things turn upward, from complexity to simplicity; from that one God all things flow downward, from singularity to multiplicity. To state with emphasis the one large argument—the metaproposition—that the Mishnah's authorship sets forth in countless small ways: the very artifacts that appear multiple in fact form classes of things, and, moreover, these classes themselves are subject to a reasoned ordering by appeal to this-worldly characteristics signified by properties and indicative traits.

The Bavli's version of the integrity of truth matches the Mishnah's theme of the hierarchical unity of all being with the Bavli's principle that many principles express a single one—many laws embody one governing law, which is the law behind the laws. However, the difference in the documents may be seen, in how, for instance, the Mishnah establishes a world in stasis: lists of like things, subject to like rules. In contrast, the Bavli portrays a world in motion: lists of like things form series, but series also conform to rules. The Bavli's paramount intellectual trait is its quest through abstraction for the unity of the law and the integrity of truth. That same quest insists on the fair and balanced representation of conflicting principles behind discrete laws—not to serve the cause of academic harmony but to set forth how, at their foundations, the complicated and diverse laws may be explained by appeal to simple and few principles. The conflict of principles then is less consequential than the demonstration that diverse cases may be reduced to only a few principles.

Both Talmuds, the Yerushalmi and the Bavli, treat the same issues of the Mishnah, yet the second Talmud radically differs from the first, and the two Talmuds rarely intersect other than at a given Mishnah paragraph or TOSEFTA selection. This is not so surprising, for, despite the fact that the Yerushalmi is 200 years older than the Bavli, scholars do not believe the framers of the Bavli to have had access to the Yerushalmi during the Bavli's redaction. (Though some

sayings known to the editors of the Yerushalmi also circulated among those of the Bavli.) Therefore, each Talmud pursues its own interests when reading a passage shared with the other. No substantial, shared exegetical protocol or tradition, whether in fully spelled-out statements in so many words, or in the gist of ideas, or in topical conventions, or in intellectual characteristics, governed the two Talmuds' reading of the same Mishnah paragraph. The Bavli presents an utterly autonomous statement, speaking in its own behalf and in its own way about its own interests.

If we compare the way in which the two Talmuds read the same Mishnah, we discern consistent differences between them. The principal difference between the Talmuds is the same difference that distinguishes jurisprudence from philosophy. The Yerushalmi talks in details, the Bavli in large truths; the Yerushalmi tells us what the Mishnah says, the Bavli, what it means. How do the two Talmuds compare?

1. The Yerushalmi analyzes evidence, the Bavli investigates premises;
2. The Yerushalmi remains wholly within the limits of its case, the Bavli vastly transcends the bounds of the case altogether;
3. The Yerushalmi wants to know the rule, the Bavli asks about the principle and its implications for other cases.

The Yerushalmi provides an EXEGESIS and amplification of the Mishnah; the Bavli, a theoretical study of the law in all its magnificent abstraction, transforming the Mishnah into testimony to a deeper reality altogether: to the law behind the laws.

BAYON, THE \ˈbä-,yōn\, Cambodian Buddhist PYRAMID temple constructed c. 1200 at the behest of Jayavarman VII (1181–c. 1220), who had broken with Khmer tradition and adopted MAHĀYĀNA Buddhism.

In order to conform with traditional MYTHOLOGY, the Khmer kings built themselves a series of artificial moun-

tains on the Cambodian plain at the royal city of Angkor, each crowned by shrines containing images of gods and of themselves, their families, and their ancestors. Most of the temple mountains are oriented east to west, the main gates facing east. Originally the Bayon was designed to serve as the primary locus of the royal cult and to serve as Jayavarman's personal mausoleum; it stood at the center of Angkor Thom, the new capital that Jayavarman built. The four-sided central tower is carved with faces, some of which seem to represent Jayavarman in the guise of AVALOKITEŚVARA, the great BODHISATTVA. Each side of the tower is oriented to a cardinal direction. The central tower is surrounded by an additional 12 towers; each side of these towers has a carved face of Avalokiteśvara as well. In total, there are 54 towers at the Bayon site, all with carved bas-relief visages. The bas-reliefs depict Jayavarman's military victories as well as scenes of ordinary life, providing a picture of 13th-century Cambodians at work, rest, and play.

BEATIFICATION, in ROMAN CATHOLICISM, second stage in the process of CANONIZATION.

BEATITUDE, any of the blessings said by JESUS CHRIST in the SERMON ON THE MOUNT as told in the NEW TESTAMENT in MATTHEW 5:3–12 and in the Sermon on the Plain in LUKE 6:20–23. They are named from the initial words (*beati sunt*, "blessed are") of those sayings in the Latin VULGATE Bible. Beatitudes are found in other places in the New Testament (*e.g.*, Matthew 11:6, Luke 7:23, and John 20:29) and appear to be adapted from similar opening words contained in some of the Psalms (*e.g.*, Psalms 32:1).

In the Revised Standard Version, the nine Beatitudes of Matthew 5:3–12 read as follows:

- ◆ **Blessed are the poor in spirit, for theirs is the kingdom of heaven.**
- Blessed are those who mourn, for they shall be comforted.**
- Blessed are the meek, for they shall inherit the earth.**
- Blessed are those who hunger and thirst for righteousness, for they shall be satisfied.**
- Blessed are the merciful, for they shall obtain mercy.**
- Blessed are the pure in heart, for they shall see God.**
- Blessed are the peacemakers, for they shall be called sons of God.**
- Blessed are those who are persecuted for righteousness' sake, for theirs is the kingdom of heaven.**
- Blessed are you when men revile you and persecute you and utter all kinds of evil against you falsely on my account. Rejoice and be glad, for your reward is great in heaven, for so men persecuted the prophets who were before you.** ◆

BECKET, SAINT THOMAS \ˈbe-kit\, also called Thomas à Becket, or Thomas of London (b. c. 1118, Cheapside, London—d. Dec. 29, 1170, Canterbury, Kent, Eng.; canonized 1173; feast day December 29), chancellor of England (1155–62) and archbishop of Canterbury (1162–70) during the reign of King Henry II.

Thomas was born to Norman parents of the merchant class. He was educated first at Merton priory, then in a City

The Bayon at the Angkor Thom complex, Angkor, Cambodia

BEDE THE VENERABLE, SAINT

of London school, and finally at Paris. He was introduced by his father to Archbishop Theobald, a former ABBOT of Bec. Thomas won Theobald's confidence, acted as his agent, and was sent by him to study civil and CANON LAW.

In 1154 Theobald, as a reward of his services, appointed Thomas archdeacon of Canterbury, an important and lucrative post, and less than three months later recommended him to Henry as chancellor. Here Thomas showed to the full his brilliant abilities, razing castles, repairing the Tower of London, conducting embassies, and raising and leading troops in war. He was trusted completely by the king.

The movement known as the GREGORIAN REFORM had spread from Italy and had begun to influence English churchmen. Leading points in its program were free elections to clerical posts, inviolability of church property, freedom of appeal to Rome, and clerical immunity from lay tribunals. Under Henry I and Stephen, the archbishops had stood out for these reforms, sometimes with partial success. Henry II, however, undoubtedly aimed for strict control over the church, and Becket had aided him. With the death of Theobald in 1161, Henry hoped to appoint Becket as archbishop and thus complete his program.

For almost a year after the death of Theobald the see of Canterbury was vacant. Thomas was aware of the king's intention and tried to dissuade him by warnings of what would happen. Henry persisted and Thomas was elected. Once consecrated, Thomas changed both his outlook and his way of life. He became devout and austere and embraced the PAPACY and its canon law. Greatly to Henry's displeasure, he took up the matter of "criminos clerks." In western Europe, accused clerics for long had enjoyed the privilege of standing trial before the bishop rather than secular courts and usually received milder punishments than lay courts would assess. The position of Thomas, that a guilty cleric could be degraded and punished by the bishop but should not be punished again by lay authority—"not twice for the same fault"—was canonically a plausible argument which ultimately prevailed. The crisis came at Clarendon (Wiltshire, January 1164), when the king demanded in the Constitutions of Clarendon his right to punish criminal clerics, forbade EXCOMMUNICATION of royal officials and appeals to Rome, and gave to the Crown the revenues of vacant sees and the power to influence episcopal elections. Thomas, after verbally accepting the constitutions, revoked his assent and appealed to the pope.

Good relations between Thomas and Henry were now at an end; the archbishop was summoned to trial by the king on a point of feudal obligation. At the Council of Northampton (Oct. 6–13, 1164), it was clear that Henry intended to ruin and imprison or to force the resignation of the archbishop. Thomas fled in disguise and took refuge

with Louis VII of France. Pope Alexander III received Becket with honor but hesitated to act decisively in his favor in fear that he might throw Henry into the arms of the Holy Roman emperor Frederick I and his ANTIPOPE, Paschal III.

Thomas' exile lasted for six years (Nov. 2, 1164–Dec. 2, 1170). Henry meanwhile had seized the properties of the archbishop and his supporters and had exiled all Thomas' close relatives. Several abortive attempts were made at reconciliation, but new acts of hostility by the king and declarations of excommunication hurled by Thomas at his opponents embittered the struggles.

Finally, in 1170, Henry had his eldest son crowned as co-king by the archbishop of York, Becket's old rival. This was a flagrant breach of papal prohibition and of the immemorial right of Canterbury to crown the king. Thomas, followed by the pope, excommunicated all responsible. Henry, fearing an interdict for England, met Thomas at Fréteval (July 22), and it was agreed that Thomas should return to Canterbury and receive back all the possessions of his see. Neither party withdrew from his position regarding the Constitutions of Clarendon, which on this occasion were not mentioned. Thomas returned to Canterbury (December 2) and was received with enthusiasm, but further excommunications of the hostile royal servants, as well as his ready acceptance of tumultuous acclaim by the crowds, infuriated Henry in Normandy.

Some violent words of Henry were taken literally by four leading knights of the court, who proceeded swiftly to Canterbury (December 29), forced themselves into the archbishop's presence, and followed him into the cathedral. There, at twilight, after further altercation, they cut him down with their swords. His last words were an acceptance of death in defense of the church of Christ.

Within a few days after Thomas' death, his tomb became a goal of PILGRIMAGE, and he was canonized by Alexander III in 1173. In 1174 Henry did penance at Canterbury and was absolved.

BEDE THE VENERABLE, SAINT

\ˈbed\ (b. 672/673, traditionally Monkton in Jarrow, Northumbria—d. May 25, 735, Jarrow; canonized 1899; feast day May 25), Anglo-Saxon theologian, historian, and chronologist, best known

today for his *Historia ecclesiastica gentis Anglorum* ("Ecclesiastical History of the English People"), a source vital to the history of the conversion to Christianity of the Anglo-Saxon tribes. During his lifetime and throughout the Middle Ages Bede's reputation was based mainly on his scriptural commentaries, copies of which found their way to many of the monastic libraries of western Europe. His method of dating events from the time of the incarnation, or JESUS CHRIST'S birth—i.e., BC and AD—came into general use through the popularity of the *Historia ecclesiastica* and two works on chronology.

Murder of Thomas Becket; illustration from an English psalter, c. 1200

© The British Library/Heritage-Images

Reared from the age of seven by Abbot St. Benedict Bishop, Bede was ordained deacon when 19 years old and priest when 30.

Bede's works fall into three groups: grammatical and "scientific," scriptural commentary, and historical and biographical. His earliest works include treatises on spelling, HYMNS, figures of speech, verse, and epigrams. His first treatise on chronology, *De temporibus* ("On Times"), with a brief chronicle attached, was written in 703. In 725 he completed a greatly amplified version, *De temporum ratione* ("On the Reckoning of Time"), with a much longer chronicle. Both these books were mainly concerned with the reckoning of EASTER. Bede's method of dating events from the time of Christ's birth came into general use via these works.

In 731/732 Bede completed his *Historia ecclesiastica*. Divided into five books, it recorded events in Britain from the raids by Julius Caesar (55–54 BCE) to the arrival in Kent (597 CE) of St. Augustine. For his sources he claimed the authority of ancient letters, the "traditions of our forefathers," and his own knowledge of contemporary events. Although overloaded with the miraculous, it is the work of a scholar anxious to assess the accuracy of his sources and to record only what he regarded as trustworthy evidence. It remains an indispensable source for some of the facts and much of the feel of early Anglo-Saxon history.

BEECHER, HENRY WARD \ˈbē-čər\ (b. June 24, 1813, Litchfield, Conn., U.S.—d. March 8, 1887, Brooklyn, N.Y.), U.S. Congregational minister (see CONGREGATIONALISM) whose oratorical skill and social concern made him one of the most influential Protestant spokesmen of his time.

The son of a minister, Beecher spent three postgraduate years in Cincinnati, Ohio, at Lane Theological Seminary, of which his father became president in 1832. In 1837 Beecher became minister to a small PRESBYTERIAN congregation at Lawrenceburg, Ind. He gradually became a highly successful preacher and lecturer. Beecher furthered his reputation through *Seven Lectures to Young Men* (1844), vivid exhortations on the vices and dangers in a frontier community.

In 1847 he accepted a call to Plymouth Church (Congregational), Brooklyn, N.Y., where he drew weekly crowds of 2,500 by the early 1850s. He gradually became more emphatic in opposing slavery, and his lectures of 1863 in England won over audiences initially hostile to him and to the Northern point of view. Increasingly outspoken after the Civil War, he supported a moderate Reconstruction policy for the South and advocated women's suffrage, evolutionary theory, and scientific BIBLICAL CRITICISM. His outlets for these issues, in addition to Plymouth Church, were the *Independent*, a Congregational journal he edited in the early 1860s, and the nondenominational *Christian Union* (later *Outlook*), which he founded in 1870.

BEECHER, LYMAN (b. Oct. 12, 1775, New Haven, Conn. [U.S.]—d. Jan. 10, 1863, Brooklyn, N.Y.), U.S. PRESBYTERIAN clergyman in the revivalist tradition.

A graduate of Yale in 1797, he held pastorates at Litchfield, Connecticut, and at Boston, Massachusetts. After turning his attention to evangelizing the West, he became president of the newly founded Lane Theological Seminary in Cincinnati, Ohio (1832–50), and also assumed a new pastorate there (1832–42). His CALVINISM, however, considered strict by Bostonian standards, proved so mild for western Presbyterians that Beecher was tried for HERESY, but his SYNOD acquitted him.

Beecher was called by a contemporary "the father of more brains than any other man in America." Among the 13 children of his three marriages, HENRY WARD BEECHER and Harriet Beecher Stowe achieved fame. Five others well known in their day were Catharine (1800–78), a leader in the women's education movement; Edward (1803–95), a minister, college president, and anti-slavery writer; Charles (1815–1900), Florida's superintendent of public instruction; Isabella (1822–1907), a champion of legal rights for women; and Thomas (1824–1900), an early advocate of adapting church life to modern urban conditions.

BEELZEBUB \bē-ˈel-zī-bəb, ˈbēl-, ˈbel-\, in the BIBLE, the prince of the DEVILS. In the OLD TESTAMENT (in the form Baalzebub), it is the name given to the god of the Philistine city of Ekron (2 Kings 1:1–18). Neither name is found elsewhere in the Old Testament, and there is only one reference to it in other Jewish literature. Reference to Beelzebub is made in the NEW TESTAMENT (Matthew 10:25; 12:27). See also SATAN; LUCIFER.

BEGUINES \ˈbe-gēn, bā-ˈgēn\, women in the cities of northern Europe who, from the Middle Ages, led lives of religious devotion without joining an established religious order.

So-called "holy women" first appeared in Liège toward the end of the 12th century. The use of the Old French word *beguine* to designate such women was established by the 1230s. Its etymology is uncertain; it seems to have originated as a pejorative term.

The movement began among upper-class women and spread to the middle class. In addition to addressing the spiritual needs of its adherents, it responded to problems caused by a surplus of unattached women in urban areas. Most Beguines lived together in communities called beguinages. In Germany groups of up to 60 or 70 women lived together in houses; in the Low Countries they usually lived in individual houses within walled enclosures. Most supported themselves, often by nursing or cloth- or lace-making, and they spent time in religious contemplation. Beguines promised to preserve chastity while they remained in the community, but they were free to leave it and marry.

Some communities and individuals cultivated intense forms of MYSTICISM. These circumstances led many people to suspect them of heretical tendencies. Throughout the 13th century they were the object of prejudice and of restrictive legislation. Official policy varied until the 15th century, when a consistent policy of toleration was established. Meanwhile, however, the beguinal movement had declined; many of its members joined formal religious orders. Some communities still exist, mainly in Belgium; most operate charitable institutions.

One of the most remarkable Beguines was Marguerite Porete, who was burned for HERESY in Paris in 1310. Her mystical work *Miroir des simples âmes* (c. 1300; *The Mirror of Simple Souls*) is thought to be the greatest religious tract written in Old French.

The male counterparts of Beguines were known as Beghards. They never achieved the same prominence, and the few communities that survived in Belgium were suppressed during the French Revolution.

BEHEMOTH \bi-ˈhē-məth\, in the OLD TESTAMENT, a powerful, grass-eating animal whose "bones are tubes of bronze, his limbs like bars of iron" (Job 40:18). Jewish mythology relates that the righteous will witness a spectacular battle

between Behemoth and Leviathan in the messianic era and later feast upon their flesh. Some sources identify Behemoth, who dwells in the marsh and is not frightened by the turbulent river Jordan, as a hippopotamus and Leviathan as a crocodile, whale, or snake.

BEKTASHĪ \bek-ˈtā-shē\ *Turkish* Bektaşī \,bek-tā-ˈshē\, in ISLAM, any member of an order of mystics traditionally founded by Hājī Bektāsh Walī of Khorāsān, Iran. The order acquired definitive form in the 16th century in Anatolia and spread to the Ottoman Balkans, particularly Albania.

Originally one of many Sufi orders (*see* SUFISM) within orthodox SUNNĪ Islam, the Bektashi order in the 16th century adopted tenets of the SHĪʿITES, including a veneration of ʿALĪ, the fourth successor of the prophet MUHAMMAD, as a member of a trinity with ALLĀH and the Prophet himself. The Bektashis were lax in observing daily Muslim laws and allowed women to take part in ritual wine drinking and dancing during devotional ceremonies. The Bektashis in the Balkans adapted such Christian practices as the ritual sharing of bread and the CONFESSION of sins. Their mystical writings made a rich contribution to Sufi poetry. After 1925, when all Sufi orders were dissolved in Turkey, the Bektashī leadership shifted to Albania. With the banning of religion in Albania in 1967, Bektashī devotions were carried on by communities in Turkey, Albanian regions of the Balkans, and the United States.

BEL \ˈbel\, the Akkadian counterpart of the Sumerian deity ENLIL. Bel is derived from the Semitic word BAAL, or “lord.” Bel had all the attributes of Enlil, and his status and cult were much the same. Bel, however, gradually came to be thought of as the god of order and destiny. In Greek writings references to Bel indicate this Babylonian deity and not the Syrian god of Palmyra of the same name.

BELENUS \ˈbe-lə-nəs\ (Gaulish: possibly, “Bright One”), an ancient and widely worshiped deity in CELTIC RELIGION; he was associated with healing. The festival of BELTANE (or Beltine) held on May 1 in Gaelic-speaking lands was possibly originally connected with his cult. On that day the cattle were purified and protected by fire before being put out to the open pastures for the summer.

There is evidence of the cult of Belenus in northern Italy, Noricum in the eastern Alps, and southern Gaul. Belenus is often identified with APOLLO and probably also combined solar and curative elements.

BELIEF, RELIGIOUS, belief in the objects and assertions of a religion. While such a definition may initially seem clear, it is inherently problematic: if “religion” is thought of as a set of beliefs and practices, then the definition is circular. The problem of defining what makes a belief distinctively “religious” can therefore be difficult to solve. A religious belief can be said to be something that the believer holds to be deeply true; but again the question of what relation “religious truth” has to other types of truth, such as scientific truth, must first be answered before a definition is to be based on this premise.

Most modern authors, rather than defining religious belief per se, instead attempt to delineate its general characteristics. So, for instance, religious beliefs can often be distinguished from other beliefs in a cultural system by stressing the importance that superhuman beings hold within religious beliefs. The great gods and goddesses of religions are usually thought of as such beings, but the great

personages of religion—be it the prophets or founders such as MOSES, JESUS, MUHAMMAD, and the BUDDHA GOTAMA—are also good examples. Religious beliefs almost always involve such beings, all within a complex web of other beliefs and attitudes such as hopes, fears, and desires. Belief in superhuman beings is not to be confused, however, with the notion of the supernatural or a transcendental realm, since there are many religions in which such concepts are either lacking or denied.

Religious beliefs also tend to function as explanations regarding the world and events in the world, including the human experience of suffering, the existence of evil, and similar existential issues. It is this function of religious beliefs that has caused the most controversy in the STUDY OF RELIGION, particularly with regard to the debate on the relation between SCIENCE AND RELIGION.

There are three general positions on the question of how religious truth-claims are to be evaluated in light of modern science. The first position asserts that all religious beliefs are false: they attempt to explain perceived phenomena in a way that is often contrary to scientific principles, and in any case religious beliefs cannot be empirically verified. Most scholars who take this position are quick to point out that holding a false belief does not entail irrationality, no more than it was irrational for people to hold that certain diseases were caused by “bad air” prior to the discoveries of pathogens such as bacteria.

The second position states that religious beliefs are neither true nor false, since their meaning does not depend on truth conditions. Rather, these scholars hold, religious beliefs refer to emotional states or systems of morality, and thus are different in kind from the sort of claims which science makes. From this vantage point, religion and science talk about entirely different things.

The third position holds that the truth conditions of religious beliefs are simply beyond verification, since they refer to those things that are not, and perhaps cannot, be known: the beginning of all things, the meaning of life, and what happens after death. The scholars who hold this view also tend to hold a theory of “two truths,” one scientific and one symbolic (or religious). The debate is not settled.

BELIT \ˈbā-lit\ (Akkadian), *Sumerian* Ninlil, in MESOPOTAMIAN RELIGION, a goddess, the consort of the god BEL (Sumerian: ENLIL) and a deity of destiny. She was worshiped especially at Nippur and Shuruppak and was the mother of the moon god, SIN (Sumerian: Nanna). In Assyrian documents Belit is sometimes identified with ISHTAR (Sumerian: Inanna) of Nineveh and is sometimes the wife of either ASHUR, the national god of Assyria, or of Enlil, god of the atmosphere.

The Sumerian Ninlil was a grain goddess, known as the Varicolored Ear (of barley). She was the daughter of Haia, god of the stores, and Ninshebagunu (or Nidaba). One myth recounted the rape of Ninlil by her consort, Enlil. He saw Ninlil bathing in a canal and raped and impregnated her. For his crime he was banished to the Underworld, but Ninlil followed. In the course of their journey Enlil assumed three different guises, each one ravishing and impregnating Ninlil. The myth seems to represent the process of wind-pollination, ripening, and the eventual withering of the crops and their subsequent return to the earth (corresponding to Ninlil’s sojourn in the Underworld).

BELLEROPHON \bə-ˈler-ə-ˈfän\, *also called* Bellerophonēs \bə-ˌler-ə-ˈfän-ˌtēz\, hero in Greek legend. In the *Iliad* he was

the son of GLAUCUS, who was the son of SISYPHUS. Anteia (or Stheneboea), wife of Proetus, the king of Argos, made sexual overtures to Bellerophon, which were rejected; she therefore falsely accused him to her husband. Proetus then sent Bellerophon to the king of Lycia with a message that he was to be killed. The king, repeatedly unsuccessful in his assassination attempts, finally recognized Bellerophon as more than human and married him to his daughter. Bellerophon lived in prosperity until he fell out of favor with the gods, lost two of his children, and wandered grief-stricken over the Aleian Plain.

Later authors added that, while still at Corinth, Bellerophon tamed the winged horse PEGASUS with a bridle given to him by ATHENA and that he used Pegasus to fight the CHIMERA and afterward to punish Anteia. He supposedly earned the wrath of the gods by trying to fly up to Olympus and was thrown from Pegasus and crippled.

BELLONA \bə-'lō-nə\, *original name* Duellona, in ROMAN RELIGION, goddess of war, identified with the Greek Enyo. She is sometimes known as the sister or wife of MARS. Her temple at Rome stood in the Campus Martius, outside the city's gates. There the Senate met to discuss generals' claims to triumphs and to receive foreign ambassadors. In front of it was the *columna bellica*, where the ceremony of declaring war by the *fetiales* (a group of priests) took place.

BELTANE \'bel-,tān-, -tin\, *also spelled* Beltine, *Irish* Beltaine or Belltaine, *also known as* Cétsamain, CELTIC RELIGION, a festival held on the first day of May, celebrating the beginning of summer and open pasturing. Beltane is first mentioned in a glossary attributed to Cormac, bishop of Cashel and king of Munster, who was killed in 908. Cormac describes how cattle were driven between two bonfires on Beltane as a magical means of protecting them from disease before they were led into summer pastures—a custom still observed in Ireland in the 19th century.

Cormac derives the word *Beltaine* from the name of a god Bel, or Bil, and the Old Irish word *tene*, "fire." Despite linguistic difficulties, some contemporary scholars have maintained modified versions of this etymology, linking the first element of the word with the Gaulish god BELENUS.

BENDIS \ben-dis\, Thracian goddess of the moon; the Greeks usually identified her with the goddess ARTEMIS. She is often represented holding two spears.

BENEDICT XVI *original name* Joseph Alois Ratzinger (b. April 16, 1927, Marktl am Inn, Ger.), pope from 2005. In his early years Ratzinger was forced to join the Hitler Youth, and during World War II he was drafted into the German military. After the war he continued his education. He was ordained in 1951 and received a doctorate in theology at the University of Munich in 1953. A highly regarded theologian and teacher, he served as an expert adviser and an advocate of reform during the Second Vatican Council (1962–65). In 1977 he was appointed archbishop of Munich; three months later he was made a cardinal. As prefect of the Congregation for the Doctrine of the Faith from 1981 to 2005, he enforced doctrinal uniformity in the church and served as a close adviser of Pope JOHN PAUL II. He faced numerous challenges as pope, including a decline in vocations and church attendance, divisions over the direction of the church, and the effects of the sexual-abuse scandal involving priests.

BENEDICT OF NURSIA, SAINT \'be-nə-,dikt . . . 'nər-shē-ə, -shə; 'nür-sē-ə\ (b. c. 480, Nursia, Kingdom of the Lombards [now in Italy]—d. c. 547; feast day July 11, formerly March 21), founder of the BENEDICTINE monastery at Monte Cassino and the father of Western monasticism; the rule that he established became the norm for monastic living throughout Europe.

The authority for the facts of Benedict's life is Book 2 of the Dialogues of ST. GREGORY THE GREAT, who said that he had obtained his information from Benedict's disciples.

Benedict's life spanned the decades in which the decayed imperial city became the Rome of the medieval PAPACY.

As a young man Benedict retreated from Rome to the country and lived alone for three years, furnished with food and monastic garb by a monk of one of the monasteries nearby. He was persuaded to become ABBOT of one of these monasteries. His reforming zeal was resisted, however, and an attempt was made to poison him. He returned to his cave retreat; but again disciples flocked to him, and he founded 12 monasteries, each with 12 monks, with himself in control of all. Later, he left the area, while the 12 monasteries continued in existence. A few disciples followed him south, where he settled near Cassino. The district was still largely non-Christian, but the people were converted by his preaching. His sister Scholastica, who came to live nearby as the head of a nunnery, died shortly before her brother.

Benedict had begun his monastic life as a HERMIT, but he had come to see the difficulties and spiritual dangers of a solitary life. As a layman, his Rule is concerned with a life spent wholly in a community of laymen, and among his contributions to the practices of the monastic life none is more important than his establishment of a full year's probation, followed by a solemn vow of obedience to the Rule as mediated by the abbot of the monastery to which the monk vowed a lifelong residence.

On the constitutional level, Benedict's supreme achievement was to provide a succinct and complete directory for the government and the spiritual and material well-being of a monastery. The abbot, elected for life by his monks, is bound only by the law of God and the Rule, but he is continually advised that he must answer for his monks, as well as for himself, at the judgement seat of God. He appoints his own officials—prior, cellarer (steward), and the rest—and controls all the activities of individuals and the organizations of the common life. Ownership, even of the smallest thing, is forbidden. The ordering of the offices for the canonical hours (daily services) is laid down with precision.

The working day is divided into three roughly equal portions: five to six hours of liturgical and other prayer; five hours of manual work, whether domestic work, craft work, garden work, or field work; and

four hours reading of the SCRIPTURES and spiritual writings. This balance of prayer, work, and study is another of Benedict's legacies. All work was directed to making the monastery self-sufficient and self-contained.

Until 1938 the Rule had been considered as a personal achievement of St. Benedict. In that year, however, it was suggested that an anonymous document, the "Rule of the Master" (*Regula magistri*)—previously assumed to have plagiarized part of the Rule—was in fact one of the sources drawn on by St. Benedict. Though absolute certainty has not yet been reached,

most competent scholars favor the earlier composition of the "Rule of the Master." If this is accepted, about one-third of Benedict's Rule is derived from the Master—this includes the writings on humility, obedience, and the abbot, which are among the most familiar and admired sections of the Rule. Even so, the Rule that imposed itself all over Europe was the Rule of St. Benedict, derived from disparate sources, but providing a directory at once practical

and spiritual for the monastic way of life, that continued for 1,500 years.

BENEDICTINE \,be-nə-'dik-,tēn\, member of the Order of Saint Benedict (O.S.B.), the confederated congregations of monks and lay brothers who follow the rule of life of ST. BENEDICT OF NURSIA. The Benedictines, strictly speaking, do not constitute a single religious order because each monastery is autonomous.

Benedict wrote his rule with his own abbey in mind; the rule spread slowly in Italy and Gaul, and by the 7th century it had been applied to women, as nuns, whose patroness was deemed Scholastica, sister of Benedict.

By the time of Charlemagne at the beginning of the 9th century, the Benedictine Rule had supplanted most other observances in northern and western Europe. During the five centuries following the death of Benedict, the monasteries multiplied both in size and in wealth. They were the chief repositories of learning and literature in western Europe and were also the principal educators.

The great age of Benedictine predominance ended about the middle of the 12th century, and the history of the main line of Benedictine MONASTICISM for the next three centuries was to be one of decline and decadence.

The 15th century saw the rise of a new Benedictine institution, the congregation. In 1424 the congregation of Santa Giustina of Padua instituted reforms that breathed new life into Benedictine monasticism. Superiors were elected for three years, and the monks no longer took vows to a particular house but to the congregation. This radical reform spread to all the Benedictines. In the turmoil of the Protestant REFORMATION in the 16th century the monasteries and nunneries disappeared almost entirely from northern Europe, and, for almost a century, they suffered greatly in France and central Europe. Benedictinism revived in France and Germany during the 17th century, and though the 18th century witnessed a new decline, from the middle of the 19th century Benedictine monasteries and nunneries again began to flourish. Foundations, including Solesmes in France and Maria Laach in Germany, arose throughout Europe; monks and nuns returned to England; congregations were established in North and South America; and monasteries scattered all over the world.

BENEDICTION, a verbal blessing of persons or things, commonly applied to invocations pronounced in God's name by a priest or minister, usually at the conclusion of a religious service. The Aaronic benediction, which reads, "The Lord bless you and keep you: The Lord make his face to shine upon you, and be gracious unto you: The Lord lift up his countenance upon you, and give you peace" (Numbers 6:24–26) was incorporated by MARTIN LUTHER into his German MASS. It is also used in the Mozarabic liturgy of Spain before the reception of the Host. Some Christian churches, however, prefer the benediction of ST. PAUL THE APOSTLE (2 Corinthians 13:14).

In ROMAN CATHOLICISM, benediction commonly means a blessing of persons (*e.g.*, the sick) or objects (*e.g.*, religious articles).

BENE-ISRAEL \bə-nā-'iz-rē-əl, -rā-\ (Hebrew: "Sons of Israel"), Jews of India who for centuries lived in Bombay and adjacent regions isolated from other Jewish influences.

According to two equally unverifiable traditions, they arrived in India as a result of a shipwreck or are a remnant of the TEN LOST TRIBES OF ISRAEL. When the existence of

St. Benedict of Nursia, detail of a polyptych by Segna di Buonaventura, early 14th century
By courtesy of the Metropolitan Museum of Art, New York City, Gift of Reinhardt and Co., 1924

a Jewish community in India first attracted public attention in the 18th century, the group still adhered to such Jewish practices as CIRCUMCISION, observance of the SABBATH, certain dietary laws, and the celebration of several major festivals. David Ezekiel Rahabi (1694–1772) and Samuel Ezekiel Divekar (1730–97), both of Cochin, were instrumental in revivifying JUDAISM among the Bene-Israel; contact with Arabic-speaking Jews of Baghdad also facilitated this renewal. The first of numerous Bene-Israel SYNAGOGUES, all following the liturgy of the SEFARDI, was built in Bombay in 1796.

Though the Bene-Israel speak Marathi and differ little from their Hindi neighbors in appearance, they claim pure Jewish blood. This contention created problems when a majority of the Bene-Israel migrated to the State of Israel after 1948, for the chief rabbinate objected to their marriage with other Jews on the grounds that the Bene-Israel could not have properly observed rabbinic laws governing marriage and divorce. A compromise was reached in 1964: The Bene-Israel as a group were declared full-fledged Jews, but the chief rabbinate reserved to itself the right to decide the legitimacy of individual marriages.

BENJAMIN \ˈben-jə-mən\, one of the 12 tribes that in biblical times constituted the people of ISRAEL, and one of the two tribes (along with JUDAH) that later became the Jewish people. The tribe was named after the younger of two children born to JACOB (also called Israel) and his second wife, Rachel (GENESIS 35:16–18).

After the death of MOSES, JOSHUA led the Israelites into the Promised Land and, dividing the territory among the 12 tribes, assigned south-central Palestine to the tribe of Benjamin (Joshua 18:11ff.). Members of the tribe were separated when two distinct kingdoms were established after the death of King SOLOMON (922 BCE) and the territory of Benjamin was divided between them (1 Chronicles 9:3). Jews belonging to the 10 tribes of the northern kingdom of Israel disappeared after the Assyrian conquest of 721 BCE and are known in legend as the TEN LOST TRIBES OF ISRAEL (2 Kings 17:5–6; 18:9–12). Benjaminites in the southern kingdom of Judah were assimilated by the more powerful tribe of Judah and gradually lost their identity. Modern Jews thus consider themselves to be descendants of the tribes of Judah and Benjamin. SAUL, the first of Israel's kings, and ST. PAUL THE APOSTLE were both of the tribe of Benjamin.

BEOWULF \ˈbā-ə-,wūlf\, heroic poem, the highest achievement of Old English literature and the earliest European vernacular epic. Preserved in a single manuscript (Cotton Vitellius A XV) from c. 1000, it deals with events of the early 6th century and is believed to have been composed between 700 and 750. It did not appear in print until 1815. Although originally untitled, it was later named after the Scandinavian hero Beowulf, whose exploits and character provide its connecting theme. There is no evidence of a historical Beowulf, but some characters, sites, and events in the poem can be historically verified.

The poem falls into two parts. It opens in Denmark, where King Hrothgar's splendid mead hall, Heorot, has been ravaged for 12 years by nightly visits from an evil monster, Grendel, who carries off Hrothgar's warriors and devours them. Unexpectedly, young Beowulf, a prince of the Geats of southern Sweden, arrives with a small band of retainers and offers to cleanse Heorot of its monster. The king is astonished at the little-known hero's daring but welcomes him, and, after an evening of feasting, the King

retires, leaving Beowulf in charge. During the night Grendel comes from the moors, tears open the heavy doors, and devours one of the sleeping Geats. He then grapples with Beowulf, whose powerful grip he cannot escape. He wrenches himself free, tearing off his arm, and leaves, mortally wounded.

The next day is one of rejoicing in Heorot. But at night as the warriors sleep, Grendel's mother comes to avenge her son, killing one of Hrothgar's men. In the morning Beowulf seeks her out in her cave at the bottom of a mere and kills her. He cuts the head from Grendel's corpse and returns to Heorot. The Danes rejoice once more. Hrothgar makes a farewell speech about the character of the true hero, as Beowulf, enriched with honors and princely gifts, returns home to King Hygelac of the Geats.

The second part passes rapidly over King Hygelac's subsequent death in a battle (of historical record), the death of his son, and Beowulf's succession to the kingship and his peaceful rule of 50 years. But now a fire-breathing dragon ravages his land and the doughty but aging Beowulf engages it. The fight is long and terrible and a painful contrast to the battles of his youth. Painful, too, is the desertion of his retainers except for his young kinsman Wiglaf. Beowulf kills the dragon but is mortally wounded. The poem ends with his funeral rites and a lament.

Beowulf belongs metrically, stylistically, and thematically to the inherited Germanic heroic tradition. Many incidents, such as Beowulf's tearing off the monster's arm and his descent into the mere, are familiar motifs from FOLKLORE. The ethical values are manifestly the Germanic code of loyalty to chief and tribe and vengeance to enemies. Yet the poem is so infused with a Christian spirit that it lacks the grim fatality of many of the lays of the EDDAS or of the Icelandic sagas. Beowulf himself seems more altruistic than other Germanic heroes or the heroes of the Iliad. It is significant that his three battles are not against men, which would entail the retaliation of the blood feud, but against evil monsters, enemies of the whole community and of civilization itself. Many critics have seen the poem as a Christian ALLEGORY, with Beowulf the champion of goodness and light against the forces of evil and darkness. His sacrificial death is not seen as tragic but as the fitting end of a hero.

BERAKHAH \bə-rä-ˈkäh\ (Hebrew: "blessing"), plural berakhot \-ˈkōt\, in JUDAISM, a BENEDICTION that is recited at specific points of the SYNAGOGUE liturgy, during private prayer, or on other occasions (e.g., before performing a commandment). Most berakhot begin with the words *Barukh Attah Adonai Eloheinu Melekh ha-Olam* ("Blessed art Thou, O Lord our God, King of the Universe").

Berakhot for food and wine are customarily recited in many Jewish homes as a grace before meals—e.g., "Blessed art Thou, O Lord our God, King of the Universe, who hast created the fruit of the vine." Many of the berakhot also thank God for sanctifying ISRAEL through the holidays.

BERLIN, ISAIAH BEN JUDAH LOEB \bər-ˈlīn\, also called Isaiah Pick (b. October 1725, Eisenstadt, Hungary [now in Austria]—d. May 13, 1799, Breslau, Silesia, Prussia [now Wrocław, Pol.]), Jewish scholar noted for his textual commentaries on the TALMUD and other writings.

The son of a well-known Talmudic scholar, he moved to Berlin as a youth. He became a member of the rabbinate late in life (1787), and in 1793 he was elected RABBI of Breslau. Berlin's writings are distinguished for their critical and historical insight. Among his works are commentaries,

BERNADETTE OF LOURDES, SAINT

notes, and glosses on many early works of Jewish scholarship. His commentary on the Talmud, *Masoret ha-Shas* ("Talmud Tradition"), supplements an earlier work by a Frankfort rabbi and is the best known of his collated texts (noting variant readings and parallel passages).

BERNADETTE OF LOURDES, SAINT \ber-nà-'det . . . 'lürd, *Angl* bər-nə-'det . . . 'lürdz\, *original name* Marie-Bernarde Soubirous (b. Jan. 7, 1844, LOURDES, France—d. April 16, 1879, Nevers; canonized Dec. 8, 1933; feast day April 16, but sometimes February 18 in France), miller's daughter whose visions led to the founding of the shrine of Lourdes.

Bernadette was from a poverty-stricken family. She contracted cholera in the epidemic of 1854 and suffered from other ailments throughout her life. Between February 11 and July 16, 1858, at the age of 14, she is said to have had a series of visions of the Virgin MARY, who revealed her identity with the words "I am the IMMACULATE CONCEPTION." Bernadette steadfastly defended the genuineness of these visions, despite strong opposition from her parents, the local clergy, and civil authorities, as she relayed messages she said were given her by the Virgin. To escape public attention she became a boarder in the local school run by the Sisters of Charity of Nevers. In 1866 she was granted admission into the novitiate in the mother house at Nevers. There she completed her religious instruction and passed her remaining years in prayer and seclusion. The chapel of the St. Gildard Convent, Nevers, contains her body.

BERNARD OF CLAIRVAUX, SAINT \ber-'när...kler-'vó... *Angl* bər-'närð\ (b. 1090, probably Fontaine-les-Dijon, near Dijon, Burgundy—d. Aug. 20, 1153, Clairvaux, Champagne; canonized Jan. 18, 1174; feast day August 20), CISTERCIAN monk and mystic, the founder of the abbey of Clairvaux and one of the most influential churchmen of his time.

Born of landowning aristocracy, Bernard turned away from his literary education, begun at the school at Châtillon-sur-Seine, and from ecclesiastical advancement toward a life of renunciation and solitude. Bernard sought the counsel of the abbot of Cîteaux, Stephen Harding, and decided to enter this struggling new community that had been established to restore Benedictinism to a more primitive and austere pattern of life. He entered the Cîteaux community in 1112, and from then until 1115 he cultivated his spiritual and theological studies.

In 1115 Stephen Harding appointed him to lead a small group of monks to establish a monastery at Clairvaux, on the border of Burgundy and Champagne. Bernard and his companions endured extreme deprivations for well over a decade before Clairvaux was self-sufficient. Meanwhile, as Bernard's health worsened, his spirituality deepened. Under pressure from his ecclesiastical superiors and his friends, he

retired to a hut near the monastery and to the discipline of a quack physician. It was here that his first writings evolved. They are characterized by references to the CHURCH FATHERS and by the use of analogues, etymologies, alliterations, and biblical symbols. He also produced a small but complete treatise on MARIOLOGY, "Praises of the Virgin Mother." Bernard was to become a major champion of a moderate cult of the Virgin, though he opposed the notion of the IMMACULATE CONCEPTION.

The mature and most active phase of Bernard's career occurred between 1130 and 1145. In these years both Clairvaux and Rome focused upon Bernard. Mediator and counselor for several civil and ecclesiastical councils and for theological debates during seven years of papal disunity, and the confidant of five popes, Bernard considered it his role to assist in healing the church of wounds inflicted by the ANTIPOPEs and to oppose the rationalistic influence of the greatest and most popular dialectician of the age, PETER ABELARD. Bernard finally claimed a victory over Abelard, not because of skill or cogency in argument but because of his homiletical denunciation and his favored position with the bishops and the PAPACY.

His greatest literary endeavor, "Sermons on the Canticle of Canticles," was written during this active time. It was a love song supreme: "The Father is never fully known if He is not loved perfectly." Add to this one of Bernard's favorite prayers, "Whence arises the love of God? From God. And what is the measure of this love? To love without measure," and one has a key to his doctrine.

BERTINORO, OBADIAH (BEN ABRAHAM YARE) OF \,ō-bə-'dī-ə . . . ,ber-tē-'nōr-ō\ (b. c. 1450, Bertinoro, Papal States—d. before 1516), Italian rabbinic author whose commentary on the MISHNAH, incorporating literal explanations from the medieval commentator RASHI and citing rulings from the philosopher MOSES MAIMONIDES, is a standard work of Jewish literature and since its first printing in 1548 has been published in almost every edition of the Mishnah.

Bertinoro is also remembered as the author of three celebrated letters describing his three-year journey (1486–88) to Jerusalem and containing invaluable descriptions of the people and customs of the Jewish communities he visited on the way. The letters, written to Bertinoro's father and brother during the period 1488–90, have been published under the titles *Darkhei Ziyyon* and *HaMassa le-Erez Yisrael* and translated into several languages. He lived in Jerusalem almost continuously after 1488, acting as spiritual head of the Jewish community there.

BES \bes\, in ancient EGYPTIAN RELIGION, a minor god represented as a dwarf with large head, goggle eyes, protruding tongue, bowlegs, bushy tail, and usually a crown of feathers. The name Bes is now used to designate a group of deities of similar appearance with a wide variety of ancient names. The god's figure was intended to inspire joy or drive away pain and sorrow, his hideousness being perhaps supposed to scare away evil spirits. Contrary to the usual rule of representation, Bes was commonly shown full-faced rather than in profile. He was portrayed on mirrors, ointment vases, and other personal articles. He was associated with music and with childbirth and was represented in the "birth houses" devoted to the cult of the child god.

BETHEL \be-thəl, be-'thel\, ancient city of Palestine, located just north of Jerusalem. Originally called Luz (GENESIS 28:19; Judges 1:23), and in modern times Baytun, Bethel was

important in OLD TESTAMENT times and was frequently associated with ABRAHAM and JACOB (Genesis 12:8; 13:3; 28:10–22; 35:1 ff.). Excavations suggest that Bethel may have been the actual scene of the events described in the Old Testament as having taken place at Ai during the Israelite conquest of CANAAN (Joshua 8ff.)

After the division of ISRAEL, Jeroboam I (10th century BCE) made Bethel the chief SANCTUARY of the northern kingdom (Israel; 1 Kings 12:28–30), and the city was later the center for the prophetic ministry of AMOS (Amos 7:10–13). The city apparently escaped destruction by the Assyrians at the time of the fall of Samaria (721 BCE), but it was occupied by JOSIAH of JUDAH (reigned c. 640–c. 609 BCE; 2 Kings 23:4, 15f.; 2 Chronicles 34:1–7).

BETHLEHEM, STAR OF, celestial phenomenon mentioned in the Gospel According to Matthew as leading “wise men from the East” to the birthplace of JESUS CHRIST. While the fact that the year of Jesus’ birth is unknown prevents certain identification, natural events that might well have been considered important OMENS and described as stars include exploding stars (novae and supernovae), comets (Halley’s Comet was visible in 12 and 11 BCE), meteors, and planetary conjunctions—*i.e.*, apparent close approaches of two or more planets to each other.

Chinese annals record novae in 5 BCE and 4 BCE. Several striking planetary conjunctions also took place within 10 years of the chronological point now taken as the beginning of the Christian era. A triple conjunction in early 6 BCE, in which Mars, Jupiter, and Saturn stood at the points of a triangle, has often been mentioned as a possible explanation of the star. Prior to that, in 7 BCE, Jupiter and Saturn were for eight months within three degrees of each other and three times within that period passed within one degree. Several years later, on June 17, 2 BCE, the bright planets VENUS and Jupiter would have appeared to observers in Babylon to have merged just before setting in the general direction of Bethlehem to the west.

BEZA, THEODORE \ˈbē-zə\, French Théodore de Bèze \də-ˈbez\ (b. June 24, 1519, Vézelay, France—d. Oct. 13, 1605, Geneva), author, translator, educator, and theologian who assisted and later succeeded JOHN CALVIN as a leader of the Protestant REFORMATION centered at Geneva.

After studying law at Orléans, France (1535–39), Beza established a practice in Paris, where he published *Juvenilia* (1548), a volume of amorous verse that earned him a reputation as a leading Latin poet. On recovering from a serious illness, he underwent a conversion experience and in 1548 traveled to Geneva to join Calvin. A year later Beza became a professor of Greek at Lausanne, where he wrote in defense of the burning of the anti-Trinitarian heretic MICHAEL SERVETUS (d. 1553). For several years Beza traveled throughout Europe defending the Protestant cause. He returned to Geneva in 1558.

There, in 1559, with Calvin, he founded the new Geneva academy, destined to become a training ground for promotion of Calvinist doctrines. As its first rector, Beza was the logical successor to Calvin upon the reformer’s death in 1564. Beza remained the chief pastor of the Geneva church for the rest of his life, contributing numerous works that influenced the development of Reformed theology.

Beza’s sermons and commentaries were widely read in his time; his Greek editions and Latin translations of the NEW TESTAMENT were basic sources for the Geneva BIBLE and the KING JAMES VERSION (1611). His *De jure magistratum*

(1574), defending the right of revolt against tyranny, grew out of the St. Bartholomew’s Day Massacre (1572), from which many surviving French Protestants were welcomed by Beza in Geneva. Beza’s book overthrew the earlier Calvinist doctrine of obedience to all civil authority and became a major political manifesto of CALVINISM. His other works include anti-Catholic tracts, a biography of Calvin, and the *Histoire ecclésiastique des Églises réformées au royaume de France* (1580; “Ecclesiastical History of the Reformed Church in the Kingdom of France”). Both as a theologian and as an administrator, despite occasional charges of intolerance made against him, Beza is considered not only Calvin’s successor but also his equal in securing the establishment of Calvinism in Europe.

BHADRABĀHU I \ˌbā-drə-ˈbā-hü\, Jain leader and philosopher who, after a serious 12-year-long famine, is held to have led an exodus from the Jain stronghold in northeastern India to Sravana-Belgola, near Mysore, southwestern India, about 300 BCE.

The DIGAMBARA sect of JAINISM, whose monks wear no clothing, recognizes Bhadrabāhu as their founder, claiming that he left the Mauryan capital Pāṭaliputra in the company of the first king of the dynasty, who had embraced the life of Jain mendicancy. Many inscriptions in the Mysore area lend credibility to an early southward migration, though not necessarily captained by Bhadrabāhu or Candra Gupta (Chandragupta Maurya). According to Digambara sources, monks in Bhadrabāhu’s following returned to Pāṭaliputra after his death but were unable to accept doctrinal and practical changes that had been instigated in their absence by the faction that came to be called SVETĀMBARA. Svetāmbara sources represent this history differently. Bhadrabāhu is believed to have been the author of three of the Jain sacred books as well as of *Niryuktis*, short commentaries on 10 of the 12 original sacred books. He is reputed to have died by realizing the Jain ideal of starving to death.

BHAGAVAD GĪTĀ \ˈbā-gə-ˌvəd-ˈgē-tā\ (Sanskrit: “Song of God”), one of the greatest of the Hindu SCRIPTURES. It forms part of Book VI of the MAHĀBHĀRATA and is written in the form of a dialogue between the warrior Prince ARJUNA and his friend and charioteer, KRISHNA (often considered an earthly incarnation of the god VISHNU, but in the conception of the text itself he is the supreme divinity). The *Bhagavad Gītā*, consisting of 700 Sanskrit verses divided into 18 chapters, is of a later date than many parts of the *Mahābhārata* and was most probably written in the 1st or 2nd century CE.

The setting is a battlefield, just prior to the war between the PĀNDAVAS and the Kauravas (the cousins of the Pāṇdavas). The two armies stand opposing each other, and, on seeing many of his friends and kinsmen among those lined up on the other side, Prince Arjuna hesitates. He considers whether it would not be better to allow himself to be slain by the enemy rather than to engage in a cruel albeit just war. He is recalled to his sense of duty as a warrior by Krishna, who points out to him that the higher way is the dispassionate discharge of his duty, performed sacrificially, with faith in Krishna, and without concern for personal triumph or gain.

The *Bhagavad Gītā* considers broadly the nature of ultimate reality. As a predominantly theistic work, it often describes that reality as a personal god, Krishna, but it also refers to the supreme as a seemingly impersonal transcendent absolute, and equally as the state of one’s own awakened

spirit. The *Bhagavad Gītā* elaborates and correlates three disciplines (YOGAS) creating the possibility for transcending the limitations of this world: JÑĀNA (knowledge or wisdom), KARMA (dispassionate action), and BHAKTI (love of God).

The earliest commentary on the *Bhagavad Gītā* is that of the great philosopher ŚAMKARA. Outstanding modern commentaries are those of B.G. Tilak, ŚRĪ AUROBINDO, MAHATMA GANDHI, and Sarvepalli Radhakrishnan. GITA PRESS was founded in the 1930s with the purpose of making the *Bhagavad Gītā* accessible to every Hindu, and the claim that it is the most widely revered Hindu scripture has gained plausibility throughout the 20th century.

BHĀGAVATA \ˈbā-gə-və-tə\ (Sanskrit: “One Belonging to the Glorious One [Vishnu]”), member of the earliest recorded Hindu sect, representing the beginnings of theistic, devotional worship and of modern VAIṢṆAVISM.

The Bhāgavata sect apparently originated among the Yādava people of the Mathura area in the centuries preceding the beginning of the Common Era. Inscriptional evidence locates it in surrounding North India in the 2nd century BCE. It was introduced into South India at an early date, quite possibly as early as the 3rd or 2nd century BCE, and continued to be prominent within Vaiṣṇavism until at least the 11th century. Some have argued that part of its success derived from royal patronage made possible by its relatively lenient approach to accepting initiates from nonbrahmanical communities.

The Bhāgavata system centered upon a personal god variously called VISHNU, VĀSUDEVA, KRISHNA, Hari, or Nārāyaṇa, and was known as *ekāntika dharma* (“religion with one object”—i.e., MONOTHEISM). The religious poem the BHĀGAVAD GĪTĀ (1st–2nd century CE) is the earliest extant exposition of

the Bhāgavata system, but the magisterial text is the BHĀGAVATA PURĀṆA, whose lengthy and influential 10th book focuses on Krishna. By the time of the *Gītā*, Vāsudeva (Krishna), the hero-deity of the Yādava clan, was identified with the Vedic Lord Vishnu. Bhāgavata religion, unlike Vedic practice (see VEDIC RELIGION), is associated with worship through images, and a case has been made that some of India’s earliest extant temples, such as the impressive 8th-century temple of Vishnu as Vaikuṅṭha Perumāḷ in Kāñchīpuram, owe their design to Bhāgavata inspiration. It is also argued that the *Bhāgavata Purāṇa* should be understood as the great Bhāgavata SCRIPTURE, even from a relatively early date.

BHĀGAVATA PURĀṆA \ˈbā-gə-və-tə-pū-ˈrā-nə\ (Sanskrit: “Ancient Accounts of the Glorious One [VISHNU]”), the most celebrated text of a variety of Hindu sacred literature in Sanskrit that is known as the PURĀṆAS, and the specific text that is held sacred by the BHĀGAVATA sect. The *Bhāgavata Purāṇa* was probably composed about the 10th century, somewhere in the Tamil country of South India; its expression of BHAKTI owes a debt to that of the South Indian devotional poets, the ĀLVĀRS. The *Purāṇa* is made up of some 18,000 stanzas divided into 12 books; but it is book 10, which deals with KRISHNA’S childhood and his years spent among the cowherds of Vṛndāvana, that accounts for its immense popularity with Vaiṣṇavas throughout India (see VAIṢṆAVISM). The attempts on Krishna’s life made by his wicked uncle Kāṁsa, the childhood pranks he played on his foster mother Yaśodā, his love for the *gopīs* (cowherd wives and daughters) and their passionate abandonment to him are treated with endearing charm and grace, even while transfused with deep religious significance. In theology, the *Bhāgavata Purāṇa*

attempts to build a synthesis between *bhakti* devotionism and the abstract philosophy of ADVAITA VEDĀNTA.

BHAIṢAJYAGURU \bī-ˈshəj-yə-ˈgür-ü\ (Sanskrit), *Tibetan* Sman-Bla-Rgyal-Po \ˈman-lä-ˈgʻel-bō\, *Chinese* Yao-Shih-Fo \ˈyau-ˈshā-ˈfō-ˈshər-\, *Japanese* Yakushi Nyorai \ˈyā-kū-shē-ˈnē-yō-ri\, the healing Buddha, widely worshiped in Tibet, China, and Japan. According to popular belief, some illnesses are effectively cured by merely touching Bhaiṣajyaguru’s image or by calling out his name. More serious illnesses, however, require the performance of complex rituals, which are described in the *Bhaiṣajyaguru Sūtra*. He is associated with the “self-born,” eternal Buddha, AKṢOBHYA (and by some Japanese sects with another eternal Buddha, i.e., VAIROCANA), and rules over the Eastern Paradise.

In Japan, Bhaiṣajyaguru is especially venerated by the

Tendai (T'ĪEN-T'AI), SHINGON, and ZEN sects. In Japan he is often represented in the garb of a blue-skinned Buddha with his medicine bowl in one hand. In Tibet he often holds the medicinal myrobalan fruit. He has in his retinue 12 divine *yakṣa*, or nature spirits, generals who protect true believers. Chinese Buddhists, in a later phase, connected these generals with the 12 hours of the day and the 12 years of the Chinese calendar's cycle.

BHAJAN \ˈbə-jən\ see KĪRTAN or BHAKTI.

BHAKTI \ˈbək-tē\, in various South Asian religions, particularly HINDUISM, the devotional sentiment widely understood to be a predominant aspect of religious practice and expression. Derived from the Sanskrit verbal root *bhaj*, originally meaning "to share, to apportion," *bhakti* came to mean "love, sharing, worship, devotion." In BUDDHISM and JAINISM, *bhakti* was an infrequent technical term implying veneration and awe of the BUDDHA GOTAMA or MAHĀVĪRA, one factor among others, such as knowledge of SCRIPTURE or ASCETICISM, necessary for spiritual practice. In South Asian ISLAM, the rudiments of *bhakti* appeared in works of SUFISM, particularly during the reign of AKBAR (1556–1605), and in the veneration of a *pīr*, or charismatic Sufi figure. SIKHISM, emerging in the 16th century, incorporated many practices associated with *bhakti*, such as an emphasis on the name (NĀM) of God in worship. However, *bhakti* is most prevalent in Hinduism, where loosely interdependent religious communities arose with *bhakti* as a guiding theological and social principle. Proponents of *bhakti*—often called collectively "the *bhakti* movement"—challenged the dominance of sacrificial VEDIC RELIGION, CASTE boundaries, gender inequity, and the use of Sanskrit as the exclusive language of religion. *Bhakti* integrates aspects of personal RELIGIOUS EXPERIENCE, social protest, and a variety of ritual modes around a notion of intimacy with one's deity that colors all aspects of human existence.

Precursors to *bhakti* existed as early as the ṚG VEDA (c. 1200 BCE), where devotees extolled the virtues of certain deities, entreating the goddess SARASVATĪ, for example, to show benevolence. The word's earliest datable occurrence is in the work of the preeminent Sanskrit grammarian Pāṇini, who uses *bhakti* to mean "devotion." It also appears in the early Buddhist text, the THERAGĀTHĀ. Several early factors opened the way for *bhakti*'s appearance as a religious, social, and philosophical ideology. Jainism, Buddhism, and Upanishadic thought presented challenges to VEDIC RELIGION through their radical models of religious expression that emphasized communal support for individual effort toward spiritual evolution, rather than a reliance on priestly authority and sacrificial rituals. Concurrently, the Indian epics RĀMĀYAṆA and MAHĀBHĀRATA and the PURĀNA literature about the lives of deities, depicted gods and goddesses in direct relationship with humans, joining together in war, love, and friendship. The most famous example of this is the intense relationship between KRISHNA and ARJUNA in the BHAGAVAD GĪTĀ (c. 1st century CE), where Krishna explicitly propounds *bhakti* in the context of Arjuna's loyalty and challenge.

By the early centuries of the Common Era, *bhakti* was apparent in various forms of religious expression, particularly during the "Golden Age" of the Gupta Empire (320–647 CE) and the reign of the Pallavas and the Pāṇdyas in South India (4th–10th centuries CE). Temple construction became important as an act of *bhakti*. There, as in private homes, sacred icons were the objects of visual *bhakti*, a

process today known familiarly as DARŚAN, or "seeing," whereby a devotee sees and is seen by God. Another typical aspect of Hindu worship came to light in this ambience: PŪJĀ, whereby the deities in image form are welcomed with flowers, fruits, and sweets as if they were honored guests in the devotee's home.

Temple construction and personal worship began to reflect sectarian preference for VISHNU, SHIVA, or manifestations of the Goddess (DEVĪ, ŚAKTI, DURGĀ). The first written records of songs voiced in a vernacular language rather than in Sanskrit appeared in Tamil in the 6th century in South India. In the course of the next several centuries, massive collections of Tamil hymns to Shiva and Vishnu emerged, soon to be accompanied by a separate literature describing the lives of the poets who produced them. The Śaiva poets are called collectively NĀYAṆĀRS, the Vaiṣṇava poets ĀLVĀRS. Today *bhakti* poetry continues to be composed and sung in every South Asian language. See also ŚAIVISM and VAISNAVISM.

Bhakti saint-poets have expressed their love of God through song in two general modes. In the first, SAGUṆA ("with traits"), the poets evoke the image of the deity, portrayed in human and tangible ways, with color, personality, and definition. Sometimes they take their inspiration from specific temple icons and sculpture, rich with physical detail, as well as from pilgrimages that bring *saguṇa* devotees to these holy sites. *Saguṇa bhakti* songs also explore various relationships between the deity and the devotee by conceiving of them in familiar human terms—e.g., a child trusting in a parent, a servant humbled before his master, or a lover yearning for her beloved. Two good examples of saints "in love" with their God are the female poets MAHĀDEVĪ (12th century), who sings to her lord Shiva, "white as jasmine," and MĪRĀBĀĪ (16th century), who seeks shelter in Krishna, her beloved "mountain lifter." But female poets are not the only ones to suffer by being separated from a God portrayed as male; from the 1st millennium onward, male poets have assumed female personae to express the same longing.

A second *bhakti* mode, NIRGUṆA ("without traits"), conceives of divinity as singular and ineffable, beyond the realm of human perception. *Nirguṇa* saint-poets often challenge sensory religious practices such as *pūjā* and *darśan*, and question the efficacy of pilgrimages to temples and holy sites, as BASAVA (12th century) did in South India and KABĪR (15th century) in the North. They are apt to prefer a focus on the simple recitation of God's name. *Nirguṇa* saint-poets like Kabir, RAVIDĀS, and NĀNAK (15–16th centuries) often articulated *bhakti*'s intensity in ways that elude comparison to the "natural" forms of relationship favored by *saguṇa* poets. Yet in the communities that formed around them, the teacher-student relationship loomed large, and in their own poetry as well we find the figure of the transcendent True Teacher (*satguru*)—either as an internal voice of authority or as an external guide or both. Finally, *nirguṇa* and *saguṇa* modes are sometimes indistinguishable, as with the 14th-century Marathi saint-poet NĀMDEV, who sings to his deity, "You are unfathomable . . . I see you wherever I go."

Bhakti has an explicitly theological dimension. Systematic theologians such as RĀMĀNUJA (11th–12th century) and VALLABHA (16th century) sought to achieve a rapprochement between the personalist convictions of *bhakti* and the abstract philosophical rigor of various schools of VEDĀNTA. Each proposed ways in which the universe could be understood as both displaying the divine, of which it is an em-

bodiment, and obscuring it. Such theologies, like those that developed by and around BASAVA (from Karnataka), CAITANYA (from Bengal), NĀNAK (from the Punjab), and KABĪR (from the Gangetic valley), helped give distinctive regional forms to *bhakti*. Sometimes they also echoed sectarian styles that can be seen in poetry, social protest, ritual performance, and even cuisine.

BHAKTIVEDANTA, A(BHAY) C(HARANARAVINDA) \bək-ti-vā-'dān-tə, -'vā-dān-tə\, also called Swami Prabhupāda \s'wā-mē-prə-bū-'pā-də, -'prə-bū-'pād\ (b. Sept. 1, 1896, Calcutta, India—d. Nov. 14, 1977, Vrindāvan, Uttar Pradesh), Indian religious leader who in 1965 founded the International Society for Krishna Consciousness (ISKCON), commonly known as the Hare Krishna movement.

In 1922 Bhaktivedanta, a pharmacist by trade, was urged by his GURU, a spiritual leader of one of the Vaiṣṇava sects of HINDUISM (see VAIṢṆAVISM), to preach the teachings of KRISHNA throughout the Western world. Thereafter Bhaktivedanta devoted much time as lecturer, writer, editor, and translator for the Vaiṣṇava sect to which he belonged. In 1933 he was formally initiated as a disciple at Allahābād, Uttar Pradesh.

Because his family did not share his religious interests, Bhaktivedanta turned over his business to a son and renounced all family ties in 1954 to devote his full time to religious work. He received the title of swami in 1959 and in 1965 moved to Boston and then New York City, where he established the headquarters of the Hare Krishna movement. The movement, which he claimed could affect the consciousness of a world afflicted with rampant materialism, became especially popular among young people, and many of the swami's books began to be studied on college and university campuses. Despite his failing health, by the time of his death Bhaktivedanta had written and published more than 50 books on ancient Vedic culture and had opened more than 100 centers throughout the world.

BHĀRATA NĀṬYA \bār-ə-tə-'nā-tyə\ (Sanskrit: "Bharata's dancing"), also called *dāsī āṭṭam*; the principal of the classical dance styles of India (the others being *kuchipuḍi*, *kathak*, *kathakali*, *manipuri*, and *orissi*). It is indigenous to Tamil Nadu but has become well known throughout India and abroad. *Bhārata nāṭya* serves the expression of Hindu religious themes and devotions, and its techniques and terminology have been traced back to ancient treatises such as the *Nāṭya-śāstra*, by the BRAHMIN sage and priest Bharata. It was originally performed exclusively by female temple dancers and was not brought to the stage for public performance until about 1930.

A program of *bhārata nāṭya* usually lasts two hours without interruption and includes a specific list of procedures, all performed by one dancer, who does not leave the stage or change costume. The accompanying orchestra—composed of drums, drone, and singer—occupies the back of the stage, led by the GURU, or teacher, of the dancer.

The dancer's feet beat out complicated counter rhythms; the legs are bent in a characteristic low squat; arms, neck, and shoulders are part of the movement. In the pantomime sections, the hands tell the story through conventional gestural language, while the face expresses the mood. In the pure dance the hands are restricted to 11 hand poses.

Bhārata nāṭya has survived to the present through the DEVADĀSĪS, temple dancing girls who devoted their lives to their gods through this medium. In colonial times the institution of *devadāsī* fell into disrepute, and temple dancing

girls became synonymous with prostitutes. In the latter half of the 19th century in Tanjore, Chinnaiah, Ponnaiah, Vadivelu, and Shivanandam, four talented dancers who were brothers, revived the original purity of *dāsī āṭṭam* by studying and following the ancient texts and temple friezes, with missing links supplied by the socially spurned *devadāsīs*. Their popularized form of *dāsī āṭṭam* was called *bhārata nāṭya*.

BHARATIYA JANATA PARTY \,bār-ə-'tē-yə-jə-nə-'tā\ (Indian People's Party), also called BJP, political party of post-independence India that includes a strong Hindu nationalist component and that succeeded in forming a coalition government at the national level in 1998. Standing in the lineage of the earlier Jan Sangh Party, the BJP forms a triad with the Rashtriya Swayamsevak Sangh (RSS) and VISHVA HINDU PARISHAD (VHP). This triad is commonly called the Sangh Parivar ("Sangh" family [of organizations]), after the RSS, considered the parent group providing leadership for all three.

While a certain proportion of the BJP's success at the polls has followed from its attempt to represent itself as being opposed to the "corruption as usual" practices of the Congress Party and others, it has also attempted to mobilize sentiment in favor of a majority Hindu polity. Some of the key ideological planks in this program were laid out by V.D. Savarkar in 1923 under the banner HINDUTVA ("Hinduness"), a concept insisting that Hindus give true definition to Indian national identity because they embrace their "fatherland" (*pitṛbhūmi*) as "sacred land" (*puṇyabhūmi*). Such ideas have had the effect of estranging Muslims, Christians, and many low-caste Hindus from membership in the BJP. In the 1990s the BJP made efforts to include these groups, but its legacy as the party that supported the drive to de-

Bhārata nāṭya dance drama

Mohan Khokar

stroy the Babri Mosque in AYODHYA in 1992 has continued to brand it an ineradicably Hindu nationalist party in the minds of many, as does its ongoing alliance with avowedly anti-Muslim groups such as the Shiv Sena, a regional party in Maharashtra. The BJP's importation of explicit Hindu forms into political action and discourse—*e.g.*, its use of the vocabulary of Hindu pilgrimage or the language of sacrifice (YAJNA)—cause it to be regarded with fear and deep suspicion by many committed to political secularism in contemporary India.

BHARTRHARI \ˈbər-tri-,hə-rē-,ˈbär-\ (d. 650, Ujjain, India), Hindu philosopher, poet, and grammarian, author of the *Vākyaṇḍīya* ("Words in a Sentence"), regarded as one of the most significant works on the philosophy of language in the *śabdādvaita* school of Indian thought.

Three collections of poetry are also attributed to him, attesting to his status as a legendary authority on life's multiple attractions. All are called *śataka* ("century"), owing to the fact that they each contain one hundred verses: the *Śṛṅgāra*- (love) *śataka*, *Nīti*- (ethical and polity) *śataka*, and *Vairāgya*- (dispassion) *śataka*. Legends of Bhartṛhari's life echo this range but are not entirely consistent with one another. One version says that he was attached to the court of the Maitraka king of Valabhi (modern Vala, Gujarat), where he cultivated the pleasures of this life; but he felt so torn by the needs of the soul that he withdrew to the monastic life on seven separate occasions, each time to reemerge. The 7th-century Buddhist traveler I-ching evidently heard a version of this narrative and believed Bhartṛhari's ASCETICISM to have been derived from BUDDHISM. A strong sense of personal irony enlivens the *śatakas*, as well as a consciousness of the strains and insults associated with being a poet in royal service. In keeping with the breadth of Bhartṛhari's persona, another work is sometimes also attributed to him: the *Bhaṭṭi kāvyā* ("Poem of Bhaṭṭi"), in which the poet performs linguistic gymnastics to demonstrate the subtleties of Sanskrit.

BHĀVAVIVEKA \ˈbā-və-vi-ˈvā-kə\, 8th-century Indian Buddhist philosopher who was an interpreter of NĀGĀRJUNA, the founder of MĀDHYAMIKĀ school of philosophy. The disciples of Nāgārjuna who continued to limit the use of logic to a negative and indirect method, known as *prasaṅga*, are called the *prāsaṅgikas*: of these, Aryadeva, Buddhapālita, and CANDRAKĪRTI are the most important. Bhāvaviveka, however, followed the method of direct reasoning and thus founded what is called the Svāntarika (*svatantra*; "independent") school of Mādhyamika philosophy. With him Buddhist logic comes to its own. Bhāvaviveka developed a notion of two truths in which, at the level of conventional (as distinguished from ultimate) truth, reason could be used to support positive teachings and practices. The Svāntarika tradition played a very important role in the development of Buddhist philosophy in Tibet.

BHEDĀBHEDA \ˈbā-dā-ˈbā-də\ (Sanskrit: "difference and nondifference," or "identity in difference"), an important branch of VEDĀNTA. Its principal author was Bhāskara, probably a younger contemporary of the great thinker ŚAMKARA. Against Śamkara's view that ultimately all distinctions are unreal and therefore any particular path of action is irrelevant for a liberated person (SANNYĀSĪ), Bhāskara upheld the doctrine of the "cumulative effect of acts and knowledge" (*jñāna-karma-samuccaya*) and declared that a person should only withdraw from active life once he has fulfilled

its obligations. On the important issue of the relationship between BRAHMAN (the absolute) and the world, Bhāskara taught that Brahman is the substantial cause of the world, which becomes manifold through power or transformation akin to a spider weaving its web. The self is naturally one with Brahman, but is also different by virtue of conditions (UPĀDHIS) that are imposed on Brahman.

Although Bhāskara's doctrine never became as widely accepted as that of Śamkara, his work is important for its documentation of the typical BRAHMIN (priestly class) concern not just with MOKṢA (release) but with the implementation of DHARMA—caste and individual obligations that keep the world in balance and produce the good society.

BHIKṢU \ˈbik-shū\ (Sanskrit, *feminine* bhikṣuṇī \ˈbik-shū-nē\, *Pāli* bhikkū \ˈbik-kū\, or (*feminine*) bhikkunī \ˈbik-kū-nē\, in BUDDHISM, one who has renounced worldly life and joined the mendicant and CONTEMPLATIVE community. While individuals may enter the monastic life at an early age—some renunciate communities include children in their preteens—a candidate for ordination must be 21 years of age and have parental permission.

The term bhikṣu comes from a verbal root meaning "to beg." Thus, a Buddhist monk or nun is marked primarily by his or her practice of poverty and nonattachment to the material world. Originally, bhikṣus were the mendicant followers of the BUDDHA GOTAMA who had left their families and worldly pursuits in order to meditate and to apply the Buddha's teachings to their everyday life. Bhikṣus tended to live as a group in forest retreats near villages and towns; in exchange for food, the monks taught the townspeople Buddhist ways. Buddhist texts indicate that in the beginning the Buddha allowed only a male monastic community (the SANGHA) but later permitted women to establish a female order as well. (This *bhikṣuṇī* order has been maintained in some MAHĀYĀNA traditions but has not been maintained in the THERAVĀDA context.)

A *bhikṣu* is expected to follow the rules that were established by the Buddha and preserved in a text called the *Vinaya*. There are some 227 to 250 rules regulating the conduct of the *bhikṣus* and an even greater number for *bhikṣuṇī*. Violations must be confessed in twice-monthly meetings (the *uposatha*). Four monastic rules, if broken, result in lifelong expulsion from the order: (1) having sexual relations, (2) taking or ordering the taking of life, (3) taking something as one's own that has not been freely given, and (4) making claims regarding one's spiritual attainments, powers, or degree of enlightenment.

The *bhikṣu*'s head and face are kept shaven. He wears three garments—an upper and lower robe and a stole—originally made of cast-off rags dyed with saffron, now more likely the gift of a layperson. He is allowed to retain only a minimum of possessions—his robes and stole, a girdle, an alms bowl, a razor, a needle and thread for mending, and a strainer to prevent his harming the small insects that might otherwise enter his drinking water.

The *bhikṣu* begs daily for his food; the donation of food by the laity is viewed as meritorious. The *bhikṣu* may eat no solid food between noon and the following morning. Except on holy days, which are vegetarian, meat may be eaten but only if it has not been cooked especially for a monk.

In the Theravāda countries of Southeast Asia, the monk commonly is prohibited from handling money and from doing physical labor. This is not the case in China and Japan, where Ch'an (ZEN) Buddhism early established the rule, "A day without work, a day without food."

BHINDRANWALE, SANT JARNAIL SINGH \bin-də-rən-'vā-lā\ (b. 1947, Rhode, Punjab—d. June 6, 1984, Amritsar), SIKH religious leader and political revolutionary. Born into a Sikh peasant family, Jarnail Singh attended a residential Sikh seminary (*taksāl*) where students were trained to become *granthīs* (custodians of the GURDWARĀS), preachers, and *rāgīs* (singers of Sikh sacred hymns) at a nearby village, Bhindran. The chief of the Bhindran *taksāl*, Sant Gurbachan Singh, was widely revered. After his death in 1969, one of his followers, Sant Kartar Singh, moved to Mehta, 30 miles from AMRITSAR, and established a new *taksāl* there. Jarnail Singh accompanied him and succeeded him as head of the Mehta *taksāl* after his death in 1977.

Known for his charisma as well as his knowledge of the SCRIPTURE, history, and mythology of SIKHISM, Sant Jarnail Singh was asked by the Congress Party under Giani Zail Singh, who later became the president of India, to align with them in their effort to break the hold of the AKĀLĪ DAL on rank-and-file Sikhs. Sant Jarnail Singh obliged, but in the process he became increasingly aware of the role he might play in Sikh history. By setting himself as an example, Sant Jarnail Singh hoped to pull the Sikh community back to its traditions of bravery and martyrdom. He argued against the Akālī Party's policy of negotiating their demands peacefully with the central government in Delhi, insisting that political power in the Punjab was a Sikh right, not a gift of the Delhi regime. Sant Jarnail Singh succeeded in convincing a large number of rural Sikhs that the politics of the Akālī Dal were humiliating for them.

In July 1982, he moved to the GOLDEN TEMPLE (Darbār Sāhib) in Amritsar and began preaching that Sikhs should initiate a battle for creation of a separate state of KHALISTAN. He gathered a considerable following of like-minded militants and stockpiled weapons. In 1984 Prime Minister Indira Gandhi ordered Indian troops to attack the Darbār Sāhib complex, and in the confrontation that followed, hundreds of people were killed, including Sant Jarnail Singh. For many Sikhs, he died the death of a martyr. Especially in the Sikh diaspora, the hope of Khalistan remained a central feature of Sikh life.

BHŪT \'büt\, in the MYTHOLOGY of HINDUISM, a restless ghost. *Bhūts* are believed to be malignant if they have died a violent death or have been denied funeral rites; they are particularly feared by women, children, and the newly married.

Bhūts haunt trees, deserts, abandoned houses, the hearths and roofs of homes, crossroads, and boundaries but never rest on the ground. Rudimentary shrines are sometimes established for *bhūts*, and when in fear of a believer will invoke SHIVA, as he is considered to be their lord.

Sant Jarnail Singh Bhindranwale addressing his followers at Amritsar
AP—Wide World

BIBLE, the sacred SCRIPTURES of JUDAISM and CHRISTIANITY. The Christian Bible consists of the OLD TESTAMENT and the NEW TESTAMENT; in ROMAN CATHOLICISM and EASTERN ORTHODOXY, the Old Testament is slightly larger because of their acceptance of certain books and parts of books considered apocryphal in PROTESTANTISM. The Jewish Bible includes only the books known to Christians as the Old Testament. The arrangements of the Jewish and Christian canons differ considerably. However, the Protestant and Roman Catholic arrangements more nearly match one another.

Traditionally the Jews have divided their scriptures into three parts: the TORAH (the "Law"), or PENTATEUCH; the NEB'IM (the "Prophets"); and the KETUBIM (the "Writings"), or Hagiographa. The Pentateuch, together with the book of Joshua, can be seen as the account of how ISRAEL became a nation and of how it possessed the Promised Land. The division designated as the "Prophets" continues the story, describing the establishment and development of the monarchy and presentation of the messages of the prophets to the people. The "Writings" include speculation on the place of evil and death in the scheme of things (Job and Ecclesiastes), the poetical works, and other historical books.

In the APOCRYPHA of the Old Testament, the purpose seems to have been to fill in some of the gaps left by the indisputably canonical books and to carry the history of Israel to the 2nd century BCE.

Like the Old Testament, the New Testament is a collection of books, including a variety of early Christian literature. The four GOSPELS deal with the life, the person, and the teachings of JESUS CHRIST, as he was remembered by the Christian community. THE ACTS OF THE APOSTLES carries the story of Christianity from the RESURRECTION of Jesus to the end of the career of PAUL. The Letters, or Epistles, are correspondence by various leaders of the early Christian church applying the message of the church to the sundry needs and problems of early Christian congregations. The REVELATION TO JOHN is the only canonical representative of a large genre of apocalyptic literature that appeared in the early Christian movement.

BIBLICAL CRITICISM, discipline that studies textual, compositional, and historical questions surrounding both the OLD TESTAMENT and the NEW TESTAMENT. Biblical criticism lays the groundwork for the meaningful interpretation of the BIBLE.

The major types of biblical criticism are (1) textual criticism, which is concerned with establishing the original or most authoritative text, (2) philological criticism, which is the study of the biblical languages for an accurate knowledge of vocabulary, grammar, and style of the period, (3) literary criticism, which focuses on the various literary genres embedded in the text in order to uncover evidence concerning date of composition, authorship, and original function of the various types of writing that constitute the Bible, (4) tradition criticism, which attempts to trace the development of the ORAL TRADITIONS that preceded written texts, and (5) form criticism, which classifies the written material according to the preliterary forms, such as PARABLE or hymn.

Other schools of biblical criticism that are more exegetical in intent—that is, concerned with recovering original meanings of texts—include redaction criticism, which studies how the documents were assembled by their final authors and editors, and historical criticism, which seeks to interpret biblical writings in the context of their historical settings.

The application of the scientific principles on which modern criticism is based depend in part upon viewing the Bible as a suitable object for literary study, rather than as an exclusively sacred text.

BIBLICAL INSPIRATION, the claim that the writers of sacred books acted under special divine guidance. It is in many ways an extension of the claim of divine revelation and of the belief that seers, visionaries, and prophets received not only the content of their message, but its form and even its very words, from a divine source. Thus, in ancient Greece, the Delphic ORACLE (and other oracles, as well) were the voice of the divine. In the Hebrew SCRIPTURE, the God of ISRAEL not only put words into the mouths of the prophets and other appointed messengers but often commanded them to write these words down exactly as given. The Christian NEW TESTAMENT affirmed this inspired quality about Hebrew scripture, and eventually the Christian APOSTLES and Evangelists were also seen as having been inspired directly by the HOLY SPIRIT. The highest doctrine of any of the “monotheisms of the Book” is that of ISLAM, where God is the only author of the QUR’AN and MUHAMMAD is merely his scribe.

The rise, within both JUDAISM (by such philosophers as Benedict de Spinoza) and CHRISTIANITY, of the historical-critical method of studying the Bible brought about conflict between the doctrine of biblical inspiration and scholarly study, and with it some of the most bitter theological controversies of the 19th and 20th centuries.

BIBLICAL SOURCE, any of the original oral or written materials that, in compilation, came to constitute the BIBLE of JUDAISM and CHRISTIANITY. Most of the writings in the OLD TESTAMENT are of anonymous authorship, and in many cases it is not known whether they were compiled by individuals or by groups. Nevertheless, by careful evaluation of internal evidence and with the aid of various schools of BIBLICAL CRITICISM, scholars have been able to identify certain sources and to arrange them chronologically.

The means by which the basic sources of the PENTATEUCH were distinguished and their chronology established provided the first clear picture of ISRAEL’S literary and religious development. The names by which these sources are now known, in chronological order, are: the YAHWIST, or J, source, so called because it employed as the Lord’s name a Hebrew word transliterated into English as YHWH (called J from the German: JHVH) and spoken as “Yahweh”; the ELOHIST, or E, source, distinguished by its reference to the Lord as Elohim; the DEUTERONOMIST, or D, source, marked by distinctive vocabulary and style; and the PRIESTLY CODE, or P, source, which contains detailed ritual instructions.

Numerous other sources for the Old Testament have since been identified, including two of the earliest books of Hebrew literature, not now extant, parts of which are embedded in the early narratives. These, the “Book of the Wars of Yahweh” and the “Book of Yashar” (the Upright), were probably poetic in form.

The NEW TESTAMENT sources consist of the original writings that constitute the Christian SCRIPTURES, together with

the ORAL TRADITION that preceded them. The first three Gospels are referred to as synoptic; *i.e.*, they have a common source. Contemporary opinion holds that Mark served as a source for Matthew and Luke and that the latter two also share another common source, called Q (after the German word *Quelle*, “source”), consisting mainly of Jesus’ sayings. The Gospel of John apparently represents an independent line of transmission.

Whereas most of the Old Testament authors are anonymous, the major New Testament sources are known, and the essential task in their study is to restore the texts as closely as possible to the original autographs. The main sources of evidence are manuscripts of the New Testament in Greek dating from the 2nd to the 15th century (some 5,000 of these manuscripts are known) and early versions in other languages, such as Syriac, Coptic, Latin, Armenian, and Georgian.

These sources are collectively referred to as “witnesses.” Authoritative Bibles in contemporary translation are usually based on an eclectic text in which the witnesses show variant readings. In such cases, the reading that best suits the context and the author’s known style is preferred.

Attempts to go beyond the original writings to reconstruct the oral tradition behind them are the province of the form of biblical criticism known as tradition criticism. Recent scholars have attempted with this method to recover the actual words of Jesus by removing the accretions attached to them in the course of transmission.

BIBLICAL TRANSLATION, the art and practice of rendering the BIBLE into languages other than those in which it was originally written. Both the OLD TESTAMENT and NEW TESTAMENT have a long history of translation.

The Old Testament was originally written almost entirely in Hebrew, with a few short elements in Aramaic. When the Persian empire gained control of the eastern Mediterranean basin, Aramaic became the dominant language of the area, and it became desirable to have the PENTATEUCH (the books of GENESIS, EXODUS, Leviticus, Numbers, and Deuteronomy) translated into the common language from Hebrew. The resulting TARGUMS (from Aramaic *meturgeman*, “translator”) survived after original Hebrew scrolls had been lost.

By the mid-3rd century BCE Greek was the dominant language, and Jewish scholars began translating the Hebrew canon into that language. Because tradition held that each of the 12 tribes of Israel contributed six scholars to the project, the Greek version of the Jewish Bible came to be known later (in Latin) as the SEPTUAGINT (from *septuaginta*, meaning “70”).

The Hebrew SCRIPTURES were the only Bible the early Christian church knew, and, as the young religion spread out through the Greek-speaking world, Christians adopted the Septuagint. In the meantime, many of the books of the Christian Bible, the New Testament, were first written or recorded in Greek, while others perhaps were recorded in Aramaic.

The spread of CHRISTIANITY necessitated further translations of both the Old and New Testaments into Coptic, Ethiopian, Gothic, and, most important, Latin. In 405 ST. JEROME finished translating a Latin version that was based firstly on the Septuagint and then on the original Hebrew, and this version, the VULGATE, despite corruption introduced by copyists, became the standard of Western Christianity for a thousand years or more.

Hebrew scholars at Talmudic schools in Palestine and

Babylonia about the 6th century CE began trying to retrieve and codify the Hebrew scriptures, restoring them authoritatively and in the Hebrew language. Over centuries they worked on the traditional text, known as the MASORETIC TEXT, which since its completion in the 10th century has come to be universally accepted.

Jerome's Latin Vulgate served as the basis for translations of both the Old Testament and the New Testament into Syriac, Arabic, Spanish, and many other languages, including English. The Vulgate provided the basis for the Douai-Reims Version (New Testament, 1582; Old Testament, 1609–10), which remained ROMAN CATHOLICISM's only authorized Bible in English until the 20th century.

The new learning in the 15th and 16th centuries revived the study of ancient Greek and led to new translations, among them one by the Dutch humanist DESIDERIUS ERASMUS, who in 1516 published an edition of the New Testament containing the Greek text together with his own translation into Latin. Meanwhile, in Germany, MARTIN LUTHER produced the first complete translation from the original Greek and Hebrew into a modern European language. His German-language translation of the New Testament was published in 1522 and that of the complete Bible in 1534.

The first complete English-language version of the Bible dates from 1382 and was credited to JOHN WYCLIFFE and his followers. But it was the work of the scholar WILLIAM TYNDALE, who from 1525 to 1535 translated the New Testament and part of the Old Testament, that became the model for a series of subsequent English translations. All previous English translations culminated in the KING JAMES VERSION (1611; known in England as the Authorized Version), which was prepared by 54 scholars appointed by King James I.

About the time of the invention of printing in 1450, there were only 33 different translations of the Bible. By about 1800 the number had risen to 71; by the late 20th century the entire Bible had been translated into nearly 325 languages, and portions of the Bible had been published in more than 1,800 of the world's languages.

BID'Ā \ˈbi-dā\, in ISLAM, any innovation that has no roots in the traditional practice (SUNNA) of the Muslim community. The HANBALĪ LEGAL SCHOOL, the most conservative legal school in Islam (and its modern survivor, the WAHHĀBĪS of Saudi Arabia), rejected *bid'a* completely, arguing that the duty of a Muslim is to follow the example set by MUHAMMAD and not try to improve on it.

Most Muslims, however, agreed that it was impossible to adapt to changing conditions without introducing some types of innovations. As a safeguard against any excesses, *bid'as* were classified as either good (*ḥasan*) or praiseworthy (*maḥmūdah*), or bad (*sayy'a*) or blameworthy (*madhmūma*). They were then further grouped under five categories of Muslim law: (1) those that are required of the Muslim community (*farq kifāyah*): the study of Arabic grammar and philology as tools for the proper understanding of the QUR'AN, evaluation of HADITH to determine their validity, the refutation of heretics, and the codification of law; (2) those that undermine the principles of orthodoxy and thus constitute unbelief (KUFR); (3) those that are recommended (*mandūb*): the founding of schools and religious houses; (4) those that are disapproved (*makrūh*): the ornamentation of mosques and the decoration of the Qur'an; and finally (5) those that are indifferent (*mubāḥa*): fine clothing and good food.

BIDDLE, JOHN \ˈbi-dəl\ (b. 1615, Wotton-under-Edge, Gloucestershire, Eng.—d. Sept. 22, 1662, London), controversial lay theologian who was repeatedly imprisoned for his anti-Trinitarian views and who became known as the father of English UNITARIANISM.

Biddle was educated at Magdalen Hall, Oxford, and was subsequently appointed to the mastership of the free school in Gloucester. His reputation as a heretic in Anglican eyes originated with his manuscript of about 1644, *Twelve Arguments Drawn out of Scripture, Wherein the Commonly Received Opinion Touching the Deity of the Holy Spirit Is Clearly and Fully Refuted*, which was given to magistrates by a treacherous friend.

In 1645 Biddle was committed to prison. He was released on bail in 1647, but upon the publication of his manuscript the same year Biddle was once again taken into custody, and his *Twelve Arguments* was seized and burned. Two additional tracts were subsequently suppressed for attacking the doctrine that the three Persons of the Trinity—Father, Son, and Holy Ghost—were coequal. In 1648 Parliament made this HERESY a cause for the death penalty, but influential friends made it possible for Biddle to live under surveillance until 1652, when he was again imprisoned.

Freed in the same year under the protectorate of Oliver Cromwell, Biddle and his adherents, called Unitarians (see UNITARIANISM), began to meet regularly for Sunday worship. Soon after publication of his *Two-Fold Catechism* (1654), Biddle was again imprisoned. When Parliament was dissolved the next month, Biddle was free briefly but was then rearrested and tried for his heresy. Reluctant to see him executed, Cromwell rescued Biddle and sent him to one of the Scilly Isles in October 1655. In 1658 some of Biddle's friends sought and obtained his release, and he retired to the country to teach. On his return to London as a preacher in 1662 he was again arrested and fined £100. Unable to pay, he was immediately confined to prison, where he died.

BISHAMON \ˈbē-shā-mōn\, also called Bishamonten \,bē-shā-mōn-ten\, in Japanese mythology, one of the Shichifuku-jin ("Seven Gods of Luck"), a group of popular deities, all of whom are associated with good fortune and happiness. Bishamon is identified with the Buddhist guardian of the north, known as KUBERA, or Vaiśravaṇa. He is depicted as dressed in full armor, carrying a spear and a miniature PAGODA. He is the protector of the righteous and is the Buddhist patron of warriors.

The temple city of Shigi near Ōji (west-central Honshu) is dedicated to him. It was founded, according to tradition, by Shōtoku Taishi (573–621 CE), who attributed a victory over an enemy of BUDDHISM to Bishamon's assistance.

BISHOP, in some Christian churches, the chief pastor and overseer of a DIOCESE, an area containing several congregations. It is likely that the episcopacy, or threefold ministry of bishops, priests, and deacons, was well established in the Christian church by the 2nd century CE. ROMAN CATHOLICISM, EASTERN ORTHODOXY, and some other churches have maintained the view that bishops are the successors of the APOSTLES, a doctrine known as APOSTOLIC SUCCESSION. Until Feb. 11, 1989, when the Reverend Barbara Harris was ordained bishop in the Protestant Episcopal church, the apostolic-succession churches had reserved the office for men.

Until the Protestant REFORMATION in the 16th century, the bishop was the chief pastor, priest, administrator, and ruler of his Christian community. In the course of the Reformation, some of the new Protestant churches repudiated

the office of the bishop, partly because they believed the office to have acquired such broad powers during the Middle Ages as to endanger its spiritual purity, and partly because they saw no basis for the institution in the NEW TESTAMENT. Thus, of the post-Reformation Christian communions, only the Roman Catholics, the Eastern Orthodox, Old Catholics, Anglicans, and a few others have maintained both the bishop's office and the belief that bishops have continued the apostolic succession. Some Lutheran churches (primarily in Scandinavia and Germany) have bishops, but, except for those in Sweden, they have not maintained the doctrine of apostolic succession. Most other Protestant churches do not have bishops.

Popes, CARDINALS, archbishops, PATRIARCHS, and METROPOLITANS are different gradations of bishops. A bishop is often assisted in the administration of his diocese by other, lesser bishops. Bishops alone have the right to confirm and ordain members of the clergy, and their main duty is to supervise the clergy within their diocese. In the Roman Catholic church, the bishop is selected by the pope, who is himself the bishop of Rome. In the ANGLICAN COMMUNION and other churches, a bishop is chosen by the dean and chapter of the cathedral of a diocese. Among the insignia traditional to a bishop are a miter, CROSIER (pastoral staff), pectoral cross, ring, and *caligae* (i.e., stockings and sandals).

BITON: *see* CLEOBIS AND BITON.

BLACK MASS, in ROMAN CATHOLICISM, a requiem MASS during which the celebrant wears black vestments. The term is more commonly used, however, for a usually obscene burlesque of the true mass allegedly performed by satanic cults, in which the back of a naked woman serves as an altar and a validly consecrated host is used. The rite commonly incorporates other magical elements such as philters or abortifacients.

Charges of SATANISM and celebration of the black mass have been made against persons accused of HERESY and WITCHCRAFT since early Christian times. Allegations were made against the Knights TEMPLAR in the 14th century and against the Freemasons in the 19th. Joris-Karl Huysmans' novel *Là-bas* (1891; *Down There*) describes a black mass celebrated in late 19th-century France.

BLACK STONE OF MECCA: *see* KA'BA.

BLASPHEMY, irreverence toward a deity or deities and, by extension, the use of profanity.

In CHRISTIANITY, blasphemy has points in common with HERESY but is differentiated from it in that heresy consists of holding a belief contrary to the orthodox one. Thus, it is not blasphemous to deny the existence of God or to question the established tenets of the faith unless this is done in a mocking and derisive spirit. In the Christian religion, blasphemy has been regarded as a SIN by moral theologians; ST. THOMAS AQUINAS described it as a sin against faith.

In ISLAM, insults or verbal attacks against God, the QU'RAN, and MUHAMMAD were the principle grounds for charges of blasphemy, which was understood as a form of disbelief (KUFR), APOSTASY (*ridda*), or heresy (*zandaqa*). The Qu'ran and HADITH, containing numerous condemnations of those opposed to Muhammad and his message, provided Muslim jurists with scriptural precedents. Muslims and non-Muslims alike could be charged with blasphemy, which, if legally substantiated, could incur any of several penalties, including censure, disinheritance, mandatory di-

vorce, and even death. Historically, however, implementation of such measures rarely occurred, and when it did, it was at times of social or religious turmoil, under threat of foreign invasion. AL-HALLAJ (d. 922) and other Sufis were accused of blasphemy for statements made in a state of mystical ECSTASY (*see* SUFISM). The most famous blasphemy case of the 20th century was that of the Anglo-Indian writer Salman Rushdie (b. 1947), who was condemned to death in a controversial ruling issued by AYATOLLAH RUHALLAH KHOMEINI (d. 1989) for allegedly having insulted the Prophet in his novel *The Satanic Verses* (1988).

In many other societies blasphemy in some form or another has been an offense punishable by law. The Mosaic Law decreed death by stoning as the penalty for the blasphemer. Under the Byzantine emperor JUSTINIAN I (reigned 527–565) the death penalty was decreed for blasphemy. In Scotland until the 18th century it was punishable by death, and in England it is both a statutory and a common-law offense, probably on the basis that an attack on religion is necessarily an attack on the state.

BLAVATSKY, HELENA PETROVNA \blə-'vat-skē\, *also called* Madame Blavatsky (b. Aug. 12 [July 31, Old Style], 1831, Yekaterinoslav, Ukraine, Russian Empire—d. May 8, 1891, London), Russian spiritualist, author, and cofounder of the Theosophical Society (*see* THEOSOPHY).

After a short-lived marriage, Blavatsky became interested in OCCULTISM and SPIRITUALISM and traveled extensively throughout Asia, Europe, and the United States; she also claimed to have spent several years in India and Tibet studying under Hindu gurus. In 1873 she went to New York City, where she became a close companion of H.S. Olcott, and in 1875 they and several other prominent persons founded the Theosophical Society.

In 1877 she published her first major work, *Isis Unveiled*, which criticized both science and religion and asserted that mystical experience and doctrine were the means to attain true spiritual insight and authority. Although *Isis Unveiled* attracted attention, the society dwindled. In 1879 Blavatsky and Olcott went to India; three years later they established a Theosophical headquarters at Adyar, near Madras, and began publication of the society's journal, *The Theosophist*, which Blavatsky edited from 1879 to 1888. The society soon developed a very strong following in India.

Blavatsky claimed extraordinary psychic powers. She was accused by the Indian press late in 1884 of concocting fictitious spiritualist phenomena. Protesting her innocence while on a tour of Germany, she returned to India in 1884 and met with an enthusiastic reception. The "Hodgson Report," the findings of an investigation in 1885 by the London Society for Psychical Research, declared her a fraud. Soon thereafter she left India in failing health. She lived quietly in Germany, Belgium, and finally in London, working on her small, meditative classic *The Voice of Silence* (1889) and her most important work, *The Secret Doctrine* (1888), which was an overview of Theosophical teachings. It was followed in 1889 by her *Key to Theosophy*.

At least 14 volumes of Blavatsky's *Complete Writings* were published by the early 1980s.

BLESSING WAY, central ritual of a complex system of ceremonies performed by the Navajo to restore equilibrium to the cosmos.

Of the many rituals classified by the Navajo according to their purpose, the largest group is the Chant Ways, which

are concerned with curing and are divided into three groups. The first group are the Holy Way chants—including the Blessing Way, parts of which are found throughout most of the rituals, and the Wind Ways—all of which are used to cure diseases that can be traced to some violation of the supernatural provinces of the Holy People, or supernatural beings. These rituals are further classified into Peaceful Ways, which invoke the beneficence of the Holy People, and Injury Ways, which are primarily exorcistic.

The Blessing Way is a comparatively short ritual, taking only two days to perform. Performed for the general well-being of the community, rather than for specific curative purposes, it contains none of the typical features of curing rituals (e.g., SAND PAINTINGS, prayer sticks, medicine songs, and herbs). To invoke good fortune—such as during childbirth, in blessing a new hogan (house), and in a girl's puberty ceremony—the Navajo family would have the Blessing Way sung at least twice a year. Parts of the Blessing Way are incorporated into almost all other Chant Ways.

The story of the Blessing Way contains details of the mythical events that occurred after the legendary emergence of the Navajo from the earth at creation. These events provide the prototypes for the organization of the cosmos, important Navajo ceremonials, and their central cultural institutions. (See also NATIVE AMERICAN RELIGIONS.)

BLODEUEDD \blō-'dai-eth\, also called *Blodeuwedd* \blō-'dai-weth\ (Welsh: "Flower-Form"), in the Welsh collection of stories called the MABINOGION, a beautiful girl fashioned from flowers as a wife for Llew Llaw Gyffes (see LUGUS). Llew's mother had put a curse on him that he would have no wife, and Blodeuedd was created to subvert the curse; she was unfaithful, however, and conspired with a lover to kill Llew. The attempt failed and she was changed into an owl as a punishment.

BOANN \'bō-ən\, also called *Boyne* \'bōin\, in Irish MYTHOLOGY, sacred river personified as a MOTHER GODDESS. With DAGDA (or Daghdá), chief god of the Irish, she was the mother of Mac ind Óg ("Young Son" or "Young Lad"), known also as Oenghus; mother, father, and son together formed one version of the divine triad familiar from Celtic mythology.

BODH GAYĀ \'bōd-'gī-ä\, also spelled *Buddh Gayā* \'būd-'gī-ä\, village in central Bihār state, northeastern India, one of the holiest sites of BUDDHISM. Bodh Gayā has also been important for other Indian religious groups.

According to Buddhist tradition it was there, under the great BODHI TREE, that the BUDDHA GOTAMA was enlightened. A simple shrine was built by the emperor AŚOKA (3rd century BCE) to mark the spot. In the Kushān period

(2nd century CE) this shrine was replaced by the present Mahābodhi temple, which was refurbished in the Pāla-Sena period (750–1200).

In the 16th century, after the collapse of Buddhism in India, the Mahābodhi temple was taken over by a Hindu (Śaivite, see ŚAIVISM) lineage and maintained as a temple devoted to the god VISHNU. During the period of British rule (specifically the late 19th century) the Mahābodhi temple was restored, and about the same time Buddhists outside India began to mount a campaign to return the temple to Buddhist control. In 1949 the Bihār government passed the Bodh Gayā Temple Act, and in 1953—in accordance with that act—a Management Committee was established that included four Śaiva members and four Buddhist members. Today Bodh Gayā has once again emerged as a major destination for Buddhist pilgrims.

BODHI \'bō-dē\ (Sanskrit and Pāli: "awakening," "enlightenment"), in BUDDHISM, the final enlightenment, which puts an end to the cycle of transmigration and leads to NIRVANA; it is comparable to the SATORI of ZEN Buddhism. The accomplishment of this "awakening" transformed Siddhārtha Gotama into a BUDDHA.

The final enlightenment remains the ultimate ideal of all Buddhists, to be attained by ridding oneself of false beliefs and the hindrance of passions. This is achieved by following the course of spiritual discipline known as the EIGHTFOLD PATH. MAHĀYĀNA Buddhism, while embracing this ideal, places a high value on the compassion of the BODHISATTVA, who postpones his own entrance into nirvana to work for the salvation of all sentient beings.

BODHIDHARMA \,bō-di-'dār-mə, -'där-\, *Chinese* (Wade-Giles romanization) Ta-Mo \'dā-'mō\, *Japanese* Daruma \'dā-rū-mā\ (fl. 6th century CE), legendary Indian monk who is credited with the establishment of the Ch'an (ZEN) school of BUDDHISM that flourished in East Asia. Considered the 28th Indian successor in a direct line from the BUDDHA GOTAMA, Bodhidharma is recognized by the Chinese Ch'an schools as their first patriarch.

According to the East Asian tradition Bodhidharma was a native of Conjeeveram near Madras; in 520 he traveled to Kuang (modern Canton). It is said that he was granted an interview with the emperor Wu-ti, who was famous for his good works. To the emperor's dismay, Bodhidharma stated that merit applying to salvation could not be accumulated through good deeds. For Bodhidharma meditation was the practice necessary to progress along the path to enlightenment.

BODHISATTVA \,bō-di-'sət-və, -wə\ (Sanskrit), *Pāli* bodhisatta \-'sət-tə\ ("one whose essence is *bodhi* [enlight-

Painted clay bodhisattva, 11th century; in the lower Hua-yen Temple, Ta-t'ung, China

Gao Lishuang—ChinaStock Photo Library

enment]”), in BUDDHISM, the historical BUDDHA GOTAMA in his previous lives as a bodhisattva and in his final life prior to his enlightenment; also, other individuals who have taken a vow to become a buddha in this or in another life.

In MAHĀYĀNA Buddhism the decision of the bodhisattva to postpone his own final entrance into NIRVANA in order to alleviate the suffering of others is given special valuation. The ideal supplants the earlier, THERAVĀDA goal of the ARAHANT who perfects himself by following the Buddha’s teachings and of the self-enlightened buddha, both of whom are criticized by Mahāyāna as concerned solely with their own personal salvation. The bodhisattva concept emphasizes that the virtue of compassion (*karuṇā*) is equal to the virtue of wisdom (*prajñā*).

Once the bodhisattva declares his intention, he enters the first of 10 spiritual stages (*bhūmi*) and henceforward is reborn only in the world of men or of gods. In most cases the aspirant bodhisattva is a male but need not be a monk.

The celestial bodhisattvas, who are in some contexts considered to be manifestations of buddhas, are, however, great savior figures who—particularly in East Asia—often eclipse the historical Buddha in the personal devotion they inspire. Foremost is the compassionate and merciful AVALOKITEŚVARA, who is associated with the buddha AMITĀBHA. In China the most widely worshiped bodhisattvas are MAÑJUŚRĪ (representing wisdom), KṢITIGARBHA (the savior of the dead), Samantabhadra (representing happiness), and Avalokiteśvara (known in China as KUAN-YIN and often depicted as androgynous or feminine). In Tibet, Avalokiteśvara, Mañjuśrī, and VAJRAPĀṆĪ (who holds the thunderbolt) form a popular TRINITY.

BODHI TREE, also called bo tree \ˈbō\, according to Buddhist tradition, the pipal (*Ficus religiosa*) under which the BUDDHA GOTAMA sat when he attained enlightenment (BODHI) at BODH GAYĀ (near Gayā, India). The bodhi tree in Gayā, and other bodhi trees associated with it, have played an important role in Buddhist art and cultic life.

BODY MODIFICATIONS AND MUTILATIONS, the intentional permanent or semipermanent modifications of the living human body for religious, aesthetic, or social reasons. The methods of modification and mutilation used are incision, perforation, complete or partial removal, cautery, abrasion, adhesion, insertion of foreign bodies or materials, compression, distention, diversion, enlargement, and also staining.

Ritualistic motives for modification include ascetic mortification, magical protection, mourning, the indication of status or rank or group membership, bravado, and punishment. Ritual mutilation is generally used to modify the social position of an individual in a manner visible to and recognized by other members of the society. Mutilation may be performed as a part of initiation, marriage, or mourning rites, or it may be inflicted as a means of punishment, either for serious crimes or for social transgressions.

Mutilation and modification of the head include alterations of the skull, lips, teeth, tongue, nose, eyes, or ears. Deformation of the skull is the best-documented form, largely because archaeological skeletal remains clearly show its presence. Tabular deformations are produced by constant pressure of small boards or other flattened surfaces against the infant’s head. Cranial deformation is known from all continents (except Australia) and from Oceania. It is rather rare in Africa south of the Sahara and apparently absent from south India.

Dental mutilations take the form of removal, usually of one or more incisors (ancient Peru, most Australian Aboriginals, some groups in Africa, Melanesia, and elsewhere); pointing in various patterns by chipping (Africa) or filing (ancient Mexico and Central America); filing of the surface, sometimes into relief designs (Indonesia); incrustation with precious stones or metal (Southeast Asia, India, ancient Mexico, and Ecuador); insertion of a peg between the teeth (India); and blackening (south India, hill peoples in Myanmar [Burma], some Malaysian groups).

Ancient Aztec and Maya Indians drew a cord of thorns through the tongue as a form of sacrifice; some Australian tribes draw blood from gashes under the tongue at initiation rites.

The best-known and most widespread genital modification is CIRCUMCISION. Subincision (opening the urethra along the inferior surface of the penis for a varying distance between the urinary meatus and the scrotum) is a common practice at puberty initiations among Australian Aboriginals and is recorded as a therapeutic measure among Fijians, Tongans, and Amazonian Indians. Customary unilateral castration (monorchy) is known in central Algeria, among the Beja (Egypt), Sidamo (Ethiopia), San and Khoikhoïn (southern Africa), and some Australian Aboriginals, and on Ponape Island (Micronesia).

Female modifications include excision (of part or all of the clitoris—CLITORIDECTOMY, female circumcision—and sometimes also of the labia, mons, or both), in much of Africa, ancient Egypt, India, Malaysia, and Australia, and among the Skoptsy (a Russian Christian sect); incision (of the external genitalia, without removal of any part) among the Totonac (Mexico) and tropical South American Indians; infibulation (induced adhesion of the labia minora, leaving only a small orifice, to prevent sexual intercourse until the orifice is reopened by incision) in the Horn of Africa and among some Arabs; dilatation (of the vaginal orifice, often with incision) among some Australian Aboriginals; elongation of the labia (*tablier*), recorded for southern Africa and the Caroline Islands; and artificial defloration (among Australian Aboriginals and elsewhere).

Amputation of a phalanx or whole finger, usually as a form of sacrifice or in demonstration of mourning, was common among North American Indians, Australian Aboriginals, San and Khoikhoïn, Nicobarese, Tongans, Fijians, and some groups in New Guinea, South America, and elsewhere. Amputation of the toes is less common but occurred in Fijian mourning.

Modification of the skin is accomplished primarily by tattooing and cicatrization, or scarification. In the former, color is introduced under the skin; in the latter, raised scars (keloids) are produced by incision or burning, usually in

Karamoja girl exhibiting scarification, Uganda

George Holton—Photo Researchers

decorative patterns. Scarification occurs primarily among darker-skinned peoples (whose skin more readily forms keloids) in much of Africa, among Australian and Tasmanian aboriginals, and in many Melanesian and New Guinean groups; it is practiced both for aesthetic effect and to indicate status or lineage. Another form of skin modification is the introduction of objects under the skin: e.g., magical protective AMULETS inserted under the skin by some peoples of Myanmar.

BOETHUSIAN \bō-ē-'thū-zhən, -zē-ən\, member of a Jewish sect that flourished for a century or so before the destruction of Jerusalem in 70 CE. Their subsequent history is obscure, as is also the identity of Boethus, their founder. The Boethusians had certain similarities to the SADDUCEES, of whom they may have been a branch. Both parties associated with the aristocracy and denied the immortality of the soul and the resurrection of the body, because neither of these doctrines was contained in the written TORAH, or PENTATEUCH. The Boethusians testified to their disbelief in the "world to come" by living lives of luxury and by ridiculing the piety and ASCETICISM of the PHARISEES. The TALMUD speaks of the Boethusians in derisive tones.

BOGOMIL \bä-gə-'mil, bə-gə-'mēl\, member of a dualist religious sect that flourished in the Balkans between the 10th and 15th centuries. It arose in Bulgaria in the mid-10th century from a fusion of neo-Manichaean doctrines and a local Slavonic movement aimed at reforming, in the name of an evangelical CHRISTIANITY, the recently established Bulgarian Orthodox Church. The Bogomils were so called after their alleged founder, the priest Bogomil.

The Bogomils' central teaching, based on a dualistic COSMOLOGY, was that the visible, material world was created by the devil. Thus, they denied the doctrine of the INCARNATION and rejected the Christian conception of matter as a vehicle of GRACE. They rejected BAPTISM, the EUCHARIST, and the whole organization of EASTERN ORTHODOXY. The moral teaching of the Bogomils was as consistently dualistic. They condemned those functions of man that bring him into close contact with matter, especially marriage, the eating of meat, and the drinking of wine.

During the 11th and 12th centuries Bogomilism spread over many European and Asian provinces of the Byzantine Empire. Its growth in Constantinople resulted, about 1100, in the trial and imprisonment of prominent Bogomils and in the public burning of their leader, Basil. In the second half of the 12th century, the Serbian ruler Stefan Nemanja was obliged to summon a general assembly to check it. By the early 13th century the dualistic communities of southern Europe—comprising the PAULICIANS and Bogomils in the east and the CATHARI in the west—formed a network stretching from the Black Sea to the Atlantic.

In the country of its birth Bogomilism remained a powerful force until the late 14th century. The Bulgarian authorities convened several church councils to condemn its teachings. With the Ottoman conquest of southeastern Europe in the 15th century, obscurity descended upon the sect. Traces of a dualistic tradition in the FOLKLORE of the South Slavs are all that remain today.

BÖHME, JAKOB \bō-ē-mə, Angl 'bər-mə\ (b. 1575, Altseidenberg, near Görlitz, Saxony [Germany]—d. Nov. 21, 1624, Görlitz), German philosophical mystic and author who had a profound influence on such later movements as idealism and ROMANTICISM.

Böhme was born at the end of the Protestant REFORMATION period. He had little education and worked as a cobbler. In 1594 or 1595 he went to Görlitz, a town where Reformation controversies seethed. Martin Möller, the Lutheran pastor of Görlitz, was "awakening" many in the conventicles that he had established. In 1600, Böhme, probably stimulated by Möller, had a religious experience wherein he gained an insight that helped him to resolve the tensions of his age. The strain between medieval and Renaissance cosmologies (dealing with the order of the universe), the perennial PROBLEM OF EVIL, the collapse of feudal hierarchies, and the political and religious struggles of the time found resolution in Böhme's rediscovery, as he said, of the dialectical principle that "in Yes and No all things consist." This principle became known for Böhme as *Real-dialektik* ("real dialectic").

Germinating for several years, the insight led him to write *Aurora, oder Morgenröthe im Aufgang* (1612)—an amalgam of theology, philosophy, and what then passed for ASTROLOGY, all bound together by a common devotional theme. A copy of *Aurora* fell into the hands of Gregory Richter, successor to Martin Möller as pastor, who condemned Böhme's pretensions to theology. Richter brought the matter up with the Görlitz town council, which forbade further writing on Böhme's part.

A period of silence ensued during which Böhme's ideas matured. He read the "high masters" as well as other unnamed books that were lent to him by the circle of neighbors and friends who were awed by the book-writing intellectual cobbler. These friends introduced Böhme to the writings of the Swiss physician Paracelsus. The alchemical and mystical views of Paracelsus further inspired Böhme's interest in nature MYSTICISM.

Although he never worked in a laboratory himself, Böhme did use its alchemical terms to describe both his nature mysticism and his subjective experiences, which he sought to integrate into a common framework. During this period Böhme wrote at least six tracts that were circulated guardedly among his friends. This second period of writing activity began in 1619, as the Thirty Years' War (1618–48) was beginning to gain momentum. The various strident controversies of the age forced Böhme into a period of religious APOLOGETICS wherein he had to protest his orthodoxy. He wrote a series of devotional tracts dealing with penitence, resignation, regeneration—traditional themes of German mysticism. In 1622 his friends had several of these devotional tracts printed in Görlitz under the title *Der Weg zu Christo* (*The Way to Christ*), a small work joining nature mysticism with devotional fervor. Publication of this tract brought about the intense displeasure of Richter, who incited the populace against Böhme.

In 1623 he wrote two major works: *The Great Mystery* and *On the Election of Grace*. The former explained the creation of the universe as told in GENESIS in terms of the Paracelsian three principles (including the mystical elements "salt," "sulfur," and "mercury"), thus joining Renaissance nature mysticism with biblical religion. The latter gave exposition in terms of dialectical insight to the problem of freedom that Calvinist PREDESTINATION (the view that man's destiny is determined by God) was then making acute. This theme later was taken up by the idealist philosopher Friedrich Schelling and by a German theologian, Franz von Baader, whose commentary for *On the Election of Grace* is still held in high regard by scholars.

In 1619 Böhme defiantly renewed his writing, and before he died he produced at least 30 works. His defiance of the

town council of Görlitz brought him further difficulty, and he was banished. He fled to one of the neighboring castles where he clearly was the central figure in some kind of secretive group. There he fell sick, and, sensing that his end was near, he was taken back home to Görlitz. He was examined by ecclesiastical authorities and found orthodox enough to be given the sacrament, and then died.

BOJO GUKSA \ˈpō-ˈjō-ˈkük-sä\, *secular name* Chi-Nui \ˈshē-ˈnū-ē\ (b. 1158, Korea—d. 1210, Korea), Buddhist priest who founded the CHOGYE-CHONG (Chogye Sect), now one of the largest Buddhist sects in Korea. It is derived from ZEN Buddhism.

Bojo became a Buddhist follower at the age of eight and entered the priesthood at 25. He was greatly influenced by the doctrine of sudden enlightenment taught by the Chinese Zen Buddhist master HUI-NENG (638–713). In 1190 Bojo set up a new organization to counter the elaborate ritualistic practices that had crept into Korean BUDDHISM. In 1200 he moved to the Songkwang-sa (Songkwang Temple) in Mount Chiri, where he established the Chogye-chong, which stressed the importance of studying the AVATAMSAKA SŪTRA (*Garland Sutra*). In his last and most famous writing, “A Commentary on the Fa-chi-pieh-hang-lu,” Bojo taught that the ultimate goal of Buddhism is to acquire the essential calmness of mind, free from external influence.

BON \ˈpō\, indigenous religion of Tibet that gave TIBETAN BUDDHISM much of its distinctive character.

The original features of Bon seem to have been largely concerned with the propitiation of demonic forces and included the practice of blood sacrifices. Later, there is evidence of a cult of divine kingship, the kings being regarded as manifestations of the sky divinity (reformulated in BUDDHISM as the REINCARNATION of LAMAS); oracular priests (their counterpart, the Buddhist soothsayers); and a cult of the gods of the atmosphere, the earth, and subterranean regions (now lesser deities in the Buddhist pantheon).

In the 8th and 9th centuries struggles took place between the ruling house of Tibet, whose members sided with Buddhism, and the powerful noble families, who sided with Bon. Challenged by the Buddhist use of written works, Bon developed into a systematized religion with specific doctrine and a sacred literature. Although any serious Bon claims to religious supremacy were ended by the late 8th-century persecution by King Khrisong Detsen, it was never completely destroyed and survives both in the aspects of Tibetan Buddhism that are mentioned above and as a living religion on the northern and eastern frontiers of Tibet.

BONA DEA \ˈbō-nə-ˈdē-ə, -ˈdā-\ (Latin: “Good Goddess”), in ROMAN RELIGION, deity of fruitfulness, both in the earth and in women. She was identified with various goddesses who had similar functions. The dedication day of her temple on the Aventine was May 1. Her temple was cared for and attended by women only, and the same was the case at a second celebration, at the beginning of December, in the house of a sovereign magistrate. Myrtle—a symbol of sexuality to the Romans—was forbidden. A sow was sacrificed and wine was drunk under the ritual name “milk.” Inscriptions show that there was a public side to the worship of Bona Dea, where men could participate.

BONAVENTURE, SAINT \,bā-nə-ˈven-chər, ˈbā-nə-\ (b. c. 1217, Bagnoregio, Papal States—d. July 15, 1274, Lyon; canonized April 14, 1482; feast day July 15), leading medieval

theologian, minister general of the FRANCISCAN order, and CARDINAL bishop of Albano.

He was a son of Giovanni of Fidenza, a physician. He fell ill while a boy and, by his own report, was saved from death by the intercession of ST. FRANCIS OF ASSISI. Entering the University of Paris in 1235, he received the master of arts degree in 1243 and then joined the Franciscan order, which named him Bonaventure in 1244. He studied theology in the Franciscan school at Paris from 1243 to 1248.

In 1248 he began to teach the Bible; from 1251 to 1253 he lectured on the *Sentences*, a medieval theology textbook, and he became a master of theology in 1254, when he assumed control of the Franciscan school in Paris. He taught there until 1257, producing many works, notably commentaries on the BIBLE and the *Sentences* and the *Breviloquium* (“Summary”), a summary of his theology. These works showed his deep understanding of SCRIPTURE and the Fathers of the early church—principally ST. AUGUSTINE—and of the philosophers, particularly Aristotle.

Bonaventure was particularly noted in his day for the rare ability to reconcile diverse traditions in theology and philosophy. He united different doctrines in a synthesis containing his personal conception of truth as a road to the love of God. In 1256 he defended the Franciscan ideal of the Christian life against William of Saint-Amour, a university teacher who accused the MENDICANTS (FRIARS who wandered about and begged for a living) of defaming the GOSPEL by their practice of poverty. Bonaventure’s defense of the Franciscans and his personal probity led to his election as minister general of the Franciscans on Feb. 2, 1257.

The Franciscan order was at the time undergoing internal discord. One group, the Spirituals, took a rigorous view of poverty; another, the Relaxati, displayed a disturbing laxity of life. Bonaventure used his authority so prudently that, placating the first group and reproving the second, he preserved the unity of the order and reformed it in the spirit of St. Francis. Bonaventure based the revival of the order on his conception of the spiritual life, which he expounded in mystical treatises manifesting his Franciscan experience of contemplation as a perfection of the Christian life. Revered by his order, Bonaventure recodified its constitutions (1260), wrote for it a new *Life of St. Francis of Assisi* (1263), and protected it (1269) from an assault by Gerard of Abbeville, a teacher of theology at Paris, who renewed the charge of William of Saint-Amour.

Bonaventure’s wisdom and tact moved Pope Gregory X to name him cardinal bishop of Albano, Italy, in May 1273. At the second Council of Lyon he was the leading figure in the reform of the church, reconciling the secular (parish) clergy with the mendicant orders. He also had a part in attempting to restore the Greek church to union with Rome. His death, at the council, was viewed as the loss of a wise and holy man. He was buried the same day in a Franciscan church with the pope in attendance.

BONHOEFFER, DIETRICH \ˈbän-,hō-fər, German ˈbön-,hœ-fər\ (b. Feb. 4, 1906, Breslau, Prussia, Ger.—d. April 9, 1945, Flossenbürg, Bavaria), German Protestant theologian, important for his support of ECUMENISM and his view of CHRISTIANITY’S role in a secular world—he was a leading spokesman for the CONFESSING CHURCH, the center of German Protestant resistance to the Nazi regime. His involvement in a plot to overthrow Adolf Hitler led to his imprisonment and execution. His *Prisoner of God: Letters and Papers from Prison*, published posthumously in 1951, is perhaps the most profound document of his convictions.

BONIFACE, SAINT

Bonhoeffer grew up amid the academic circles of the University of Berlin. From 1923 to 1927 he studied theology at the universities of Tübingen and Berlin. At Berlin he was strongly attracted by the new “theology of revelation” being propounded elsewhere by KARL BARTH. After serving in 1928–29 as assistant pastor of a German-speaking congregation in Barcelona, he spent a year as an exchange student at Union Theological Seminary in New York City. On his return to Germany in 1931 he took up an appointment at the University of Berlin.

From the first days of the Nazi accession to power in 1933 he was involved in protests against the regime, especially its ANTI-SEMITISM, and, despite an absence when he served as a pastor in London (1933–35), Bonhoeffer became a leader in the CONFESSING CHURCH, which developed among German Protestants to resist Nazi control. In 1935 he was appointed to head a new seminary for the Confessing Church at Finkenwald (Pomerania), which continued in disguised form until 1940, despite its proscription by the political authorities in 1937. From this period dates *Nachfolge* (1937; *The Cost of Discipleship*), a study of the SERMON ON THE MOUNT in which he attacked the “cheap grace” being marketed in Protestant churches—*i.e.*, an unlimited offer of forgiveness, which in fact served as a cover for ethical laxity. It was in this rigorous and even ascetic guise (to which his later theme of “Christian worldliness” provides a contrast if not a contradiction) that Bonhoeffer first became widely known.

Bonhoeffer's involvement in the church's struggle took an increasingly political character after 1938, when his brother-in-law, the jurist Hans von Dohnanyi, introduced him to the group seeking Hitler's overthrow. Bonhoeffer was able to continue his work for the resistance movement under cover of employment in the Military Intelligence Department, which in fact was a center of the resistance. In May 1942 he flew to Sweden to convey to the British government the conspirators' proposals for a negotiated peace; these hopes were thwarted, however, by the Allies' “unconditional surrender” policy. Bonhoeffer was arrested on April 5, 1943, and imprisoned in Berlin. Following the failure of the attempt on Hitler's life on July 20, 1944, the discovery of documents linking Bonhoeffer directly with the conspiracy led to his execution.

In his work entitled *Ethik* (1949; *Ethics*) Bonhoeffer abjured all “thinking in terms of two spheres,”—*i.e.*, any dualistic separation of the church and the world, nature and GRACE, the sacred and the profane. He called for a unitive,

concrete ethic founded on Christology, an ethic in which labor, marriage, and government are to be viewed as divinely imposed tasks or functions (“mandates”) rather than orders of creation. Bonhoeffer urged a recovery of the concept of “the natural” in Protestant thought. In the prison writings, published in 1951 (*Widerstand und Ergebung; Letters and Papers from Prison*), Bonhoeffer asked whether man's increasing ability to cope

with his problems without the hypothesis of God may not indicate the obsolescence of the “religious premise” upon which Christianity has hitherto been based. The stripping off of “religion,” in the sense of otherworldliness and preoccupation with personal salvation, Bonhoeffer suggested, will in fact free Christianity for its authentic this-worldliness in accordance with its Judaic roots. The church should give up its inherited privileges in order to free Christians to “share in God's sufferings in the world” in imitation of JESUS CHRIST, “the man for others.”

BONIFACE, SAINT \ˈbä-nə-fəs, -fās \, *Latin* Bonifatius (b. c. 675, Wessex, England—d. June 5, 754, Dokkum, Frisia; feast day June 5), English missionary and reformer, often called the Apostle of Germany for his role in the Christianization of that country.

Boniface was educated by the BENEDICTINES and became a Benedictine monk, being ordained priest about the age of 30. From 716 to 722 he made two attempts to evangelize the Frisian Saxons but was balked by their king, Radbod. In 718 he accompanied a group of Anglo-Saxon pilgrims to Rome, where Pope Gregory II entrusted him with a mission to the PAGANS east of the Rhine; Gregory gave him at this time the name Boniface (his name was Wynfrid). Radbod died in 719, and Boniface returned to Frisia. In 722 he went to Hesse, where he established the first of many Benedictine monasteries.

So great was his success that he was called to Rome, where Gregory consecrated him a missionary bishop. The pope also provided him with a collection of canons (ecclesiastical regulations) and letters of recommendation to such important personages as Charles Martel, master of the Frankish kingdom, whose protection was essential to Boniface's success. It was the pagan awe of Martel's name that allowed Boniface to destroy the sacred oak of the Germanic god THOR at Geismar.

For 10 years (725–735) Boniface was active in Thuringia, where he met opposition, he said, “from ambitious and free-living clerics” whom he pursued relentlessly. Pope Zachary was forced to moderate the zeal of Boniface, who requested not only EXCOMMUNICATION but also solitary confinement for two “heretical” missionaries, Adalbert and Clement the Irishman—sentences that the pope avoided imposing by deliberate delay. Boniface's handling of missionaries whose methods he deplored seems at times to have been excessively severe.

Ordered by Pope Gregory III (731–741) to organize the church in Bavaria, Boniface initially established four bishoprics there. His work had far-reaching political repercussions, for his Christianization of Bavaria paved the way for the ultimate incorporation of the country into the Carolingian Empire. Boniface undertook the reform of the Frankish clergy and, wherever possible, of Irish missionaries. Between 740 and 745, five SYNODS were convened for this purpose. In 747 a reforming council was held for the entire Frankish kingdom with the wholehearted collaboration of Carloman and Pepin, the sons and heirs of Charles Martel.

Boniface's life ended in martyrdom at the hands of a band of Frisians, who killed him as he was reading the SCRIPTURES to Christian neophytes on PENTECOST Sunday. Boniface is buried at the monastery Fulda in a magnificent baroque SARCOPHAGUS.

BONIFACE VIII, *Latin* Bonifatius, or Bonifacius (b. c. 1235–40, Anagni, Papal States—d. Oct. 11, 1303, Rome), pope from 1294 to 1303, the extent of whose authority was

Bonhoeffer, 1939

By courtesy of Eberhard Bethge

vigorously challenged by the emergent powerful monarchies of western Europe, especially France.

Benedict Caetani was born of an old and influential Roman family. He studied law in Bologna and then for many years held increasingly important functions in the papal government. Martin IV made him cardinal-deacon in 1281, and it was Cardinal Benedict Caetani who confirmed the unhappy pope Celestine V in his wish to resign. After he had succeeded him as Boniface VIII, he found it advisable to intern the old man, who died soon after. Although Celestine died of natural causes, the death was open to suspicion and incriminating aspersions by Boniface's enemies.

Boniface's attempt to stop hostilities between Edward I of England and Philip IV of France became enmeshed with the tendency of these warring monarchs to tax the clergy without obtaining papal consent. Boniface refused to look on inactively while the struggle, which he was trying to terminate, was being financed at the cost of the church and the PAPACY. In 1296 he issued the bull *Clericis Laicos*, which forbade any imposition of taxes on the clergy without express license by the pope.

Philip IV forestalled the publication of *Clericis Laicos* with an order forbidding all export of money and valuables from France and with the expulsion of foreign merchants—a serious threat to papal revenues. The necessity of Boniface coming to terms with Philip, however, was primarily the result of an insurrection against Boniface by the Colonna family. A year of military action against the Colonnas followed, which ended with their unconditional surrender. They were absolved from EXCOMMUNICATION but were not reinstated in their offices and possessions; they therefore rebelled again and fled; some of them went to Philip.

A second conflict broke out in 1301 around the trumped-up charges against a French bishop and his summary trial and imprisonment. This was a threat to one of the gains that the papacy had made and maintained in the last two centuries: papal, rather than secular, control of the clergy. The pope could not compromise here, and in the bull *Ausculta Fili* ("Listen, Son") he sharply rebuked Philip.

Boniface hoped for a favorable termination of this conflict; the German king and prospective emperor, Albert I of Habsburg, was ready to give up his French alliance if the pope would recognize the legitimacy of his rule. This recognition was granted early in 1303. The Holy Roman Empire now was said by the Pope to possess an overlordship over all other kingdoms, including France. In November 1302 Boniface had issued an even more fundamental declaration concerning the position of the papacy in the Christian world, the bull *Unam Sanctam* ("One Holy"), a powerful but not novel invocation of the supremacy of the spiritual over the temporal power.

Meanwhile, Philip IV's councillor Guillaume de Nogaret pursued an actively anti-papal policy. Many unjustified accusations against Boniface, ranging from unlawful entry into the papal office to heresy, were raised at a secret meeting of the king and his advisers in the Louvre at Paris. Shortly after the Louvre meeting, at which Nogaret had demanded the condemnation of the pope by a general council of the church, Nogaret went to Italy.

When he learned that Boniface was about to excommunicate Philip, Nogaret, with the assistance of Sciarra Colonna, decided to capture the pope at Anagni. After two days the local people of Anagni rescued the pope and thus frustrated whatever further plans Nogaret may have had. During these two days Boniface was probably physically ill-treated. He returned to Rome and died soon after.

BOOK OF THE DEAD, ancient Egyptian collection of mortuary texts made up of SPELLS or magic formulas, placed in tombs to protect and aid the deceased in the hereafter. Probably compiled and re-edited during the 16th century BCE, the collection included COFFIN TEXTS dating from c. 2000 BCE, PYRAMID TEXTS dating from c. 2400 BCE, and other writings. Later compilations included hymns to RE, the sun god. Numerous authors, compilers, and sources contributed to the work. Scribes copied the texts on rolls of papyrus, often colorfully illustrated, and sold them to individuals for burial use. Many copies of the book have been found in Egyptian tombs, but none contains all of the approximately 200 known chapters. The collection, literally titled "The Chapters of Coming-Forth-by-Day," received its present name from Karl Richard Lepsius, the German Egyptologist who published the first collection of the texts in 1842.

BOOK OF THE DEAD, TIBETAN, or Bardo Thödrol \b'är-dä-'t'ä-däl\, Tibetan Buddhist text which describes in detail the religious opportunities and the frightening apparitions that the deceased encounters day after day while in the 49-day interval between death and rebirth. In Tibet, Nepal, and Mongolia a LAMA will sometimes recite the Book of the Dead to the recently deceased in order to assist in the rebirth process.

BOREAS \b'ör-ē-əs\, in Greek mythology, the personification of the north wind. He carried off the beautiful Oreithyia, a daughter of ERECHTHEUS, king of Athens, to be his queen in Thrace; they had two sons, CALAIS AND ZETES. To show his friendliness for the Athenians, Boreas wrecked the fleet of the Persian king Xerxes off the promontory of Sepias in Thessaly; in return the Athenians built him a SANCTUARY or altar near the Ilissus and held a festival (Boreasmos) in his honor. In art Boreas was represented as winged.

BOROBUĐUR \b'ör-rö-bü-'dür\, also spelled Barabudur, Buddhist monument in central Java, Indonesia, 42 miles northwest of Yogyakarta. It was constructed between about 778 and 850 CE, under the Sailendra dynasty. The Borobudur monument combines the symbolic forms of the STUPA (originally a relic mound commemorating the BUDDHA GOTAMA), the temple mountain, and the MANDALA (a mystic Buddhist symbol of the universe, combining the square as earth and the circle as heaven). The style of Borobudur is

The stupa complex at Borobudur, Java

Robert Harding Picture Library—Photobank BKK

influenced by Indian Gupta and post-Gupta art. Within a few centuries of its construction the area suffered a volcanic eruption, and Borobudur was virtually buried in volcanic dust. It was then abandoned and overgrown by vegetation from about 1000 CE until its restoration by Dutch archaeologists in 1907–11 (a second UNESCO-supported restoration was completed in the early 1980s). Many consider Borobudur to be the most impressive of all Buddhist monuments.

Borobudur is a massive monument built over a natural hill. The base and the four successively higher galleries that constitute the lower segment of the monument are square. Each of these galleries extends all around the four sides of the monument and has walls on both sides, each of them covered by marvelously carved bas reliefs. The galleries, though they have no roof, are relatively enclosed. In contrast, the three upper levels are circular, open terraces on which 72 latticed stupas are situated. At the very top is a large central stupa 103 feet above the base.

A series of reliefs on the base and the galleries represent the ascending stages along the path to enlightenment. The reliefs on the base illustrate the effect of good and bad deeds in this life. Those on the walls of the first gallery depict events in the life of the historical Buddha and scenes from the JĀTAKAS (stories of his previous lives). The reliefs on the walls of the second, third, and fourth galleries contain scenes from the *Gandavyāha*, a famous MAHĀYĀNA *sūtra* that depicts a pilgrim's travels, including visits to Mahāyāna figures who teach and inspire. The most prominent figure is MAITREYA, the future buddha who presently resides in the Tuṣita heaven. The specific symbolism of the upper segment of the monument is obscure, but it is clear that the circular terraces and latticed stupas represent celestial realms and Buddhas who are accessible to those who have attained the highest levels of the path. The central stupa at the top is clearly the "sacred center," which may have contained an especially sacred relic or image. The monument provided a Mahāyāna-style PILGRIMAGE path for ordinary Buddhists and probably was the arena for special royal rituals as well.

BRAHMĀ \ˈbrā-mə, -mä\, from about 500 BCE to 500 CE in India, one of the major gods of HINDUISM, but gradually eclipsed by VISHNU, SHIVA, and the great Goddess (in her multiple aspects). Brahmā—associated with the Vedic creator god PRAJĀPATI, whose identity he came to assume—was born from a golden egg and created the earth and all things on it. Later sectarian myths describe him as having come forth from a lotus that issued from Vishnu's navel.

By the middle of the 1st millennium CE an attempt to synthesize the diverging sectarian traditions is evident in the doctrine of TRIMŪRTI, which considers Vishnu, Shiva, and Brahmā as three forms of the supreme, unmanifested deity. By the 7th century, when the Smārtas initiated their worship of five deities, omitting Brahmā, he had largely lost his claim as a supreme deity, although the *trimūrti* continued to figure importantly in both text and sculpture. Today there is no cult or sect that exclusively worships Brahmā, and few temples are dedicated to him. Nevertheless, all temples dedicated to Shiva or to Vishnu must contain an image of Brahmā.

Brahmā is usually depicted in art as having four faces, symbolic of a wide-ranging four-square capacity, as expressed in the four VEDAS (revealed SCRIPTURES), the four YUGAS ("ages"), the four VARṆAS (social classes), the four directions, the four stages of orthoprax life (*āśramas*, see

ASHRAM), and so forth. He is usually shown with four arms, holding sacrificial instruments, PRAYER BEADS, and a book. He may be seated or standing on a lotus throne or on his mount, the *hamsa* (ruddy goose). SĀVITRĪ and SARASVATĪ, respectively exemplars of faithfulness and of music and learning, frequently accompany him.

BRAHMA KUMĀRĪ \ˈbrā-mə-kū-ˈmār-ē\, also spelled Brahmakumari, Hindu spiritual association founded by a wealthy Sindhi merchant named Dada Lekhraj who, in 1936, began having visions, most notably of imminent large-scale destruction and chaos. These visions led him, his family, and others to believe that he served as the medium for SHIVA (whom the Brahma kumārīs call Shiv Baba), the Supreme Father. Lekhraj's first followers took to chanting the syllable "Om" along with him, and thus were called the OM Mandlis. By 1938, Lekhraj had appointed a group of women to lead his followers and donated all of his considerable wealth to them. His predominantly female following aroused considerable suspicion and hostility, especially since one of Lekhraj's most important teachings was CELIBACY, while many of the women were married or soon to be wed. Lekhraj and his followers retreated to Karachi (in modern day Pakistan), returning to India only in 1950, when they settled in Mount Abu, Rajasthan. They took to calling themselves the Brahma kumārīs, meaning "princesses (or daughters) of BRAHMĀ." The organization's upper echelons are still composed almost exclusively of women. The group holds that only those who remain celibate and free from vice will survive the upheavals Lekhraj foresaw and enjoy rebirth in the ensuing Golden Age, in which the sexes will be equal and reproduction will not require sexual intercourse. To attain spiritual purity, adherents must recognize themselves as souls, not bodies, whose true home is in the realm of Shiv Baba. This is effected through the practice they term *rāja* YOGA, a form of meditation wherein one focuses on the eyes of one's teacher in a darkened room, the teacher often being illuminated from behind by a light said to represent Shiv Baba. Lay members far outnumber celibates, who reside in the movement's centers in the major cities of India, the United States, Britain, and Hong Kong.

BRAHMAN, in the UPANISHADS, the supreme existence or absolute, the font of all things. The etymology of the Sanskrit is uncertain, but many scholars associate it with *brahman*, sacred utterance in a ritual context. In the Upanishads, Brahman is the eternal, conscious, irreducible, infinite, omnipresent, spiritual source of the universe.

Marked differences in interpretation characterize the various subschools of VEDĀNTA philosophy. According to the ADVAITA school, Brahman is categorically different from anything phenomenal, and human perceptions of differentiation are illusively projected on this reality. The BHEDĀBHEDA school maintains that Brahman is nondifferent from the world, which is its product, but different in that phenomenality imposes certain adventitious conditions (*upādhis*) on Brahman. The VIŚIṢṬĀDVAITA school maintains that a relation between Brahman and the world of soul and matter exists that is comparable to the relation between soul and body and that phenomenality is a glorious manifestation of Brahman. The DVAITA school refuses to accept the identity of Brahman with either soul or matter, maintaining their ontological separation and the dependence of soul and matter on Brahman.

In early Hindu mythology, Brahman is sometimes personified as the creator god BRAHMĀ and placed in a triad of

divine functions—Brahmā the creator, VISHNU the preserver, and SHIVA the destroyer—although these functions significantly overlap.

BRĀHMAṆĀ \ˈbrā-mə-nə\, a number of prose discourses expounding on the VEDAS, the most ancient Hindu sacred literature, explaining the significance of the Vedas in ritual sacrifices and the symbolic import of the priests' actions. The word *brāhmaṇa* may mean either the utterance of a BRAHMIN or an exposition on the meaning of the sacred word. The *Brāhmaṇas* belong to the period 900–600 BCE. They present a digest of accumulated teachings, illustrated by myth and legend, on various matters of ritual and on hidden meanings of the sacred texts. Their principal concern is with sacrifice, and they are the oldest extant sources for the history of Indian ritual. Their most distinctive contribution is to elaborate a series of correspondences tying Vedic sacrificial actions to all aspects of the cosmos; by no means do these homologues always agree. The ĀRANYAKAS and UPANISHADS are appended to the *Brāhmaṇas*.

Of the *Brāhmaṇas* handed down by the followers of the RĠ VEDA, two have been preserved, the *Aitareya Brāhmaṇa* and the *Kauṣītaki* (or *Śāṅkhayāna*) *Brāhmaṇa*. Discussed in these two works are “the going of the cows” (*gavāmāyana*), the 12 days' rites (*dvādaśāha*), the daily morning and evening sacrifices (*agnihotra*), the setting up of the sacrificial fire (*agnyādhāna*), the new- and full-moon rites, and the rites for the installation of kings.

Properly speaking, the *Brāhmaṇas* of the Sāma Veda are the *Pañcaviṃśa* (25 books), *Sadvimśa* (26th), and the *Jaiminiya Brāhmaṇa*. They show almost complete accordance in their exposition of the “going of the cows” ceremony, the various SOMA ceremonies, and the different rites lasting from 1 to 12 days. Also described are the atonements required when mistakes or evil portents have occurred during sacrifices.

The *Brāhmaṇas* of the Yajur Veda were at first inserted at various points in the texts alongside the material on which they commented. This was at variance with the practice followed by the teachers of the RĠ Veda and the Sāma Veda. The Yajur Veda fell into two separate groups, the later White (Sukla) Yajur Veda, which separated out the *Brāhmaṇas* from the Saṃhitās (collections of vedas), and the Black (KRISHNA) Yajur Veda, which did not. The *Satapatha Brāhmaṇa* (or 100 “paths”), consisting of 100 lessons, belongs to the White Yajur Veda. Ranking next to the RĠ Veda in importance, this *Brāhmaṇa* survives in two slightly differing versions. Elements closely connected with domestic ritual are introduced here.

Finally, to the Atharva Veda belongs the comparatively late *Gopatha Brāhmaṇa*. Relating only secondarily to the Saṃhitās and *Brāhmaṇas*, it is in part concerned with the role played by the priest who supervised the sacrifice.

BRAHMAVIHĀRĀ \ˈbrā-mə-vi-ˈhār-ə\ (Sanskrit: “Brahmanic state or condition,” “state of being in Brahman [heaven]”), in Buddhist philosophy, the four noble practices that, when followed, allow the practitioner to obtain subsequent rebirth into the BRAHMAN heaven. These four practices are the perfect virtues of (1) sympathy, which gives happiness to living beings (Sanskrit: *maitrī*); (2) compassion, which removes pain from living beings (*karuṇā*); (3) joy, the enjoyment of the sight of others who have attained happiness (*muditā*); and (4) equanimity, being free from attachment and being indifferent to living beings (*upekṣa*). These are also called the four *apramāṇas*.

C.M. Natu

BRAHMIN \ˈbrā-mən\, also spelled *Brahman*, Sanskrit *brāhmaṇa* \ˈbrā-mə-nə\ (literally, “one possessing brahman [sacred utterance]”), usually considered the highest ranking of the four VARṆAS, or social classes, in Hindu India. Texts of the late Vedic period already contained the idea that society is functionally divided between Brahmins, or priests, warriors (of the KṢĀTRIYA class), traders (of the VAISYA class), and laborers (of the ŚŪDRA class). The basis of the age-old veneration of Brahmins is the belief that they are inherently of greater ritual purity than members of other CASTES and that they alone are capable of performing certain vital religious tasks, including the preservation of the four collections (Saṃhitās) of Vedic hymns and the development of the commentary associated with them. The study and recitation of these sacred SCRIPTURES was open to males of the first three *varṇas*, but for centuries the great preponderance of Indian scholarship was in Brahmin hands.

Because of their high prestige and tradition of education, Brahmins have long exerted an important influence on secular affairs. Although political power lay normally with members of the warrior caste, Brahmins often acted as advisers and ministers of ruling chiefs, including the British. Many heads of state in independent India, including the Nehru dynasty, have Brahmin blood. During the 20th century in southern India and elsewhere, anti-Brahmin movements gathered considerable strength, though this did not largely affect their traditional position as priests, ministering both in temples and at domestic rites. The Brahmin family priest (*purohita*) still officiates at most Hindu life-cycle rituals.

The ritual purity of the Brahmins is maintained through a more or less complex regimen of dietary and religious observances. Most Brahmin castes are strictly vegetarian, and

BRAHMO SAMAJ

their members must abstain from certain occupations. They may not handle any impure material, such as leather or hides, or plow, but they may farm and do such agricultural work as does not violate these specific restrictions. A number have been traders and businessmen. They may also accept employment as domestic servants; many well-to-do Hindus have Brahmin cooks, who are valued because custom permits members of all castes to eat the food they prepare.

The Brahmins are divided into 10 main territorial divisions, 5 of which are associated with the north and 5 with the south. The northern group consists of Sarasvatī, Gauḍa, Kannaṁ, Maithil, and Utkal Brahmins, and the southern group comprises Mahārāshtra, Āndhra, Drāvīḍa, Karnāṭa, and Malabār Brahmins.

BRAHMO SAMAJ \ˈbrä-mō-sə-ˈmäj\, *Brahmo* also spelled *Brahma*, *Hindi* Brāhma Samāj (“Society of Brahman”), a quasi-Unitarian, monotheistic movement within HINDUISM, founded in Calcutta in 1828 by RAM MOHUN ROY. The Brahmo Samaj rejected the authority of the VEDAS and the doctrine of AVATARS (incarnations) and did not insist on belief in KARMA (causal effects of past deeds) or rebirth. It discarded Hindu rituals and adopted some Christian practices in its worship.

Influenced by ISLAM and CHRISTIANITY, it denounced POLYTHEISM, idol worship, and the CASTE system. It had considerable success with its programs of social reform but remained largely an elite group without a significant popular following.

Whereas Ram Mohun Roy wanted to reform Hinduism from within, his successor, DEBENDRANATH TAGORE, broke away in 1850 by repudiating Vedic authority. He tried, however, to retain some of the traditional Hindu customs, and a radical group led by KESHAB CHUNDER SEN seceded and organized the Brahmo Samaj of India in 1866 (the older

group became known as the *Adi*—*i.e.*, original—Brahmo Samaj). The new branch was most influential in the struggle for social reform. It encouraged the education of women and campaigned for the remarriage of widows and for legislation to prevent child marriages. When Keshab arranged for his daughter to marry the prince of Cooch Behār, however, both parties were well under age. He was thus violating his own reformist principles, and many of his followers became angry and rebelled, forming a third *samāj*, or “association,” the Sadharan (*i.e.*, common) Brahmo Samaj, in 1878. The Sadharan Samaj gradually reverted to the teaching of the UPANISHADS and carried on the work of social reform. Although the Brahmo movement lost force in the 20th century, its fundamental challenges to Hindu caste conventions have been encoded in the constitution of independent India.

BRÂN \ˈbrän\ (Celtic: “Raven”), in CELTIC RELIGION, a gigantic deity who figured in the MABINOIGION (a collection of medieval Welsh tales) as king of Britain.

According to the myth, Brân, mortally wounded, asked his companions to cut off his head. He told them to take the head with them on their wanderings because it would provide them with entertainment and companionship and would remain uncorrupted as long as they refrained from opening a certain door. If that door were opened, they would find themselves back in the real world and would remember all their sorrows. Eventually, they were to take the head and bury it on the White Mount in London. All happened as Brân had prophesied, and his head, buried in London, kept away all invaders from Britain until it was unearthed. Brân is also the hero of *The Voyage of Brân*.

BRANCH DAVIDIAN, religious sect that believed in the imminent return of JESUS CHRIST.

It was founded in 1935 near Waco, Texas, by Victor Houteff as an offshoot of the Seventh-day ADVENTISTS. Under Vernon Howell, a charismatic and apocalyptic preacher who took the name David Koresh (1959–93), the sect stockpiled weapons at its compound, where some 130 followers were living by 1993. That year, after a shoot-out in which four federal agents were killed, federal law-enforcement agencies besieged the compound for 51 days following allegations of child abuse against the group and the continued stockpiling of weapons. The standoff ended in a conflagration in which some 80 members died, including several children and Koresh. Controversy about the circumstances and necessity of the assault led to a Congressional investigation, which exonerated federal agents.

BRIAREUS \brī-ˈar-ē-əs, -ˈer-\, also called *Aegaeon*, in Greek mythology, one of three 100-armed, 50-headed Hecatoncheires (from the Greek words for “hundred” and “arms”), the sons of the deities OURANUS and GAEA. In one legend, Briareus and his brothers aided ZEUS against the assault of the TITANS. In another account, Briareus attacked and was defeated by Zeus; after his defeat, he was buried under Mount Etna. Yet another tradition made Briareus a GIANT of the sea, an enemy of POSEIDON, and the inventor of warships.

BRICRIU’S FEAST \ˈbrī-krüz-ˈfēst\, *Irish Gaelic* Fled Bricrenn, in Irish literature, a comic account of rivalry among Ulster warriors. One of the longest tales of the ULSTER CYCLE, it dates from the 8th century and is preserved in *The Book of the Dun Cow* (c. 1100). Bricriu, the trickster, promises the hero’s portion of his feast to three champions, LÓGAIRE, CONALL CERNACH, and CÚ CHULAINN. A dispute over precedence ensues, which leads to a series of contests. One night a GIANT carrying an ax challenges the knights to behead him in exchange for a chance to behead them. On successive nights, Conall and Lógaire behead the giant, who replaces his head and leaves but comes back to take his turn, only to find that the warriors have gone. At last Cú Chulainn beheads the giant and, when the giant returns, places his own head on the block. The giant, the wizard Cú Roi in disguise, proclaims Cú Chulainn the first hero of Ulster. This is considered the source for the beheading game in *Sir Gawayne and the Grene Knight*.

BRIDGET OF SWEDEN, SAINT \ˈbrī-jət\, also spelled *Birgit*, or *Brigid*, *Swedish* Sankta Birgitta av Sverige (b. c. 1303, Sweden—d. July 23, 1373, Rome [Italy]; canonized Oct. 8,

1391; feast day July 23, formerly October 8), patron saint of Sweden, founder of the BRIDGETTINE Order, and a mystic whose revelations were influential during the Middle Ages.

From an early age Bridget had remarkable religious visions. In 1316 she married; she bore eight children, including St. Catherine of Sweden. On the death of her husband in 1344, Bridget retired to the CISTERCIAN monastery of Alvastra on Lake Vetter. To the prior, Peter Olafsson, she dictated the revelations that came to her. One was a command to found a new religious order, for which she received papal permission in 1370. She went to Rome in 1350 and, except for several PILGRIMAGES, remained there for the rest of her life, constantly accompanied by Catherine. She worked among rich and poor, sheltering the homeless and sinners, and she worked untiringly for the return of the pope from Avignon to Rome (see AVIGNON PAPACY).

BRIDGETTINE \ˈbri-jə-tin, -tīn, -tēn\, also spelled Brigittine, member of the Order of the Most Holy Savior (O.S.S.), a religious order of cloistered nuns founded by ST. BRIDGET OF SWEDEN in 1344 and approved by Pope Urban V in 1370. Bridget believed that she was called by JESUS CHRIST to found a strictly disciplined religious order that would encourage the reform of monastic life. Her foundation contributed greatly to the culture of Scandinavia and Germany. At the time of the Protestant REFORMATION, the order was nearly destroyed. The modern Sisters of the Most Holy Savior of St. Bridget, founded at Rome in 1911 by Mother Elisabeth Hasselblad, were recognized by the Holy See in 1942 as an offshoot of the ancient order. Its members are CONTEMPLATIVES whose prayer life is directed to the reunion of all Christians and, in particular, to the return of Scandinavia to ROMAN CATHOLICISM.

BRIGIT \ˈbri-git\, also called Brigantia (Celtic: "High One"), in CELTIC RELIGION, ancient goddess of the poetic arts, crafts, PROPHECY, and DIVINATION; she was considered the equivalent of the Roman goddess MINERVA (Greek ATHENA). In Ireland Brigit was one of three goddesses of the same name, daughters of the DAGDA, the great god of that country. Her two sisters were connected with healing and with smithery. Brigit was worshiped by the semi-sacred poetic class, the *filid*, who also had certain priestly functions.

Brigit was taken over into CHRISTIANITY as St. Brigit, but she retained her strong pastoral associations. Her feast day was February 1, which was also the date of the pre-Christian festival of IMBOLC, the season when the ewes came into milk. St. Brigit had a great establishment at Kildare in Ireland that was probably founded on a pre-Christian SANCTUARY. Her sacred fire there burned continually; it was tended by a series of 19 nuns and by the saint herself every 20th day. Brigit still plays an important role in modern Scottish folk tradition, where she figures as the midwife of the Virgin MARY. Numerous holy wells in the British Isles are dedicated to her.

Brigantia, patron goddess of the Brigantes of northern Britain, is substantially the same goddess as Brigit. Her connection with water is shown by her invocation in Roman times as "the NYMPH goddess"; several rivers in Britain and Ireland are named after her.

BRITOMARTIS \ˌbri-tə-ˈmār-tis\, Cretan goddess sometimes identified with the Greek ARTEMIS. Her name (in early inscriptions "Britomarpis") is perhaps of Minoan origin and was said to mean "sweet virgin" by the Roman geographer Solinus. According to myth, Britomartis was a daughter of

ZEUS and lived in Crete; she was a huntress and a virgin. MINOS, king of Crete, fell in love with her and pursued her for nine months until she, in desperation, leapt from a high cliff into the sea. She was caught in fishermen's nets and hauled to safety. For her chastity she was rewarded by Artemis with immortality. The Greeks also identified her with Aphaea, a primitive local goddess of Aegina.

BROWNE, ROBERT \ˈbraʊn\ (b. c. 1550—d. October 1633, Northampton, Northamptonshire, Eng.), Puritan Congregationalist church leader, one of the original proponents of the Separatist movement among NONCONFORMISTS that demanded separation from the Church of England. (See also CONGREGATIONALISM).

Educated at the University of Cambridge and ordained, he, with Robert Harrison, gathered a Separatist Church at Norwich in 1580. As a consequence of this and similar activities, he was imprisoned 32 times and in 1582 was exiled. He subsequently returned to England, however, and conformed to the ESTABLISHED CHURCH.

BUBER, MARTIN \ˈbü-bər\ (b. Feb. 8, 1878, Vienna—d. June 13, 1965, Jerusalem), German-Jewish religious philosopher, biblical translator and interpreter. Buber's philosophy was centered on the encounter, or dialogue, of man with other beings, particularly the relation with God.

Buber was brought up by his grandparents in Lemberg (now Lviv, Ukraine). Though taught Hebrew by his grandfather, during his adolescence his active participation in Jewish religious observances ceased altogether. In his university days in Vienna, Berlin, Leipzig, and Zürich, he was greatly influenced by Friedrich Nietzsche's proclamation of heroic nihilism and his criticism of modern culture. The Nietzschean influence was reflected in Buber's turn to ZIONISM and its call for a return to roots and a more wholesome culture. In 1916 Buber founded the influential monthly *Der Jude* ("The Jew"), which he edited until 1924 and which became the central forum for German-reading Jewish intellectuals. In it he advocated the highly unpopular cause of Jewish-Arab cooperation in the formation of a binational state in Palestine.

Buber's *Chassidischen Bücher* ("Hasidic Books," 1927) made the legacy of HASIDISM, the popular 18th-century eastern European Jewish pietistic movement, a part of Western literature. In Hasidism Buber saw a healing power for the malaise of JUDAISM and mankind in an age of alienation that had shaken relationships between man and God, man and man, and man and nature.

After the Nazis forbade Buber's lectures and teaching, in 1938 he immigrated to Palestine where he was appointed professor of social philosophy at Hebrew University in Jerusalem, a post he held until 1951. He was the first president of the Israeli Academy of Sciences and Arts.

Buber

By courtesy of Israel Information Services

After an early period of MYSTICISM, Buber abandoned the notion of a mystical union between man and God and embraced instead the notion of their encounter, which presupposes and preserves their separate existence. This basic view underlies Buber's mature thinking; it was expressed in his famous work *Ich und Du* (1923; *I and Thou*). According to this view, God, the great Thou, enables human I-Thou relations between man and other beings. A true relationship with God, as experienced from the human side, must be an I-Thou relationship, in which God is truly met and addressed, not merely thought of and expressed.

Toward God, any type of I-It relationship should be avoided, be it theoretical by making him an object of dogmas, juridical by turning him into a legislator of fixed rules or prayers, or organizational by confining him to CHURCHES, MOSQUES, or SYNAGOGUES. Buber saw the BIBLE as originating in the ever-renewed encounter between God and his people, and he ascribed most of the legal prescriptions of the TALMUD to what he called the spurious tradition removed from the Thou relation with God.

BUCER, MARTIN \büt-sər\, also spelled Butzer \büt-sər\ (b. Nov. 11, 1491, Schlettstadt, Alsace—d. Feb. 28, 1551, England), Protestant Reformer, mediator, and liturgical scholar best known for his ceaseless attempts to make peace between conflicting reform groups.

Bucer entered the DOMINICAN order in 1506. He became acquainted with the works of the great humanist scholar ERASMUS and of MARTIN LUTHER. In 1521 Bucer withdrew from the Dominicans and in the following year he became pastor of Landstuhl, where he married a former nun. Excommunicated in 1523, he made his way to Strasbourg.

Strasbourg lay between the area influenced by the most important Swiss Reformer, HULDRYCH ZWINGLI—southern Germany and Switzerland—and the area influenced by Luther—northern Germany. After 1524 Luther and Zwingli clashed over the meaning of the words, "This is my body," a central phrase in the liturgy of the Lord's Supper. In 1529 the two leading Reformers and other Reformers engaged in a colloquy to settle the dispute. Luther held to the traditional view that Christ was really present in the SACRAMENT of the Lord's Supper (see TRANSUBSTANTIATION); Zwingli espoused a spiritual interpretation that was common among the humanists; Bucer, however, believed that the two opposing views could be reconciled. But when, at the end of the colloquy, Zwingli and Bucer proffered their hands in fellowship to Luther, he refused.

Bucer participated in nearly every conference on religious questions held in Germany and Switzerland between 1524 and 1548. In the various colloquies between PROTESTANTS and ROMAN CATHOLICS or between German Lutheran and Swiss Reform churchmen, Bucer often advocated the use of ambiguity—believing that the essential goal was the reform of the people and the doctrinal issues could be worked out later. At Wittenberg in 1536 Bucer took part in a conference between Lutheran and Reformed theologians, also attended by PHILIPP MELANCHTHON. It appeared for a time as though Bucer and Melanchthon were about to end the dispute over the Lord's Supper. Luther, in satisfaction over the apparent agreement, declared, "We are one, and we acknowledge and receive you as our dear brethren in the Lord." Melanchthon subsequently drew up the Wittenberg Concord incorporating the agreement, but it failed to effect a lasting union.

Bucer was sometimes charged as having no conviction except that the end justifies the means. In his defense he

claimed that compromises were only a temporary measure. Bucer's policy of agreement by compromise was seen in a better light when it was applied to the problem of religious toleration. Under Bucer's policies there was less persecution of ANABAPTISTS and other minority groups in Strasbourg than in most of Europe.

Apart from promoting intra-Protestant union, Bucer had long dreamed of healing the Protestant-Catholic rift. The Holy Roman emperor Charles V, for political reasons, pursued similar aims. He accordingly called for a colloquy between Catholics and Protestants at Regensburg in 1541. Charles selected three Catholic and three Protestant theologians (including Bucer) to discuss the anonymous Regensburg Book, which proposed steps toward Catholic-Protestant union. Both Catholics and Protestants rejected the Regensburg Book. Charles settled the matter for a time by subduing the Protestant powers and by enforcing his own compromise scheme, the Augsburg Interim of 1548.

Bucer vigorously opposed acceptance of the Augsburg Interim by Strasbourg. The armies of Charles, however, prevailed, and Strasbourg discharged Bucer and several other Protestant ministers, all of whom were invited to England by the archbishop of Canterbury, Thomas Cranmer. There Bucer supported the official, cautious reform program of Cranmer and the scholarly Nicholas Ridley. He died in England in 1551.

BUCHIS \bū-kis\, in ancient EGYPTIAN RELIGION, white bull with black markings, worshiped as a favorite incarnation of the war god MONT. He was represented with the solar disk and two tall plumes between his horns. According to Macrobius, his hair grew in the opposite direction from that of ordinary animals and changed color every hour. At HERMONTHIS (modern Armant) in Upper Egypt, a special center of Mont's worship, a particular bull was chosen to receive a cult as Buchis. Upon its death, it was mummified and buried in a SARCOPHAGUS with divine honors. The mothers of these Buchis bulls received a similar burial.

BUDDHACARITA \būd-də-'chə-ri-tə\, in full *Buddhacarita-Kāvya-Sūtra* (Sanskrit: "Poetic Discourse on the Acts of the Buddha"), poetic narrative of the life of the BUDDHA GOTAMA by the poet AŚVAGHOṢA (1st–2nd century CE). This sophisticated work is one of the earliest "biographies" extant of the Buddha. It is a rendition of his life that reflects a tremendous knowledge of Indian mythology and of pre-Buddhist philosophies, plus a court poet's interest in love, battle, and statecraft. Only the first half of the *Buddhacarita* remains intact in Sanskrit, but all 28 chapters are preserved in Chinese (5th century) and Tibetan translations.

BUDDHAGHOSA \būd-də-'gō-sə, -shə\ (fl. early 5th century CE), in BUDDHISM, a THERAVĀDA scholar who was probably a native of northern India. Buddhaghosa traveled to Sri Lanka, where he discovered many Sinhalese Buddhist commentaries, which he translated into Pāli. He is also the author of the *Visuddhi-magga* ("Path to Purification"), which remains to the present day an authoritative compendium of Theravāda teaching.

BUDDHA GOTAMA \būd-də-'gō-tə-mə; Angl 'bü-də-'gō-tə-mə, 'bü-\, clan name Gotama, also called Siddhārtha \sid-'där-tə\ (fl. c. 6th–4th century BCE; b. Lumbini, near Kapilavastu, Sākya republic, Kosala kingdom [India]—d. Kusinārā, Malla republic, Magdha kingdom [India]), founder of BUDDHISM. The term buddha, literally meaning "awakened

Seated Buddha with attendants, carved ivory sculpture from Kashmir, c. 8th century CE; in the Prince of Wales Museum of Western India, Bombay

P. Chandra

one" or "enlightened one," is not a proper name but rather a title, and Buddhists traditionally believe that there will be innumerable buddhas in the future as there have been in the past, and that there are other buddhas in other presently existing cosmos as well. The Buddha who belongs to the present era of the cosmos in which we are living is often referred to as Gotama. When the term the Buddha is used, it is generally assumed that it refers to the Buddha Gotama.

According to virtually all Buddhist traditions, the Buddha lived many lives before his birth as Gotama; these previous lives are described in JĀTAKAS (birth stories) that play an important role in Buddhist art and education. Most Buddhists also affirm that the Buddha's life was continued in his teachings and his relics. The Pāli Tipitaka (see TRIPĪṬAKA), which is recognized by scholars as the earliest extant record of the Buddha's discourses, and the later Pāli commentaries are the basis of the following account in which history and legend are inextricably intertwined.

The Buddha was born in the 6th or 5th century BCE in the kingdom of the Śākya, on the borders of present-day Nepal and India. Gotama is said to have been born of the king and queen of the Śākya, Siddhodna and MAHĀMĀYĀ. The Buddha's legend, however, begins with an account of a dream that his mother Mahāmāyā had one night before he was born: a beautiful elephant, white as silver, entered her womb through her side. BRAHMINS (Vedic priests) were asked to interpret the dream, and they foretold the birth of a son

who would become either a universal monarch or a buddha. The purported site of his birth, now called Rummindei, lies within the territory of Nepal. (A pillar placed there in commemoration of the event by AŚOKA, a 3rd-century-BCE Buddhist emperor of India, still stands.) The child was given the name Siddhattha (Sanskrit: Siddhārtha), which means "one whose aim is accomplished."

Gotama is said to have led a sheltered life of great luxury, which was interrupted when, on three excursions outside of the palace, he encountered an old man, an ill man, and a corpse. Each time he asked a servant to explain the phenomenon and was told that all men are subject to such conditions. Gotama then met up with a wandering ascetic and decided that he must discover the reason for such a display of serenity in the midst of such misery. Renouncing his princely life, he went in search of teachers who could instruct him in the way of truth. He took up the practice of various austerities and extreme self-mortifications, including severe fasting. These experiences eventually led Gotama to the conviction that such mortifications could not lead him to what he sought.

Buddhist mythology states that the Buddha went to meditate beneath a pipal tree (*Ficus religiosa*), now known as the BODHI tree. There he was tempted by MARA (the Buddhist "Lord of the Senses"), but Gotama remained unmoved. Later that night the Buddha was to realize the FOUR NOBLE TRUTHS, achieving enlightenment during the night of the full-moon day of the month of May (Vesakha) at a place now called BODH GAYA.

After this enlightenment, the story continues that the Buddha sought out five companions and delivered to them his first sermon, the *Dhammacakkappavattana Sutta* ("Sermon on Setting in Motion the Wheel of Truth"), at Sarnath. An ancient STUPA marks the spot where this event is said to have occurred. The Buddha taught that those in search of enlightenment should not follow the two extremes of self-indulgence and self-mortification. Avoiding these two extremes, the TATHAGATA ("He Who Has Thus Attained") discovers the middle path leading to vision, to knowledge, to calmness, to awakening, and to NIRVANA.

This middle path is known as the Noble EIGHTFOLD PATH, and consists of right view, right thought, right speech, right action, right living, right endeavor, right mindfulness, and right concentration. The First Noble Truth is that sentient existence is DUKKHA, always tainted with conflict, dissatisfaction, sorrow, and suffering. The Second Noble Truth is that all this is caused by selfish desire—i.e., craving or *tanha*, "thirst." The Third Noble Truth is that there is nirvana—emancipation, liberation, and freedom for human beings from all this. The Fourth Noble Truth, the Noble Eightfold Path, is the way to this liberation.

After this sermon the five ascetics became the Buddha's first disciples, were admitted by him as monks (BHIKKHUS), and became the first members of the SANGHA ("community," or "order"). After the Buddha had trained followers, his mission was fulfilled. At Kusinara (the modern Kasia) on the full-moon day of the month of Vesakha (May), the Buddha Gotama entered *parinirvāṇa*—an end to the cycle of being reborn. His body was cremated by the Mallas in Kusinara, but a dispute over the relics of the Buddha arose between the Mallas and the delegates of rulers of several kingdoms. It was settled by a venerable Brahmin on the basis that they should not quarrel over the relics of one who preached peace. Stupas were then built over these relics.

BUDDHA NATURE: see TATHAGATA.

B U D D H I S M

pan-Asian religion and philosophy, Buddhism was founded by Siddhārtha Gotama in northeast India about the 5th century BCE. Buddhism has played a central role in the Eastern world and during the 20th century has spread to the West.

THE BUDDHA'S MESSAGE

The teaching attributed to the BUDDHA GOTAMA was transmitted orally by his disciples, prefaced by the phrase “*Evam me sutam*” (“Thus have I heard”); therefore, it is difficult to say whether his discourses were related as they were spoken. They usually allude, however, to the place, time, and community where he preached; and there is concordance between various versions. An attempt was made by Buddhist councils in the first centuries after the Buddha’s death to establish his true and original teachings.

It may be said that the Buddha based his entire teaching on the fact of human suffering. Existence is painful. The conditions that make an individual are precisely those that also give rise to suffering. Individuality implies limitation; limitation gives rise to desire; and, inevitably, desire causes suffering, since what is desired is transitory, changing, and perishing. It is the impermanence of the object of craving that causes disappointment and sorrow. By following the “path” taught by the Buddha, the individual can dispel the “ignorance” that perpetuates this suffering. The Buddha’s doctrine was not one of despair. Living amid the impermanence of everything and being themselves impermanent, humans search for the way of deliverance, for that which shines beyond the transitoriness of human existence—in short, for enlightenment.

According to the Buddha, reality, whether of external things or the psychophysical totality of human individuals, consists in a succession and concatenation of microseconds called *dhammas* (these “components” of reality are not to be confused with another sense of *dhamma*, “law” or “teaching”). The Buddha departed from the main lines of traditional Indian thought in not asserting an essential or ultimate reality in things.

Moreover, the Buddha did not want to assume the existence of the soul as a metaphysical substance, but he admitted the existence of the self as the subject of

Buddhist monk before a statue of the Buddha at the Huating Temple, Huating, China

action in a practical and moral sense. Life is a stream of becoming, a series of manifestations and extinctions. The concept of the individual ego is a popular delusion; the objects with which people identify themselves—fortune, social position, family, body, and even mind—are not their true selves. There is nothing permanent, and, if only the permanent deserves to be called the self, or ĀTMAN, then nothing is self. There can be no individuality without a putting together of components. This is becoming different, and there can be no way of becoming different without a dissolution, a passing away.

To make clear the concept of no-self (ANĀTMAN), Buddhists set forth the theory of the five aggregates or constituents (*khandhas*, or SKANDHAS) of human existence: (1) corporeality or physical forms (*rūpa*), (2) feelings or sensations (*vedanā*), (3) ideations (*saññā*), (4) mental formations or dispositions (*sankhāras*, or SAMSKĀRAS), and (5) consciousness (*viññāṇa*). Human existence is only a composite of the five aggregates, none of which is the self or soul. A person is in a process of continuous change, with no fixed underlying entity.

The belief in rebirth, or SAMSĀRA, as a potentially endless series of worldly existences in which every being is caught up was already associated with the doctrine of KARMA (literally "act," or "deed") in pre-Buddhist India, and it was generally accepted by both the THERAVĀDA and the MAHĀYĀNA traditions (the two main traditions in Buddhism). According to the doctrine of karma, good conduct brings a pleasant and happy result and creates a tendency toward similar good acts, while bad conduct brings an evil result and creates a tendency toward repeated evil actions. This furnishes the basic context for the moral life of the individual.

The acceptance by Buddhists of the belief in karma and rebirth while holding to the doctrine of no-self gave rise to a difficult problem: how can rebirth take place without a permanent subject to be reborn? The relation between existences in rebirth has been explained by the analogy of fire, which maintains itself unchanged in appearance and yet is different in every moment—what may be called the continuity of an ever-changing identity.

Conviction that the above are fundamental realities led the Buddha to formulate the FOUR NOBLE TRUTHS: the truth of misery, the truth that misery originates within us from the craving for pleasure and for being or nonbeing, the truth that this craving can be eliminated, and the truth that this elimination is the result of a methodical way or path that must be followed. Thus, there must be an understanding of the mechanism by which a human being's psychophysical being evolves; otherwise, human beings would remain indefinitely in *samsāra*, in the continual flow of transitory existence.

Hence, the Buddha formulated the law of dependent origination (*paṭicca-samuppāda*, or PRATĪTYA-SAMUTPĀDA), whereby one condition arises out of another, which in turn arises out of prior conditions. Every mode of being presupposes another immediately preceding mode from which the subsequent mode derives, in a chain of causes. According to the classical rendering, the 12 links in the chain are ignorance (*avijjā*), karmic predispositions (*sankhāras*), consciousness (*viññāṇa*), form and body (*nāma-rūpa*), the five sense organs and the mind (*saḷāyatana*), contact (*phassa*), feeling-response (*vedanā*), craving (*taṇhā*), grasping for an object (*upādāna*), action toward life (*bhava*), birth (JĀTI), and old age and death (*jarāmarāṇa*). Thus, the misery that is bound up with all sensate existence is accounted for by a methodical chain of causation.

The law of dependent origination of the various aspects of becoming remains fundamental in all schools of Buddhism. There are, however, diverse interpretations. Given this law, the question arises as to how one may escape the continually renewed cycle of birth, suffering, and death. Here ethical conduct enters in. It is not enough to know that misery pervades all existence and to know the way in which life evolves; there must also be a purification that leads to the overcoming of this process. Such a liberating purification is effected by following the Noble EIGHTFOLD PATH constituted by right views, right aspirations, right speech, right conduct, right livelihood, right effort, right mindfulness, and right meditational attainment.

The aim of religious practice is to be rid of the delusion of ego, thus freeing one-

self from the fetters of this mundane world. One who is successful in doing so is said to have overcome the round of rebirths and to have achieved enlightenment. This is the final goal—not a paradise or a heavenly world.

The living process is likened to a fire burning. Its remedy is the extinction of the fire of illusion, passions, and cravings. The Buddha, the Enlightened One, is one who is no longer kindled or enflamed. Many terms are used to describe the state of the enlightened human being; the one that has become famous in the West is *NIRVANA*, translated as “dying out”—that is, the dying out in the heart of lust, anger, and delusion. But nirvana is not extinction, and indeed the craving for annihilation or nonexistence was expressly repudiated by the Buddha. Buddhists search not for mere cessation but for salvation. Though nirvana is often presented negatively as “release from suffering,” it is more accurate to describe it in a more positive fashion: as an ultimate goal to be sought and cherished.

The Buddha left indeterminate questions regarding the destiny of persons who have reached this ultimate goal. He even refused to speculate as to whether such purified saints, after death, continued to exist or ceased to exist. Such questions, he maintained, were not relevant to the practice of the path and could not in any event be answered from within the confines of ordinary human existence. Still, he often affirmed the reality of the religious goal. For example, he is reported to have said: “There is an unborn, an unoriginated, an unmade, an uncompounded; were there not, there would be no escape from the world of the born, the originated, the made, and the compounded.”

In his teaching, the Buddha strongly asserted that the ontological status (that is, whether it possesses existence) and character of the unconditioned nirvana cannot be delineated in a way that does not distort or misrepresent it. But what is more important is that he asserted with even more insistence that nirvana can be experienced—and experienced in this present existence—by those who, knowing the Buddhist truth, practice the Buddhist path.

SANGHA, SOCIETY, AND STATE

Monastic institutions. The *SANGHA* is the assembly of Buddhist monks that has, from the origins of Buddhism, authoritatively studied, taught, and preserved the teachings of the Buddha. In their communities monks have served the laity through example and, as directed by the Buddha, through the teachings of morality (Pāli: *sīla*; Sanskrit: *śīla*). In exchange for their service the monks have received support from the laity, who thereby earn merit. Besides serving as the center of Buddhist propaganda and learning, the monastery offers the monk an opportunity to live apart from worldly concerns, a situation that has usually been believed necessary or at least advisable in order to follow strictly the path that leads most directly to release.

Origin and development of the sangha. According to scholars of early Buddhism, at the time of the Buddha in northeastern India there existed numerous religious *MENDICANTS* or almsmen who wandered and begged individually or in groups. These men had forsaken the life of a householder and the involvement with worldly affairs that this entails in order to seek a doctrine and form of practice which would meaningfully explain life and offer salvation. When such a seeker met someone who seemed to offer such a salvatory message, he would accept him as a teacher (*GURU*) and wander with him. The situation of these mendicants is summed up in the greeting with which they met other religious wanderers. This greeting asked, “Under whose guidance have you accepted religious mendicancy? Who is your master (*sattha*)? Whose dhamma is agreeable to you?”

Van Bucher—Photo Researchers

The groups of mendicants that had formed around a teacher broke their wanderings during the rainy season (*VASSA*) from July through August. At this time they gathered at various rain retreats (*vassavāsa*), usually situated near villages. Here they would beg daily for their few needs and continue their spiritual quest. The Buddha and his followers may well have been the first group to found such a yearly rain retreat.

After the Buddha's death his followers did not separate but continued to wander and enjoy the rain retreat together. In their retreats the followers of the Buddha's teachings probably built their own huts and lived separately, but their sense of community with other Buddhists led them to gather biweekly at the time of the full and new moons to recite the *PĀTIMOKKHA*, or declaration of their steadfastness in observing the monastic discipline. This ceremony, in which the laity also participated, was called the *uposatha*.

Within the first several centuries after the Buddha's death, the *sangha* came to include two different groups of monks. One retained the wandering mode of existence; this group has been a very creative force in Buddhist history and continues to play a role in contemporary Buddhism, particularly in Sri Lanka and Southeast Asia. The other, much larger group gave up the forest life and settled in permanent monastic settlements (*VIHARAS*). There appear to be two major reasons for this change in the mode of living. First, the followers of the Buddha were able, through their confession of a common faith, to build up a certain coherent organization. Second, the laity gave meritorious gifts of land and raised buildings in which the followers of the Buddha might live permanently, assured of a supply of the staples of life and also fulfilling the Buddha's directive to minister to the laity. In this manner small *viharas* were raised in northeastern India and adjoining areas into which Buddhism spread. With the reign of King *AŚOKA*, further developments occurred. *Aśoka* took a protective interest in the unity and well-being of the Buddhist monastic community, and, as a result of his support and influence, Buddhism developed a more universal orientation.

In the post-*Aśokan* period, Buddhist monasteries grew in size and acquired a great deal of wealth. By about the 5th century CE there developed *MAHĀVIHĀRAS*, or monastic centers, such as *Nālandā* in India. These were centers of Buddhist learning and propaganda, drawing monks from China and Tibet and sending forth missionaries to these lands. The institutions were open to the outside influence of a resurgent *HINDUISM*, however, which weakened Buddhism prior to its disappearance from India in the 13th century.

In all Buddhist countries, monasteries continued to serve as centers of missions and learning and as retreats. Different types of monastic establishments developed in particular areas and in particular contexts. In several regions there were at least two types of institutions. There were a few large public monasteries that usually functioned in greater or lesser accord with classical Buddhist norms. In addition, there were many smaller monasteries, often located in rural areas, that were much more loosely regulated. Often these were hereditary institutions in which the rights and privileges of the abbot were passed on to an adopted disciple. In areas where clerical marriage was practiced—for example, in medieval Sri Lanka and in post-Heian Japan—a tradition of blood inheritance developed.

Internal organization of the sangha. It appears that the earliest organization within Indian monasteries was democratic in nature. This democratic nature arose from two important historical factors. First, the Buddha did not, as was the custom among the teachers of his time, designate a human successor. Instead, the Buddha taught that each monk should strive to follow the path that he had preached. Thus there could be no absolute authority vested in one person, for the authority was the *dhamma* that the Buddha had taught. Second, the region in which Buddhism arose was noted for a system of tribal democracy, or republicanism, which was adopted by the early *sangha*.

When an issue arose, all the monks of the monastery assembled. The issue was put before the body of monks and discussed. If any solution was forthcoming, it had to be read three times, with silence signifying acceptance. If there was debate, a vote might be taken or the issue referred to committee or the arbitration of the

elders of a neighboring monastery. As the *sangha* developed, a certain division of labor and hierarchical administration was adopted. The abbot became the head of this administrative hierarchy and was vested with almost unlimited powers over monastic affairs. The anti-authoritarian character of Buddhism, however, continued to assert itself. In China and Southeast Asian countries there has traditionally been a popular distaste for hierarchy, making rules difficult to enforce in the numerous almost independent monastic units.

As the Buddhist *sangha* developed, specific rules and rites were enacted that differ very little in all Buddhist monasteries even today. The rules by which the monks are judged and the punishments that should be assessed are found in the *vinaya* texts (*vinaya* literally means "that which leads"). The VINAYA PĪṬAKA of the Theravāda canon contains precepts that were supposedly given by the Buddha as he judged a particular situation. While in the majority of cases the Buddha's authorship can be doubted, the attempt is made to refer all authority to the Buddha and not to one of his disciples. The heart of the *vinaya* texts is the *Pātimokkha*, which, in the course of the *sangha*'s development, became a list of monastic rules. The rules are recited by the assembled monks every two weeks, with a pause after each one so that any monk who has transgressed this rule may confess and receive his punishment. While the number of rules in the *Pātimokkha* differs in the various schools, with 227, 250, and 253, respectively in the Pāli, Chinese, and Tibetan canons, the rules are essentially the same. The first part of the *Pātimokkha* deals with the four gravest SINS, which necessarily lead to expulsion from the monastery. They are sexual intercourse, theft, murder, and exaggeration of one's miraculous powers. The other rules, in seven sections, deal with transgressions of a lesser nature, such as drinking or lying.

In the Theravāda countries—Sri Lanka, Myanmar (Burma), Thailand, Cambodia, and Laos—the Buddhist monastic community is composed primarily of male monks and novices (the order of nuns died out in the Theravāda world more than a millennium ago, and contemporary efforts to reestablish it have met with only minimal success), white-robed ascetics (including various types of male and female practitioners who remain outside the *sangha* but follow a more or less renunciatory mode of life), and laymen and laywomen. In some Theravāda countries, notably in mainland Southeast Asia, boys or young men were traditionally expected to join the monastery for a period of instruction and meditation. Thus,

World distribution of Buddhism

the majority of men in these areas were involved with the monastic ethos. This practice has fostered a high degree of lay participation in monastic affairs.

In the Mahāyāna and VAJRAYĀNA countries of China and Tibet there was traditionally a stage of one year before the aspirant could become a novice. This was a year of probation when the aspirant did not receive TONSURE and remained subject to governmental taxation and service, while receiving instructions and performing menial tasks within the monastery. At the end of this one-year probationary period, the aspirant had to pass a test, including the recitation of part of a well-known *sūtra*—the length depending upon whether the applicant was male or female—and a discussion on various doctrinal questions. In China, one usually did not progress beyond the novice stage unless he or she was of exceptional character or was affiliated with the government.

According to *vinaya* rules, entry into the *sangha* is an individual affair, dependent upon the wishes of the individual and his family. In some Buddhist countries, however, ordination was often under the control of the state, and the state conducted the examinations to determine entry or advancement in the *sangha*. In certain situations ordination could be obtained not only through such examinations but also by the favor of high officials or through the purchase of an ordination certificate from the government. This selling of ordination certificates was at times abused by the government in order to fill its treasury.

The life of a Buddhist monk was originally one of wandering, poverty, begging, and strict sexual abstinence. The monks were supposed to live only on alms, to wear clothes made from cloth taken from rubbish heaps, and to possess only three robes, one girdle, an alms bowl, a razor, a needle, and a water strainer used to filter insects from the drinking water (so as not to kill or imbibe them). Most Buddhist schools still stress CELIBACY, although some groups, particularly in Tibet and Japan, have relaxed the monastic discipline, and some Vajrayāna schools have allowed sexual activity as an esoteric ritual that contributes to the attainment of release. Begging, however, has tended in all schools to become merely a symbolic gesture used to teach humility or compassion or to raise funds for special purposes. Also, the growth of large monasteries has often led to compromises on the rule of poverty. While the monk might technically give up his property before entering the monastery—although even this rule is sometimes relaxed—the community of monks might inherit wealth and receive lavish gifts of land. This acquisition of wealth has led at times not only to a certain neglect of the Buddhist monastic ideal but also to the attainment of temporal power. This factor, in addition to the self-governing nature of Buddhist monasteries and the early Buddhist connection with Indian kingship, has influenced the interaction of the *sangha* and the state.

Society and state. Though Buddhism is sometimes described as a purely monastic, otherworldly religion, this is not accurate. In the earliest phases of the tradition the Buddha was pictured as a teacher who addressed not only renouncers but lay householders as well. Moreover, although he is not depicted in the early texts as a social reformer, he does address issues of social order and responsibility.

Throughout Buddhist history, Buddhists have put forth varying forms of social ethics based on notions of karmic justice (the “law” that good deeds will be rewarded with happy results while evil deeds will entail suffering for the one who does them); the cultivation of virtues such as self-giving, compassion, and evenhandedness; and the fulfillment of responsibilities to parents, teachers, rulers, and so on. Moreover, Buddhists have formulated various notions of COSMOGONY and COSMOLOGY that have provided legitimacy for the social hierarchies and political orders with which they have been associated. For the most part, Buddhism has played a conservative, moderating role in the generally hierarchical social and political organization of various Asian societies, but the tradition has on occasion given rise to more radical and revolutionary movements as well.

Over the course of Buddhism’s long history, the relationship between the Buddhist community and state authority has taken many forms. The early Buddhist *sangha* in India appears to have been treated by Indian rulers as a self-governing unit not subject to their power unless it proved subversive or was threatened by internal or external disruption. Aśoka, the Buddhist king whose personal support

and prestige helped Buddhism grow from a regional to a universal religion, appears to have been applying this policy of protection from disruption when he intervened in Buddhist monastic affairs to expel schismatics. He came to be remembered, however, as the Dharmarāja, the great king who protected and propagated the teachings of the Buddha.

In Theravāda countries Aśoka's image as a supporter and sponsor of the faith has traditionally been used to judge political authority. In general, Buddhism in Theravāda countries has been either heavily favored or officially recognized by the government, so that the golden age in which there is a creative interaction between the government and the monks has been viewed as an obtainable goal. The *sangha*'s role in this interaction has traditionally been to preserve the *dhamma* and to act as the spiritual guide and model, revealing to the secular power the need for furthering the welfare of the people. While the *sangha* and the government appear as two separate structures, there has been some intertwining; for monks (often of royal heritage) have commonly acted as temporal advisers, and the kings—at least in Thailand—occasionally have spent some time in the monastery. It should also be pointed out that Buddhist monastic institutions have served as a link between the rural peoples and the urban elites, helping to unify the various Theravāda countries.

In China the relationship between the *sangha* and the state has fluctuated. At times Buddhism has been seen as a foreign religion, as a potential competitor with the state, or as a drain on national resources of men and wealth. These perceptions have led to sharp purges of Buddhism and to rules curbing its influence. Some of the rules were an attempt to limit the number of monks and to guarantee governmental influence in ordination through state examinations and the granting of ordination certificates. Conversely, at other times, such as during the early centuries of the T'ang dynasty (618–845), Buddhism was almost considered the state religion. The government created a commissioner of religion to earn merit for the state by erecting temples, monasteries, and images in honor of the Buddha.

In Japan, Buddhism has experienced similar fluctuations. During the period from the 10th to the 13th century, monasteries gained great landed wealth and temporal power. They formed large armies of monks and mercenaries that took part in wars with rival religious groups as well as in temporal struggles. By the 14th century, however, their power began to wane, and, under the Tokugawa regime that took control in the 17th century, Buddhist institutions became, to a considerable degree, instruments of state power and administration.

Only in Tibet did Buddhists establish a theocratic polity that lasted for an extended period of time. Beginning in the 12th century, Tibetan monastic groups developed relationships with the powerful Mongol khans that often gave them control of governmental affairs in Tibet. In the 17th century the DGE-LUGS-PA school established a monastic regime that was able to maintain more or less continual control until the Chinese occupation in the 1950s.

During the immediate premodern period, each of the various Buddhist communities in Asia developed some kind of working relationship with the sociopolitical system in its area. Within the sweep of Western colonialism and especially after the establishment of new political ideologies and systems during the 19th and 20th centuries, these older patterns of accommodation between Buddhism and state authority were seriously challenged. In many cases bitter conflicts resulted—for example, between Buddhists and colonial regimes in Sri Lanka and Myanmar, between Buddhists and the Meiji reformers in Japan, and between Buddhists and many different communist regimes. In some cases, as, for instance, in Japan, these conflicts have been resolved and new modes of accommodation have been established. In other cases, such as that of Tibet, there has been no resolution.

HISTORICAL DEVELOPMENT

The early councils. The early BUDDHIST COUNCILS (*sangītis*, or “recitals”) were concerned largely with the purity of the faith and practice of the monastic community. Unfortunately, legend and myth have so colored these accounts that scholars cannot be sure when and where they took place or even who took part in them. Though many scholars deny its very existence, all Buddhist traditions maintain that a council was called at Rājagaha (modern Rājgīr) immediately after the Buddha’s death (the date of which is unknown). According to legend, this council (comprising 500 ARAHANTS, or accomplished monks) was responsible for the composition of the *vinaya* (code of monastic discipline), under the monk Upāli, and the *dhamma* (*i.e.*, the *sūtras*, or Buddhist SCRIPTURES), under the monk ĀNANDA, even though the latter was supposedly brought to trial at the same council. Though there were memorizers of *sūtras* and the *vinaya*, as well as authorized commentators, during the period of the first three Buddhist councils, the scriptures as such existed only in an inchoate oral form.

More scholars are prone to accept the historicity of the second council that was held at Vesālī (Sanskrit: Vaiśālī) a little more than a century after the Buddha’s death. According to the tradition, a controversy arose between a certain Yasa and the monks of Vajji. The 10 points of discipline observed by the Vajjian monks and opposed by Yasa permitted storing salt in a horn, eating in the afternoon, and drinking buttermilk after meals. These and other rules were condemned by the council as being too lax. Many scholars believe the second council to have been closely associated with the controversy that led to the open division between two segments of the early community—the MAHĀSĀNGHIKA school, which displayed more liberal attitudes, and the Thāvavāda (Theravāda) school, which took a more conservative stance.

According to Theravāda accounts, a third council was called by King Aśoka at Pāṭaliputta (Patna) about 250 BCE. Moggaliputta Tissa, president of the council, is said to have completed his *Abhidharma* (scholastic) treatise, the *Kathāvatthu* (“Points of Controversy”), during this council. It is also said that a controversy arose between two sects, the Sarvāstivādins and the Vibhajyavādins (usually identified with the early Theravādins), over the reality of past and future states of consciousness (*cittas*). After the Sarvāstivādin view that such states actually exist was condemned, the sect supposedly withdrew from the lower GĀNGĀ (Ganges) valley to Mathurā in the northwest. There it appears to have continued to develop as a transitional school between the older, more conservative schools and the nascent Mahāyāna (“Greater Vehicle”) movement.

According to northern Buddhist traditions, a fourth council was held under King KANIṢKA, probably in the 1st century CE, at Jalandhar or in Kashmir. This council seems to have been limited to the composition of commentaries. Because it appears that the Sarvāstivādin viewpoint was the only one represented, scholars generally conclude that this was a sectarian synod rather than an actual ecumenical Buddhist council. At any rate, the fourth council has never been recognized by southern Buddhists.

Developments within India. *Expansion of Buddhism.* The Buddha was a charismatic leader who discovered and proclaimed a religious message and founded a distinctive religious community. Some of the members of that community were, like the Buddha himself, wandering ascetics. Others were laypersons who venerated the Buddha, followed those aspects of his teachings that were relevant to them, and provided the wandering ascetics with the material support that they required.

During the first several centuries after the Buddha’s death, the story of his life was remembered and embellished, his teachings were preserved and developed, and the community that he had established became a significant religious force. Many of the followers of the Buddha who were

wandering ascetics began to settle in permanent monastic establishments and to develop the procedures needed to maintain large monastic institutions. At the same time, the Buddhist laity came to include important members of the economic and political elite.

During the first century of its existence Buddhism spread from its place of origin in Magadha and Kosala throughout much of northern India, including the areas of Mathurā and Ujjayanī in the west. According to tradition, invitations to the Council of Vesālī, held just over a century after the Buddha's death, were sent to monks living in many distant places throughout northern and central India. By the middle of the 3rd century BCE, Buddhism had gained the favor of a Mauryan king who had established an empire that extended from the HIMALAYAS in the north almost as far south as Sri Lanka.

To the rulers of the kingdoms and republics arising in northeastern India, the patronage of sects with practices differing from orthodox Hinduism was one way of counterbalancing the enormous political power enjoyed by high-caste Hindus (BRAHMINS) in the affairs of state. The first Mauryan emperor, Candra Gupta (c. 321–c. 297 BCE), patronized JAINISM and finally became a Jain monk. His grandson, Aśoka, who ruled over the greater part of the subcontinent from about 270 to 230 BCE, became the archetypal Buddhist king. Aśoka attempted to establish in his realm a “true *dhamma*” based on the virtues of self-control, impartiality, cheerfulness, truthfulness, and goodness. Though he did not found a state church, he did attempt to forge a Buddhist-oriented culture that would include Hindu, Jain, Ājīvika (Ājīvaka), and Buddhist alike. Though Aśoka created a new ideal of kingship that would have powerful repercussions throughout the later Buddhist world, the various problems posed by a state of vast dimensions proved greater than he could solve. Soon after Aśoka's death, the Mauryan empire began to crumble.

Although Buddhists seem to have suffered some persecutions during the subsequent Śuṅga–Kāṇva period (185–28 BCE), Buddhism succeeded in maintaining and even expanding its influence. Buddhist monastic centers and magnificent Buddhist monuments such as the great STUPAS at Bhārhut and Sāñchi were established throughout the subcontinent, and these institutions often received royal patronage. In the early centuries of the Common Era, Buddhism was especially flourishing in northwestern India, and from there it spread rapidly into Central Asia and China.

Buddhism under the Guptas and Pālas. By the time of the Gupta dynasty (c. 320–c. 600 CE), Buddhism in India was being affected by the revival of Brahmanic religion and the rising tide of BHAKTI (Hindu devotionalism). During this period, for example, some Hindus were practicing devotion to the Buddha, whom they regarded as an AVATAR (incarnation) of the Hindu deity VISHNU.

During the Gupta period some monasteries joined together to form monastic centers (MAHĀVIHĀRAS) that functioned as universities. The most famous of these, located at NĀLANDA, had a curriculum that went far beyond the bounds of traditional Buddhism. Nālanda soon became the leading center for the study of Mahāyāna, which was rapidly becoming the dominant Buddhist tradition in India.

Though Buddhist institutions seemed to be faring well under the Guptas, various Chinese pilgrims visiting India between 400 and 700 CE could discern an internal decline in the Buddhist community and the beginning of the reabsorption of Indian Buddhism by Hinduism. Among these pilgrims were FA-HSIEN, Sung Yün, Hui-sheng, I-ching, and the 7th-century monk HSÜAN-TSANG, who found “millions of monasteries” in northwestern India reduced to ruins by the Huns, a nomadic Central Asian people. Many of the remaining Buddhists were developing their own form of Tantrism (see TANTRA).

Buddhism survived the Huns' destruction of the monasteries, especially in the northeast, and flourished for a time under the Buddhist Pāla kings (8th–12th century CE). These kings continued to protect the great monastic establishments, building such new centers as Odantapurī, near Nālanda, and establishing a system of supervision for all such *mahāvihāras*. Under the Pālas, Tantric Buddhism (*i.e.*, Vajrayāna) became the dominant sect. Adepts of this sect, called SIDDHAS,

Reclining Buddha, 12th century CE; in the Galvihara shrine, Polonnaruwa, Sri Lanka

Robert Harding Picture Library/
Getty Images

identified nirvana with the passions, maintaining that one could “touch the deathless element with his body.” During this period, the university of Nālanda became a center for the study of Tantric Buddhism and the practice of Tantric magic and rituals. Under the Pāla kings, contacts with China decreased as Indians began to turn their attention to Tibet and Southeast Asia.

The decline of Buddhism in India. With the collapse of the Pāla dynasty in the 12th century, Buddhism suffered another defeat, and this time it did not recover. Though some pockets of Buddhist influence remained, the Buddhist presence in India became so negligible that it could hardly be noticed. To some extent, Buddhism was so tolerant of other faiths that it was simply reabsorbed by a revitalized Hindu tradition. Likewise, Buddhism in India, having become mainly a monastic movement, probably paid little heed to the laity and, after the Muslim invaders sacked the Indian monasteries in the 12th century CE, Buddhists had little basis for recovery. After the destruction of the monasteries, the Buddhist laity showed little interest in restoring the “Way.”

Contemporary revival. At the beginning of the 20th century Buddhism was virtually extinct in India. Since the early 1900s, however, a significant Buddhist presence has been reestablished. The incorporation of Sikkim in 1975 into the Republic of India has brought into the modern Indian nation a small Himalayan society that has a strong Buddhist tradition related to the Vajrayāna Buddhism of Tibet. Following the Chinese conquest of Tibet in the late 1950s, there was an influx of Tibetan Buddhists who established a highly visible Buddhist community in northern India. More importantly, though, a number of Buddhist societies were organized in the early decades of the 20th century by Indian intellectuals who found in Buddhism an alternative to a Hindu tradition that they could no longer accept. The mass conversion of large numbers of people from the so-called scheduled CASTES (formerly called UNTOUCHABLES), a movement originally led by BHIMRAO RAMJI AMBEDKAR, began in the 1950s. In October 1956 Ambedkar and several hundred thousand of his followers converted to Buddhism, and—although accurate figures are difficult to determine—the group has continued to grow. Some estimates indicate that the number of converts is as high as four million.

Sri Lanka and Southeast Asia. The first clear evidence of the spread of Buddhism outside India dates from the reign of King Aśoka (3rd century BCE). Accord-

ing to his inscriptions, Aśoka sent Buddhist emissaries not only to many different regions of the subcontinent but also into certain border areas as well. It is certain that Aśokan emissaries were sent to Sri Lanka and to an area called Suvarṇabhūmi that many modern scholars have identified with the Mon country in southern Myanmar and central Thailand.

Sri Lanka. According to the Sinhalese tradition, Buddhism took root in Sri Lanka with the arrival of Aśoka's son Mahinda and his six companions. Sent as missionaries by the Mauryan emperor, these travelers converted King Devānampiya Tissa and many of the nobility. Under King Tissa, the Mahāvihāra monastery was built, an institution that was to become the center of Sinhalese orthodoxy. After Tissa's death (c. 207 BCE) Sri Lanka fell into the hands of the South Indians until the time of Duṭṭhagāmaṇī (101–77 BCE), a descendant of Tissa, who overthrew King Elāra. During this time, as a reaction to the threat posed by the South Indians, Buddhism and Sri Lankan political formations became closely intertwined. Again, it was probably because of this danger that the Pāli canon was first written down under King Vaṭṭagāmaṇī Abhaya in the 1st century BCE. This king also built the Abhayagiri monastery, the main center of the various Mahāyāna movements in Sri Lanka. These developments were openly supported by King Mahāsenā (276–303 CE). Under Mahāsenā's son, Śrī Meghavaṇṇa, the "Tooth of the Buddha" was brought to Abhayagiri and made the national symbol.

During the 1st millennium CE in Sri Lanka, the ancient Theravāda tradition coexisted with various forms of Hinduism, Mahāyāna Buddhism, and Tantric Buddhism. Beginning in the 10th century, as Buddhism was declining in India, Sri Lanka became a major locus of a Theravāda Buddhist revival. As a result of this revival, Sri Lanka became a Theravāda kingdom, with a *sangha* that was unified under Theravāda auspices and a monarch who legitimated his rule in Theravāda terms. The new Theravāda tradition that was established spread from Sri Lanka into Southeast Asia, where it exerted a powerful influence.

In modern times Sri Lanka fell prey to the Western colonial powers (to the Portuguese in 1505–1658, the Dutch in 1658–1796, and finally the British in 1796–1947). Under King Kittisiri Rājasīha (1747–81) the ordination lineage was once again renewed, this time by monks recruited from Thailand.

The monastic community in Sri Lanka is now divided into three major bodies: (1) the Siam Nikaya, founded in the 18th century, a conservative and wealthy sect that admits only members of the Goyigama, the highest Sinhalese caste, (2) the Amarapura sect, founded in the 19th century, which has opened its ranks to members of lower castes, and (3) the reformed splinter group from the Siam Nikaya called the Ramanya sect. Among the laity several reform groups have been established. Among these the SARVODAYA community that is headed by A. T. Ariyaratne is especially important. This group has established religious, economic, and social development programs that have had a significant impact on Sinhalese village life.

Southeast Asia. In Southeast Asia the Buddhist impact has been made in very different ways in three different regions. In two of these (the region of Malaysia-Indonesia and the region on the mainland extending from Myanmar to southern Vietnam), the main connections have been trade routes with India and Sri Lanka. In Vietnam the main connections have been with China. It is certain that Buddhism reached these areas by the beginning centuries of the 1st millennium CE.

With the help of Indian missionaries such as the monk Guṇavarman, Buddhism had gained a firm foothold on Java well before the 5th century CE. Buddhism was also introduced at about this time in Sumatra, and, by the 7th century, the king of Śrīvijaya on the island of Sumatra was a Buddhist. When the Chinese traveler I-ching visited this kingdom in the 7th century, he noted that HĪNAYĀNA Buddhism was dominant in the area but that there were in addition a few Mahāyānists. It was also in the 7th century that the great scholar Dharmapāla from Nālanda visited Indonesia.

The Śailendra dynasty, which ruled over the Malay Peninsula and a large section of Indonesia from the 7th to the 9th century, promoted the Mahāyāna and Tantric forms of Buddhism. During this period major Buddhist monuments were

Buddhist monk pauses while cleaning vegetation from a stupa at Angkor Wat, Cambodia

John Spragens, Jr.—Photo Researchers

dominant religion in the area. (In Indonesia and Malaysia, Buddhism exists as a living religion only among the Chinese minority, but there is a growing community of converts, with its greatest strength in the vicinity of Borobudur.)

A second pattern of Buddhist expansion in Southeast Asia developed in the mainland area that extends from Myanmar in the north and west to the Mekong delta in the south and east. According to the local Mon and Burman traditions, this is the area of Suvarṇabhūmi that was visited by missionaries from the Aśokan court. It is known that, by the early centuries of the 1st millennium CE, Buddhist kingdoms were beginning to appear in this region. In Myanmar and Thailand—despite the presence of Hindu, Mahāyāna, and Vajrayāna elements—the more conservative Hinayāna forms of Buddhism were especially prominent throughout the 1st millennium CE. Farther to the east and south, in what is now Cambodia and southern Vietnam, various combinations of Hinduism, Mahāyāna Buddhism, and Vajrayāna Buddhism became dominant. Throughout much of the history of Angkor, the great imperial center that dominated Cambodia and much of the surrounding areas for many centuries, Hinduism seems to have been the preferred tradition, at least among the elite. In the late 12th and early 13th centuries, however, the Buddhist King Jayavarman VII built a new capital called Angkor Thom, with a temple complex that was dominated by Mahāyāna and Vajrayāna monuments; these monuments represent one of the high points of Buddhist architectural achievement.

In mainland Southeast Asia, as in Sri Lanka, a Theravāda reform movement began to develop in the 11th century. Drawing heavily on the Theravāda heritage that had been preserved among the Mon in southern Myanmar, as well as on the new reform tradition that was developing in Sri Lanka, this revival soon established the Theravāda tradition as the most dynamic tradition in Myanmar, where the Burmans had conquered the Mon. By the late 13th century the reform movement had spread to Thailand, where the Thai were gradually displacing the Mon as the dominant population. Within another two centuries the Theravāda reformers had spread their tradition to Cambodia and Laos.

The Theravāda preeminence that was thus established remained basically intact throughout the area during the remainder of the premodern period. The arrival of the Western powers in the 19th century, however, brought important changes. In Thailand, which retained its independence, a process of gradual reform and modernization took place. During the 19th century leadership in the reform and modernization process was taken by a new Buddhist sect, the Thammayut Nikāya, which was established and supported by the reigning Chakri dynasty. More

erected in Java, among them the marvelous BOROBUDUR, which is perhaps the most magnificent of all Buddhist stupas (burial monuments). From the 7th century onward, Vajrayāna Buddhism spread rapidly throughout the area. King Kertanagara of Java (reigned 1268–92) was especially devoted to Tantric practice.

In the Malay Peninsula and Indonesia, as in India, Buddhism gradually lost its hold during the first half of the 2nd millennium CE. In many areas Buddhism was assimilated to Hinduism, forming a Hindu-oriented amalgam that in some places (for example, in Bali) has persisted to the present. In most of Malaysia and Indonesia, however, both Hinduism and Buddhism were replaced by ISLAM, which remains the

recently, the reform and modernization process has become more diversified and has affected virtually all segments of the Thai Buddhist community.

In the other Theravāda countries in Southeast Asia, Buddhism has had a much more difficult time. In Myanmar, which endured an extended period of British rule, the *sangha* and the structures of Buddhist society have been seriously disrupted. Under the military regime of General Ne Win, established in 1962, reform and modernization were limited in all areas of national life, including religion. In Laos and Cambodia, both of which suffered an extended period of French rule followed by the devastation of the Vietnam War and the violent imposition of communist rule, the Buddhist community has been severely crippled. During the late 20th century, however, many signs of a Buddhist revival have begun to appear.

There are some indications that Vietnam was involved in the early sea trade between India, Southeast Asia, and China and that Buddhism reached the country around the beginning of the 1st millennium CE, brought by missionaries traveling between India and the Chinese empire. The northern part of what is now Vietnam had been conquered by the Chinese empire in 111 BCE; it remained under Chinese rule until 939 CE. In the south there were two Indianized states, Funan (founded during the 1st century CE) and Champa (founded 192 CE). In these areas both Hīnayāna and Mahāyāna traditions were represented. The traditions that most affected the long-term development of Buddhism in Vietnam, however, were ZEN and PURE LAND traditions introduced from China into the northern and central sections of the country beginning in the 6th century CE.

The first *dhyāna* (Zen; Vietnamese: *thiền*), or “meditation,” school was introduced by Vinītaruci, an Indian monk who had come to Vietnam from China in the 6th century. In the 9th century a school of “wall meditation” was introduced by the Chinese monk Vo Ngon Thong. A third major Zen school was established in the 11th century by the Chinese monk Thao Durong. From 1414 to 1428 Buddhism in Vietnam was persecuted by the Chinese, who had again conquered the country. TANTRISM, TAOISM, and CONFUCIANISM were also filtering into Vietnam at this time. Even after the Chinese had been driven back, a Chinese-like bureaucracy closely supervised the Vietnamese monasteries. The clergy was divided between the highborn and Sinicized (Chinese-influenced), on the one hand, and those in the lower ranks, who often were active in peasant uprisings.

During the modern period these Mahāyāna traditions centered in northern and central Vietnam have coexisted with Theravāda traditions that have spilled over from Cambodia in the south. Rather loosely joined together, the Vietnamese Buddhists managed to preserve their traditions through the period of French colonial rule in the 19th and 20th centuries. During the struggle between North and South Vietnam in the 1960s and early '70s, many Buddhists worked to achieve peace and reconciliation, but they met with little success. Under the communist regime that completed its victory in Vietnam in the early 1970s, conditions have been difficult, but Buddhism has persisted. Reports in the late 1980s and early '90s indicated that new signs of vitality were beginning to appear.

Central Asia and China. *Central Asia.* By the beginning of the Common Era, Buddhism had probably been introduced into eastern Turkistan. According to tradition, a son of Aśoka founded the kingdom of Khotan around 240 BCE. The

Funeral cortege in Saigon (now Ho Chi Minh City) of Buddhist monk Thich Quang Duo, who immolated himself to uphold claims of Buddhists in Vietnam during the Vietnam War

AFP—Archive Photos

grandson of this king supposedly introduced Buddhism to Khotan, where it became the state religion. On more secure historical grounds, it is clear that the support given by the Indo-Scythian king Kaniṣka of the Kushān (Kuṣāna) dynasty, which ruled in northern India, Afghanistan, and parts of Central Asia in the 1st to 2nd century CE, encouraged the spread of Buddhism into Central Asia. Kaniṣka purportedly called an important Buddhist council; he patronized the Gandhāra school of Buddhist art, which introduced Greek and Persian elements into Buddhist iconography; and he supported Buddhist expansion within a vast region that extended far into the Central Asian heartland. In the northern part of Chinese Turkistan, Buddhism spread from Kucha (K'u-ch'e) to the kingdoms of Agnideśa (Karashahr), Kao-ch'ang (Turfan), and Bharuka (Aksu). According to Chinese travelers who visited Central Asia, the Hinayānists (at least at the time of their visits) were strongest in Turfan, Shanshan, Kashgar, and Kucha, while Mahāyāna strongholds were located in Yarkand and Khotan.

In Central Asia there was a confusing welter of languages, religions, and cultures, and, as Buddhism interacted with these various traditions, it changed and developed. SHAMANISM, ZOROASTRIANISM, NESTORIAN CHRISTIANITY, and Islam all penetrated these lands and coexisted with Buddhism. For example, some of the Mahāyāna BODHISATTVAS, such as AMITĀBHA, may have been inspired in part by Zoroastrian influence. There is also evidence of some degree of syncretism between Buddhism and MANICHAEISM, an Iranian dualistic religion that was founded in the 3rd century CE.

Buddhism continued to flourish in parts of Central Asia until the 11th century, particularly under the patronage of the Uighur Turks. With the increasingly successful incursions of Islam (beginning in the 7th century CE) and the decline of the T'ang dynasty (618–907) in China, however, Central Asia ceased to be the important crossroads of Indian and Chinese culture that it once had been. Buddhism in the area gradually became a thing of the past.

China. Although there are reports of Buddhists in China as early as the 3rd century BCE, Buddhism was not actively propagated in that country until the early centuries of the Common Era. Tradition has it that Buddhism was introduced after the Han emperor Ming Ti (reigned 57/58–75/76 CE) had a dream of a flying golden deity that was interpreted as a vision of the Buddha. Accordingly, the emperor dispatched emissaries to India, who subsequently returned to China with the *Sutra in Forty-two Sections*, which was deposited in a temple outside the capital of Lo-yang. In actuality, Buddhism entered China gradually, first primarily through Central Asia and, later, by way of the trade routes around and through Southeast Asia.

The Buddhism that first became popular in China during the Han dynasty was deeply colored with magical practices, making it compatible with popular Chinese Taoism. Instead of the doctrine of no-self, early Chinese Buddhists taught the indestructibility of the soul. Nirvana became a kind of immortality. They also taught the theory of karma, the values of charity and compassion, and the need to suppress the passions. Until the end of the Han dynasty, there was a virtual symbiosis between Taoism and Buddhism and a common propagation of the means for attaining immortality through various ascetic practices. It was widely believed that LAO-TZU, the founder of Taoism, had been reborn in India as the Buddha. Many Chinese emperors worshiped Lao-tzu and the Buddha on the same altar. The first translations of Buddhist *sūtras* into Chinese—namely those dealing with such topics as breath control and mystical concentration—utilized a Taoist vocabulary to make the Buddhist faith intelligible to the Chinese.

After the Han period, in the north of China, Buddhist monks were often used by non-Chinese emperors for their political-military counsel as well as for their skill in magic. At the same time, in the south, Buddhism began to penetrate the philosophical and literary circles of the gentry. An important contribution to the growth of Buddhism in China during this period was the work of translation. The most important early translator was the learned monk KUMĀRAJĪVA, who, before he was brought to the Chinese court in 401 CE, had studied the Hindu VEDAS, the occult sciences, and astronomy, as well as the Hinayāna and Mahāyāna *sūtras*.

During the 5th and 6th centuries CE Buddhist schools from India became established, and new, specifically Chinese schools began to form. Buddhism was becoming a powerful intellectual force in China, monastic establishments were proliferating, and Buddhism was becoming well-established among the peasantry. Thus, it is not surprising that, when the Sui dynasty (581–618) established its rule over a reunified China, Buddhism flourished as a state religion.

The golden age of Buddhism in China occurred during the T'ang dynasty. Though the T'ang emperors were usually Taoists themselves, they tended to favor Buddhism, which had become extremely popular. Under the T'ang the government extended its control over the monasteries and the ordination and legal status of monks. From this time forward, the Chinese monk styled himself simply *ch'en*, or "subject."

During this period several Chinese schools developed their own distinctive approaches. Some of them produced comprehensive systematizations of the vast body of Buddhist texts and teachings. There was a great expansion in the number of Buddhist monasteries and the amount of land they owned. It was also during this period that many scholars made PILGRIMAGES to India, heroic journeys that greatly enriched Buddhism in China, both by the texts that were acquired and by the intellectual and spiritual inspiration that was brought from India. Buddhism was never able to replace its Taoist and Confucian rivals, however, and in 845 the emperor Wu-tsung began a major persecution. According to records, 4,600 Buddhist temples and 40,000 shrines were destroyed, and 260,500 monks and nuns were forced to return to lay life.

Buddhism in China never recovered completely from the great persecution of 845. It did maintain much of its heritage, however, and continued to play a significant role in the religious life of China. On the one hand, Buddhism retained its identity as Buddhism and generated new forms through which it was expressed. These included texts such as the *yü lu*, or "recorded sayings," of famous teachers that were oriented primarily toward monks, as well as more literary creations such as the *Journey to the West* (written in the 16th century) and *The Dream of the Red Chamber* (18th century). On the other hand, Buddhism coalesced with the Confucian-Neo-Confucian and Taoist traditions to form a complex multi-religious ethos within which all three traditions were more or less comfortably encompassed.

Among the various schools the two that retained the greatest vitality were the Ch'an school (better known in the West by its Japanese name, Zen) which was noted for its emphasis on meditation, and the Pure Land (Ching-t'u) tradition, which emphasized Buddhist devotion. The former school exerted the greatest influence among the cultured elite. It did so through various media, including the arts. Ch'an artists during the Sung dynasty (960–1279) used images of flowers, rivers, and trees, executed with sudden, deft strokes, to evoke an insight into the flux and EMP-TINESS of all reality. The Pure Land tradition exerted a greater influence on the population as a whole and was sometimes associated with SECRET SOCIETIES and peasant uprisings. But the two seemingly disparate traditions were often very closely linked. In addition, they were mixed with other Buddhist elements such as the so-called "masses for the dead" that had originally been popularized by the practitioners of Esoteric (Vaj-rayāna) Buddhism.

During the early decades of the 20th century, China experienced a Buddhist reform movement aimed at revitalizing the Chinese Buddhist tradition and adapting Buddhist teachings and institutions to modern conditions. However, the disruptions caused by the Sino-

Japanese War and the subsequent establishment of a communist government have not been helpful to the Buddhist cause. The Buddhist community was the victim of severe repression during the Cultural Revolution (1966–69).

Korea and Japan. *Korea.* Buddhism was first introduced into the Korean region when it was divided into the three kingdoms of Paekche, Koguryō, and Silla. After Buddhism was brought to the northern kingdom of Koguryō from China in the 4th century, it gradually spread throughout the other Korean kingdoms. As often happened, the new faith was first accepted by the court and then extended to the people. After the unification of the country by the kingdom of Silla in the 660s, Buddhism began to flourish throughout Korea. The monk WŎNHYO (617–686) was one of the most impressive scholars and reformers of his day. He was married and taught an “ecumenical” version of Buddhism that included all branches and sects. He tried to use music, literature, and dance to express the meaning of Buddhism. Another scholar of the Silla era was Ŭi-sang (625–702), who went to China and returned to spread the Hwaōm (Chinese HUA-YEN) sect in Korea. The Chinese Ch’an sect (Zen) was introduced in the 8th century and, by absorbing the Korean versions of Hua-yen, T’IEN-T’AI (Tendai; a rationalist school), and Pure Land, gradually became the dominant school of Buddhism in Korea, as it did in Vietnam.

Early Korean Buddhism was characterized by a this-worldly attitude. It emphasized the pragmatic, nationalistic, and aristocratic aspects of the faith. Still, an indigenous tradition of shamanism influenced the development of popular Buddhism throughout the centuries. Buddhist monks danced, sang, and performed the rituals of shamans.

During the Koryō period (935–1392), Korean Buddhism reached its zenith. During the first part of this period the Korean Buddhist community was active in the publication of the *Tripitaka Koreana*, one of the most inclusive editions of the Buddhist sutras up to that time. After 25 years of research, a monk by the name of Ŭich’ōn (1055–1101; see DAIGAK GUKSA) published an outstanding three-volume bibliography of Buddhist literature. Ŭich’ōn also sponsored the growth of the T’ien-t’ai sect in Korea. He emphasized the need for cooperation between Ch’an and the other “Teaching” schools of Korean Buddhism.

Toward the end of the Koryō period, Buddhism began to suffer from internal corruption and external persecution, especially that promoted by the Neo-Confucians. The government began to put limits on the privileges of the monks, and Confucianism replaced Buddhism as the religion of the state. The Yi dynasty (1392–1910) continued these restrictions, and, since the end of World War II, Buddhism in Korea has been hampered by communist rule in North Korea and by the great vitality of Christianity in South Korea. Despite these challenges, Buddhists, particularly in South Korea, have both preserved the old traditions and initiated new movements.

Japan. The Buddhism that was initially introduced into Japan in the 6th century from Korea was regarded as a talisman (charm) for the protection of the country. The new religion was accepted by the powerful Soga clan but was rejected by others, thus causing controversies that resembled the divisions caused by the introduction of Buddhism in Tibet. In both countries, some believed that the introduction of Buddhist statues had been an insult to the native deities, resulting in plagues and natural disasters. Only gradually were such feelings overcome. Though the Buddhism of the Soga clan was largely magical, under the influence of Prince Shōtoku, who became regent of the nation in 593, other aspects of Buddhism were emphasized. Shōtoku lectured on various scriptures that emphasized the ideals of the layman and monarch, and he composed a “Seventeen-Article Constitution” in which Buddhism was adroitly mixed with Confucianism as the spiritual foundation of the state. In later times he was widely regarded as an incarnation of the bodhisattva AVALOKITEŚVARA.

During the Nara period (710–784), Buddhism became the state religion of Japan. Emperor Shōmu actively propagated the faith, making the imperial capital, Nara—with its “Great Buddha” statue (Daibutsu)—the national cult center. Buddhist schools imported from China became established in Nara, and state-subsidized provincial temples (*kokubunji*) made the system effective at the local level.

After the capital was moved to Heian-kyō (modern Kyōto) in 794, Buddhism continued to prosper. Chinese influence continued to play an important role, particularly through the introduction of new Chinese schools that became dominant at the royal court. MOUNT HIEI and MOUNT KŌYA became the centers for the new Tendai and Esoteric (SHINGON) schools of Buddhism, which were characterized by highly sophisticated philosophies and complex and refined liturgies. Moreover, Buddhism interacted with SHINTŌ and local traditions, and various distinctively Japanese patterns of Buddhist-oriented folk religion became very popular.

New schools of the Kamakura period. There was a turning point in the 12th and 13th centuries in Japanese history and in the history of Japanese Buddhism in particular. Late in the 12th century the imperial regime with its center at Heian collapsed, and a new feudal government, or shogunate, established its headquarters at Kamakura. As a part of the same process, a number of new Buddhist leaders emerged and established schools of Japanese Buddhism. These reformers included proponents of the Zen traditions such as EISAI and DŌGEN; Pure Land advocates such as HŌNEN, SHINRAN, and Ippen; and NICHIREN, the founder of a new school that gained considerable popularity. The distinctively Japanese traditions these creative reformers and founders established became—along with many very diverse synthetic expressions of Buddhist-Shintō piety—integral components of a Buddhist-oriented ethos that structured Japanese religious life into the 19th century. Also during this period many Buddhist groups allowed their clergy to marry, with the result that temples often fell under the control of particular families.

Under the Tokugawa shogunate (1603–1867), Buddhism became an arm of the government. Temples were used for registering the populace; this was one way of preventing the spread of Christianity, which the feudal government regarded as a political menace. However, this association with the Tokugawa regime made Buddhism quite unpopular at the beginning of the Meiji period (1868–1912), at least among the elite. At that time, in order to set up Shintō as the new state religion, it was necessary for Japan's new ruling oligarchy to separate Shintō from Buddhism. This led to the confiscation of temple lands and the defrocking of many Buddhist priests.

During the period of ultranationalism (c. 1930–45), Buddhist thinkers called for uniting the East in one great “Buddhaland” under the tutelage of Japan. After the war, however, Buddhist groups, new and old alike, began to emphasize Buddhism as a religion of peace and brotherhood. During the postwar period the greatest visible activity among Buddhists has been among the new religions such as SŌKAGAKKAI (“Value Creation Society”) and RISSHŌ-KŌSEI-KAI (“Society for Establishing Righteousness and Friendly Relations”).

Tibet, Mongolia, and the Himalayan Kingdoms. *Tibet.* Buddhism, according to the Tibetan tradition, was first given recognition in Tibet during the reign of Srong-brtsan-sgam-po (c. 627–c. 650). This king had two queens who were early patrons of the religion and were later regarded in popular tradition as incarnations of the Buddhist savioress TĀRĀ. The religion received active encouragement from Khri-srong-lde-btsan, during whose reign (c. 755–797) the first Buddhist monastery in Tibet was built at Bsam-yas (Samye), the first seven monks were ordained,

Zen Buddhist monk ringing the temple bell of the Eihei Temple monastery in Japan

Paolo Koch—Photo Researchers

and the celebrated Indian Tantric master PADMASAMBHAVA was invited to Tibet. Padmasambhava is credited with subduing the spirits and DEMONS associated with BON, the indigenous religion of Tibet, and with subjugating them to the service of Buddhism. At the time, influences from Chinese Buddhism were strong, but it is recorded that at the Council of Bsam-yas (792–794) it was decided that the Indian tradition should prevail.

Following a period of suppression that lasted almost two centuries (from the early 800s to the early 1000s), Buddhism in Tibet enjoyed a revival. During the 11th and 12th centuries many Tibetans traveled to India to acquire and translate Buddhist texts and to receive training in Buddhist doctrine and practice. With the assistance of the renowned Indian master ATĪṢA, who arrived in Tibet in 1042, Buddhism became established as the dominant religion. From this point forward Buddhism was the primary culture of the elite, was a powerful force in the affairs of state, and penetrated deeply into all aspects of Tibetan life.

One of the great achievements of the Buddhist community in Tibet was the translation into Tibetan of a vast corpus of Buddhist literature, including the *Bka'-gyur* ("Translation of the Buddha Word") and *Bstan'-gyur* ("Translation of Teachings") collections.

A major development occurred in the late 14th or early 15th century when a great Buddhist reformer named TSONG-KHA-PA established the DGE-LUGS-PA school, known more popularly as the Yellow Hats. In 1578, representatives of this school succeeded in converting the Mongol Altan Khan, and, under the khan's sponsorship, their leader (the so-called third DALAI LAMA) gained considerable monastic power. In the middle of the 17th century the Mongol overlords established the fifth Dalai Lama as the theocratic ruler of Tibet.

The fifth Dalai Lama instituted the high office of Panchen Lama for the abbot of the Tashilhunpo monastery, located to the west of Lhasa. The Panchen lamas were regarded as successive incarnations of AMITĀBHA. The Manchus in the 18th

Important sites and routes of expansion of early Buddhism

century and subsequently the British, the Nationalist Chinese, and the Chinese communists have all tried to exploit the division of power between the Panchen and the Dalai lamas for their own ends. In 1950 Chinese forces occupied Tibet, and in 1959 the Dalai Lama fled to India after an unsuccessful revolt. The Chinese communists then took over his temporal powers. The Dalai Lama's followers are now based in Dharmasala, India, and in 1995 the Dalai Lama and the Chinese government each identified a different boy as the 11th Panchen Lama.

Mongolia. The distinctive form of Buddhism that developed in Tibet has exerted a strong influence on neighboring areas and peoples. Most important was the conversion of the Mongol tribes to the north and east of Tibet. There are some indications that Buddhism was present among the Mongols as early as the 4th century, and during the 13th century close relationships developed between the Mongol court in China and some of the leaders of TIBETAN BUDDHISM. Kublai Khan himself became a supporter of the Tibetan form of Buddhism. Kublai Khan's Tibetan advisers helped to develop a block script for the Mongolian language, and many Buddhist texts were translated from Tibetan into Mongolian. In general, however, the religion failed to gain widespread popular support during this period.

In 1578 a new situation developed when the Altan Khan accepted the Dge-lugs-pa version of the Tibetan tradition and supported its spread among his followers at all levels of Mongol society. Over the centuries Mongolian scholars translated a large corpus of texts from Tibetan, and they produced their own sophisticated original texts. The Mongols based their Buddhist doctrine, practice, and communal organization on Tibetan models, but they developed and adapted them in a distinctive way.

Between 1280 and 1368 China was part of the Mongol empire, and the Mongols established their variant of Tibetan Buddhism in China. When they no longer held power in China, they continued to maintain the traditions they had developed in their homeland in the Central Asian steppes. During the 20th century, however, Mongolian Buddhism was undermined by the communist regimes that ruled in the Mongol areas of the former Soviet Union, Mongolia, and China.

Buddhism in the West. During the long course of Buddhist history, Buddhist influences have from time to time reached the Western world, and there are occasional references to what seem to be Buddhist traditions in the writings of the Christian CHURCH FATHERS. Not until the modern period, however, is there evidence for a serious Buddhist presence in the Western world. Beginning in the mid-19th century, Buddhism was introduced into the United States and other Western countries by large numbers of immigrants, first from China and Japan but more recently from other countries, especially countries of Southeast Asia. Buddhism gained a foothold among a significant number of Western intellectuals and—particularly during the 1960s and early '70s—among young people seeking new forms of RELIGIOUS EXPERIENCE and expression. The interest of Westerners in Buddhism has been increased by the work of Buddhist missionaries such as the Japanese scholar D.T. SUZUKI (1870–1966) as well as by a number of Tibetan Buddhist teachers who came to the West after the Chinese conquest of their homeland in the late 1950s.

BUDDHISM IN THE CONTEMPORARY WORLD

Modern trends. During the 19th and 20th centuries Buddhism has been forced to respond to new challenges and opportunities that cut across the regional religious and cultural patterns that characterized the Buddhist world in the premodern period. A number of Buddhist countries were subjected to Western rule, and even those that were not actually conquered felt the heavy pressure of Western religious, political, economic, and cultural influence. Modern rationalistic and scientific modes of thinking, modern notions of liberal democracy and socialism, and modern patterns of economic organization were introduced and became important elements in the thought and life of Buddhists and non-Buddhists in these countries. In this situation the Buddhists' response was twofold. They came to associate Buddhism with the religious and cultural identity that they sought to preserve and reassert in the face of Western domination. In addition, they sought to

Photo Researchers

initiate reforms that would make Buddhism a more appealing and effective force in the modern world.

The Buddhist concern to challenge Western domination manifested itself both in the specifically religious and in the religiopolitical sphere. In the former, Buddhists used a variety of measures to meet the challenge posed by the presence of Western Christian missionaries, often adopting modern Christian practices such as the establishment of Sunday schools, the distribution of tracts, and the like. They also attempted to strengthen the Buddhist cause through the initiation of Buddhist missions, including missions to the West, and through ecumenical cooperation among various Buddhist groups. Organizations such as the WORLD FELLOWSHIP OF BUDDHISTS (founded in 1950) and the World Buddhist Sangha Council (founded in 1966) were established to promote cooperation among Buddhists from all countries and denominations.

In the religiopolitical sphere, many Buddhist leaders—including many politi-

cally active monks—sought to associate Buddhism with various nationalist movements that were struggling to achieve political, economic, and cultural independence. Of course, the success of this strategy was tied to the success of the nationalist movements.

Three emphases have been especially important in the various reform movements. First, many Buddhist leaders have put forward a highly rationalized, Protestant-type interpretation of Buddhism that deemphasizes the supernatural and ritualized aspects of the tradition and focuses on the supposed continuity between Buddhism and modern science and on the centrality of ethics and morality. This interpretation, according to its proponents, represents a recovery of the true Buddhism of the Buddha.

A second, closely related emphasis that has been prominent among modern Buddhist reformers represents Buddhism as a form of religious teaching and practice that provides a basis for social, political, and economic life in the modern world. In some cases the focus has been on Buddhist ideas that supposedly provide a religious grounding for an international order supporting world peace. Other reformers have presented Buddhism as a basis for a modern democratic order or have advocated a Buddhist form of socialism.

Finally, Buddhist reformers have initiated and supported movements that give the Buddhist laity (and in some cases Buddhist women) a much stronger role than they have had in the past. In the Theravāda world, lay societies have been formed and lay-oriented meditation movements have enjoyed great success. In East Asia

an anticlerical, lay-oriented trend that was evident even before the modern period has culminated in the formation and rapid expansion of new, thoroughly laicized Buddhist movements, particularly in Japan.

Challenges and opportunities. The status of contemporary Buddhist communities and the kinds of challenges those communities face differ radically from area to area. Five different kinds of situations can be identified.

First, there are a number of countries where previously well-established Buddhist communities have suffered severe setbacks that have curtailed their influence and seriously sapped their vitality. This kind of situation prevails primarily in countries ruled by communist governments where Buddhism has, for many decades, been subjected to intense pressures that have undercut its institutional power and weakened its influence on large segments of the population. This has happened in the Mongol areas of Central Asia, in China (outside of Tibet), in North Korea, and, to a lesser extent, in Vietnam.

Second, there are places where well-established Buddhist communities have suffered similar setbacks but have retained the loyalty of large segments of the population. Perhaps the most vivid example is Tibet, where the Chinese communists have implemented anti-Buddhist policies that, despite their brutality, have failed to break the bond between Buddhism and the Tibetan sense of identity. In Cambodia and Laos, similarly, communist rule (including even the reign of terror imposed by the Pol Pot regime that controlled Kampuchea from 1975 to 1979) does not seem to have broken the people's loyalty to Buddhism.

Third, there are situations in which the Buddhist community has retained a more or less accepted position as the leading religious force and has continued to exert a strong influence on political, economic, and social life. This is the case in Sri Lanka and Myanmar, where Buddhism is the dominant religion among the Sinhalese and Burman majorities, and in Thailand, where more than 90 percent of the population is counted as Buddhist. In Sri Lanka and Myanmar, ethnic conflict and (especially in Myanmar) authoritarian rule and economic stagnation have resulted in political instability that has had a disruptive effect on the local Buddhist communities. In Thailand, however, Buddhism has a firm position within a relatively stable and rapidly modernizing society.

The fourth type of situation is one in which well-developed Buddhist traditions are operating with a considerable degree of freedom and effectiveness in societies where Buddhism plays a more circumscribed role. This situation prevails in several of the Pacific Rim countries, including South Korea, Taiwan, and Singapore, and to a lesser extent in Southeast Asian countries such as Malaysia and Indonesia, where Buddhism is practiced by significant numbers of overseas Chinese. The primary example, however, is Japan, where Buddhism has continued to play an important role. In the highly modernized society that has developed in Japan, many deeply rooted Buddhist traditions, such as Shingon, Tendai, the Pure Land schools, Zen and the Nichiren school have persisted and have been adapted to changing conditions. At the same time, new Buddhist sects such as Rissho-Kosei-Kai and Soka-gakkai have gained millions of converts not only in Japan but also throughout the world.

Finally, new Buddhist communities have developed in areas where Buddhism disappeared long ago or never existed at all. Thus in India, where Buddhism had been virtually extinct since at least the 15th century, new Buddhist societies have been formed by Indian intellectuals, new Buddhist settlements have been established by Tibetan refugees, and a significant Buddhist community has been founded by converts from the so-called scheduled castes. In the West (particularly but not exclusively in the United States), important Buddhist communities have been established by immigrants from East and Southeast Asia. Buddhist influences have penetrated into many aspects of Western culture, and communities of Buddhist converts are active.

For more than two millennia Buddhism has been a powerful religious, political, and social force, first in India, its original homeland, and then in many other lands. It remains a powerful religious, political, and cultural force in many parts of the world today.

BUDDHISM, ART OF, pictorial and representational works which developed out of a Buddhist context. Much of Buddhist art has been concerned with stories from the Buddha's life or other elements of Buddhist mythology. The introduction of BUDDHISM to East Asian cultures in the mid-6th century had a profound effect on local artistic traditions. Especially within Japanese and Korean sculpture, Buddhist subjects were almost always dominant.

The subject of Buddhist art is a vast and complex topic, and this article will merely attempt to sketch out a few of its dimensions. Treatments of related topic may be found in other articles, including BUDDHISM; STUPA; SACRED ARCHITECTURE; MANDALA; and EMERALD BUDDHA.

Early Buddhist artwork in India often drew on the mythology that surrounded the BUDDHA GOTAMA, illustrating key events in his "historical" life as well as scenes from the JĀTAKAS, the stories that told of his previous incarnations. In the earliest period of Buddhist-inspired carved stonework (2nd–1st centuries BCE), the Buddha was portrayed by a collection of symbols: a tree indicating his enlightenment (which is said to have occurred beneath the pipal, or BODHI TREE); a wheel portraying his first preaching (the wheel being both the symbol of the universal monarch [CHAKRAVARTIN] and of the Buddha as universal guide and teacher); and a miniature STUPA portraying his release, or NIRVANA (the stupa being the focus of the cult surrounding the Buddha's material remains).

From the 1st century BCE onward the Buddha Gotama began to be figured in northwestern Indian sculpture; common types of Buddha images are those that represent his calling the earth to witness against MĀRA by touching it with the fingertips of the right hand, the meditating Buddha protected by a cobra's hood, and the Buddha lying on his right side as he enters final nirvana. These stereotyped presentations of him soon became the model for future use throughout Asia. The traditions of imagery relating to the Buddha Gotama thrive to this day chiefly in Sri Lanka and the Southeast Asian countries where THERAVĀDA Buddhism prevails.

From northwestern India, Buddhist architecture, ICONOGRAPHY, and painting passed into China and from there into the rest of East Asia. The spread of Buddhism into Asia served to introduce the complex mythology of MAHĀYĀNA Buddhism, with its various buddhas, BODHISATTVAS, and quasi-buddhas, to the local artistic traditions. Certain figures were more popular in representational art than others; especially popular in China, and hence in Japan and Korea, were

The Granger Collection

AMITĀBHA, VAIROCANĀ, MAITREYA, MAÑJUŚRĪ, KṢITIGARBHA, and AVALOKITEŚVARA (as the goddess KUAN-YIN). Among Chinese works, of particular importance are the paintings of buddhas and bodhisattvas in the caves of TUN-HUANG (4th–10th century CE), particularly the so-called Cave of the Thousand Buddhas (Ch'ien-fung, or Mo-kao-k'u). These temples have been well preserved in the Gobi desert, and the quality and quantity of their fresco paintings and texts has remained unmatched.

In Japan, Buddhist artwork had a tendency to ground spiritual experiences in the easily approachable guise of everyday life. Thus when ZEN Buddhists used monochrome painting as a form of participatory spiritual exercise, they often depicted subjects not obviously religious in theme. Bird-and-flower paintings were created and queried for insights into spiritual meaning, and landscape painting offered access to a symbolic meaning which referred to internal, spiritual journeys.

Esoteric (Tantric, or VAJRAYĀNA) Buddhism relies heavily on visualization in its ritual procedures. Thus the creation of an environment of worship was essential. The use of MANDALAS, expressed both in two dimensions as paintings and in three dimensions as ensembles of sculpture, invited the believer into a diagrammatic rendering of a spiritual cosmos. The deities or spiritual entities portrayed in these paired paintings represent both the realm of the transcendent, clear enlightenment and the hu-

Siddhārtha goes to school; Pakistan, 2nd–4th century CE
Victoria & Albert Museum, London—Art Resource

mane, compassionate aspects of the Buddha. It was the repetitive meditative practice of journey through and visceral assimilation of this symbolic, schematic cosmos that could lead the believer to an enlightenment of unity.

The main repository of Indian Mahāyāna and Vajrayāna iconographic traditions is Tibet, where Buddhism was introduced from the 8th to the 13th centuries. The introduction of Buddhism led to the arrival in Tibet of Buddhist craftsmen from Central Asia and later from Nepal and northwest India, all of which were then Buddhist lands. After the 10th century Tibet's cultural focus turned to internal forces, but until the communist takeover of 1959 the Tibetans preserved Indian (Pāla) styles of iconography, along with ancient techniques and styles of Indian Buddhist painting that were modified and enriched in some schools by much later influence from China. Tibetan metalworkers have excelled in producing fine things for ritual use: ritual lamps, vases, bowls, bells, PRAYER WHEELS, and decorated temple trumpets and horns. Among sculptural works, images of vast size, rising up through two or three stories, are quite often seen in Tibetan temples, and their construction and dedication is considered a work of vast religious merit.

BUDDHIST COUNCILS, *Palī sangīti*, in most Buddhist traditions, two early councils on Buddhist doctrine and practice. The first, which most modern scholars do not accept as historical, was supposedly held at Rājagṛha (modern Rājgir, Bihār state, India) during the first rainy season after the BUDDHA GOTAMA'S death. According to the received accounts, the council involved the compilation of the remembered words of the Buddha, including the SUTRAS that he had preached and the monastic rules and procedures that he had prescribed. The second council, which most modern scholars do accept as historical, was held at Vaiśālī (Bihār state) a little more than a century later. It seems that the matters in dispute concerned the monastic rules and that the result was a split in the early SANGHA.

The THERAVĀDA tradition contains an account of a third council sponsored by King AŚOKA that was held in Pāṭaliputra (modern Patna) about 247 CE. The Theravādins contend that this council settled disputed matters in their favor, and that the *Kathāvatthu*, the fifth book of their ABHIDHAMMA PITAKA, contains an account of the examination and refutation of the views that were rejected. Different groups of Theravādins have recognized other councils (*sangīti*) that continued the process of extending and purifying the tradition. The Sinhalese have recognized as many as three such occasions including one at which the TRIPITAKA (the "three baskets" of the HĪNAYĀNA "canon") was supposedly committed to writing for the first time. The Burmese have officially recognized three such occasions, including the so-called fifth council called in Burma by King Mindon in 1871, and the so-called sixth council held in Yangōn in the 1950s. The Thai have recognized a total of nine *sangīti*, including a council held in Chiang Mai (Chiengmai) in the late 15th century and one held in Bangkok in the late 18th century.

Important Buddhist councils remembered by other Buddhist traditions include one sponsored by King KANIṢKA (c. 100 CE) in northwestern India that was attended by Hīnayāna monks of the SARVĀSTIVĀDIN school, and one, the Council of Lhasa, that was held in Tibet in the late 8th century. The Council of Lhasa featured a debate between a Chinese and an Indian monk that resulted—according to the Tibetan account—in a clear victory for the latter.

BUKHĀRĪ, AL- \,al-bū-'k̄ā-rē\, in full Abū 'Abd Allāh Muḥammad ibn Ismā'īl al-Bukhārī (b. July 19, 810, Bukhara, Central Asia [now in Uzbekistan]—d. Aug. 31, 870, Khar-tank, near Samarkand), one of the greatest Muslim compilers and scholars of HADITH. His chief work is accepted by SUNNĪ Muslims—*i.e.*, those following the majority tradition—as second only to the QUR'AN as both a source of religious law and a sacred work.

Al-Bukhārī began learning the utterances and actions of the Prophet MUHAMMAD by heart while still a child. His travels in search of more information about them began with a PILGRIMAGE to MECCA when he was 16. He then went to Egypt, and for 16 years he sought out informants from Cairo to Merv in Central Asia. Al-Bukhārī was an extremely scrupulous compiler, showing great critical discrimination and editorial skill in his selection of authentic traditions. From the approximately 600,000 traditions he gathered, he selected only about 7,275 that he deemed completely reliable and thus meriting inclusion in his *Kitāb al-Jāmi' al-ṣaḥīḥ*.

As a preliminary to his *Ṣaḥīḥ*, al-Bukhārī wrote *Kitāb al-Tārīkh al-kabīr* ("The Great History"), which contains biographies of the persons forming the chain of oral transmission and recollection of traditions back to the Prophet. Toward the end of his life, he was involved in a theological dispute in Nishāpūr and left that city for Bukhara, but, following his refusal to give special classes for Bukhara's governor and his children, he was forced into exile.

BULGAKOV, SERGEY NIKOLAYEVICH \bül-'gä-kəf\ (b. June 16, 1871, Livny, Russia—d. July 12, 1944, Paris, France), economist and Russian EASTERN ORTHODOX theologian who most fully developed the philosophical system called sophiology, which centered on problems of the creation of the world and stressed the unity of all things.

Bulgakov began his clerical training at the seminary of Oryol, Russia, but he was influenced by Marxism to break with the church and become a student of political economics. After studying in Moscow, Berlin, Paris, and London, he taught at the universities of Kiev (1901–06) and Moscow (1906–18). During this period he wrote *Capitalism and Agriculture* (1901) and *Philosophy and Economics* (1912).

Bulgakov became disillusioned with Marxism, however, and returned to the church with a group of several former Marxists that included the philosopher Nikolay Berdyayev. Bulgakov's conversion is described in his own book *The Undying Light* (1917). Ordained a priest in 1918, he was prevented by the Bolshevik government from resuming his teaching and in 1923 was expelled from the Soviet Union. After two years in Prague he was made professor of theology and dean of the Russian Orthodox Theological Institute of Paris, where he taught until his death.

Bulgakov spent the last 20 years of his life developing sophiology, a philosophical-theological system built around the concept of *sophia* (Greek: "wisdom"). This concept, frequently found in the works of medieval mystics, is used by Bulgakov to signify the link connecting God and the created world. His doctrines of divine wisdom, however, were strongly opposed by several Orthodox theologians. Bulgakov's own bishop, Metropolitan Eulogius of Paris, and his colleagues at the institute supported him and protected his freedom to teach and to write.

BULL, in ROMAN CATHOLICISM, an official papal letter or document. The name is derived from the lead seal (Latin: *bul-la*) traditionally affixed to such documents. Since the 12th

century it has designated a letter from the pope carrying a *bul*la that shows the heads of the apostles PETER and PAUL. With the introduction of papal briefs in the 15th century for less significant communications, bulls were reserved for more important matters—*e.g.*, the CANONIZATION of saints and dogmatic pronouncements.

BULL CULT, prehistoric religious practice originating in the eastern Aegean and extending from the Indus Valley of Pakistan to the Danube in eastern Europe. The bull god's symbol was the phallus, and in the east the bull often was depicted as the partner of the great goddess of fertility. Numerous representations of the bull have been uncovered, many designed to be worn as a charm or AMULET. The cult continued into historic times and was particularly important in the INDUS VALLEY and on Crete—in both places the bull's "horns of consecration" were an important religious symbol.

BULL-ROARER, commonly a flat piece of wood, a few inches to a foot in length, fastened at one end to a string. When swung around in the air, it produces a whirring or howling sound likened to those of animals or spirits.

Among many ancient or indigenous peoples it had great mythic and religious significance. It has been observed in Australia, North and South America, and other areas where indigenous societies survive. It may symbolize totemic ancestors (*see* TOTEMISM), or it may be believed to cause or drive away sickness, warn women and children to stay away from men's sacred ceremonies, control the weather, and promote fertility of game animals and crops.

BULTMANN, RUDOLF (KARL) 'bült-män (b. Aug. 20, 1884, Wiefelstede, Ger.—d. July 30, 1976, Marburg, W.Ger.), leading 20th-century NEW TESTAMENT scholar known for his program to "demythologize" the New Testament; *i.e.*, to interpret, according to the concepts of Existentialist philosophy, the essential message of the New Testament that was expressed in mythical terms.

At 19 Bultmann began his theological studies at the University of Tübingen. In 1921 he was appointed professor of New Testament at Marburg, where he remained until his retirement in 1951.

In 1921 Bultmann published his *Geschichte der synoptischen Tradition* (*History of the Synoptic Tradition*), an analysis of the traditional material used by the Evangelists MATTHEW, MARK, and LUKE and an attempt to trace its history in the tradition of the church prior to their use of it. This

established Bultmann's reputation as a scholar. At Marburg he was influenced by the Existentialist philosopher Martin Heidegger, who, Bultmann felt, was developing an analysis of human existence that was strikingly parallel to the understanding of human existence implied by the theologies of PAUL and JOHN, as Bultmann interpreted them.

It was during discussion with Heidegger that Bultmann developed his own theological position; namely, that Christian faith is, and should be, comparatively uninterested in the historical JESUS CHRIST and centered instead on the transcendent Christ. Christian faith, he asserted, is faith in the *kērygma* ("proclamation," *see* KERYGMA AND CATECHESIS) of the church, into which Jesus may be said to be risen (Bultmann's understanding of the RESURRECTION), and not faith in the historical Jesus. This position remained constant for Bultmann, and all his subsequent work, including his demythologizing proposal made in 1941, developed out of it.

During the Hitler years in Germany, Bultmann refused to modify his teaching in any way to suit Nazi ideology, and he supported the CONFESSING CHURCH. But, in his own words, he "never directly and actively participated in political affairs"; *i.e.*, he did not directly oppose the Nazi regime. With the resumption of contacts between the German universities and the rest of the world after World War II, Bultmann became a major international academic figure. He gave an extremely influential series of lectures in Britain in 1955 (*History and Eschatology: The Presence of Eternity*) and in the United States in 1958 (*Jesus Christ and Mythology*), and his demythologizing program became the subject of a multivolume series with the title *Kerygma und Mythos* (*Kerygma and Myth*).

BUNDAHISHN 'bún-də-'hē-shən (Pahlavi: "Original Creation"), ZOROASTRIAN scripture giving an account of the creation, history, and duration of the world, the origin of man, and the nature of the universe. Written in Pahlavi, it dates from the 9th century CE but is based on ancient material from a lost part of the original AVESTA and preserves some pre-Zoroastrian elements.

BUNDLES, *also called* medicine bundles, in NATIVE AMERICAN RELIGIONS, in the tribes of the Great Plains, collections of magical objects of ritual importance. The bundles were often felt to offer protection against disease and general misfortune. Some bundles were personal, the contents of which had been suggested to the individual by a supernatural sponsor, while others were tribal property originating in the mythological past. They were handled reverently and opened according to definite rules. The opening of the Cheyenne sacred arrow bundle, for instance, was the focus of an elaborate tribal rite extending over four days. Among the Crow, the owner of a bundle was permitted to sell part of his power to other men who had not received visions and to create replica bundles for them.

BURĀQ 'bū-rāk, in Islamic tradition, a creature said to have transported the Prophet MUHAMMAD to heaven. Described as "a white animal, half-mule, half-donkey, with wings on its sides," the Burāq was originally introduced into the story of Muhammad's night journey (ISRĀ') from MECCA to Jerusalem and back, thus explaining how the journey could have been completed in a single night. In some traditions he became a steed with the head of a woman and the tail of a peacock. As the tale of the night journey became connected with that of Muhammad's ascension to heaven (MĪRĀJ), the Burāq replaced the ladder as Muham-

mad's means of access into heaven. The Burāq was depicted in illuminated *mīrāj* manuscripts; it still occurs in Afghan truck decorations, where it is intended, in part, to bring the truck under God's protection, and in Egyptian HAJJ murals where, although it is depicted alongside modern modes of transport that carry pilgrims to Mecca and MEDINA, it still contains the idea of a divine blessing.

Burāq is also the name Muslims give to the Western Wall on the Temple Mount in Jerusalem, where they say the creature was tethered during Muhammad's ascension.

BURIAL, funerary ritual in which human remains are deposited in the earth, a grave, or a tomb; consigned to the water; or exposed to the elements or carrion animals. Geography, religion, and the social system all influence burial practices. Climate and topography influence whether the body is buried under the ground, placed in water, burned, or exposed to the air. Religious and social attitudes help determine how elaborate the burial should be.

Inhumation. Burial in the ground by hollowing out a trench in the earth for the body or covering it with rocks or dirt dates back at least to Middle Paleolithic times. Grave burial, or inhumation, may be simple or elaborate. The old Norse people built BARROWS that sometimes reached enormous heights; in North America, large BURIAL MOUNDS were characteristic of eastern Native American cultures from 1000 BCE to 700 CE.

Graves may be mere shallow pits, or they may be intricate and beautifully fashioned subterranean palaces spacious enough to accommodate vast numbers of persons. The Paraca burial chambers in Peru, hewn out of solid rock 18 feet below the surface, were large enough to accommodate 400 corpses with all of the belongings that it was thought they would need in the afterworld. Customarily, however, graves have been for the burial of individuals.

Caves have also been used for the dead. The ancient Hebrews used natural single-chamber caves and hewed oblong recesses lengthwise into the walls to accommodate the dead, a custom that led to the building of mausoleums. There are thousands of rock temples in western India and in Sri Lanka, some of which received elaborate architectural and sculptural treatment. Both caves and earth graves en-

couraged the development of COFFINS and rich grave-clothes and burial goods.

Customarily the body is placed in an extended position, as if in sleep. Bodies of Muslims are laid on their right side and facing Mecca; those of Buddhists are laid with the head to the north. Native Americans often buried their dead in a fetal position, sometimes in a basket or clay urn, with knees under the chin and the body neatly tied into a death bundle. Upright burial has been favored by other people, particularly for warriors.

Water burial. The bodies of chiefs and heroes have often been set adrift on rivers and oceans in death ships. Among the Norse, even

those who were interred were sometimes given such a bier—a custom that was widespread from Iceland to England during the 7th and 8th centuries CE. At Sutton Hoo in Suffolk, England, archaeologists found the remains of a wooden boat, 85 feet long, that had been dragged from the river and lowered into the ground.

Water burials have been common in other cultures. In the South Pacific it was customary to place the dead in a canoe and launch that on the water. In the Solomon Islands, bodies are simply laid on a reef to be eaten by sharks; in other places they are wrapped and weighted with stones. Scattering ashes on water is widely practiced, especially in Asia. In India, within a year after death, the remains are taken to the GANGĀ RIVER and thrown into the sacred water; if it is not possible to do that, they are thrown into another river or stream with the hope that they will eventually make their way to the Gaṅgā.

Exposure. Placing the body where it may be eaten by scavenging birds and animals or weathered to its essential elements has been held by many groups to be the most desirable form of disposal for spiritual as well as material reasons. ZOROASTRIANISM has been perhaps the most widely known for this type of burial, which developed out of the belief that the corpse is so unclean that to inter or to cremate it would contaminate the "pure elements" of earth, fire, and water. Since the 6th century BCE it has been their custom to leave bodies on mountains or hills at a distance from the community. In Bombay the PARSIS maintain "towers of silence," high circular structures. The dead are carried to them, and funeral servants place them on stone beds surrounding a central pit. After vultures have stripped the flesh from the bones—usually within a few hours—the bones are gathered and dropped into the central pit.

A number of people who expose the dead use trees and platforms (tree burial). Among them are the Balinese, the Nāga tribes of India, the tribes of central Australia, and various Native American groups. Commonly, the Sioux robed the dead in their best clothing, sewed them into a deerskin or buffalo shroud, and carried them to a platform about eight feet high. Possessions and gifts were placed on the scaffold, and the body was allowed to remain there for a year, when it was taken down and given an earth burial.

BURIAL MOUND

Second burial. Among many people, particularly in indigenous cultures, a period of waiting occurs between the first and a second burial that often coincides with the duration of decomposition. The origin of this practice is considered to be the different concept of death held by these peoples. In most modern societies, death is regarded as instantaneous; it is not so in other societies, where it is held to involve a slow change, a passage from the visible society of the living to the invisible one of the dead. These beliefs may lead to two burials—the interval between the two marking the time it takes for the spirit to pass over into the next world. A second burial of the remains then occurs (or, the remains may be disposed of in a communal area). In areas in which death is believed to be a slow change, customs other than two burials may take place—e.g., during the period of decomposition the corpse is sometimes treated as if it were alive, provided with food and drink, and surrounded by company.

BURIAL MOUND, artificial hill of earth and stones built over the remains of the dead.

Burial mounds known as **BARROWS** were a type of burial place constructed in England from Neolithic (c. 4000 BCE) until late pre-Christian (c. 600 CE) times. Barrows of the Neolithic Period were long and contained the various members of a family or clan, while those of the Early Bronze Age (c. 1900 BCE) were round and were used to bury a single important individual. The bodies were placed in stone or wooden vaults, over which large mounds of soil were heaped. Both types of barrows continued to be used in England until the advent of Christianity.

Burial mounds were a peculiarly prominent feature of the protohistoric period in Japan (3rd–6th century CE), which is known as the tumulus period. The mounds, some of which are spectacularly large and impressive, consist of earthen

keyhole-shaped mounds surrounded by moats. They were used to bury royalty and prominent members of the aristocracy. One of the largest, the burial site of the 4th-century emperor Nintoku, on the outskirts of the city of Sakai, near Osaka, measures 1,594 feet in length and is 115 feet high.

Burial mounds were characteristic of the Indian cultures of east-central North America from about 1000 BCE to 700 CE. The most numerous ones, found in the Ohio and Mississippi river valleys, were large conical or elliptical mounds surrounded by extensive earthworks, and are assigned to the Hopewell and Adena cultures. Along the upper Mississippi River and the Great Lakes, some of the later Indian mounds are in the shape of animals and other forms.

BUSHIDŌ \ˈbü-shē-dō\ (Japanese: “Way of the Warrior”), the code of conduct of the samurai class of Japan. In the mid-19th century Bushidō became the basis for the ethical training given to all of Japanese society, with the emperor replacing the feudal lord, or *daimyo*, as the object of loyalty and sacrifice.

Though the name Bushidō was not used until the 16th century, the idea of the code developed during the Kamakura period (1192–1333). Its precise content varied historically under the influence of ZEN Buddhist and Confucian thought, but its one unchanging ideal was martial spirit, including athletic and military skills as well as fearlessness toward the enemy in battle. Frugal living, kindness, honesty, and FILIAL PIETY were also highly regarded. But the supreme obligation of the samurai was to his lord, even if this might cause suffering to his parents.

Stone tumulus, or burial mound, from Pitten, Austria, 1500–1200 BCE

Erich Lessing—Art Resource

During the Tokugawa period (1603–1867) Bushidō thought was infused with Confucian ethics and made into a comprehensive system that stressed obligation or duty. The samurai was equated with the Confucian “perfect gentleman” and was taught that his essential function was to exemplify virtue to the lower classes. Obedience to authority was stressed, but duty came first even if it entailed violation of statute law. (See CONFUCIANISM.)

BUSHNELL, HORACE \ˈbʊʃ-nəl\ (b. April 14, 1802, Bantam, Conn., U.S.—d. Feb. 17, 1876, Hartford, Conn.), Congregational minister and controversial theologian, sometimes called “the father of American religious liberalism.”

Bushnell joined the Congregational Church (see CONGREGATIONALISM) in 1821, and in 1823 entered Yale to become a minister. Not until 1831, after qualifying for the bar, did his religious doubts diminish sufficiently for him to begin his theological education. He entered Yale Divinity School and in 1833 was ordained minister of the North Congregational Church in Hartford, where he served for more than 20 years until ill health forced his resignation.

A major figure in U.S. intellectual history, Bushnell stood between the orthodox tradition of Puritan New England and the new romantic impulses represented by Ralph Waldo Emerson, Samuel Taylor Coleridge, and especially FRIEDRICH SCHLEIERMACHER. His first significant publication, *Christian Nurture* (1847), was a thorough critique of the prevailing emphasis placed on the conversion experience by revivalists. In *God in Christ* (1849), published in the year of his mystical experience that illumined the Gospel for him, Bushnell challenged the traditional, substitutionary view of the ATONEMENT (*i.e.*, that the death of Christ was the substitute for man’s punishment for SIN) and considered problems of language, emphasizing the social, symbolic, and evocative nature of language as related to religious faith and the mysteries of God. *Christ in Theology* (1851) defended his attitude toward theological language, giving special attention to metaphoric language and to an instrumental view of the TRINITY. In *Nature and the Supernatural* (1858) he viewed the twin elements of the title as constituting the one “system of God” and sought to defend from skeptical attack the Christian position on sin, miracles, INCARNATION, revelation, and Christ’s divinity.

Bushnell’s views were bitterly attacked, and in 1852 North Church withdrew from the local “consociation” in order to preclude an ecclesiastical HERESY trial. Despite such opposition, however, his ability to assemble and present coherent arguments guaranteed the impact and influence of his interpretation of CHRISTIANITY.

BUSIRIS \byü-ˈsī-rəs\, in Greek mythology, Egyptian king, son of POSEIDON and Lyssianassa (daughter of Epaphus, a legendary king of Egypt). After Egypt had been afflicted for nine years with famine, Phrasius, a seer of Cyprus, arrived in Egypt and announced that the famine would not end until an annual sacrifice of a foreigner to ZEUS was instituted. Later HERACLES, who had arrived in Egypt from Libya, was seized and brought to the altar, but he burst his bonds and slew Busiris and his son Amphidamas.

Some Greek writers made Busiris an Egyptian king and successor of Menes (traditionally the first king of a united Egypt), though others rejected him altogether. The name Busiris is most likely an earlier and less accurate hellenization of the name of the Egyptian god known later to the Greeks as OSIRIS; it derives from an Egyptian compound word meaning literally “temple of Osiris.”

BU-STON \,pü-ˈdɔ̃n, Angl. bü-ˈtɔ̃n\ (b. 1290—d. 1364), Tibetan Buddhist scholar who was a member of the Saskya-pa sect and for many years served as the head of the Zwa-lu monastery. Bu-ston formulated a notion of the “Three Turnings of the Buddhist Law” (HĪNAYĀNA, MĀHAYĀNA, and VAJRAYĀNA) which he employed in the organization of his important *History of Buddhism* and in his highly influential classification of texts considered to be “canonical” in the Tibetan tradition. He also generated what became the standard classification of Tantric texts into four groups: the Korya (Sanskrit: Kriyā) TANTRAS, the Caryā (Sanskrit: Caryā) Tantras, the YOGA Tantras, and the Asvattavayoga (Sanskrit: Anuttarayoga) Tantras.

Bu-ston was active as a translator and interpreter for many Vajrayāna texts and was recognized as master of Vajrayāna/Tantric ritual practice. In addition, he was a student of Buddhist architecture who both wrote about Buddhist STUPAS and oversaw the construction of an important stupa in the Zwa-lu area.

BUTO \ˈbyü-tō, ˈbü-\, also called Uto, Edjo, Wadjet, or Wadjit, the cobra goddess of ancient Egypt. Depicted as a cobra twined around a papyrus stem, Buto was the tutelary goddess of Lower Egypt. Buto and NEKHBEET, the vulture-goddess of Upper Egypt, were the protective goddesses of the king and were sometimes represented together on the king’s diadem as the symbol of his sovereignty over all of Egypt. The form of the rearing cobra of Buto on a crown is termed the uraeus. In mythology, Buto was nurse to the infant god HORUS and helped ISIS, his mother, protect him from his uncle, SETH, when she took refuge in the Delta swamps. The similarity of this myth to the Greek myth of LETO and APOLLO most probably led to a later identification of Buto with Leto.

Buto is also the Greek form of the ancient Egyptian Per Wadjit (Coptic Pouto: “House of Wadjit”), the name of the capital of the 6th Lower Egyptian nome (province), modern Tall al-Farā’in. Buto was the goddess who was the local deity of this area.

BYZANTINE RITE, the system of liturgical practices and discipline observed by the Eastern Orthodox church and by the majority of Eastern-rite churches which are in communion with Rome. See EASTERN ORTHODOXY.

The Byzantine rite originated in the Greek city of Antioch (in modern Turkey); but it was developed and perfected in Byzantium, or Constantinople (modern Istanbul). The rite was associated primarily with the Great Church of Constantinople and used the Greek language. As Constantinople extended its influence, however, the rite was translated into the vernacular of the peoples who adopted it.

Several AUTOCEPHALOUS Eastern Orthodox churches follow canonical rites derived from the original Byzantine rite. The number of these churches has varied in history but has included the Church of Constantinople, the Church of Alexandria (Egypt), and the Church of Antioch (with headquarters in Damascus, Syria).

In the early Christian church, liturgies developed gradually and were essentially formed by the 6th century. Of the three liturgies in use by Byzantine-rite churches, the Liturgy of ST. JOHN CHRYSOSTOM is celebrated most frequently and is the normal church service. The Liturgy of ST. BASIL THE GREAT is longer and is used on 10 special occasions each year. The Liturgy of the Presanctified (of ST. GREGORY I the Great) is celebrated on Wednesdays and Fridays during LENT and from Monday to Wednesdays of HOLY WEEK.

CABEIRI \kə-ˈbī-rē, -rī\, also spelled Cabiri, important group of deities, probably of Phrygian origin, worshiped over much of Asia Minor, on the islands nearby, and in Macedonia and northern and central Greece. They were promoters of fertility and protectors of seafarers. Perhaps originally indefinite in number, in classical times there appear to have been two male deities, Axiocersus and his son and attendant Cadmilus, or Casmilus, and a less important female pair, Axierus and Axiocersa. The cult included fertility rites, rites of purification, and initiation. The two male Cabeiri were often confused with the **DIOSCURI**.

The Cabeiri are often identified with the Great Gods of Samothrace. In the period after the death of Alexander the Great (323 BCE), their cult reached its height.

CABRINI, SAINT FRANCES XAVIER \kə-ˈbrē-nē\, *byname* Mother Cabrini (b. July 15, 1850, Sant' Angelo Lodigiano, Lombardy, Italy—d. Dec. 22, 1917, Chicago; canonized 1946; feast day December 22), founder of the Missionary Sisters of the Sacred Heart and first United States citizen canonized.

From childhood, she desired to become a missionary. In 1877 she took her vows, and soon after that she became known as Mother Cabrini. She founded (1880) the Missionary Sisters of the Sacred Heart. She planned to found a convent in China, but Pope LEO XIII directed her to “go west, not east,” and she sailed with a small group of sisters for the United States in 1889. Their work in the United States was to be concentrated among the neglected Italian immigrants. She became a naturalized citizen of the United States in 1909. Although frequently in ill health, Mother Cabrini established 67 houses in such cities as Buenos Aires, Argentina (1896), Paris (1898), and Madrid (1899).

CACUS AND CACA \ˈkɑ-kəs . . . ˈkɑ-kə\, in ROMAN RELIGION, brother and sister, respectively, originally fire deities of the early Roman settlement on the Palatine Hill, where “Cacus’ stairs” were later situated. The Roman poet Virgil described Cacus as the son of the god VULCAN and as a monstrous fire-breathing brigand who terrorized the countryside. He stole some of the giant Geryon’s cattle from the hero HERACLES and hid them in his lair on the Aventine Hill, but a lowing cow betrayed Cacus, and Hercules killed him. There are various versions of this story, which is traditionally connected with the establishment of Hercules’ oldest Roman place of worship, the Ara Maxima, in the Forum Boarium (Cattle Market), whose name is believed to commemorate these events.

CADMUS \ˈkɑd-məs\, in Greek mythology, the son of PHOENIX or Agenor (king of Phoenicia) and brother of EUROPA. Europa was carried off by ZEUS, king of the gods, and Cadmus was sent out to find her. Unsuccessful, he consulted the Delphic ORACLE, which ordered him to give up his quest, follow a cow, and build a town on the spot where she lay down. The cow guided him to Boeotia (Cow Land), where

he founded the city of Thebes. Later, Cadmus sowed in the ground the teeth of a dragon he had killed. From these sprang a race of fierce, armed men, called Sparti (meaning Sown). Five of them assisted him to build the Cadmea, or citadel, of Thebes and became the founders of the noblest families of that city. Cadmus took as his wife HARMONIA, daughter of the divinities ARES and APHRODITE, by whom he had a son, Polydorus, and four daughters, Ino, Autonoe, Agave, and SEMELE. Cadmus and Harmonia finally retired to Illyria. But when the Illyrians later angered the gods and were punished, Cadmus and Harmonia were saved, being changed into black serpents and sent by Zeus to the Islands of the Blessed. According to tradition it was Cadmus who brought the alphabet to Greece.

CADUCEUS \kə-ˈdū-sē-əs, -ˈdyü-, -shəs\, Greek kerykeion, staff carried by HERMES as a symbol of peace. Among the ancient Greeks and Romans it became the badge of heralds and ambassadors, signifying their inviolability. Originally the caduceus was a rod or olive branch ending in two shoots and decorated with garlands or ribbons. Later the garlands were interpreted as two snakes entwined in opposite directions with their heads facing; and a pair of wings, in token of Hermes’ speed, was attached to the staff above the snakes. Its similarity to the staff of ASCLEPIUS the healer (a staff branched at the top and entwined by a single serpent) resulted in modern times in the adoption of the caduceus as a symbol of the physician and as the emblem of the U.S. Army Medical Corps.

CAENEUS \ˈsē-nūs\, in Greek mythology, the son of Elatus, a Lapith. At the marriage of PIRITHOUS, king of the Lapiths, the CENTAURS, who were guests, attacked the bride and other women, a scene that is frequently found depicted in Greek art. Caeneus joined in the ensuing battle and, because of his invulnerable body, was able to kill five Centaurs. In desperation the other Centaurs combined against him, beating him with huge pine trees until he was forced underground, never to appear again. A later story explained that Caeneus was originally a girl, Caenis, who was raped by the sea god POSEIDON and received as compensation the male sex and invulnerability.

CAESAROPAPISM \,sē-zə-rō-ˈpā-pi-zəm\, political system in which the head of the state is also the head of the church and supreme judge in religious matters. The term is most frequently associated with the late Roman, or Byzantine, Empire. Most modern historians recognize that the legal Byzantine texts speak of interdependence between the imperial and ecclesiastical structures rather than of a unilateral dependence of the latter. ST. JOHN CHRYSOSTOM and most other authoritative Byzantine theologians denied imperial power over the church.

It was normal practice, however, for the Eastern Roman emperor to act as the protector of the universal church and

as the manager of its administrative affairs. EUSEBIUS OF CAESAREA called CONSTANTINE “the overseer [*i.e.*, bishop] of external” (as opposed to spiritual) church problems (*episkopos tōn ektos*). Emperors presided over councils and their will was decisive in the appointment of PATRIARCHS.

Caesaropapism was more a reality in Russia, where the abuses of Ivan IV the Terrible went practically unopposed and where Peter the Great finally transformed the church into a department of the state (1721), although neither claimed to possess special doctrinal authority.

The concept of caesaropapism has also been applied in Western Christendom—for example, to the reign of Henry VIII in England, as well as to the principle *cujus regio, ejus religio* (“religion follows the sovereign”), which prevailed in Germany after the REFORMATION.

CAIN \ˈkān\, in the Biblical story of creation, first-born son of ADAM AND EVE, who murdered his brother ABEL (GENESIS 4:1–16). Cain, a farmer, became enraged when God accepted the offering of his brother Abel, a shepherd, in preference to his own. He murdered Abel and was banished from the settled country. Cain feared that in his exile he could be killed, so God gave him a sign for his protection (the mark of Cain) and a promise that if he were killed, he would be avenged sevenfold.

According to some early Christian writers, a Gnostic sect called CAINITES existed in the 2nd century CE.

CAINITE \ˈkā-nīt\, member of a Gnostic sect (*see* GNOSTICISM) mentioned by IRENAEUS and other early Christian writers as flourishing in the 2nd century CE, probably in the eastern area of the Roman Empire. The Christian theologian ORIGEN declared that the Cainites had “entirely abandoned JESUS.” They held that YAHWEH (the God of the Jews) was not merely an inferior DEMIURGE, as many Gnostics believed, but that he was positively evil because his creation of the world was perversely designed to prevent the reunion of the divine element in man with the unknown perfect God. The Cainites also reversed biblical values by revering such rejected figures as CAIN (whence their name), ESAU, and the Sodomites, all of whom were considered to be bearers of an esoteric, saving knowledge (gnosis). These biblical persons were said to have been punished by a jealous, irrational creator called Hystera (Womb).

The Cainites believed that perfection, and hence salvation, comes only by breaking all the laws of the OLD TESTAMENT. The violation of biblical prescriptions was, therefore, a religious duty. Because it was difficult to violate all biblical laws in a lifetime, the Cainites did not look for salvation in the created world but rather escape from it.

CAIRD, JOHN \ˈkerd\ (b. Dec. 15, 1820, Greenock, Renfrew, Scot.—d. July 30, 1898, Greenock), British theologian and preacher, and an exponent of THEISM in Hegelian terms.

Ordained a PRESBYTERIAN minister on graduating from Glasgow University (1845), Caird was appointed professor of theology at Glasgow in 1862 and principal of the university in 1873. In *An Introduction to the Philosophy of Religion* (1880) and in *The Fundamental Ideas of Christianity*, 2 vol. (1899; the Gifford lectures for 1892–93 and 1894–96), both of which follow Hegelian teaching closely, Caird argues that universal thought is the reality of all things and that the existence of this Infinite Thought, namely God, is demonstrated by the limitations of finite thought. Collected editions of Caird’s writings include *Sermons* (1858) and *University Addresses* (1898).

Alinari—Art Resource

CAIRN \ˈkern\, a pile of stones used as a boundary marker, a memorial, or a burial site. Cairns are usually conical in shape and were often erected on high ground. BURIAL MOUND cairns date primarily from the Neolithic Period and the Early Bronze Age, though cairns are still used in some parts of the world as burial places. The term cairn is sometimes used interchangeably with BARROW.

CAITANYA \chī-ˈtən-yə\, in full Śrī Kṛṣṇa Caitanya (Krishna consciousness), also called Gaurāṅga \gāu-ˈrāŋ-gə\, original name Viśvambhara Miśra (b. 1485, Nabadvīp, Bengal, India—d. 1533, Puri, Orissa), Hindu mystic whose worship of the god KRISHNA (Kṛṣṇa) with ecstatic song and dance had a profound effect on VAIṢṆAVISM in Bengal.

The son of a BRAHMIN, he grew up in an atmosphere of piety and affection. He received a thorough education in the Sanskrit SCRIPTURES and, after the death of his father, set up a school of his own. At the age of 22 he made a PILGRIMAGE to Gayā to perform his father’s ŚRĀDDHA (death anniversary ceremony). While there he underwent a profound RELIGIOUS EXPERIENCE that transformed his outlook and personality. He returned to his home in Nabadvīp entirely indifferent to all worldly concerns.

A group of devotees soon gathered around Caitanya and joined him in the congregational worship called KĪRTAN, which consists in the choral singing of the name and deeds of God, often accompanied by dance movements and culminating in states of trance. In 1510 he received formal initiation as an ascetic and took the name Śrī Kṛṣṇa Caitanya.

Although Caitanya himself wrote no works on theology or religious practices, his selection of and charges to core

disciples gave birth to a major Vaiṣṇava sect in his own lifetime, called familiarly the Caitanya or Gauḍīya SAMPRADĀYA. Caitanya's own frequent and prolonged experiences of religious rapture took their toll on his health; he himself diagnosed some of his seizures as epileptic. The exact date and circumstances of his death are unknown, but Caitanyaite tradition remembers him as having left his body by walking into the ocean at Puri while lost in a devotional trance.

CAITANYA MOVEMENT, also called Gauḍīya Vaiṣṇavism, emotional form of HINDUISM that has flourished from the 16th century, mainly in Bengal (Gauḍ), eastern Orissa, and Braj. It takes its name from the medieval saint CAITANYA (1485–1533), who inspired the movement. For Caitanya the legends of KRISHNA and his youthful beloved, RĀDHĀ, were symbolic and the highest expressions of the mutual love between God and the human soul. BHAKTI (devotion) superseded all other forms of religious practice and was conceived as complete self-surrender to the divine will.

The Caitanya movement had its beginnings in Nabadvīp (Bengal), Caitanya's birthplace. From the first, a favorite and characteristic form of worship was KIRTAN; *i.e.*, singing of simple hymns with the repetition of God's name, accompanied by a drum and cymbals. This worship continued for several hours and usually resulted in states of religious exaltation. Caitanya left the organization of his followers to his close companions, Nityānanda and Advaita. These three are called the three masters (*prabhu*), and their imagines are established in temples of the sect.

A theology for the movement was worked out by a group of Caitanya's disciples who came to be known as the six *gosvāmīs* (religious teachers; literally, "lords of cows" or "masters of the senses"). The six *gosvāmīs* turned out a voluminous religious and devotional literature in Sanskrit, defining the tenets of the movement and its ritual practices. Although Caitanya appears to have been worshiped as an AVATAR of Krishna even during his lifetime, the theory of his dual incarnation, as Krishna and Rādhā in one body, was developed only by the later Bengali hymnists.

The present leaders of the sect, also called *gosvāmīs*, are (with some exceptions) the lineal descendants of Caitanya's early disciples and companions. The ascetics are known as VAIRĀGĪS (the "dispassionate"). A.C. BHAKTIVEDANTA Swami, founder of the International Society for Krishna Consciousness (ISKCON, commonly known as the Hare Krishna movement), was such a *vairāgī* when he established this most recent expression of Caitanya VAISṂAVISM.

CALAIS AND ZETES \ˈka-lā-is . . . ˈzē-tēz\, in Greek mythology, the winged twin sons of BOREAS and Oreithyia. On their arrival with the ARGONAUTS at Salmydessus in Thrace, they liberated their sister Cleopatra, who had been thrown into prison by her husband, Phineus, the king of the country. According to another story, they delivered Phineus from the Harpies. They were slain by HERACLES near the island of Tenos, possibly as a result of a quarrel with Tiphys, the pilot of the Argonauts. Tradition tells that Calais founded Cales in Campania.

CALCHAS \ˈkal-kəs\, in Greek mythology, the son of Thestor (a priest of APOLLO) and the most famous soothsayer among the Greeks at the time of the Trojan War. He foretold the duration of the siege of Troy, demanded the sacrifice of IPHIGENEIA, daughter of AGAMEMNON, and advised the construction of the wooden horse with which the Greeks

finally took Troy. It had been predicted that he would die when he met his superior in divination; the PROPHECY was fulfilled when Calchas met Mopsus after the war, at CLAROS or at Siris in Italy. Beaten in a trial of soothsaying, Calchas died of chagrin or committed suicide.

CALENDAR: *see* HINDU CALENDAR; JEWISH CALENDAR; MUSLIM CALENDAR.

CALIPH, also spelled calif, Arabic *khalīfa* ("successor"), ruler of the community in ISLAM. When MUHAMMAD died (June 8, 632), Abū Bakr succeeded to his political and administrative functions as *khalīfat rasūl Allāh*, or "successor of the Messenger of God," but it was probably under ʿUmar ibn al-Khaṭṭāb, the second caliph, that the term caliph came into use as a title of the civil and religious head of the Muslim state. In the same sense, the term was employed in the QURʿAN in reference both to ADAM and to DAVID as the vice-regents of God.

The urgent need for a successor to Muhammad as political leader of the Muslim community was met by a group of Muslim elders in MEDINA who designated Abū Bakr, the Prophet's father-in-law, as caliph. Several precedents were set in the selection of Abū Bakr, including that of choosing as caliph a member of the QURAYSH tribe. The first four caliphs—Abū Bakr, ʿUmar I, ʿUTHMĀN, and ʿALĪ—largely established the administrative and judicial organization of the Muslim community and forwarded the policy begun by Muhammad of expanding the Islamic religion into new territories, including Syria, Jordan, Palestine, Iraq, Egypt, and portions of North Africa, Armenia, and Persia.

The assassination of ʿUthmān and the troubled caliphate of ʿAlī that followed sparked the first sectarian split in the Muslim community. By the time of ʿAlī's death in 661, Muʿāwīya I, a member of ʿUthmān's Umayyad clan, had wrested away the caliphate, and his rule established the Umayyad caliphate that lasted until 750. Despite the largely successful reign of Muʿāwīya, tribal and sectarian disputes erupted after his death. There were three caliphs between 680 and 685, and only by nearly 20 years of military campaigning did the next one, ʿAbd al-Malik, succeed in reestablishing the authority of the Umayyad capital of Damascus. Under his son al-Walīd (705–715), Muslim forces took permanent possession of North Africa, converted the native Berbers to Islam, and overran most of the Iberian Peninsula as the Visigothic kingdom there collapsed. Progress was also made in the east with settlement in the Indus River valley. Umayyad power had never been firmly seated, however, and the caliphate disintegrated rapidly after the long reign of Hishām (724–743). A serious rebellion broke out against the Umayyads in 747, and in 750 the last Umayyad caliph, Marwān II, was defeated in the Battle of Great Zab by the followers of the ʿAbbāsīd family.

The ʿAbbāsīds, descendants of an uncle of Muhammad, owed the success of their revolt in large part to their appeal to the aid of the SHĪʿITE Muslims. According to the Shīʿites no caliph is legitimate unless he is a lineal descendant of the prophet Muhammad. The SUNNIS insist that the office belongs to the tribe of Quraysh, to which Muhammad himself belonged, but this condition would have vitiated the claim of the Turkish SULTANS, who held the office after the last ʿAbbāsīd caliph of Cairo transferred it to Selim I. The first ʿAbbāsīd caliph, as-Saffāh (749–754), ordered the elimination of the entire Umayyad clan; the only Umayyad of note who escaped was ʿAbd al-Rahmān, who made his way to Spain and established an Umayyad dynasty that lasted

until 1031. Thus, the 'Abbāsids took the caliphate for themselves, leaving the Shi'ites to evolve into an alternative branch of Islam that was opposed to the Sunni consensus concerning legitimate authority.

Abū Bakr and his three immediate successors are known as the "perfect" or "rightly guided" caliphs (*al-khulafā' al-rāshidūn*). After them the title was borne by the 14 Umayyad caliphs of Damascus and subsequently by the 38 'Abbāsīd caliphs of Baghdad, whose dynasty fell before the Mongols in 1258. There were titular caliphs of 'Abbāsīd descent in Cairo under the Mamlūks from 1258 until 1517, when the last caliph was captured by the Ottoman sultan Selim I. The Ottoman sultans then claimed the title and used it until it was abolished by the Turkish Republic on March 3, 1924.

After the fall of the Umayyad dynasty at Damascus (750), the title of caliph was also assumed by the Fāṭimid rulers of Egypt (909–1171), who claimed to descend from FĀṬIMA (daughter of Muhammad) and her husband, 'Alī.

CALLIOPE \kə-'lī-ə-pē\, also spelled Kalliope, in Greek mythology, foremost of the nine MUSES, patron of epic poetry. At the behest of ZEUS, she judged the dispute between the goddesses APHRODITE and PERSEPHONE over ADONIS. In most accounts she and King Oeagrus of Thrace were the parents of ORPHEUS. She was also loved by the god APOLLO, by whom she had two sons, HYMEN and Ialemus. Other versions present her as the mother of Rhesus, king of Thrace and a victim of the Trojan War; or as the mother of LINUS the musician, who was inventor of melody and rhythm.

CALLISTO \kə-'līs-tō\, in Greek mythology, a NYMPH (although in some myths she is said to be a daughter of either LYCAON of Arcadia or of Nycteus or Ceteus). Callisto was one of the goddess ARTEMIS' hunting companions and swore to remain unwed. But she was seduced by ZEUS and, in several variations of the legend, was turned into a she-bear either by Zeus (to conceal his deed from HERA) or by Artemis or Hera (who were enraged at her unchastity). Callisto was then killed during the chase by Artemis, who, owing to the machinations of the jealous Hera, mistook Callisto for a real bear. Zeus then gave Arcas, his child with Callisto, to the Titaness Maia to raise. He then placed Callisto among the stars as the constellation Ursa Major (Great Bear). An alternative legend has it that Arcas was transformed into the constellation Arctophylax just as he was about to kill his mother during a hunt.

CALVIN, JOHN \ˈkal-vən\, French Jean Calvin, or Cauvin (b. July 10, 1509, Noyon, Picardy, France—d. May 27, 1564, Geneva), the leading French Protestant Reformer and the most important figure in the second generation of the Protestant REFORMATION. Calvin's interpretation of CHRISTIANITY, advanced above all in his *Institutio Christianae religionis* (1536, but elaborated in later editions; *Institutes of the Christian Religion*) is held to have had a major impact on the formation of the modern world.

Calvin was sent to the University of Paris in 1523 to be educated for the priesthood, but his family later decided

that he should be a lawyer; from 1528 to 1531, therefore, Calvin studied in the law schools of Orléans and Bourges and then returned to Paris.

During these years he was exposed to Renaissance humanism, influenced by ERASMUS and Jacques Lefèvre d'Étaples, which constituted the radical student movement of the time. This movement, which antedates the Reformation, aimed to reform church and society on the model of both classical and Christian antiquity, to be established by a return to the BIBLE studied in its original languages. Under its influence Calvin studied Greek and Hebrew as well as Latin, in preparation for serious study of the SCRIPTURES. It also intensified his interest in the classics. But the movement, above all, emphasized salvation of individuals by GRACE rather than good works and ceremonies.

Because the government became less tolerant of this reform movement, Calvin found it prudent to leave Paris in 1533. Eventually he made his way to Basel, Switz., then Protestant but tolerant of religious variety. Up to that point

there is little evidence of Calvin's conversion to PROTESTANTISM, which was probably gradual. His beliefs underwent a change when he began to study theology intensively in Basel. Probably in part to clarify his own beliefs, he began to write. He began with a preface to a French translation of the Bible by his cousin Pierre Olivétan and then undertook what became the first edition of the *Institutes*, his masterwork, which, in its successive revisions, became the single most important statement of Protestant belief. The final versions appeared in 1559 and 1560.

The *Institutes* had given Calvin some reputation among Protestant leaders. The Reformer and preacher Guillaume Farel, then struggling to plant Protestantism in Geneva, persuaded Calvin to help in this work. Protestantism had been imposed on Geneva chiefly as the price of military aid from Protestant Bern. The limited enthusiasm of Geneva for Protestantism, reflected by a resistance to religious and moral reform, continued almost until

Calvin's death. The resistance was all the more serious because the town council exercised ultimate control over the church and the ministers, all French refugees. The main issue was the right of EXCOMMUNICATION, which the ministers regarded as essential to their authority but which the council refused to concede. The uncompromising attitudes of Calvin and Farel led to their expulsion from Geneva in May 1538.

Calvin found refuge for the next three years in the German Protestant city of Strasbourg, where he was pastor of a church for French-speaking refugees and also lectured on the Bible; there he published his commentary on the Letter of Paul to the Romans. During his Strasbourg years Calvin also learned much about the administration of an urban church from MARTIN BUCER, its chief pastor.

In September 1541 Calvin was invited back to Geneva, where the Protestant revolution had become increasingly insecure. The town council in November enacted his Ecclesiastical Ordinances, which instituted Calvin's conception of church order. It also established four groups of church officers: pastors and teachers to preach and explain the Scriptures, elders representing the congregation to administer

Calvin, oil painting by an anonymous artist, c. 1550

the church, and deacons to attend to its charitable responsibilities. It undertook a wide range of disciplinary actions covering everything from the abolition of Roman Catholic "superstition" to the enforcement of sexual morality. A significant element of the population resented these measures, and the arrival of increasing numbers of French religious refugees in Geneva was a further cause of discontent. These tensions, as well as the persecution of Calvin's followers in France, help to explain the trial and burning of MICHAEL SERVETUS, a Spanish theologian preaching and publishing unorthodox beliefs about the TRINITY. Calvin was responsible for Servetus' arrest and conviction, though he had preferred a less brutal form of execution.

The struggle over control of Geneva lasted until May 1555, when Calvin finally prevailed. He had constantly to watch the international scene and to keep his Protestant allies in a common front. Toward this end he engaged in a massive correspondence with political and religious leaders throughout Protestant Europe. He continued his commentaries on Scripture, working through the whole NEW TESTAMENT (except the Book of Revelation) and most of the OLD TESTAMENT. During this period Calvin also established the Genevan Academy to train students in humanist learning in preparation for the ministry and positions of secular leadership. He also performed a wide range of pastoral duties, preaching regularly and often, performing numerous weddings and BAPTISMS, and giving spiritual advice.

CALVINISM \ˈkɑl-və-ni-zəm\, in PROTESTANTISM, the theology developed and advanced by JOHN CALVIN. The term also is used to identify the development of some of Calvin's doctrines by his followers, and also doctrines and practices derived from the works of Calvin and his followers that became the distinguishing characteristics of the REFORMED and PRESBYTERIAN CHURCHES.

In his theology, Calvin sought to hold in balance the full range of biblical teaching, arranged in a coherent pattern but not with absolute logical precision. He often refused to make conclusions that his followers were willing to make. Calvinism in its second form began to develop after Calvin's death in 1564. Certain developments, never postulated by him, tended to produce a more legalistic pattern in doctrine and discipline. Calvin's successor at Geneva, THEODORE BEZA, placed far more importance on the doctrine of double PREDESTINATION (the doctrine that some persons are elected to be saved and others to be damned) than had Calvin. Beza also emphasized literalism in the inspiration of the BIBLE, which led him to believe that the church must be presbyterian in government—*i.e.*, a form of governance that believes the church is a community in which Christ is head and all members are equal under him, and thus the ministry is given to the entire church and is distributed among many elected officers—and not episcopal (based on a hierarchical structure of bishops and priests). Beza and his followers in England (Thomas Cartwright) and Scotland (Andrew Melville) emphasized church discipline exercised by presbyterian organization as being fundamental to the church's existence. The Five Articles of the SYNOD OF DORT (1618–19) represented a powerful definition of this post-Calvin "Calvinism" and included the proposition that Christ died only for the ELECT (chosen), a statement that Calvin himself did not formally propose.

The deterministic element in Beza's Calvinism was modified by the introduction of COVENANT THEOLOGY, which emphasized the successive COVENANTS made by God with man (from ADAM through MOSES to JESUS CHRIST) in which man is

to respond in obedience in daily life to God's commandments in the moral law, through the covenant of GRACE in Christ. The WESTMINSTER CONFESSION (1646), long the standard creed of English-speaking Presbyterians, was influenced by covenant theology. Another modification of Calvin's theology was the pietistic and pragmatic concern for personal salvation that developed in English PURITANISM.

Calvinism also refers to the theological emphasis and forms of church organization, worship, and discipline that became widespread in the 16th century. This emphasis is reflected in the various CONFESSIONS, CATECHISMS, and statements of faith of the Reformed and Presbyterian churches.

CALYPSO \kə-ˈlɪp-sə\, in Greek mythology, the daughter of ATLAS the TITAN (or OCEANUS or NEREUS). Calypso was a NYMPH of the mythical island of Ogygia. She entertained the Greek hero ODYSSEUS for seven years but could not overcome his longing for home even by a promise of immortality. At last the god HERMES was sent by ZEUS to ask her to release Odysseus. According to later stories she bore Odysseus a son Auson, or LATINUS, and twins, Nausithous and Nausinous.

CAMĀR \chə-ˈmār\, widespread CASTE in northern India whose hereditary occupation is tanning leather; the name is derived from the Sanskrit word *carmakāra*, or "skin worker." The more than 150 subcastes are characterized by well-organized panchayats (governing councils). Because their hereditary work obliged them to handle dead animals, the Camārs have suffered from the stigma of being considered UNTOUCHABLE (*see also* DALIT). Their settlements have often been outside higher caste Hindu villages. Each settlement has its own headman (*pradhān*), and larger towns have more than one such community headed by a *pradhān*. They allow widow remarriage, with either the husband's younger brother or a widower of the same subcaste. A segment of the caste follows the teaching of the saint Śiva Nārāyaṇa (*see* SATNĀMĪ SECT) and aims at "purifying" their customs in order to raise their social prestige. Other Camārs revere RAVIDĀS (Raidās), an influential 16th-century poet-saint of Banaras (VARANASI) who challenged the idea of pollution and its ritual manifestations. Still others have adopted BUDDHISM, following the lead of B. R. AMBEDKAR. While many still practice their traditional craft, tanning, many more are part of the broader agricultural and urban labor force.

CAMILLA \kə-ˈmi-lə\, in Roman mythology, legendary Volscian maiden who became a warrior and was a favorite of the goddess DIANA. According to the poet Virgil, her father, Metabus, was fleeing from his enemies with the infant Camilla when he reached the Amisenus (Amaseno) River. He fastened the child to a javelin, dedicated her to Diana, and hurled her across the river. He then swam to the opposite bank, where he rejoined Camilla.

Living among shepherds and in the woods, Camilla became a skilled hunter and warrior through her father's tutelage. She became the leader of a band of warriors that included a number of women, and fought in a battle against the Roman hero Aeneas; but she was killed by Arruns, an Etruscan, as she was chasing a retreating soldier.

CAMPBELL, ALEXANDER \ˈkɑm-bəl *also* ˈkɑ-məl\ (b. Sept. 12, 1788, near Ballymena, County Antrim, Ire.—d. March 4, 1866, Bethany, W.Va., U.S.), American clergyman, writer, and founder of the DISCIPLES OF CHRIST.

He was the son of a PRESBYTERIAN minister who emigrated in 1807 to the United States, where he promoted his program for Christian unity. Campbell espoused his father's program and emerged as the leader of a movement for religious reform. He began preaching in 1810 and soon settled in what is now Bethany, W.Va. He and his followers accepted BAPTISM by immersion in 1812 and joined the BAPTISTS the next year, but tension on other issues led to their dissociation from the Baptists in 1830.

In 1832 his followers, known as Disciples of Christ, or Christians (nicknamed Campbellites), joined Kentucky "Christians," followers of Barton W. Stone, to form the Disciples of Christ (Christian Church). Campbell presented a rationalistic and deliberative CHRISTIANITY that was based on the NEW TESTAMENT and was opposed to speculative theology and emotional REVIVALISM.

Campbell founded (1823) and edited the *Christian Baptist* (later the *Millennial Harbinger*). In 1840 he founded Bethany College and was its president until his death.

CANAAN \ˈkɑː-nən\, area variously defined in historical and biblical literature, but always centered on Palestine. Its original pre-Israelite inhabitants were called Canaanites. The names Canaan and Canaanite occur in cuneiform, Egyptian, and Phoenician writings from about the 15th century BCE as well as in the BIBLE. Canaan refers sometimes to an area encompassing all of Palestine and Syria, sometimes to the entire land west of the Jordan River, and sometimes to a strip of coastal land from Acre (ʿAkko) northward. The Israelites occupied and conquered Palestine, or Canaan, beginning in the late 2nd millennium BCE, or perhaps earlier; and the Bible justifies such occupation by identifying Canaan with the Promised Land, the land promised to the Israelites by God.

The civilization of coastal Canaan can be traced to Paleolithic and Mesolithic times; settlement in fixed towns and villages, however, appears not to have occurred until the Neolithic Period (c. 7000–c. 4000 BCE). The Semites first appear during the Early Bronze Age (c. 3000–2000 BCE). With the Middle Bronze Age (c. 2000–c. 1550 BCE) the recorded history of the area began. The Semitic Amorites, who penetrated Canaan from the northeast, became the dominant element of the population. Other invaders included the Egyptians, the Hyksos, and the Hurrians (the Horites of the OLD TESTAMENT). The Late Bronze Age (c. 1550–c. 1200 BCE) was mainly one of Egyptian control, although their power was contested by the Hittites of Anatolia (see ANATOLIAN RELIGIONS). The period was also marked by incursions of marauders called Hapiru or Apiru, a multiethnic group identified by many scholars with the original Hebrews, of whom the later Israelites were only one branch or confederation. By the end of the 13th century BCE, however, Egypt's domi-

nation over southern Canaan had waned, and the Hittites collapsed under the assault of enemies from the north.

During the transition from the Late Bronze to the Early Iron Age—probably c. 1250 BCE—the Israelites entered Canaan, settling at first in the hill country and in the south. In the following century, Canaan suffered further invasion at the hands of the Philistines, who appear to have come from Crete. They eventually established a coalition of five city-states on the southern coast of Canaan. Under the leadership of King DAVID (10th century BCE), the Israelites were finally able to break the Philistine power and vanquish the native Canaanites. Thereafter Canaan became, for all practical purposes, the Land of ISRAEL.

Most of what is known about Canaanite religion is derived from a series of tablets discovered at Ras Shamra, site of ancient UGARIT, on the north coast of Syria. The principal god was EL, but the jurisdiction over rainfall and fertility was delegated to BAAL, or HADAD. Other important deities included RESHEPH, lord of plague and the netherworld; KOTHAR, the divine craftsman; ASHERAH, consort of EL; and ASTARTE, goddess of fertility.

The language of the Canaanites perhaps may be best described as an archaic form of Hebrew. The Canaanites were the first people, as far as is known, to use an alphabet.

CANDĪ \ˈchən-dē\, also called Caṅḍikā, in HINDUISM, the demon-destroying form of the goddess ŚAKTI, particularly popular in eastern India. She is known by various names, such as Mahāmāyā, or Abhayā (Sanskrit: "She Who Is Without Fear"). In her representation she is shown with either 8 or 10 arms and seated on a lion vehicle. Hundreds of folktales and songs tell of her exploits. She is the central figure of an extensive Middle Bengali literature known as *Caṅḍī-maṅgal*, the most famous of which is that of Mukundarāma Cakravartī (c. 16th century).

CANDLEMAS \ˈkan-dəl-məs\, in the Christian church, festival on February 2, commemorating the occasion when the Virgin MARY, in obedience to Jewish law, went to the Temple in Jerusalem both to be purified 40 days after the birth of her son and to present Jesus to God as her firstborn (Luke 2:22–38). The festival was formerly known in the Roman Catholic church as the Purification of the Blessed Virgin Mary and is now known as the Presentation of the Lord. In the Anglican church it is called the Presentation of Christ in the Temple. In the Greek church it is called Hypapante (Meeting), in reference to Jesus' meeting in the Temple with the aged SIMEON.

The earliest reference to the festival is from the late 4th century. By the middle of the 5th century the custom of observing the festival with lighted candles had been introduced, whence the name Candlemas.

CANDOMBLÉ \ˌkän-ˈdöm-ˈblā\, local name in Bahia state, Brazil, for the Brazilian MACUMBA tradition.

CANDRAKĪRTI \ˈchən-drə-ˈkir-tē\ (fl. c. 600–650 CE), principal representative of the Prāsāṅgika branch of the MĀDHYAMIKA school of MAHĀYĀNA Buddhist philosophy. One of Candrakīrti's most famous works is the *Prasannapadā*, a commentary on a basic text by NĀGĀRJUNA, the founder of the Mādhyamika school.

CANISIUS, SAINT PETER \kə-ˈni-shē-əs, -shəs\, Dutch Sint Petrus Canisius, or Kanis (b. May 8, 1521, Nijmegen [now in The Netherlands]—d. Dec. 21, 1597, Fribourg,

Switz.; canonized 1925; feast day December 21), doctor of the church, JESUIT scholar, and opponent of PROTESTANTISM.

Educated at the University of Cologne, Canisius became a Jesuit (1543) and taught at the universities of Cologne, Ingolstadt, and Vienna. He founded colleges at Munich (1559), Innsbruck (1562), Dillingen (1563), Würzburg (1567), Augsburg, and Vienna.

Perhaps more than any of his contemporaries, Canisius delayed the advance of Protestantism by his participation in the religious discussions at Worms (1557) and at the COUNCIL OF TRENT (1545–63) and the Diet of Augsburg (1559). He sought to renew the Roman Catholic church in Germany by means of his zealous preaching in various German towns, by the extension of the Jesuit order, and especially by his desire to provide worthy and scholarly priests. In 1580 he settled in Fribourg and founded a Jesuit college (now the University of Fribourg).

His major work was the *Triple Catechism* (1555–58), containing a lucid exposition of Roman Catholic dogma. It became the most famous catechism of the COUNTER-REFORMATION, going through 400 editions in 150 years.

CANNIBALISM, also called anthropophagy \an-thrə-'pä-fə-jē\, eating of human flesh. Although there are cases of people eating human flesh to avoid starvation, cannibalism has also been undertaken for ritual or religious. Even in cultures in which actual cannibalism has never been practiced, religious rituals may symbolically refer to cannibalism. Also, accusations of cannibalism have political force, whether or not the accused do in fact eat human flesh.

Until about a hundred years ago knowledge of cannibalism rested on travelers' accounts, colonial records, and missionary reports. The accuracy and objectivity of these sources has been called into serious question; travelers' tales often contained fanciful or exaggerated assertions, and European colonizers often used accusations of cannibalism to label indigenous people as savage and, hence, in need of domination. Indigenous people sometimes accused one another of cannibalism. Among the Sherbro of Sierra Leone in the late 1800s and early 1900s, political contenders went to colonial authorities to accuse rivals of cannibalism, in the hope that those rivals would be removed from power. Europeans also sometimes accused one another of cannibalism, as in the blood libel myth alleging that Jews sacrificed Christian children at Passover to obtain blood with which to make unleavened bread. This myth appeared in Europe in the 12th century but has surfaced sporadically through modern times. In general, stories of cannibalism told by one group about another have served as a way to assert that the other group is less than human. Some groups also have myths about their own past cannibalism; in this case cannibalism acts as a marker of a mythic "pre-cultural" state rather than as an actual historical description.

Although many accusations of cannibalism were politically inspired fictions, 20th-century anthropological studies have nonetheless documented instances of cannibalism, recorded its symbolic meaning, and illuminated its cultural context. These studies show that HUMAN SACRIFICE and cannibalism were not necessarily related and that those whose flesh was eaten were not necessarily killed—or if they were killed, it may have been for reasons unrelated to cannibalism. It is clear, too, that cannibalism has a symbolic dimension, even when it is real. Although cannibalism was practiced in some places well into the 19th century—as, for instance, in Polynesia and New Guinea—colonial officials actively suppressed it, and it rarely occurs today.

In some cultures (notably the Aztec) cannibalism was a means of incorporating the divine. When the victim was offered as food to the gods, he or she took on the nature of a god. Thus, when the flesh of the victim was consumed by other humans, it transmitted this divinity to the eater. Cannibalism was also sometimes used to symbolize or create political superiority. In 19th-century Fiji, chiefs were the only ones allowed to distribute two of the three "great things"—whales' teeth and human flesh. (The chiefs themselves were the third "great thing.") Human flesh had such great ritual power to the Fijians that it had to be consumed with a special "cannibal fork" that prevented the eater from having to touch the meat.

Cannibalism has also played a role in rituals that create group or gender identities. The Bimin Kuskusmin of Papua New Guinea, for example, defined themselves as "true men" because they used appropriate ritual forms when engaging in anthropophagy, while saying that their neighbors, the Miyanmin, were barbaric because they treated human flesh as ordinary food. The Gimi, also of Papua New Guinea, incorporated cannibalism into rituals surrounding gender identity: women ate human flesh to become more fertile, but men who ate it were made as "weak as women." Symbols of cannibalism may be veiled references to gender and sexuality and hence may be used to create distinctions between the sexes.

In other cultures cannibalism was an important part of social cohesion. Among the Fore people of New Guinea, for instance, social bonds include a fictive KINSHIP created through exchange, and a man generally has the right to demand gifts—including pork—from his maternal kin. During the time the Fore practiced cannibalism they believed that when a man died, he had to repay the gift to his real and fictive maternal kin by yielding his flesh for them to eat. This practice came to light during epidemiological studies of kuru, a degenerative neurological disease that is transmitted by handling and ingesting the infected brain matter of human corpses.

In an instance of cannibalism in a modern context, in 1972 the surviving members of an Uruguayan rugby team whose plane crashed in the Andes ate their dead companions in order to avoid starvation. Some members of the team later asserted that their cannibalism brought them closer to the divine because it was a literal version of Holy Communion. They based their claim on the Roman Catholic doctrine of TRANSUBSTANTIATION, which posits that the bread and wine of the EUCHARIST are transformed into the real flesh and blood of JESUS CHRIST by their consecration during the MASS. The Catholic church absolved them from SIN but rejected any claims of greater significance.

CANONIZATION, official act of a Christian church declaring one of its deceased members worthy of public veneration and entering his or her name in the canon, or authorized list, of recognized saints. In the early church there was no formal canonization, but the cult of local martyrs was widespread. The translation of the martyr's remains from the place of burial to a church was equivalent to canonization. Gradually, ecclesiastical authorities intervened more directly; by the 10th century appeals were made to the pope. The first saint known to have been canonized by a pope was Ulrich, bishop of Augsburg (d. 973), who was canonized in 993 by Pope John XV (985–996). Pope Alexander III (1159–81) began to reserve the cases of canonization to the Holy See, and this became general law under Gregory IX (1227–41).

Pope Sixtus V (1585–90) assigned to the Congregation of Rites, one of the offices of the ROMAN CURIA, the duty of conducting the processes of BEATIFICATION (*i.e.*, a step toward canonization, whereby limited public veneration is permitted) and canonization. In the following century Pope Urban VIII forbade the public cult of any person not as yet beatified or canonized by the church, excepting those who were in possession of a public cult for at least 100 years.

Two types of beatification and canonization are distinguished: formal, or ordinary; and extraordinary, or equivalent. Formal beatification has entailed four steps: an informative process, introduction of the cause, the apostolic process, and four definite judgments.

The investigation of the candidate involves the gathering together of all material pertaining to the candidate's reputation for sanctity, the writings of the candidate, and information about miracles performed by the candidate either during his life or after death. The bishop appoints a person, called postulator of the cause, to promote the cause and also a promoter of the faith, commonly known as the "devil's advocate," to see that the entire truth is made known about the candidate. After the process is completed, if the pope orders the beatification, it is in the form of a solemn proclamation with a solemn MASS. Veneration then may be carried on in specified localities.

The canonization process is essentially the same, but at least two authentic miracles that were obtained through invocation must occur after the candidate's beatification—only then may the cause for canonization be introduced. Extraordinary, or equivalent, canonization is simply a papal confirmation that a person is a saint. It is applied only to persons whose veneration was immemorial at the time of Pope Urban VIII (1634).

Canonization in the Eastern Orthodox church is a solemn proclamation rather than a process. Spontaneous devotion toward an individual by the faithful establishes the usual basis for sainthood. The bishop accepts the petition, examines it, and delivers it to a commission that will render a final decision.

In the Anglican church, a commission was appointed in 1950 that discussed in subsequent years (especially at the 1958 Lambeth Conference) the question of canonization for members of its own communion. Feast days of certain saints, such as Saints Swithun and Cyprian, are recognized by the Anglican Communion. The observance of these days is optional for Anglicans.

CANON LAW, *Latin* jus canonicum, the body of laws made within certain Christian churches (in ROMAN CATHOLICISM, EASTERN ORTHODOXY, independent churches of Eastern Christianity, and the ANGLICAN COMMUNION) by lawful ecclesiastical authority for the government of the whole church or of some part thereof.

The word *canon* is derived from the Greek *kanōn*, which has the literal meaning of "measuring line," or "rule." The canon law concerns the constitution of the church, the relations between the church and other bodies, and matters of internal discipline. It is not per se a formulation of dogma; nonetheless, statements of the divine positive and natural law that are contained in the canons may be doctrinal in nature.

The Roman Catholic church. At no time during the first centuries of Christianity was there any attempt to enact uniform legislation for the whole church. Each community was ruled by its own customs and traditions, with, however, a certain uniformity indicating a common origin.

Such compilations of canon law as exist contain occasional decisions given by councils or by certain bishops.

These compilations began in the East, the first appearing in the province of Pontus. This contained 20 canons of Nicaea (325), together with others from the Councils of Ankyra (314) and Neocaesarea (early 4th century). The collection later grew to more than 150 canons, so well known that they were referred to by number at the COUNCIL OF CHALCEDON (451). It was further augmented by placing the so-called Apostolic Canons at the head of the collection. This was the Greek collection as first translated and introduced into the West. During the 6th century other documents were added. The Council in Trullo (692) enacted 102 canons and officially accepted the Greek collection above mentioned. The collection thus formed, together with 22 canons of the COUNCIL OF NICAEA (787), became the official canon law of the Greek and later of the Russian church.

In the West, even local collections are not mentioned until the 5th century, and not until the 8th and 9th centuries are there found traces of unification as a result of exchange of these collections among various regions. The most ancient and homogeneous of these is the African collection deriving from the almost annual plenary meetings of the African episcopate. This survives only in the collection called the *Hispana* and in that of Dionysius Exiguus.

It was against this background that John Gratian, a Camaldolese monk, published, sometime between 1139 and

A depiction of the first Council of Nicaea, which codified numerous points of canon law

Church of St. Menas, Heraklion, Crete

CANOPIC JAR

about 1150, his monumental treatise, known as the *Decretum Gratiani*, or *Decretum*. He drew his materials from the existing collections and included the canons of recent councils up to and including the LAT-ERAN COUNCIL (1139). When necessary, he had recourse to the Roman law and made extensive use of the Fathers and ecclesiastical writers.

The *Decretum* served as the definitive collection of canon law for several centuries. To it were added new compilations of papal laws and decisions, and in 1500 the enlarged collection, known as the *Corpus Juris Canonici* ("Corpus of Canon Law"), was published in Paris.

On March 19, 1904, Pope Pius X issued a *motu proprio* decreeing the revision and codification of the canon law of the Latin church. A commission of CARDINALS was appointed for this purpose. After years of concerted labor, the new *Codex Juris Canonici* ("Code of Canon Law") was officially promulgated on May 27, 1917. Revision of the *Codex Juris Canonici* was undertaken, at the direction of POPE JOHN XXIII, to reflect the decrees and decisions of the SECOND VATICAN COUNCIL (1962–65). The second *Codex Juris Canonici* was signed by Pope John Paul II on Jan. 25, 1983.

The Eastern Orthodox church. Canon law of the Eastern and Western churches was much the same in form until these two groups separated in the SCHISM of 1054. In Eastern Christianity, however, because of doctrinal and nationalistic disputes during the 5th to 7th centuries, several church groups separated themselves from the nominal head of Eastern Christianity, the PATRIARCH of Constantinople, and developed their own bodies of canon law.

The Eastern churches. The churches of Eastern Christianity that separated from the patriarchal see of Constantinople developed bodies of canon law that reflected their isolated and—after the Arab conquests in the 7th century—secondary social position. Among these churches are the Syrian Orthodox Patriarchate of Antioch (in Syria), the Ancient Church of the East (the Assyrians), the Armenian Apostolic Church, and the COPTIC ORTHODOX CHURCH (in Egypt). Another independent church is the ETHIOPIAN ORTHODOX CHURCH.

Though these churches developed an extensive body of canon law throughout their histories, Western knowledge of their canon law has been very scant. In the 20th century, however, more than 300 manuscripts dealing with canon law were found in various isolated monasteries and ecclesiastical libraries of the Middle East. These manuscripts cover the period from the 3rd to the 14th century and deal with ecclesiastical regulations of the Syrian churches.

Anglican canon law. The British Parliament recognizes the British monarch as supreme head of the Church of England. The development of church law in the Anglican

Communion is held by some to be not canon law but, instead, the ecclesiastical law of the state. Proposals relating to any matter concerning the Church of England—other than dogma—are made by a Church Assembly (established in 1919) and are presented for approval to the ecclesiastical committee of Parliament. Upon the approval of both houses of Parliament, followed by royal approval, the proposal becomes law.

CANOPIC JAR \kə-'nō-pik, -'nä-\, in ancient Egyptian funerary ritual, a covered vessel of wood, stone, pottery, or faience in which was buried the embalmed viscera removed from a body during the process of mummification (*see* EMBALMING). The earliest canopic jars, which came into use during the Old Kingdom (c. 2575–c. 2130 BCE), had plain lids; but during the Middle Kingdom (c. 1938–c. 1600? BCE) the jars were decorated with sculpted human heads, probably representations of the deceased; from the 19th dynasty until the end of the New Kingdom (1539–1075 BCE), the heads represented the four sons of the god HORUS (*i.e.*, jackal-headed Duamutef, falcon-headed Qebhsenuf, human-headed Imset, and baboon-headed Hapy). The art of making canopic jars declined with the 20th dynasty (1190–1075 BCE), when the practice began of returning the viscera to the body.

CANTOR (Latin: "singer"), *Hebrew* *hazzan* ("overseer"), in JUDAISM and CHRISTIANITY, an ecclesiastical official in charge of music or chants.

In Judaism the cantor, or *hazzan*, directs liturgical prayer in the SYNAGOGUE and leads the chanting. He may be engaged by a congregation to serve for an entire year or merely to assist at the ceremonies of ROSH HASHANAH and YOM KIPPUR. In former times the duties of the *hazzan* included care of the synagogue, announcement of the beginning and the end of the SABBATH, removal of the TORAH scrolls from the Ark of the Law and their replacement after the service, care for the sick and the needy, and the religious education of children. His knowledge of music and Hebrew gradually transformed his role of assistant to the reader into that of director of the chanting during liturgical services.

In medieval Christianity the cantor was an official in charge of music at a cathedral. His duty, later undertaken by the organist, was to supervise the choir's singing, particularly the singing of the psalms and the canticles. The term was also used for the head of a college of church music—*e.g.*, the Roman *schola cantorum* of the early Middle Ages and the singing schools founded by Charlemagne.

CAO DAI \'kəu-'dā\, *Sino-Vietnamese* Cao-Đài ("High Tower," a Taoist epithet for the supreme god), syncretist modern Vietnamese religious movement with a strongly nationalist political character. Cao Dai draws upon ethical

Cao Dai temple at Tay Ninh, near Ho Chi Minh City (Saigon), Vietnam

Steve Raymer—Asia Images/Getty Images

precepts from CONFUCIANISM, occult practices from TAOISM, theories of KARMA and rebirth from BUDDHISM, and a hierarchical organization from ROMAN CATHOLICISM. Its pantheon of saints includes such diverse figures as the BUDDHA GOTAMA, CONFUCIUS, JESUS CHRIST, MUHAMMAD, Pericles, Julius Caesar, JOAN OF ARC, Victor Hugo, and Sun Yat-sen. God is represented as an eye in a triangle, a symbol that appears on the facades of the sect's temples. The religion's organization is patterned after that of Roman Catholicism, with a pope, cardinals, and archbishops. Worship involves elaborate rituals and festivals.

In 1919 NGO VAN CHIEU, an administrator for the French in Indochina, received a communication from the supreme deity during a SEANCE. Chieu became the prophet of the new religion, which was formally established in 1926. A Cao Dai army was established in 1943 during the Japanese occupation of Indochina. After the war the Cao Dai was an effective force in national politics. In 1955–56 the government disbanded the Cao Dai army and forced the sect's pope, Pham Cong Tac, into exile. After the communist takeover in 1975 Cao Dai was reportedly repressed by the government. Centers of worship were established in Vietnamese refugee communities abroad, however, and by the early 1990s Cao Dai was reported to have some two million adherents in Vietnam, Cambodia, France, and the United States. Headquarters of the religion are at Tay Ninh, near Ho Chi Minh City (formerly Saigon).

CĀRAN \ˈchär-ən\, Hindu CASTE of hereditary genealogists, bards, and storytellers located in Gujarat state in western India.

CARDINAL, a member of the Sacred College of Cardinals, whose duties include electing the pope, acting as his principal counselors, and aiding in the government of the ROMAN CATHOLIC church. Cardinals serve as chief officials of the RO-

MAN CURIA (the papal bureaucracy), as bishops of major DIOCESES, and often as papal envoys.

The Latin word *cardinalis*, “chief,” “principal” (from *cardo*, “hinge,” “pivot”), began to be used around the beginning of the 6th century as an epithet of bishops, priests, or deacons whose attachment to a particular church was permanent. In Rome the first persons to be called cardinals were the deacons of the seven regions of the city. The name was also given to the senior priest in each of the “title” churches (the PARISH churches) of Rome and to the bishops of the seven sees surrounding the city. By the 8th century the Roman cardinals constituted a privileged class among the Roman clergy. By decree of a SYNOD of 769 only a cardinal was eligible to become pope. In 1059 cardinals were given the right to elect the pope.

In cities other than Rome the name began to be applied to certain ecclesiastics as a mark of honor. This usage of the word spread rapidly, and from the 9th century various episcopal cities had a special class among the clergy known as cardinals. The use of the title was reserved for the cardinals of Rome in 1567 by Pius V.

The College of Cardinals, with its structure of three orders (bishops, priests, and deacons), originated in the reform of Urban II (1088–99). These ranks within the College of Cardinals do not necessarily correspond to a cardinal's rank of ordination; *e.g.*, the bishop of a diocese such as New York City or Paris may be a cardinal priest.

The cardinal bishops are successors of the bishops of the sees surrounding Rome. Prior to 1962 they had full jurisdiction in their own sees; since then, however, they retain only the title without any of the functions, which are exercised by a bishop actually resident in the see.

The second and largest order in the Sacred College is that of the cardinal priests. Since the 11th century this order has been more conspicuously international than the orders of cardinal bishops and deacons.

The cardinal deacons are successors of the seven regional deacons. Originally, the order was limited to those who had advanced no further than the diaconate. Later legislation prescribed that a cardinal deacon be at least a priest.

In 1586 Sixtus V fixed the total number of cardinals at 70, a restriction that was eliminated nearly 400 years later by John XXIII.

New cardinals are appointed only by the pope. He calls a secret consistory (meeting) of the cardinals and announces to them the names of the new cardinals. In a subsequent public consistory, the newly named cardinals receive the red biretta and the ring symbolic of their office.

Under the influence of the Second Vatican Council (1962–65) and in recognition of the need for greater internationalization of the College of Cardinals, Paul VI and John Paul II appointed many new cardinals: under Paul there were 145, and under John Paul II there were 182. The growth of the college prompted the imposition of new restrictions on the cardinalate. In 1970 Paul VI directed that cardinals who reach age 75 are to be asked to resign; those who do not do so relinquish the right to vote for a pope when they reach age 80. In addition, Paul limited the number of voting cardinals to 120. John Paul II confirmed this restriction during his pontificate. In 1996 a new set of rules issued by John Paul provided that, under certain circumstances, the long-required majority of two-thirds plus one for election of a pope could be superseded by a simple majority.

CAREY, GEORGE (LEONARD) (b. Nov. 13, 1935, London, Eng.), archbishop of Canterbury from 1991 to 2002.

CARGO CULT

Carey received a bachelor of divinity degree from King's College London in 1962. He held various ecclesiastical and academic appointments, including those of vicar of St. Nicholas Church in Durham (1975–82) and principal of Trinity College, Bristol (1982–87). He was made bishop of Bath and Wells in 1987, and in 1990 he was elected archbishop of Canterbury. As archbishop he endorsed the ordination of women in the church but rejected the ordination and marriage of homosexuals. He supported the war against Afghanistan led by the United States and Britain following the terrorist attacks on the United States in September 2001 but called for dialogue between Christians and Muslims. He retired in 2002. His books include *I Believe in Man* (1975) and *The Archbishop of Canterbury's Millennium Message* (2000).

CARGO CULT, any of the religious movements, chiefly in Melanesia, that exhibited belief in the imminence of a new age of blessing, to be initiated by the arrival of a special "cargo" of goods from supernatural sources. The belief was derived from the observation by local residents of the delivery of supplies to colonial officials. Foreigners were sometimes accused of having intercepted material goods intended for the indigenous peoples. If the cargo was expected by ship or plane, symbolic wharves or landing strips and warehouses were sometimes built in preparation, and traditional material resources were abandoned and foodstocks destroyed. New social organizations, sometimes imitative of the colonial police or armed forces, were also initiated.

The cults believed that the radically new age would be inaugurated by cataclysmic events that would destroy the old order and bring a paradisaical plenty, together with freedom and justice that could involve the reversal of the positions of white foreigners and indigenous peoples. The political implications and economic losses connected with these mass movements led colonial authorities to suppress them. They may, however, be understood as the expression of traditional millennial ideas (see MILLENNIALISM), often revived by the eschatological teaching of Christian MISSIONS.

Cargo cults led by prophets claiming a new revelation appeared in the late 19th century, caught public attention in the Papuan "Vailala Madness" in 1919, and proliferated by the score from the 1930s, especially in marginal and underdeveloped areas. In growing towns, cargo cults gave way to more secular movements.

CARMELITE \ˈkär-mə-ˌlīt\, member of one of the four great MENDICANT orders of the Middle Ages. The origin of the order can be traced to Mt. Carmel in Palestine, where a number of devout men established themselves near the traditional fountain of ELIJAH, an OLD TESTAMENT prophet, about 1155. Their rule was written between 1206 and 1214 by St. Albert, Latin PATRIARCH of Jerusalem, and approved in 1226 by Pope Honorius III.

The early Carmelites were HERMITS who lived in separate cells or huts and observed vows of silence, abstinence, and austerity. Soon the losses of the crusading armies in Palestine made Mt. Carmel unsafe for the Carmelites, and they set out, about 1240, for Cyprus, Sicily, France, and England. Their

first general chapter (legislative meeting) was held in England in 1247. The Carmelites adapted to the conditions of the lands to which they had been transplanted, changing from an order of hermits into one of mendicant FRIARS. The first institution of Carmelite nuns was founded in 1452.

By far the most important reform of the order was initiated by ST. TERESA OF ÁVILA. After nearly 30 years in a Carmelite CONVENT, she founded (1562) in Ávila, Spain, a small convent in which a stricter rule of life was to be followed; it became the order of Discalced (barefoot) Carmelite Nuns (O.D.C.), whose members wore sandals in place of shoes and stockings. St. Teresa succeeded in establishing not only nunneries but also, with the cooperation of Juan de Yepes (later ST. JOHN OF THE CROSS), a number of friaries based on this stricter observance.

Both orders suffered severely from the French Revolution and from suppression both by Napoleon and the liberal governments of the 19th century, though they were later restored in most countries of western Europe, as well as in the Middle East, Latin America, and the United States. The original order (Order of Brothers of the Blessed Virgin Mary of Mt. Carmel; White Friars; O.Carm.) is engaged primarily in preaching and teaching. The Discalced Carmelite Fathers (Order of Discalced Brothers of the Blessed Virgin Mary of Mt. Carmel; O.C.D.), a chiefly pastoral and devotional order, is active in parishes and in foreign MISSIONS.

CARNEIA \kär-ˈnē-ə\, important religious festival among ancient Dorian-speaking Greeks, held in the month of Karneios (roughly August). Five young men called Karneatai were chosen out of each tribe; one youth, decked with garlands, ran away, and the rest followed him; if he was overtaken, it was a good OMEN.

CARNIVAL, the festivity that takes place in many ROMAN CATHOLIC countries in the last days and hours of the pre-

A carnival celebration at Mardi Gras in New Orleans, La.

Sylvain Grandadam—Photo Researchers

Lenten season. The word *carnival*, from *carnevale* in the Italian dialect of Rome and its environs, descends ultimately from Latin *car-n-*, “meat,” and *levare*, “to raise,” “remove”; originally the word alluded to the commencement of the 40-day Lenten fast (during which Roman Catholics formerly abstained from eating meat), though early in its history its reference shifted to the festive period preceding LENT. The historical origin of carnival is obscure; in its long history, however, the carnival played a significant role in the development of the popular theater, vernacular song, and folk dances.

The first day of the carnival season varies with both national and local traditions. In Munich, Ger., and in Bavaria the carnival begins on the feast of EPIPHANY (January 6), while in Cologne and the Rhineland it begins on November 11 at 11:11 AM. In France the celebration is restricted to Tuesday before ASH WEDNESDAY (Shrove Tuesday) and to *mîcarême*—that is, the Thursday before the third week of Lent.

In the United States the principal carnival celebration is in New Orleans, La., where the carnival season opens on Twelfth Night (January 6) and climaxes with the MARDI GRAS season commencing 10 days before Shrove Tuesday. The French name *Mardi Gras* means Fat Tuesday, from the custom of using all the fats in the home before Lent. Perhaps the most famous modern carnival is that of Rio de Janeiro. Masked balls, elaborate costumes, parades, and various other festivities mark such celebrations. In most cases, the modern celebration of carnival has taken on a strongly secular quality distinct from its roots in Christian and pre-Christian religion.

CARPOCRATIAN \kär-pə-'krā-shən\, follower of Carpo crates, a 2nd-century Christian Gnostic. The sect flourished in Alexandria. Carpo crates revered JESUS as an ordinary man whose uniqueness flowed from the fact that his soul had not forgotten that its origin and true home was within the sphere of the unknown perfect God. Carpo crates completely rejected the created world by identifying themselves with spiritual reality. They claimed to communicate with demonic spirits and presented this as proof of their power over, and superiority to, the material world. The subversion of Jewish biblical law was considered a serious responsibility because they claimed the law came from evil ANGELS who created the world.

The Carpo crates have been called libertine Gnostics because they contended that the attainment of transcendent freedom depended on having every possible experience. Such an array of experiences normally required more than one lifetime, so the Carpo crates espoused the doctrine of the transmigration of souls, perhaps inspired by Indian or Pythagorean beliefs.

The Carpo crates made brightly colored ICONS with images of Jesus and other figures. Indeed, they were the first sect known to have used pictures of Christ.

CARTHUSIAN \kär-'thü-zhən, -'thyü-\, member of the Order of Carthusians (O.Cart.), an order of monks founded by St. Bruno of Cologne in 1084 in the valley of Chartreuse (Latin: Cartusia) in southeastern France. The Carthusians, who played an important role in the monastic-reform movement of the 11th and 12th centuries, combine the solitary life of HERMITS with a common life within the walls of a monastery. The monks live in individual cells, where they pray, study, eat, and sleep, gathering in the church only for the night office, morning MASS, and afternoon vespers. They eat together on Sundays and at great feasts, when they also

have a period of conversation; and once a week they take a long walk together. At the Grande Chartreuse, as the motherhouse is known, the lay brothers distill the liqueur that bears the name of the motherhouse and of which the profits benefit religious causes and charities. Carthusian nuns, with a few monasteries in France and Italy, are also strictly cloistered and CONTEMPLATIVE.

CASSANDRA \kə-'san-drə, -'sän-\, in Greek mythology, the daughter of PRIAM, the last king of Troy, and his wife HECUBA. Cassandra was desired by the god APOLLO, who promised her the power of PROPHECY if she would grant his desires. Cassandra accepted the proposal, received the gift, and then refused the god her favors. Apollo revenged himself by ordaining that her prophecies should never be believed. She predicted such events as the fall of Troy and the death of AGAMEMNON, but her warnings went unheeded. In the distribution of the spoils after the capture of Troy, Cassandra fell to Agamemnon and was later murdered with him. She was worshiped, as Alexandra, with Apollo.

CASSIAN, SAINT JOHN \'ka-sē-ən, -shē-\, also called Johannes Eremita, or Johannes Massiliensis (b. 360, the Dobruja, Scythia—d. 435, Marseille; Eastern feast day February 29; feast day in Marseille July 23), ascetic, monk, theologian, and founder and first ABBOT of the famous abbey of Saint-Victor at Marseille.

Probably of Roman birth, Cassian became a monk at Bethlehem and later visited and was trained by the HERMITS and monks of Egypt. About 399 he went to Constantinople (now Istanbul), where he was ordained deacon by the patriarch, ST. JOHN CHRYSOSTOM. A few years later, after John had been illegally deposed, Cassian went to Rome to plead John's cause with the Pope and while there was ordained priest (405). Nothing is then known of his life until 415, when he founded a nunnery at Marseille, and also the abbey of Saint-Victor, of which he remained abbot until his death. He was a leading exponent, in its early phase, of SEMI-PELAGIANISM, a HERESY that flourished in southern France during the 5th century.

Cassian's most influential work is his *Institutes of the Monastic Life* (420–429); this, and his *Collations of the Fathers* (or *Conferences of the Egyptian Monks*), written as dialogues of the Desert Fathers, were influential in the further development of Western MONASTICISM.

CASSOCK, long garment worn by ROMAN CATHOLIC and other clergy both as ordinary dress and under liturgical garments. The cassock, with button closure, has long sleeves and fits the body closely. In the Roman Catholic church the color and trim vary with the ecclesiastical rank of the wearer: the pope wears white; cardinals scarlet, or black with scarlet trim, except in penitential seasons when they wear purple; archbishops and bishops black with red trim; and lesser clergy plain black.

The cassock was originally the out-of-doors and domestic dress of European laity as well as clergy, and its survival among the latter is merely the outcome of ecclesiastical conservatism. In cold weather it was worn under the tabard (a tunic with or without short sleeves) or chimere (a loose, sleeveless gown); sometimes in the Middle Ages the name chimere was given to it as well as to the sleeveless upper robe. In winter the cassock was often lined with furs. Its color varied with ecclesiastical or academic status.

In the Church of England the cassock, which with the gown is prescribed by a canon of 1604 as the canonical

CASTE

dress of the clergy, has been worn by the clergy since the REFORMATION. It has long ceased, however, to be the everyday walking dress of either Catholic or Anglican clergy and is now usually worn only in church.

In the Eastern church the cassock's equivalent is called a rhason.

CASTE, group of people having a specific social rank, defined generally by descent, marriage, commensality, and occupation.

Although the term *caste* is applied to hierarchically ranked groups in many different societies around the world, the caste system in its most developed form is found in India. The word (from the Portuguese *casta*, meaning "race" or "lineage") was first applied to Indian society by Portuguese travelers in the 16th century. A roughly analogous word used in many Indian languages is *JĀTI* ("birth group"). There are about 3,000 castes and more than 25,000 subcastes in India, some with several hundred members and others with millions.

In traditional Brahminical law books, and in much popular usage, Indian society is divided into four *VARNAS* (Sanskrit: "class," or "color"). At the top of the hierarchy are the *BRĀHMINS* (priests and scholars), followed in rank order by the *KṢĀTRIYAS* (warriors and rulers), the *VAIŚYAS* (merchants, traders, and farmers), and the *SŪDRAS* (artisans, laborers, servants, and slaves). The members of each class are considered to be ritually polluted to varying degrees as a result of defilements brought about by their birth, occupations, dietary habits, and customs. Those who have the most defiling jobs are typically ranked beneath the *Sūdras* and called "untouchables" (now also known as *DALIT*, *Harijans* ["Children of God," the name preferred by MAHATMA GANDHI], or as members of the Scheduled castes, because of the special status accorded them by census authorities in British India). India's Muslims, Sikhs, and Christians also observe caste distinctions in varying degrees, though they generally place less emphasis on food *TABOOS* and inherited rank than on endogamy.

It is important to emphasize that the *varṇāśrama* DHARMA system—a vision of society in which an individual's place (or at least, an individual man's place) could be ascertained by cross referencing his *varṇa* with his stage of life (*ashram*)—has always functioned more as an ideal than as reality. *Jātis*, which are true social groupings, do not always align easily with *varṇas*, and their rankings vary radically from area to area. Rulers, not Brahmins, have very often been regarded as occupying the pinnacle position in Indian society, and even their specifically religious importance sometimes outranks that of Brahmins. In South India, additionally, landholding *Sūdras* hold high social rank. Scholars often emphasize the role played by the British census in institutionalizing the idea that the particular hierarchical *varṇa* conception found in *The Laws of Manu* corresponds to social reality.

In *Manu* and elsewhere, concepts of pollution and purification are based on the idea that each caste group can maintain its status by regulating its contact with lower-ranking caste groups and with objects thought to be inherently impure. In early Brahminical circles great emphasis was traditionally placed on bodily hygiene and dietary restrictions. The latter practice could contribute to a store of "austerities" (*TAPAS*) conducive to attaining the spiritual goal of *MOKṢA*, or release from the cycle of transmigration. An added factor was the value of *AHIMSĀ* ("noninjury"), or refusal to kill for nonsacrificial purposes.

A person can be vulnerable to external pollution and internal pollution (as by ingesting impure food) and can also be polluted by coming into contact with people who, because of their own hygienic and dietary habits, are impure. Since members of a given caste customarily prepare and eat food with each other, a polluted individual can, by association, pollute others of his caste. In this social dimension, then, pollution is the degree to which a caste allows practices that a ritually and socially superior caste group does not permit its members. Each caste maintains its own standards, infractions of which are adjudicated and punished by the caste itself. While external pollution can be washed off with water, internal pollution requires another means of purification, normally imposed by tradition but, on occasion, by decision of the caste assembly (*sabhā*). Purification rites can include a fine or penalty paid by giving a feast for caste members or Brahmins. A common purification rite is the consumption of a cleansing agent whose constituents include cow's milk, butter, curds, dung, and urine.

Rigidities of caste lessened in the 20th century, partly owing to Gandhi's influence and to the efforts of successive Indian governments to abolish caste rituals, remove legal restrictions from untouchables, and promote the welfare of the lower castes in general. Particularly since India gained independence in 1947, and especially in urban settings, there has been considerable social mobility among castes. This usually takes the form of a *jāti* trying to associate itself with a higher-ranked *varṇa* by adopting the customs, rituals, and attitudes found in the Brahminical SCRIPTURES, a process that has been called Sanskritization.

Urbanization and industrialization have also increased Indian social mobility and thereby modified the caste system. Modern transportation facilities, workplaces, and housing have brought Indians of all castes into close and unavoidable contact. As a result, prohibitions on many forms of personal contact between castes have been relaxed or abandoned entirely in urban areas, at least in public places. Declining specialization in traditional occupations has further eroded the caste system, particularly in the more industrialized areas, though new occupations sometimes tend to generate new caste rankings rather than dismantle caste altogether. In some instances "affirmative action" measures have also tended to perpetuate caste, though in new forms, as caste groups have joined to form bloc-voting pressure groups that compete in politics and vie for control of economic opportunities and social-welfare services. Particularly important are provisions regulating access to education and government jobs. Therefore, despite movements for reform, caste alliances still remain a powerful political and social force in India, and caste considerations remain strong in the countryside, where the majority of India's people live.

CATACOMB, *Latin* catacumba, *Italian* catacomba, subterranean cemetery composed of galleries or passages with side recesses for tombs. The term, of uncertain origin, seems to have been applied first to the subterranean cemetery under the BASILICA of San Sebastiano (on the Appian Way near Rome), which was reputed to have been the temporary resting place of the bodies of Saints PETER and PAUL in the last half of the 3rd century. The word came to refer to all the subterranean cemeteries around Rome. The early Christian catacombs of Rome are located in a rough circle about three miles from the center of the city. About 40 chambers are known, and most are found near the main roads leading into the city.

Catacomb of Domitilla in Rome showing a passage with side recesses for tombs

Fototeca Unione, American Academy in Rome

In the early Christian communities of the Roman Empire, catacombs served many functions in addition to burial. Funeral feasts were celebrated in family vaults on the day of burial and on anniversaries. The EUCHARIST, which accompanied funerals in the early church, was celebrated there. In some catacombs, larger halls and connected suites of chapels were, in effect, shrines to saints and martyrs. A famous example is the Triclia in the catacomb of St. Sebastian, to which countless pilgrims came to partake of memorial meals (*refrigeria*) in honor of Saints Peter and Paul and to scratch prayers to them on the walls.

The catacombs also, because of their intricate layout and access by secret passages to sand quarries and open country, could be used as hiding places during times of persecution and civil commotion. There seems, however, to be no truth in the widespread belief that early Christians used the catacombs as secret meeting places for worship. By the 3rd century CE there were more than 50,000 Christians in Rome, and 50,000 persons could hardly go out to the catacombs in secret. Furthermore, worship of any kind would seem out of the question in the long, narrow corridors of the catacombs, and even the largest of the tomb chambers hardly holds 40 persons. Finally, Christians and pagans alike regarded death as unclean, so that, while memorial meals or masses for the dead might be celebrated there, regular public worship in such a place would be unlikely.

Catacombs were by no means a Christian or an exclusively Roman invention. The custom of burying the dead in

underground rock chambers goes far back into antiquity. Catacombs are found all over the Mediterranean world.

CATECHISM, a manual of religious instruction usually arranged in the form of questions and answers used to instruct the young, to win converts, and to testify to the faith. The term catechism was evidently first used for written handbooks in the 16th century.

After the invention of printing and the REFORMATION, catechisms became much more important, both in PROTESTANTISM and ROMAN CATHOLICISM. These catechisms were influenced by the medieval catechism, which had concentrated upon the meaning of faith (the APOSTLES' CREED), hope (the LORD'S PRAYER), and charity (the TEN COMMANDMENTS). The later catechisms usually included discussions of these three subjects and added others.

Perhaps the most influential book produced by any Reformer was MARTIN LUTHER'S *Small Catechism* (1529), which added discussions of BAPTISM and the EUCHARIST to the usual three subjects. JOHN CALVIN published a catechism in 1542 intended for children. The HEIDELBERG CATECHISM (1563) of Caspar Olevianus and Zacharias Ursinus (revised by the SYNOD OF DORT in 1619) became the most widely used catechism in the Reformed churches. The standard PRESBYTERIAN catechisms have been the Westminster Larger and Shorter Catechisms, completed in 1647.

The Anglican catechism is included in THE BOOK OF COMMON PRAYER. The first part was probably prepared by Thomas Cranmer and Nicholas Ridley in 1549 and was modified several times before 1661. A second part, discussing the meaning of the two SACRAMENTS, was prepared in 1604 in response to a suggestion of the Puritan faction of the Hampton Court Conference.

The most famous Roman Catholic catechism was one by PETER CANISIUS, a JESUIT, first published in 1555, which went through 400 editions in 150 years. In more recent times, well-known Roman Catholic catechisms have included the Baltimore Catechism (1885) in the United States and *A Catechism of Christian Doctrine* ("Penny Catechism") in England (1898). In 1992 the Vatican issued a new universal *Catechism of the Catholic Church* that summarized the church's doctrinal positions and teachings since the SECOND VATICAN COUNCIL (1962–65).

In reaction to the work of the Jesuits and the REFORMED CHURCH among the Orthodox, PETER MOGILA composed *The Orthodox Confession of Faith* in the form of a catechism. It was approved at a provincial SYNOD in 1640 and standardized by the synod of Jerusalem in 1672. By order of the Russian tsar Peter I the Great, a smaller Orthodox catechism was prepared in 1723.

CATECHUMEN \,ka-tə-'kyü-mən, 'ka-tə-,\, a person who receives instruction in the Christian religion in order to be baptized. As the number of GENTILES in the early church increased, instruction in the Christian faith became more necessary, and by the 4th century, with the rise of HERESY, detailed doctrinal teaching was given. By this time the postponement of BAPTISM had become general, and, therefore, a large proportion of Christians belonged to the catechumenate. Catechumens were permitted to attend the first part of the liturgy ("Liturgy of the Catechumens") but were dismissed before the "Liturgy of the Faithful" (the liturgy of the EUCHARIST). As infant baptism became general, the catechumenate decreased. The baptismal rites now used are adaptations of rites intended for the reception of adult catechumens.

CATHARI \ˈka-thə-ri, -rē\, also spelled Cathars \ˈka-,thärz\ (from Greek: *katharos*, “pure”), heretical Christian sect that flourished in western Europe in the 12th and 13th centuries (see also ALBIGENSES). The Cathari professed a dualist doctrine that there are two principles, one good and the other evil, and that the material world is evil. Similar views were held in the Balkans and the Middle East by the PAULICIANS and the BOGOMILS.

Isolated groups of such believers appeared in western Germany, Flanders, and northern Italy in the first half of the 11th century, and their numbers grew rapidly in the mid-12th century. About this time the Bogomil church was reorganizing itself, and Bogomil missionaries, as well as Western dualists returning from the Second Crusade (1147–49), were at work in the West. From the 1140s the Cathari were an organized church with a hierarchy, a liturgy, and a system of doctrine. About 1149 the first bishop established himself in the north of France, a few years later he established colleagues at Albi and in Lombardy. The status of these bishops was confirmed and the prestige of the Cathar church enhanced by the visit of the Bogomil bishop Nicetas in 1167. In the following years more bishops were set up, until by the turn of the century there were 11 bishoprics in all, 1 in the north of France, 4 in the south, and 6 in Italy.

The groups emphasized different doctrines, but all agreed that matter was evil. Humans were aliens and sojourners in an evil world; their aim must be to free their spirit, which was in its nature good, and restore it to communion with God. There were strict rules for fasting, including the prohibition of meat. Sexual intercourse was forbidden; complete renunciation of the world was called for.

The extreme ASCETICISM made the Cathari a church of the elect, and yet in France and northern Italy it became a popular religion. This success was achieved by the division of the faithful into two bodies: the “perfect” and the “believers.” The perfect were set apart from the mass of believers by a ceremony of initiation, the *consolamentum*. They devoted themselves to contemplation and were expected to maintain the highest moral standards. The believers were not expected to attain the standards of the perfect.

The Cathar doctrines of creation led them to rewrite the biblical story. They viewed much of the OLD TESTAMENT with reserve; some of them rejected it altogether. The orthodox doctrine of the INCARNATION was rejected. JESUS was merely an angel; his human sufferings and death were an illusion. They also severely criticized the worldliness and corruption of the ROMAN CATHOLIC church.

The Cathar doctrines struck at the roots of both orthodox CHRISTIANITY and the political institutions of Christendom, and the authorities of church and state united to attack them. POPE INNOCENT III (1198–1216) attempted to force Raymond VI, count of Toulouse, to join him in putting down the movement, but the papal legate was murdered in January 1208; the count was generally thought to have been an accessory to the crime. The Albigensian Crusade was proclaimed against the heretics, and an army led by a group of barons from northern France ravaged Toulouse and Provence and massacred the inhabitants, both Cathar and Catholic. A more orderly persecution of Cathars, later sanctioned by St. Louis IX, in alliance with the nascent INQUISITION, was more effective. In 1244 the great fortress of Montségur near the Pyrenees, a stronghold of the perfect, was captured and destroyed. Many of the French Cathari fled to Italy, where persecution was more intermittent. The hierarchy faded out in the 1270s; the movement lingered and finally disappeared early in the 15th.

CATHBAD \ˈkɑ-fə, ˈkɑth-vəθ\, also spelled Cathbhadh, in the Irish sagas, the great DRUID of Ulster and, in some legends, the father of King CONCHOBAR MAC NESSA (Conor).

Cathbad was able to divine the signs of the days, thus to determine auspicious or inauspicious activities for certain days. According to one tradition, the queen Nessa once consulted Cathbad, asking him what the day was auspicious for; Cathbad answered that it was auspicious for getting a king upon a queen, and Conchobar was conceived in their subsequent union. When Conchobar reached manhood, none in Ulster was allowed to speak before he had spoken, but Conchobar never spoke before Cathbad had spoken—giving Cathbad precedence over the king. Cathbad acted as the king’s advisor and is referred to as a teacher, supporting Julius Caesar’s assertion that the Gallic Druids served as repositories of traditional knowledge.

CATHEDRAL, in Christian churches that have an episcopal form of church government, the church in which a residential BISHOP has his official seat or throne, the cathedra. Cathedral churches are of different degrees of dignity. There are cathedral churches of simple diocesan bishops, of ARCHBISHOPS OF METROPOLITANS, of PRIMATES, PATRIARCHS, and, in ROMAN CATHOLICISM, of the POPE. A cathedral church is not necessarily large and magnificent, although most cathedrals have become so.

In the Roman Catholic church, CANON LAW makes no architectural conditions for a cathedral. The only canonical requirement is that a cathedral should be consecrated and adequately endowed. The pope has the right to designate a cathedral, although the choice of the bishop of the DIOCESE or his decision to build a cathedral is normally approved. The bishop must be present in his cathedral on certain holy days and normally must perform ORDINATIONS there.

In Eastern Orthodoxy, the cathedral is the main church in a city where the bishop resides and where he celebrates the liturgy on festival occasions. In Russia, where the dioceses have always been few and have covered a vast area, the main church in any large town became known as a cathedral (*sobor*), even though no bishop was in residence there. The principal church of a large monastery also assumed the same name.

CATHERINE OF SIENA, SAINT \ˈka-thə-rən . . . sē-ˈe-nə\, original name Caterina Benincasa (b. March 25, 1347, Siena, Tuscany—d. April 29, 1380, Rome; canonized 1461; feast day April 29), patron saint of Italy who played a major role in returning the PAPACY from Avignon to Rome (1377). She was declared a doctor of the church in 1970.

Catherine became a tertiary (a member of a monastic third order who takes simple vows and may remain outside a CONVENT or monastery) of the DOMINICAN order (1363) in Siena. When Florence was placed under an interdict by Pope Gregory XI (1376), Catherine determined to take public action for peace within the church and Italy and to encourage a crusade against the Muslims. She went as an unofficial mediator to Avignon with her confessor and biographer Raymond of Capua. Her mission failed, and she was virtually ignored by the pope, but while at Avignon she promoted her plans for a crusade.

It became clear to her that the return of Pope Gregory XI to Rome—an idea that she did not initiate and had not strongly encouraged—was the only way to bring peace to Italy and thus facilitate a crusade. At her encouragement, Gregory moved the papacy to Rome in 1377 (where he died the next year). Catherine went to Rome in November of

St. Catherine of Siena; illustration from the *Dialogo della divina provvidenza*, 1504
Culver Pictures

1378, probably at the invitation of Pope Urban VI (1378–1417), whom she helped in reorganizing the church. From Rome she sent out letters and exhortations to gain support for Urban in his struggles with the ANTIPOPE Clement VII.

Catherine's writings, all of which were dictated to her disciples, include about 380 letters, 26 prayers, and the four treatises of *Il libro della divina dottrina*, better known as the *Dialogo della divina provvidenza* (c. 1475). A complete edition of Catherine's works together with her biography by Raymond was published in Siena (1707–21).

CATHOLIC (from Greek: *katholikos*, "universal"), the characteristic that, according to ecclesiastical writers since the 2nd century, distinguished the Christian church at large from local communities or from heretical and schismatic sects. A notable exposition of the term as it had developed during the first three centuries of CHRISTIANITY was given by ST. CYRIL OF JERUSALEM in his *Catecheses* (348): the church is called catholic on the ground of its worldwide extension, its doctrinal completeness, its adaptation to the needs of men of every kind, and its moral and spiritual perfection. (See NICENE CREED.)

The theory that what has been universally taught or practiced is true was first fully developed by ST. AUGUSTINE in his controversy with the Donatists. It received classic expression in a paragraph by St. Vincent of Lérins in his *Commonitoria* (434), from which is derived the formula: "What all men have at all times and everywhere believed must be regarded as true."

Confusion in the use of the term has been inevitable, be-

cause various groups that have been condemned by the Roman Catholic church as heretical or schismatic never retreated from their own claim to catholicity. Not only the Roman Catholic church but also the Eastern Orthodox, the Anglican, and a variety of national and other churches claim to be members of the holy catholic church, as do most major Protestant churches.

CECROPS \ˈsē-kräps\, traditionally the first king of Attica in ancient Greece. He was said to have instituted the laws of marriage and property and a new form of worship. The introduction of bloodless sacrifice, the burial of the dead, and the invention of writing were also attributed to him. He acted as arbiter during the dispute between the deities ATHENA and POSEIDON for the possession of Attica. Cecrops was represented as human in the upper part of his body, while the lower part was shaped like a snake.

CELIBACY, abstention from sexual intercourse or from marriage, usually in association with the role of a religious official or devotee. The term is typically applied only to those for whom the unmarried state is the result of a sacred vow, act of renunciation, or religious conviction. Celibacy has existed in some form or another throughout the history of religions. Wherever celibacy has appeared, it has generally accompanied the view that the religious life is essentially different or even alienated from the normal structures of society and the normal drives of human nature.

Celibacy can be either permanent or temporary. Examples of permanent celibacy can be found in the lives of monks and nuns in CHRISTIANITY or in the rituals of HINDUISM performed by a SANNYASI (world renouncer). These rituals serve to separate the *sannyasi* from his life as a householder, underscoring the true significance of celibacy: it is a state in opposition to that which governs domestic life.

Celibacy in ancient civilizations. In the great civilizations of antiquity celibacy emerged in various contexts. The requirement that the VESTAL VIRGINS of Rome remain celibate for at least the 30 years of their service indicates that celibacy had some place in a very ancient stratum of ROMAN RELIGION. Celibacy was especially characteristic of priest-devotees of the Great Mother cults. The well-organized PRIESTHOOD of the religion of ISIS, for example, represented sacerdotalism (that is, the belief that priests serve as essential mediators between humans and the divine); and sexual abstinence was an absolute requirement for those who celebrated her holy mysteries.

Similarly, Manichaeans, Gnostics, and Hermeticists typically had an inner circle requiring strict continence. Thus, many important religious movements in the classical world envisioned continence as an ideal and set the stage for Christian celibacy and MONASTICISM.

Celibacy in the religions of Asia. In Hinduism, celibacy is not associated with the priesthood, which is hereditary. Prominent, however, among the religious personages of India are the *sadhus*, "holy men," who live a life free of possessions and family obligations. The *sadhus* have no institutions or organizations. Many *sadhus*, male and female, become celibates after marriage or widowhood; others early in life. The *sadhu* is one who has left the type of life ruled by the order of DHARMA (cosmic and societal law—i.e., of CASTE, family, money, state, and all their responsibilities and privileges) in order to seek MOKSHA (final liberation).

Although celibacy is postulated for Buddhist clergy everywhere, there have been and are liberal exceptions, such as the married monks of pre-20th-century Ceylon (Sri Lan-

ka) and those of some of the Japanese clergies. Since the vows of the Buddhist monk in principle are not permanent, the theoretical emphasis on celibacy has become academic in many parts of Asia, and, in fact, some VAJRAYĀNA schools have allowed sexual intercourse as an esoteric ritual that contributes to the attainment of release.

Chinese TAOISM has monastics and independent celibate adepts. SHINTŌ in Japan has no monks or celibate priesthood; instead, especially in premodern times, it has embraced shamanesses "married" to the shrine god and celibate priestesses in major shrines.

Celibacy in the major monotheisms. Permanent celibacy is of little significance in JUDAISM. There were, however, prescribed periods of sexual abstinence in connection with rituals and sacrifices and while engaging in HOLY WARS. It seems that in post-Old Testament times, some members of the ESSENE sect rejected marriage.

In ISLAM, too, celibacy does not play an important role. A basic social teaching in Islam is the encouragement of marriage, and the QUR'AN regards celibacy as something exceptional. However, many SUFIS preferred celibacy, and some even regarded women as an evil distraction from piety, although celibacy was exceptional even among members of these mystical orders.

Celibacy first appears in Christianity out of apocalyptic expectations (see MILLENNIALISM). It was believed among the original Christians that the present age was ending, that the KINGDOM OF GOD was at hand, and that in the new age there would be no marriage. The regional Council of Elvira in Spain (c. 306 CE) decreed that all priests and bishops, married or not, should abstain from sexual relations. The position of the Eastern churches was made clear by the decrees of the Quinisext Council in 692: bishops must be celibate, but ordained priests, deacons, and subdeacons could continue already established marriages.

In the 10th and 11th centuries, church lands became secularized, and many priests married or lived in concubinage. Not only the practice but also the principles of clerical celibacy were challenged. The first and second LATERAN COUNCILS (1123 and 1139) put an end to the legality of theoretically continent clerical marriages. They declared priestly orders an impediment to valid marriage and vice versa. This is still the official position within ROMAN CATHOLICISM, although exceptions have been made for some men who were married prior to their conversion to Roman Catholicism and then became Catholic priests. Although the SECOND VATICAN COUNCIL (1962–65) permitted a married diaconate, Pope Paul VI issued an ENCYCLICAL, *Sacerdotalis Caelibatus* (June 23, 1967), reaffirming the traditional law of celibacy for priests.

The churches of the REFORMATION (Lutheran, Anglican, Reformed, and others) do not require clerical celibacy. See also ASCETICISM; RITUAL; RITES OF PASSAGE.

CELTIC CHURCH, the early Christian church in the British Isles, founded in the 2nd or 3rd century. It contributed to the conversion of the Anglo-Saxons in the 7th century, but its organization gave way to that of Rome. It survived in Wales until the 11th century and in Scotland and Ireland until the 12th.

CELTIC RELIGION, religious beliefs and practices of the ancient Celts.

Because of their great reverence for the art of memory, the pre-Christian Celts themselves left no writings. Other than a few inscriptions, the principal sources of modern in-

formation about them are contemporary Greek and Latin writers, notably Poseidonius, Lucan, and Julius Caesar. Insight can also be gleaned from the sagas and myths, particularly of Ireland and Wales, that were recorded by native Christian monks centuries later.

Little is known about the religious beliefs of the Celts of Gaul. They believed in a life after death, for they buried food, weapons, and ornaments with the dead. The DRUIDS, the early Celtic PRIESTHOOD, taught the doctrine of transmigration of souls and discussed the nature and power of the gods. The Irish believed in an otherworld, imagined sometimes as underground and sometimes as islands in the sea. The otherworld was variously called "the Land of the Living," "Delightful Plain," and "Land of the Young" and was believed to be a country where there was no sickness, old age, or death, where happiness lasted forever, and where a hundred years were as one day. But this "delightful plain" was not accessible to all. Donn, god of the dead and ancestor of all the Irish, reigned over Tech Duinn, which was imagined as on or under Bull Island off the Beare Peninsula, and to him all men returned except the happy few.

According to Caesar, the god most honored by the Gauls was "Mercury," and this is confirmed by numerous images and inscriptions. His Celtic name is not explicitly stated, but it is implied in the place-name Lugudunon ("the fort or dwelling of the god Lugus") by which his numerous cult centers were known and from which the modern Lyon, Laon, and Loudun in France, Leiden in The Netherlands, and Legnica in Poland derive. The Irish and Welsh cognates of LUGUS are Lugh and LLEU, respectively, and the traditions concerning these figures mesh with those of the Gaulish god. Caesar's description of the latter as "the inventor of all the arts" might almost have been a paraphrase of Lugh's conventional epithet *samildánach* ("possessed of many talents"). Another important god is CERNUNNOS, the stag-horned, shamanistic Lord of the Animals. Stags play an integral part in the Celtic literature recorded in the early Christian period, apparently embodying the attributes of the SHAMAN. Many other animals, including the raven, the crane, and the bull are accorded divine significance.

Among the female deities, the goddess of mares, variously called EPONA (Gaul), MACHA (Ireland), and RHIANNON (Britain), is a very powerful force, as is the crow goddess Morrigan. These two figures seem to have ruled most closely the fortunes of king and tribe, the former personifying fertility, the latter, death and rebirth.

Goddesses frequently manifested themselves in triple aspects or in groups of three. Examples include the Gallic Matronae, or three mothers; the Irish BRIGITS, who rule over poetry, healing, and metalcraft; and the "great queen" Morrigan, whose three aspects represent death-prophecy, battle-panic, and death-in-battle. According to Lucan, the Gauls also had a triple god in whose honor they practiced HUMAN SACRIFICE. His aspects comprise thunder, war, and a mysterious bull, which may represent fertility.

Celtic worship centered upon the interplay of the "otherworld," or divine element, with the land and the waters. Wells, springs, rivers, and hills were believed to be inhabited by guardian spirits, usually female, and the names of these spirits live on in many place-names still. The land itself was regarded anthropomorphically as feminine. The ocean, which was ruled by the god Manannán, was also, particularly in British and Irish COSMOLOGY, a force of great magic and mystery.

Based on a fluid cosmology in which shape-shifting and magic bonds between humans and other creatures are com-

Graveyard in Al-Qayrawān, Tunisia

Georg Gerster—Photo Researchers

monplace, Celtic myths point to a strong belief in the transmigration of souls. Such artifacts as the Gundestrup Caldron (found in Denmark) and the so-called Paris relief depict scenes of shamanistic ritual, and much of Celtic poetry well into the Christian period reflects a preoccupation with transformations and animal consciousness.

Caesar stated that the Druids avoided manual labor and paid no taxes, so that many were attracted to join the order. They learned great numbers of verses by heart; some studied for as long as 20 years; they thought it wrong to commit their learning to writing but used the Greek alphabet for other purposes. Archaeological finds include post-holes from small, wooden buildings that contained sacred enclosures within. Remains of humans and animals (perhaps victims of sacrifice) also have been discovered in the Celtic areas—some in the vicinity of towns. These sacred buildings were destroyed during the Roman conquest, and Romano-Celtic temples took their place.

Irish cult life revolved around seasonal observances. One of the two major yearly festivals was SAMHAIN (on November 1), which marked the summer's end and served both as the New Year's festival and as the Feast of the Dead. The other was BELTANE, or Bel's Fire (May 1). Both festivals involved huge bonfires. Other, lesser feasts included those of IMBOLC (February 1), the beginning of the spring season sacred to the goddess Brigid, and LUGNASAD (August 1), the feast of the marriage of Lugus and the day of the harvest fair. CHRISTIANITY eventually absorbed and incorporated these great festivals.

CEMETERY, a place set apart for burial or entombment of the dead. Reflecting geography, religious beliefs, social attitudes, and aesthetic and sanitary considerations, cemeteries may be simple or elaborate. They may also be regarded as "holy fields" or prohibited areas. In countries such as Japan and Mexico cemeteries are festival places on certain occasions set aside to honor the dead. In other countries and among other religious groups, they are simple and stark and generally shunned.

In most cultures, providing a place for the dead was originally a family obligation because of the widespread belief that ties of KINSHIP last beyond death. Having a family mausoleum or graveyard is a custom that has endured in many parts of the world. Their locations have often been selected with great care: In China FENG-SHUI ("augury") experts picked sites calculated to provide "good wind and water"; Koreans hired geomancers to divine auspicious locations, out of the range of vision of "baleful spirits." Even when the tribe or the community took over the obligation, burial in the communal graveyard was a jealously guarded privilege. Strangers could dwell in towns and cities but could not be buried there. Special cemeteries for criminals, foreigners, and the poor were set up by many, including the ancient Jews and Romans. In Europe from the medieval period until well into the 19th century, convicted witches,

CENOBITIC MONASTICISM

murderers, and suicides were excluded from cemeteries.

Sanitary precautions have influenced the nature and location of cemeteries. Romans and Jews, for example, regarded cemeteries as hazardous or ritually unclean and established their graveyards outside the walls of Rome and Jerusalem. Christians, on the other hand, had no such concern, and, when they were allowed to practice their religion freely, they buried the dead in churches and churchyards.

By the middle of the 18th century the consequences of overcrowded churchyard burial and the lack of adequate space for further burial within city limits had become a matter of public apprehension. In the churchyards, coffins were placed tier above tier in the graves until they were within a few feet (or sometimes even a few inches) of the surface, and the level of the ground was often raised to that of the lower windows of the church. To make room for fresh interments, the sextons had recourse to the surreptitious removal of bones and partially decayed remains, and in some cases the contents of the graves were systematically transferred to pits adjacent to the site, the gravediggers appropriating the coffin plates, handles, and nails to be sold as waste metal. As a result of these practices, the neighborhoods of the churchyards were usually unhealthy and their sight intolerable.

From 1860 churchyard burials have gradually been discontinued in many countries. More common now are memorial parks where the graves may be marked with flat metal markers instead of the customary gravestones. In the United States there continue to be public cemeteries, cooperative cemeteries, church cemeteries, and large, mutually owned cemeteries. In addition to state, county, and municipal cemeteries, the federal government operates a complex of national cemeteries in the United States and abroad for military servicemen and members of their families. In the modern cemetery, lots are sold by the government, religious, commercial, or other organization that has charge. A fee is charged for perpetual care, and a charge is made for opening the grave and other duties performed by the sexton or superintendent. *See also* FUNERARY CUSTOMS.

CENOBITIC MONASTICISM \se-nə-ˈbi-tik, ˌsē-, form of MONASTICISM based on “life in common” (Greek: *koinobion*), as distinct from eremitic (IDIORRHYTHMIC) monasticism, the solitary lifestyle of HERMITS. Cenobitic monasticism is characterized by strict discipline, regular worship, and manual work. The Egyptian saint PACHOMIUS was the author of the first cenobitic rule, which was later developed by ST. BASIL THE GREAT. Cenobitic monasticism was introduced in the West by ST. BENEDICT OF NURSIA and became the norm of the BENEDICTINE order. In the East its major centers were the monastery of Stoudios in Constantinople (now Istanbul in Turkey) and several communities on Mount Athos, in Greece.

CENOTE \si-ˈnō-tē\ (from Yucatec Maya: *ts'onot*), natural well or reservoir, common in the Yucatán Peninsula, associated with PILGRIMAGES and the cult of the rain gods, or CHACS. In ancient times, notably at Chichén Itzá, precious objects, such as jade, sacrificial knives, masks, plates made of gold and copper, and incense and also human beings, including children, were thrown into the cenotes as offerings. A survivor was believed to bring back a message from the gods about the year's crops.

CENTAUR, *Greek* kentauros, in Greek mythology, a race of creatures, part horse and part man, dwelling in the moun-

Centaur fighting a Lapith, detail of a metope of the Parthenon of Athens; in the British Museum

Hirmer Fotoarchiv, Munchen

tains of Thessaly and Arcadia. The centaurs were said to be the offspring of IXION, king of the Lapiths, and the goddess Nephele, whom he had raped under the impression that she was HERA. They were best known for their fight (centauro-machy) with the Lapiths, which resulted from their attempt to carry off the bride of PIRITHOUS, son of Ixion. They lost the battle and were driven from Mount Pelion. In later Greek times they were often represented drawing the chariot of the wine god DIONYSUS or bound and ridden by EROS, the god of love, in allusion to their drunken and amorous habits. They were wild, lawless, and inhospitable beings, the antithesis of culture. By contrast the king of the centaurs, CHIRON, was notable for being civilized and gentle, and was named as the tutor of numerous heroes.

In early art they were portrayed as human beings in front, with the body and hindlegs of a horse attached to the back; later, they were men only as far as the waist. There were no female centaurs in classical mythology.

CENTRAL CONFERENCE OF AMERICAN RABBIS (CCAR), organization of North American Reform RABBIS, founded by Rabbi ISAAC MAYER WISE in 1889. The organization is one of the largest publishers of Jewish liturgical matter, publishing Reform prayerbooks, hymnals, and rabbinic manuals. CCAR also publishes a quarterly journal on JUDAISM. Its membership, which consists of more than 1,600 rabbis, is divided into 12 regions covering the United States and Canada, with two additional regions; one is composed of Israel, and the other encompasses all areas not in North America or Israel.

CEPHALUS \se-fə-ləs\, legendary ancestor of an Attic family, traditionally a great hunter. He was beloved by the goddess Dawn (EOS, or Aurora). With his hound, Laelaps (Hurricane), he overcame the fox of Teumessus that had ravaged Boeotia. The most popular tale about Cephalus in later Greek and Roman literature concerned his wife, Procris.

Cephalus' devotion to hunting aroused in her suspicions that she had a rival, so she followed him. Emerging suddenly from a thicket, she was fatally struck by her husband, who mistook her for his prey. Later legends, through false etymology, made Cephalus the founder of the Ionian island community of Cephallenia and linked him with the ancestry of ODYSSEUS.

CERES \ˈsir-ēz, ˈsē-rēz\, in ROMAN RELIGION, goddess of the growth of food plants, worshiped either alone or in association with the earth goddess TELLUS. At an early date her cult was overlaid by that of the Greek goddess DEMETER, who was also widely worshiped in Sicily. On the advice of the Sibylline Books, a cult of Ceres, Liber, and Libera was introduced into Rome (according to tradition, in 496 BCE) to check a famine. The temple, built on the Aventine Hill in 493 BCE, became a center of plebeian religious and political activities and also became known for the splendor of its works of art. Destroyed by fire in 31 BCE, it was restored by Augustus. The three chief festivals of Ceres' cult all followed Greek lines.

CERINTHUS \sə-ˈrin-thəs\ (fl. c. 100 CE), Christian heretic whose errors, according to the theologian Irenaeus, led the apostle John to write his NEW TESTAMENT Gospel.

Cerinthus was probably born a Jew in Egypt. He was a teacher and founded a short-lived sect of Jewish Christians with Gnostic tendencies. He apparently taught that the world was created by ANGELS, from one of whom the Jews received their imperfect Law. The only New Testament writing that he accepted was the Gospel of Matthew. Cerinthus taught that JESUS, the offspring of JOSEPH and MARY, received Christ at his BAPTISM as a divine power revealing the unknown Father. This Christ left Jesus before the Passion and the RESURRECTION. Cerinthus admitted CIRCUMCISION and the SABBATH and held a form of millenarianism (see MILLENNIALISM).

CERNUNNOS \ker-ˈnü-nōs\ (Celtic: "Horned One"), deity in CELTIC RELIGION who was presumably worshiped as the "Lord of Wild Things." Cernunnos may have had a variety of names in different parts of the Celtic world, but his attributes were generally consistent. He wore stag antlers and was sometimes accompanied by a stag and by a sacred ram-horned serpent that was also a deity in its own right. He wore and sometimes also held a torque, the sacred neck ornament of Celtic gods and heroes. The earliest known depiction of a possible Cernunnos-type is found at Val Camonica, in northern Italy, which was under Celtic occupation from about 400 BCE. He was also portrayed on the Gundestrup Caldron, a ritual vessel found at Gundestrup in Jutland, Denmark, dating to about the 1st century BCE.

Cernunnos was worshiped primarily in Britain, although there are also traces of his cult in Ireland. The Christian church seems to have used him as a symbol of the ANTI-CHRIST; such a horned god figured in Christian ICONOGRAPHY and medieval manuscripts.

CHAC \ˈchäk\, Mayan god of rain, especially important in the Yucatán region of Mexico where he was depicted in Classic times (from about 100–900 CE) with protruding fangs, large round eyes, and a proboscis-like nose.

Like other major Mayan gods, Chac also appeared as four gods, the Chacs. The four gods were associated with the cardinal directions and their colors: white, north; red, east; black, west; and yellow, south. At Chichén Itzá, in post-Classic times (about 900–1519 CE), HUMAN SACRIFICE became associated with the rain god, and the priests who held the arms and legs of the sacrificial victims were called *chacs*.

Hindu diagram of chakras
The Granger Collection

CHAKRA \ˈchə-krə, ˈchä-, also spelled *cakra*, Sanskrit *cakra* \ˈchə-krə\ ("wheel"), psychic-energy centers of the body. In certain forms of HINDUISM and BUDDHISM (see VAJRAYĀNA), chakras are conceived of as focal points where psychic forces and bodily functions merge and interact with each other. Among the 88,000 chakras in the human body, 6 major ones located roughly along the spinal cord and another located just above the crown of the skull are of principal importance. Each of these 7 major chakras (in Buddhism, 4) is associated with a specific color, shape, sense organ, natural element, deity, and MANTRA. Along with the heart chakra, the most important chakras are often considered to be the *mūlādhāra*, located at

the base of the spine, and the *sahasrāra*, at the top of the head. The *mūlādhāra* encircles a mysterious divine potency (KUNḌALINĪ) that the individual attempts, by yogic techniques, to raise from chakra to chakra until it reaches the *sahasrāra* and self-illumination results.

CHAKRAVARTIN \ˈchə-krə-ˈvār-tin\, also spelled *Cakravartin*, Sanskrit *Cakravartin*, the ancient Indian conception of the world ruler, derived from the Sanskrit *cakra*, "wheel," and *vartin*, "one who turns." Thus, a chakravartin may be understood as a ruler "whose movements are unobstructed."

Sources in BUDDHISM and JAINISM distinguish three types of secular chakravartin: *cakravāla cakravartin*, a king who rules over all four of the continents posited by ancient Indian cosmography; *dvīpa cakravartin*, a ruler who governs only one of those continents and is, therefore, less powerful than the first; and *pradeśa cakravartin*, a monarch who leads the people of only a part of a continent, the equivalent of a local king. Buddhist and Jain philosophers of this

CHALCEDON, COUNCIL OF

period conflated the notion of the universal monarch with the idea of a king of righteousness and maintainer of moral law. The chakravartin was considered to be the secular counterpart of a Buddha.

CHALCEDON, COUNCIL OF \ˈkal-si-ˌdän, kal-ˈsē-dən\, the fourth ecumenical council of the Christian church, held in Chalcedon (modern Kadiköy, Turkey) in 451. It was attended by about 520 bishops or their representatives and was the largest and best-documented of the early councils. It approved the creed of Nicaea (325), the creed of Constantinople (381; subsequently known as the NICENE CREED), two letters of CYRIL OF ALEXANDRIA against NESTORIUS, which insisted on the unity of divine and human persons in Christ, and the *Tome* of POPE LEO I confirming two distinct natures in Christ and rejecting the MONOPHYSITE doctrine that Christ had only one nature.

Besides reinforcing canons of earlier church councils as well as declarations of some local SYNODS, the council issued disciplinary decrees affecting monks and clergy and declared Jerusalem and Constantinople patriarchates. The authority of the PATRIARCH of Constantinople—the “New Rome,” where the emperor and the senate also resided—began with canon 28 of the Council of Chalcedon. Technically, the patriarch of Constantinople occupied the second rank—after the bishop of Rome—in a hierarchy of five major PRIMATES, which included also the patriarchs of Alexandria, Antioch, and Jerusalem.

CHALCHIUHTLICUE \ˌchäl-chē-üt-ˈlë-kwä\, also spelled Chalchihuitlicue (Nahuatl: “She Having a Skirt of Precious Green Stone”), also called Matlalcu-eye \ˌmät-läl-ˈkwä-yä\ (“She Having a Green Skirt”), Aztec goddess of rivers, lakes, streams, and other fresh waters. Wife (in some myths, sister) of the rain god TLALOC, in Aztec COSMOLOGY she ruled over the fourth of the previous suns; in her reign, corn was first used. Like other water deities, she was often associated with serpents.

CHALICE, cup used in the celebration of the Christian EUCHARIST. Both the statement of ST. PAUL about “the cup of blessing which we bless” (1 Corinthians 10:16) and the accounts in the first three Gospels indicate that special rites of consecration attended the use of the chalice from the beginning. It was not until the recognition of CHRISTIANITY by the Roman Empire in the 4th century that silver and gold became the usual materials for the chalice. In the Middle Ages the legend of the Holy Grail surrounded

the origins of the eucharistic chalice with a magical aura.

CH’AN: *see* ZEN.

CHANG TAO-LING \ˈjäng-ˈdaü-ˈliŋ\, *Pinyin* Zhang Daoling, also called Chang Ling (b. 34? CE, P’ei, Kiangsu, China—d. 156?, Han-chung), the founder and the first patriarch of the Taoist church in China.

Chang settled in the Szechwan area and there studied the TAO (“Way”) sometime during the reign (125–144) of Emperor Shun-ti of the Eastern Han dynasty. Later he composed a Taoist work to propagate his cult, which attracted many followers among both the Chinese and the indigenous ethnic groups in Szechwan. Like other Taoists of his day Chang Ling promised physical immortality and longevity to his followers, but unlike the others, he emphasized the importance of religious organization. Thus he founded the first Taoist church, the T’IEN-SHIH TAO, or Way of the Celestial Masters, popularly known as the Way of the FIVE PECKS OF RICE because it required its members to contribute five pecks of rice a year, presumably for the upkeep of the organization. Chang Ling’s church was particularly attractive because of its emphasis on FAITH HEALING. Illness, it taught, was a result of sinful-mindedness, which could be most effectively cured by making confession to the minister in the church; purification of the soul formed the solid foundation of physical health.

Probably in imitation of the Han imperial throne, the patriarchate of the church was made hereditary. It passed from Chang Ling to his son Chang Heng and then to his distinguished grandson Chang Lu; they were collectively known as the Three Changs. Chang Lu succeeded even in establishing a Taoist theocratic state in Han-chung (modern Szechwan and part of Shensi) toward the end of the Han dynasty (c. 188–215). The basic text used for religious instruction in the Taoist church was the TAO-TE CHING of LAO-TZU; however, the famous Hsiang-erh commentary to Lao-tzu, traditionally attributed to Chang Ling, shows that this ancient philosophical treatise was interpreted to suit the religious needs of his church.

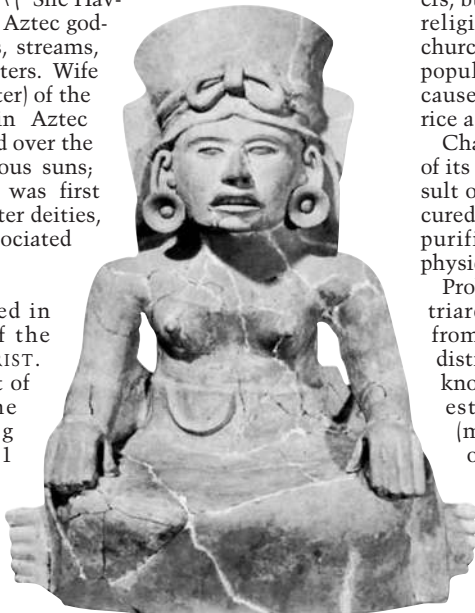

CHANG TSAI \ˈjäng-ˈdzī\, *Pinyin* Zhang Zai, *Wade-Giles romanization* Chang Heng-ch’ü \-ˈhəŋ-ˈchüē\ (b. 1020, Ch’ang-an, China—d. 1077, China), realist philosopher of the Sung dynasty, a leader in giving NEO-CONFUCIANISM a metaphysical foundation.

The son of a magistrate, Chang studied BUDDHISM and TAOISM but found his true inspiration in the Confucian

“Chalice of Antioch,” partially gilded silver, 4th–5th century CE

Chalchihuitlicue, carved stone, 4th–9th century CE

Giraudon—Art Resource

Classics. In his chief work, *Cheng-meng* ("Correct Discipline for Beginners"), he declared that the universe is a unity with myriad aspects, and all existence is an eternal integration and disintegration. *Ch'i* ("matter") is identified with ultimate reality. When *ch'i* is influenced by yang (male) elements, it floats and rises, dispersing its substance. When the yin (female) element is prevalent, *ch'i* sinks and falls, thus condensing and forming the concrete things of the world.

The one basic virtue is JEN ("humaneness"); in its various manifestations (*i.e.*, in various human relations) *jen* may become FILIAL PIETY toward parents or respect for an elder brother. Man was once *ch'i*, like all other aspects of the universe, and he has an original nature that is one with all the things of the world. His physical nature, however, derives from the physical form into which his *ch'i* has been dispersed. Moral self-cultivation consists in attempting to do one's duty as a member of society and as a member of the universe. One does not try to prolong or extend life. The superior person understands that "life entails no gain nor death any loss."

Chang influenced some of the most eminent later Neo-Confucian thinkers; the brothers Ch'eng Hao (1032–85) and Ch'eng I (1033–1107) were his pupils. His theory of mind was adopted by the great philosopher CHU HSI (1130–1200), and Wang Fu-chih (1619–92) developed Chang's philosophy into a system that has come to be recognized as one of the major achievements of Chinese thought.

CHANNING, WILLIAM ELLERY \ˈcha-niŋ\ (b. April 7, 1780, Newport, R.I.—d. Oct. 2, 1842, Bennington, Vt., U.S.), American author and moralist, Congregationalist and, later, Unitarian clergyman. Channing was a leading figure in the development of New England Transcendentalism and of organized attempts in the United States to eliminate slavery, drunkenness, poverty, and war.

Channing studied theology in Newport and at Harvard and soon became a successful preacher in various churches in the Boston area. From June 1, 1803, until his death he was minister of the Federal Street Church, Boston. Preferring to avoid abstruse points of doctrine, he preached morality, CHARITY, and Christian responsibilities. He became a popular speaker on ceremonial occasions and reached an even larger audience by writing for liberal Boston periodicals, one of which was *The Christian Disciple* (from 1824 called *The Christian Examiner*). In 1815 he was attacked by the orthodox Calvinist periodical *The Panoplist*, whose editor, Jedidiah Morse, denounced the Boston clergy as "Unitarian" rather than Christian. During the next five years Channing issued several defenses of his position, especially "Unitarian Christianity," a sermon delivered at an ORDINATION in Baltimore in 1819.

Reluctantly accepting the label of UNITARIANISM, he described his faith as "a rational and amiable system, against which no man's understanding, or conscience, or charity, or piety revolts." He did not wish to found a denomination, believing that a Unitarian orthodoxy would be just as oppressive as any other, but he formed (1820) a conference of liberal Congregational ministers, later (May 1825) reorganized as the American Unitarian Association.

Channing sympathized with several social and educational reform movements but did not believe that society could be improved by collective action. He denied that government—the only legitimate function of which was, in his view, maintaining public order—could advance the moral sensibility of the human race.

CHANUKAH: *see* HANUKKAH.

CHAOS, in early Greek COSMOLOGY, either the primeval EMPTINESS of the universe before things came into being or the abyss of Tartarus, the Underworld. Both concepts occur in the *Theogony* of Hesiod (c. 700 BCE). First there was Chaos in Hesiod's system, then GAEA and EROS. Chaos, however, did not generate Gaea; the offspring of Chaos were Erebus (Darkness) and NYX (Night).

In the later cosmologies Chaos generally designated the original state of things, however conceived. The modern meaning of the word is derived from Ovid, who saw Chaos as the original disordered and formless mass, from which the maker of the Cosmos produced the ordered universe. This concept of Chaos also was applied to the interpretation of the creation story in GENESIS 1 (to which it is not native) by the early CHURCH FATHERS.

CHAPLAIN, originally a priest or minister who had charge of a chapel, now a member of the clergy who is assigned to a special ministry. The title dates to the 8th century.

"Chaplain" owes its origin to the half-cape (Latin: *cappella*) of ST. MARTIN OF TOURS, which was the most renowned of the saints' relics owned by the Frankish kings of the Merovingian and Carolingian dynasties. The *cappella* gave its name to the royal oratory or chapel, as well as to the relics' custodians, the *cappellani*, or chaplains—royally appointed clerics who lived on the palace grounds and performed divine services for the court. In their duties the chaplains gradually became direct servants of the monarch and advisers in both ecclesiastical and secular matters.

The practice of kings appointing their own chaplains spread throughout western Christendom. Many of the royal chaplains were appointed to bishoprics and the highest offices in the church; and down to the present day the British monarchs have appointed their own royal chaplains.

In modern usage the term *chaplain* is not confined to any particular church or denomination. Clergy and ministers appointed to a variety of institutions and corporate bodies—such as cemeteries, prisons, hospitals, schools, colleges, universities, embassies, legations, and armed forces—usually are called chaplains.

Chaplains serve in the armed forces of most countries, generally as commissioned officers who are not required to bear arms. Protestant, Roman Catholic, and Jewish chaplains serve in the armed forces of the United States. A chaplain in the U.S. military must furnish or arrange for religious services and ministrations, advise on matters pertaining to religion and morality, administer religious education, and serve as counselor and friend to the personnel of the command, including those personnel who do not belong to his religious affiliation.

CHARISMA, attribute of awesome power and capacity ascribed by followers to the person and personality of extraordinarily magnetic leaders. Such leaders may be political and secular as well as religious. The term came into scholarly usage primarily through the works of the German sociologist MAX WEBER (1864–1920), especially his *Wirtschaft und Gesellschaft* (1921; *On Law in Economy and Society*), in which he postulated that charismatic authority was a form of authority distinct from those of tradition and law. Weber considered charisma to be essentially irrational.

CHARITY, in Christian thought, the highest form of love, signifying the reciprocal love between God and man that is

made manifest in unselfish love of one's fellow men. ST. PAUL's classical description of charity is found in the NEW TESTAMENT (1 Corinthians 13). In Christian theology, charity (a translation of the Greek word *agapē*, also meaning "love") is most eloquently shown in the life, teachings, and death of JESUS CHRIST. ST. THOMAS AQUINAS identified charity as "the foundation or root" of the other Christian virtues.

Although the controversies of the REFORMATION dealt more with the definition of faith than with either hope or charity, the Reformers identified the uniqueness of God's *agapē* for man as unmerited love; therefore, they required that charity, as man's love for man, be based not upon the desirability of its object but upon the transformation of its subject through the power of divine *agapē*.

CHARON \ˈkɑr-ən, -ən\, in Greek mythology, the son of Erebus (Darkness) and NYX (Night), whose duty it was to ferry over the Rivers STYX and Acheron the souls of the deceased. In payment he received the coin that was placed in the mouth of the corpse at burial. In art Charon was represented as a grisly old man. In Etruscan art he was known as Charun and appeared as a death DEMON, armed with a hammer. Eventually he came to be regarded as the image of death and of the world below. As such he survives in Charos the ANGEL of death in modern Greek folklore.

CHEMOSH \ˈkē-məsh\, ancient West Semitic deity, revered by the MOABITES as their supreme god. Little is known about Chemosh; although King SOLOMON of Israel built a SANCTUARY to him (1 Kings 11:7), the shrine was later abolished by King JOSIAH (2 Kings 23:13). The goddess ASTARTE was probably the cult partner of Chemosh. On the famous Moabite Stone, Chemosh received mention as the deity who brought victory over the Israelites to the Moabites.

CH'ENG-CHU SCHOOL \ˈchəŋ-ˈtʃu\, *Pinyin* Cheng-Zhu, also called *Li-hsüeh* \ˈlī-ˈshwə\ (Chinese: "School of Universal Principles"), or *Tao-hsüeh* \ˈdaü-\ ("School of True Way"), Chinese school of NEO-CONFUCIAN philosophy in which cultivation of the self was integrated with social ethics and moral metaphysics; it derives its name from its leading philosophers, Ch'eng I and CHU HSI. Ch'eng I taught that the way to acquire knowledge of basic truths (LI) was to investigate those things in the world in which it is present; this investigation could take the form of induction, deduction, the study of history, or even political activities. Under the guidance of Chu Hsi, who maintained that moral cultivation entailed the rational investigation of all things in order fully to comprehend their essential principle (*li*), the school expanded to become the Rationalist school of Chinese philosophy, which dominated official circles until the Republican Revolution of 1911. Education, to the thinkers of this school, meant a self-cultivation of moral consciousness, the ultimate extent of which was the inner experience of feeling at one with universal principles. These men also made a commitment to reconstruct a moral society—to them the only conceivable foundation for good government. With missionary-like zeal, they engaged in propagation of this true way and formed moral-intellectual fellowships. The Ch'eng-Chu school was the primary opponent of the HSIN-HSÜEH (Lu-Wang) school, which encouraged a more introspective approach.

CH'ENG HAO AND CH'ENG I \ˈchəŋ-ˈhaü . . . ˈchəŋ-ˈē\, Ch'eng I also spelled (Wade-Giles romanization) Ch'eng Yi, *Pinyin* Cheng Hao and Cheng Yi (respectively b. 1032 CE,

Honan, China—d. 1085, Honan; b. 1033, Honan—d. 1107, Honan), brothers who developed NEO-CONFUCIANISM into an organized school of philosophy. Ch'eng Hao influenced the idealist school of Neo-Confucianism, while Ch'eng I influenced the development of the rationalist school.

Ch'eng Hao was interested in both BUDDHISM and TAOISM as a young man. Later he studied CONFUCIANISM, passed his civil service examinations, and attained high office, but because he opposed the reforms of the innovator Wang An-shih (1021–86), he was dismissed from the government. He joined his brother in Honan, and a circle of disciples gathered around them.

After Ch'eng I passed his civil service examinations he served briefly as Imperial tutor (1069–70), but his stern conception of morality soon alienated those around him and he resigned. For most of his life he declined high office even as he criticized those in power. As a result, in 1097 his land was confiscated, his teachings barred, and he was banished to Fu-chou, in southwest China. Pardoned three years later, he was again censured in 1103. He was pardoned a second time in 1106, shortly before his death.

The two brothers built their philosophies primarily on the concept of LI—defined as the basic force, universal law, or truth underlying and governing all existence—an idea they brought to Neo-Confucianism from Buddhist and Taoist writings. While both agreed that exhaustive study of *li* is the best way to spiritual cultivation, Ch'eng Hao stressed calm introspection and taught that in his original state man was united with the universe, while Ch'eng I—whose philosophy was originally called *Tao-hsüeh* (School of True Way) but came to be called *LI-HSÜEH* (School of Universal Principle)—emphasized that the way to discover *li* is to investigate the myriad things of the universe in which *li* is present. Ch'eng I espoused many methods of investigation—induction, deduction, the study of history and other disciplines, and participation in human affairs.

Ch'eng Hao's stress on meditation influenced the later idealist school of Neo-Confucianism founded by LU HSIANG-SHAN (1139–93) and WANG YANG-MING (1472–1529). A decade after Ch'eng I's death CHU HSI (1130–1200) began to expand Ch'eng I's ideas into what came to be called the Ch'eng-Chu (after its two most important exponents) rationalist school of Chinese philosophy; it dominated official circles until the Republican Revolution of 1911.

CHENG-I TAO \ˈjəŋ-ˈē-ˈdaü\, *Pinyin* Zhengyidao (Chinese: "Way of Orthodox Unity"), Taoist sect, established during the end of the Sung Period (960–1279). During the centuries preceding the 1200s, the T'IENT-SHIH TAO (Way of the Celestial Masters), centered at Lung-hu Shan (Dragon-Tiger Mountain), had been eclipsed by the prestige of MAO SHAN. A revitalization occurred, however, when the 30th celestial master, Chang Chi-hsien, was four times summoned to court by the Sung emperor Hui-tsung, who hoped for support for his threatened reign. Chang Chi-hsien was credited with a renovation of the ancient sect, thereafter called Cheng-i tao, and with the introduction of the influential rites of the "five thunders" (*wu-lei*) into Taoist liturgy.

CHEN-JEN \ˈjən-ˈrən\, *Pinyin* zhenren (Chinese: "realized, perfected, or true man"), in TAOISM, a god or deified mortal; the term has been the official title of the head of the Cheng-i Taoist sect since the late 13th century.

The Taoist sage CHUANG-TZU used the term to refer to the Taoist ideal man who had achieved immortality and was immune to earthly desires and dangers.

CHEN TAO ʼjən-ˈdau\ (Chinese: “True Way”), one of the most recent and highly publicized of the new religions in Taiwan, founded by Chen Hong-min in Pei-pu, Hsin-chu county, Taiwan, in 1993.

Chen was a former professor of sociology at Chianan College of Pharmacology and Science when he received instruction from Chen Yu-hsia, a man he said was one of God’s representatives on earth. With guidance from his mentor, Chen founded a religion that is an eclectic mixture of BUDDHISM, popular religion, CHRISTIANITY, and New Age Western cults with belief in extraterrestrial intervention in human affairs. Chen laid out a complex theology based on ideas of spiritual energy—a variation of Chinese *ch’i-kung* thought—modifying traditional Chinese popular ideas in accordance with his reading of Western physics and Asian and Western ideas of demonology. Preaching that much of the world is dominated by evil spirits, he integrated Christian millennialist and eschatological ideas into his theology, calling himself a prophet who was able to chart the course of the coming conflagration and the road to individual salvation. Pei-pu was the chosen place because, according to Chen, it was a place where spiritual energy created by God would flow from heaven to earth.

Chen developed his cult, published texts and works on his doctrine, and, according to some sources, convinced his followers to give him between \$30,000 and \$60,000 to gain passage aboard the spaceships—disguised as clouds—that would take them away after landing on earth in 1999. He also persuaded these followers to move to San Dimas, Calif., U.S., to await God’s coming; they migrated in 1995. He then became convinced that Garland, Texas, would be the place where God would come, for to his ears “Garland” sounded like “Godland.” He and his followers then moved to Texas in 1997.

Chen predicted that God would announce his plans and materialize on earth in human form, recognizable to Chen, on March 31, 1998. Before his incarnation—or, as Chen believed, simultaneous multi-incarnation—God would announce his formal SECOND COMING on channel 18 on television on March 25. When the day came and nothing happened, Chen revised his predictions. In the weeks that followed he relocated his cult, and many of the members returned to Taiwan or applied for legal immigrant status in the United States. *See also* NEW RELIGIOUS MOVEMENTS; MILLENNIALISM.

CHEN YESSU CHIAO-HUEI ʼjən-ˈye-ˈsə-ˈchyaü-ˈhwä\ (Chinese: “True Jesus Church”), Chinese religious movement that evolved as a result of the Pentecostal charismatic revivals (1900–20) in the United States.

In 1917 a number of Christians from Shantung (Shandong) province in northeastern China listened to charismatic missionaries preaching, obtained materials, and then returned to Beijing where they began a church. The new church was built upon the teachings of the Pentecostal and Holiness churches in the United States but remained fiercely independent. This new church, the True Jesus Church, developed a theology that centered on the works of the HOLY SPIRIT as reflected in speaking in tongues, full immersion BAPTISM, and worship on the Hebrew SABBATH. The church also developed its own polity. The True Jesus Church expanded to the provinces along the China coast during the late 1910s and the 1920s and then took root in Taiwan in the late 1920s and the interior of the mainland in the late 1940s. After the Chinese Civil War (1945–49), the church was persecuted, and its community virtually disap-

peared from the mainland. However, Taiwan proved to be a safe haven, and the church developed there among Taiwanese and Hakka Chinese, among newly arrived immigrants from the Chinese mainland, and among the non-Chinese indigenous peoples of the island. It has become one of the largest independent churches operating on Taiwan and also has churches in the United States. In recent years the church’s leaders have tried to renew their church in mainland China.

CHERUB, plural cherubim, in Jewish, Christian, and Islamic literature, a celestial winged being with human, animal, or birdlike characteristics who functions as a throne bearer of the deity. Derived from ancient Middle Eastern MYTHOLOGY and ICONOGRAPHY, these celestial beings serve important liturgical and intercessory functions in the hierarchy of ANGELS. The term most likely derives from the Akkadian *kāribu*, or *kūribu* (from the verb *karābu*, meaning “to pray,” or “to bless”).

Within JUDAISM, the OLD TESTAMENT descriptions of the cherubim emphasize their supernatural mobility and their cultic role as throne bearers of God, rather than any intercessory functions. In CHRISTIANITY the cherubim are ranked among the higher orders of angels and, as celestial attendants of God, continually praise him. Known as *karūbiyūn* in ISLAM, the cherubim continuously praise God by repeating the *tasbīḥ* (“Glory to Allāh”) and dwell in peace in an area of the heavens that is inaccessible to attacks from IBLĪS, the devil.

CH’I ʼchē\, *Pinyin* qi (Chinese: “breath,” or “force”), in Chinese philosophy, the ethereal substance of which everything is composed. Early Taoist philosophers and alchemists regarded *ch’i* as a vital force associated with the breath and bodily fluids and developed techniques to alter and control the movement of *ch’i* within the body; their aim was to achieve physical longevity and spiritual power. Manipulation of *ch’i* is a central aspect of Chinese meditation, medicine, and MARTIAL ARTS.

Neo-Confucian philosophers of the Sung dynasty (960–1279 CE) regarded *ch’i* as emanating from the Great Ultimate (T’ai-chi) by way of LI, the prime ordering principle of the universe. This school, whose ideas predominate in traditional Chinese thought, held that *ch’i* was transformed through the yang (active) and yin (passive) modes into the Five Elements (*wu-hsing*; wood, metal, earth, water, and fire), which in turn formed the basic constituents of the physical universe. (*See also* YIN-YANG.)

CHICOMEKOATL ʼchē-kō-mā-kō-ä-täl\ (Nahuatl: “Seven Snakes”), also called Xilonen (“[She] Went About/Lived [as an] Ear of Green Corn”), Aztec goddess of sustenance and corn, often the consort of the corn god, Centéotl, and one of the most ancient and important goddesses in the Valley of Mexico. Chicomecoatl is depicted with her body and face painted red, wearing a rectangular headdress or pleated fan of red paper, and often holding a double ear of corn in each hand.

CHIH-I ʼjə-ˈē\, *Pinyin* Zhiyi, also called Chih-k’ai ʼ-ki\ (b. 538, Hunan province, China—d. 597, Mount T’ien-t’ai, Chekiang province), Buddhist monk, founder of the eclectic T’ien-t’ai Buddhist sect, which was named for his monastery on Mount T’ien-t’ai in Chekiang, China. His name is frequently but erroneously given as Chih-k’ai.

Orphaned at 17, Chih-i turned to the monastic life. He

was a disciple of the great Buddhist master Hui-ssu from 560 to 567. Chih-i was intimately associated with the imperial government, first with the Ch'en dynasty in southern China and then with the Sui dynasty, which eventually reunified the country.

Confronted with the many varieties of Buddhist thought that existed in his time, Chih-i exhibited skill at compromise and classification. He regarded the various Buddhist doctrines as true and assumed they had all been present in the mind of Śākyamuni (the BUDDHA GOTAMA) from the time of his enlightenment. According to Chih-i, the Buddha unfolded his teachings in five periods, taking into account the capacity of his listeners: as they became more enlightened, they could absorb more profound doctrines. Chih-i believed the LOTUS SUTRA to be the Buddha's most advanced teaching, and Chih-i helped establish it as the most popular SCRIPTURE of east Asia.

He criticized both those who indulged in a purely intellectualized BUDDHISM and those who in reaction practiced a religion without a doctrinal base. His sect, which claimed more than 5,000,000 adherents in Japan in the late 20th century, was the leading sect in China in the 8th and 9th centuries.

CH'I-KUNG \ˈchē-'gūŋ\, *Pinyin* qigong ("ch'i work," or "working with the energy of ch'i"), loose set of physical and mystical techniques designed to reestablish bodily and spiritual health by regulating and manipulating the energy known as *ch'i*. These practices are related to ancient traditions often associated with TAOISM. It is, however, not exclusively Taoist and has similarities with traditional Chinese medicine, "inner alchemy," the martial arts, and T'ai-chi ch'uan. Having become wildly popular in post-Maoist China and other Chinese communities, it has taken on the characteristics of a revivalistic HEALING CULT promoted by various charismatic *ch'i-kung* masters.

CHILAM BALAM, BOOKS OF \ˈchē-'lām-bā-'lām\, documents written in Yucatec MAYA with Spanish characters during the 17th and 18th centuries. A principal source of knowledge of ancient Mayan custom, the 12 surviving manuscripts contain myth, PROPHECY, medical lore, calendrical information, and historical chronicles. Those of Chumayel, Tizimin, and Maní (towns where they were written) are particularly important sources for scholars studying Mayan history. *Chilam Balam* means "spokesman of the jaguar."

CH'I-LIN \ˈchē-'lin, -'lən\, *Pinyin* qilin, in Chinese mythology, a kind of unicorn whose rare appearance often coincides with the imminent birth or death of a sage or illustrious ruler. A *ch'i-lin* usually has a single horn on its forehead, a yellow belly, a multicolored back, the hooves of a horse, the body of a deer, and the tail of an ox. It is too gentle to tread upon or eat living vegetation.

The first *ch'i-lin* is said to have appeared in the garden of the legendary Huang-ti (Yellow Emperor) in 2697 BCE. Some three centuries later a pair of *ch'i-lin* were reported in the capital of Emperor YAO. Both events bore testimony to the benevolent nature of the rulers. A *ch'i-lin* was said to have appeared to the pregnant mother of CONFUCIUS, whereupon she coughed up an inscribed jade tablet that foretold the fu-

ture greatness of her son. Confucius' death was foreshadowed when a *ch'i-lin* was injured by a charioteer.

CHIMERA \kī-'mir-ə, ki-\, in Greek MYTHOLOGY, a fire-breathing female monster resembling a lion in the forepart, a goat in the middle, and a dragon behind. She devastated Caria and Lycia until she was slain by BELLEROPHON. In art the Chimera is usually represented as a lion with a goat's head in the middle of its back. The word is now used to denote a fantastic idea or figment of the imagination.

CHINESE CLASSICS: *see* FIVE CLASSICS.

CHINESE RITES CONTROVERSY, a 17th–18th-century argument originating in China among ROMAN CATHOLIC missionaries about whether the ceremonies honoring CONFUCIUS and family ancestors were incompatible with Christian belief. The JESUITS

believed that they probably were not and that they could be tolerated within certain limits; the DOMINICANS and FRANCISCANS took the opposite view and carried the issue to Rome. In 1645 the Congregation for the Propagation of the Faith, on the basis of a brief submitted by the Dominicans, condemned the rites. After considering the arguments of the Jesuits, however, the same congregation lifted the ban in 1656.

The continuing controversy was considered by eight popes and by the K'ang-hsi emperor. By the end of the 17th century, many Dominicans and Franciscans had come to share the Jesuits' opinion, but Rome disagreed. In a decree of 1704, reinforced by a bull in 1715, Clement XI banned the rites. Benedict XIV in 1742 reaffirmed the prohibition and forbade further debate. But a decree of Dec. 8, 1939, authorized Christians to take part in ceremonies honoring Confucius and to observe the ancestral rites. The SECOND VATICAN COUNCIL (1962–65) proclaimed the principle of admitting native ceremonies into the liturgy of the church whenever possible. *See also* MATTEO RICCI.

CHING-TSO \ˈjīŋ-'dzwò\, *Pinyin* jingzuo (Chinese: "quiet sitting"), meditation technique associated with NEO-CONFUCIANISM. Influenced by both Taoist and Ch'an (ZEN) Buddhist forms of meditation, it involves sitting in a relaxed fashion with the intent of quieting the flow of discursive thought and the attainment of the original goodness of human nature (the condition of Confucian sagehood).

CHIRON \ˈkī-'rən\, in Greek mythology, leader of the CENTAURS, the son of the god CRONUS and Philyra, a nymph; his parentage set him apart from the other centaurs, who were sirens by IXION. Chiron lived at the foot of Mount Pelion in Thessaly and was famous for his wisdom and knowledge of medicine. Many Greek heroes, including HERACLES, ACHILLES, JASON, and ASCLEPIUS, were instructed by him. Accidentally pierced by a poisoned arrow shot by Heracles, he suf-

Deutsche Fotothek

fered agony from the festering wound until he renounced his immortality in favor of PROMETHEUS and was placed among the stars as the constellation Sagittarius.

CHISHTĪYA \chish-'tē-ə\, Muslim Sufi order in India and Pakistan, named for Chisht, the village near Herat (in modern Afghanistan) in which the founder of the order, Abū Ishāq of Syria, settled. The Chishtīya were brought to India by Khawāja Muʿīn al-Dīn Chishtī in the 12th century. Since the 16th century, Muʿīn al-Dīn's shrine in Ajmer, Rājasthān, has become the most frequented Muslim PILGRIMAGE site in the subcontinent; it also attracts Hindu devotees.

During the period of the Great SHAYKHS (c.1200–1356), a centralized network of Chishtīya monasteries (*khanqahs*) were established in the northern provinces of Rājputāna, the Punjab, and Uttar Pradesh. From the 14th century, these monasteries were provincial institutions where branches of the order took root, notably the Ṣābirīya branch in the 15th century at Rudawli and the Nizāmīya, revived in the 18th century Delhi. Many of the teachers of the DEOBAND SCHOOL, founded in the 19th century, were Chishtī.

Great emphasis was originally placed by the Chishtīya on the Sufi doctrine of the unity of being (*waḥdat al-wujūd*), oneness with God. Thus, material goods were rejected as distracting from the contemplation of God; no connection with the state was permitted; and pacifism was embraced. The recitation of the names of God, both aloud and silently (*dhikr jahri*, *dhikr khafi*), formed the cornerstone of Chishtī practice. The order is still widely known for the performance of moving *qawwālī* songs at its assemblies. The order's prominence during the Mughal era (1520–1857) led it to permit ownership of property and other modifications of former practice.

CH'IU CH'U-CHI \jyō-'jü-'jē\ (monastic name), *Pinyin* Qiu Chuji, *original name* Ch'ang-ch'un \chāng-'chün\, *Pinyin* Changchun (b. 1148, Chi-hsia, China—d. 1227, Beijing), Taoist monk and alchemist who journeyed from China to visit Genghis Khan, the famed Mongol conqueror, at his encampment north of the Hindu Kush mountains. The narrative of Ch'iu Ch'u-chi's expedition, *The Travels of an Alchemist*, written by his disciple-companion Li Chih-ch'ang, vividly depicts the land and people between the Great Wall of China and Kābul (now in Afghanistan) and between the Yellow Sea and the Aral Sea.

Ch'iu Ch'u-chi was a member of a Taoist sect known for extreme ASCETICISM and for the doctrine of *hsing-ming*, which held that man's natural state had been lost but could be recovered through prescribed practices. In 1188 he was invited to give religious instruction to the Juchen dynasty emperor Shih Tsung, then reigning over northern China.

In 1215 the Mongols captured Beijing, and in 1219 Genghis Khan sent for Ch'iu Ch'u-chi. Having received an invitation from the Khan's brother, Temüge, who lived in northeastern Mongolia, he left Beijing, crossed the Gobi Desert, and visited Temüge's camp near Buir Nor. Ch'iu Ch'u-chi arrived in Samarkand, now in Uzbekistan, in mid-winter (1221–22) and reached the Khan's Hindu Kush mountain camp in spring. He returned to Beijing in 1224.

CH'OE SI-HYŎNG \chœ-'sē-'hyŏng\ (b. 1827, Korea—d. 1898, Seoul [now in South Korea]), second leader of the Korean apocalyptic antiforeign Tonghak (Ch'öndogyo) religion, who helped organize the underground network that spread the sect after the 1864 execution of its founder, Ch'oe Che-u, for fomenting rebellion.

After Ch'oe Che-u's death, Ch'oe Si-hyŏng published in 1880 and 1881 the first two Tonghak SCRIPTURES, in which he expanded his predecessor's idea that all men are equal before heaven and must serve heaven, a principle onto which he grafted an ideal of public service. Meanwhile, he continued to preach the necessity of Korea's becoming as strong as the Western imperialist powers. In 1892 he mobilized his followers to stage a demonstration under the banner of "Expel the West, Expel the Japanese, and Inculcate Righteousness," and in 1894 he led the so-called Tonghak Revolt against the "corrupt government." The uprising was viciously suppressed, and in 1898 Ch'oe Si-hyŏng was finally arrested and executed, but not before Tonghak had spread throughout Korea.

CHOGYE-CHONG \chō-'gye-'chōng\, *also known as* Chogye, one of the largest Buddhist sects in Korea, founded by BOJO GUKSA (1158–1210). It was derived from Ch'an, the Chinese form of BUDDHISM, known as Sŏn in Korea and as ZEN in Japan. The Chogye-chong stressed the importance of studying the AVATAMSAKA SŪTRA (*Garland Sutra*) and of meditation, with the goal of acquiring calmness of mind.

CH'ÖNDOGYO \chän-'dō-'gyō\ (Korean: "Religion of the Heavenly Way"), Korean religion that combines elements of CONFUCIANISM, BUDDHISM, TAOISM, shamanism, and ROMAN CATHOLICISM. The movement was formerly called Tonghak ("Eastern Learning"). Converts to Ch'öndogyo dedicate themselves to God by placing clean water on an altar in a ritual called *ch'öngsu*. They are instructed to meditate on God, offer prayers (*kido*) upon leaving and entering their homes, dispel harmful thoughts, and worship God in church on Sundays.

The essence of Ch'öndogyo is said to be contained in a formula (*chumun*) that is recited as the way to enlightenment: "May the creative power of the universe be within me in abundance. May heaven be with me and every creation will be done. Never forgetting this truth, everything will be known." The basic principle of Ch'öndogyo is that "Man and God are one" (*In-Nae-Ch'ön*); this oneness is realized by individuals through sincere faith in the unity of their own body and spirit and through faith in the universality of God.

Ch'öndogyo was established by Ch'oe Che-u in 1860, after what he said was a direct inspiration from the Heavenly Emperor (Ch'önju). Ch'oe sought to effect change in the social order, a political course which resulted in his execution in 1864. Ch'oe Si-hyŏng, already prominent in the movement, took over the leadership but met a similar fate in 1898. The third leader, Son Pyŏng-hi, changed the name to Ch'öndogyo in 1905. By the late 20th century there were some 3,000,000 adherents.

CHŎNG TO-JŎN \chän-tō-'jŏn\ (d. 1398), Korean Neo-Confucian scholar who helped to overthrow the Koryŏ kingdom (918–1392 CE) and establish the Chosŏn kingdom (1392–1910 CE). He was of a nonaristocratic family and promoted Confucian learning and the rise of the bureaucratic class. With the fall of the Koryo patronage of BUDDHISM and the rise of the Chosŏn kingdom, he championed a sweeping reform of education and government along Neo-Confucian lines. Related to these reforms were his polemical writings against Buddhism, TAOISM, and other traditional shamanistic practices. Adhering to an exclusive Neo-Confucian political ideology and philosophical metaphysics, he condemned Buddhism and Taoism as being inherently

antithetical to public-spirited service. Developments in later Buddhism and Taoism in Korea often represent an ameliorative response to these attacks.

CHOSEN PEOPLE: *see* ISRAEL.

CHOSEN WOMEN, *Quechua* Aclla Cuna, or Aklya Kona ("Virgins of the Sun"), in INCA religion, celibate women who lived in temples and prepared ritual food, maintained a sacred fire, and wove garments for the emperor and for ritual use. In the early 16th century the Virgins numbered several thousand and were governed by a high priestess, the Coya Pasca, a noblewoman believed to be the consort of the sun god. The Virgins were villagers selected for their beauty and talent at the age of 8 or 10 and shut up in the temples for six or seven years. Some became sacrificial victims, whereas others were made imperial concubines or the wives of nobles.

CHOU TUN-I \zhō-'dūn-'ē\, *Pinyin* Zhou Dunyi, also called Chou Lien-Hsi \-'lyen-'shē\, *Pinyin* Zhou Lianxi (b. 1017, Ying-tao, Tao-chou, China—d. 1073, Nan-k'ang-ch'ing), Chinese philosopher considered the most important precursor of NEO-CONFUCIANISM.

Chou was born into a highly influential family and served in high governmental capacities throughout most of his life. He successively held the posts of magistrate, prefectural staff supervisor, professor of the directorate of education, and assistant prefect before resigning from office a year before his death.

In his reformulation of CONFUCIANISM, Chou drew from Taoist doctrines and elaborated on the I-CHING, or *Book of Changes*. His short treatise *T'ai-chi-t'u shuo* ("Explanation of the Diagram of the Great Ultimate") developed a metaphysics based on the idea that "the many are [ultimately] one, and the one is actually differentiated into the many." Chou combined Taoist schema of the universe with the I-ching's concept of an evolutionary process of creation: originating from the Great Ultimate (which is simultaneously the Non-Ultimate) are yin (tranquillity) and yang (movement). The interactions of yin and yang then give rise to the Five Elements (fire, earth, water, metal, and wood), and the integration and union of all of the preceding entities give rise to the male and female elements, which in turn are the cause of the production and evolution of all things. When humans react to the external phenomena thus created, the distinction between GOOD AND EVIL emerges in their thought and conduct.

In a treatise entitled *T'ung-shu* ("Explanatory Text"), Chou's restatement and reinterpretation of Confucian doctrines laid the basis for the ethics of later Neo-Confucianism. The sage, or superior man, reacts to external phenomena according to the principles of propriety, humanity, righteousness, wisdom, faithfulness, and tranquillity. Chou viewed sincerity as the foundation of human moral nature, the source of one's ability to distinguish good from evil, and thus also of one's ability to perfect oneself.

Chou's work laid the foundation for the more systematic exposition of Neo-Confucianism provided by his later disciples, especially CHU HSI (1130–1200). Because of his efforts, the *I-ching* was revered as a Confucian classic by Chu and other Neo-Confucianists of the late Sung dynasty.

CHRIST, CHURCH OF, any of several conservative Protestant churches, found chiefly in the United States. Each church is known locally as a Church of Christ, and its

members as Christians; and each church is autonomous in government, with elders, deacons, and a minister or ministers. There is no organization beyond the local church.

The early history of this group is identical with that of the DISCIPLES OF CHRIST. They developed from various religious movements in the United States in the early part of the 19th century, especially those led by Barton W. Stone and Thomas and ALEXANDER CAMPBELL. They pleaded for the BIBLE as the only standard of faith, without additional creeds, and for the unity of the people of God by the restoration of New Testament CHRISTIANITY. Refusing affiliation with any sect, they called themselves simply Christians.

Controversies developed among the Christians about the middle of the 19th century, principally over the scriptural authorization for organized MISSION societies and the use of instrumental music in worship. In 1906 in the federal census of religion there was added to the earlier listing of Disciples of Christ a new listing of Churches of Christ that enumerated those congregations opposing organized mission societies and instrumental music. The NEW TESTAMENT mentions neither, and, therefore, the Churches of Christ consider them to be unauthorized innovations.

After the division, the Churches of Christ continued to grow. Though the churches oppose organized mission societies, missionary work is supported by individual churches and is carried on in 100 foreign fields.

Sunday worship in the Churches of Christ consists of unaccompanied congregational singing, prayer, teaching, preaching, giving, and the Lord's Supper. Other worship and teaching services are held during the week.

CHRISTIAN CASTE, in India, the social stratification that persists among Christians, based upon CASTE membership at the time of an individual's own or of an ancestor's conversion. Indian Christian society is divided into groups geographically and according to denomination, but an additional factor is caste. Caste groups may worship and even dine together, but, as a rule, they do not intermarry.

The problem of reconciling change in religious belief with existing social tradition has dominated the history of CHRISTIANITY in India. The Syrian Christians along the Malabar coast trace their origin to the legendary visit of ST. THOMAS the Apostle, early in the 1st century CE. Many of his converts were of high birth, and after conversion they continued to be accorded a mid-rank status by the Hindu society that surrounded them.

With the arrival of Europeans from the 16th century onward, other groups of Christian converts emerged. Portuguese missionaries converted thousands of fisherfolk who then had little in common with the Syrian Christians. Roberto de Nobili (16th–17th century), a JESUIT of noble birth, took a different path by understanding his position to correspond to that of a BRAHMIN ascetic. Becoming expert in Sanskrit and Tamil, he hoped for India's large-scale conversion to Christianity by way of an appeal to its scholars. He sought to dissociate himself from the Portuguese missionaries who were converting the fisherfolk. These practices gave him acceptance among the Indian upper classes, but brought him into conflict with his own church.

In the 19th century, Protestant missionaries arrived in India in large numbers. They insisted on social reform along with religious conversion; the result was that most of their converts were from the lowest social classes.

Caste distinctions among contemporary Indian Christians are breaking down at about the same rate as those among Indians of other faiths. In some instances the old

traditions persist, and there are ROMAN CATHOLIC churches where members of each caste sit together for worship.

CHRISTIAN FUNDAMENTALISM, conservative movement in American PROTESTANTISM arising out of the MILLENNIALISM of the 19th century and emphasizing as fundamental to CHRISTIANITY the literal interpretation and absolute inerrancy of the SCRIPTURES, the imminent and physical SECOND COMING of JESUS CHRIST, the VIRGIN BIRTH, the RESURRECTION, and the ATONEMENT.

The roots of fundamentalism lie in the American millenarian movement. In the 1830s and '40s there were numerous outbreaks of ADVENTIST excitement. They were eventually channeled into a movement largely through the Niagara Bible Conference. Initiated by James Inglis, a New York City BAPTIST minister, the conference continued under James H. Brookes (1830–97), a St. Louis, Mo., PRESBYTERIAN minister and editor of the influential millenarian periodical *The Truth*. The group held annual summer conferences until 1899.

By the end of the century the movement had emerged as an alternative to, and escape from, labor unrest, social discontent, the rising tide of ROMAN CATHOLIC immigration, and the challenges posed by the rise of liberal BIBLICAL CRITICISM. Growing numbers of Protestant clergy and laity turned to some form of millenarianism, and the evangelist Dwight L. Moody (1837–99) provided in his Northfield conferences an influential platform for millenarian expression.

The high point of millenarian influence upon the conservative tradition within evangelical Protestantism occurred when millenarians cooperated with other defenders of the inerrancy of the BIBLE, notably a group of conservative scholars from the Princeton Theological Seminary in New Jersey, in founding the American Bible League in 1902 and in writing a series of 12 pamphlets entitled *The Fundamentals*. The pamphlets, published between 1910 and 1915, attacked the current theories of biblical criticism and reasserted the authority of the Bible.

At the end of World War I, the millenarians held a number of conferences in New York City and Philadelphia that encouraged the formation of a larger and more comprehensive organization in 1919, the World's Christian Fundamentals Association. In spite of vigorous leadership, however, the association never prospered.

The liberal, or modernist, tendency that was their target had been of slight importance before the turn of the century. After that, however, the methods of "higher criticism" had begun to pervade the universities and the seminaries. By 1914, among the Episcopal, Methodist, Baptist, and Presbyterian denominations in the North, liberalism had gained many adherents. The battle to prevent the reception and spread of these new views had

been lost. During the 1920s it only remained to be decided whether the liberals could be forced out of the denominations.

Not every Protestant denomination was affected by intellectual controversy during the 1920s. Serious controversy did erupt, however, among the northern Baptists and the Presbyterians in the northern states. Within the Presbyterian church, conservatives had, with the help of the millenarians, imposed a set of essential doctrines upon the denomination in 1910. To avoid a SCHISM within the Presbyterian church in the United States, a Commission of Fifteen was appointed to work out a compromise. Their report held that the Presbyterian denomination had traditionally tolerated a diversity of opinion and rejected the right of the General Assembly to determine which were the essential doctrines of the Christian faith. The report virtually destroyed the conservatives' position within Presbyterianism.

Displeasure with the teaching of evolution, as well as anxiety over the spread of biblical criticism, gained popular momentum in the 1920s, however. Fundamentalists, believing that the Bible could not be reconciled with the view of the origin of life put forward by Charles Darwin, opposed evolution; and antievolution crusaders lobbied for legislation to prevent the teaching of evolution in the public schools.

During the 1930s and '40s the institutional structure of modern fundamentalism developed. Some fundamentalist Presbyterians and Baptists broke away from their denominations to form new churches. Many fundamentalists joined a congregation of one of the smaller sects that had remained faithful to the creed of biblical literalism and premillennialism, such as the PLYMOUTH BROTHERS and the Evangelical Free Church, or one of the many independent Bible churches and tabernacles that arose during that period. Much of the structure of modern fundamentalism is provided by Bible institutes and Bible colleges. Many of these schools operate very much like denominational headquarters and provide a bond between otherwise isolated congregations.

The most significant influences upon the fundamentalist and evangelical churches in America since World War II have been the prosperity of the postwar decades, the religious revival of the 1950s, and the alleged threat of communist subversion. The issue of communism that preoccupied the American public during the 1950s closely resembled the traditional concerns of fundamentalism—namely, biblical criticism and evolution—which fundamentalists believed came from abroad, seemed to spread uncontrollably and subversively, and tended to undermine Christianity. The anticommunist activities of the mid-20th century virtually duplicated the history of the antievolution crusade of the 1920s.

In the late 20th century, while fundamentalist beliefs had not changed significantly since the Niagara Conference, the method of disseminating those beliefs had. Evangelists such as BILLY GRAHAM had paved the way for televangelists, and the fundamentalist movement became highly effective in using television broadcasting to reach its followers. The movement also had success creating political change desired by its members through such organizations as the Moral Majority, a fundamentalist citizens' organization under the leadership of Baptist minister Jerry Falwell. The "Christian right," as the movement was sometimes called, campaigned against legalized abortion, homosexual rights, and the women's Equal Rights Amendment, and for legalized school prayer.

CHRISTIANITY

C

Christianity is the religion that traces its origins to Jesus of Nazareth, whom it affirms to be the chosen one (Christ) of God. Christianity is the religion of one-third of the people of the world, and more than 2,100,000,000 people are identified in some way or other with the Christian movement, with substantial populations on every continent. Despite its representation and support in many lands today, Christianity has been principally a Western phenomenon. Yet the influence of Christianity extends beyond the borders of traditional Christendom. It has affected other religions and been affected by them in return, and its ethos continues to shape the characters of individuals and nations that no longer live by its creed.

HISTORY OF CHRISTIANITY

Christianity begins with JESUS CHRIST. The effects of his life, the response to his teachings, and the experience of his death and RESURRECTION were the beginnings of the Christian community. When PETER, Christ's APOSTLE, is represented in the NEW TESTAMENT as confessing that Jesus is "the Christ, the Son of the living God," he speaks for the Christianity of all ages. And it is in response to this CONFESSION that Jesus is described as announcing the foundation of the Christian church: "You are Peter, and on this rock I will build my church, and the powers of death shall not prevail against it."

The ministry of Jesus. The Gospels represent Jesus as calling God "Father"; the God whom Jesus proclaimed and revealed was the forgiving Father in the PARABLE of the prodigal son (Luke 15:11 ff.), but he was also the wrathful king in the parable of the unmerciful servant (Matthew 17:23 ff.). Rather than mitigating the holiness of God and the severity of his judgment as described in the OLD TESTAMENT, Jesus made God's requirements even more stringent (Matthew 5–7). (That is, Jesus' message in this passage warns that the "outer" purity caused by following the laws of Leviticus is no longer sufficient for God—a purity of thought is also necessary for God.) Through Jesus' message God was conveying a threat, a demand, and a promise, all at once. Paradoxically, both the rigor and the tenderness of God received greater emphasis in his proclamation than they had before.

This was partly due to the close connection in Jesus' message between the picture of God and the announcement of the KINGDOM OF GOD. "The kingdom of God is like . . ."—these words form the introduction to many of the parables in which Jesus described the kingly activity of God. By "kingdom" he seems to have meant not principally the realm of God but the reign of God: not a country or territory but a divine activity and a relation. (It is therefore foreign to Jesus' teaching when Christians speak of their "building the kingdom.") Clearly, Jesus directed his hearers to that which was to come when he spoke to them about the kingdom—they did not and could not take possession of the kingdom in their time. In this sense it is valid to describe Jesus' view of the kingdom as futuristic. But there are also statements in the Gospels, and not merely in the Fourth Gospel (John), that have no meaning unless this coming kingdom, while not yet fully arrived, was at least beginning. Jesus himself appears in the Gospels as the herald, but also as the sign and the bringer of the kingdom. Jesus brought the kingdom, and the kingdom was bringing Jesus: this is the only way to summarize the relation between Jesus' coming and the coming of the kingdom according to the Gospels. Therefore he could say to his enemies that the kingdom was "in the midst of you" (Luke 17:21; not "within you"); for he himself was the sign of the kingdom in their midst. God's reign was working in hidden ways, but one day soon it would come out of its hiding. Until then only some were privileged to know "the secrets of the kingdom of heaven" (Matthew 13:11). Hence it was with the announcement of the kingdom that Jesus began his public preaching (Mark 1:15).

Joined directly to this announcement of the kingdom in that earliest account of Jesus' preaching was the invitation to repent and to believe the Gospel. Repentance meant a change of mind, a break with the past and a new direction. The promises of the kingdom were not for those who boasted of their moral goodness before God but for those who were genuinely sorry for their SINS (Luke 18:9–14). Some of the strongest words in the Gospels are those in which Jesus denounced the pride of religious men in his time, with their claims upon God and the inner corruption of their hearts (Matthew 23:25–28). Because such claims and such corruption were not restricted to Jesus' contemporaries, these denunciations and this invitation to repentance and faith formed a continuing part of the Christian witness. One of the purposes of Jesus' stress upon the severity of God's demands was to bring about the kind of awareness out of which true repentance would issue. But the call to repentance was also an invitation to "believe the Gospel." The kingdom was a gift of God's good pleasure

(Luke 12:32), and the God who laid his demands upon humans was also the God whose purpose it was to forgive them their sins. Hence the only response proper to his invitation and his generosity was the response of faith, described by Jesus as resembling the trust of children (Mark 10:15).

The primary commandment was to believe in God and to love him. Next to this commandment, Jesus put the “second commandment” (Mark 12:31) of love toward one’s neighbor. In enjoining such love, Jesus insisted that outward performance did not suffice. Not merely murder but even hatred was prohibited, and not merely adultery but even lust (Matthew 5:21–30). What was revolutionary about Jesus’ ethic of the kingdom was this insistence upon purity of thought as well as action, coupled as it was with his primary emphasis upon the mercy and righteousness of God. Other issues do appear in the Gospels—*e.g.*, Jesus also spoke of marriage, of religious and cultic duties, of prayer and thanksgiving, of spiritual blindness and the illumination of God. But if there are any overarching themes to be found in Jesus’ teachings, these themes center around God, the kingdom of God, and the call to repentance, and faith and love for one’s neighbor.

The mission of Jesus. In the Gospels Jesus is described as having had the sense that God had called him for a special duty, but the descriptions of that sense of duty are not uniform. This has led New Testament scholars to concern themselves with the problem of development in the messianic consciousness of Jesus. Two questions are uppermost in that problem: Is the identification of Jesus as the MESSIAH in the Gospels principally a construction by the later church, read back into the career of Jesus? If not, when and under what circumstances did Jesus come to think of himself as the appointed Messiah? LUKE’S Gospel even makes this identification a part of its infancy narratives (Luke 2:26), while JOHN’S Gospel

Saints Matthew (opposite, below), Mark (opposite, above), Luke (below), and John (above), the four Evangelists, with their symbols, illuminations from an English Gospel, c. 1130

credits it to ANDREW, the first of the disciples to be called (John 1:41). The title “Messiah” came from the Old Testament but had undergone further development in the period immediately preceding the time of Jesus, although it must be stated that the term was by no means as prominent among Jews as Christians often tend to suppose. Among many of the common people the title had come to represent their hope for deliverance—deliverance either from sin, or, at least, from the Romans. That hope for deliverance, coupled as it was with imaginative expectations of radical changes in the order of things, seems to have arisen with new fervor each time a new national or religious leader appeared, as happened, for example, when JOHN THE BAPTIST began his ministry (Luke 3:15); and with the coming of Jesus as a religious teacher and worker of mira-

cles, new speculation was raised as to whether he might not be the promised one (Matthew 16:14). The story of the entry into Jerusalem told by all four Gospels (see Matthew 21:1 ff.) and the account of the feeding of the five thousand in John's Gospel (John 6:14, 15) both disclose the character of the popular hope as Jesus stirred it up once more.

But Jesus not only stimulated this hope, he also reinterpreted it. In the expectations of ISRAEL there were many elements, two of which were the expectations of the Messiah, the Son of DAVID, who would restore the lost glory of his father's kingdom; and the idea, summarized most fully in Isaiah 53, that God's purposes for Israel could not achieve their fulfillment except through the suffering of God's servant. It is not altogether clear how closely or how often these two elements had ever been combined in previous versions of the messianic ideal, but the reactions of Jesus' contemporaries and disciples seem to suggest that the combination had rarely if ever been a part of Israel's hope. From the sources it is evident that such a combination eventually determined Jesus' own conception of his mission. Immediately after the great messianic disclosure at Caesarea Philippi (Matthew 16:16), Jesus goes into a discussion of the CRUCIFIXION (Matthew 16:21 ff.). The combination, significantly, comes out most clearly in one of the post-Resurrection scenes (Luke 24:26, 27), where the disciples learned to identify the Davidic king with the suffering servant. It may be the intent of the Gospels to say that fear of the political interpretation of the Messiah led Jesus to disclose his messianic mission to his disciples only gradually, until the course of the terminal events at Jerusalem should make any such political interpretation impossible. But some scholars have taken the Gospels to be saying that the full meaning of his messianic vocation only came upon Jesus over a period of time and that part of this meaning was his realization that the Messiah had to suffer and die. One problem with this notion of development is the difficulty encountered with any attempt to fix chronological sequence on the Gospels, and thus on the career and inner life of Jesus.

A special problem in the interpretation of Jesus' vocation is the so-called "messianic secret." Among the first to recognize Jesus as the Christ in the Gospels were the DEMONS (Luke 4:41), whom he then charges to keep silent. Mark attaches a passage in which Christ admonishes silence from his disciples at both Caesarea

Philippi (Mark 8:30) and the TRANSFIGURATION (Mark 9:9). In Matthew and even more in John, on the other hand, Jesus is quite overt about his declarations (John 4:25, 26). Which of these portrayals more accurately represents the usual attitude of Jesus toward the matter of his messianic character? Some critics maintain on the basis of this and other evidence that Jesus never thought of himself as the Messiah at all: He suppressed the messianic hopes of others as much as he could, but, as part of the process of glorification that took place in the memories of his followers after his death, the disciples ascribed to him messianic claims that he had never made for himself. The majority of interpreters, however, trace the identification of Messiah and suffering servant to Jesus himself, even though they differ widely on the extent to which that identification remained Jesus' private secret until near the end. At least in part, the answer to these and related questions will depend upon one's attitude not only toward the New Testament but toward Jesus himself. For those Christians whose view of Jesus is determined by the decisions on dogma made by the ancient church, the question should read: How did the limited human nature of Jesus Christ in the days of his sojourn on earth share in that full awareness of his mission from the Father that was a continual part of his unlimited divine nature? According to his divine nature, he was omniscient and always knew himself to be the Christ, whether or not this awareness was always complete in his human nature. Passages such as Mark 13:32—in which Christ claims that the hour of the passing away of heaven and earth are known by “no man, no, not the ANGELS which are in heaven, neither the Son, but the Father”—would then have to apply only to his human nature, not to the person of Christ as a whole.

As already mentioned, part of the messianic ideal that Jesus' contemporaries cherished was the expectation that a radical change was in the offing, to affect not only political and national destiny but the arrangement of the universe itself. Jewish apocalyptic literature gave vivid voice to this expectation in language that often finds echoes in the Gospels, and these expectations continue to be the subject of debate among students of the New Testament. Some scholars maintain that Jesus shared the apocalyptic beliefs of his time and that he confidently expected the end of the world to come in the near future. Accordingly, his death was the way he expected the coming of the end to be set in motion. Other scholars of the Gospels claim that the ESCHATOLOGY of Jesus, his view of the last things on earth, was a “realized eschatology.” This means that the dramatic language of his apocalyptic utterances was intended to describe the “end” of human history—not the end understood as termination but the end understood as purpose, the appearance in human history of that which interprets, redeems, and judges it. In other words, Jesus was not talking about a finish so much as he was talking about a continuing feature of life seen under the judgment of God. A third way to interpret these utterances has been to say that in Jesus' own message both elements were present. Those in which “end” meant primarily “termination” found their way chiefly into the SYNOPTIC GOSPELS, while John's Gospel contains those that speak of the “end” as the continuing judgment of God. Again, a decision among these interpretations depends upon one's picture of Jesus. Traditional Christian doctrine, whether that of ROMAN CATHOLICISM, EASTERN ORTHODOXY, or PROTESTANTISM, forbids any interpretation that would either ascribe error to Christ's expectations or deny the ultimate termination of human history.

The title “Son of Man” was one of the symbols appearing in Jewish apocalyptic writings, and the Gospels frequently put it into the sayings of Jesus. Sometimes it merely takes the place of the personal pronoun “I,” as is evident from a comparison of Matthew 16:13 with Luke 9:18 and from other sets of parallel passages. At other times it is merely equivalent to “man,” which may indeed have been the original term in sayings like Mark 2:28. In some passages it may even refer, as it perhaps did in Psalms 8:4 (a passage applied in Hebrews 2:6–9 to the person of Jesus Christ), to man in his lowliness. But in some places it clearly carries the connotation it acquired in Jewish apocalyptic writings, possibly under the influence of Persian thought, of God's representative, anointed to bring in his kingdom. This connotation was most prominent in sayings like Matthew 24:27, 30,

and it may be that Jesus used it deliberately to avoid the title "Messiah." "Son of Man" appears in the Gospels approximately 80 times, carrying one of several of these connotations. The fact that Jesus used the title in the third person certainly does not prove, as some have contended, that he did not regard himself as the Son of Man; this was merely general Semitic usage, prevalent in Arabic even today. The implications of terms like "kingdom," "Son of Man," and "end" are therefore more complex than has often been realized, combining meanings that later interpreters have falsely set in opposition to one another.

The influence of Jesus on the Gentiles. Concerning the attitude and relation of Jesus to non-Jews we know very little. His use of a SAMARITAN in the familiar parable of Luke 10:30–35 and the later reports of his other contacts with this hated semi-Jewish people suggest that he had made an impression upon the memory of his followers by his freedom from the sort of parochialism that had often marked his people. What he said about "the rulers of the GENTILES" (Matthew 20:25) indicates how geographically limited his career was. The people spoken of in John 12:20, were not "Greeks," but Hellenistic Jews or perhaps Jewish proselytes of Greek descent. In other contacts with non-Jews he is reported to have healed the daughter of the Syrophenician woman (Mark 7:24 ff.) and the servant of the centurion (Matthew 8:11). It would seem that Jesus then had envisioned what the prophets had also predicted, that the kingdom of God would be universal, not restricted to the Jewish people; but apparently he saw that this would happen only after his death. In the closing scene of Matthew's Gospel (Matthew 28:19) as well as in the opening scene of the Acts (the ACTS OF THE APOSTLES 1:8), the risen Lord is portrayed as commanding that his followers bear witness to him throughout the Gentile world. But, despite these and other indications of Jesus' personal perspective, it was as an adherent of JUDAISM that he lived and among Jews that he was both accepted and rejected.

Opposition. The hostility to Jesus appears to have stemmed from diverse motives. He had repeatedly manifested an independence and "authority" in relation to the law of the Old Testament that was heretical to the religious leaders of his people. Some of them saw their position threatened by the support he had among the people. The vigorous denunciations he had directed against injustice and hypocrisy had undoubtedly earned him the hatred of others, while the cleansing of the temple (Matthew 21:12) was a dramatic indication to them of how far he was willing to go.

From a report preserved in John 11:47 ff., it appears that Jesus' miracles, his proclamation of the coming kingdom, and the attention he was receiving had become politically embarrassing to the Jewish leaders, who enjoyed considerable local autonomy under Roman rule and were fearful of losing it if there were an insurrection. It also seems plausible that the people turned against him because of his consistent refusal to lead such an insurrection. Jesus himself believed that the will of his Father for the kingdom could not come to pass except by his death, and he went up to Jerusalem to die in obedience to that will. Hence it is true that the cross was imposed upon him by his enemies, but it is also true that he voluntarily took upon himself the death of the cross (John 10:18).

Early Christianity. Jesus was a Jew, as were all the Apostles. Thus the earliest Christianity is in fact a movement within Judaism; the very acknowledgment of Jesus as "the Christ" means the confession that he is the fulfillment of the promises originally made to ABRAHAM, ISAAC, and JACOB. But the Christian gospel encountered opposition within Judaism, just as Jesus had, and soon it turned toward the Gentile world. Ideologically, this required Christian thought to shift from Judaism and to define the Gospel as both the correction and the fulfillment of Greek and Roman philosophy. This definition was the assignment of the Christian APOLOGISTS of the first three centuries. Politically, the Christian expansion into the Greco-Roman world and its rejection of such religious practices as the worship of Caesar brought upon the early Christians the suspicion of their fellow citizens and persecution by the Roman authorities. Despite this early hostility, Christian churches continued to arise in many portions of the Roman Empire, attracting Romans of every social class.

The inward growth of the Christian community matched this outward growth in numbers and prestige. Christians celebrated and shared the GRACE and power given in Christ by participating in the rites he had instituted, especially BAPTISM and the EUCHARIST. They recited the events of his life, exhorting, teaching, and urging one another to prepare for his coming again, which they apparently hoped to see very soon. In this hope they set themselves consciously apart from the way of life that characterized “the world” in its terminal stages.

From the very outset the Christian community was a community of structure. Its remembrance and celebration followed a pattern that was indeed fluid in some of its details but was nonetheless fixed in its basic outline. Similarly, the office of the Apostles, traced by the primitive church to the ordinance of the risen Christ himself, was the basis for the earliest structures of administrative and pastoral organization. Furthermore, the collections of the sayings and deeds of Jesus were combined with the writings of the Apostles to form a body of Christian sacred writings. From these primitive structures emerged the threefold system of apostolic authority in bishop, creed, and biblical canon, with which the early church met the challenge of preserving its continuity despite the death of the Apostles and the postponement of the Lord’s return.

Even in these early centuries the Christian movement was plagued by faction and torn by strife. The New Testament itself bears marks of the strife provoked by early exponents of a Christian form of Gnosticism, who interpreted the Gospel to conform with their theories of sin and salvation. The flowering of Gnosticism within Christianity occurred during the 2nd century, when BASILIDES and VALENTINUS arose to claim that true apostolic Christianity had been transmitted secretly to them and their followers rather than to the church, with its bishops and SCRIPTURES. Though differing from these Gnostics in significant ways, MARCION OF PONTUS also purported to be the restorer of apostolic, especially Pauline, doctrine and practice. And the doctrine of MONTANISM, which claimed that the church had forsaken the pristine holiness of the Apostles and had become too worldly, asserted that the promise of the “counselor” given in the last discourses of Jesus in St. John had been fulfilled in the life and teachings of the prophet MONTANUS.

Thus, the crystallization of bishop, creed, and canon as the triple norm of apostolic Christianity was accentuated, if not actually hastened, by the need for a definition of orthodoxy against these unorthodox movements and schisms. As it resisted both a syncretism that would have absorbed it into a universal world-religion and a particularism that would have restricted it to the select few, Christianity asserted that it was catholic, or universal, in its message and appeal. It was, of course, catholic in principle long before it became catholic in fact. The features that would characterize the Christianity of the first three centuries as “catholic”—the gospel of a Savior who had died for the entire world; a message communicated in the Koine, or common Greek, that had become the universal

Jesus washing St. Peter's feet, detail from a medieval manuscript; in the Biblioteca Palatina, Parma, Italy

Erich Lessing—Art Resource

literary language of the empire; a polity that coordinated local responsibility with ecumenical concern, especially through the growing prestige of the bishop in the capital city of the Roman *oikoumene*; and a participation in the spirit of Greco-Roman classicism that nevertheless remained open to both the ancient oriental and the new Germanic cultures—all showed Christianity as being both possessed of an identity and able at the same time to encompass universality.

Little is recorded about the Christians of these centuries; both their number and their names remain largely unknown. Those whose names have become part of the historical record are the bishops, heretics, and saints—these categories are not mutually exclusive—who attracted more than the usual attention in their own time and thus became the spokesmen to later times for the silent in the land. Thus TERTULLIAN, who died about 220, has come to epitomize the church's radical rejection of the world and its culture, as CLEMENT OF ALEXANDRIA, who died in almost the same year, and ORIGEN, who died about 254, are the recurring symbols of the Christian conviction that Christ is "the desire of all nations" and the answer to the quest of the philosophers. In the thought of IRENAEUS (d. c. 200) the Christianity of the 2nd century produced a system that summarized many of its fundamental beliefs about the renewal and redemption accomplished in Christ. From the history of the use of these names it is clear how easily they can all become clichés, but behind the clichés is the struggle of Christianity during the first three centuries of its history to be faithful to the deposit of its faith and relevant to its world, and to be both at the same time.

The picture of Christ in the early church: the Apostles' Creed. Even before the writings we know as the Gospels were written, Christians were reflecting upon the meaning of what Jesus had been and what he had said and done. To comprehend the faith of the early church regarding Christ, we must turn to the writings of the New Testament, where that faith found embodiment. It was also embodied in brief confessions or creeds, but these have not been preserved for us complete in their original form. What we have are fragments of those confessions

Apostolic voyages

or creeds in various books of the New Testament, snatches from them in other early Christian documents, and later forms of them in Christian theology and liturgy. The so-called Apostles' Creed is one such later form. It did not achieve its present form until quite late; just how late is a matter of controversy. But in its earliest ancestry it is very early indeed, perhaps dating back to the 1st century. And its confession regarding Christ is probably the earliest core, around which later elaborations of it were composed. Allowing for such later elaborations, we may say that in the Apostles' Creed we have a convenient summary of what the early church believed about Christ amid all the variety of its expression and formulation. The creeds were a way for Christians to explain what they meant by their acts of worship. When they put "I believe" or "We believe" at the head of what they confessed about God and Christ, they meant that their declarations rested upon faith, not merely upon observation.

- ◆ **I believe in God, the Father Almighty,
the Creator of heaven and earth,
and in Jesus Christ, his only Son, our Lord:
Who was conceived by the Holy Spirit,
born of the Virgin Mary,
suffered under Pontius Pilate, was crucified, died,
and was buried.
He descended into hell.
The third day He arose again from the dead.
He ascended into heaven and sits at the
right hand of God the Father Almighty,
Whence He will come to judge the living and
the dead.**
- I believe in the Holy Spirit,
the holy catholic church,
the communion of saints,
the forgiveness of sins,
the resurrection of the body,
and the life everlasting.**
- Amen.** ◆

Preexistence. The statement "I believe" also indicated that Christ was deserving of worship and faith and that he was therefore on a level with God. At an early date, possibly as early as the words of Paul in Philippians 2:6–11, Christian theology began to distinguish three stages in the career of Jesus Christ: his preexistence with the Father before all things; his INCARNATION and humiliation in "the days of His flesh" (Hebrews 5:7); and his glorification, beginning with the Resurrection and continuing forever.

Probably the most celebrated statement of the preexistence of Christ is the opening verses of the Gospel of St. John. Here Christ is identified as the incarnation of that Word (LOGOS) through which God made all things in the beginning, a Word existing in relation to God before the creation. The sources of this doctrine have been sought in Greek philosophy, both early and late, as well as in the Jewish thought of PHILO JUDAEUS and of the Palestinian RABBIS. Whatever its source, the doctrine of the Logos in John is distinctive by virtue of the fact that it identifies the Logos with a specific historical person. Other writings of the New Testament also illustrate the faith of the early Christians regarding the preexistence of Christ. The opening chapters of both Colossians and Hebrews speak of Christ as the preexistent one through whom all things were created, therefore as distinct from the created order of things in both time and preeminence; the preposition "before" in Colossians 1:17 apparently refers both to his temporal priority and to his superior dignity. Yet before any theological reflection about the nature of this preexistence had been able to find terms and concepts, the early Christians were worshipping Christ as divine. Philippians 2:6–11 may be a quotation from a HYMN used in such worship. Theological reflection told them that, if this worship was

legitimate in a religion that continued to insist on MONOTHEISM, he must have existed with the Father “before all ages.”

Jesus Christ. By the time the text of the creed was established, “Jesus Christ” was the usual designation for the Savior. Originally, of course, “Jesus” (the hellenized form of “Joshua”) had been his given name, meaning “Yahweh saves” or “Yahweh will save” (Matthew 1:21), while “Christ” was the Greek translation of the title “Messiah.” Some passages of the New Testament still used “Christ” as a title (e.g., Luke 24:26; 2 John 7), but it is evident from Paul’s usage that the title became simply a proper name very early. Most of the Gentiles took it to be a proper name, and it was as “Christians” that the early believers were labeled (Acts 11:26). In the most precise language, the term “Jesus” was reserved for the earthly career of the Lord, but it seems from liturgical sources such as Philippians 2:10 that it may actually have been endowed with greater solemnity than the name “Christ.” Within a few years after the beginnings of the Christian movement, Jesus, Christ, Jesus Christ, and Christ Jesus could be used almost interchangeably, as the textual variants in the New Testament indicate. Only in modern times has it become customary to distinguish sharply among them for the sake of drawing a line (which often seems quite arbitrary) between the Jesus of history and the Christ of faith.

God’s only Son. The declaration that Jesus Christ is the Son of God is one of the most universal in the New Testament, most of whose books refer to him that way. The Gospels do not quote him as using the title for himself in so many words, although sayings like Matthew 11:27 (“All things are delivered unto me of my Father: and no man knoweth the Son, but the Father . . .”) come close to it. There are some instances—for example, the SERMON ON THE MOUNT (Matthew 5:9)—where the usage of the Gospels appears to echo the more general implications of divine sonship in the Old Testament as a prerogative of Israel or of the true believer. Usually, however, it is evident that the Evangelists, like Paul, meant some special honor by the name. The Evangelists associated the honor with the story of Jesus’ baptism (Matthew 3:17) and Transfiguration (Matthew 17:5), Paul with the faith in the Resurrection (Romans 1:4). From this association some have argued that “Son of God” in the New Testament never referred to the preexistence of Christ. But it is clear in John and in Paul that this implication was not absent, even though it was not as prominent as it became soon thereafter.

What made the implication of preexistence more prominent in later Christian use of the term “Son of God” was the clarification of the doctrine of the TRINITY, where “Son” was the name for the eternal Second Person (Matthew 28:19). As the Gospels show, the application of the name “Son of God” to Jesus was offensive to the Jews, probably because it seemed to smack of Gentile POLYTHEISM. This also made it all too intelligible to polytheists, as early controversies indicate. Facing both the Jews and the Greeks, the apostolic church confessed that Jesus Christ was “God’s only Son,” antithetical to Jewish claims that the Eternal could have no sons and to Greek myths of divine procreation.

Our Lord. As passages like Romans 1:3 show, the phrase “Jesus Christ our Lord” was one of the ways the apostolic church expressed its understanding of what he had been and done. Luke even put the title into the mouth of the CHRISTMAS angel (Luke 2:11). From the way the name “Lord” (*Kyrios*) was employed during the 1st century it is possible to see several implications in the Christian use of it for Christ. The Christians meant that they did not accept the existence of a

multitude of divine and lordly beings in the universe, but only one genuine *Kyrios* (1 Corinthians 8:5, 6). They meant that the Roman Caesar was not the lord of all, as he was styled by his worshipers, but that only Christ was Lord (Revelation 17:14). And they meant that YAHWEH, the COVENANT God of the Old Testament, whose name they pronounced as “Lord” (*Adonai*), had come in Jesus Christ to establish the new covenant (“For there is no difference between the Jew and the Greek: for the same Lord over all is rich unto all that call upon him. For whosoever shall call upon the name of the Lord shall be saved.” Romans 10:12, 13). Like “Son of God,” therefore, the name *Kyrios* was directed against both parts of the audience to which the primitive church addressed its proclamation. At times it stood particularly for the risen and glorified Christ, as in Acts 2:36; but in passages that echoed the Old Testament it was sometimes the preexistence that was being primarily emphasized (Matthew 22:44). Gradually “our Lord,” like “Christ,” became a common way of speaking about Jesus Christ (as it still is, especially among Roman Catholics), even when the speaker did not intend to stress his lordship over the world.

Incarnation and humiliation. *Conceived by the Holy Spirit, born of the Virgin Mary*—Earlier forms of the creed, reflected in the Niceno-Constantinopolitan Creed of 381, read: “Born of the Holy Spirit and of the Virgin Mary.” The primary affirmation of this article is that the Son of God, the Word, had become human, or, as John’s Gospel put it, “flesh” (John 1:14). Preexistence and incarnation presuppose each other in the Christian view of Jesus Christ. Hence the New Testament assumed Christ’s preexistence when it talked about his becoming human; and, when it spoke of him as preexistent, it was ascribing this preexistence to Christ, about whom it was describing in the flesh. It may be that the reference in the creed to the Virgin Mary was intended to stress primarily her function as the guarantee of Christ’s true humanity, as did the New Testament phrase “born of a woman” (Galatians 4:4), but the creed also intended to teach the supernatural origin of that humanity. Although it is true that neither Paul nor John makes reference to it, the teaching about the virginal conception of Jesus, apparently based upon Isaiah 7:14, was sufficiently widespread in the 1st century to warrant inclusion in both Matthew and Luke, as well as in creeds that date back to the 1st century. As it stands, the creedal statement is a paraphrase of Luke 1:35. In the New Testament the Holy Spirit was also involved in the baptism (Matthew 3:16) and the Resurrection (Romans 1:4) of Jesus.

Suffered under Pontius Pilate, was crucified, died, and was buried—To a reader of the Gospels, the most striking feature of the creed is probably its omission of that which occupied a major part of the Gospels, the story of Jesus' life and teachings. In this respect there is a direct parallel between the creed and the epistles of the New Testament, especially those of Paul. Judging by the amount of space they devoted to the Passion story, even the writers of the Gospels were apparently more interested in these few days of Jesus' life than they were in anything else he had said or done. The reason for this was the faith underlying both the New Testament and the creed, that the events of Jesus' Passion, death, and Resurrection were the events by which God had accomplished the salvation of human beings. The Gospels found their climax in those events, and the other material in turn led up to those events. The epistles applied those events to concrete situations in the early church. From the way Paul could speak of the cross (Philippians 2:6–11) and of "the night when he [Jesus] was betrayed" (1 Corinthians 11:23), it seems that before the Gospels came into existence the church commemorated the happenings associated with what came to be called HOLY WEEK. Some of the earliest Christian art was a portrayal of these happenings, as was the use of the sign of the cross to invoke divine blessing or to ward off evil—another indication of their importance in the cultic and devotional life of early Christianity. How did the cross effect our salvation? The answers of the New Testament and the early church to this question involved a variety of metaphors: Christ offered himself as a sacrifice to God; his life was a ransom for many; his death made us alive by trampling down the powers of death and hell; his suffering was an example to us when we must suffer; he was the Second Adam, creating a new humanity; his death shows us how much God loves us; and others. Every major ATONEMENT theory of Christian theological history discussed below was anticipated by one or another of these metaphors. The New Testament employed them all to symbolize something that could be described only symbolically, that "God was in Christ reconciling the world to himself, not counting their trespasses against them" (2 Corinthians 5:19).

He descended into hell—This phrase was probably the last to be added to the creed. Its principal source in the New Testament was the description in 1 Peter 3:18–20 of Christ's preaching to the spirits in prison. Originally the descent into hell may have been identified with the death of Christ, when he entered the abode of the dead. But in the time before it entered the creed, the descent was frequently taken to mean that Christ had gone to rescue the souls of the Old Testament faithful from the underworld, from what Western Catholic theology eventually called the *limbus patrum*. Among some of the CHURCH FATHERS the descent into hell had come to mean Christ's declaration of his triumph over the powers of hell. Despite its subsequent growth in importance, however, the doctrine of the descent into hell apparently did not form an integral part of the apostolic preaching about Christ in the way that the Crucifixion and the Resurrection did.

Glorification. The third day he rose again from the dead—The writers of the New Testament nowhere made the Resurrection of Christ a matter for argument, but everywhere asserted it and assumed it. With it began that state in the history of Jesus Christ that was still continuing, his elevation to glory. They used it as a basis for three kinds of affirmations. The Resurrection of Christ was the way God bore witness to his Son, "designated Son of God in power according to the Spirit of holiness by his resurrection from the dead" (Romans 1, 4); this theme was prominent also in the book of Acts. The Resurrection was also the basis for the Christian hope of life after death (1 Thessalonians 4:14), and without it that hope was said to be baseless (1 Corinthians 15:12–20). The Resurrection of Christ was also the ground for admonitions to manifest a "newness of life" (Romans 6:4) and to "seek the things that are above" (Colossians 3:1). The writers of the New Testament themselves expressed no doubt that the Resurrection had really happened. But Paul's discussion in 1 Corinthians 15 and the response to his message in Athens as described in Acts 17:32 show that among those who heard the Christian message there was such doubt, as well as efforts to rationalize the Resurrection. The differences among the Gospels, and between the Gospels and Paul, sug-

gest that from the outset a variety of traditions existed regarding the details of the Resurrection. But such differences only serve to emphasize how universal was the faith in the Resurrection amid this variety of traditions.

He ascended into heaven and sits at the right hand of God the Father Almighty—As indicated earlier, the narrative of the ASCENSION is peculiar to Luke and Acts, but other parts of the New Testament may refer to it. Ephesians 4:8–10 may be such a reference, but many interpreters hold that, for Paul, Resurrection was identical with Ascension. That, they maintain, is why Paul could speak of the appearance of the risen Christ to him in continuity with Christ's appearances to others (1 Corinthians 15:5–8) despite the fact that, in the chronology of the creed, the Ascension intervened between these appearances. Session at the right hand of the Father was apparently a Christian interpretation of Psalms 110:1. It implied the elevation—or, as the doctrine of preexistence became clearer, the restoration—of Christ to a position of honor with God. Taken together, the Ascension and the session were a way of speaking about the presence of Christ with the Father during the interim between the Resurrection and the Second Advent. From Ephesians 4:8–16, it is evident that this way of speaking was by no means inconsistent with another Christian tenet, the belief that Christ was still present in and with his church. It was, in fact, the only way to state that tenet in harmony with the doctrine of the Resurrection.

Whence He will come to judge the living and the dead—The creed concludes its Christological section with the doctrine of the Second Advent: the first Advent was a coming into the flesh, the Second Advent a coming in glory. Much controversy among modern scholars has been occasioned by the role of this doctrine in the early church. Those who maintain that Jesus erroneously expected the early end of the world have often interpreted Paul as the first of those who began the adjustment to a delay in the end, with John's Gospel as a more advanced stage of that adjustment. Those who hold that the imminence of the end was a continuing aspect of human history as Jesus saw it also maintain that this phrase of the creed was a statement of that imminence, without any timetable necessarily implied. From the New Testament it seems that both the hope of the SECOND COMING and a faith in the continuing presence of Christ belonged to the outlook of the apostolic church, and that seems to be what the creed meant. The phrase "the living and the dead" is a summary of passages like 1 Corinthians 15:51–52 and 1 Thessalonians 4:15–17.

In order to complete the confession of the creed regarding the glorification of Christ, the NICENE CREED added the phrase: "Of his kingdom there shall be no end." This was a declaration, apparently provoked by speculation on the basis of 1 Corinthians 15:28 that the end of history would mean the end of the rule of Christ, that Christ's return as judge would usher in the full exercise of his reign over the world. Such was the expectation of the apostolic church, based on what it knew and believed about Jesus Christ.

Established Christianity. In the first decades of the 4th century Christianity received a boon that shaped its history: toleration, recognition, and eventually establishment by the state. The emperor CONSTANTINE I the Great, for what appears to have been a mixture of personal and political motives, identified himself with the Christian movement. Except for a brief revival of traditional religions under Julian ("the Apostate"), who died in 363, Christianity, whether orthodox or heretical, was the religion of the Roman emperors thereafter, as it was of the Germanic tribes who eventually displaced and then "revived" the empire in the West. So it was that after Rome had fallen, Christianity preserved many of the values of Rome and thus provided later centuries with a link to classical culture.

Christian dogma, theology, and institutions: the ancient councils. The acceptance of Christianity by the Roman emperors helped to make possible the establishment of general councils as a means for adjudicating controversies in the areas of doctrine and discipline. The main lines of

orthodox Christian teaching about the person of Christ were set by the New Testament and the ancient creeds. But what was present there in a germinal form became a clear statement of Christian doctrine when it was formulated as dogma. In one way or another, the first six ecumenical councils were all concerned with the formulation of the dogma regarding the person of Christ—his relation to the Father, and the relation of the divine and the human in him. Such a formulation became necessary because teachings arose in the Christian community that seemed to threaten what the church believed and confessed about Christ. Both the dogma and the heretical teachings against which the dogma was directed are therefore part of the history of Jesus Christ.

Early heresies—From the outset Christianity has had to contend with those who offered unorthodox interpretations of the person and mission of Jesus. Both the New Testament and the early confessions of the church referred and replied to such interpretations. As the Christian movement gained adherents from the non-Jewish world, it had to explain Christ in the face of new challenges.

These unorthodoxies touched both the question of his humanity and the matter of his deity. A concern to safeguard the humanity of Jesus led some early Christians to teach that Jesus of Nazareth, an ordinary man, was adopted as the Son of God in the moment of his baptism or after his Resurrection; this movement was called ADOPTIONISM. Gnostics and others wanted to protect him against involvement in the world of matter, which they regarded as essentially evil, and therefore taught that he had only an apparent body, not a real one; they were called DOCETISTS. Most of the struggle over the person of Christ, however, dealt with the question of his relation to the Father. Some early views were so intent upon asserting Jesus' identity with the Father that the distinction of his separate personhood was lost and he became merely a manifestation of the one God. Because of this idea of Christ as a "mode" of divine self-manifestation, proponents of this view were dubbed "modalists"; from an early supporter of the view it was called "Sabellianism." Other interpretations of the person of Christ in relation to God went to the opposite extreme. They insisted so strenuously upon the distinctness of his person from that of the Father in order to safeguard the biblical insistence on monotheism that they subordinated him to the Father. Many early exponents of the doctrine of the Logos were also subordinationists, so that the Logos idea itself became suspect in some quarters. What was needed was a framework of concepts with which to articulate the doctrine of Christ's oneness with the Father and yet distinctness from the Father and thus to answer the question posed by the late 19th-century German theologian and historian of dogma Adolf von Harnack: "Is the Divinity which has appeared on earth and reunited men with God identical with that supreme Divinity which governs heaven and earth, or is it a DEMIGOD?"

The Council of Nicaea—That question forced itself upon the church through the teachings of ARIUS. He maintained that the Logos was the first of the creatures called into being by God as the agent or instrument through which he was to make all things. Christ was thus less than God, but more than man; he was divine, but he was not God. To meet the challenge of ARIANISM, which threatened to split the church, the newly converted emperor Constantine convoked in 325 the first ecumenical council of the Christian church at Nicaea. The private opinions of the attending bishops were anything but unanimous, but the opinion that carried the day was that espoused by the young presbyter ATHANASIUS, who later became bishop of Alexandria. The COUNCIL OF NICAEA determined that Christ was "begotten, not made," that he was therefore not creature but Creator. It also asserted that he was "of the same essence as the Father" (*homoousios to patri*). In this way the Council made clear its basic opposition to subordinationism, even though there could be, and were, quarrels about details. It was not equally clear how the position of Nicaea and of Athanasius differed from modalism. Athanasius asserted that it was not the Father nor the Holy Spirit but only the Son who became incarnate as Jesus Christ. But in order to assert this, he needed a more adequate terminology concerning the "persons" (to use later Latin terminology) in the Holy Trinity. So the settlement at Nicaea regarding the person of Christ made

necessary a fuller clarification of the doctrine of the Trinity, and that clarification in turn made possible—and necessary—a fuller statement of the doctrine of the person of Christ.

The Council of Constantinople—Nicaea did not put an end to the controversies but only gave the parties a new rallying point. Doctrinal debate was complicated by the rivalry among bishops and theologians as well as by the intrusion of imperial politics that had begun at Nicaea. Out of the post-Nicene controversies came that fuller statement of the doctrine of the Trinity that was needed to protect the Nicene formula against the charge of failing to distinguish adequately between the Father and the Son. Ratified at the COUNCIL OF CONSTANTINOPLE in 381, that statement made official the terminology developed by the supporters of Nicene orthodoxy in the middle of the 4th century: one divine essence, three divine persons (*mia ousia, treis hypostaseis*). The three persons, Father, Son, and Holy Spirit, were distinct from one another but were equal in their eternity and power. Now it was possible to teach, as Nicaea had, that Christ was “of the same essence as the Father” without arousing the suspicion of modalism. Although this doctrine seemed to make problematical the unity of God, it did provide an answer to the first of the two issues confronted by the church in its doctrine of the person of Christ—the issue of Christ’s relation to the Father. It now became necessary to clarify the second issue—the relation of the divine and the human within Christ.

The Councils of Ephesus and Chalcedon—By excluding several extreme positions from the circle of orthodoxy, the formulation of the doctrine of the Trinity in the 4th century determined the course of subsequent discussion about the person of Christ. It also provided the terminology for that discussion, since 5th-century theologians were able, within careful limits, to describe the relation between the divine and the human in Christ by analogy to the relation between the Father and the Son in the Trinity. The term that was found to express this relation in Christ was the term *physis*—meaning “nature.” There were three divine persons in one divine essence and in one divine nature; such was the outcome of the controversies in the 4th century. But there were also two natures, one of them divine and the other human, in the one person Jesus Christ. Over the relation between these two natures the theologians of the 5th and 6th centuries carried on their controversies, on which the Second and Third Councils of Constantinople in 553 and in 680–81 pronounced in their decrees.

The abstract questions with which they sometimes dealt in those controversies, some of them almost unintelligible to a modern mind, must not be permitted to obscure the fact that a basic issue of the Christian faith was at stake: How can Jesus Christ be said to possess that identity with God that he must have to be our Savior, and yet be called our brother, as he truly must be to make his salvation available to us?

Alexandria and Antioch—During the half century after the Council of Constantinople several major points

of emphasis developed in the doctrine of the person of Christ; characteristically, these are usually defined by the episcopal see that espoused them. There was a way of talking about Christ that was characteristic of the see at Alexandria. It stressed the divine character of all that Jesus Christ had been and done, but its enemies accused it of absorbing the humanity of Christ in his divinity. The mode of thought and language employed at Antioch, on the other hand, emphasized the true humanity of Christ; but its opponents maintained that in so doing it had split Christ into two persons, each of whom maintained his individual selfhood while they acted in concert with each other. Western theology was not as abstract as either of these alternatives. Its central emphasis was a practical concern for human salvation and for as harmonious a settlement of the conflict as was possible without sacrificing that concern.

Even more than had been the case in the 4th century, considerations of imperial politics were always involved in conciliar actions, together with the fear in countries like Egypt that Constantinople might come to dominate them. Thus a decision regarding the relation between the divine and the human in Christ could be simultaneously a decision regarding the political situation. Nevertheless, the settlements at which the councils of the 5th century arrived may be and are regarded as normative in the church long after their political setting has disappeared.

The conflict between Alexandria and Antioch came to a head when NESTORIUS, the PATRIARCH of Constantinople, taking exception to the use of the title “Mother of God” or, more literally, “God-Bearer” (THEOTOKOS) for the Virgin Mary, insisted that she was only “Christ-Bearer.” In this insistence the Antiochian emphasis upon the distinction between the two natures in Christ made itself heard throughout the church. The Alexandrian theologians responded by charging that Nestorius was dividing the person of Christ, which they represented as so completely united that, in the famous phrase of Cyril, there was “one nature of the Logos which became incarnate.” By this he meant that there was only one nature, the divine, before the Incarnation, but that after the Incarnation there were two natures indissolubly joined in one person; Christ’s human nature had never had an independent existence. There were times when Cyril appeared to be saying that there was “one nature of the incarnate Logos” even after the Incarnation, but his most precise formulations avoided this language. The COUNCIL OF EPHESUS in 431 was one in a series of gatherings called to settle this conflict, some by one party and some by the other. It also made official and binding the designation of the Virgin Mary as “Theotokos.”

The Council of Chalcedon—But the actual settlement was not accomplished until the calling of the COUNCIL OF CHALCEDON in 451. The basis of that settlement was the Western understanding of the two natures in Christ, as formulated in the *Tome* of POPE LEO I of Rome. Chalcedon declared: “We all unanimously teach . . . one and the same Son, our Lord Jesus Christ, perfect in deity and perfect in humanity . . . in two natures, without being mixed, transmuted, divided, or separated. The distinction between the natures is by no means done away with through the union, but rather the identity of each nature is preserved and concurs into one person and being.” In this formula the valid emphases of both Alexandria and Antioch came to expression; both the unity of the person and the distinctness of the

natures were affirmed. Therefore the decision of the Council of Chalcedon has been the basic statement of the doctrine of the person of Christ for most of the church ever since.

Emerging from this period, then, was an interpretation of the person of Christ that affirmed both his oneness with God and his oneness with humanity while still maintaining the oneness of his person. Interestingly, the liturgies of the church had maintained this interpretation at a time when the theologians of the church were still struggling for clarity, and the final solution was a scientifically precise restatement of what had been present germinally in the liturgical piety of the church. In the formula of Chalcedon that solution finally found the framework of concepts and of vocabulary that it needed to become intellectually consistent. In one sense, therefore, what Chalcedon formulated was what Christians had been believing from the beginning; in another sense it represented a development from the earlier stages of Christian thought.

Thus the classical Christian dogmas of the Trinity and the person of Christ emerged from the decisions of the councils in the 4th, 5th, and 6th centuries, dogmas that have been the criteria of Christian orthodoxy ever since. Christianity thus acquired an intellectual formulation that befitted its new status as the dominant religious force in the Mediterranean world. It acquired theological spokesmen also, whose speculations and systematizations, based upon Scripture and dogma, created the vocabulary and set the style for a Christian culture. Most prominent among these theologians in the West was AUGUSTINE of Hippo (354–430), whose *City of God* summarized the case for Christianity against competing faiths, and whose treatise *On the Trinity* combined fidelity to authority with philosophical reflection into a new synthesis. The Greek-speaking portions of the church were more richly endowed with theological leaders than was the Christian West. Athanasius defended the full deity of Christ against the Arians. BASIL, GREGORY OF NYSSA, and GREGORY OF NAZIANZUS, “the Cappadocian Fathers,” refined and expanded the teachings of Athanasius into a more complete doctrine of the Trinity.

The Alexandrians and the Antiochians continued the controversies that had preceded Chalcedon, but they clashed as well now over how to interpret Chalcedon. The controversy over the MONOPHYSITES (those who believed Christ had one nature, which combined both the divine and human) and the Monothelites (those who accepted the orthodox position that Christ had two distinct natures but posited that he had only one will) was an effort to clarify the interpretation of Chalcedon, with the result that the extremes of the Alexandrian position were condemned just as the NESTORIAN extreme of the Antiochian had been.

The Church Fathers. With Christianity’s increased political recognition, MONASTICISM arose as a way to express the continuing separation of the church from the world. The figure of the hermit ANTHONY OF EGYPT, dramatically described in the biography of him by Athanasius, represented the Christianization of an ASCETICISM that had been at work in Egypt even before the coming of the gospel. A second stage in the development of monasticism was the rise of the communal or cenobitic form of the monastic life and the establishment of monasteries and CONVENTS, first in the Eastern section of the church through the work of PACHOMIUS and then much later (6th century) in the Western portion through the work of BENEDICT OF NURSIA. Instituted as a means of denying the world, monasticism became, through its role in the missionary enterprise and through its educational work, one of the principal means by which Christianity was able to spread. Another factor was the growth in the prestige and power of the bishop of Rome. Pope Leo I the Great (d. 461) made the primacy of the Roman bishop explicit both in theory and in practice and must be counted as one of the most important figures in the history of the centralization of authority in the church. The next such figure was GREGORY I the Great, pope from 590 to 604, whose work shaped the worship, the thought, and the structure of the church as well as its temporal wealth and power.

With the determination of the orthodox teaching of the church regarding the person of Christ, it still remained necessary to clarify the doctrine of the work of

Christ. While it had been principally in the East that the discussion of the former question was carried on, it was the Western church that provided the most detailed answers to the question: Granted that this is what Jesus Christ was, how are we to describe what it is that he did?

The most representative spokesman of the Western church on this question, as on most others, was Augustine. His deep understanding of the meaning of human sin was matched by his detailed attention to the meaning of divine grace. Central to that attention was his emphasis upon the humanity of Jesus Christ as assurance of human salvation, an emphasis to which he gave voice in a variety of ways. The humanity of Christ showed, for Augustine, how God elevated the humble; it was the link between human physical nature and the spiritual nature of God; it was the sacrifice that the human race offered to God; it was the foundation of a new humanity, re-created in Christ as the old humanity had been created in Adam—in these and other ways Augustine sought to describe the importance of the Incarnation for the redemption of humanity. By combining this stress upon the humanity of Christ as Savior with a doctrine of the Trinity that was orthodox but nevertheless highly creative and original, Augustine put his mark indelibly upon Western piety and theology.

The common theme in all these figures of speech concerning God and humanity was the desire to do two things simultaneously: to emphasize that the reunion was an act of God, and to safeguard the participation of humans in that act. Some theories current at the time were so “objective” in their emphasis upon the divine initiative that humans almost seemed to be pawns in the transaction between God in Christ and the Devil. Other theories so “subjectively” concentrated their attention upon human involvement and human response that the full scope of the redemption as a product of the divine initiative in grace could vanish from sight. It was to be in ANSELM OF CANTERBURY (d. 1109) that Western Christendom eventually found a theologian who could bring together elements from many theories into one doctrine of the atonement, summarized in his book, *Cur Deus homo?* (1099; “Why Did God Become Man?”). According to this doctrine, sin was a violation of the honor of God. God offered humans life if they rendered satisfaction for that violation; but the longer these humans lived, the worse their personal situation became. Only a life that was truly human and yet had infinite worth would have been enough to give such a satisfaction to the violated honor of God on behalf of the entire human race. Such a life was that of Jesus Christ, whom the mercy of God sent as a means of satisfying the justice of God. Because he was truly human, his life and death could be valid for humans; because he was true God, his life and death could be valid for *all* humans. By accepting the fruits of his life and death, humanity could receive the benefits of his satisfaction. With some minor alterations, Anselm’s doctrine of atonement passed over into the theology of the Latin church, forming the basis of both Roman Catholic and orthodox Protestant ideas of the work of Christ. It owed its acceptance to many factors, not the least of them being the way it squared with the liturgy and art of the West. The crucifix has become the traditional symbol of Christ in the Western church, reinforcing and being reinforced by the satisfaction theory of the atonement.

Byzantine Christianity. Still a part of the universal church but increasingly isolated from the West by differences of language, culture, politics, and religion, Byzantine Christianity followed its own course in the shaping of the heritage of the early church. The Eastern churches never became as centralized in their polity as did the church in the West but developed the principle of the relative independence or “autocephaly” of each national church (*see* AUTOCEPHALOUS CHURCH). During the centuries when Western culture was striving to assimilate the German tribes, Constantinople, probably the most civilized city in Christendom, blended classical and Christian elements with a refinement that expressed itself in philosophy, the arts, statecraft, jurisprudence, and scholarship. A thinker such as Michael Psellus in the 11th century, who worked in several of these fields, epitomizes this synthesis. It was from Byzantine rather than from Roman missionaries that most of the Slavic tribes received Christianity; Byzantium was also the victim of Muslim aggressions throughout the period known in the West as the

Middle Ages. Following the pattern established by the emperors Constantine and Justinian, the relation between CHURCH AND STATE in the Byzantine empire was coordinated in such a way as to often subject the life and even the teaching of the church to the decisions of the temporal ruler—the phenomenon frequently, though oversimplly, termed CAESAROPAPISM.

All these differences between the Eastern and the Western parts of the church, both the religious differences and those that were largely cultural or political, came together to cause the SCHISM between the two. It is not easy to date this schism, for the alienation between West and East erupted several times: in the 9th century through conflict over the MISSION to the Slavs; in the 11th century as a contest over rank and authority; in the 13th century with great vehemence in the Christian sack of Constantinople by the Fourth Crusade in 1204 and the establishment of the Latin patriarchate there; in the 15th century after the failure of the union of Florence and after the fall of Constantinople to the Turks. Whatever the date, the two divisions of the church have existed, both in spirit and in fact, for about half of Christian history, more than twice as long as PROTESTANTISM and ROMAN CATHOLICISM.

Papacy and empire. Conflict with the East was both a cause and an effect of the distinctive development of Western Christianity during the Middle Ages. If popes Leo I and Gregory I may be styled the architects of the medieval PAPACY, popes GREGORY VII (d. 1085) and INNOCENT III (d. 1216) should be called its master builders. Gregory VII reformed both the church and the papacy from within, establishing the canonical and moral authority of the papal office when it was threatened by corruption and attack; Innocent III made the papal claims to universality an ecclesiastical and political fact, exercising his authority at all levels of the life of the church in the 13th century. Significantly, both these popes were obliged to defend the papacy against the Holy Roman Empire and other temporal rulers. The battle between the church and the empire is a persistent theme in the history of medieval Christianity. Both the involvement of the church in feudalism and the participation of temporal rulers in the Crusades can be read as variations on this theme. Preoccupied as they often are with the history of the church as an institution and with the life and thought of the leaders of the church, the documentary sources of knowledge about medieval Christianity make it difficult for the historian to descry “the religion of the common man” during this period, but late 20th-century social history has made great progress in doing so. Both the “age of faith” depicted by neo-Gothic ROMANTICISM and the “dark ages” depicted by secularist and Protestant polemics are a gross oversimplification of history; only that historical judgment of medieval Christianity is valid that discerns how subtly faith and superstition can be blended in the piety and thought of medieval (and of modern) thinkers and of ordinary believers.

Medieval thought. No product of medieval Christianity has been more influential in the centuries since the Middle Ages than medieval thought, particularly the philosophy and theology of SCHOLASTICISM, whose outstanding exponent was THOMAS AQUINAS (d. 1274). The theology of scholasticism was an effort to harmonize the doctrinal traditions inherited from the Fathers of the early church and to relate these traditions to the intellectual achievements of classical antiquity. Because many of the early Fathers both in the East and in the West had developed their theologies under the influence of Platonic modes of thought, the reinterpretation of these theologies by scholasticism required that the doctrinal content of the tradition be disengaged from the metaphysical assumptions of Platonism. For this purpose the recovery of Aristotle—first through the influence of Aristotelian philosophers and theologians among the Muslims and eventually, with some help from Byzantium, through translation and study of the authentic texts of Aristotle himself—was providential to the scholastic theologians. Because it managed to

Scala—Art Resource

combine a fidelity to Scripture and tradition with a positive, though critical, attitude toward the “natural” mind, scholasticism is a landmark both in the history of Christianity and in the history of Western culture. Very few theological systems have managed to play this dual role, which can be a symbol (depending upon one’s own position) either of the Christianization of society and culture or of the betrayal of Christianity to the society and culture of the Middle Ages.

Scholastic theology, therefore, did not modify traditional ways of speaking about either the person or the work of Christ as sharply as it did, for example, some of the ways the Church Fathers had spoken about the presence of the body and blood of Christ in the Eucharist. The major contribution of the scholastic period (which dates from about the 6th century to the 17th century) to the Christian conception of Jesus Christ appears to lie in the way it managed to combine theological and mystical elements. Alongside the growth of Christological dogma and sometimes in apparent competition with it was the development of a view of Christ that emphasized personal union with him in addition to accurate concepts

about him. Such a view of Christ appeared occasionally in the writings of Augustine, but it was in men like BERNARD OF CLAIRVAUX that it attained both its fullest expression and its most adequate harmonization with the dogmatic view. The relation between the divine and the human natures in Christ, as formulated in ancient dogma, provided the mystics, both men and women, with the ladder they needed to ascend through the man Jesus to the eternal Son of God, and through him to a mystical union with the Holy Trinity; this had been anticipated in the mystical theology of some of the Greek Fathers. At the same time the dogma saved MYSTICISM from the pantheistic excesses to which it might otherwise have gone; for the doctrine of the two natures meant that the humanity of the Lord was not an expendable element in Christian piety, mystical or not, but its indispensable presupposition and the continuing object of its adoration, in union with his deity. As a matter of fact, another contribution of the medieval development was the increased emphasis of ST. FRANCIS OF ASSISI (d. 1226) and his followers upon the human life of Jesus. These brotherhoods cultivated a more practical and ethical version of mystical devotion, to be distinguished from speculative and CONTEMPLATIVE mysticism. As expressed in the IMITATION OF CHRIST, a late medieval work that achieved wide circulation, their theme be-

came the imitation of Christ in a life of humility and obedience. With it came a new appreciation of that true humanity of Christ which the dogma had indeed affirmed but which theologians had been perceived as being in danger of reducing to a mere dogmatic concept.

Reformation. It was the latter interpretation of scholasticism as a betrayal of Christianity that, in part, animated the Protestant REFORMATION. Protestantism differed from the various protest movements during the later Middle Ages by the thoroughness of its polemic against the ecclesiastical, theological, and sacramental developments of Western Catholicism. Initially the Protestant Reformers maintained the hope that they could accomplish the reformation of the doctrine and life of the church from within, but this proved impossible (again depending upon one’s position) either because of the intransigency of the church or because of the extremism of the Protestant movements or because of the political and cultural situation—or for all of these reasons combined. The several parties of the Reformation may be conveniently classified according to the radicalism of their

Adoration of the Lamb of God, surrounded by the Evangelists and 12 of the 24 elders, from a 10th-century Spanish commentary on the Apocalypse

The Pierpont Morgan Library—Art Resource

protest against medieval theology, piety, and polity. The Anglican Reformers (*see* ANGLICAN COMMUNION), as well as MARTIN LUTHER and his movement, were, in general, the most conservative in their treatment of the Roman Catholic tradition; JOHN CALVIN and his followers were less conservative; the ANABAPTISTS and other groups in the left wing of the Reformation were least conservative of all. Despite their deep differences, the various Reformation movements were almost all characterized by an emphasis upon the BIBLE, as distinguished from the church and its tradition, as the authority in religion; by an insistence upon the sovereignty of free grace in the forgiveness of sins; by a stress upon faith alone, without works, as the precondition of acceptance with God; and by the demand that the laity assume a more significant place in both the work and the worship of the church.

The attitude of most of the reformers toward the traditional conception of the person and work of Christ was conservative. Insisting for both religious and political reasons that they were orthodox, they altered very little in the Christological dogma. Luther and Calvin gave the dogma a new meaning when they related it to their doctrine of JUSTIFICATION by grace through faith. Because of his interpretation of sin as the captivity of the will, Luther also revived the patristic metaphor of the atonement as the victory of Christ; it is characteristic of him that he wrote hymns for both Christmas and Easter, but not for Lent. The new attention to the Bible that came with the Reformation created interest in the earthly life of Jesus, while the Reformation idea of "grace alone" and of the sovereignty of God even in his grace made the deity of Christ a matter of continuing importance.

In the ideas about the Lord's Supper set forth by HULDRYCH ZWINGLI, Luther thought he saw not only a weakening of the belief in the real presence but a threat to the orthodox doctrine of Christ, and he denounced those doctrines vehemently. As this controversy progressed, Luther interpreted the ancient dogma of the two natures to mean that the omnipresence of the divine nature was communicated to the human nature of Christ, and that therefore Christ as both God and man was present everywhere, and hence could be truly present in the bread and wine of the sacrament. Although he repudiated both Luther's and Zwingli's theories, Calvin was persuaded that the ancient Christological dogma was true to the biblical witness and he permitted no deviation from it. All this is evidence for the significance that "Jesus Christ, true God begotten of the Father from eternity, and also true man, born of the Virgin Mary," to use Luther's formula, had been retained in the faith and theology of all the reformers.

At one point the theology of the reformers did serve to bring together several facets of the biblical and the patristic descriptions of Jesus Christ. That was the doctrine of the threefold office of Christ, anticipated as early as the 4th century but systematized by Calvin and developed more fully in Protestant orthodoxy: Christ as prophet, priest, and king. Each of these symbolized the fulfillment of the Old Testament and represented one aspect of the church's continuing life. Christ as prophet fulfilled and elevated the prophetic tradition of the Old Testament, while continuing to fulfill his prophetic office in the ministry of the preaching of the Word. Christ as priest brought to an end the sacrificial system of the Old Testament by being both the priest and the victim, while he continued to function as intercessor with and for the church. Christ as king was the royal figure to whom the Old Testament had pointed, while exercising his rule among humans now through those whom he had appointed. In each of the three, Protestants differed from one another according to their theological, ethical, or liturgical positions. But the threefold office enabled Protestant theology to take into account the complexity of the biblical and patristic pictures of Christ as no oversimplified theory was able to do, and it is probably the chief contribution of the reformers to the theological formulation of the doctrine of the "office" or work of Christ.

The Reformation was originally launched as a movement within the established Christianity that had prevailed since Constantine. It envisaged neither schism within the church nor the dissolution of the Christian culture that had developed for more than a millennium. But by the time the Reformation was over, both the church and the culture had been radically transformed. In part this

transformation was the consequence of the Reformation, in part it was the accompaniment of the Reformation. The voyages of discovery, the beginnings of a capitalistic economy, the rise of modern nationalism, the dawn of the scientific age, the culture of the Renaissance—all these factors, and others besides, helped to break up the “medieval synthesis.” Among these factors, however, the Reformation was one of the most important, and certainly for the history of Christianity the most significant. For the consequences of the Reformation, not in intention but in fact, were a divided Christendom and a secularized West. Roman Catholicism, no less than Protestantism, has developed historically in the modern world as an effort to adapt historic forms to the implications of these consequences. Established Christianity, as it had been known in the West since the 4th century, ended after the Reformation, though not all at once.

Modern Christianity. Paradoxically, the end of “established Christianity” in the old sense resulted in the most rapid and most widespread expansion of Christianity and the Gospel in the history of the church. The Christianization of the Americas and the evangelization of Asia, Africa, and Australasia have given geographical substance to the Christian title “ecumenical.” Growth in areas and in numbers, however, need not be equivalent to growth in influence. Despite its continuing strength throughout the modern period, Christianity has retreated on many fronts and has lost much of its prestige and authority.

During the formative period of modern Western history, roughly from the beginning of the 16th to the middle of the 18th century, Christianity participated in many of the movements of cultural and political expansion. The explorers of the New World were followed closely by missionaries—that is, when the two were not in fact identical. Protestant and Roman Catholic clergymen were prominent in politics, letters, and science. Although the RATIONALISM of the Enlightenment alienated many people from the Christian faith, especially among the intellectuals of the 17th and 18th centuries, those who were alienated often kept a loyalty to the figure of Jesus or to the teachings of the Bible even when they broke with traditional forms of Christian doctrine and life. Citing the theological conflicts of the Reformation and the political conflicts that followed upon these as evidence of the dangers of religious intolerance, representatives of the Enlightenment gradually introduced disestablishment, toleration, and religious liberty into most Western countries; in this movement they were joined by various Christian individuals and groups that advocated religious freedom not out of indifference to dogmatic truth but out of a concern for the free decision of personal faith.

The earliest criticism of orthodox dogma, however, had come in the age of the Reformation, not from the mainline reformers but from the left wing of the Reformation, from MICHAEL SERVETUS (1511?–53) and the Socinians. This criticism was directed against the presence of nonbiblical concepts and terms in the dogma, and it was intent upon safeguarding the true humanity of Jesus as a moral example. There were many inconsistencies in this criticism, such as the willingness of Servetus to call Jesus “Son of God” and the Socinian custom of addressing prayer and worship to him. But it illustrates the tendency, which became more evident in the Enlightenment, to use the Reformation protest against Catholicism as a basis for a protest against orthodox dogma as well. While that tendency did not

gain much support in the 16th century because of the orthodoxy of the reformers, later criticism of orthodox Christology was able to wield the “Protestant principle” against the dogma of the two natures, on the grounds that this was a consistent application of what the reformers had done. Among the ranks of the Protestant laity, the hymnody and the catechetical instruction of the Protestant churches assured continuing support for the orthodox dogma. Indeed, the doctrine of atonement by the vicarious satisfaction of Christ’s death has seldom been expressed as amply within Roman Catholic theology and spirituality as it was in the hymns and CATECHISMS of both the Lutheran and the Reformed churches. During the period of PIETISM in the Protestant churches, this loyalty to orthodox teaching was combined with a growing emphasis upon the humanity of Jesus, also expressed in the hymnody of the time, and above all in the sacred music of Johann Sebastian Bach and George Frideric Handel.

When theologians began to criticize orthodox ideas of the person and work of Christ, therefore, they met with opposition from the common people. ALBERT SCHWEITZER dates the development of a critical attitude from the work of H.S. Reimarus (1694–1768), but Reimarus was representative of the way the Enlightenment treated the traditional view of Jesus. The books of the Bible were to be studied just as other books are, and the life of Jesus was to be drawn from them by critically sifting and weighing the evidence of the Gospels. The Enlightenment thus initiated the modern interest in the life of Jesus, with its detailed attention

Press—Monkmeyer

to the problem of the relative credibility of the Gospel records. The leaders of Enlightenment thought did not make a sudden break with traditional ideas, but gave up belief in miracles, the VIRGIN BIRTH, the Resurrection, and the Second Advent only gradually. Their principal importance for the history of the doctrine of Christ consists in the fact that they made the historical study of the sources for the life of Jesus an indispensable element of any Christology.

The state of Christian faith and life within the churches during the 17th and 18th centuries both reflected and resisted the spirit of the time. Even though the Protestant Reformation had absorbed some of the reformatory energy within Roman Catholicism, the theology and morals of the church underwent serious revision in the Catholic COUNTER-REFORMATION. Fighting off the attempts by various countries, most notably perhaps in the Gallicanism of France, to establish national Roman Catholic churches, the papacy sought to learn from the history of the Reformation and to avoid the mistakes that had been made then. Protestantism, meanwhile, discovered that separation from Rome did not necessarily inoculate it against many of the trends it had denounced in Roman Catholicism. The confessional orthodoxy of the 17th century both in LUTHERANISM and in the Reformed churches displayed many features of medieval scholasticism, despite the attacks of the Reformers upon the latter.

Although the Enlightenment of the 18th century was the beginning of the break with orthodox teachings about Jesus Christ, it was only in the 19th century that this break attracted wide support among theologians and scholars in many parts of Christendom—even, for a while, among the Modernists of the Roman Catholic church. Two works of the 19th century were especially influential in their rejection of orthodox Christology. One was the *Life of Jesus* first published in 1835 by David Friedrich Strauss; the other, bearing the same title, was first published by Ernest Renan in 1863. Strauss's work paid more attention to the

growth of Christian ideas—he called them “myths”—about Jesus as the basis for the picture we have in the Gospels, while Renan attempted to account for Jesus' career by a study of his inner psychological life in relation to his environment. Both works achieved wide circulation and were translated into other languages, including English. They took up the Enlightenment contention that the sources for the life of Jesus were to be studied as other sources are, and what they constructed on the basis of the sources was a type of biography in the modern sense of the word. In addition to Strauss and Renan, the 19th century saw the publication of a plethora of books about the life and teachings of Jesus. Each new hypothesis regarding the problem of the SYNOPSIS GOSPELS implied a reconstruction of the life and message of Jesus.

The fundamental assumption for most of this work on the life and teachings of Jesus was a distinction between the “Jesus

Celebration for the feast of St. John the Baptist in a church named for him in Texhuacán, Mex.

Miguel Sayago—Photo Researchers

of history" and the "Christ of faith." Another favorite way of putting the distinction was to speak of the religion of Jesus in antithesis to the religion about Jesus. This implied that Jesus was a man like other men but with a heightened awareness of the presence and power of God. Then the dogma of the church had mistaken this awareness for a metaphysical statement that Jesus was the Son of God, the Second Person of the Trinity, and had thus distorted the original simplicity of his message. Some critics went so far as to question the very historicity of Jesus, but even those who did not go that far questioned the historicity of some of the sayings and deeds attributed to Jesus in the Gospels—above all, the miracles and the declarations of identity with God.

In part this effort grew out of the general concern of 19th-century scholarship with the problem of the historicity of much of traditional history, but it also reflected the religious and ethical assumptions of the theologians. Many of them were influenced by the moral theories of Immanuel Kant in their estimate of what was permanent about the teachings of Jesus, and by the historical theories of George William Friedrich Hegel in the way they related the original message of Jesus to the Christian interpretations of that message by later generations of Christians. The ideas of evolution and of natural causality associated with the science of the 19th century also played a part through the naturalistic explanations of the biblical miracles. And the historians of dogma, climaxing in Adolf von Harnack (1851–1930), used their demonstration of the dependence of ancient Christology upon non-Christian sources for its concepts and terminology to reinforce their claim that Christianity had to get back from the Christ of dogma to the "essence of Christianity" in the teachings of Jesus about the fatherhood of God and the brotherhood of man.

During the political revolutions of the 18th, 19th, and 20th centuries, Roman Catholicism in France, EASTERN ORTHODOXY in Russia, and Protestantism in former European colonies in Africa were identified—by their enemies if not also by themselves—as part of the *ancien régime* and were nearly swept away with it. As the discoveries of science proceeded, they clashed with old and cherished notions about the universe and about humanity, many of which were passionately supported by various leaders of organized Christianity. The age of the revolutions—political, economic, technological, intellectual—was an age of crisis for Christianity. It was also an age of opportunity. The critical methods of modern scholarship, despite their frequent attacks upon traditional Christian ideas, helped to produce editions of the chief documents of the Christian faith, the Bible and the writings of the Fathers and Reformers, and to arouse an unprecedented interest in the history of the church. The 19th century has been called the great century in the history of Christian missions, both Roman Catholic and Protestant. By the very force of their attacks upon Christianity the critics of the church helped to arouse within the church new apologists for the faith, who creatively reinterpreted it in relation to contemporary philosophy and science.

At the beginning of the 20th century the most influential authorities on the New Testament were still engaged in the quest for the essence of Christianity and for the Jesus of history. But that quest led in the early decades of the 20th century to a revolutionary conclusion regarding the teachings of Jesus—namely, that he had expected the end of the age to come shortly after his death and that his teachings as laid down in the Gospels were an "interim ethic," intended for the messianic community in the brief span of time still remaining before the end. The effort to apply those teachings in modern life was criticized as a dangerous MODERNIZATION. This thesis of the "consistent eschatology" in Jesus' message was espoused by Johannes von Weiss (1863–1914) and gained wide circulation through the writings of Albert Schweitzer.

The years surrounding World War I also saw the development of a new theory regarding the composition of the Gospels. Because of its origin, this theory is usually called form criticism (German *Formgeschichte*). It stressed the forms of the Gospel narratives—parables, sayings, miracle stories, Passion accounts, etc.—as an indication of the ORAL TRADITION in the Christian community out of which the narratives came. While the attention of earlier scholars had been concentrated on

the authenticity of Jesus' teachings as transmitted in the Gospels, this new theory was less confident of being able to separate the authentic from the later elements in the Gospel records, though various proponents of it did suggest criteria by which such a separation might be guided. The studies of form criticism made a life of Jesus in the old biographical sense impossible, just as consistent eschatology had declared impossible the codification of a universal ethic from the teachings of Jesus. Some adherents of form criticism espoused an extreme skepticism regarding any historical knowledge of Jesus' life at all, but the work of men like Martin Dibelius and even RUDOLF BULTMANN showed that such skepticism was not warranted by the conclusions of this study.

Influenced by these trends in New Testament study, Protestant theology by the middle of the 20th century was engaged in a reinterpretation of the Christology of the early church. Some Protestant churches continued to repeat the formulas of ancient dogma, but even there the critical study of the New Testament documents was beginning to call those formulas into question. The struggles of the evangelical churches in Germany under Adolf Hitler, which achieved forceful expression in the Barmen Declaration of 1934, caused some theologians to realize anew the power of the ancient dogma of the person of Christ to sustain faith, and some of them were inclined to treat the dogma with less severity. But even they acknowledged that the formulation of that dogma in static categories of person, essence, and nature was inadequate to the biblical emphasis upon actions and events rather than upon states of being. KARL BARTH for the Reformed tradition, Lionel Thornton for the Anglican tradition, and Karl Heim for the Lutheran tradition were instances of theologians trying to reinterpret classical Christology. While yielding nothing of their loyalty to the dogma of the church, Roman Catholic theologians like Karl Adam and KARL RAHNER were also endeavoring to state that dogma in a form that was meaningful to modernity. The doctrine of the work of Christ was receiving less attention than the doctrine of Christ's person. In much of Protestantism, the concentration of the 19th century upon the teachings of Jesus had made it difficult to speak of more than the prophetic office. The priestly office received least attention of all; and therefore, despite the support accorded to efforts like that of Gustaf Aulén to reinterpret the metaphor of the atonement as Christ's victory over his enemies, Protestant theology in the middle of the 20th century was still searching for a doctrine of the atonement to match its newly won insights into the doctrine of the person of Christ, especially its new emphases on his humanity and his personality.

From the history of Christianity both the critics and the adherents of the Christian movement can derive support for their ideas. To the critics of Christianity its history can prove that Christian faith was tied inseparably to worldviews that had been outmoded by modern discoveries and that therefore the churches were living fossils, doomed to become extinct as the full implications of science dawned upon an increasing number of believers. To the adherents of Christianity its history can prove the almost infinite adaptability of the Christian faith to a great diversity of societies, cultures, and philosophies, as well as its ability to convey the grace of God to people of every social station and cultural background. Yet Christianity is not simply an important element of the history of Western culture. It continues to claim the faith and obedience of hundreds of millions.

PRESENT STATE OF CHRISTENDOM

A map of the religions of the world at the end of the 20th century would reveal that Christianity was the most widely disseminated faith on earth. Virtually no nation has remained unaffected by Christian missions, although in many countries Christians are only a small fraction of the total population. Most of the countries of Asia and of Africa have Christian minorities, some of these, as in India, numbering many million. Yet such a map would continue to show the concentration of Christians in the domain of European or "Western" culture.

Roman Catholicism. The Roman Catholics in the world outnumber all other Christians combined. They are organized in an intricate system that spans the life of the church from the local PARISH to the papacy. Under the central authority

of the papacy, the church is divided into **DIOCESES**, whose bishops act in the name and by the authority of the pope but retain considerable administrative freedom within their individual jurisdictions. Similarly, the parish priest stands as the executor of papal and diocesan directives. Alongside the diocesan organization and interacting with it is a chain of orders, congregations, and societies; all of them are, of course, subject to the pope, but they are not as directly responsible to the bishop as are the local parishes. It would, however, be a mistake to interpret the polity of the Roman Catholic church in so purely an organizational manner as this. For Roman Catholic polity rests upon a belief in a mandate that is traced to the action of Jesus Christ himself, when he invested Peter, and through Peter his successors, with the power of the keys in the church. Christ is the invisible head of his church, and by his authority the pope is the visible head.

This interpretation of the origin and authority of the church determines both the attitude of Roman Catholicism to the rest of Christendom and its relation to the social order. Believing itself to be the true church of Jesus Christ on earth, it cannot deal with other Christian traditions as equals without betraying its own identity. This does not mean, however, that anyone outside the visible fellowship of the Roman Catholic church cannot be saved, nor does it preclude the presence of "vestiges of the church" in the other Christian bodies. During the 20th century, above all in the actions of the **SECOND VATICAN COUNCIL** (1962–65), the Roman Catholic church has increasingly concerned itself with its "separated brethren" both in Eastern Orthodoxy and in the several Protestant churches. Thus the ecumenical movement has evoked interest not only in the Protestant groups with which it began but Orthodoxy and Roman Catholicism as well. As the true church of Christ on earth, Roman Catholicism also believes itself responsible for the proclamation of the will of God as knowable by human reason to organized society and to the state. This role has often brought the church into conflict with the state throughout church history. Yet the political activities of individual churchmen, of whom Cardinal de Richelieu and Cardinal Mazarin are good illustrations, must not be confused with the fundamental obligation the church feels itself to have, believing itself to be the divinely ordained society to which is given responsibility for the moral law that is binding upon all; thus, the church feels itself to be responsible for giving this moral law to the nations and for working toward a social and political order in which both supernatural revelation and natural law can function.

Doctrine. The understanding that Roman Catholicism has of itself, its interpretation of the proper relation between the church and the state, and its attitude to other Christian traditions are all based upon Roman Catholic doctrine. In great measure this doctrine is identical with that confessed by orthodox Christians of every label, and consists of the Bible, the dogmatic heritage of the ancient church as laid down in the historic creeds and in the decrees of the ecumenical councils, and the theological work of the great doctors of the faith in East and West. If, therefore, the presentation of the other Christian traditions in this article compares them with Roman Catholicism, this comparison has a descriptive rather than a normative function; for to a considerable degree, Protestantism and Eastern Orthodoxy have defined themselves in relation to Roman Catholicism. In addition, as this article will attempt to show, most Christians past and present do have a shared body of beliefs about God, Christ, and the way of salvation.

Roman Catholic doctrine is more than this shared body of beliefs, as is that of each of the groups. Mention need only be made of the three distinctive doctrines that achieved definitive formulation during the 19th and 20th centuries: **PAPAL INFALLIBILITY** and the **IMMACULATE CONCEPTION** of and bodily **ASSUMPTION** of the Virgin Mary. On most other major issues of doctrine Roman Catholicism and Eastern Orthodoxy are largely in agreement, while Protestantism differs from both of them on several. For example, Roman Catholic theology treats the doctrine of the sacraments differently from the way Orthodox theology does; but in contrast to Protestantism, both Roman Catholic and Orthodox doctrine insist upon the centrality of the seven sacraments—baptism, confirmation, Eucharist, extreme unction, penance, matrimony, and holy orders—as channels of divine grace.

Children attending after-school classes run by a Greek Orthodox church in Astoria, Queens, N.Y.

Katrina Thomas—Photo Researchers

Liturgy. The Roman Catholic doctrine of the sacraments is a summary, in theological form, of that which is affirmed by Roman Catholic liturgy. The church is not merely an organization, nor is it a school of doctrine. It is the place where divine and human meet, as God approaches through grace and humans approach through worship. Hence the focus of Roman Catholic piety is the Eucharist, which is both a sacrament and a sacrifice. The obligations of church membership are also derived from the sacramental system, either as preparations for worthy participation in it or as expressions of the obedience sustained by it. Instruction in these obligations is the responsibility of Roman Catholic educational institutions, which, despite the low educational level of church members in many cultures, surpass any other system of schools in Christian history in both size and the excellence of their products. The missions of the church and its institutions of mercy, like the schools, are largely in the hands of religious orders.

Churches of Eastern Christendom. More than 218,000,000 Christians belong to the various Christian traditions of the East. Separated from the West, the Orthodox churches of the East have developed their own way for half of Christian history. Each national church is autonomous. The "ecumenical patriarch" of Constantinople is not the Eastern pope but merely the first in honor among equals in jurisdiction. Eastern Orthodoxy interprets the primacy of Peter, and therefore that of the pope, similarly as first among equals and thus denies the right of the pope to speak and act for the entire church by himself, without a church council and without his episcopal colleagues. Because of this polity, Eastern Orthodoxy has identified itself more intimately with national cultures and with national regimes than has Roman Catholicism. Therefore the history of church-state relations in the East has been very different from that in the West, because the church in the East has sometimes tended toward the extreme of becoming a mere instrument of national policy, while the church in the West has sometimes tended toward the opposite extreme of attempting to dominate the state.

During most of the 20th century, most Eastern Orthodox believers and churches lived under hostile regimes, in particular under Marxism-Leninism in the Soviet Union and the Balkans, and had to endure devastating persecution. The fall of those regimes in the final two decades of the 20th century, therefore, presented those churches with new opportunities, but also with new challenges.

The history of ecumenical relations between Eastern Orthodoxy and Protestantism during the 20th century was also different from the history of Protestant-Roman Catholic relations. The hope for an eventual healing of the East-West schism was symbolized by the fraternal meeting between Pope Paul VI of Rome and Patriarch Athenagoras I of Constantinople in Jerusalem in 1964, which resulted in the mutual withdrawal of the ancient EXCOMMUNICATIONS pronounced by each of these sees on the other. Meanwhile, Orthodox churches were also making connections with the WORLD COUNCIL OF CHURCHES and the NATIONAL COUNCIL OF THE CHURCHES OF CHRIST IN THE U.S.A., and some Orthodox churches even established ties with the Anglican Communion and with the OLD CATHOLIC CHURCH.

Doctrinal authority for Eastern Orthodoxy resides in the Scriptures, the ancient creeds, the decrees of the first seven ecumenical councils, and the tradition of the church. The scope and content of this tradition are not specified; hence it is not always easy to discover just what the Eastern Orthodox churches teach on a particular doctrinal question. In addition to the two issues mentioned in the discussion of Roman Catholicism above, the chief dogmatic difference between Roman Catholic and Eastern Orthodox thought is on the Western doctrine of the procession of the Holy Spirit from the Father and Son, the so-called FILIOQUE, which the East rejects as an unwarranted addition to the Nicene Creed.

But "orthodoxy," in the Eastern use of the term, means primarily not a species of doctrine but a species of worship. The Feast of Orthodoxy on the first Sunday of Lent celebrates the end of the ICONOCLASTIC CONTROVERSY and the restoration to the churches of the ICONS, which are basic to Orthodox piety. In Orthodox churches (as well as in those Eastern churches that have reestablished communion with Rome), the most obvious points of divergence from normal Western practice are the right of the clergy to marry before ORDINATION, though bishops may not be married, and the administration to the laity of both species (bread and wine) in the Eucharist at the same time by the method of intinction (dipping bread in wine and offering this combined Eucharist to communicants).

Protestantism. Although there is a greater variety of thought and expression within both Roman Catholicism and Eastern Orthodoxy than outsiders usually recognize, both must appear monolithic when compared with Protestantism. Formulating a definition of Protestantism that would include all its varieties has long been the despair of Protestant historians and theologians, for there is greater diversity within Protestantism than there is between some forms of Protestantism and some non-Protestant Christianity. For example, an Anglican or a Lutheran high-churchman has more in common with an Orthodox theologian than he has with a BAPTIST theologian. Amid all this diversity, however, it is possible to define Protestantism formally as non-Roman Western Christianity and to divide most of Protestantism into four major confessions or confessional families—Lutheran, Anglican, Reformed, and Free Church.

Lutheranism. The largest of these non-Roman Catholic denominations in the West is the Lutheran church, whose worldwide membership totals approximately 65,000,000. The Lutheran churches in Germany, in the several Scandinavian countries, and in the Americas are distinct from one another in polity, but almost all of them are related through various national and international councils, of which the Lutheran World Federation is the most comprehensive. Doctrinally, Lutheranism sets forth its distinctive position in the BOOK OF CONCORD, especially in the AUGSBURG CONFESSION. A long tradition of theological scholarship has been responsible for the development of this position into many and varied doctrinal systems. Luther, as noted above, moved conservatively in his reformation of the Roman Catholic liturgy, and the Lutheran church, although it has altered many of his liturgical forms, has remained a liturgically traditional church. Most of the Lutheran churches of the world have participated in the ecumenical movement and are members of the World Council of Churches, but Lutheranism has not moved very often across its denominational boundaries to establish full communion with other bodies. That situation changed, however, with the Leuenberg Concord of 1973 in Europe and the establishment of full communion between the Evangelical Lutheran Church in America and three Reformed churches in 1997.

The prominence of Lutheran societies in the history of missions during the 18th and 19th centuries gave an international character to the Lutheran church; so did the development of strong Lutheran churches in North America, where the traditionally German and Scandinavian membership of the church was gradually replaced by a more cosmopolitan constituency.

Anglicanism. The ANGLICAN COMMUNION, with more than 78,000,000 members worldwide, is not only the ESTABLISHED CHURCH of England but the Christian denomination of many believers throughout the world. Like Lutheranism, Anglicanism has striven to retain whatever it could of the Catholic tradition of liturgy and piety, but after the middle of the 19th century the Catholic revival in Anglicanism went much further in the restoration of ancient liturgical usage as well as of the doctrinal tradition. Although the Catholic revival also served to rehabilitate the authority of tradition in Anglican theology generally, great variety continued to characterize the theologians of the Anglican Communion. Anglicanism is set off from most other non-Roman churches in the West by its retention of and its insistence upon the APOSTOLIC SUCCESSION of ordaining bishops. The Anglican claim to this apostolic succession, despite its repudiation by Pope Leo XIII in 1896, has largely determined the role of the Church of England in the discussions among the churches. Anglicanism has often taken the lead in inaugurating such discussions, but it has demanded the presence of the historic episcopate as a prerequisite to the establishment of full communion. During the 19th and 20th centuries many leaders of Anglican thought were engaged in finding new avenues of communication with industrial society and with modern intellectual thought. The strength of Anglicanism in the New World and in the younger churches of Asia and Africa has confronted this communion with the problem of deciding its relations to new forms of Christian life in these new cultures. As its centuries-old reliance upon the establishment in England has been compelled to retrench, Anglicanism has discovered new ways of exerting its influence and of expressing its message.

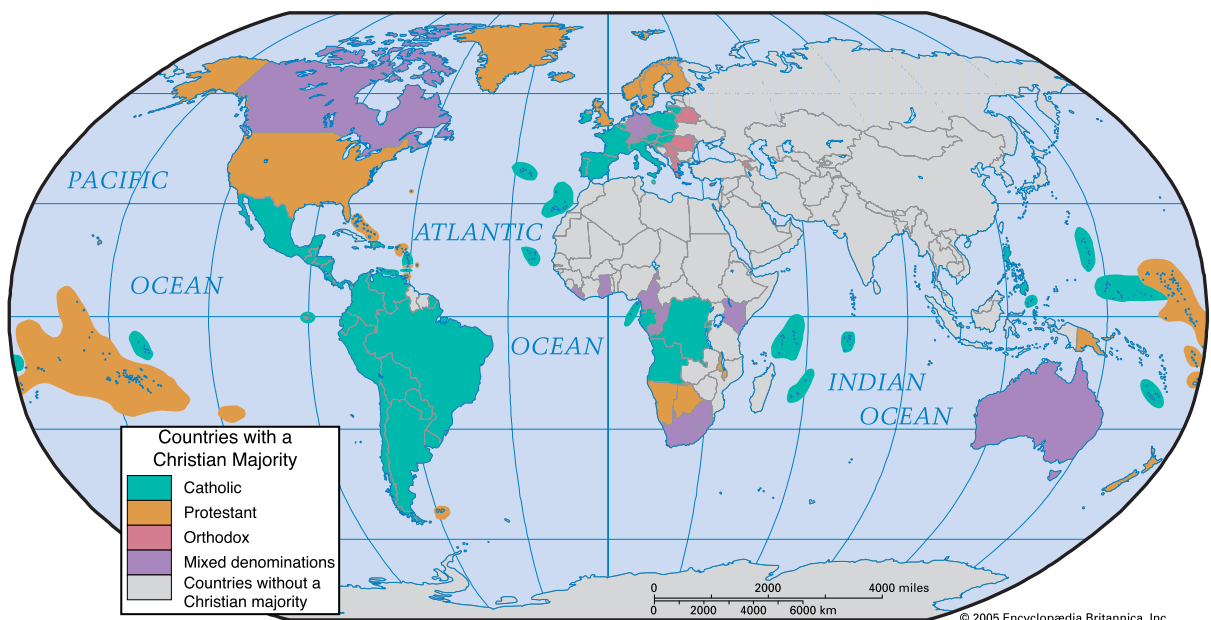

Presbyterian and Reformed churches. Protestant bodies that owe their origins to the reformatory work of John Calvin and his associates in various parts of Europe are often termed "Reformed," particularly in Germany, France, and Switzerland. In Britain and in the United States they have usually taken their name from their distinctive polity and have been called PRESBYTERIAN. They number about 75,000,000 worldwide. They are distinguished from both Lutheranism and Anglicanism by the thoroughness of their separation from Roman Catholic patterns of liturgy, piety, and even doctrine. Reformed theology has tended to emphasize the sole authority of the Bible with more rigor than has characterized the practice of Anglican or Lutheran thought, and it has looked with deeper suspicion upon the symbolic and sacramental traditions of the Catholic centuries. Perhaps because of its stress upon biblical authority, Reformed Protestantism has sometimes tended to produce a separation of churches along the lines of divergent doctrine or polity, by contrast with the inclusive or latitudinarian churchmanship of the more traditionalistic Protestant communions. This understanding of the authority of the Bible has also led Reformed Protestantism to its characteristic interpretation of the relation between church and state, sometimes rather oversimply labeled theocratic, according to which those charged with the proclamation of the revealed will of God in the Scriptures (*i.e.*, the ministers) are to address this will also to civil magistrates. As the church is "reformed according to the word of God," so the lives of the individuals in the church are to conform to the word of God; hence the Reformed tradition has assigned great prominence to the cultivation of moral uprightness among its members. During the 20th century most of the Reformed churches of the world took an active part in the ecumenical movement.

Free churches. In the 19th century the term "free churches" was applied in Great Britain to those Protestant bodies that did not conform to the establishment, such as CONGREGATIONALISTS, METHODISTS, and Baptists (and Presbyterians in England); but since that time it has come into usage among the counterparts to these churches in the United States, where each of them has grown larger than its British parent body. As the Reformed denominations go beyond both Anglicanism and Lutheranism in their independence of Catholic traditions and usages, so the

free churches have tended to reject some of the Catholic remnants also in classical Presbyterian worship and theology. Baptists and Congregationalists see the local congregation of gathered believers as the most nearly adequate visible representation of Christ's people on earth. The Baptists requirement of free personal decision as a prerequisite of membership in the congregation leads to the restriction of baptism to believers (*i.e.*, those who have made and confessed such a decision of faith) and therefore to the repudiation of infant baptism; this in turn leads to the restriction of communion at the Eucharist to those who have been properly baptized. In Methodism the free church emphasis upon personal commitment leads to a deep concern for moral perfection in the individual and for moral purity in the community. The DISCIPLES OF CHRIST, a free church that originated in the United States, make the New Testament the sole authority of doctrine and practice in the church, requiring no creedal subscription at all; a distinctive feature of their worship is their weekly celebration of communion. Emphasizing as they do the need for the continuing reformation of the church, the free churches have provided leadership and support for the ecumenical movement. This cooperation, as well as the course of their own historical development from spontaneous movements to ecclesiastical institutions possessing many of the features that the founders of the free churches had originally found objectionable in the establishment, has made the question of their future role in Christendom a central concern of free churches on both sides of the Atlantic.

Other churches and movements. In addition to these major divisions of Protestantism, there are other churches and movements not so readily classifiable; some of them are quite small, but others number millions of members. These churches and movements would include, for example, the SOCIETY OF FRIENDS, known both for their cultivation of the "inward light" and for their pacifism; the UNITARIAN and Universalist bodies, which do not consistently identify themselves as Christian; Pentecostal churches and churches of divine healing, which profess to return to primitive Christianity; and many independent churches and groups, most of them characterized by a free liturgy and a fundamentalist theology. Separately and together, these groups illustrate how persistent has been the tendency of Christianity since its beginnings to proliferate sects, heresies, and movements. They illustrate also how elusive is the precise demarcation of Christendom, even for those observers whose definition of normative Christianity is quite exact.

CHRISTIANITY, ART OF, art inspired by and often intended to offer instruction in the Christian faith. Because the history of Christian art is so extensive, tracing out its beginnings and influences to about the 6th century is all that is attempted in this article.

The earliest identifiably Christian art consists of a few 2nd-century wall and ceiling paintings in the Roman CATA-COMBS (underground burial chambers), which continued to

rial sponsorship brought popularity, riches, and many converts from all classes of society. Suddenly the church needed to produce art and architecture on a more ambitious scale in order to accommodate and educate its new members and to reflect its new dignity and social importance.

Churches and shrines were soon being built throughout the empire, many sponsored by Constantine himself. These buildings were usually five-aisled **BASILICAS**, such as Old St.

Peter's in Rome, or basilican-plan buildings centering upon a round or polygonal shrine, such as that in the Church of the Nativity in Bethlehem. Large-scale sculpture was not popular, but relief sculpture on sarcophagi and ivory carvings and book covers continued to be produced. The walls of the churches were decorated with paintings or mosaics to instruct the faithful. Painting also illustrated liturgical books and other manuscripts.

The art of this period had its roots in the classical Roman style, but it developed into a more abstract, simplified artistic expression. Its ideal was not physical beauty but spiritual feeling. The human figures thus became types rather than individuals and often had large, staring eyes, "the windows of the soul." Symbols were frequently used, and compositions were flat and hieratic, in order to concentrate on and clearly visualize the main idea. Although the art of the period intentionally departed from earlier **NATURALISM**, it sometimes has great power and immediacy.

CHRISTIANITY, ROOTS OF, the origins of the beliefs and practices of the Christian religion, which began in the Jewish community of Palestine. Though it attracted little attention among **PAGANS** and Jews at the beginning, **CHRISTIANITY** was by far the most important sectarian development of the Roman period. With the discovery of the **DEAD SEA SCROLLS** at QUMRĀN, the received view that Pharisaism was to be considered the mainstream of **JUDAISM** had to be revised sharply. In consequence, primitive Christianity, with its apocalyptic and eschatological interests, came to be viewed by many

scholars no longer as a splinter group, peripheral to Jewish development, but, at least initially, as part of a broad range of attitudes within **JUDAISM**. **JESUS** himself, despite his criticisms of Pharisaic legalism, may now be classified as a **PHARISEE** with strong apocalyptic inclinations; he proclaimed that his intention was not to abrogate the **TORAH**, but to fulfill it. It is possible to envision a direct line of development from Jewish currents, both in Palestine and the Diaspora in the Hellenistic Age, to Christianity, particularly in the traditions of martyrdom, proselytism, **MONASTICISM**, **MYSTICISM**, liturgy, and such matters of religious philosophy as the doctrine of the **LOGOS** (Word) as an intermediary between God and the world and the synthesis of faith and reason. The **SEPTUAGINT**, in particular, played an important role: theoretically, in the transformation of Greek philosophy into the theology of the Church Fathers; and practically, in converting Jews and Jewish sympathizers to Christianity. The connection of nascent Christianity with the **QUMRĀN** groups may be seen in their **DUALISM** and apocalypticism; but there are differences, notably in the conception of the **INCARNATION** and in the relationship of the Son and the Father (see also **ESSENE**). Again, the Qumrān group constituted an esoteric and militant movement that enforced a community of goods and strict observance

be decorated in a sketchy style derived from Roman impressionism through the 4th century. They provide an important record of some aspects of the development of Christian subject matter. The earliest Christian **ICONOGRAPHY** tended to be symbolic. A simple rendering of a fish was sufficient to allude to **JESUS CHRIST**. Bread and wine invoked the **EUCCHARIST**. During the 3rd and 4th centuries, in the catacomb paintings and in other manifestations, Christians began to adapt familiar pre-Christian prototypes to new meanings. The early figural representations of Christ, for instance, most often show him as the good shepherd by directly borrowing from a classical prototype. He was also sometimes depicted in the guise of familiar gods or heroes, such as **APOLLO** or **ORPHEUS**. Only later, when the religion itself had achieved some measure of earthly power, did he take on more exalted attributes. The earliest scenes from the life of Christ to be depicted were the miracles. The Passion, particularly the **CRUCIFIXION** itself, was generally avoided until the religion was well established.

The beginnings of Early Christian art date to the period when the religion was yet a modest and sometimes persecuted sect, and its flowering was possible only after 313, when the Christian emperor **CONSTANTINE** the Great decreed official toleration of **CHRISTIANITY**. Subsequent impe-

of the TORAH, whereas Christianity was pacifist, was open to all, and represented a New COVENANT that looked away from Torah ritual and urged a voluntary community of possessions. In general, moreover, Christianity was more positively disposed toward Hellenism than was Pharisaism, particularly under the leadership of Paul, a thoroughly Hellenized Jew. (See PAUL THE APOSTLE, SAINT.)

When Paul proclaimed his ANTINOMIANISM (against Torah observance as a means of salvation) many Jewish followers of Jesus became Jewish Christians and continued to observe the Torah. Their two main groupings were the Ebionites—probably to be identified with those called minim, or “sectaries,” in the Talmud—who accepted Jesus as the MESSIAH but denied his divinity, and the Nazarenes, who regarded Jesus as both messiah and God, but regarded the Torah as binding upon Jews alone. The percentage of Jews converted to any form of Christianity was extremely small, as can be seen from the frequent criticisms of Jews for their stubbornness by Christian writers.

There were four major turning points in the final break between Christianity and Judaism: (1) the flight of the Jewish Christians from Jerusalem to Pella across the Jordan in 70 CE and their refusal to continue the struggle against the Romans; (2) the institution by the patriarch GAMALIEL II of a prayer in the Eighteen BENEDICTIONS (see AMIDAH) against such heretics (c. 100 CE); and (3 and 4) the failure of the Christians to join the messianic leaders Lukuas-Andreas and BAR KOKHBA in the revolts against Trajan (115–117 CE) and Hadrian (132–135 CE), respectively.

CHRISTIAN SCIENCE, religious denomination founded in the United States in 1879 by MARY BAKER EDDY, author of the definitive statement of its teaching, *Science and Health with Key to the Scriptures*. About one-third of its nearly 3,000 congregations are located in 56 countries outside the United States, with membership concentrated in areas with strong Protestant traditions. It is widely known for its practice of spiritual healing.

Christian Science subscribes to the essential Christian belief in an omnipotent, purposeful God, accepts the revelatory authority (though not the verbal inerrancy) of the BIBLE, and holds the CRUCIFIXION and RESURRECTION OF JESUS CHRIST to be the central event in history, indispensable to the redemption of mankind. It departs from traditional CHRISTIANITY in rejecting the deity (but not the divinity) of Jesus. His healing works, as well as his own victory over death and the grave, are regarded as demonstrating that all the ills and limitations of the mortal state can be overcome in proportion as one gains “the mind of Christ,” *i.e.*, a rooted understanding of man’s true spiritual status. This requires a penetration beyond material appearances to a spiritual order of being.

Once one accedes to the proposition that matter is created by God, Mrs. Eddy argued, one has made a fatal compromise with materialism, holding God responsible for all suffering in the universe (see also THEODICY). Christian redemption is therefore held to include regeneration from all phases of mortality, or “the flesh.” Redemption from SIN is basic to this process, since sin in all its forms denies God’s sovereignty by claiming that life, will, and mind evolve from brute matter rather than from Spirit. Mrs. Eddy saw the regenerative process as a long and demanding one, calling upon the Christian virtues of patience and humility, repentance and cross-bearing. The cure of disease through prayer is seen as a necessary element in a full redemption from the flesh.

Mary Baker Eddy

A Christian Scientist is not compelled by the church to employ spiritual means for healing; it encourages members to obey public health laws, including quarantine regulations, report suspected contagious diseases, and follow immunization requirements where religious exemptions are not provided by law. They also generally employ the services of dentists and optometrists, and often those of physicians for such procedures as the setting of bones or the delivery of a child.

Christian Scientists in need of nursing care can go to a Christian Science sanatorium or seek the services of a Christian Science nurse in the home. Those engaged in the full-time healing ministry are called Christian Science practitioners.

Systematic study and prayer are considered basic to the ongoing life of the denomination and the readiness of its members to meet the challenges of Christian healing. All Christian Science churches maintain Reading Rooms for this purpose. Central in this study is the “Bible lesson-sermon” composed of passages from the Bible and *Science and Health* on 26 rotating subjects. The lessons from these two books are studied daily and form the basis of the Sunday service, read by a first and second reader elected from the congregation. In this service there are no formally observed SACRAMENTS. Wednesday evening meetings include the sharing of healings and other experience by the congregation.

Christian Science has had significance out of proportion to its size. It is one of several lasting denominations indigenous to 19th-century America and reflects in its own way the emphasis of many American religious groups in the radical Reformed Protestant tradition on the revitalization of primitive Christianity. Yet Christian Science has aroused considerable controversy as well as misunderstanding by its view of creation as wholly spiritual, a view that breaks decisively with traditional Christian COSMOLOGY as well as with traditional scientific materialism.

In social terms, the Christian Science movement has increasingly been perceived as anticipating the development of feminism in the religious world. While not a feminist as such, Mrs. Eddy taught that the spiritual equality of men and women must have political and social effects. In the Christian Science movement as a whole, women have had significant roles as practitioners and church officers.

The church is widely known for *The Christian Science Monitor*, an international daily newspaper published in Boston, and for its international news broadcasts.

CHRISTIAN SOCIALISM, movement of the mid-19th century that attempted to apply the social principles of CHRISTIANITY to modern industrial life. The term was generally associated with the demands of Christian activists for a social program of political and economic action on behalf of all individuals, impoverished or wealthy, and the term was

used in contradistinction to *laissez-faire* individualism. Later, Christian Socialism came to be applied in a general sense to any movement that attempted to combine the fundamental aims of socialism with the religious and ethical convictions of Christianity.

Early in the 19th century the French philosopher Henri de Saint-Simon expounded a "new Christianity" primarily concerned with the plight of the poor. Saint-Simonians believed that the keynote of social development would be a spirit of association, with religion as the dominating force, that would gradually supplant the prevailing spirit of egoism and antagonism in society.

The term Christian Socialism was first appropriated by a group of British men including FREDERICK DENISON MAURICE, novelist Charles Kingsley, and John Malcolm Ludlow, who founded a movement in England after the failure of the Chartist agitation of 1848. Ludlow enlisted other churchmen in an effort to promote the application of Christian principles in industrial organization. Stirred by the sufferings of the poor and by factory and workshop conditions, Ludlow's group vigorously criticized socially conservative Christianity and *laissez-faire* attitudes within the industrial sector. They joined forces with the cooperativist movement and financed several small cooperative societies. They also founded the Working Men's College in London. The movement as such dissolved in the late 1850s, however, numerous Christian Socialist organizations were formed in the 1880s and '90s in England.

In addition to the French Roman Catholic social movement long in existence, movements similar to Ludlow's took shape among French Protestants in the latter half of the 19th century. The Protestant Association for the Practical Study of Social Questions, founded in 1888, opposed bourgeois PROTESTANTISM while rejecting a strict, egalitarian socialism. In Germany the movement for Christian social action in the late 19th century became associated with violent anti-Semitic agitation, as in the case of Adolf Stoecker, a court preacher and a founder of the Christian Social Workers' Party. In the United States, Henry James, Sr., the father of novelist Henry James and philosopher William James, had argued the identity of the aims of socialism and Christianity as early as 1849. The Society of Christian Socialists was organized in 1889. The first years of the 20th century witnessed the rise of the SOCIAL GOSPEL movement, which was an outgrowth of Christian Socialism that stressed the social aspect of salvation.

CHRISTMAS (from Old English: *Cristes mæsse*, literally, "Christ's mass"), Christian festival celebrated on December 25, commemorating the birth of JESUS CHRIST. It is also a popular secular holiday.

According to a Roman almanac, Christmas was celebrated in Rome by 336 CE. In the eastern part of the Roman Empire, however, a festival on January 6 commemorated both the birth and the BAPTISM of Jesus, except in Jerusalem, where only the birth was celebrated. During the 4th century the celebration of Christ's birth on December 25 was gradually adopted by most Eastern churches. In the Armenian Church, a Christmas on December 25 was never accepted; Christ's birth is celebrated on January 6. After Christmas was established in the East, the baptism of Jesus was celebrated on EPIPHANY, January 6. In the West, however, Epiphany was the day on which the visit of the MAGI to the infant Jesus was celebrated.

The reason why Christmas came to be celebrated on December 25 remains uncertain, but one view holds that the

date was inferred from the supposed date of Jesus' conception nine months earlier on March 25, the traditional date of the creation of the world.

Contemporary Christmas customs typically do not derive from theological or liturgical affirmations, and most are of fairly recent origin. Although the precise date and origin of the tradition of the Christmas tree is unknown, it appears that fir trees were first decorated with apples in Strasbourg in 1605. The first use of candles on such trees is recorded by a Silesian duchess in 1611. The Advent wreath—made of fir branches, with four candles denoting the four Sundays of the Advent season—is even more recent, especially in North America. The custom, which began in the 19th century but had roots in the 16th, originally involved a fir wreath with 24 candles (the 24 days before Christmas, starting December 1); because so many candles made the wreath awkward, the number was reduced to four.

Christmas is traditionally regarded as the festival of the family and of children, in the name of whose patron, SAINT NICHOLAS, or Santa Claus, presents are exchanged in many countries.

CHRISTOPHER, SAINT \ˈkris-tə-fər\ (fl. c. 3rd century; Western feast day July 25; Eastern feast day May 9), patron saint of travelers. Though one of the most popular saints, there is no certainty that he existed historically. Portrayed as a GIANT who helped travelers to cross rivers, he is the hero of many legends. In one legend a small child asked to be carried across the river, and in the middle of the river the child became so heavy that Christopher staggered under the burden, complained, and was told that he had borne upon his back the world and Him who created it. Hence, Christopher (Greek: "Christ-Bearer") is generally represented in art carrying the Christ child on his back. In 1969 his name was dropped from the calendar of the Roman Catholic church, and his feast day is no longer obligatory.

CHRYSOSTOM, SAINT JOHN \ˈkri-sə-stəm, kri-ˈsäs-təm\ (b. c. 347 CE, Antioch, Syria—d. Sept. 14, 407, Comana, Helenopontus; Western feast day September 13; Eastern feast day November 13), early CHURCH FATHER, biblical interpreter, and archbishop of Constantinople; the zeal and clarity of his preaching earned him the Greek surname meaning "golden-mouthed."

John was brought up as a Christian and was intended for the law, but he also studied theology and gave up his profession to become a hermit-monk. His health gave way, and he returned to Antioch, becoming a priest there. For 12 years (from 386) he established himself as a great preacher. A sensational episode of this period was a riot in 387, when the citizens of Antioch treated the images of the emperors with disrespect and were threatened with reprisals; in a famous course of sermons, "On the Statues," Chrysostom brought his hearers to a frame of mind suitable both to the season, LENT, and to the danger of their situation.

In 398 Chrysostom was called to Constantinople to be its archbishop. He gained a large following among the people, but his castigation of the misuse of riches angered the wealthy and influential. He was concerned, above all, for the spiritual and temporal welfare of the needy and oppressed. He taught that personal property is not strictly private but a trust, and declaring that what was superfluous to one's reasonable needs ought to be given away.

An alliance against John was made by Eudoxia, the wife of the Eastern Roman emperor Arcadius, and the archbish-

op of the rival see of Alexandria, the powerful Theophilus. In 403 Theophilus convened a **SYNOD** that indicted John on a large number of charges, many of them purely frivolous or vexatious. Chrysostom refused to appear before the synod, whereupon it condemned him and professed to depose him from his see. Arcadius therefore banished Chrysostom to be kept in confinement at Cucusus in Armenia.

Chrysostom appealed his banishment to the bishop of Rome, Pope Innocent I; the latter, with the help of the Western emperor Honorius, attempted to intervene, but his efforts failed. In exile, however, John found it possible to keep up a lively correspondence and was still able to exert a measure of influence in his cause, and word came from Constantinople that he was to be removed to an even more remote place at the eastern end of the Black Sea. Chrysostom did not survive the journey. The official rehabilitation of John Chrysostom came in 438, when his relics were brought to Constantinople and were solemnly received by the then archbishop Proclus and the emperor Theodosius II, son of Arcadius and Eudoxia.

The most frequently used of the three eucharistic services in **EASTERN ORTHODOXY** is called the Liturgy of St. John Chrysostom, but the evidence upon which to base this theory of his having had anything to do with its composition is unconvincing.

CHTHONIC \ˈthä-nik\, of or relating to earth, particularly the Underworld. Chthonic figures in Greek **MYTHOLOGY** included **HADES** and **PERSEPHONE**, the rulers of the Underworld, and the various heroes venerated after death; even **ZEUS**, the king of the sky, had earthly associations and was venerated as Zeus Chthonius. Oracles (prophecies) delivered through incubation (that is, whereby the inquirer slept in a holy precinct and received an answer in a dream) were believed to come from chthonian powers. In the symbolism and iconography of chthonic deities, snakes are often associated with such deities in world mythology; thus, divinities are often portrayed entwined with serpents.

CH'ÜAN-CHEN \ˈchwän-ˈjən\, *Pinyin* Quanzhen (Chinese: "Perfect Realization"), in **TAOISM**, sect founded in 1163 by **WANG CHE**. This sect came to the favorable attention of the Mongols, who had taken over in the North, and its second patriarch, Ch'iu Ch'ang-ch'un, was invited into Central Asia to preach to Genghis Khan. The sect enjoyed great popularity, and its establishment of celibate monks continued to be active into the 20th century, with the White

Cloud Monastery (Pai-yün kuan) at Beijing as headquarters.

CHUANG-TZU \ˈjwǎŋ-ˈdzə\, *Pinyin* Zhuangzi, *personal name* (*Wade-Giles romanization*) Chou (b. c. 369 BCE—d. 286 BCE, the most significant of China's early interpreters of **TAOISM**, whose work (*Chuang-tzu*) is considered one of the definitive texts of Taoism and is thought to be more comprehensive than the **TAO-TE CHING**. Chuang-tzu's teachings also exerted a great influence on the development of Chinese **BUDDHISM** and had considerable effect on Chinese landscape painting and poetry.

Tradition says that Chuang-tzu was a native of the state of Meng; it is known that he was a minor official at Ch'i-yüan in his home state. He lived during the reign of Prince Wei of Ch'u and was therefore a contemporary of **MENCIUS**. According to **Ssu-ma Ch'ien**, Chuang-tzu's teachings were drawn primarily from the sayings of **LAO-TZU**, but his perspective was much broader. His literary and philosophical skills were used to refute the Confucianists and Mohists (followers of **MO-TZU**, who advocated universal love). In addition, he is reported to have written "The Old Fisherman," "Robber Chi," and "Opening Trunks," all attacks on **CONFUCIANISM**.

Chuang-tzu is best known through the book that bears his name, the *Chuang-tzu*, also known as *Nan-hua chen-ching* ("The Pure Classic of Nan-hua"). It is generally agreed that the first seven chapters, the "inner books," are, for the most part, genuine, whereas the "outer books" (chapters 8–22) and the miscellany (chapters 23–33) are largely spurious, even though it is possible that some passages may reflect Chuang-tzu's own hand.

The more vivid descriptions of his character come from the anecdotes in the later chapters of the book. He is portrayed as an unpredictable eccentric sage who seems careless about personal comforts or public esteem. The stories speak of his failure to mourn the death of his wife, or his refusal of an elaborate burial. Many of the stories of his eccentricities stem directly from his enlightened fatalism. Enlightenment for Chuang-tzu comes with the realization that everything in life is One, the **TAO**.

Chuang-tzu taught that what can be known or said of the Tao is not the Tao. It has no beginning or end, no limitations or demarcations. Life is subject to the eternal transformation of the Tao, in which there is no better or worse, no good or evil. Things should be allowed to follow their own course, and men should not value one situation over another. A truly virtuous man is free from the bondage of

circumstance, personal attachments, tradition, and the need to reform his world. Accordingly, Chuang-tzu reputedly declined an offer to be prime minister of Ch'u because he did not want the entanglements of a court career.

The complete relativity of his perspective is forcefully expressed in one of the better-known passages of the *Chuang-tzu*:

Once I, Chuang Chou, dreamed that I was a butterfly and was happy as a butterfly. I was conscious that I was quite pleased with myself, but I did not know that I was Chou. Suddenly I awoke, and there I was, visibly Chou. I do not know whether it was Chou dreaming that he was a butterfly or the butterfly dreaming that it was Chou. Between Chou and the butterfly there must be some distinction. This is called the transformation of things.

In the *Chuang-tzu*, the relativity of all experience is in constant tension with the unity of all things. When asked where the Tao was, Chuang-tzu replied that it was everywhere. When pushed to be more specific, he declared that it was in ants and, still lower, in weeds and potsherd; furthermore, it was also in excrement and urine. This forceful statement of the omnipresence of the Tao had its parallels in later Chinese Buddhism, in which a similar figure of speech was used to describe the ever-present Buddha.

CHUBB, THOMAS \ˈchəb\ (b. Sept. 29, 1679, East Harnham, Wiltshire, Eng.—d. Feb. 8, 1747, Salisbury, Wiltshire), self-taught English philosopher and proponent of DEISM.

The son of working-class parents, Chubb was apprenticed to a glovemaking and later worked for a tallow chandler. He read widely and began to write on RATIONALISM in the early 1700s; his first publication was an essay, "The Supremacy of the Father Asserted," written in 1715 in response to the Arian controversy. Chubb's other works, which include *Discourse Concerning Reason* (1731), *The True Gospel of Jesus Christ Vindicated* (1739), and *Discourse on Miracles* (1741), betray the deficiencies of his education, and he was often treated disparagingly by more erudite theologians. His tracts tended to limit the Christian religion to three fundamental tenets: belief in the divinely ordained moral law, belief in the need of sincere repentance for SIN, and belief in future rewards and punishments.

CHU HSI \ˈjü-'shē\, Pinyin Zhu Xi, literary name (hao) Yüan Hui \yüwän-'hwä, 'ywen-\, or Chung Hui \ˈjün-'hwä\, courtesy names (tzu) Hui An, Ch'en Lang, Chi Yen, Hui Weng, Hsün Weng, or Yün Ku Lao-jen, also called Chu-tzu \ˈjü-'dzä\, or Chu-fu-tzu \ˈjü-'fü-'dzä\ (b. Oct. 18, 1130, Yu-hsi, Fukien province, China—d. April 23, 1200, China), Chinese philosopher whose synthesis of Neo-Confucian thought long dominated Chinese intellectual life.

Chu Hsi was the son of a local official. He was educated in the Confucian tradition by his father and passed the highest civil service examination at the young age of 18. Chu Hsi's first official position (1151–58) was as a registrar in T'ung-an, Fukien, where he reformed the management of taxation and police, improved the library and the standards of the local school, and drew up a code of proper formal conduct and ritual. Before proceeding to T'ung-an, Chu Hsi had studied in 1160 with Li T'ung, a thinker in the tradition of Sung CONFUCIANISM. Li had created a new metaphysical system to compete with Buddhist and Taoist phi-

losophy. Under his influence, Chu's allegiance turned definitely to Confucianism at this time.

After his assignment at T'ung-an ended, Chu Hsi did not accept another official appointment until 1179. He did, however, continue to express his political views in memorandums addressed to the emperor. In 1175 he held a famous philosophical debate with the philosopher LU HSIANG-SHAN (Lu Chiu-yüan) at which neither man was able to prevail. In contrast to Lu's insistence on the exclusive value of inwardness, Chu Hsi emphasized the value of inquiry and study, including book learning. In a number of works, including a compilation of the works of the Ch'eng brothers and studies of Chou-Tun-i (1017–73) and CHANG TSAI (1020–77), he expressed his esteem for these four philosophers, whose ideas he incorporated and synthesized into his own thought. In 1175 Chu Hsi and his friend LÜ Tsu-ch'ien (1137–81) compiled passages from the works of the four to form their famous anthology, *Chin-ssu lu* (*Reflections on Things at Hand*). His enormously influential commentaries on the LUN-YÜ (*Analects*) of CONFUCIUS and on MENCIOUS were both completed in 1177.

Chu Hsi also took a keen interest in history and directed a reworking and condensation of Ssu-ma Kuang's history, the *Tzu-chih t'ung-chien* ("Comprehensive Mirror for Aid in Government"), so that it would illustrate moral principles in government. The resulting work, known as the *T'ung-chien kang-mu* ("Outline and Digest of the General Mirror"), basically completed in 1172, served as the basis for the first comprehensive history of China published in Europe, J.-A.-M. Moyriac de Mailla's *Histoire générale de la Chine* (1777–85).

While serving as prefect (1179–81) in Nan-k'ang, Kiangsi, Chu Hsi rehabilitated the White Deer Grotto Academy, which had fallen to ruin. The prestige restored to it by Chu was to last through eight centuries.

In 1188 Chu Hsi wrote a major memorandum in which he restated his conviction that the emperor's character was the basis for the well-being of the realm. In 1189 he commenced an important commentary on TA-HSÜEH ("Great Learning"), a Confucian text on moral government, and he continued to work on *Ta hsüeh* for the rest of his life. Similarly, in 1189 he wrote a commentary on CHUNG-YUNG ("Doctrine of the Mean"). It was largely because of the influence of Chu Hsi that these two texts came to be accepted along with the *Analects* and *Mencius* as the FOUR BOOKS basic to the Confucian educational curriculum.

Near the end of his life, his enemies brought virulent accusations against him, and he was barred from political activity. Chu Hsi's reputation was rehabilitated soon after his death, however, and posthumous honors for him followed, culminating in the placement of his tablet in the Confucian Temple in 1241. In later centuries, rulers more authoritarian than those he had criticized made his system the sole orthodox creed, which it remained until the end of the 19th century.

Chu Hsi's philosophy emphasized logic, consistency, and the conscientious observance of classical authority, especially that of Confucius and his follower Mencius. Chu Hsi held that the universe has two aspects: the formless and the formed. The formless, or LI, is a principle or a network of principles that is supreme natural law and that determines the patterns of all created things. This law combines with the material force or energy called CH'I to produce matter, or things having form. In human beings the *li* (manifested as human nature) is essentially perfect, and defects—including vices—are introduced into the body and

Footnotes:

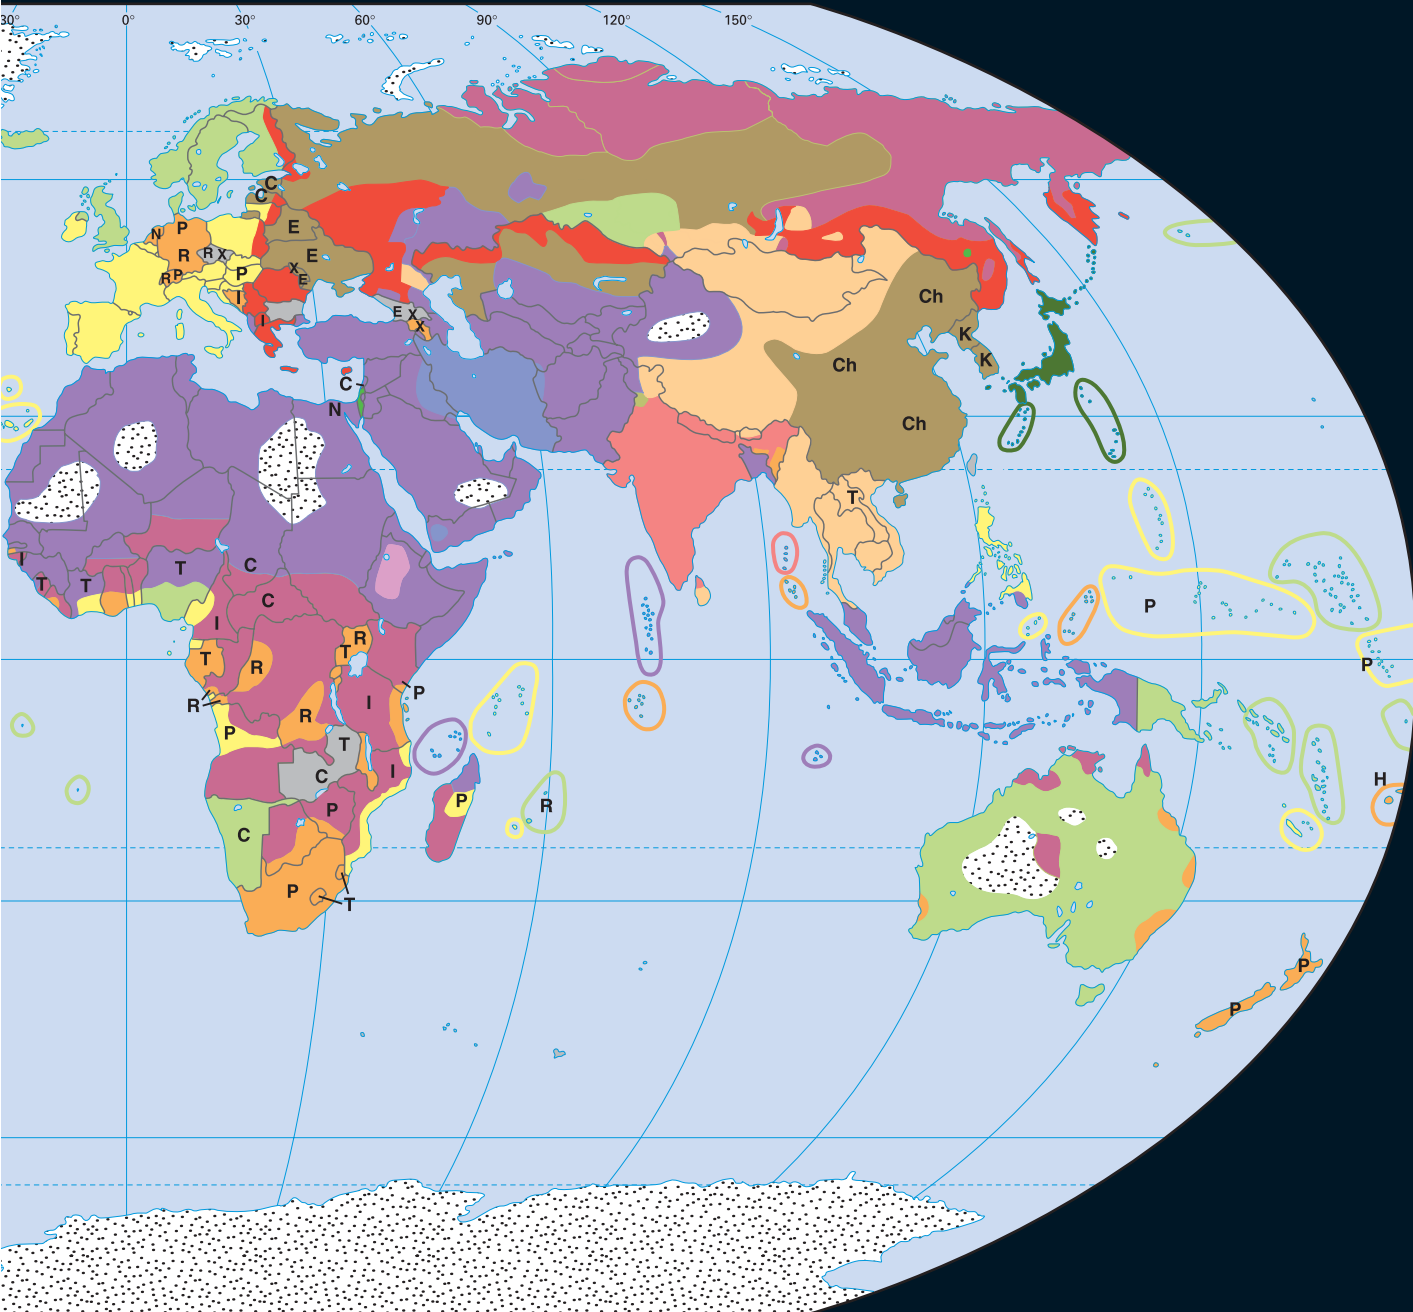

¹ In certain eastern Asian areas, many of the people have plural religious affiliations. Chinese and Korean religions include Buddhism, Taoism, Confucianism, and folk cults. The Japanese religions include Shintō and Buddhism.

² Chiefly mingled Protestantism and Roman Catholicism, neither predominant.

³ Including Greek and Russian Orthodox Christianity.

⁴ Including Armenian, Coptic, Ethiopian, East and West Syrian.

RELIGIONS

Note:

The majority of the inhabitants in each of the areas colored on the map share the religious tradition indicated. Letter symbols show religious traditions shared by at least 25 percent of the inhabitants within areas no smaller than 1,000 square miles. Therefore minority religions of city dwellers have generally not been represented.

mind through impurities of *ch'i*, or matter. Chu Hsi and his followers stressed the "investigation of things," by which they meant primarily the study of ethical conduct and of the revered FIVE CLASSICS. The study of ethical and metaphysical principles in turn constituted an ingredient both in building a personal faith and in advising emperors through whose self-cultivation order might be restored in the world.

CHU-HWEI HSUO, **THE** \ʼjü-ʼhwā-ʼshwò\, also called *Ti-fang Hwei* \ʼdē-ʼfāŋ-ʼhwā\ (Chinese: "Local Church"), movement founded by Watchman Nee (1903–72) after study of the theology of the PLYMOUTH BRETHERN, an English independent church. Nee developed his own forms of church polity and his own theology, based on Brethren ideas, and the church gained followers on the Chinese mainland. After the revolution (1949) Nee and his church were persecuted harshly by the Chinese Communist Party. However, a lieutenant of Nee's, Witness Lee (1905–97), moved the church to Los Angeles, and other followers established themselves in Taiwan. In the years since 1949, the church has become a major independent Protestant entity in Taiwan and continues to have a strong base in the United States. It has also played a role in the redevelopment of independent forms of CHRISTIANITY in China.

CH'UN-CH'IU \ʼchün-ʼchyö\, *Pinyin* Chunqiu (Chinese: "Spring and Autumn [Annals]"), the first Chinese chronological history, said to be the traditional history of Lu, as revised by CONFUCIUS. It is one of the FIVE CLASSICS (*Wu ching*) of CONFUCIANISM. The work is a complete month-by-month account of significant events that occurred during the reign of 12 rulers of Lu, Confucius' native state, beginning in 722 BCE and ending shortly before Confucius' death (479 BCE).

Among many who sought to discover profound meanings in the text was TUNG CHUNG-SHU (c. 179–c. 104 BCE), a great Han-dynasty Confucian, who claimed that the natural phenomena recorded in the book (e.g., eclipse of the sun, shower of stars at night, drought) were intended as warnings to future leaders of what happens when rulers prove unworthy. Since Confucian scholars were the official interpreters of this and the other classics, the book was a means for imposing Confucian ideals on government.

The fame of *Ch'un-ch'iu* is mainly due to TSO-CHUAN, a commentary (*chuan*) by a scholar named Tso. Two other important commentaries on *Ch'un-ch'iu* are *Kung-yang chuan* and *Ku-liang chuan*. All three commentaries are listed among the alternative lists of the Nine, Twelve, and Thirteen Classics of Confucianism.

CHUNG-YUNG \ʼjün-ʼyün\, *Pinyin* Zhongyong, one of four ancient Confucian texts that, when published together in 1190 by CHU HSI, a great Neo-Confucian philosopher, became the famous *Ssu-shu* ("FOUR BOOKS"). *Chung-yung* was chosen by Chu Hsi for its metaphysical interest, which had already attracted the attention of BUDDHISTS and earlier NEO-CONFUCIANISTS. In his preface, Chu Hsi attributed authorship of the treatise (which was actually a chapter from LI-CHI, one of the FIVE CLASSICS of antiquity) to TZU SSU (K'ung Chi), a grandson of CONFUCIUS.

The two Chinese characters *Chung-yung* (often translated "doctrine of the mean") express a Confucian ideal that encompasses virtually every relationship and activity of a person's life: moderation, rectitude, objectivity, sincerity, honesty, truthfulness, propriety, equilibrium, and lack of prejudice. One must adhere unwaveringly to the mean,

or center course, at all times. Such behavior conforms to the laws of nature, is the distinctive mark of the superior person, and is the essence of true orthodoxy.

CHÜN-TZU \ʼjüen-ʼdzə\, *Pinyin* junzi (Chinese: "gentleman," literally "prince-son," or "noble son"), in the teachings of CONFUCIUS, the ideal of the high-minded man whose actions are guided by JEN (benevolence). The *chün-tzu* attains nobility by means of character rather than inheritance. Confucius envisaged a fellowship of noblemen as moral vanguards of society, whose mission was to redefine and revitalize those institutions, such as the family, that for centuries were believed to have maintained social solidarity and to have enabled people to live in harmony and prosperity.

CHURCH, in Christian doctrine, the Christian religious community as a whole, or a body or organization of Christian believers.

The Greek word *ekklesia*, which came to mean church, was originally applied in the classical period to an official assembly of citizens. In the SEPTUAGINT (Greek) translation of the OLD TESTAMENT (3rd–2nd century BCE), the term *ekklesia* is used for the general assembly of the Jewish people, especially when gathered for a religious purpose such as hearing the Law (e.g., Deuteronomy 9:10, 18:16). In the NEW TESTAMENT it is used of the entire body of believing Christians throughout the world (e.g., Matthew 16:18), of the believers in a particular area (e.g., Acts 5:11), of the congregation meeting in a particular house—the "house-church" (e.g., Romans 16:5), and also of the celestial "new Jerusalem" (e.g., Revelation 21–22).

After the CRUCIFIXION of JESUS, his followers went forth to preach the Gospel and developed facilities for those who were converted. In time Christians established their own communities, modeled on the Jewish SYNAGOGUE. Gradually, the church worked out a governmental system based on the office of the bishop (episcopacy).

Various controversies threatened the unity of the church from its earliest history, but, except for small sects that did not ultimately survive, it maintained unity for several centuries. Since the SCHISM of the Eastern and Western churches in 1054 and the disruption of the Western church during the 16th-century Protestant REFORMATION, however, the church has been split into various bodies, most of which consider themselves either the one true church or at least a part of the true church.

A traditional means of discussing the nature of the church has been to consider the four marks, or characteristics, by which it is distinguished in the NICENE CREED: one, holy, catholic, and apostolic. The first, that of oneness or unity, appears to be contradicted by the divisions in the church. It has been held, however, that since BAPTISM is the rite of entry into the church, the church must consist of all baptized people, who form a single body irrespective of denomination. The holiness of the church derives from its creation by the HOLY SPIRIT. The term catholic originally meant the universal church as distinct from local congregations, but it came to imply the Church of Rome. Finally, apostolic implies that, in both its church and ministry, the church is historically continuous with the Apostles and thus with the earthly life of Jesus.

The fact that many Christians hold nominal beliefs and do not act like followers of Christ has been noted since the 4th century, when the church ceased to be persecuted. To account for this, ST. AUGUSTINE proposed that the real

church is an invisible entity known only to God. MARTIN LUTHER used this theory to excuse the divisions of the church at the Reformation, holding that the true church has its members scattered among the various Christian bodies but that it is independent of any organization known upon earth. Many Christians, however, believing that Jesus intended to found one visible church here upon earth, have worked to restore the unity of the church in the ecumenical movement.

CHURCH AND STATE, concept that the religious and political powers in society are clearly distinct, though both claim the people's loyalty.

Early Christian theories. Before the advent of CHRISTIANITY, separate religious and political orders were not clearly defined in most civilizations. People worshiped the gods of the particular state in which they lived, religion in such cases being but a department of the state. In the case of the Jewish people, the revealed Law of the SCRIPTURE constituted the Law of ISRAEL.

The Christian concept of the secular and the spiritual is founded on the words of Jesus: "Render unto Caesar the things that are Caesar's, and to God the things that are God's" (Mark 7:17). Two distinct, but not altogether separate, areas of human life and activity had to be distinguished; hence, a theory of two powers came to form the basis of Christian thought from earlier times.

In the early church the attitude of the Christian toward the political order was determined by the imminent expectation of the KINGDOM OF GOD; consequently, the importance of the existing political order was negligible. Orientation toward the coming Kingdom of God placed Christians in tension with the state, which occasionally made demands upon them that were in conflict with their faith. This contrast was developed most pointedly in the rejection of the Roman imperial cult and of certain state offices—above all,

that of judge—to which the power over life and death was professionally entrusted.

Despite the early Christian longing for the coming Kingdom, even the Christians of the early generations acknowledged the state as the bearer of order in the old AEON, which for the time being continued to exist. Two contrary views thus faced one another within the Christian communities. On the one hand, under the influence of Pauline missions, was the idea that the "ruling body"—i.e., the existing political order of the Roman Empire—was "from God . . . for your good" (Romans 13:1–4) and that Christians should be "subject to the governing authorities." On the other hand was the apocalyptic identification of the imperial city of Rome with the great whore of Babylon (Revelation 17:3–7). The first attitude, formulated by PAUL, was decisive in the development of a Christian political consciousness. The second was noticeable especially in the subsequent history of radical Christianity and in radical Christian pacifism.

The Roman imperial period and following. The emperor CONSTANTINE I the Great (died 337 CE) granted himself, as "bishop of foreign affairs," certain rights to church leadership. These not only concerned the "outward" activity of the church but also encroached upon the inner life of the church—as in summoning and leading imperial councils to formulate fundamental Christian doctrine and to ratify their decisions.

It was EUSEBIUS OF CAESAREA (c. 260–c. 340), Constantine's court theologian, who formed the Orthodox understanding of the relationship of church and state. He saw the empire and the imperial church as sharing a close bond. In the center of the Christian empire stood the Christian emperor, who is God's representative on earth in whom God himself "lets shine forth the image of his absolute power." Through the possession of these characteristics the Christian emperor is the archetype not only of justice but also of the love of humankind (see CAESAROPAPISM).

Orthodox theologians have understood the coexistence of the Christian emperor and the head of the Christian church as *symphonia*, or "harmony." The church recognized the powers of the emperor as protector of the church and preserver of the unity of faith and limited its own authority to the purely spiritual domain of preserving the Orthodox truth and order in the church. The emperor, on the other hand, was subject to the spiritual leadership of the church as far as he was a son of the church.

By contrast, the historical development of the church in the Latin West, much influenced by ST. AUGUSTINE'S *De civitate Dei* (*The City of God*), produced a new entity, the Roman Church, the church of the bishop of Rome. The Roman Church's theocratic claim to dominion freely developed after the state and administrative organization of the Roman Empire in the West collapsed in the chaos following the fall of Rome in the 5th century CE. The Roman Church came to be viewed as the only guarantor of order, and the Roman popes used this power to develop an ecclesiastical state and to base this state upon a new theocratic ideology—the idea that the pope was the representative of JESUS CHRIST and the successor of ST. PETER.

It was in this context that the judicial pretense of the DONATION OF CONSTANTINE became possible. A fraudulent account of Constantine's conferring upon Pope Sylvester I (reigned 314–335) the primacy of the West, including the imperial symbols of rulership, the Donation attempted to retroactively reconstruct the history of the Roman PAPACY in order to explain and legitimate a number of important political developments and papal claims. These included

Emperor Charlemagne, whose coronation in 800 by Pope Leo III led to a blurring of the division between church and state

By courtesy of Weidenfeld & Nicholson Ltd., photograph, Ann Munchow

the transfer of the capital of the Roman Empire to Byzantium in 330, the displacement of old Rome by the new Rome of the church, papal secular authority, and the papal right to create an emperor by crowning him.

The latter would be used to great effect when Pope Leo III crowned Charlemagne emperor of the Romans in 800. Charlemagne then claimed for himself the right to appoint the bishops of his empire, who were more and more involved in political affairs. These conflicting perspectives were the cause of interminable struggles between popes and rulers throughout the Middle Ages.

In the course of this development, the process of the feudalization of the church occurred. Ruling political leaders in this system occupied significant positions in the church; by virtue of patronage this development encompassed the whole imperial church. At the conclusion of this development, bishops in the Holy Roman Empire were simultaneously the reigning princes of their dioceses; they often were much more interested in the political tasks of their dominion than in the spiritual.

In the great church-renewal movement, which extended from the 10th century until the reign of Pope GREGORY VII in the late 11th century, the papal church rejected both the sacred position of the king and the temporal position of bishops, who were awarded their rights and privileges by the king. It proclaimed the freedom of the church from state authority, as well as its preeminence over worldly powers. This struggle, now remembered as the INVESTITURE CONTROVERSY, was fought out as a dramatic altercation between the papacy and the empire. The church was not able to gain a complete victory in terms of its claims to full authority over the worldly and the spiritual realms.

The Reformation and its consequences. With the weakening of the Holy Roman Empire, the European nation-states arose as opponents of the church. The 16th-century Reformation forced the church to focus on spiritual tasks and placed Reformation law and the legal powers of church leadership in the hands of the princes. Under King Henry VIII the English church broke away from papal supremacy, and in the German territories the reigning princes became, in effect, the legal guardians of the Protestant episcopate. Similar developments took place in the ROMAN CATHOLIC nation-states, such as Spain, Portugal, and France.

Various medieval sects (e.g., CATHARI, WALDENSES, HUSSITES, and the Bohemian Brethren) had disseminated democratic ideas of the freedom and equality of Christians who held voluntary membership in a communion of saints. These ideas were reinforced during the Reformation by groups such as the HUTTERITES, MENNONITES, Schwencfelders, and the followers of THOMAS MÜNTZER, who renounced aspects of the secular state such as military service and state offices and sought to found communist communities based on Christian ideals and radical pacifism. Many of their political ideas—at first bloodily suppressed by the Reformation and COUNTER-REFORMATION states and churches—were later prominent in the Dutch wars of independence (Eighty Years' War [1568–1648]) and in the English Revolution (the Revolution of 1688).

The Reformation's strivings toward a guarantee for the freedom of the church, the Enlightenment's ideas of natural law, and social revolutionary criticism against the wealthy ecclesiastical hierarchy came together in the separation of church and state proclaimed during the French Revolution in the latter part of the 18th century. This separation echoed developments that arose during and after the American Revolution from the struggle of the Puritans against the

English Episcopal system and the English throne. The new Constitution of the United States sought to free the church of state supervision in order to allow it a maximum amount of freedom in the realization of its spiritual tasks.

CHURCH FATHER, any of the great bishops and other eminent Christian teachers of the early centuries whose writings remained as a court of appeal for their successors, especially in reference to controverted points of faith or practice.

CHURCH OF JESUS CHRIST OF LATTER-DAY SAINTS, largest denomination of the MORMON religion.

CH'U TZ'U \ˈchü-ˈtsə\, *Pinyin* Chuci (Chinese: “Words of the Ch’u”), compendium of ancient Chinese poetic songs from the southern state of Ch’u during the Chou dynasty. Collected in the 2nd century BCE by Wang I, many of the poems are attributed to the famous 4th-century state official and poet, Ch’u Yüan. Having shamanistic and political implications, these poems express the religious practices of the Ch’u people. Often associated with the development of TAOIST traditions that predate the Han Dynasty (which began about 200 BCE), some of the more renowned poems (the “Yuan-Yu,” or “Far Off Journey,” and the “Li-sao,” or “On Encountering Sorrow”) refer to the escape from human misery by means of an ecstatic celestial journey.

CILAPPATIKĀRAM \ˈsē-lə-pə-tē-ˈkār-əm\, also spelled *Shilappadikaram*, Tamil epic attributed to the Jain prince Iḷaṅkō Aṭṭikal, in three books, set in the capitals of the three Tamil kingdoms: Pukār (the Cōla capital), Maturai (*i.e.*, MADURAI, the Pāṇṭiya [Pandya] capital), and Vañci (the Cēra capital). It dates to the age of the Pallavas (c. 300–900 CE).

The epic's hero is Kōvalaṅ, a young Pukār merchant. It narrates Kōvalaṅ's marriage to the virtuous Kaṇṇaki, his love for the courtesan Mātavi, and his consequent ruin and exile in Maturai—where he dies, unjustly executed for theft after trying to sell his wife's anklet to a wicked goldsmith who had stolen a similar anklet belonging to the queen. Kaṇṇaki comes running to the city and shows the king her other anklet, breaks it to prove it is not the queen's—Kaṇṇaki's contains rubies, and the queen's contains pearls—and thus proves Kōvalaṅ's innocence. Kaṇṇaki tears off one breast and throws it at the kingdom of Maturai, which goes up in flames. Such is the power of a faithful wife. The third book deals with the Cēra king's victorious expedition to the north to bring Himalayan stone for an image of Kaṇṇaki, now become a goddess of chastity (*paṭṭiṇi*).

The *Cilappatikāram* is a fine synthesis of mood poetry in the ancient Tamil *caṅkam* tradition and the rhetoric of Sanskrit poetry—even the epic's title is a blend of Tamil and Sanskrit. Included in the epic frame is an operatic blend of romantic lyric, the dialogues typical of the *caṅkam*-period text *Kalittokai* (containing poems of unrequited or mismatched love), choruses of folk songs, descriptions of cities and villages, technical accounts of dance and music, and strikingly dramatic scenes of love and tragic death. The *Cilappatikāram* is a detailed poetic witness to Tamil culture, its varied religions, its town plans and city types, the commingling of Greek, Arab, and Tamil peoples, and the arts of dance and music.

CIRCE \ˈsər-sē\, in Greek mythology, a sorceress, the daughter of HELIOS, the sun god, and of the ocean NYMPH Perse. She was able by means of drugs and incantations to

CIRCUMCISION

change humans into wolves, lions, and swine. The Greek hero ODYSSEUS visited her island, Aeaëa, with his companions, whom she changed into swine. But Odysseus, protected by an herb given him by HERMES, compelled her to restore them. He stayed with her for one year before resuming his journey. Greco-Roman tradition placed her island near Italy or located her on Mount Circeo.

CIRCUMCISION, the operation of cutting away all or part of the foreskin (prepuce) of the penis. The origin of the practice is unknown. The widespread ethnic distribution of circumcision as a ritual and the widely preferred use of a stone knife rather than a metal one suggest great antiquity. Wherever the operation is performed as a traditional rite, it is done either before or at puberty and sometimes, as among some Arab peoples, immediately before marriage.

Among the ancient Egyptians, boys were generally circumcised between the ages of 6 and 12 years. Among Ethiopians, Jews, and Muslims, the operation is performed shortly after birth (among Jews, on the eighth day after birth) or perhaps a few years after birth. Among most other peoples who practice it ritually the operation is performed at puberty. At any age the ritual operation is regarded as of the profoundest religious significance. For the Jews it represents the fulfillment of the COVENANT between God and ABRAHAM (GENESIS 17:10–14) that every male child shall be circumcised. That Christians were not obliged to be circumcised was first recorded biblically in Acts 15. The operation at puberty represents a beginning of the initiation into manhood and the leaving behind of childhood. For female circumcision see CLITORIDECTOMY.

CIST \ˈsɪst, ˈkɪst\, *also called* stone chest, prehistoric European COFFIN containing a body or ashes, usually made of stone or a hollowed-out tree; also, a storage place for sacred objects. “Cist” has also been used to refer to the stone burial place itself, usually with several upright stone slabs supporting a flat roofing stone.

CISTERCIAN \ˈsɪs-ˈtər-shən\, *byname* White Monk, or Bernardine \ˈbɛr-nər-dɪn, -dɛn\, member of a ROMAN CATHOLIC monastic order that was founded in 1098 and named after the original establishment at Cîteaux (Latin: Cistercium), a locality in Burgundy. The order's founding fathers, led by St. Robert of Molesme, were a group of BENEDICTINE monks from the abbey of Molesme who were dissatisfied with the relaxed observance of their abbey and desired to live under the strictest interpretation of the Rule of ST. BENEDICT. The Cistercian regulations demanded severe asceticism and reintroduced

Egyptian circumcision, relief, tomb of Ankhmahor, Saqqārah, 6th dynasty (2345–2181 BCE)

Henri Stierlin—Ziolo

manual labor for monks, making it a principal feature of their life. Communities of nuns were added to the order about 1200.

Cistercian government was based on three features: (1) uniformity—all monasteries were to observe exactly the same rules and customs, (2) general chapter meeting—the ABBOTS of all houses were to meet in annual general chapter at Cîteaux, (3) visitation—each daughter house was to be visited yearly by the founding abbot. Each house preserved its internal autonomy, and each monk belonged for life to the house where he made his vows.

The Cistercians might have remained a relatively small family but for ST. BERNARD OF CLAIRVAUX, who joined Cîteaux as a novice in 1112 or 1113. In 1115 he was sent out as founding abbot of Clairvaux, and thenceforward the growth of the order was spectacular. At St. Bernard's death the total number of Cistercian abbeys was 338, of which 68 were direct foundations from Clairvaux.

With compact broad estates and with a large, disciplined, unpaid labor force, the Cistercians were able to develop all branches of farming. They played a large part in the economic progress of the 12th century and in the development of the techniques of farming and marketing. Be-

Cistercian abbot St. Bernard of Clairvaux, from a 15th-century altarpiece by the Florentine School

By courtesy of the Staatliche Museen zu Berlin

fore the close of the 12th century, however, many abbeys were breaking essential statutes by accumulating wealth. Discipline, too, was allowed to decline. The phenomenal expansion of the order made it impossible to maintain annual chapter and annual visitations of daughter houses. After the Protestant REFORMATION the Cistercian monks disappeared from northern Europe, and, where they survived, abbeys struggled for existence.

Nevertheless, reform movements took place in France during the 16th and 17th centuries. The most noteworthy reform is traced to Armand-Jean Le Bouthillier de Rancé, who became abbot of La Trappe in 1664. His reforms were so successful that strict monastic observance became popularly associated with the name TRAPPISTS. Before the modernizing reforms of the SECOND VATICAN COUNCIL (1962–65), the monks of the Order of the Reformed Cistercians of the Strict Observance (O.C.S.O.) slept, ate, and worked in common in perpetual silence. Since the 1960s, however, these practices have been modified.

Meanwhile, the original order, now known as the Cistercians of Common Observance (S.O.Cist.), after a more moderate reform begun in 1666, has continued.

CITPĀVAN \chit-'pā-vān\, also called Konkanasth, CASTE of BRAHMINS in Konkan (the area of Goa) and Maharashtra in western India. They rose to considerable eminence in Maharashtra as administrators during the rule of the peshwas of Pune (1713–1818), who belonged to that caste. The predominance among them of fair complexions and light-colored eyes has given rise to the speculation that they are descended from shipwrecked European sailors. While many Citpāvan Brahmins continue the administrative tradition, others are active in the professions and in scholarship.

CIVIL RELIGION, term coined by the American sociologist Robert Neelly Bellah to describe the shared symbolic heritage which binds a community together into a cohesive, moral unit. More widely, the term has come to refer to the symbolic and ritual structures which societies turn to when traditional religions retreat in the face of SECULARISM.

CIZIN \kē-'sēn\, also spelled Kisin (Yucatec Mayan: "One Who Farts"), Mayan (see PRE-COLUMBIAN MESO-AMERICAN RELIGIONS) god of earthquakes and death. He may have been one aspect of a malevolent Underworld deity who manifested himself under several names and guises (e.g., Ah Puch, Xibalba, and Yum Cimil). In pre-Conquest manuscripts, Cizin is frequently depicted with the god of war in scenes of HUMAN SACRIFICE, while some codices show Cizin uprooting or destroying trees planted by CHAC, the rain god. Cizin is also often depicted in the codices as a dancing skeleton, holding a smoking cigarette. He is also known by his death collar, which partly consists of disembodied eyes dangling by their nerve cords. After the Spanish Conquest, Cizin became merged with the Christian devil, SATAN.

CLARE OF ASSISI, SAINT \'klar . . . ə-'si-sē, 'kler, -'sē-zē\, also spelled Clara \'klar-ə\, Italian Santa Chiara di Assisi (b. July 16, 1194, Assisi, duchy of Spoleto [Italy]—d. Aug. 11, 1253, Assisi; canonized 1255; feast day August 11), ABBESS and founder of the POOR CLARES (Clarissines).

Deeply influenced by ST. FRANCIS OF ASSISI, she refused to marry as her parents wished and fled (March 18, 1212) to the Porziuncola Chapel below Assisi, where Francis received her vows, thus marking the beginning of the Second Order of St. Francis. Many joined Clare, including her

mother and her sister St. Agnes. Soon the Poor Clares were housed in the church and convent of San Damiano, near Assisi, where Clare became abbess in 1216. Clare's great concern was to obtain a rule reflecting the spirit of Francis to replace the BENEDICTINE rule that Cardinal Ugolino (later Pope Gregory IX) had adapted for her order, which was eventually approved by Pope Innocent IV.

She was credited with many miracles in life and after death. Legends relate that she saved Assisi twice from invasion. In 1958 Pope PIUS XII declared her patron of television, alluding to an incident in her last illness when she miraculously heard and saw the Christmas midnight mass in the BASILICA of San Francesco on the far side of Assisi.

CLAROS \'klār-ös\, site of an oracular shrine of the Greek god APOLLO, near Colophon in Ionia, Asia Minor (now in Turkey). According to tradition, the shrine was founded by Manto, daughter of TIRESIAS. Prior to their utterances, the prophets drank from a pool within a cave. References to the Clarian ORACLE, which was especially celebrated during Roman times, have been found as far away as Britain.

CLEMENT, FIRST LETTER OF \'kle-mənt\, originally titled Letter to the Church of Corinth, a letter to the CHRISTIAN Church in Corinth from the church of Rome, traditionally ascribed to and almost certainly written by ST. CLEMENT I of Rome, c. 96 CE. It is extant in a 2nd-century Latin translation, which is possibly the oldest surviving Latin Christian work. Regarded as SCRIPTURE by many 3rd- and 4th-century Christians, it was transmitted in manuscripts with a sermon known as the *Second Letter of Clement*, written c. 125–140 by an unknown author.

The letter discusses the orders of the ministry, which it asserts were established by the APOSTLES at the will of God. The *First Letter* was an important influence on the development of the episcopal orders (BISHOPS, PRIESTS, deacons), and it has been used to support the doctrine of the APOSTOLIC SUCCESSION, according to which bishops represent a direct, unbroken line of succession from the Apostles.

CLEMENT I, SAINT, byname Clement of Rome, Latin Clemens Romanus (b. Rome?—d. end of 1st century CE, Rome; feast day November 23), first Apostolic Father, pope from 88 to 97, or from 92 to 101, supposed third successor of St. Peter.

According to TERTULLIAN, Clement was consecrated by PETER. Bishop ST. IRENAEUS of Lyon lists him as a contemporary of the APOSTLES and witness of their preaching. Bishop EUSEBIUS of CAESAREA dates his pontificate from 92 to 101. His martyrdom is legendary, and he has been hypothetically identified with the Clement mentioned in Philippians 4:3. His attribute is an anchor, to which he was tied and cast into the sea, according to spurious tales.

The authorship of the *Letter to the Church of Corinth* (1 Clement) has been traditionally ascribed to him. Still extant, it was written to settle a controversy among the Corinthians against their church leaders and reveals that Clement considered himself empowered to intervene (the first such action known by a bishop of Rome) in another community's affairs.

Clement is credited with transmitting to the church the *Ordinances of the Holy Apostles Through Clement* (APOSTOLIC CONSTITUTIONS), which, reputedly drafted by the Apostles, is the largest collection of early Christian ecclesiastical law; the constitutions are now believed, however, to have been written in Syria c. 380.

CLEMENT OF ALEXANDRIA, *Latin name* Titus Flavius Clemens (b. c. 150 CE, Athens—d. between 211 and 215; feast day December 4; Eastern feast day November 24), Christian APOLOGIST, missionary theologian to the Hellenistic world, and second known leader and teacher of the catechetical SCHOOL OF ALEXANDRIA.

According to Clement, philosophy was to the Greeks as the Law of MOSES was to the Jews: a preparatory discipline leading to the truth, which was personified in the LOGOS. His goal was to make Christian beliefs intelligible to those trained within the context of the Greek *paideia* (educational curriculum) so that those who accepted the Christian faith might be able to witness effectively within Hellenistic culture. Clement's view—"One, therefore, is the way of truth, but into it, just as into an everlasting river, flow streams but from another place"—prepared the way for the curriculum of the catechetical school under ORIGEN that became the basis of the medieval quadrivium and trivium (*i.e.*, the liberal arts).

Although much of Clement's attention was focused upon the reorientation of people's personal lives in accordance with the Christian gospel, his interest in the social witnessing of Christians also involved him in the political and economic forces that affected the individual's status and dignity. Clement alluded to the theory of the two cities, the city of heaven and the city of the earth. Like AUGUSTINE in *The City of God* two centuries later, Clement did not equate the city of heaven with the institutional church. According to Clement, the Christian was to live first as a citizen of heaven and then under the law as a citizen of the earth. If a conflict should arise between God and Caesar (*i.e.*, the state), the Christian was to appeal to the "higher law" of God. At one point Clement advocated the theory that open rebellion against a government that enslaves people is justified. In this view he also anticipated Augustine's theory of just war. He also attacked racism when it is considered a basis for slavery.

Because of the persecution of Christians in Alexandria under the Roman emperor Severus in 201–202, Clement was obliged to leave his position as head of the catechetical school and to seek sanctuary elsewhere. He was replaced at the school by his young and gifted student Origen, who became one of the greatest theologians of the Christian church. Clement found safety with another of his former students, Alexander, bishop of Jerusalem.

The Greek church regarded Clement's views as too close to Origen's, some of which were considered heretical. In the Latin church he was a saint, and his feast day was celebrated on December 4 until 1586, when Sixtus V deleted his name from the Roman martyrology because the orthodoxy of some of his views was questioned.

CLEMENTIA \kle-'men-tē-ə\, in ROMAN RELIGION, personification of mercy and clemency. Her worship began with her deification as the celebrated virtue of Julius Caesar. The Senate in 44 BCE decreed a temple to Caesar and Clementia, in which the cult statue represented the two figures clasping hands. Tiberius was honored with an altar to his *clementia*, and the clemency of Caligula received yearly sacrifices. On coins the goddess was usually depicted standing, holding a patera (a dish used in sacrifices) and a scepter.

CLEOBIS AND BITON \'klē-ə-bis . . . 'bī-tən\, Biton *also spelled* Bito \'bī-tō\, in Greek myth, the sons of Cydippe, priestess of HERA, queen of the gods, at Argos, noted for their filial devotion and for their physical strength.

CLERGY, a body of ordained ministers in a CHRISTIAN church. In the ROMAN CATHOLIC church and in the churches of the ANGLICAN COMMUNION, the term includes the orders of bishop, priest, and deacon. Until 1972, in the Roman Catholic church, clergy also included several lower orders.

The Greek word *klēros* means literally "share" or "inheritance." Its use in patristic Greek to mean "church office" or "clergy" is sometimes traced to NEW TESTAMENT usages (such as in 1 Peter 5:3), in which *klēros* is thought to refer to the share or portion of the faithful assigned to each elder in a Christian community. Most Christian churches understand the clergy to be persons functioning within the PRIESTHOOD of all the people but ordained, or set aside, for particular service, especially in connection with eucharistic ministry.

A distinction between clergy and laity developed in the 2nd century, although the clerical ministry traces its beginnings to the commission of the Twelve Apostles and the Seventy for service. Over the centuries, the distinction between clergy and laity was emphasized by special privileges granted to the clergy. These privileges were later extended and codified by the Theodosian Code (438), but were eventually removed in most countries by legislation.

Within the Roman Catholic tradition, from the 4th century on, CELIBACY began to be enforced on priests. By the 12th century anyone taking vows as a deacon or priest also took a vow of celibacy. In the Eastern church, however, celibacy prevailed only for bishops. In the 20th century the permanent diaconate, open to married and single men, was once more restored within the Roman Catholic church.

Until the 20th century, in most Christian churches, the clergy was restricted to males. Gradually, however, many mainline Protestant churches began to allow the ordination of women.

CLIO \'klī-ō, 'klē-\, in Greek mythology, one of the nine MUSES, patron of history. Traditionally Clio reprimanded the goddess APHRODITE for her love for ADONIS. Aphrodite made her fall in love with Pierus, king of Macedonia. From that union was born HYACINTHUS, a young man of great beauty who was later killed by his lover, the god APOLLO. In art Clio was frequently represented with the heroic trumpet and the clepsydra (water clock).

CLITORIDECTOMY \,kli-tə-ri-'dek-tə-mē\, *also called* female circumcision, *or* excision, any of a range of ritual surgical procedures from a simple drawing of blood to infibulation (also called Pharoanic circumcision), which consists in removal of the clitoris, the labia minora, and the anterior two-thirds of the labia majora, the sides of which are joined leaving a small posterior opening.

The practice of female circumcision dates to ancient times and was traditionally performed to guard virginity and to reduce sexual desire. It is widely practiced in such places as New Guinea; Australia; the Malay Archipelago; Ethiopia, Egypt, and other parts of Africa; Brazil; Mexico; Peru; and by various Islamic peoples of the Middle East, Africa, western Asia, and India. Infibulation is common particularly in The Sudan, Somalia, and Nigeria. The operation is usually performed by a midwife. Especially with the more radical excision, consequences may include severe bleeding, tetanus and other infections, extreme pain, and death; urination and sexual intercourse may be painful. Where the practice of infibulation is common, women are reinfibulated after the birth of each child.

Groups in which clitoridectomy is practiced also usually

practice male circumcision and view the ritual as a necessary ritual stage for passage into responsible adulthood.

CLUNY, monastery founded in 910 by William the Pious, duke of Aquitaine.

Established as a donation for the cure of the souls of the duke and his family, the monastery eventually observed a more austere form of the Benedictine Rule. It was dedicated to the apostles **ST. PETER** and **ST. PAUL**, and it came under the protection of the pope. William ensured the independence of the monastery from all rulers, religious or secular, and allowed the monks to elect the abbot. These liberties enabled the community to develop its devotion to the liturgy and prayers for the dead, which earned it a reputation for holiness and attracted numerous benefactors. Cluniac monks were sent as reformers to monasteries throughout Europe. Cluny's influence on the church in the 11th and 12th centuries has been widely recognized, and its abbots were greatly esteemed. Its predominance was eroded by the rise of the **CISTERCIAN** order, and in the later Middle Ages the monastery declined. It was suppressed during the French Revolution and closed in 1790. Its Romanesque Basilica of St. Peter and St. Paul (demolished during the French Revolution) was the world's largest church until the erection of Saint Peter's Basilica in Rome.

COATLICUE \kō-ät-'lē-kwā\ (Nahuatl: "Snake's Skirt," *i.e.*, "[She Who Has a] Skirt of Snakes"), Aztec earth goddess, symbol of the earth as creator and destroyer, mother of the gods and mortals. Her face consists of two fanged serpents; her skirt is of interwoven snakes (snakes symbolize fertility); her breasts are flabby (she nourished many); her necklace is of hands, hearts, and a skull; her hands and feet are claws (she feeds on corpses, as the earth consumes all that dies). Called also Teteoinnan ("Mother of the Gods") and Toci ("Our Grandmother"), she was one manifestation of the earth goddess. See **PRE-COLUMBIAN MESO-AMERICAN RELIGIONS**.

CODEPENDENT ORIGINATION: *see* **PRATĪTYA-SAMUTPĀDA**.

COFFIN, the receptacle in which a corpse is placed. The Greeks and Romans disposed of their dead both by burial

and by **CREMATION**. Greek coffins were urn-shaped, hexagonal, or triangular, with the body arranged in a sitting posture. The material used was generally burnt clay and in some cases had obviously been molded around the body and baked. In the Christian era stone coffins came into use. Romans who were rich enough had their coffins made of a limestone brought from Assus, in Asia Minor, which was commonly believed to "eat" the body (hence the term **SARCOPHAGUS**, or "flesh-eater"); rapid decomposition was thought to aid the passage of the soul to the afterlife.

The Egyptian coffins were the largest stone coffins known and were generally highly polished and covered with hieroglyphics that usually told a history of the deceased. **MUMMY** chests shaped to the form of the body were also used, being made of hardwood or painted papier-mâché; these also bore hieroglyphics.

Among the American Indians some tribes used rough-hewn wooden coffins; others sometimes enclosed the corpse between the upper and lower shells of a turtle. In their tree and scaffold burial the Indians sometimes used wooden coffins or travois baskets; sometimes they simply wrapped the body in blankets. Canoes, mounted on a scaffold near a river, were used as coffins by some tribes, while others placed the corpse in a canoe or wicker basket and floated it out into the stream or lake. The Aborigines of Australia generally used coffins of bark, but some tribes employed baskets of wickerwork.

COFFIN TEXTS, collection of ancient Egyptian funerary texts consisting of **SPELLS** or magic formulas painted on the burial **COFFINS** of the First Intermediate period (c. 2130–1939 BCE) and the Middle Kingdom (1938–c. 1600? BCE). The Coffin Texts, combined with the **PYRAMID TEXTS** from which they were derived, were the primary sources of the **BOOK OF THE DEAD**, which was in prominent use during the New Kingdom and Late period. These three collections represent the most extensive body of Egyptian religious literature available to modern scholars.

COHEN: *see* **KOHEN**.

COKHĀMELĀ \'chō-kā-'mā-lā\ (b. c. 1250–1300 CE, Mahrāshtra state, India—d. 1338, Mangalvedha, Mahrāshtra), poet-saint (*sant*) who is remembered as a composer of

Coatlicue, stone sculpture

By courtesy of the Instituto Nacional de Antropología e Historia, Mexico City

devotional songs (*abhang*) in Marathi to the Hindu deity Viṭṭhal. His songs are preserved through oral performance (KĪRTAN), old handwritten manuscripts, and modern printed collections. Cokhāmēlā belonged to an UNTOUCHABLE caste (JĀTI), the MAHARS, and his own poetry, as well as the allusions and remembrances of others, highlights this important fact. HAGIOGRAPHY records that Cokhāmēlā was miraculously born from a half-eaten mango that was given to Cokhāmēlā's mother by Viṭṭhal disguised as a BRAHMIN. In another story the gods asked Cokhāmēlā to purify heaven's nectar, which had been polluted by DEMONS. Only Cokhāmēlā could purify the nectar because he had not been conceived by sexual intercourse; hence he received the name "Collection (*melā*) of Purity (*cokhā*)."¹ Some songs attributed to Cokhāmēlā, like the story about his name, lament his socially and religiously low status and challenge Hindu notions of purity and sacrality. In other songs he accepts the conditions of his "low" birth as justice for past sinful actions (KARMA). An understanding of VEDĀNTA pervades Cokhāmēlā's compositions, a knowledge attributed to his relationship with his spiritual teacher and fellow Marāṭhī poet-saint NĀMDEV (1270?–1350? CE). Among Cokhāmēlā's family members, his wife, son, sister, and brother-in-law are also remembered as poet-saints. Legend recalls that Cokhāmēlā died when a wall he was building with other Mahārs collapsed on top of him. His family and friends asked Nāmdev how they might identify his bones from among those of the other workers. Nāmdev said, "You will know Cokhāmēlā because you will hear Viṭṭhal's name vibrating in his bones."²

COLETTE, SAINT \kò-'let\ (b. Jan. 13, 1381, Corbie, France—d. March 6, 1447, Ghent; canonized 1807; feast day March 6), ABBESS, reformer of the POOR CLARES and founder of the Colettine Poor Clares.

Colette entered the third order of St. Francis. Legend relates that in a vision, St. Francis directed her to restore the Poor Clares to the original severity of their rule. Despite initial opposition, her reform spread through Savoy, Burgundy, France, Flanders, and Spain, this was especially true after her death.

COLUMBUS PLATFORM, in REFORM JUDAISM, declaration issued by an important conference of American Reform rabbis in Columbus, Ohio (1937), supporting the use of traditional customs and ceremonies and the liturgical use of Hebrew. The platform also reemphasized the idea of Jewish peoplehood and represented a dramatic revision of Reform principles as stated in the PITTSBURGH PLATFORM of 1885.

COMANA \kə-'mā-nə\, *modern Şahr*, ancient city of Cappadocia in southern Turkey. Often called Chryse to distinguish it from Comana in Pontus, it was there that the cult of Ma-Enyo, a variant of the great west Asian MOTHER GODDESS, was celebrated with orgiastic rites. The service was carried on in an opulent temple by thousands of temple servants. The city, which was subordinate to the temple, was governed by the chief priest, usually a member of the reigning Cappadocian family, who ranked next to the king. Under the emperor Caracalla (reigned 211–217 CE), Comana became a Roman colony, and it continued to receive honors until the official recognition of Christianity.

COMMON LIFE, BROTHERS OF THE, religious community established in the late 14th century by Geert Groote at Deventer, in the Netherlands. Groote formed the brethren

from among his friends and disciples. After Groote's death, several followers became AUGUSTINIAN Canons and established the Congregation of Windesheim. These two communities became the principal exponents of DEVOTIO MODERNA, a school and trend of spirituality stressing meditation and the inner life and criticizing the highly speculative spirituality of the 13th and 14th centuries.

The brethren spread throughout the Netherlands, Germany, and Switzerland. They were self-supporting and lived a simple Christian life in common, with an absence of ritual. Among their chief aims were the education of a Christian elite and the promotion of the reading of devout literature. They produced finely written manuscripts and, later, printed books. They kept large schools in which the scholarship (but not the humanistic spirit) of the Italian Renaissance was found. Groote also founded the Sisters of the Common Life, devoted to education, the copying of books, and weaving.

The *devotio moderna* movement was seriously affected by the religious upheaval of the Protestant REFORMATION, and the brethren ceased to exist early in the 17th century.

COMMON PRAYER, THE BOOK OF, liturgical book used by churches of the ANGLICAN COMMUNION. First authorized for use in the Church of England in 1549, it was radically revised in 1552, with subsequent minor revisions in 1559, 1604, and 1662. The prayer book of 1662, with minor changes, has continued as the standard liturgy of most Anglican churches of the British Commonwealth. Outside the Commonwealth most churches of the Anglican Communion possess their own variants of the English prayer book.

The First Prayer Book of Edward VI was prepared primarily by Thomas Cranmer, who became archbishop of Canterbury in 1533. Intended as a compromise between old and new ideas, it aroused opposition from both conservatives and Reformers. The latter prevailed and in 1552 *The Second Prayer Book of Edward VI* was introduced. The revision changed the text and ceremonies in a Protestant direction. In 1553 the new Catholic queen, Mary, restored the old Latin liturgical books. After Elizabeth I became queen in 1558, the prayer book of 1552 was restored. It included a few small but significant changes, one which allowed for belief in the Real Presence of JESUS CHRIST in the EUCHARIST. The Puritans were dissatisfied and, on the accession of James I, their renewed demands for change resulted in some concessions in the prayer book of 1604.

The prayer book was proscribed under the Commonwealth and Protectorate. After the Restoration (1660) a revision of the prayer book was adopted (1662). After the Revolution of 1688, a revision of the prayer book was proposed in an attempt to reunite the Puritans with the ESTABLISHED CHURCH. That proposal failed, however, and further revisions were not attempted until the 20th century. Much controversy resulted from the revision of 1927–28; it was rejected by Parliament, which suspected "Romanizing" tendencies in changes proposed for the ministering of Holy Communion. The Church of England and most of those within the Anglican Communion did, however, develop a liturgy in contemporary language that was widely used; after much controversy it was fully adopted by the Church of England and the Protestant Episcopal Church in the United States at the end of the 1970s.

COMPANIONS OF THE PROPHET, *Arabic Şahāba*, or Aşhāb, in ISLAM, followers of MUHAMMAD who had personal contact with him; any Muslim who was alive in the

Concheros dancer in San Miguel de Allende, Mex.
Andrew Rakoczy—Monkmeyer

Prophet's lifetime and saw him may be reckoned among the Companions. The Companions, being eyewitnesses, are the most important sources of HADITH. The first four CALIPHS are the *ṣaḥāba* held in highest esteem among SUNNI Muslims; they are part of a group of 10 Companions to whom Muhammad promised paradise. The *muhājirūn* (those who followed the Prophet from MECCA to MEDINA), the ANṢĀR (the Medinese believers), and the *badriyūn* (those who fought at the BATTLE OF BADR) are all considered Companions. (See HIJRA.) There are differing accounts of who belonged to the various groups.

SHĪ'ITE Muslims disregard the *ṣaḥāba*, whom they consider responsible for the loss of the caliphate by the family of Muhammad's son-in-law 'ALĪ.

COMPARATIVE RELIGION, systematic study of the similarities and differences among religions. Comparative STUDY OF RELIGIONS was popular among Western scholars during the late 19th and early 20th centuries. The standard measure in these studies was CHRISTIANITY, and the resulting comparisons were biased toward theistic categories. Thus, the Hindu gods BRAHMĀ, VISHNU, and SHIVA were often compared to the Christian TRINITY, and the AVATARS of Vishnu were analyzed as similar to the INCARNATION of Christ. The rise of social evolution became a second influence in comparative religion. Religions were characterized as simple (primitive) or complex, nonrational or rational, cyclical or noncyclical, agricultural or pastoral. The categories often derived from an assumed progress of rationality, usually

culminating in modern Western science and democracy. The development of typology provided a third method for comparing religion. Scholars classed religions as solar, lunar, aquatic, cyclical, noncyclical, animist, natural, and revelatory. The ethnocentric bias of such analyses, the lack of theoretical agreement, and the growth of specialization in the study of religion caused comparative religion to fall out of scholarly favor.

CONALL CERNACH \ˈkō-nəl-ˈk'ər-nəʃ\, also spelled Conal, warrior of Celtic myth who figures in the ULSTER CYCLE story *Bricriu's Feast* and many other tales.

CONCHEROS \kōn-ˈchā-rōs\, Mexican ritual dance. It apparently originated in 1522, after the Spanish conquest of the Chichimec tribe, as a means of preserving elements of PRE-COLUMBIAN MESO-AMERICAN religious ritual. Dancers belong to an intertribal society; unlike most ritual dance societies, the *concheros* admits women. Members perform at seasonal festivals, notably at sites north (Villa de Guadalupe), east (Amecameca), south (Chalma), and west (Los Remedios) of Mexico City, reflecting the ancient religious importance of the four cardinal directions. Dances are preceded by processions and invocations, and the paraphernalia include floral decorations, banners, and *concheros*, lutes made from an armadillo shell.

CONCHOBAR MAC NESSA \ˈkā-nū-ər-mək-ˈne-sə, ˈkāj-kō-ər-\, also known as Conor \ˈkā-nər\, in ancient Irish Gaelic literature, the reputed king of the Ulaids of northeast Ireland from his seat at EMAIN MACHA about the beginning of the 1st century BCE. He figures prominently in the ULSTER CYCLE as the ideal Irish king.

CONCILIARISM \kən-ˈsi-lē-ə-ri-zəm\, in ROMAN CATHOLICISM, a theory that a general council of the church has greater authority than the pope and may depose him.

Supporters of conciliarism invoked the idea as a means of ending the Great SCHISM (1378–1417). The doctrine was put into effect at the COUNCIL OF CONSTANCE (1414–18), which deposed three claimants to the papal throne and elected Pope Martin V. Efforts to continue the movement after Martin's election failed because of the conciliarists' excessive claims of power and the restored prestige of the PAPACY. Nevertheless the theory survived, influencing doctrines that advocated the restriction of papal power.

In 1870 the FIRST VATICAN COUNCIL explicitly condemned conciliarism. The SECOND VATICAN COUNCIL (1962–65) adopted a more positive attitude, asserting that the pope as a member and the head of the college of bishops forms with it at all times an organic unity, especially when it is gathered in a general council.

CONCLAVE, in ROMAN CATHOLICISM, the assembly of cardinals gathered to elect a new pope and the system of strict seclusion to which they submit.

Election of the pope became the responsibility of the CARDINALS in 1059. When, after the death of Clement IV (1268), the cardinals dithered for more than two years, the local magistrate locked them in the episcopal palace and fed them only bread and water until they elected Gregory X. The system of meeting in closed conclave was codified in 1904 by Pius X. Voting is by secret ballot; one ballot is held on the first afternoon of the conclave and four on each subsequent day, two in the morning and two in the afternoon, until a new pope is chosen. In 1996 JOHN PAUL II declared

that, after 30 ballots, the requirement of a two-thirds majority plus one for the election of a pope could be superseded, at the cardinals' discretion, by election by a simple majority. Ballots are burned in a stove after each vote, and the smoke produced by their burning indicates whether a new pope has been elected: if there is a new pope, the smoke is white; if not, the smoke is black. (Additives are mixed with the ballots to ensure the proper color of the smoke.) Bells are rung to confirm the signal.

CONCORD, BOOK OF, collected doctrines of the Lutheran church, published in German (June 25, 1580) and in Latin (1584). Its publication climaxed 30 years of effort to heal the SCHISMS that had broken out in the Lutheran movement after MARTIN LUTHER'S death. After two conferences (in 1558 and 1561) failed to produce agreement, the Protestant princes of the Holy Roman Empire entrusted the project to several theologians, who produced the Formula of Concord in 1577. The Book of Concord was subsequently compiled. It was not adopted in total by all Lutherans, but it has remained the doctrinal standard of LUTHERANISM.

It consists of (1) a preface; (2) the three ecumenical creeds (APOSTOLIC, NICENE, and ATHANASIAN); (3) the Unaltered AUGSBURG CONFESSION (1530) and (4) its Apology (1531); (5) the SCHMALKALDIC ARTICLES (1536–37); (6) PHILIPP MELANCTHON'S *Treatise on the Power and Primacy of the Pope* (1537); (7) Martin Luther's Small and Large CATECHISMS (1529); (8) the Formula of Concord (1577); and (9) the Catalogue of Testimonies (1580), an optional supplement of citations from the early CHURCH FATHERS.

CONCORDIA \kän-'kór-dē-ə, in ROMAN RELIGION, goddess who was the personification of "concord," or "agreement," especially among members or classes of the Roman state. She had several temples at Rome, the oldest and most important one dating from the middle of the 4th century BCE. Concordia appeared on coins holding a CORNUCOPIA and an olive branch or a patera (a dish used in sacrifices).

CONFESSING CHURCH, *German* Bekennende Kirche, movement within the German Protestant churches that resisted Adolf Hitler's attempt to make the churches an instrument of National Socialist (Nazi) propaganda and politics.

Hitler's church party, the German Christians, gained control of the German Evangelical Church, a federation formed in 1933 of Lutheran, Reformed, and United territorial churches. Ludwig Müller, supported by the Nazis, was elected *Reichsbischof* ("imperial bishop").

In response, the Young Reforming Movement was formed within the churches under the leadership of Hanns Lilje, Martin Niemöller, and others. These founders believed that the Nazi doctrine of racial superiority ran counter to both Christian scriptures and the confessional writings of the REFORMATION. In November 1933 Niemöller founded the Pastors' Emergency League, which resisted the programs of the German Christians. The SYNOD OF BARMEN was held in May 1934, and its theological declaration transformed the defensive movement against Nazi control of the churches into an organized revival (see BARTH, KARL).

At the end of 1934, at the second synod of the Confessing Church at Dahlem, the church proclaimed its emergency law: the true church in Germany was that which accepted the Barmen Declaration, and, in any church led by the German Christian movement, ministers and parishes were to follow the orders of the Confessing Church. Thus, in prac-

tice, two Protestant churches developed in Germany, one under state control and one that the state did not recognize. The Confessing Church, together with the churches of Bavaria, Württemberg, and Hanover (which had remained independent of Nazi rule), formed the provisional government of the German Evangelical Church.

In 1936 internal differences led the Lutheran territorial churches to form the Council of the Evangelical Lutheran Church in Germany, thus eroding the unity of the Confessing Church. The Reformed and United sections of the Confessing Church remained particularly active in protesting against the persecution of the Jews. Nazi pressure was gradually intensified, and increasingly the Confessing Church was forced underground. In 1937 Niemöller and other clergy were arrested. After the outbreak of World War II in 1939, the Confessing Church was seriously handicapped by the conscription of clergy and laity. Many founding members of the church were compelled to live abroad, and those who stayed in Germany faced imprisonment and sometimes execution (see BONHOEFFER, DIETRICH). In 1948 the Confessing Church ceased to exist.

CONFESSION, in the Judeo-Christian tradition, the acknowledgment of sinfulness in public or private, regarded as necessary to obtain divine forgiveness.

The mission of the OLD TESTAMENT prophets was to awaken in the people a sense of sinfulness and an acknowledgment of their guilt, both personal and collective. Before the destruction of the TEMPLE OF JERUSALEM (70 CE), the sin offerings on the Day of Atonement (YOM KIPPUR) were prefaced by a collective expression of sinfulness (Leviticus 16:21), and, since the destruction of the Temple, the Day of Atone-

Penitent at confession with priest

Mimi Forsyth—Monkmeyer

ment has continued in JUDAISM as a day of prayer, fasting, and confession.

In the NEW TESTAMENT the public ministry of JESUS was prepared for by JOHN THE BAPTIST, whose BAPTISMS were accompanied by a public confession of sins. The practice of making a detailed confession to a BISHOP or PRIEST began fairly early in the church's history. In the 5th-century Roman church, the practice was to hear confessions at the beginning of LENT and to reconcile the penitents on Holy (MAUNDY) Thursday. Gradually the practice of reconciling, or absolving, sinners immediately after confession and before fulfillment of penance was introduced. By the end of the 11th century, only notorious sinners were reconciled on Holy Thursday. Often, those guilty of serious sins put off penance until death approached. To correct this abuse, the fourth LATERAN COUNCIL (1215) established the rule that every Christian should confess to a priest at least once a year.

The ROMAN CATHOLIC church teaches that penance is a SACRAMENT, instituted by Christ, in which a confession of all serious sins committed after baptism is necessary. The doctrine of the EASTERN ORTHODOX churches concerning confession agrees with that of the Roman Catholic church.

Most Protestants regard the general confession and ABSOLUTION of the communion service as sufficient preparation for the Lord's Supper. Among Lutherans, private confession and absolution survived the REFORMATION for a time but were eventually given up by most members. JOHN CALVIN also recognized the value of private confession and absolution for those troubled in conscience, but he denied that such confession was a sacrament or that it was necessary for the forgiveness of sins. In some Pentecostal and fundamentalist churches, confession of sins is an important part of the worship service. Most Protestants consider auricular or private confession to be unbiblical and consider confession viewed as a sacrament to be equally unbiblical. These Protestants stress that God alone can forgive sins.

CONFESSIO OF FAITH, formal statement of doctrinal belief ordinarily intended for public avowal by an individual, a group, a congregation, a SYNOD, or a church; confessions are similar to creeds, although usually more extensive. They are especially associated with the churches of the Protestant REFORMATION.

The medieval Christian church did not attempt an official codification of its doctrine. The creeds inherited from antiquity (NICENE CREED) or formulated in the early Middle Ages (APOSTLES' CREED, ATHANASIAN CREED) were used in liturgical worship to confess the Christian faith. Certain doctrinal points were defined by councils as a result of doctrinal controversies. The heretical movements in the Middle Ages produced no comprehensive declarations of faith.

The Reformation in the 16th century led to the formulation of declarations which aimed at defining all the main points of the doctrinal system. Most of these documents were compiled with the purpose of expressing the church's doctrine; a few of them originally served other purposes (e.g., Luther's CATECHISMS) but were soon given the rank of doctrinal standards. The first confessional documents of the Reformation were the drafts preceding the AUGSBURG CONFESSION of 1530. This example of the Lutherans was followed by other Reformation churches, and it was even followed by the COUNCIL OF TRENT (1545–63), whose decrees and canons, together with the *Professio fidei Tridentina* of 1564, were a codification of ROMAN CATHOLIC doctrine.

Other important Protestant confessions include the Formula of Concord (1577) and BOOK OF CONCORD (1580), the

Presbyterian WESTMINSTER CONFESSION (1648), and the Anglican THIRTY-NINE ARTICLES (1571).

CONFESSIONS, BOOK OF, compilation of creeds and CONFESSIONS OF FAITH that was prepared by a committee of the United PRESBYTERIAN Church in the U.S.A. and was adopted by that church in 1967. It includes the NICENE CREED, the APOSTLES' CREED, the Scots Confession (1560), the HEIDELBERG CATECHISM (1562), the Second Helvetic Confession (1566), the WESTMINSTER CONFESSION and the Westminster Shorter Catechism (1648), the Barmen Declaration (1934), and the new Confession of 1967.

The union that formed the United Presbyterian Church in the U.S.A. in 1958 had stipulated that the new church would draft "a brief contemporary statement of faith," that, it was assumed, would be a version of the Westminster Confession. The committee that began work on the project in 1959 soon found, however, that a simplified version of a 300-year-old confession would not suffice. The committee then secured permission to develop a Book of Confessions that would deal adequately with the problem of continuity and tradition.

The Confession of 1967 was designed explicitly to presuppose, continue, and supplement the historic creeds of the Book of Confessions without repeating their contents. The new creed was primarily concerned with the task of the church in the modern world. The Confession of 1967 also expresses clearly the church's conviction that critical study of the BIBLE is an aid to, rather than an attack upon, the use of the Bible in the church.

CONFIRMATION, in CHRISTIANITY, rite by which the relation between man and God established previously in BAPTISM is said to be confirmed (or strengthened and established in faith).

During the first several centuries of Christian history, when most of those who joined the church were adult converts from paganism, the baptism of these adults and the ceremony admitting them to the full rights of membership (equivalent to, but not yet called, confirmation) probably coincided. Early Christian theologians, therefore, closely connected the meaning and effects of confirmation with those of baptism. But as the baptism of infants rather than of adults became customary, a sharper distinction between baptism and confirmation became necessary.

The ROMAN CATHOLIC church views confirmation as a SACRAMENT instituted by JESUS CHRIST. It confers the gifts of the HOLY SPIRIT upon the recipient, who must be a baptized person at least seven years old. A BISHOP normally performs the rite, which includes the laying on of hands and anointing the forehead with chrism (consecrated oil).

In EASTERN ORTHODOXY, a child generally receives the three sacraments of baptism, confirmation (called chrismation), and the first communion all in the same service, administered by a PRIEST.

After the Protestant REFORMATION, the ANGLICAN COMMUNION and LUTHERANISM retained a form of confirmation. Lutheranism rejects the sacramental definition of confirmation and considers it a public profession of the faith into which the candidate was baptized as an infant. In both Anglicanism and Lutheranism, confirmation is usually preceded by instruction in the CATECHISM. Other Protestant bodies deny that confirmation is a sacrament, but they sometimes use the term confirmation for acceptance of baptized members into full membership of the church, including the right to receive Holy Communion.

CONFUCIANISM

A way of life

propagated by CONFUCIUS in the 6th–5th century BCE and followed by the Chinese people for more than two millennia, Confucianism—a Western term that has no counterpart in Chinese—is a worldview, a social ethic, a political ideology, and a scholarly tradition. Although often grouped with the major HISTORICAL RELIGIONS, Confucianism differs from them by not being an organized religion. Nonetheless, it spread to other East Asian countries under the influence of Chinese literate culture and exerted a profound influence on spiritual and political life.

FORMATION OF THE CLASSICAL CONFUCIAN TRADITION

Confucius (551–479 BCE) lived in an era of political violence and social disintegration in China. As a master teacher concerned with modes of thought and action that could be potentially restorative of order and harmony, Confucius was said to have attracted 3,000 students, of whom 72 were close disciples. Believing in the perfectibility of all human beings, Confucius focused his teachings on his concept of JEN—variously translated as “love,” “goodness,” and “human-heartedness.” In the most complete sense, *jen* signified supreme moral achievement and excellence in character in accord with LI (ritual norms) and the principles of *chung* (loyalty to one’s true nature), *shu* (reciprocity), *yi* (righteousness), and HSIAO (filial piety). All of these principles make up the Confucian sense of TE or “virtue.” The paradigmatic individual was the CHÜN-TZU (literally, “prince-son”), who in Confucius’ view attained nobility by means of character rather than inheritance. Confucius found models of inspiration in legendary sage-kings who ruled by moral suasion rather than by might.

According to Han-fei-tzu (d. 233 BCE), shortly after Confucius’ death his followers split into eight distinct schools, all claiming to be the legitimate heir to his legacy. Presumably each school was associated with or inspired by one or more of Confucius’ disciples, which included Yen Yüan (or Yen Hui), TSENG-TZU, Tzu Kung, Tzu-hsia, and others. Yet the Confucians did not exert much influence in the 5th century BCE.

A century after Confucius’ death, the Confucian attempt to moralize politics was not working; the disintegration of the Chou feudal ritual system and the rise

Worship ceremony at the Confucius Temple, Tientsin, China

of powerful hegemonic states reveal that wealth and power still spoke the loudest. The intellectual agenda was determined by the hermits (the early Taoists, *see* TAOISM), who left the world to create a sanctuary in nature in order to lead a contemplative life, and the realists (proto-Legalists), who played the dangerous game of assisting ambitious kings to gain wealth and power so that they could influence the political process. The Confucians refused to be identified with the interests of the ruling minority because their social consciousness impelled them to serve as the conscience of the people. Although they wanted to be actively involved in politics, they could not accept the status quo as the legitimate arena in which to exercise authority and power.

Mencius: The paradigmatic Confucian intellectual. MENCIUS is known as the self-styled transmitter of the Confucian Way. In his sophisticated argument against the physiocrats (who advocated the supremacy of agricultural labor), he employed the idea of the division of labor to defend those who labor with their minds, observing that service is as important as productivity. To him Confucians served the vital interests of the state as scholars, not by becoming bureaucratic functionaries but by assuming the responsibility of teaching the ruling minority humane government (*jen-cheng*) and the kingly way (*wang-tao*). In dealing with feudal lords, Mencius made it explicit that a true man cannot be corrupted by wealth, subdued by power, or affected by poverty.

Mencius' strategy for social reform was to change the language of profit, self-interest, wealth, and power by making it part of a moral discourse, with emphasis on rightness, public-spiritedness, welfare, and influence. Rather than arguing against profit, Mencius instructed the feudal lords to cultivate a common bond with their ministers, officers, clerks, and the seemingly undifferentiated masses. Only then, Mencius contended, would they be able to preserve their profit, self-interest, wealth, and power. He encouraged them to extend their benevolence and warned them that this was crucial for the protection of their families.

Mencius' appeal to the common bond among all people as a mechanism of government was predicated on his strong sense that the people are more important than the state and the state more important than the king and that the ruler who does not act in accordance with the kingly way is unfit to rule. Mencius insisted that an unfit ruler should be criticized, rehabilitated, or, as the last resort, deposed. Mencius' conception of politics was based upon his philosophical vision that human beings can perfect themselves through effort and that human nature is good. While he acknowledged the role of biological and environmental factors in shaping the human condition, he insisted that human beings become moral simply by willing to be so. Furthermore, Mencius asserted that if men fully realize the potential of their hearts, they will understand their nature; by understanding their nature, they will know Heaven.

Hsün-tzu: The transmitter of Confucian scholarship. If Mencius brought Confucian moral idealism to fruition, HSÜN-TZU (c. 300–c. 230 BCE) conscientiously transformed Confucianism into a realistic and systematic inquiry on the human condition, with special reference to ritual and authority. Hsün-tzu's penetrating insight into the shortcomings of virtually all the major currents of thought propounded by his fellow thinkers helped to establish the Confucian school as a forceful political and social movement.

Hsün-tzu underscored the centrality of self-cultivation. He defined the process of Confucian education as a ceaseless endeavor to accumulate knowledge, skills, insight, and wisdom. Because he saw human beings as prone to pursue the gratification of their passions, he firmly believed in the need for social constraints. Without constraints, social solidarity, the precondition for human well-being, would be undermined. The most serious flaw he saw in the Mencian commitment to the goodness of human nature was the practical consequence of neglecting the necessity of ritual and authority for the well-being of society.

Like Mencius, Hsün-tzu believed in the perfectibility of all human beings through self-cultivation, in humanity and rightness as cardinal virtues, in humane government as the kingly way, in social harmony, and in education. But his view of how these could actually be achieved was diametrically opposed to that of

Mencius. Hsün-tzu singled out human rationality as the basis for morality. Men become moral by voluntarily harnessing their desires and passions to act in accordance with society's norms. Although this is alien to human nature, it is perceived by the mind as necessary for both survival and well-being. A cultured person is by definition a fully socialized member of the human community, who has successfully sublimated his instinctual demands for the public good.

Hsün-tzu's insistence on objective standards of behavior may have ideologically contributed to the rise of authoritarianism, which resulted in the dictatorship of the Ch'in (221–206 BCE). Yet he was instrumental in the continuation of Confucianism as a scholarly enterprise, and he so significantly enriched the Confucian heritage that he was revered by the Confucians as the paradigmatic scholar for more than three centuries.

The Confucianization of politics. Confucianism before the emergence of TUNG CHUNG-SHU (c. 179–c. 104 BCE) was not particularly influential, but the gradual Confucianization of Han politics began soon after the founding of the dynasty. By the reign of Wu-ti (the Martial Emperor, 141–87 BCE), Confucianism was deeply entrenched in the central bureaucracy. It was manifest in such practices as the clear separation of the court and the government, often under the leadership of a scholarly prime minister, the process of recruiting officials through the dual mechanism of recommendation and selection, the family-centered social structure, the agriculture-based economy, and the educational network. Confucian ideas were also firmly established in the legal system as ritual became increasingly important in governing behavior, defining social relationships, and adjudicating civil disputes. Yet it was not until the prime minister Kung-sun Hung (d. 121 BCE) had persuaded Wu-ti to announce formally that the *ju* school alone would receive state sponsorship that Confucianism became an officially recognized Imperial ideology and state cult.

As a result Confucian Classics became the core curriculum for all levels of education. In 136 BCE Wu-ti set up at court five Erudites of the FIVE CLASSICS and in 124 BCE assigned 50 official students to study with them, creating a de facto Imperial university. By 50 BCE enrollment at the university had grown to 3,000, and by 1 CE those with a Confucian education staffed the bureaucracy. In the year 58 all government schools were required to make sacrifices to Confucius, and in 175 the court had the approved version of the Classics carved on large stone tablets.

The Five Classics. The compilation of the *Wu-ching* (The Five Classics) was a concrete manifestation of the coming of age of the Confucian tradition. Both pre-

Confucian texts, the *SHU-CHING* ("Classic of History") and the *Shih-ching* ("Classic of Poetry"), and contemporary Ch'in-Han material, such as certain portions of the *LI-CHI* ("Record of Rites"), were included.

The *I-CHING* ("Classic of Changes") combines divinatory art with numerological technique and ethical insight. According to the philosophy of change, the cosmos is a great transformation occasioned by the constant interaction of two complementary as well as conflicting vital energies, *YIN AND YANG*. The universe, which resulted from this great transformation, always exhibits both organismic unity and dynamism. The nobleman, inspired by the harmony and creativity of the universe, must emulate this pattern by aiming to realize the highest ideal of "unity of man and Heaven" through ceaseless self-exertion.

The *Shu-ching* presents kingship in terms of the ethical foundation for a humane government. The legendary Three Emperors (*YAO*, *SHUN*, and *YÜ THE GREAT*) all ruled by virtue. Their sagacity, filial piety, and dedication enabled them to create a political culture based on responsibility and trust. Their exemplary lives encouraged the people to enter into a covenant to achieve social harmony without punishment or coercion. Even in the Three Dynasties (*Hsia*, *Shang*, and *Chou*) moral authority, as expressed through ritual, was sufficient to maintain political order. The human continuum, from the undifferentiated masses to the enlightened, the nobility, and the sage-king, formed an organic unity as an integral part of the great cosmic transformation. For the Confucianist, politics means moral persuasion, and the purpose of the government is not only to provide food and maintain order but also to educate.

The *Shih-ching* underscores the Confucian valuation of common human feelings. The majority of its poetic verses give voice to emotions and sentiments of

communities and persons from all levels of society expressed on a variety of occasions. The basic theme of this poetic world is mutual responsiveness.

The *Li-chi* shows society as a community of trust with emphasis on communication. Society organized by the four functional occupations—the scholar, farmer, artisan, and merchant—is, in the true sense of the word, a cooperation. As a contributing member of the cooperation each person is obligated to recognize the existence of others and to serve the public good. It is the king's duty to act kingly and the father's duty to act fatherly. If the king or father fails to behave properly, he cannot expect his minister or son to act in accordance with ritual.

The *Ch'un-ch'iu* ("Spring and Autumn Annals") emphasizes the significance of collective memory for communal self-identification. Historical consciousness is a defining characteristic of Confucian thought, which was in concert with the ancient Sinitic wisdom that reanimating the old is the best way to attain the new.

Tung Chung-shu: The Confucian visionary. Tung Chung-shu (c. 179–c. 104 BCE) was instrumental in developing an interpretation of Confucianism that came to be characteristic of the Han period. His work, *Ch'un-ch'iu fan-lu* ("Luxuriant Gems of the Spring and Autumn Annals"), is a metaphysical treatise in the spirit of the *I-ching*. Tung's elaborate worldview, which integrated Confucian ethics with naturalistic COSMOLOGY, developed out of his studies of the meaning of the five agents (metal, wood, water, fire, and earth), the correspondence of human beings and the numerical categories of heaven, and the sympathetic activation of things of the same kind, as well as his studies of cardinal Confucian values such as humanity, rightness, ritual, wisdom, and trustworthiness. His theory of mutual responsiveness between heaven and humanity provided the Confucian scholars with a higher law by which to judge the conduct of the ruler.

A reaction in favor of a more rational and moralistic approach to the Confucian Classics, known as the "Old Text" school, set in before the fall of the Hsi (Western) Han (25 CE). Yang Hsiung (c. 53 BCE–18 CE) in the *Fa-yen* ("Model Sayings"), a collection of moralistic aphorisms, and the *T'ai-hsüan ching* ("Classic of the Supremely Profound Principle"), a cosmological speculation, presented an alternative world view. This school, claiming its own recensions of authentic classical texts allegedly rediscovered during the Han period and written in an "old" script before the Ch'in unification, was widely accepted in the Eastern Han (25–220 CE).

As the study of the Classics became more refined and elaborate, Confucian scholasticism tended to become too professionalized to remain a vital intellectual force. Yet Confucian ethics exerted great influence on government, schools, and society at large. Toward the end of the Han period as many as 30,000 students attended the Imperial university, and a Confucian temple eventually stood in every one of China's 2,000 counties.

Confucian ethics in the Taoist and Buddhist context. Incompetent rulership, faction-ridden bureaucracy, a mismanaged tax structure, and domination by eunuchs toward the end of the Eastern Han period first prompted widespread protests by the Imperial university students. The court imprisoned and killed thousands of them and their official sympathizers in 169 CE, but the downward economic spiral made the life of the peasantry unbearable. The peasant rebellion, partly led by Confucian scholars, combined with open insurrections of the military, brought down the Han dynasty and thus put an end to the first Chinese empire. As the Imperial Han system disintegrated, barbarians invaded from the north. Northern China was controlled by rival groups, and a succession of states was established in the south. This period of disunity, from the early 3rd to the late 6th century, marked the decline of Confucianism, the emergence of an organized Taoist religion, and the spread of BUDDHISM.

Despite the prominence of Taoism and Buddhism among the cultural elite and the populace in general, Confucian ethics remained virtually inseparable from the moral fabric of Chinese society. Confucius continued to be universally honored as the paradigmatic sage. For example, the outstanding Taoist thinker Wang Pi (226–249) argued that Confucius, by not speculating on the nature of the Tao, had an experiential understanding of it superior to LAO-TZU'S. The Confucian Classics remained the foundation of all literate culture, and sophisticated commentaries

were being produced throughout the age. The political forms of life also were distinctively Confucian, and in the south systematic attempts were made to strengthen family ties by establishing clan rules, genealogical trees, and ancestral rituals based on Confucian ethics.

The reunification of China by the Sui (581–618) and the restoration of lasting peace and prosperity by the T'ang (618–907) gave a powerful stimulus to the revival of Confucian learning. A definitive, official edition of the *Wu-ching* was published and Confucian rituals were implemented at all levels of governmental practice. An examination system was established based on literary competence; this made the mastery of the Confucian Classics a prerequisite for political success and was, therefore, perhaps the single most important institutional innovation in defining elite culture in Confucian terms.

The T'ang dynasty, nevertheless, was dominated by Buddhism and, to a lesser degree, by Taoism. One consequence in the development of Confucian thought was the rise of the metaphysically significant Confucian texts, notably CHUNG-YUNG ("Doctrine of the Mean") and *I-chuan* ("The Great Commentary of the Classic of Changes"), which appealed to some Buddhist and Taoist thinkers.

THE CONFUCIAN REVIVAL

The reemergence of Confucianism as the leading intellectual force involved both a creative response to the Buddhist and Taoist challenge and an imaginative reappropriation of classical Confucian insights.

The Sung masters. Under the Sung dynasty (960–1279), the decline of the aristocracy, the widespread availability of printed books, the democratization of education, and the full implementation of the examination system produced a new social class, the gentry, noted for its literary proficiency, social consciousness, and political participation. The outstanding members of this class, such as the classicists Hu Yüan (993–1059) and Sun Fu (992–1057), the reformers Fan Chung-yen (989–1052) and Wang An-shih (1021–86), the writer-officials Ou-yang Hsiu (1007–72) and Su Shih (pen name of Su Tung-p'o; 1036–1101), and the statesman-historian Ssu-ma Kuang (1019–86), contributed to the revival of Confucianism in education, politics, literature, and history.

The Confucian revival can be traced through a line of Neo-Confucian thinkers from CHOU TUN-I (1017–73) by way of SHAO YUNG (1011–77), CHANG TSAI (1020–77), the brothers CH'ENG HAO (1032–85) and CH'ENG I (1033–1107), and the great synthesizer CHU HSI (1130–1200). These men developed a comprehensive humanist vision in which cultivation of the self was integrated with social ethics and moral metaphysics. In the eyes of the Sung literati this new philosophy successfully applied the classical Confucian insights to the concerns of their own age.

Chou Tun-i articulated the relationship between the "great transformation" of the cosmos and the moral development of human beings. In his metaphysics, humanity, as the recipient of the highest excellence from heaven, is itself a center of cosmic creativity. He focused on the omnipresence of CH'I ("vital energy") and advocated the oneness of *li* ("principle") and the multiplicity of its manifestations, which is created as the principle expresses itself through the "vital energy."

Ch'eng Hao's definition of humanity as "forming one body with all things" was founded on his theme of mutuality between heaven and human beings, consanguinity between human beings, and harmony between humans and nature. To him the presence of T'ien-li ("Heavenly Principle") in all things as well as in human nature enables the human mind to purify itself in a spirit of reverence. Ch'eng I, following his brother's lead, formulated the famous dictum, "Self-cultivation requires reverence; the extension of knowledge consists in the investigation of things." By making special reference to KO-WU ("investigation of things"), he raised doubts about the appropriateness of focusing exclusively on the illumination of the mind in self-cultivation, as his brother seems to have done. The learning of the mind as advocated by Ch'eng Hao and the learning of the principle as advocated by Ch'eng I became two modes of thought in Sung Confucianism.

Chu Hsi, clearly following Ch'eng I's School of Principle, developed a pattern of interpreting and transmitting the Confucian Way that for centuries defined Con-

fucianism in China, Korea, and Japan. Chu Hsi virtually reconstituted the Confucian tradition, giving it new structure, new texture, and new meaning. He was more than a synthesizer; through systematic interpretation he gave rise to a new Confucianism, known as NEO-CONFUCIANISM in the West but often referred to as LI-HSÜEH ("Learning of the Principle") in modern China.

The "Doctrine of the Mean" and the "Great Learning," two chapters in the *Li-chi*, had become independent treatises and, together with the *Analects* and *Mencius*, had been included in the core curriculum of Confucian education for centuries before Chu Hsi's birth. But by putting them into a particular sequence, the "Great Learning," the *Analects*, *MENCIUS*, and the "Doctrine of the Mean," synthesizing their commentaries, interpreting them as a coherent humanistic vision, and calling them the FOUR BOOKS, Chu Hsi fundamentally restructured the Confucian scriptural tradition. The Four Books, placed above the Five Classics, became the central texts for both primary education and civil service examinations in traditional China from the 14th century.

Chu Hsi defined the process of the investigation of things as a rigorous discipline of the mind to probe the principle in things. He recommended a twofold method of study: to cultivate a sense of reverence and to pursue knowledge. Reading, sitting quietly, ritual practice, physical exercise, calligraphy, arithmetic, and empirical observation all had a place in his pedagogical program. Under Chu Hsi's guidance, the White Deer Grotto in present Kiangsi province became the intellectual center of his age and provided a model for all schools in East Asia.

LU HSIANG-SHAN (Lu Chiu-yüan, 1139–93) criticized Chu Hsi's theory of the investigation of things as fragmented and ineffective *EMPIRICISM*. Instead he advocated a return to Mencian moral idealism by insisting that establishing the "great body" (*i.e.*, Heaven-endowed nobility) is the primary precondition for self-realization. To him the learning of the mind as a quest for self-knowledge provided the basis upon which the investigation of things assumed its proper significance. Although Lu's challenge remained a minority position for some time, his learning of the mind later became a major intellectual force in Ming China (1368–1644) and Tokugawa Japan (1603–1867).

Confucian learning in the Chin, Yüan, and Ming dynasties. When the Mongols reunited China in 1279, the harsh treatment of scholars by the conquest Yüan dynasty (1206–1368) seriously damaged the well-being of the scholarly community, but outstanding Confucian thinkers emerged throughout the period. Hsü Heng (1209–81) was appointed by Kublai Khan as the president of the Imperial Academy, and he conscientiously introduced Chu Hsi's teaching to the Mongols and set the tone for the eventual success of the Confucianization of Yüan bureaucracy. In fact, it was the Yüan court that first officially adopted the Four Books as the basis of the civil service examination, a practice continued until 1905. Thanks to Hsü Heng, Chu Hsi's teaching prevailed in the Mongol period, but it was significantly simplified.

The hermit-scholar, Liu Yin (1249–93), on the other hand, allegedly refused Kublai Khan's summons in order to maintain the dignity of the Confucian Way. To him education was for self-realization. By taking seriously the idea of the investigation of things, Liu Yin put a great deal of

*Confucian temple,
Beijing, China*

Rapho—Photo Researchers

emphasis on the learning of the mind. He applied philological methods to classical studies and advocated the importance of history. Liu Yin's contemporary Wu Cheng (1249–1333) further developed the learning of the mind. Wu assigned himself the task of harmonizing the difference between Chu Hsi and Lu Chiu-yüan. As a result, he reoriented Chu's balanced approach to morality and wisdom to accommodate Lu's existential concern for self-knowledge. This prepared the way for the revival of Lu's learning of the mind in the Ming dynasty (1368–1644).

WANG YANG-MING (1472–1529) was the most influential Confucian thinker after Chu Hsi. As a critique of excessive attention to philological details characteristic of Chu Hsi's followers, he allied himself with Lu Chiu-yüan's learning of the mind and advocated the precept of uniting thought and action. By focusing on the transformative power of the will, he inspired a generation of Confucian students to return to the moral idealism of Mencius.

Wang's primary concern was moral education, which he felt had to be grounded in the "original substance" of the mind. This he later identified as *liang-chih* ("good conscience"), by which he meant an innate knowledge or a primordial existential awareness that is possessed by every human being. Wang further suggested that good conscience as the Heavenly Principle is inherent in all beings from the highest spiritual forms to grass, wood, bricks, and stone. Because the universe consists of vital energy informed by good conscience, it is a dynamic process rather than a static structure. Human beings can learn to regard heaven and earth and the myriad things as one body by extending their good conscience to embrace an ever-expanding network of relationships.

Wang Yang-ming's dynamic idealism set the Confucian agenda for several generations in China. His followers, such as the communitarian Wang Chi (1498–1583), who devoted his long life to building a community of the like-minded, and the radical individualist Li Chih (1527–1602), who proposed to reduce all human relationships to friendship, broadened Confucianism to accommodate a variety of lifestyles.

The age of Confucianism: Yi-dynasty Korea, Tokugawa Japan, and Ch'ing China. Among all the dynasties, Chinese and foreign, the long-lived Yi in Korea (1392–1910) was undoubtedly the most thoroughly Confucianized. Since the 15th century, when the aristocracy (*yangban*) defined itself as the carrier of Confucian values, the penetration of court politics and elite culture by Confucianism had been unprecedented. Even today, as manifested in political behavior, legal practice, ancestral veneration, genealogy, village schools, and student activism, the vitality of the Confucian tradition is widely felt in South Korea.

Yi T'oegye (1501–70), the single most important Korean Confucian, helped shape the character of Yi Confucianism through his creative interpretation of Chu Hsi's teaching. Critically aware of the philosophical turn engineered by Wang Yang-ming, T'oegye transmitted the Chu Hsi legacy as a response to the advocates of the learning of the mind. As a result, he made Yi Confucianism at least as much a true heir to Sung learning as Ming Confucianism was.

Confucius, gouache on paper, c. 1770
The Granger Collection

Indeed, his *Discourse on the Ten Sagely Diagrams*, an aid for educating the king, offered a depiction of all the major concepts in Sung learning. His exchange of letters with Ki Taesung (1527–72) in the famous FOUR-SEVEN DEBATE, which discussed the relationship between Mencius' four basic human feelings—commiseration, shame, modesty, and right and wrong—and seven emotions, such as anger and joy, raised the level of Confucian dialogue.

In Japan, Chu Hsi's teaching, as interpreted by T'oegye, was introduced by YAMAZAKI ANSAI (1618–82). A distinctive feature of Yamazaki's thought was his recasting of native SHINTŌISM in Confucian terminology. The diversity and vitality of Japanese Confucianism was further evident in the appropriation of Wang Yang-ming's dynamic idealism by the samurai-scholars, notably KUMAZAWA BANZAN (1619–91). It is, however, in Ogyū Sorai's (1666–1728) determination to rediscover the original basis of Confucian teaching by returning to its pre-Confucian sources that a true exemplification of the independent-mindedness of Japanese Confucians is found. Although Tokugawa Japan was never as Confucianized as Yi Korea had been, virtually every educated person in Japanese society was exposed to the Four Books by the end of the 17th century.

The Confucianization of Chinese society reached its apex during the Ch'ing (1644–1911/12) when China was again ruled by a conquest (Manchu) dynasty. The Ch'ing emperors outshone their counterparts in the Ming in presenting themselves as exemplars of Confucian kingship. They transformed Confucian teaching into a political ideology, indeed a mechanism of control. Jealously guarding their Imperial prerogatives as the ultimate interpreters of Confucian truth, they undermined the freedom of scholars to transmit the Confucian Way.

MODERN TRANSFORMATION

The impact of Western culture has so fundamentally undermined the Confucian roots in East Asia that it has come to be widely debated whether or not Confucianism can remain a viable tradition in modern times. Beginning in the 19th century, Chinese intellectuals' faith in the ability of Confucian culture to withstand the impact of Western technology and political ideas became gradually eroded. The triumph of Marxism-Leninism as the official ideology of the People's Republic of China in 1949 relegated Confucian rhetoric to the background. The modern Chinese intelligentsia, however, maintained unacknowledged, sometimes unconscious, continuities with the Confucian tradition at every level of life—behavior, attitude, belief, and commitment. Indeed, Confucianism remains an integral part of the psycho-cultural construct of the contemporary Chinese intellectual as well as of the Chinese peasant. Meanwhile, rapid economic development in Asia has raised questions about how the typical East Asian institutions, still suffused with Confucian values—such as a paternalistic government, an educational system based on competitive examinations, an emphasis on loyalty and cooperation within the family, and local organizations informed by consensus—have adapted themselves to the imperatives of MODERNIZATION.

Some of the most creative and influential intellectuals in contemporary China have continued to think from Confucian roots. Although some of the most articulate intellectuals in the People's Republic of China criticize their Confucian heritage as the embodiment of authoritarianism, bureaucratism, nepotism, conservatism, and male chauvinism, others in China, Taiwan, Singapore, and North America have imaginatively established the relevance of Confucian humanism to China's modernization. The revival of Confucian studies in South Korea, Taiwan, Hong Kong, and Singapore has been under way for more than a generation, though Confucian scholarship in Japan remains unrivaled. Confucian thinkers in the West, inspired by religious pluralism and liberal democratic ideas, have begun to explore the possibility of a third epoch of Confucian humanism. They uphold that its modern transformation, as a creative response to the challenge of the West, is a continuation of its classical formulation and its medieval elaboration. Scholars in mainland China have also begun to explore the possibility of a fruitful interaction between Confucian humanism and democratic liberalism in a socialist context.

CONFUCIUS \kən-ˈfyü-shəs\, *Chinese* (Wade-Giles romanization) K'ung-fu-tzu \k'üŋ-fü-'dzə\, or K'ung-tzu, or (Pinyin) Kongfuzi, or Kongzi, *original name* K'ung Ch'iu \k'üŋ-'chyü\, *literary name* Chung-ni \j'ün-'nē\ (b. 551 BCE, Ch'ü-fu, state of Lu [now in Shantung province, China]—d. 479, Lu), China's most famous teacher, philosopher, and political theorist, whose ideas have influenced the civilizations of all of eastern Asia. Confucius was not the founder of CONFUCIANISM in the sense that the BUDDHA was the founder of BUDDHISM and JESUS CHRIST of CHRISTIANITY. Rather, Confucius considered himself a transmitter who consciously tried to reanimate the old in order to attain the new.

Confucius' ancestors were probably members of the aristocracy who had become poor commoners by the time of his birth. His father died when Confucius was only three years old. Instructed first by his mother, Confucius then distinguished himself as an indefatigable learner in his teens. He had served in minor government posts managing stables and keeping books for granaries before he married a woman of similar background when he was 19. It is not known who Confucius' teachers were, but he made a conscientious effort to find the right masters to teach him, among other things, ritual and music. His mastery of the six arts—ritual, music, archery, charioteering, calligraphy, and arithmetic—and his familiarity with the classical traditions enabled him to start a brilliant teaching career in his 30s.

Before Confucius, aristocratic families had hired tutors to educate their sons in specific arts, and government officials had instructed their subordinates in the necessary techniques; but he was the first person to devote his whole life to learning and teaching for the purpose of transforming and improving society. He believed that all human beings could benefit from self-cultivation. He inaugurated a humanities program for potential leaders, opened the doors of education to all, and defined learning not merely as the acquisition of knowledge but also as character building.

For Confucius, the primary function of education was to provide the proper way of training noblemen (CHÜN-TZU), a process that involved constant self-improvement and continuous social interaction. Although he emphatically noted that learning was "for the sake of the self" (the end of which was self-knowledge and self-realization), he found public service a natural consequence of true education. Confucius resisted the temptation to live apart from the human community, and opted to try to transform the world from within. For decades Confucius was actively involved in politics, putting his humanist ideas into practice through governmental channels.

Confucius and his followers considered themselves part of a scholarly tradition that had its origins two millennia previously, when the legendary YAO and SHUN created a civilized world through moral persuasion. Confucius' hero was Chou Kung, or the Duke of Chou (d. 1094 BCE), who was said to have helped consolidate and refine the "feudal" ritual system. This system was based on blood ties, marriage alliances, and old covenants, as well as on newly negotiated contracts, and was an elaborate system of mutual depen-

Confucius, Chinese paper album leaf, Sung dynasty
The Granger Collection

dence. The maintenance of interstate as well as domestic order was predicated on a shared political vision, namely, that authority lies in universal kingship, heavily invested with ethical and religious power by the mandate of heaven (see T'JEN-MING) and that social solidarity is achieved not by legal constraint but by ritual observance. Its implementation enabled the Chou dynasty to survive in relative peace and prosperity for more than five centuries. By Confucius' time, however, the system had been so undermined that political crises had precipitated a profound sense of moral decline.

Confucius' response was to address the issue of learning to be human. In so doing he attempted to redefine and revitalize the institutions that for centuries had been vital to political stability and social order: the family, the school, the local community, the state, and the kingdom. Not accepting the status quo, which held that wealth and power spoke the loudest, he felt that virtue

(JEN, or Pinyin *ren*, "benevolence"), both as a personal quality and as a requirement for leadership, was essential for individual dignity, communal solidarity, and political order.

In his late 40s and early 50s, Confucius served first as a magistrate, then as an assistant minister of public works, and eventually as minister of justice in the state of Lu. It is likely that he accompanied King Lu as his chief minister on one of the diplomatic missions. Confucius' loyalty to the king, however, alienated him from the power holders of the time, the large Chi families, and his moral rectitude did not sit well with the king's inner circle. At 56, when he realized that his superiors were uninterested in his policies, Confucius left the country in an attempt to find another feudal state to which he could render his service. Despite his political frustration, he was accompanied by an expanding circle of students during this self-imposed exile of almost 12 years. His reputation as a man of vision and mission spread. At the age of 67 he returned home to teach, write, and edit classical works. According to the *Records of the Historian*, 72 of his students mastered the "six arts," and those who claimed to be his followers numbered 3,000. The earliest records of Confucius' life and thoughts are found in the text known as the *Lun-yü*, or *Analects*.

CONGREGATIONALISM, movement that arose among Protestant churches in England in the late 16th and early 17th centuries, emphasizing the right and duty of each congregation to make its own decisions about its affairs, independent of any higher human authority. Although this principle of church government is upheld by several modern denominations (e.g., most BAPTISTS and the DISCIPLES OF CHRIST), the designation Congregationalist is usually reserved for those churches that hold the congregational polity to be their primary distinguishing characteristic.

Congregationalism developed as one wing of the broader movement known as PURITANISM. Congregationalists were concerned to put into practice the REFORMATION doctrine of the PRIESTHOOD of all believers. Congregationalists gained prestige when Oliver Cromwell aligned himself with this cause. Their political influence declined precipitously after

Cromwell's death in 1658. The Toleration Act of 1689 marked the beginning of a process that would finally grant full religious toleration to the Congregationalists along with all other religious dissenters.

In the Evangelical Revival (c. 1750–1815) Congregationalism gained a new vigor that was to increase throughout the 19th century. Congregationalists forged a strong tie with the Liberal Party. The Liberal victory of 1906 is generally seen as the peak of Congregational influence in English society and politics. Congregationalism also provided many prominent leaders for the ecumenical movement. In 1972 the majority of English Congregationalists and PRESBYTERIANS united to form the new United Reform Church.

Congregationalism achieved its greatest influence in the United States. It was transplanted to America in two forms very early in the colonial period. The "Pilgrims" of Plymouth Colony were separatistic Congregationalists; that is, they felt that realization of their ideal of church government required separation from the Church of England. The neighboring Puritans of Massachusetts Bay were nonseparatists, holding that the national church was capable of being reformed according to their ideal.

The adoption in 1662 of the Half-Way Covenant relaxing requirements for church membership was a response to declining church membership. The widespread revivalistic movement of the 1730s and 1740s, known as the GREAT AWAKENING, also helped replenish the membership rolls of New England's churches, but simultaneously it revealed a new division within American Congregationalism. The CALVINISM of the founding bodies was being replaced by an ARMINIAN theology that put greater emphasis on human efforts in attaining salvation. A general liberalizing of theological opinion continued in the Congregational Churches during the 19th century, with two results. First was the defection of many churches to UNITARIANISM. Second was Congregationalism's downplaying of the importance of conversion in Christian experience. The Kansas City Creed of 1913 is usually cited as the definitive statement of Congregationalism's break with its Calvinist past.

During the first half of the 19th century, the Congregationalists participated in a Plan of Union with the Presbyterians. The National Council of Congregational Churches, formed in 1871, was enlarged in 1931 through an affiliation with the smaller General Convention of the Christian Churches. In 1961 a further merger was effected with the Evangelical and Reformed Church to create the United Church of Christ. The Congregational tradition is now preserved in original name and form in only two or three small associations of churches.

As a rule, Congregationalists eschew binding creedal statements and view faith as a personal encounter with God. In worship the preached word is usually emphasized over the use of the SACRAMENTS. In common with most Protestant groups, Congregationalists accept only two sacraments, BAPTISM and the EUCHARIST. Communion is celebrated once or twice a month and is now usually open to "all believers." Baptism is not required for membership.

CONLAÍ \ˈkɒn-lī\, in Irish heroic tales, son of the most prominent hero of Ulster, CÚ CHULAINN, and of Aife (or Aoife), a warrior-queen of a magical land across the sea. Cú Chulainn overpowered Aife and asked her to bear him a son. He told her to send this son to him in Ulster with a ring as a token—the son was not to let himself be known and not to refuse combat to anyone. When Conlaí came as an unknown youth of seven in a bronze boat, the Ulster-

men tried to stop him and one by one were beaten. Even to Cú Chulainn, Conlaí refused to give his name. He won several fights against his father, who at last mortally wounded him. Only then did Conlaí reveal his identity.

CONSERVATIVE JUDAISM, a strand of JUDAISM that mediates between REFORM JUDAISM and ORTHODOX JUDAISM. Founded in 19th-century Germany as "Historical Judaism," or "the Historical School," the Conservative movement emphasizes the practice of the religious requirements of the TORAH (as does Orthodoxy), while fostering critical scholarship as well (as does Reform Judaism). The Historical School arose among German-Jewish theologians who advocated change but found Reform extreme. They parted company with Reform on some specific issues of practice and doctrine—observance of the dietary laws and belief in the coming of the MESSIAH, for example. But they also found Orthodoxy immobile.

The Historical School's emphasis on historical research in settling theological debates explains the name of the group. Arguing that its positions represented matters of historical fact rather than theological conviction, Conservative Judaism maintained that "positive historical scholarship" would prove capable of purifying and clarifying the faith, when joined to far stricter observance of the law than the Reformers required. Toward the end of the 19th century, in 1886, RABBIS of this same centrist persuasion organized the Jewish Theological Seminary of America, and from that rabbinical school the Conservative Movement developed. Conservative Judaism in America in the 20th century carried forward a centrist position and turned a viewpoint of intellectuals into a religious movement; indeed, by the middle of the 20th century it was the largest movement among American Judaisms.

Orthopraxy is used to refer to correct action and unfettered belief, as against Orthodoxy, right doctrine. In its strict observance to Torah, some would classify Conservative Judaism in America as an orthoprax Judaism defined through works, not doctrine.

CONSTANCE, COUNCIL OF \ˈkən-stəns\ (1414–18), 16th ecumenical council of the ROMAN CATHOLIC church. Following the election of two rival popes (Gregory XII in Rome and Benedict XIII in Avignon) in 1378 and the attempt at the Council of Pisa in 1409 to resolve the Western SCHISM by the election of a new pope, the church found itself with three popes. Under pressure from the Holy Roman emperor a council at Constance was convened principally to reunite Christendom but also to examine the teachings of JOHN WYCLIFFE and JAN HUS and to reform the church.

Political rivalries so divided the council delegates that a revolutionary system of voting was adopted, whereby each of the four power blocs (Italy, England, Germany, and France) was granted a single vote; later the CARDINALS were given a vote as a group, and still later Spain was empowered to vote. John XXIII (one of the three papal candidates) promised to resign if his rivals would do the same. Shortly after, he fled from Constance, hoping that this would deprive the council of its power and lead to its dissolution. The emperor insisted that the council continue, and it issued the decree *Sacrosancta*, affirming that a general council of the church is superior to the pope (see CONCILIARISM). John XXIII was then captured and deposed; Gregory XII agreed to abdicate provided he was permitted officially to convoke the council and so assert the legitimacy of his own line of popes, to which the council agreed; Benedict XIII

was also deposed. In November 1417 the council elected Oddone Colonna, who became pope as Martin V, and the Great Schism was effectively healed. The authority of *Sacrosancta* has been a matter of dispute among scholars.

The council condemned 45 propositions of Wycliffe and 30 of Hus, who was declared an obstinate heretic and burned at the stake. Furthermore, the council adopted seven reform decrees. The Protestant REFORMATION has been attributed to the council's failure to effect stronger reforms.

CONSTANTINE I \ˈkän-stən-,tēn, -tīn\ *byname* Constantine the Great (b. Feb. 27, after CE 280?, Naissus, Moesia [now Niš, Yugos.—d. May 22, 337, Ancyrona, Bithynia [now Izmit, Tur.]), the first Roman emperor attested to have become a Christian.

Constantine's youth was spent at the imperial court of Diocletian. Constantine became emperor of the western portion of the empire in CE 312 after a series of civil wars and sole ruler of the entire Roman Empire in 324. Throughout his life Constantine ascribed his success to his conversion to CHRISTIANITY. He was personally committed to the religion by 313 when he issued the EDICT OF MILAN extending toleration to Christians. He addressed the COUNCIL OF NICAEA (325), which met to resolve a theological dispute. He rebuilt and enlarged Constantinople (formerly Byzantium), making it his permanent capital. His conversion influenced the relations of CHURCH AND STATE for centuries to come. Believing that he was God's chosen servant, he regarded himself as responsible to God for the good government of his church. Formerly a minority sect, Christianity became the official religion of the empire and was stimulated by the patronage of Constantine and his sons. Constantine is revered as a saint in EASTERN ORTHODOXY.

CONSTANTINE, DONATION OF, *Latin* Donatio Constantini, a document that discusses the supposed grant by the emperor Constantine the Great to Pope Sylvester I (314–335) and his successors of spiritual supremacy over the other great patriarchates and over all matters of faith and worship, as well as of temporal dominion over Rome and the entire Western Empire. It was claimed that the gift was motivated by Constantine's gratitude to Sylvester for miraculously healing his leprosy and converting him to CHRISTIANITY. Now universally admitted to be a forgery, it was regarded as genuine throughout the Middle Ages.

It was composed from various sources, especially the apocryphal *Vita S. Silvestri* ("Life of Saint Sylvester"). The earliest certain appeal to the document by a pope was made in 1054 by Leo IX in a letter to MICHAEL CERULARIUS, the PATRIARCH of Constantinople. From that time forward it was increasingly employed by popes and canonists in support of the papal claims. Although the validity of the document was sometimes questioned, its genuineness was first critically assailed during the Renaissance. In 1440 Lorenzo Valla proved that it was false and began a controversy that lasted until the end of the 18th century. Scholars now generally agree that the forgery was written between 750 and 800. Some believe that it was written in Rome, but others believe it was composed in the Frankish empire.

CONSTANTINOPLE, COUNCIL OF (381) \ˈkän-,stan-tə-'nō-pəl\, second ecumenical council of the Christian church, summoned by the emperor Theodosius I and meeting in Constantinople (Istanbul). Doctrinally, it promulgated what became known as the NICENE CREED; it also declared finally the Trinitarian doctrine of the equality of the HOLY

SPIRIT with the Father and the Son. Among the council's canons was one giving the bishop of Constantinople precedence of honor over all other bishops except the bishop of Rome, "because Constantinople is the New Rome."

Though only eastern bishops had been summoned (about 150 in all), the Greeks claimed this council to be ecumenical. Pope Damasus I in Rome appears to have accepted the creed but not the canons, at least not that upon the precedence of Constantinople; Rome accepted the precedence of Constantinople, next to Rome, only during the life of the Latin Empire of Constantinople, created in the 13th century by the Fourth Crusade. In both East and West, nevertheless, the council came to be regarded as ecumenical.

CONSTANTINOPLE, COUNCIL OF (553), fifth ecumenical council of the Christian church, meeting under the presidency of Eutychius, PATRIARCH of Constantinople (Istanbul). The 14 ANATHEMAS issued by the council rejected NESTORIAN doctrine; the council also ratified an earlier condemnation of ORIGEN.

Pope Vigilius of Rome opposed the council and took SANCTUARY in a church from May to December, but he at last yielded and formally ratified the verdicts of the council on Feb. 23, 554. Even so, the Western church could not bring itself to accept the decrees of the council. In Africa, imperial troops were able to force acceptance. North Italian bishops refused their allegiance to the see of Rome and found support in France and Spain. The opposition hung on in northern Italy until the end of the 7th century.

CONSTANTINOPLE, COUNCIL OF (680), sixth ecumenical council of the Christian church, summoned by the emperor Constantine IV at Constantinople (Istanbul).

Some eastern Christians, forbidden to talk of the concept of one nature of Christ, thought to enforce the unity of the person of Christ by talking of one will (*thelema*) and one operation (*energeia*) from the two natures. Persons holding this view were called Monothelites. Sergius, PATRIARCH of Constantinople, and Honorius I, pope of Rome, appear to have embraced the Monothelite doctrine. The council of 680 condemned the Monothelites, among them Honorius, and asserted two wills and two operations.

CONSTANTINOPLE, COUNCIL OF (869–870), council of the Christian church, meeting in Constantinople (Istanbul). The Roman church eventually recognized it as the eighth ecumenical council, but the Eastern church for the most part denied its ecumenicity and continues to recognize only the first seven councils.

The council confirmed a Roman sentence of EXCOMMUNICATION against Photius, PATRIARCH of Constantinople, bringing to a head the so-called Photian SCHISM. (Photius was later reinstated in 879–880.) The council's canon (number 22) prohibiting lay interference in episcopal elections assumed great importance in the Western church's INVESTITURE CONTROVERSY in the 11th and early 12th centuries.

CONSUS \ˈkän-səs\, ancient Italian deity, cult partner of Ops. Some scholars have derived his name from the Latin verb *condere* ("to store away") on the presumption that he was a god of the granary or storage bin. He had a temple on the Aventine. In later times, Consus was only a secondary deity whose character was rather abstract. On his festival days, in August and December, horses and mules were crowned with garlands and given rest from work. In August the FLAMEN *Quirinalis* (priest of the god QUIRINUS) offered

sacrifice, and the *pontifices* presided at horse and chariot races (in which mules took the place of horses).

CONTEMPLATIVE, religious movement that attempts to encourage—through prayer, meditation, and sometimes withdrawal from society—a mystical experience of god.

See also MONASTICISM; IDIORRYTHMIC MONASTICISM; CENOBITIC MONASTICISM.

CONVENT, residence of a religious order, particularly an order of NUNS. See also ABBEY.

COPTIC ORTHODOX CHURCH \ˈkɑp-tɪk\, also called Coptic Church, principal Christian church in Egypt. The people of Egypt before the Arab conquest in the 7th century identified themselves and their language in Greek as Aigyptios (Arabic *qibt*, Westernized as Copt); when Egyptian Muslims later ceased to call themselves Aigyptioi, the term became the distinctive name of the Christian minority. From the 5th century these Christians belonged to a MONOPHYSITE church, calling themselves simply the Egyptian Church. In the 19th and 20th centuries they began to call themselves Coptic Orthodox.

In the 4th and 5th centuries a theological conflict arose between the Copts and the Greek-speaking Romans, or Melchites (“Emperor’s Men”), in Egypt over the COUNCIL OF CHALCEDON (451), which rejected Monophysite doctrine. After the Arab conquest, the Copts ceased speaking Greek, and the language barrier added to the controversy.

Apart from the Monophysite question, the Coptic and the EASTERN ORTHODOX churches agree in doctrinal matters. Arabic is now used in services for the lessons from the BIBLE and for many of the variable hymns; only certain short refrains are not in Arabic. The service books are written in Coptic (the Bohairic dialect of Alexandria), with the Arabic text in parallel columns.

The Coptic Orthodox Church developed a democratic system of government after the 1890s. The PATRIARCH and the 12 diocesan BISHOPS, with the assistance of community councils in which the laity is well represented, regulate the finances of the churches and schools and the administration of the rules relating to marriage, inheritance, and other matters of personal status. When the patriarch dies, an electoral college, predominantly of laymen, selects three monks at least 50 years of age as candidates, from whom the final choice is made by lot after prayer.

The patriarch of Alexandria resides in Cairo. The church has its own primary and secondary schools in many places in Egypt, as well as a strong Sunday-school program. There

is an Institute of Coptic Studies in Cairo, a theological college connected with the institute, and a Coptic museum.

There is a Coptic Orthodox Church in Jerusalem, and there are a few other churches in the Holy Land, built in the 19th and 20th centuries, as well as a Coptic bishopric in Khartoum, Sudan. A large number of Coptic Orthodox churches exist in Australia and in the United States. The Ethiopian, Armenian, and Syrian Jacobite churches are in communion with the Coptic Orthodox Church.

CORDOVERO, MOSES BEN JACOB \,kɔr-dɔ-ˈvɛr-ɔ\ (b. 1522—d. 1570, Safed, Palestine [now Zefat, Israel]), Galilean RABBI who organized and codified the Zoharistic QAB-BALAH. He was the teacher of ISAAC LURIA.

Cordova was a disciple of JOSEPH KARO. In *Pardes rimoni*, which he completed by the age of 27, and *Elimah rabati*, completed 10 years later, and in his extensive commentary on the SEFER HA-ZOHAR (the classic text of Jewish esoteric MYSTICISM), Cordovero attempted to summarize and synthesize Qabbalistic thought to that time and to put forth his own interpretive Qabbalistic system.

CORN MOTHER, also called Corn Maiden, mythological figure believed, among agricultural tribes in Meso-America and North America, to be responsible for the origin of maize.

The story of the Corn Mother is related in two main versions with many variations. In these versions she is either an old woman or a beautiful young woman who is able to feed her hungry tribe by producing corn in ways which, once discovered, are deemed disgusting. In the first version the Corn Mother is then accused of WITCHCRAFT. Before being killed by the tribe—by some accounts with her consent—she gives careful instructions about how to treat her corpse. Corn sprouts from the places over which her body was dragged or, by other accounts, from her corpse or burial site. In the second version, after her discovery she returns to her divine home, but her husband follows her, and she gives him seed corn and detailed instructions for its cultivation.

Similar stories of the immolation of a maternal figure or the insult to and flight of a beautiful maiden are told by the Indians in accounting for

the origin of the buffalo, PEYOTE, certain medicinal herbs, and the SACRED PIPE.

CORNUCOPIA \kɔr-nə-ˈkɔ-pɛ-ə-, -nyə-\, also called horn of plenty, decorative motif, dating from ancient Greece, that symbolizes abundance. The motif originated as a curved goat’s horn filled to overflowing with fruit and grain. It is emblematic of the horn possessed by Zeus’s nurse, AMALTH-

Coptic papyrus of the Gospel According to John, 4th century

By courtesy of the British and Foreign Library Society, London

CORONACH

AEA, a NYMPH, whose horn could be filled with whatever the owner wished.

CORONACH \ˈkɔr-ə-nəʃ, ˈkär-\, in Celtic tradition, choral lament or outcry for the dead; also, a funeral song sung or shrieked by Celtic women. Though observers have frequently reported hearing such songs in Ireland or in the Scottish Highlands, no such songs have been recorded.

CORPUS CHRISTI, FEAST OF \ˈkɔr-pəs-ˈkris-tē\, festival of the Western Christian church in honor of the Real Presence of the body (*corpus*) of JESUS CHRIST in the EUCHARIST. A movable feast, it is observed on the Thursday (or, in some countries, the Sunday) after Trinity Sunday. It originated in 1246 when Robert de Torote, bishop of Liège, ordered the festival celebrated in his DIOCESE. It did not spread until Jacques Pantaléon, formerly archdeacon of Liège, became pope as Urban IV; in 1264 he ordered the whole church to observe the feast. By the mid-14th century the festival was generally accepted, and in the 15th century it became, in effect, the principal feast of the church.

The PROCESSION became the feast's most prominent feature. Sovereigns and princes took part, as well as magistrates and members of guilds. In the 15th century the procession was customarily followed by the performance by guild members of miracle plays and mystery plays.

After the practice of adoring the Host was rejected in the REFORMATION, Protestant churches suppressed the festival.

CORYBANT \ˈkɔr-ə-bant, ˈkär-\, any of the wild, half-demonic beings who were mythical attendants of the ancient Oriental and Greco-Roman deity the GREAT MOTHER OF THE GODS. They were often identified or confused with the Cretan Curetes (attendants of the Greek god ZEUS) and were distinguished only by their Asiatic origin and by the more pronouncedly orgiastic nature of their rites. Accounts of the origin of the Corybantes vary, and their names and number differ from one authority to another. They apparently had a mystic cult, and a prominent feature of their ritual was a wild dance, which was claimed to have powers of healing mental disorder. It is possible that they originated as a mythical representation of the PRIESTHOOD.

COSMOGONY \kɔz-ˈmä-gə-nē\, type of myth that refers to the origin of the world. Cosmogony and CREATION MYTH are sometimes used as synonyms, though not all cosmogonies feature a creator.

Cosmogonic myths are concerned with origins in the sense of the foundation or validity of the world as it is. Creation stories in both nonliterate and literate cultures frequently speak of the act of creation as a fashioning of the earth out of raw material that was already present. A creation out of nothing occurs much less frequently.

Water has a special role in Asian and North American cosmogonies, where the creator (often an animal) is assisted by another figure, who dives for earth in the primordial ocean. The earth-diver helper sometimes develops into an opponent in other areas. This theme helps account for the fact that evil is constitutive of the cosmos without holding the creator responsible for it. Other widely diffused motifs are: the cosmogonic egg, found in the Pacific world, parts of Europe and southern Asia (e.g., in HINDUISM); the world parents (usually in the image of sky and earth); and creation through sacrifice or through a primordial battle. Creation through the word of the creator also occurs outside the OLD TESTAMENT account (e.g., in Polynesia).

The characteristics of a particular cosmogony often set the pattern for everything else in a tradition; other myths are often related to it or derived from it. Most cosmogonic accounts have certain formal features in common. They speak of irreconcilable opposites (e.g., heaven and earth, darkness and light) and of events or things totally outside common perception and reason (e.g., a "time" in which heaven and earth were not yet separated and darkness and light intermingled).

Human origins are usually linked immediately to the cosmogony. Humans, for instance, are placed on the earth by a god, or in some other way their origin is from heaven. Humans are sometimes said to have ascended from the depths of the earth (as with the Zuni, an American Indian people) or from a certain rock or tree of cultic significance. These images are often related to the idea of a realm of ancestors as the origin of newborn children. Humans are also said to be fashioned from the dust of the ground (as in GENESIS) or from a mixture of clay and blood (as in the Babylonian creation myth). In all cases humans have a particular place (because of their duties to the gods, their limitations, or even their gifts), though the harmony of humanity and other forms of nature is emphasized.

In most cosmogonic traditions the creation of humans is the final or culminating act. The condition of the cosmos prior to the arrival of humans is viewed as separate and distinct from the alterations that result from the beginning of the human cultural world. Creation is thus seen as a process of periods or stages, frequently in a three-stage model. The first stage consists of the world of gods or primordial beings; the second stage is the world of human ancestors; and the third stage is the human world. The three stages may be interrelated; for example, the gods may be the creators of humans or the ancestors of humans, or ancestors may undergo a transformation to become human.

Among innumerable tales of origin, one of the most common types is related to the origins of institutions. Certain initiation ceremonies or ritual acts are said to have originated in the beginning, in mythical times, this primeval moment of inception constituting their validity.

COSMOLOGY, type of myth or religious discourse dealing with the ordering of the world. As a cosmology does not necessarily deal with the origins of the world, it is distinct from COSMOGONY and CREATION MYTH. A cosmological myth typically tells of the origins of the culture that tells it and explains the basic ideological problems that concern it, such as the origin of death, the nature of society, and the relationship of men and women and of the living and the dead.

Geography and physical space typically enter into cosmological traditions, frequently by means of a symbolic identity between the divine world and the community's central temple or sacred site. Such an identity is witnessed in the sacred sites of the Algonquin, Sioux, and Blackfoot North American Indian tribes (see NATIVE AMERICAN RELIGIONS); the temple of BEL at Palmyra (in Syria); the KIVA of the Pueblo villages; the Buddhist STUPA; and Brahminic, Buddhist, and Mexican mountain temples. The cosmological scheme has been applied to Christian BASILICAS and churches—with square floor plans, overarching domes, and symbolic ornamentation—from as far back as the 6th and 7th centuries. The concept of a sacred space or area reserved for a particular deity or purpose is frequently encountered, as is the corollary theory that such designated areas could correspond to each other.

Cosmologies also frequently treat the structure of the universe and the shape of the earth. Micronesians generally believe in at least three vertically arranged levels of the universe: the earth proper, the underworld, and HEAVEN or the sky world. According to the Aztec cosmological ideas, the earth had the general shape of a great disk divided into four sections oriented to the four cardinal directions. To each of the four world directions were attached five of the 20 day-signs, a color, and certain gods. The fifth cardinal point, the center, was attributed to the fire god Huehuēōtl, because the hearth stood at the center of the house. This cosmic order is usually conceived as a divine order that is well intentioned toward humans and is working for their well-being as long as they are willing to insert themselves into this order, to follow it willingly, and not to upset it by perversion or rebellion.

COTYS ^ˈkō⁻tɪs, also called *Cotyto* ^ˈkō⁻ti-tō, Thracian goddess worshiped with orgiastic rites, especially at night. Her worship was apparently adopted publicly in Corinth (c. 425 BCE) and perhaps privately in Athens about the same time; it then included a baptismal ceremony. Later relief sculptures from Thrace showed her as a goddess of the hunt similar to ARTEMIS, but in literature she was instead compared with the Oriental-Greek-Roman Cybele (GREAT MOTHER OF THE GODS).

COUNTER-REFORMATION, also called Catholic Reformation, or Catholic Revival, in CHRISTIANITY, the ROMAN CATHOLIC efforts directed in the 16th and early 17th centuries both against the Protestant REFORMATION and toward internal renewal; the Counter-Reformation took place during roughly the same period as the Protestant Reformation, actually (according to some sources) beginning shortly before Martin Luther's NINETY-FIVE THESES (1517).

Early calls for reform grew out of criticism of the worldly attitudes and policies of the Renaissance popes and many of the clergy. New religious orders and other groups were founded to effect a religious renewal—e.g., the Capuchins, the Ursulines, and especially the JESUITS. Later in the century, JOHN OF THE CROSS and TERESA OF ÁVILA promoted the reform of the CARMELITE order and influenced the development of the mystical tradition. FRANCIS DE SALES had a similar influence on the devotional life of the laity.

There was little significant papal reaction to the Protestants or to demands for reform from within the Roman Catholic church before mid-century. Pope Paul III (reigned 1534–49) is considered to be the first pope of the Counter-Reformation. It was he who in 1545 convened the COUNCIL OF TRENT, which met intermittently until 1563 and responded emphatically to the

Saint John of the Cross, a leader of the Counter-Reformation, detail of an oil painting by Joaquín Canedo, 1795

issues at hand. Its doctrinal teaching was a reaction against the Lutheran emphasis on the role of faith and God's GRACE and against Protestant teaching on the number and nature of the SACRAMENTS. There was an attempt to regulate the training of candidates for the priesthood; measures were taken against luxurious living by the clergy and the appointment of relatives to church office.

The Roman INQUISITION, an agency established in 1542 to combat HERESY, was more successful in controlling doctrine and practice than similar bodies in those countries where Protestant princes had more power than the Roman Catholic church. Political and military involvement directed against Protestant growth is most clearly reflected in the policies of Emperor Charles V and in those of his son Philip II, who was associated with the Spanish Inquisition.

A major emphasis of the Counter-Reformation was an ongoing missionary endeavor in parts of the world that had been colonized by predominantly Roman Catholic countries. The work of such men as FRANCIS XAVIER and others in Asia and of missionaries in the New World produced millions of BAPTISMS, if not true conversions. There were also attempts to reconvert areas of the world that had once been Roman Catholic—e.g., England and Sweden.

COVEN, group in which witches are said to gather. The coven traditionally is said to consist of 12 members and a devil as leader. The number is generally taken as a parody of Christ and his 12 disciples. An alternate theory, stressing a pre-Christian tradition of witches, explains 13 as the maximum number of dancers that can be accommodated in a nine-foot circle.

Each member of a coven is said to specialize in a particular branch of magic, such as bewitching agricultural produce, magical healing or infliction of disease, weather-magic, or love-magic. Many students of WITCHCRAFT, however, dismiss the theory of covens as unfounded and based on insufficient evidence. Nonetheless, contemporary witchcraft groups continue to use the term coven.

COVENANT, Hebrew *berith* ^ˈbə⁻rēt, ^ˈbrēt, in the OLD TESTAMENT, a term used variously to mean an agreement, alliance, compact, constitution, legal or diplomatic agreement, ordinance, pact, pledge, promise, testament, or treaty. A covenant may be either unilateral (with duties and obligations imposed upon only one party) or bilateral (with duties and obligations applied to both parties), and conditional (contingent upon one party performing certain actions) or unconditional. A bilateral covenant may be a "parity treaty," in which both parties are equal, or a "suzerainty treaty" (also called a "vassal treaty"), in which a dominant party offers or forces the treaty on a lesser party. The suzerainty treaty was typically the kind employed in the ancient Near East by great kings, who dictated terms and conditions to lesser kings and nations.

In the history of the Israelites, covenants are either struck or interdicted between an individual (who may be a king) and a nation (including ISRAEL), or between the Israelites and another nation (e.g., Genesis 14:13; 21:22–32; Exodus 23:32; 34:12, 15; Deuteronomy 7:2; Joshua 9; Judges 2:2; 1 Samuel 11:1–2; 2 Samuel 3:12–13; 5:3; 1 Kings 5:12; 15:18–19; Jeremiah 34:8–18; Obadiah 7). A covenant may also be an agreement between individuals (e.g., Genesis 31:44–54; 1 Samuel 18:3; 20:8; 23:18; 1 Kings 5:26; 20:34; Hosea 10:4), or it may refer to marriage or to a literal or figurative agreement between husband and wife (Malachi 2:14; Ezekiel 16:8; Proverbs 2:17).

COVENANT THEOLOGY

The most theologically significant covenants in Hebrew SCRIPTURES are those in which YAHWEH (or ELOHIM)—who is mindful of his covenants with men (Genesis 9:15–17; Exodus 2:24; 6:4–5)—is an active party, or, sometimes, the only party. Covenant, in that instance, is his unilateral promise to an individual or nation, or it is a bilateral treaty or agreement he strikes with an individual or all Israel.

The most important unconditional unilateral covenants (understood as charters or promises) Yahweh grants are those with NOAH, ABRAHAM, ISAAC, JACOB, and DAVID. Yahweh tells Noah to build an ARK, with which he, his children, and pairs of other living creatures will be saved from destruction. Later, Yahweh promises Noah never again to destroy the earth by flood, and he sets his bow (the rainbow) in the sky as a reminder of this (Genesis 6:13–21; 7:1–5; 8:21–9:17). He promises Abraham that his descendants will be virtually innumerable and will inherit the Land of Israel, from the Wadi of Egypt to the Euphrates (Genesis 15:18–21; 22:15–18). He promises Jacob virtually innumerable progeny, that he and his progeny will be a blessing to all the other nations, and that he will return to the Land (Genesis 28:12–15, 32:11–12; 35:9–13; see also Genesis 46:3–4).

Yahweh also makes conditional covenants with Abraham and Isaac. Abraham, Ishmael, and Abraham's descendants through Isaac are to accept Yahweh as their God and to circumcise their sons; consequently, Abraham will inherit CANAAN and be the father of many nations (Genesis 17). Later, Yahweh promises Isaac that He will keep the covenant with Abraham if Isaac stays in the land of the Philistines (Genesis 26:3–5).

Yahweh gives an unconditional promise to David that his house, kingdom, and throne, through his son SOLOMON, are established forever, and Yahweh will not depart from them (*e.g.*, 2 Samuel 7:11–16; 23:5; 1 Chronicles 17:12–14; 22:10; Psalms 89:3–4, 29–37; Jeremiah 33:17).

The most important bilateral covenant (as conditional suzerainty treaty or possibly loyalty OATH) in Hebrew scripture is the “great covenant” of SINAI/Horeb (Exodus 19:2–Numbers 10:11; Deuteronomy 4:10–20, 23–31, 44), which, in later traditions, is considered one mountain and one treaty (the covenant of Sinai). Yahweh offers the covenant to the Israelites, who agree to it. The Sinai Covenant is stated in Exodus 19–23 and ratified in Exodus 24 before the stipulation of its ordinances (Exodus 25:1–Num 10:11). It is reiterated by MOSES in Moab, where it is renewed (Deuteronomy 4: 23–24; 10:4; 28:1–29:29). After enjoining the people to observe Moses' law (*i.e.*, the Sinai covenant [Joshua 23:6–8]) Joshua mediates an additional covenant at Shechem (Joshua 24: 1–28). The Sinai and Shechem covenants are determinative of and law for such subsequent religious traditions as Second Temple and RABBINIC JUDAISM.

COVENANT THEOLOGY, *also called* federal theology, type of Reformed (Calvinistic) theology emphasizing the biblical

COVENANTS of works made by God with ADAM and the covenant of GRACE made between God and humanity through the grace of JESUS CHRIST. The covenants with ABRAHAM and MOSES were sometimes added. In Reformed theology, Christ was viewed as the second Adam, as he was described in the letters of the Apostle PAUL.

English Puritans of the 17th century incorporated the concept of the two covenants (law and grace) into what has been called a natural and a supernatural covenant. In the development of this theological movement, the 16th–17th-century English Puritan theologian William Ames's book *Medulla Theologiae* (*Marrow of Sacred Divinity*) influenced Reformed theology for nearly a century. The covenantal concept spread among Reformed groups in England,

Hindus honoring cows in the Gopāṣṭhamī Festival, Vrindaban, North India

John Stratton Hawley

Germany, Scotland, the Netherlands, and the New England colonies, where it was especially influential.

COW, SANCTITY OF THE, in HINDUISM, the belief that the cow is representative of divine and natural beneficence and should therefore be protected and venerated.

The origin of the belief can be traced to the early Vedic period. The Indo-European peoples who entered India in the 2nd millennium BCE were pastoralists; cattle had major economic significance that was reflected in VEDIC RELIGION. Although cattle were sacrificed and their flesh eaten in ancient India, the slaughter of milk-producing cows was increasingly prohibited, as in parts of the Sanskrit epic MAHĀ BHĀRATA and the law code MANU-SMṚTI; in the ṚG VEDA the milk-cow was said to be “unslayable.” The veneration afforded the cow is indicated by the use in rites of healing, purification, and penance of the *pañcagavya*, the five products of the cow—milk, curd, butter, urine, and dung.

Subsequently, with the rise of the ideal of AHIMSĀ, the principle of noninjury to living creatures, the cow came to symbolize a life of nonviolent generosity. It also was associated with motherhood and Mother Earth, because its products supplied nourishment. Early on the cow was identified

with the BRAHMIN or priestly class, and killing the cow was sometimes equated (by Brahmins) with the heinous crime of killing a Brahmin. In the middle of the 1st millennium CE, cow-killing was made a capital offense by the Gupta kings; legislation against cow-killing persisted into the 20th century in many states where the monarch was Hindu. The cow is associated with SHIVA (whose vehicle is a bull), INDRA (associated with Kāmadhenu, the wish-granting cow), KRISHNA (a cowherd in his youth), and goddesses (because of their maternal attributes).

Toward the end of the 19th century, a Cow-Protection movement strove to unify Hindus and distinguish them from Muslims by demanding that the government ban cow slaughter. This intertwining of political and religious purpose led periodically to anti-Muslim riots and played a role in the partition of the Indian subcontinent in 1947.

CRANMER, THOMAS ˈkrɑːn-mər (b. July 2, 1489, Aslacton, Nottinghamshire, Eng.—d. March 21, 1556, Oxford), the first Protestant archbishop of Canterbury (1533–56), adviser to the English kings Henry VIII and Edward VI. As archbishop, he put the English BIBLE in PARISH churches, drew up the BOOK OF COMMON PRAYER, and composed a litany that remains in use today. Denounced for promoting PROTESTANTISM by the CATHOLIC Mary I, he was convicted of HERESY and burned at the stake.

CREATIONISM, *also called* creation science, or scientific creationism, doctrine that postulates that matter, the world, and the various forms of life are the product of specific acts of creation by a transcendent, personal creator. Biblical creationists believe that the GENESIS story of God's six-day creation of all things is literally correct. Scientific creationists believe that a creator made all that exists, though they do not hold that the Genesis story is a literal history of that creation. Both groups deny that the changes or mutations that occur naturally in organisms over long periods of time can lead to the evolution of a higher or more complex species from a lower or less complex one. Thus, the theory of human evolution from lower animals is disputed by all creationists.

Creationism developed in response to the publication of the theory of evolution in Charles Darwin's *Origin of Species* (1859). Within two decades, most of the scientific community had accepted some form of organic evolution. Many religious leaders, however, feared that a less-than-literal reading of the biblical story of creation would result in a loss of faith, and some argued that purported signs of moral decay were evidence of the damage brought about by the teaching of "godless" evolution. The issue was argued on a number of platforms, one of the most famous being the Scopes Trial (1925), in which a high-school teacher in the U.S. state of Tennessee, John T. Scopes, was convicted of unlawfully teaching the theory of evolution. In 1987, the U.S. Supreme Court ruled that states may not require public schools to teach creationism alongside evolution if such requirements are intended to promote RELIGIOUS BELIEF. Beginning in the 1990s some creationists advocated a doctrine known as Intelligent Design, according to which the complexity of living organisms cannot be ad-

equately explained except by postulating the existence of an intelligent designer. This view represented a revival of the classical teleological argument for the existence of God, also known as the argument from design (*see* THEISM). Today many creationists work to ensure that schools present creationism as a legitimate alternative to evolution.

CREATION MYTH, *also called* COSMOGONY, or cosmogonic myth, symbolic narrative of the beginning of the world as understood in a particular tradition. Creation myths are expressions of the basic religious values of a community. They are also a means by which humans orient themselves in the universe, and they underlie the community's basic patterns of life and culture. Certain rituals may have served as dramatizations of the creation myth, performed to highlight the effectiveness of the myth in ordering and safeguarding the culture and its way of life. In addition, a community's modes of artistic expression find their models and meanings in myths of creation.

A few basic types of creation myth may be distinguished. One type, found in most of the world, is the belief in a supreme creator deity, characterized as omniscient and omnipotent, as having existed alone prior to the world's creation, and as having had a plan in creating the world. In many of these myths, the creator's plan is thwarted through some action of a creature. This rupture leads in some myths to the deity's departure from creation; in others it signifies the ambiguity of the world. In a different view, the world emerges gradually through stages. In contrast to the supreme-deity type, emergence myths emphasize the latent power in the earth and its components.

A third type of cosmogonic myth is that which sees the world as the offspring of primordial parents. The world-parents usually appear late in the narrative. The union of the parents is disrupted by the offspring. While reasons for this separation vary, it usually results in a cosmic order centered on the techniques and knowledge of human culture. Related to this type of myth is the type in which creation derives from a cosmic egg. The egg symbolizes unity and

Creation of the sky, detail from the Creation Dome; Basilica of San Marco, Venice, Italy
Scala—Art Resource

yet contains the possibility of separation or creation. A fifth type of myth tells of an animal or devil who, at the bidding of the deity, dives into the primordial waters to secure a portion of earth on which life can survive.

CREED, an officially authorized, usually brief statement of the essential articles of faith of a religious community, often used liturgically in public worship or initiation rites. Creeds are similar to the so-called CONFESSIONS OF FAITH of some Protestant Christian churches, which are usually more extensive formulations.

Although RELIGIOUS BELIEFS frequently are not brought to the fully explicit level of creeds or confessions but are expressed in rituals and myths, liturgical formulas, sacred writings, codifications of law, or theological reflection, the cultural transmission of a religion frequently elicits the formation of formal creeds in an attempt to maintain the religion's identity amidst discontinuity and change. Only ZOROASTRIANISM, BUDDHISM, JUDAISM, CHRISTIANITY, ISLAM, and some modern movements of HINDUISM possess creeds in the full meaning of the word.

In most religions it is chiefly through liturgical expressions that religious faith is confessed and religious identity sustained. In the religions of the East, certain words and phrases function in part as creedal affirmations. LI (laws of appropriate behavior) and HSIAO (FILIAL PIETY) in CONFUCIANISM and TAO (the way) in TAOISM sum up important features of the religious tradition in which they are found. Also serving in some degree as a declaration of faith are the various MANTRAS of Hinduism, especially the Gāyatrī prayer from the ṚG VEDA that BRAHMIN youth learn as part of their initiation ceremony. In HINAYANA Buddhism a more properly creedal formulation is found in the early declaration of refuge in the BUDDHA, the doctrine, and the community.

Creedal statements are most numerous in the religions of the West. A central part of the life of every Muslim is profession of the SHAHĀDA, which confesses that only God is God and that MUHAMMAD is the prophet of God. In Judaism early creedal affirmations that were apparently confessed in a worship setting as part of an annual festival are preserved in Hebrew SCRIPTURE. In the medieval period efforts were made within Judaism to formulate creeds; of these, MAIMONIDES' creed, the THIRTEEN ARTICLES OF FAITH is the most significant, though it has never been officially recognized as normative. The confession of the oneness of God and of the RESURRECTION of the dead are the central declarations of Jewish belief, and these appear as parts of worship.

Christianity has given rise to numerous creeds. This is partly because the Christian church from the start possessed its distinctive gospel, or KERYGMA (proclamation), which was decidedly dogmatic in character. As early as the apostolic age this proclamation was beginning to crystallize in conventional acclamations (*e.g.*, "Jesus is Lord") and longer partly stereotyped summaries of belief. Creedal formulation in the West reached its summit with the APOSTLES' CREED, which is still used in baptismal ceremonies and public worship by most Protestants and Roman Catholics. Its present working probably goes back to the 8th century; however, it likely originated from earlier baptismal creeds, and in particular from the Old Roman Symbol, which in its essentials seems to go back to the 2nd century.

The NICENE CREED, designed as an authoritative norm of orthodox teaching, was formulated by the COUNCIL OF CONSTANTINOPLE in 381. This creed, also called the Niceno-Constantinopolitan Creed, is accepted in both the East and the West. Like the Apostles' Creed, the Nicene Creed was for-

mulated in part to exclude heretical views, in particular the Arian HERESY that denied the equality of the Son with the Father. Thus, it affirmed that JESUS CHRIST is of one substance (HOMOIOUSIAN) with the Father. Western churches also eventually adopted a FILIOQUE clause (never accepted in the East), which asserts that the Spirit proceeds from the Son as well as from the Father.

A third ecumenical creed in the West is the ATHANASIAN CREED, officially accepted by Roman Catholics, Anglicans, and Lutherans, although its use in liturgy has greatly declined in recent centuries. Strongly polemical in tone, it expounds on the nature of Christ and the TRINITY. It probably originated between 450 and 500 in southern France.

CREMATION, the practice of reducing a corpse to its essential elements by burning.

The practice of cremation on open fires was introduced to the Western world by the Greeks as early as 1000 BCE. They seem to have adopted cremation from some northern people as an imperative of war; corpses were incinerated on the battlefield, then the ashes were gathered up and sent to the homeland for ceremonial entombment. Cremation and inhumation subsequently alternated with one another as the preferred mode of burial in ancient Greece, perhaps in part due to the expense of the wood necessary for cremation in a time when local timber was scarce.

The Romans followed Greek and Trojan fashion in cremating their military heroes. In Virgil's epic poetry, the Romans covered the pyre with leaves and fronted it with cypresses; after it was set ablaze, troops shouting war cries circled it and cast trophies taken from their slain opponents into the fire. They poured the blood of animals on the flames, and, when the fires were quenched, washed the bones in wine and placed them in urns. Cremation became such a status symbol in Rome that constructing and renting space in columbariums (vaults or similar structures with niches in the walls to receive the ashes of the dead) became a profitable business. By about 100 CE, however, cremations in the Roman Empire were stopped, perhaps because of the spread of CHRISTIANITY. Although cremation was not explicitly prohibited among Christians, it was not encouraged because of the scarcity of wood, PAGAN associations attached to the practice, and concern that cremation might interfere with the promised RESURRECTION of the body and its reunion with the soul.

The ancient Scandinavians favored cremation, believing that it helped free the spirit from the flesh and also that it kept the dead from harming the living. Their practices paralleled the Greek and Roman epic cremations. After the Icelandic conversion to Christianity in 1000 CE, cremation was rare in western Europe until the 19th century, except in emergencies. During an outbreak of the Black Death in 1656, for example, the bodies of 60,000 victims were burned in Naples during a single week.

In HINDUISM in India, cremation is the preferred form of disposing of the dead. The placing of the body into fire is regarded as a kind of final sacrificial offering, and the burning of the body is often understood to begin the process of REINCARNATION: the soul is transported to the sky by the fire and smoke where it enters clouds, falls back to earth in the form of rain which in turn produces food and, in due course, is eaten and transformed into semen. The holy city of VARANASI (Benares) is especially known for its many cremation centers clustered along the banks of the sacred Gaṅgā (Ganges) River. In Tibet, cremation is usually reserved for the high lamas; in Laos it is for those who die

Cremation in Bali, Indonesia; bodies are hidden inside gilded papier-mâché cattle to confuse evil spirits

Ewing Krainin—Stockpile

“fortunately” (*i.e.*, of natural causes at the end of a peaceful and prosperous life).

Cremation in the modern manner is very different. Open fires are not used; instead, the body is placed in a chamber where intense heat transforms it in an hour or two to a few pounds of white, powdery ash that is disposed of in accordance with law and sentiment: scattered in a garden or some other preferred spot, placed in an urn and kept at home, or taken to a cemetery for burial in a small plot or placement in a columbarium.

Many Protestant churches have actively supported cremation; the Roman Catholic church has announced that it is not prohibited. Orthodox Jewish authorities, however, continue to declare it forbidden.

CRESCAS, HASDAI BEN ABRAHAM \ˈkres-kās\ (b. 1340, Barcelona?—d. 1410, Saragossa, Spain), Spanish philosopher, Talmudic scholar, and critic of the Aristotelian rationalist tradition in Jewish thought.

A merchant and Jewish communal leader in Barcelona (1367), Crescas became closely associated with the royal court of Aragon after the accession of John I (1387). Empowered to exercise over the Jewish community juridical and executive jurisdiction enumerated by Jewish law, he settled in Saragossa as the crown’s chief **RABBI**.

Crescas’ first known work is a chronicle of the massacres of **JEW**s (including his son) in Barcelona in 1391, written in the form of a letter to the Jewish community of Avignon (now in France). Motivated to reaffirm Jewish principles during severe persecution of the Jews in Spain, he wrote (1397–98) a treatise in “Refutation of the Principles of the Christians,” a critique of 10 principles of **CHRISTIANITY**.

Crescas’ closely reasoned critique of Aristotle and Jewish Aristotelian tradition, represented in particular by the 12th-century philosopher **MAIMONIDES**, is contained in his *Or Adonai* (“The Light of the Lord”), completed in 1410, in which he rejected traditional proofs for the existence of God, insisting that certainty in this matter rests only on the authority of the **BIBLE** in stating “Hear, O Israel: The Lord our God is one Lord” (Deuteronomy 6:4; *see* **SHEMA**).

CRIOBOLIUM \,krī-ō-ˈbō-lē-əm\ (from Greek: *krios*, “ram” and *ballō*, “I throw, strike”), in the ancient religion of Asia Minor, the sacrifice of a ram and the bathing of a devotee in its blood, in the cult of the Phrygian deities **ATTIS** and **Cybele**, the **GREAT MOTHER OF THE GODS**. The ceremony may have been instituted on the analogy of the **TAUROBOLIUM**, or bull sacrifice, which it probably resembled. When it was performed in conjunction with the **Taurobolium**, the altar was usually inscribed to both the Great Mother and **Attis**, whereas the inscription was to the Mother alone when only the **Taurobolium** was performed.

CRONUS \ˈkrō-nəs\, *also spelled* Cronos, or Kronos, in ancient **GREEK RELIGION**, male deity, probably not widely worshiped in historical times, but who was later identified with the Roman god **SATURN**. His functions were connected with agriculture; in Attica his festival celebrated the harvest. It influenced the Roman **Saturnalia**. In art he was depicted as an old man holding an implement, probably originally a sickle but interpreted as a *harpē*, or curved sword.

In Greek mythology Cronus was the son of **OURANUS** (Heaven) and **GAEA** (Earth) and the youngest of the 12 **TITANS**. On the advice of his mother he castrated his father with a *harpē*, thus separating heaven from earth. He now became the king of the Titans and took for his consort his sister **RHEA**; she bore by him **HESTIA**, **DEMETER**, **HERA**, **HADES**, and **POSEIDON**, all of whom he swallowed because his parents had warned that he would be overthrown by his own child. When **ZEUS** was born, however, **Rhea** hid him in Crete and tricked Cronus into swallowing a stone instead. Zeus grew up, forced Cronus to disgorge his brothers and sisters, waged war on Cronus, and was victorious. After his defeat, Cronus became, in different versions of his story, either a prisoner in Tartarus or king of the Golden Age.

CROSIER, *also spelled* crozier, *also called* pastoral staff, staff with a curved top that is a symbol of the Good Shepherd and is carried by **BISHOPS** of the **ROMAN CATHOLIC**, **ANGLICAN**, and some European **LUTHERAN** churches and by **ABBOTS** and **abbesses** as an insignia of their office. It is made of metal or carved wood and is often very ornate. It was first mentioned as a sign of a bishop’s ruling power in 633 at the fourth Council of Toledo and was gradually adopted throughout Christendom. Originally a staff with a cross, sphere, or tau cross on top, it acquired its present form by the 13th century.

Bishops of the Eastern churches carry the *baktēria* (*dikanikion*), a pastoral staff with either a tau cross or two serpents facing each other on top.

CROSS, the principal symbol of **CHRISTIANITY**, recalling the **CRUCIFIXION** of **JESUS CHRIST** and the redeeming benefits of his Passion and death.

There are four basic types of iconographic representations of the cross: the *crux quadrata*, or Greek cross, with four equal arms; the *crux immissa*, or Latin cross, whose base stem is longer than the other three arms; the *crux*

CROSS, STATIONS OF THE

commissa, in the form of the Greek letter tau (τ), sometimes called St. Anthony's cross; and *crux decussata*, named from the Roman *decussis*, or symbol of the number 10, also known as St. Andrew's cross. The many variations and ornamentations of processional, altar, and heraldic crosses, of carved and painted crosses in churches, graveyards, and elsewhere, are developments of these four types.

Cross forms were used as symbols long before the Christian era. Two pre-Christian cross forms have had some Christian usage. The ancient Egyptian hieroglyphic symbol of life—the ANKH, a tau cross surmounted by a loop and known as *crux ansata*—was extensively used on Coptic Christian monuments. The SWASTIKA, called *crux gammata*, composed of four Greek uppercase gammas (Γ), is marked on early Christian tombs as a veiled symbol of the cross.

Before the time of the emperor CONSTANTINE in the 4th century, Christians were cautious about portraying the cross lest it expose them to ridicule or danger. After Constantine converted to Christianity, he abolished crucifixion as a death penalty and promoted, as symbols of the faith, both the cross and the chi-rho monogram of the name of Christ. The symbols became immensely popular in Christian art and funerary monuments from c. 350.

For several centuries after Constantine, Christian devotion to the cross centered on the victory of Christ over the powers of evil and death, and realistic portrayal of his suffering was avoided. The earliest crucifixes (crosses containing a representation of Christ) depict Christ alive, with eyes open and arms extended. By the 9th century, however, artists began to stress the realistic aspects of Christ's suffering and death. Subsequently, Western portrayals of the Crucifixion exhibited an increasing finesse in the suggestion of pain and agony. Romanesque crucifixes often show a royal crown upon Christ's head, but later Gothic types replaced it with a crown of thorns. In the 20th century a new emphasis emerged in ROMAN CATHOLICISM, in which Christ on the cross is crowned and vested as a king and priest, and the marks of his suffering are much less prominent.

After the 16th-century Protestant REFORMATION, the Lutherans generally retained the ornamental and ceremonial use of the cross. The Reformed churches, however, resisted such use of the cross until the 20th century, when ornamental crosses on church buildings and on communion tables began to appear. *See also* TRUE CROSS; CRUCIFIXION.

CROSS, STATIONS OF THE, also called Way of the Cross, a series of 14 pictures or carvings portraying events in the Passion of JESUS CHRIST, from his condemnation by PONTIUS PILATE to his entombment.

The series of stations is as follows: (1) Jesus is condemned to death, (2) he is made to bear his cross, (3) he falls the first time, (4) he meets his mother, (5) Simon of Cyrene is made to bear the cross, (6) Veronica wipes Jesus' face, (7) he falls the second time, (8) the women of Jerusalem weep over Jesus, (9) he falls the third time, (10) he is stripped of his garments, (11) he is nailed to the cross, (12) he dies on the cross, (13) he is taken down from the cross, (14) he is placed in the sepulchre. The images are usually mounted on the inside walls of a church or chapel but may also be erected in such places as cemeteries, corridors of hospitals, and religious houses and on mountainsides.

The devotional exercise of visiting and praying in front of each of the 14 stations and meditating on the Passion of Christ stems from the practice of early Christian pilgrims who visited the scenes of the events in Jerusalem and walked the traditional route from the supposed location of

Good Friday procession stopping at the third station of the Way of the Cross in Jerusalem

David Harris

Pilate's house to Calvary. The origin of the devotion in its present form is not clear. The number of stations originally observed in Jerusalem was considerably smaller than 14. The FRANCISCANS long popularized the devotional practice.

CRUCIFIXION, an important method of capital punishment, particularly among the Persians, Seleucids, Jews, Carthaginians, and Romans from about the 6th century BCE to the 4th century CE. CONSTANTINE the Great, the first Christian emperor, abolished it in the Roman Empire in 337 CE, out of veneration for JESUS CHRIST, who tradition relates was a victim of crucifixion.

There were various methods of performing the execution. Usually, the condemned man, after being whipped, or "scourged," dragged the crossbeam of his cross to the place of punishment, where the upright shaft was already fixed in the ground. He was then bound fast with outstretched arms

to the crossbeam or nailed firmly to it through the wrists. The crossbeam was then raised against the upright shaft and made fast to it about 9 to 12 feet from the ground. Next, the feet were tightly bound or nailed to the upright shaft. A ledge inserted about halfway up the upright shaft gave some support to the body; evidence for a similar ledge for the feet is rare and late. Over the criminal's head was placed a notice stating his name and his crime. Death, by exhaustion or by heart failure, could be hastened by shattering the legs (*crurifragium*) with an iron club to bring on shock or asphyxiation. Crucifixion was most frequently used to punish political or religious agitators, pirates, slaves, or those who had no civil rights.

Crucifixion of Jesus. The account of Jesus Christ's Crucifixion in the Gospels begins with his scourging. The Roman soldiers then mocked him as the "King of the Jews" by clothing him in a purple robe and a crown of thorns and led him slowly to Mount Calvary, or GOLGOTHA. At the place of execution he was stripped and then nailed to the cross, at least nailed by his hands; and above him at the top of the cross was placed the condemnatory inscription stating his crime of professing to be King of the Jews. (The Gospels differ slightly in the wording but are in accordance that the inscription was in "Hebrew," or Aramaic, as well as Latin and Greek.) On the cross Jesus hung for three hours. The soldiers divided his garments and cast lots for his seamless robe; various onlookers taunted him. Crucified on either side of Jesus were two convicted thieves, whom the soldiers dispatched at eventide by breaking their legs. The soldiers found Jesus already dead; but, to be certain, one of them drove a spear into his side, from which poured blood and water. He was taken down before sunset (in deference to Jewish custom) and buried in a rock-hewn tomb.

Crucifixion in art. The representation of Christ on the cross has been an important subject of Western art since the early Middle Ages. Concerned primarily with symbolic affirmations of eternal life, and repelled by the ignominy of the punishment, the early Christians did not represent the Crucifixion realistically before the 5th century; instead, the event was symbolized first by a lamb and, after the official recognition of CHRISTIANITY by the Roman state in the early 4th century, by a jeweled cross. By the 6th century, however, representations of the Crucifixion became numerous as a result of current church efforts to combat a HERESY that Christ's nature was not dual—human and divine—but simply divine and therefore invulnerable. These early Crucifixions nevertheless showed Christ alive, with open eyes and no trace of suffering, victorious over death. In the 9th century, Byzantine art began to show a dead Christ, with closed eyes, reflecting current concern with the mystery of his death and the nature of the INCARNATION. This version was adopted in the West in the 13th century with an ever increasing emphasis on his suffering.

Parallel to this development in the representation of Christ himself was the growth of an increasingly complex ICONOGRAPHY involving other elements traditionally included in the scene. The Virgin MARY and St. JOHN THE APOSTLE are frequently the only other figures included in the composition. In various expanded versions of the theme, however, there are several other pairs of figures, both historical and symbolic, that traditionally appear to the right and left of the cross—e.g., the two thieves, one repentant, who were crucified with Christ; and small personifications of the sun and moon, which were eclipsed at the Crucifixion.

With the growth of devotional art at the end of the Middle Ages, depictions of the Crucifixion often portrayed the

scene with gruesome realism. Renaissance art restored a calm idealization to the scene, however, which was preserved, with a more overt expression of emotion, in the Baroque period. Like most of Christian religious art, the theme of the Crucifixion suffered a decline after the 17th century; some 20th-century artists, however, have created highly individual interpretations of the subject.

CRUSADES, military expeditions, beginning in the late 11th century, organized by Western Christians in response to centuries of Muslim wars of expansion. Their objectives were to check the spread of Islam, to retake control of the Holy Land, to conquer pagan areas, and to recapture formerly Christian territories. Participation in the Crusades were also seen as a means of redemption and expiation for sins.

Between 1095, when the First Crusade was launched by Pope URBAN II at the Council of Clermont, and 1291, when the Latin Christians were finally expelled from their kingdom in Syria, there were numerous expeditions to the Holy Land, to Spain, and even to the Baltic; the Crusades continued for several centuries after 1291, usually as military campaigns intended to halt or slow the advance of Muslim power or to conquer pagan areas. The Crusaders initially enjoyed success, founding a Christian state in Palestine and Syria, but the growth of Islamic states reversed those gains. By the 14th century the Ottoman Turks had established themselves in the Balkans, and they later penetrated deeper into Europe despite repeated efforts to repulse them. Crusades were called against heretics (the Albigensian Crusade, 1209–29) and rivals of the popes, and the Fourth Crusade (1202–04) was diverted against the Byzantine Empire. Crusading declined rapidly during the 16th century with the advent of the REFORMATION and the decline of papal authority.

The Crusades constitute a controversial chapter in the history of Christianity. Historians have also concentrated on the role the Crusades played in the expansion of medieval Europe and its institutions. In the latter half of the 18th century the notion of "crusading" emerged as a metaphor for zealous and demanding struggles to advance the good or to oppose perceived evil.

CÚ CHULAINN \kü-'kə-lən\, also called Cuchulain, Cuchulinn, or Cuchullin, in ancient Irish Gaelic literature, the central character of the ULSTER (Ulaid) CYCLE. He was the greatest of the warriors of the Red Branch, i.e., the warriors loyal to CONOR (CONCHOBAR MAC NESSA), who was reputedly king of the Ulaid. Born as Sétanta, the son of the god LUGUS (Lugh) of the Long Arm and Dechtire, he had great size and beauty and won distinction for his exploits while still a child. His prowess was increased by the gift of seven fingers on each hand, seven toes on each foot, and seven pupils in each eye. Favored by the gods, he performed superhuman labors. In times of rage he could become deformed and uncontrollable. *The Cattle Raid of Cooley* (*Táin Bó Cuailnge*) records his defense of Ulster at the age of 17 against the forces of MEDB (Maeve), queen of Connaught. According to legend, he was tricked by his enemies into an unfair fight and slain at the age of 27.

CULT, collective veneration or worship. In the West, cults are usually thought of as groups that have deviated from normative religions. Thus, the term cult has, in recent times, often been identified with new religions which are viewed as foreign, peculiar, or dangerous.

CULTURE HEROES, mythological figures who secure for humanity the various attributes of culture (acting either with or against the gods). The culture hero is often an animal or trickster figure, and such traditions are found in etiologic stories about how humans first learned to hunt, discovered tobacco, and so on (*see* TRICKSTER TALE).

CUPID \ˈkyü-pid\, ancient Roman god of love, identified with the Greek god EROS and the equivalent of AMOR in Latin poetry. Cupid was the son of MERCURY, the winged messenger of the gods, and VENUS, the goddess of love; he usually appeared as a winged infant carrying a bow and a quiver of arrows, whose wounds inspired love or passion in his victims. He sometimes wore armor like that of MARS, the god of war, perhaps to suggest ironic parallels between warfare and romance or to symbolize the invincibility of love.

CUPSTONE \ˈkəp-,stōn\, in prehistoric European religion, an altar stone, megalithic tomb, or isolated stone slab incised with small cup-like markings. They are found mainly in Scandinavia and northern and central Germany. Dating primarily to Neolithic times (from about 7000 BCE to approximately 2300 BCE), cupstones carved in the Early Paleolithic Period and at the beginning of historical times have also been found. Although most scholars consider the cupstones to be solar symbols, there is still disagreement on their origin and purpose.

CURIA, ROMAN \ˈkyür-ē-ə, ˈkür-\, *Latin* Curia Romana, the Vatican bureaus that assist the pope in the exercise of his primate jurisdiction over the ROMAN CATHOLIC church. The Curia was given its modern form by Pope Sixtus V late in the 16th century. Its work has been associated with the members of the Sacred College of CARDINALS, acting as a body or individually as administrators in the various bureaus. A reorganization, ordered by Pope Pius X, was incorporated into the *Code of Canon Law* (1917). Further steps toward reorganization were begun by Pope PAUL VI in the 1960s and completed by Pope JOHN PAUL II in 1988.

Responsibility for the coordination of curial activities belongs to the cardinal who, as secretary of state, directs both the Secretariat of State (or Papal Secretariat) and the Council for the Public Affairs of the Church. The sacred congregations of the Curia are concerned with administrative matters. The Sacred Congregation for the Doctrine of the Faith promotes theological orthodoxy and protects the rights of those accused of failure in this regard.

Other sacred congregations are those for the Oriental Churches, Bishops, the SACRAMENTS and Divine Worship, the Causes of Saints (concerned with procedures for BEATIFICATION and CANONIZATION and with the preservation of relics), the Clergy, Religious and Secular Institutes, Catholic

Cupid, statue in the Museo Archeologico Nazionale, Naples
Alinari—Art Resource

Education, and the Congregation for the Evangelization of Peoples.

The judicial branch of the Curia consists of three tribunals: the Apostolic Signatura (the highest judicial body), the Sacred Roman Rota (for judging ecclesiastical cases appealed to the Vatican, especially those concerning the nullity of marriage), and the Sacred Apostolic Penitentiary (for matters of conscience).

There are also offices and secretariats for Promoting Christian Unity, for Non-Christians, and for Non-Believers. Several commissions reflect papal concern for scholarship, such as the Pontifical Commission for Biblical Studies.

CYBELE: *see* GREAT MOTHER OF THE GODS.

CYCLOPS \ˈsī-,kläps\ (Greek: “Round-eyed”), in Greek legend, any of several one-eyed GIANTS to whom were ascribed a variety of histories and deeds. In Homer the Cyclopes were cannibals, living a rude pastoral life in a distant land (traditionally Sicily), and in the *Odyssey* ODYSSEUS escapes death by blinding the Cyclops POLYPHEMUS. In Hesiod the Cyclopes were three sons of OURANUS and GAEA—Arges, Brontes, and Steropes (Bright, Thunderer, Lightener)—who forged the thunderbolts of ZEUS. Later authors made them the workmen of HEPHAESTUS

and said that APOLLO killed them for making the thunderbolt that slew ASCLEPIUS.

The walls of several ancient cities (*e.g.*, Tiryns) of Mycenaean architecture were sometimes said to have been built by Cyclopes. Hence in archaeology the term cyclopean is applied to walling of which the stones are not squared.

CYPRIAN, SAINT \ˈsi-prē-ən\, *Latin in full* Thascius Caecilius Cyprianus \,si-prē-ˈā-nəs\ (b. c. 200 CE, Carthage—d. Sept. 14, 258, Carthage; Western and Eastern feast day September 16; Anglican feast day September 26), early Christian theologian and bishop of Carthage who led the Christians of North Africa during a period of persecution from Rome. He became the first bishop-martyr of Africa.

Cyprian was born of non-Christian parents and was converted to CHRISTIANITY about 246. Within two years he was elected BISHOP of Carthage and early in 250 was confronted by the Decian persecution. After he went into hiding, thousands of Christians apostatized (rejected their faith). When the persecution began to diminish, the confessors—*i.e.*, those who had stood firm for their faith—reconciled the lapsed on easy terms. Cyprian returned to Carthage and at a council of bishops in May 251 was able to regain his authority. The decision of the council was that, though no one should be totally excluded from penance, those who truly had sacrificed (the *sacrificati*) should be readmitted only on their deathbeds; others were to be readmitted after varying periods of penance.

Three important principles of church discipline were thus established. First, the right and power to remit DEADLY SINS, even that of APOSTASY, lay in the hands of the church; second, the final authority in disciplinary matters rested with the bishops in council; and, third, unworthy members among the laity must be accepted in the New Israel of Christianity just as in the Old Israel of JUDAISM.

By 252 Cyprian had defeated internal enemies who had set up a rival bishop in Carthage. In 251 Cyprian had supported Bishop Cornelius against his rival for the PAPACY, Novatian, and had written on his behalf the treatise *On the Unity of the Catholic Church*, which stressed the centrality of the see of Peter (Rome) as the source of the episcopacy. Cyprian, however, had implied no acceptance of Roman jurisdictional prerogatives. When in 254 two Spanish congregations appealed to him against a decision by Stephen to restore bishops who had lapsed during the persecution, he summoned a council to consider the case. The council decided that the congregations had not only a right but a duty to separate themselves from a cleric who had committed a deadly sin such as apostasy.

Within months there was an even more serious dispute with Rome. Supporters of the excommunicated Novatian had been asserting against Cyprian that no forgiveness for lapsed Christians was possible. With the recovery of Cyprian's prestige, however, their threat began to fade and many of those whom they had baptized desired admittance to the church. Thus Stephen confronted the problem of whether the Novatian BAPTISM had been valid and decided that all baptism in the name of the TRINITY was valid. Cyprian held three councils in 255 and 256. The last decided unanimously that there could be no baptism outside the church. Behind this clash over rites lay the more fundamental question concerning the nature of the church. Though Rome emphasized the church's universal and inevitably mixed character on earth, the North Africans stressed its integrity under all circumstances. Cyprian's theology was based on the central idea of the uniqueness of the church and of its unity—that unity being expressed through the consensus of bishops, all equally possessing the HOLY SPIRIT and sovereign in their own sees. The church consisted of the people united to their bishop, with no "bishop of bishops" in Rome to occupy a higher seat.

A complete breach between Rome and Carthage was averted by Stephen's death on Aug. 2, 257. Meanwhile, persecution had been renewed by Emperor Valerian (253–260). On Aug. 30, 257, Cyprian was summoned before the proconsul and assigned an enforced residence. The next year, he was brought back to Carthage and condemned to death.

CYRENE \sī-ˈrē-nē\, in Greek mythology, a NYMPH, daughter of Hypeus (king of the Lapiths) and Chlidanope (a NAIAD). One day Cyrene wrestled a lion that had attacked her father's flocks. APOLLO, who was watching, fell in love with her and carried her off from Mt. Pelion, in Thessaly, to Libya. There he founded the city of Cyrene and made her its queen. Cyrene was the mother by Apollo of ARISTAEUS and Idmon the seer and by ARES of Diomedes of Thrace.

CYRIL AND METHODIUS, SAINTS \ˈsir-əl...mə-ˈthō-dē-əs\ (respectively b. c. 827, Thessalonica, Macedonia—d. Feb. 14, 869, Rome; b. c. 825, Thessalonica—d. April 6, 884, Moravia; feast day for both, Western church February 14; Eastern church May 11), brothers who for christianizing the Danubian Slavs and for influencing the religious and cultural development of all Slavic peoples received the title

"the apostles of the Slavs." Both were outstanding scholars, theologians, and linguists. The Cyrillic alphabet, which was probably developed by their later followers, was named after Saint Cyril.

CYRIL OF ALEXANDRIA, SAINT \ˈsir-əl\ (b. c. 375—d. June 27, 444; Western feast day June 27; Eastern feast day June 9), Christian theologian and BISHOP active in the complex doctrinal struggles of the 5th century.

He succeeded his uncle Theophilus as bishop of the see of Alexandria in 412 and came in conflict with the civil administration over the zeal with which he championed orthodoxy. He closed the churches of the Novatians, a schismatic sect. He also was involved in the expulsion of Jews from Alexandria following their attacks upon Christians. Riots ensued, and Cyril, who if not directly responsible at least had done nothing to prevent them, was forced to acknowledge the authority of the civil government.

Cyril's conflict with NESTORIUS was doctrinal but also reflected the Egyptians' fear that Constantinople might come to dominate them. The religious argument involved the relation of the divine and human within JESUS CHRIST. Cyril emphasized the unity of the two in one Person, while Nestorius so emphasized their distinctness that he seemed to be splitting Christ into two Persons acting in concert. The conflict came to the fore over Cyril's insistence that the Virgin MARY be called THEOTOKOS (Greek: "God-bearer") to describe the union of the two natures in the INCARNATION. Nestorius refused to accept this, and their dispute was referred to a general council at Ephesus in 431.

Armed with a commission to represent Pope Celestine I as well as himself, Cyril convened the council and condemned Nestorius. He had not waited, however, for the arrival of certain bishops from the East, particularly from the see of Antioch. When they did reach EPHESUS, they reconvened the council and condemned Cyril. Papal recognition of Cyril's council was eventually obtained, however, and Nestorius was banished as a heretic. Even so, the dispute continued, and peace in the church was only restored in 433, when Cyril accepted a statement, representing a compromise with Antioch, that emphasized the distinctness of the two natures within the one Person of Christ.

CYRIL OF JERUSALEM, SAINT (b. c. 315, Jerusalem—d. 386?, Jerusalem; feast day March 18), BISHOP of Jerusalem and doctor of the church who fostered the development of the "holy city" as a PILGRIMAGE center for all Christendom.

A senior PRESBYTER when he succeeded Maximus as bishop (c. 350), Cyril was exiled about 357 and at two later times from his see by the ARIANS. Many years later at the COUNCIL OF CONSTANTINOPLE (381) there was evidence that he might have been suspected by the strictly orthodox for his associations with the HOMOIOUSIANS (moderate Arians), who had reinstated him as bishop at the Council of Seleucia (359). He retained his bishopric during the reign of Emperor Julian the Apostate (361–363).

Cyril's primary surviving work is a collection of 23 catechetical lectures (*Catecheses*) delivered to candidates for BAPTISM. The first 18, based on the Jerusalem baptismal creed, were given during LENT, and the concluding 5 instructed the newly baptized during the week after EASTER. Cyril's Eucharistic theology is an advance on that of earlier writers: He interprets the Lord's presence in the terms later echoed in the dogma of TRANSUBSTANTIATION and describes the rite in pronounced sacrificial language. Cyril was declared a doctor of the church in 1883.

DĀDŪ \ˈdā-,dū\ (b. 1544, Ahmadabad, Gujarat, India—d. c. 1603, Naraina, India), Hindu/Muslim saint who inspired the formation of a sect called the Dādū Panth.

A cotton carder by profession, Dādū became a religious wanderer and preacher, settling for periods of time at Sembhar, Amber, and finally at Naraina, all within range of Jaipur and Ajmer (Rajasthan state). Dādū rejected the authority of the VEDAS (earliest Hindu SCRIPTURES), CASTE distinctions, and all divisive, external forms of worship. Instead he concentrated on *japa* (repetition of the name of God) and such themes as the soul as bride of God. His followers have insisted on vegetarianism and abstention from alcohol, and there is a strong ascetic component of the Dādū Panth. Dādū's poetic aphorisms and devotional HYMNS, the vehicle of his teachings, were collected in a 5,000-verse anthology, *Bāṇī* ("Utterances"). They also appear along with selections from the other poet-saints (*sants*) KABĪR, NĀMDEV, Ravidās, and Haridās in a somewhat fluid verse anthology called *Pañcvāṇī* ("five [groups of] utterances"), which constitutes scripture for the Dādū Panth.

DAEDALA \ˈde-də-lə, ˈdē-,\, ancient festival of the Greek goddess HERA. The Daedala was celebrated on Mount Cithaeron. In the festival, a wooden image dressed as a bride was carried in procession, then burnt with sacrificed animals and a wooden sacrificial altar. A myth existed that ZEUS had won back the estranged Hera by arousing her jealousy with such an image. The Daedala involved a new "marriage" of the pair following reconciliation.

DAEDALUS \ˈde-də-ləs, ˈdē-\ (Greek: "skillfully made"), mythical Greek architect and sculptor who was said to have built, among other things, the Labyrinth for King MINOS of Crete. Daedalus fell out of favor with Minos and was imprisoned; he fashioned wings out of wax and feathers for himself and for his son ICARUS and escaped to Sicily. Icarus, however, flew too near the sun, and his wings melted; he fell into the sea and drowned. The island on which his body was washed ashore was later named Icaria.

The Greeks of the historic age attributed to Daedalus buildings and statues the origins of which were lost in the past. Later critics ascribed to him such innovations as representing humans in statues with their feet apart and their eyes open. A phase of early Greek art, Daedalic sculpture, is named for him.

DAGAN \ˈdā-gän\, also spelled Dagon, West Semitic god of crop fertility, worshiped extensively throughout the ancient Middle East. *Dagan* was the Hebrew and Ugaritic common noun for "grain," and the god Dagan was the mythical inventor of the plow. His cult is attested as early as about 2500 BCE, and, according to texts found at Ras Shamra (ancient UGARIT), he was the father of the god BAAL. Dagan had an important temple at Ras Shamra, and in Palestine, where he was particularly known as a god of the

Philistines, he had several sanctuaries, including those at Beth-dagon in Asher (Joshua 19:27), Gaza (Judges 16:23), and Ashdod (1 Samuel 5:2–7). At Ras Shamra, he was apparently second in importance only to EL, the supreme god, although his functions as a god of vegetation seem to have been transferred to Baal by about 1500 BCE.

DAGDA \ˈdæg-θə\, also called Eochaid Ol-lathair ("Eochaid All-Father"), or In Ruad Ro-fhessa ("The Red [or Mighty] One of Great Wisdom"), in Irish myth, one of the leaders of the god-race, the TUATHA DÉ DAN-ANN ("People of the Goddess Danu"). His name was explained by medieval Irish commentators as equivalent to *dag-día*, literally "good god," alluding to the many powers credited to him rather than to his moral character. The Dagda had an enormous appetite for both food and sex, which points to some connection in cult with the maintenance of fertility. He also possessed a cauldron that was never empty and had a huge club that had the power both to kill men and to restore them to life. The Dagda mated with the sinister war goddess MORRÍGAN and with the river goddess BOANN (Boyne). He was the father of the triple goddess BRIGIT and of the god of youth and beauty, Oenghus (also known as Mac ind Óg and in Gaul as MAPONOS).

DAHRĪYA \dāh-ˈrē-ə\, in ISLAM, the unbelievers who contend that the course of time (Arabic: *dahr*) is all that governs their existence. They were so called because of a reference to them in the QUR'AN, in which they are repudiated for saying, "There is no other than our present life; we die and we live and nothing but the course of time destroys us" (Qur'an 45:24).

The Dahrīya are portrayed in Islamic theological literature as naturalists and materialists who deny the existence of anything that cannot be perceived by the senses. In the 11th century AL-GHAZĀLĪ traced their origin to ancient Greek philosophy and distinguished them from the naturalists (*tabīyūn*) who speak of a creating deity while the Dahrīya recognize only natural laws. Others described them as believers in a supreme power but not in a soul or DEMONS and ANGELS.

In the popular imagination of devout Muslims, Dahrīya are opportunists who conduct their lives according to their selfish desires; in this devout view, the Dahrīya do not make a distinction between humans and inanimate objects and are devoid of compassion and human feelings.

DAIGAK GUKSA \ˈtā-ˈgäk-ˈkük-,sə\, also spelled Taegak Kuksa, secular name Ūich'ön \ʊ-ē-ˈchən\ (b. 1055, Korea—d. 1101, Korea), Korean Buddhist priest who founded the Ch'önt'ae sect of BUDDHISM.

A son of the Koryŏ king Munjong, Ūich'ön became a Buddhist monk at age 11. In 1084 he went to China to study and collect Buddhist literature. He returned to Korea with the doctrines of the Chinese T'ĪEN-T'AI (Korean Ch'önt'ae) sect of Buddhism. Ūich'ön became the chief

propagator of the sect in Korea; this sect attempted, with considerable popular success, to reconcile the conflicting doctrines of the two chief Buddhist sects in Korea, the Kyo, or Textual, School and the ZEN School. The Ch'önt'ae doctrines stimulated the reorganization of the Zen school into the CHOGYE school, and these three sects (Chogye, Textual, and Ch'önt'ae) henceforth became the three main divisions of Buddhism in Korea.

In Korea Üich'ön also applied himself to collecting, cataloging, and publishing Buddhist writings. He published some 4,750 books of Buddhist SCRIPTURES, including the second publication of the TRIPITAKA (a complete collection of Buddhist scriptures) in Korea and an authoritative catalogue of Buddhist sectarian writings.

DAJJĀL, AL- \ä-l-däj-'jal\ (Arabic: "The Deceiver"), in Islamic ESCHATOLOGY, the ANTICHRIST who will come forth before the end of time; after a reign of 40 days or 40 years, he will be destroyed by JESUS CHRIST or the MAHDI ("Divinely Guided One") or both, and the world will submit to God. Al-Dajjäl first appears in pseudoapocalyptic Christian literature and is reworked in HADITH ascribed to MUHAMMAD. There he is described as a plump, one-eyed man with a ruddy face and curling hair and the Arabic letters *k-f-r* ("unbelief") on his forehead. Al-Dajjäl will appear during a period of great tribulation; he will be followed by the Jews and will claim to be God in Jerusalem. He will work false miracles, and most people will be deceived. At this moment will occur the SECOND COMING of Christ.

Tradition expects al-Dajjäl to appear in the East, possibly Khoräsän. In the meantime, he is said to be somewhere in the East Indies, on an island from which the sounds of dancing and beautiful music emanate. An alternate version states that al-Dajjäl is bound to a rock on an island in the sea and is fed by DEMONS.

DAKHMA \däk-mä\ (Avestan: "tower of silence"), PARSİ funerary tower erected on a hill for the disposal of the dead according to the ZOROASTRIAN rite. Such towers are about 25 feet high, built of brick or stone, and contain gratings on which the corpses are exposed. After the bones have been picked clean by vultures, they fall into a pit below, thereby fulfilling the injunction that a corpse must not suffer contact with either fire or earth.

DALAI LAMA \dä-lä-'lä-mə, 'dä-lä-\, head of the dominant DGE-LUGS-PA (Yellow Hat) order of TIBETAN BUDDHISTS and,

Daedalus and Icarus, antique bas-relief; in the Villa Albani, Rome

Alinari—Art Resource

until 1959, both spiritual and temporal ruler of Tibet.

The first of the line was Dge-'dun-grub-pa (1391–1475), founder of Tashilhunpo monastery of central Tibet. In accordance with the belief in reincarnate LAMAS which began to develop in the 14th century, his successors were conceived as his rebirths and came to be regarded as physical manifestations of the AVALOKITESVARA, the BODHISATTVA of compassion.

The second head of the order, Dge-'dun-rgya-mtsho (1475–1542), became the head abbot of the 'Bras-pungs (Drepung) monastery on the outskirts of Lhasa, which thenceforward was the principal seat of the Dalai Lama. His successor, Bsod-nams-rgya-mtsho (1543–88), while on a visit to the Mongol chief Altan Khan, received from that ruler the honorific title *ta-le* (Anglicized as "dalai"), the Mongolian equivalent of the Tibetan *rgya-mtsho*, which means "ocean" and presumably suggests breadth and depth of wisdom. The title was subsequently applied posthumously to the abbot's two predecessors. The Tibetans themselves call the Dalai

Lama Rgyal-ba Rin-po-che ("Great Precious Conqueror").

The fourth Dalai Lama, Yon-tan-rgya-mtsho (1589–1617), was a great-grandson of Altan Khan and the only non-Tibetan Dalai Lama. The next Dalai Lama, Ngag-dbang-rgya-mtsho (1617–82), is commonly called the Great Fifth. He established, with the military assistance of the Khoshut Mongols, the supremacy of the Dge-lugs-pa sect over rival orders for the temporal rule of Tibet. During his reign the majestic winter palace of the Dalai Lamas, the Potala, was built in Lhasa. The sixth Dalai Lama, Tshangs-dbyangs-rgya-mtsho (1683–1706) was deposed by the Mongols and died while being taken to China under military escort.

The seventh Dalai Lama, Bskal-bzang-rgya-mtsho (1708–57), experienced civil war and the establishment of Chinese Manchu suzerainty over Tibet; the eighth, 'Jam-dpal-rgya-mtsho (1758–1804), saw his country invaded by Gurkha troops from Nepal but defeated them with the aid of Chinese forces.

The next four Dalai Lamas all died young, and the country was ruled by regents. They were Lung-rtogs-rgya-mtsho (1806–15), Tshul-khrims-rgya-mtsho (1816–37), Mkhas-grub-rgya-mtsho (1838–56), and 'Phrin-las-rgya-mtsho (1856–75).

The 13th Dalai Lama, Thub-bstan-rgya-mtsho (1875–1933), ruled with great personal authority. The successful revolt within China against its ruling Manchu dynasty in 1912 gave the Tibetans the opportunity to dispel the dis-

The 14th Dalai Lama
Sean Gallup/Getty Images

united Chinese troops, and the Dalai Lama reigned as head of a sovereign state.

The 14th in the line of Dalai Lamas, Bstan-'dzin-rgya-mtsho, was born in 1935 in Tsinghai province, China, of Tibetan parentage. He was enthroned in 1940 but fled to exile in India with a group of 100,000 followers in 1959, the year of the Tibetan people's unsuccessful revolt against communist Chinese forces that had occupied the country since 1950. The Dalai Lama set up a government-in-exile in Dharmasala, India, in the Himalayan Mountains. In 1989

he was awarded the Nobel Prize for Peace in recognition of his nonviolent campaign to end Chinese domination of Tibet. He wrote a number of books on Tibetan Buddhism and an autobiography entitled *Freedom in Exile*.

DALIT \ˈdɑ-lit\ ("the Oppressed"), preferred term of self-identification for those at the bottom of the CASTE hierarchy in India, also known as "untouchables," "outcastes," or members of the scheduled castes. Because Dalit refers to all forms of social and economic oppression, its use can also be extended to other suppressed peoples of India: tribal groups, religious minorities, women, and the poor of all castes. Primarily, however, the term, was popularized in protest movements of the 1970s as a positive, assertive expression of pride in the UNTOUCHABLE heritage. It has largely replaced the name Harijan, or "Children of God," which was Mahatma GANDHI's suggested substitute for untouchables but has seemed patronizing to Dalits themselves.

DAMASCUS DOCUMENT \dɑ-'mas-kəs\, in full The Document of the New Covenant in the Land of Damascus, also called Zadokite Fragments, one of the most important extant works of the ancient community of Jews at QUMRĀN in Palestine. The community fled to the Judaean desert wilderness around Qumrān during Antiochus IV Epiphanes' persecution of Palestinian Jews from 175 to 164/163 BCE. Though a precise date for the composition of the *Damascus Document* has not been determined, it must have been written before the great Jewish revolt of 66–70 CE, which forced the Qumrān community to disband.

Two medieval manuscripts dating from the 10th and 12th centuries were discovered in 1896–97 in the store-room of the Ezra Synagogue in Cairo. They were published under the title *Fragments of a Zadokite Work* because members of the Qumrān community also called themselves Sons of Zadok (the Righteous One). The subsequent discovery of extensive Hebrew fragments from caves IV and VI at Qumrān confirmed that the document was one of the major doctrinal and administrative codes of the sect.

The *Damascus Document* consists of two major sections. The "exhortation" sets forth the sect's religious teaching, emphasizing fidelity to God's COVENANT with Israel and strict observance of the SABBATH and other holy days.

It also introduces the sect's enigmatic leader, the Teacher of Righteousness, whom scholars have not been able to identify. Opposed by the Wicked Priest (possibly either of two HIGH PRIESTS of the Hasmonean dynasty in Jerusalem: Jonathan, 152–143/142 BCE, or Alexander Jannaeus, 103–76 BCE), the Teacher of Righteousness was persecuted and exiled. The sect believed that a messianic age would commence 40 years after the death of the Teacher. The second section contains a list of statutes dealing with vows and ritual purity, guidelines for community assemblies, the selection of judges, and the duties of the Guardian, who controlled the admission and instruction of new members.

DAMU \ˈdä-,mü\, in MESOPOTAMIAN RELIGION, Sumerian deity, city god of Girsu on the Euphrates River near Ur in the southern orchards region. Damu, son of Enki (Akkadian: EA), was a vegetation god, especially of the vernal flowing of the sap of trees and plants. His name means "the child," and his cult—apparently celebrated primarily by women—centered on the lamentation and search for Damu, who had lain under the bark of his nurse, the cedar tree, and had disappeared. The search ended when he reappeared out of the river.

The cult of Damu influenced and later blended with the similar cult of DUMUZI the Shepherd, a Sumerian deity worshiped by the central grasslands people. A different deity called Damu was a goddess of healing and the daughter of Nininsina of Isin.

DAN \ˈdan\, one of the 12 tribes of Israel that in biblical times constituted the people of ISRAEL. The tribe was named after the first of two sons born to JACOB (also called Israel) and Bilhah, the maidservant of Jacob's second wife, Rachel (Genesis 30:5–6). Nine of the other 11 tribes were also named after sons of Jacob, while 2 bear the names of Jacob's grandsons, children of JOSEPH (Joshua 16:4).

After the death of MOSES, the Israelites were led into the promised land by JOSHUA, who divided the territory among the 12 tribes (Joshua 13–19). The portion assigned to the tribe of Dan was a region west of Jerusalem (Joshua 19:40–48). At least part of the tribe later moved to the extreme northeast and took the city of Laish, renaming it Dan (Genesis 14:14; Joshua 19:47; Judges 18). As the northernmost Israelite city, it became a point of reference in the familiar phrase "from Dan to Beersheba."

The great hero of the Danites was SAMSON, who warred against the Philistine invaders until his betrayal by DELILAH (Judges 13–16). Dan was one of the TEN LOST TRIBES OF ISRAEL, which disappeared from history after the Assyrian conquest of Israel in 721 BCE (2 Kings 17:5–6; 18:9–12).

DANA \ˈdä-nə\, in MAHĀYĀNA ("Greater Vehicle") BUDDHISM, one of the six virtues (PĀRAMITĀS), *dana* being the virtue of generosity (*dana-pāramitā*).

DANAË \ˈdä-nə-,ē\, in Greek legend, daughter of Acrisius, king of Argos. Her father, having been warned by an oracle that she would bear a son by whom he would be slain, confined Danaë in a brass tower. But ZEUS descended to her in a shower of gold, and she gave birth to PERSEUS, whereupon Acrisius placed her and her infant in a wooden box and threw them into the sea. They were finally driven ashore on the island of Seriphus, where they were picked up by a fisherman named Dictys. His brother Polydectes, who was king of the island, fell in love with Danaë and married her. According to another story, Perseus, on his return with the

head of MEDUSA, finding his mother persecuted by Polydectes, turned him into stone and took Danaë back with him to Argos. Latin legend represented her as landing on the coast of Latium and marrying Pylum or Picumnus, from whom TURNUS, king of the Rutulians, was descended. Danaë formed the subject of tragedies by Aeschylus, Sophocles, Euripides, Livius Andronicus, and Naevius. She personifies the earth suffering from drought, on which the fertilizing rain descends from heaven.

DANAUS \ˈdɑ-nā-əs\, in Greek mythology, son of Belus, king of Egypt, and twin brother of Aegyptus. Driven out of Egypt by his brother, he fled with his 50 daughters (the Danaïds) to Argos, where he became king. Soon thereafter the 50 sons of Aegyptus arrived in Argos, and Danaus was forced to consent to their marriage with his daughters. Danaus, however, commanded each daughter to slay her husband on the marriage night. They all obeyed except Hypermestra, who spared Lynceus. Being unable to find suitors for the other daughters, Danaus offered them in marriage to the youths of the district. (According to another story, Lynceus slew Danaus and his daughters and seized the throne of Argos.) In punishment for their crime the Danaïds were condemned to the endless task of filling with water a vessel that had no bottom.

DAN FODIO, USUMAN \dän-fō-ˈdē-ō\, *Usuman also spelled* Uthman, or Usman, Arabic ʿUthmān ibn Fūdī \ūth-ˈmān-i-bən-fū-ˈdē\ (b. December 1754, Maratta, Gobir, Hausaland [now in Nigeria]—d. 1817, Sokoto, Fulani empire) Fulani mystic, philosopher, and revolutionary reformer who created a new Muslim state, the Fulani empire, in what is now northern Nigeria.

Usuman's father, Muhammad Fodiye, was a scholar from the Toronkawa clan, which had emigrated from Futa-Toro in Senegal about the 15th century. While still young, Usuman moved south with his family to Degel, where he studied the QUR'AN with his father. Subsequently he moved on to other scholar relatives, traveling from teacher to teacher and reading extensively in the Islamic sciences. One powerful intellectual and religious influence at this time was his teacher in the southern Saharan city of Agadez, Jibrīl ibn ʿUmar, a radical figure whom Usuman both respected and criticized and by whom he was admitted to the Qādirī and other SUFI orders.

About 1774–75 Usuman began his active life as a teacher, and for the next 12 years he combined study with peripatetic teaching and preaching in Kebbi and Gobir, followed by a further five years in Zamfara. During this latter period he visited Bawa, the SULTAN of Gobir, from whom he won important concessions for the local Muslim community (including his own freedom to propagate ISLAM); he also appears to have taught the future sultan Yunfa.

Throughout the 1780s and '90s Usuman's reputation increased, as did the size and importance of the community that looked to him for religious and political leadership. Particularly closely associated with him were his younger brother, Abdullahi, who was one of his first pupils, and his son, Muhammad Bello, both distinguished teachers and writers. Significant support appears to have come from the Hausa peasantry, whose economic and social grievances and experience of oppression under the existing dynasties stimulated millenarian hopes and led them to identify him with the MAHDĪ (the Muslim messianic deliverer). Although he rejected this identification, he did share and encourage their expectations.

During the 1790s a division developed between his substantial community and the Gobir ruling dynasty. About 1797–98 Sultan Nafata issued a proclamation forbidding any but the SHAYKH—as Usuman had come to be called—to preach, forbidding the conversion of sons from the religion of their fathers, and proscribing the use of turbans and veils. In 1802 Yunfa succeeded Nafata as sultan, but he did not improve the status of Usuman's community. In February 1804 the Shaykh carried out a HIJRA ("migration") to Gudu, 30 miles to the northwest, like the prophet Muhammad, whose biography he frequently noted as having close parallels with his own. There he was elected IMAM (leader), and the new caliphate was formally established.

During the next five years the Shaykh's primary interests were the conduct of the JIHAD ("holy war") and the organization of the caliphate. He did not himself take part in military expeditions, but he appointed commanders, encouraged the army, handled diplomatic questions, and wrote widely on problems relating to the jihad and its justification. On this his basic position was clear and rigorous: the sultan of Gobir had attacked the Muslims; therefore he was an unbeliever and as such must be fought; and anyone helping an unbeliever was also an unbeliever.

As regards the structure of the caliphate, the Shaykh attempted to establish an essentially simple, nonexploitative system. He limited the central bureaucracy to a loyal and honest vizier, judges, a chief of police, and a collector of taxes; and he left the local administration in the hands of governors (emirs) selected from the scholarly class for their learning, piety, integrity, and sense of justice.

By 1805–06 the Shaykh's caliphal authority was recognized by leaders of the Muslim communities in Katsina, Kano, Daura, and Zamfara. When Alkalawa, the Gobir capital, finally fell at the central assault in October 1808, the main military objectives of the jihad had been achieved.

Although the jihad had succeeded, Usuman believed the original objectives of the reforming movement had been largely forgotten. In 1809–10 Bello moved to Sokoto, making it his headquarters, and built a home for his father nearby at Sifawa, where he lived surrounded by 300 students. In 1812 the administration of the caliphate was reorganized, the Shaykh's two principal viziers, Abdullahi and Bello, taking responsibility for the western and eastern sectors, respectively. The Shaykh, though remaining formally CALIPH, returned to teaching and writing.

Usuman was the most important reforming leader of the western Sudan region in the early 19th century. His importance lies partly in the stimulus that he, as a *mujaddid*, or renewer of the faith, gave to Islam throughout the region and partly in his work as a teacher and intellectual. In the latter roles he was the focus of a network of students and the author of a large corpus of writings in Arabic and Fulani that covered most of the Islamic sciences and still enjoy wide circulation and influence. Lastly, Usuman's importance lies in his activities as founder of a *jamā'a*, or Islamic community, the Sokoto caliphate, which brought the Hausa states and neighboring territories under a central administration for the first time in history.

DANU \ˈthɑ-nū, ˈdɑ-\, also spelled Dana \ˈthɑ-nə, ˈdɑ-\, in CELTIC RELIGION the mother of the Gods. The Irish god-race was called the TUATHA DÉ DANANN or People of the Goddess Danu. Welsh texts also mention her as a mother of mythological figures. Danu is probably identical with Anu and should be seen in the context of several figures of Divine Mothers from the Celtic areas of the Continent.

DAPHNE

DAPHNE \ˈdɑf-nē\, in Greek mythology, the personification of the laurel (Greek *daphnē*), whose leaves, formed into garlands, were particularly associated with APOLLO. Traditionally, the special position of the laurel was connected with Apollo's love for Daphne, the beautiful daughter of a river god (probably Ladon) who lived in either Thessaly, the Peloponnese, or Syria. She rejected every lover, including Apollo. When the god pursued her, she prayed to the Earth or to her father to rescue her, whereupon she was transformed into a laurel. Daphne was also loved by Leucippus, who was killed because of Apollo's jealousy.

DAPHNEPHORIA \ˌdɑf-nē-ˈfɔr-ē-ə\, in GREEK RELIGION, festival held every ninth year at Thebes in Boeotia in honor of APOLLO Ismenius (after the Theban river called Ismenus) or Apollo Chalazius (god of hail). It consisted of a procession in which the chief figure was a boy who was of good family and whose parents were still alive. In front of the boy

Apollo and Daphne, sculpture by Gian Lorenzo Bernini, 1622–24; in the Borghese Gallery, Rome

Scala—Art Resource

walked one of his nearest relatives, carrying an olive branch hung with laurel (*daphnē*) flowers and bronze balls and twined round with ribbons. Then followed the *Daphnēphoros* ("Laurel Bearer"), i.e., the young priest of Apollo Ismenius. The *Daphnēphoros* also dedicated a bronze tripod in the temple of Apollo. According to tradition, the festival originated because of a vision sent to the Theban general Polematas, in which the Thebans were promised victory in their war against the Aeolians and the Pelasgians if the Daphnephoria were instituted.

DAPHNIS \ˈdɑf-nis\, legendary hero of the shepherds of Sicily and the reputed inventor of bucolic poetry. According to tradition, Daphnis was the son of HERMES and a Sicilian NYMPH and was found by shepherds in a grove of laurels (Greek *daphnē*). He later won the affection of a nymph, but, upon his proving unfaithful to her, she blinded him. Daphnis tried to console himself by playing the flute and singing shepherds' songs, but he soon died or was taken up to heaven by Hermes. According to Theocritus (fl. 270 BCE), Daphnis offended EROS and APHRODITE and, in return, was smitten with unrequited love; he died, although Aphrodite, moved by compassion, attempted to save him.

DĀR AL-ISLAM \dār-əl-is-'lam\, in Islamic political ideology, the region in which ISLAM has ascendancy; traditionally it has been matched with the Dār al-Ḥarb (abode of war), the region into which Islam could and should expand. This mental division of the world into two regions persisted even after Muslim political expansion had ended. See JIHAD.

DARAZĪ, MUHAMMAD IBN ISMĀ'ĪL AL- \əl-dar-a-'zē\ (b. Bukhara, Turkistan [now in Uzbekistan]—d. 1019/20), propagandist for the Ismā'īlī sect of ISLAM and the man for whom the DRUZE religion is named.

Al-Darazī was probably at least part-Turkish and is believed to have traveled from Bukhara to Egypt as an Ismā'īlī preacher in 1017/18. He gained favor with the Fāṭimid caliph AL-ḤĀKIM and, together with ḤAMZA IBN 'ALĪ and others, created a theology that was based upon the caliph's divinity. According to al-Darazī, the divine spirit that had been invested in ADAM had been transmitted through successive IMAMS to al-Ḥākim. When al-Darazī publicly proclaimed the doctrine in the principal mosque of Cairo, rioting ensued that probably led to his death. The Druze religion was named for al-Darazī because his preaching gave him preeminence among the founders, even though Ḥamza had led in organizing the movement.

DARBĀR SĀHIB: see GOLDEN TEMPLE.

DARDANUS \ˈdār-də-nəs\, in Greek legend, the son of ZEUS and the Pleiad Electra, mythical founder of Dardania on the Hellespont. He was the ancestor of the Dardanians of the Troad. According to tradition, having slain his brother Iasion, or Iasion, Dardanus fled from Arcadia across the sea to Samothrace. When that island was visited by a flood, he crossed over to the Troad, a region surrounding Troy in Asia Minor. Being hospitably received by Teucer (ruler of Phrygia), he married Teucer's daughter Bateia and became the founder of the royal house of Troy.

DARQĀWĀ \dār-'kā-wə\, brotherhood of SUFIS (Muslim mystics) founded in Morocco at the end of the 18th century by Mawlāy al-'Arbī al-Darqāwī (c. 1737–1823). The order is an offshoot of the Shadhīlī Sufis; its doctrine is orthodox,

emphasizing devotion to, contemplation of, and union with God, attainable by frequent solitary prayer or in communal sessions where phrase repetition, poetry, song, and dance induce a state of ECSTASY. Members of the Darqāwā generally refuse to participate in public life. The order is found in Morocco, Algeria, Egypt, Lebanon, and Sri Lanka.

DARŚAN \ˈdər-shən, ˈdär-ə, also spelled (*Hindi*) darshan, *Sanskrit* darśana (“viewing”), in Hindu worship, the beholding of a deity (especially in image form), revered person, or sacred object. The experience is often conceived to be intrinsically reciprocal and results in a blessing of the human viewer. The RATHAYĀTRĀS (car festivals), in which images of gods are taken in PROCESSION through the streets, enable even those who in former days were not allowed to enter the temple to have *darśan* of the deity. *Darśan* is also imparted by GURUS to their followers, by rulers to their subjects, and by objects of veneration such as PILGRIMAGE shrines to their visitors.

In Indian philosophy the term designates a point of view, the distinctive way in which each philosophical system looks at things, including its particular exposition of sacred SCRIPTURES and authoritative knowledge and its understanding of what constitutes proof. The orthodox account is that there are six such *darśans*: *śankhya* and YOGA; NYĀYA and VAISĒSIKA; and MĪMĀMSĀ and VEDĀNTA. Other *darśans* are also considered important, especially those of BUDDHISM and JAINISM.

DASAM GRANTH \ˈdā-səm-ˈgrən-tə, -ˈgrənt\ (shortened version of Dasven Pātśah kā Granth; Punjabi: “Book of the Tenth Emperor”—*i.e.*, the tenth GURŪ, Gobind Singh), SIKH scriptural text that contains devotional hymns, biographical compositions associated with the life of Gurū GOBIND SINGH, a collection of legendary narratives, and miscellaneous fables. These are written in Braj Bhāṣā, Persian, Hindi, and Punjabi. The orthodox Sikh view attributes the entire corpus to Gurū Gobind Singh, but many scholars argue that a large part of the *Dasam Granth* was produced not by the Gurū himself but by others associated with his court at Anandpur.

The earliest extant manuscript of the *Dasam Granth* is dated 1713, and minor textual variations are found in the early manuscripts. An attempt was made to standardize the text in the 1890s, resulting eventually in the current print edition, a two-volume work containing 1,428 pages. The text is held in high reverence by Sikhs, owing especially to its connection with the tenth Gurū, the second most important figure in the tradition after Gurū NANAK. With the exception of a small set of compositions that have made their way into Sikh liturgy, however, Sikhs generally know little about the remaining contents. The better-known compositions in the *Dasam Granth* include the *Jāp Sāhib*, a meditation on the nature of God using his different names, the *Akāl Ustat*, a hymn in praise of God, the *Chaupai*, a hymn of supplication, and the *Zafar Nāmā*, Gurū Gobind Singh’s letter of defiance addressed to the Mughal emperor Aurangzeb (reigned 1658–1707).

DASSEHRA \dā-ˈshā-rā, -ˈsā-, also spelled Dussehra, or Daśarā, series of Hindu festivals, involving PROCESSIONS, feasts, and dramatic recreations, celebrated at the time of the annual DURGĀ-PŪJĀ (“Worship of the Goddess”), from the first to the tenth days of the period of the waxing moon in the month of Āśvina (September/October), just at the end of the rainy season. The holiday centers around two

mythological events, both having to do with the struggle of GOOD AND EVIL.

The first nine days of Dassehra, a period of the festival also known as Navarātri-pūjā (“Nine-nights Worship”), are connected to the defeat of the buffalo-demon, Mahiṣa, by the great warrior goddess DURGĀ. Images of the goddess, depicted with ten arms in the act of killing the buffalo-demon, are ritually constructed, adorned, worshiped, paraded about, and finally disposed of in a river or other body of water. The sacrificing of goats or buffalo sometimes also accompanies this part of the festival.

The tenth day of the festival celebrates the defeat of the RĀVAṆA (a DEMON) at the hands of the god RĀMA and his army of monkeys. Figures of the two antagonists are erected on bamboo sticks, and the image of the demon is filled with firecrackers. At nightfall, the demon is exploded; the forces of good, embodied in Rāma, once more prevail.

DAVID \ˈdā-vid\ (b. Bethlehem, Judah—d. c. 962 BCE, Jerusalem), second of the Israelite kings, reigning c. 1000 to c. 962 BCE, who established a united kingdom over all ISRAEL. In Jewish tradition he became the ideal king around whose figure and reign clustered messianic expectations of the people of Israel and the later NEW TESTAMENT writers. He was also held in high esteem in the Islamic tradition.

An aide at the court of SAUL, Israel’s first king, David was forced by Saul’s jealousy to flee into southern JUDAH and Philistia, on the coastal plain of Palestine. He became the leader of other outlaws and refugees (1 Samuel 22:2; 27:1–12) and eventually had himself “invited” to become the successor to Saul as king (2 Samuel 2:1–4a; 5:1–5). David proceeded to conquer Jerusalem, held by the Jebusites, which he made the capital of the new united kingdom (2 Samuel 5:6–10; 1 Chronicles 11:4–9). He defeated the Philistines and annexed the coastal region and later became the overlord of many small kingdoms bordering on Israel, including Edom, Moab, and Ammon. David’s reign lasted for about 40 years (2 Samuel 5:4; 1 Chronicles 29:27).

David’s great success as a warrior was marred by family dissensions and political revolts. His third son, ABSALOM, murdered the eldest son, Amnon, and launched a rebellion that sent his father fleeing across the Jordan (2 Samuel 13:1–17:29). Eventually, Absalom’s forces were defeated and he was killed (2 Samuel 18:15). Later David put down another revolt, this time by Sheba, the son of Bichri, of the tribe of BENJAMIN.

David was Israel’s first successful king and was the founder of an enduring dynasty. He sought to win power over all Israel by establishing the city of Jerusalem as the center both of Israel’s political power and of its worship (2 Samuel 6–7; 1 Chronicles 13; 16–17). On the political level this effort was not enough, for the kingdom was divided after the death of SOLOMON (1 Kings 11:26ff.; 2 Chronicles 10ff.); but on the religious and cultic level it did eventually succeed. Israel’s God was named YAHWEH. David made this name the supreme name for deity in Jerusalem (previously perhaps “Salem”), to indicate his conquest of the city (2 Samuel 7:18–29; 1 Chronicles 17:16–27). All former names and titles of deity became attributes or titles of Yahweh—for example, EL ‘Elyon (God Most High). While the Israelite name for God displaced all others, the substance of the worship remained similar; Yahweh was enthroned on ZION, and his king sat at his right hand as his regent.

In Israel’s religious tradition the royal line, or “house,” of David became a primary symbol of the bond between God and the nation; the king was the mediator between the dei-

ty and his people. The English word MESSIAH is derived from *hameshiach* ("the anointed one"), the title of the kings of the line of David (2 Samuel 1:14,16; 2:4; 5:3; 1 Kings 1:39). Thus, in later times of disaster, Israel began to wait for a new mediator of the power of God who would redeem the people and its land. By designating JESUS CHRIST as the son of David, CHRISTIANITY dramatized its conviction that this hope had been fulfilled.

DAVID, STAR OF, Hebrew Magen David ("Shield of David"), Magen *also spelled* Mogen, Jewish symbol composed of two overlaid equilateral triangles that form a six-pointed star. It appears on SYNAGOGUES, Jewish tombstones, and the flag of the State of Israel. The symbol—which historically was not limited to use by Jews—originated in antiquity, when it served as a magical sign or as a decoration. In the Middle Ages the Star of David appeared with greater frequency among Jews but did not assume any special religious significance; it is found as well on some medieval cathedrals. The term *Magen David*, which in Jewish liturgy signifies God as the protector (shield) of David, gained currency among medieval Jewish mystics, who attached magical powers to King DAVID'S shield just as earlier (non-Jewish) magical traditions had referred to the five-pointed star as the "seal of SOLOMON." Qabbalists popularized the use of the symbol as a protection against evil spirits. The Jewish community of Prague was the first to use the Star of David as its official symbol, and from the 17th century on the six-pointed star became the official seal of many Jewish communities and a general sign of JUDAISM, though it has no biblical or Talmudic authority. The star was almost universally adopted by Jews in the 19th-century as an emblem of Judaism. The yellow badge that Jews were forced to wear in Nazi-occupied Europe invested the Star of David with a symbolism indicating martyrdom and heroism.

DAYANAND SARASVATI \də-'yā-nən-də,-sə-rəs-'və-tē\, *also spelled* Dayanand Saraswati, or Dayānanda Sarasvatī, *original name* Mūla Śāṅkara (b. 1824, Tankāra, Gujarat, India—d. Oct. 30, 1883, Ajmer, Rajasthan), Hindu ascetic and social reformer who was the founder (1875) of the ARYA SAMAJ, a Hindu reform movement advocating a return to the temporal and spiritual authority of the VEDAS.

Dayanand received the education appropriate for a young Brahmin. At the age of 14 he accompanied his father on an all-night vigil at a SHIVA temple. While his father and some others fell asleep, mice, attracted by the offerings placed before the image of the deity, ran over the image, polluting it. The experience set off a profound revulsion in the young boy against what he considered to be senseless idol worship. His religious doubts were further intensified five years later by the death of a beloved uncle. In a search for a way to overcome the limits of mortality, he was directed first toward YOGA. Faced with the prospect of a marriage being arranged for him, he left home and joined the Sarasvatī branch of the Daśanāmi order of ascetics.

For the next 15 years (1845–60) he traveled throughout India in search of religious truth and finally became a disciple of Swami Birajanand, of Mathura. In 1863 Dayanand (the name taken by him at the time of his initiation as an ascetic) began preaching his vision of reinstating the purified VEDIC RELIGION that he considered to have existed in pre-Buddhist India.

Dayanand first attracted wide public attention for his views when he engaged in a public debate with orthodox Hindu scholars in Banaras (VARANASI) presided over by the

maharaja of Banaras, but he also became well known for his debates with Christian missionaries. The first meeting establishing the Arya Samaj (Society of ARYANS [Nobles]) was held in Bombay on April 10, 1875. In 1877, in Banaras, he published his best-known work *Satyārth Prakāś* ("The Light of Truth"). Dayanand's zeal to restore the purity of Vedic practice created a theoretical framework that allowed him to espouse many important social reforms in the name of tradition; for example, he opposed child marriage (SATI) and strictures on the remarriage of widows as un-Vedic. He opened Vedic study to members of all CASTES and to women as part of a broader educational program in which he founded many educational and charitable institutions. The Arya Samaj also contributed greatly to the reawakening of a spirit of Indian nationalism in pre-Independence days.

Dayanand died after vigorous public criticism of a princely ruler, under circumstances suggesting that he might have been poisoned by one of the maharaja's supporters.

DAZHBOG \ˈdāzh-bōg\, Russian pre-Christian deity. Dazhbog is mentioned in the *Kiev Chronicle* (*Povest vremennykh let*), a 12th- to 13th-century account of events and life in the Kievan state. The chronicle enumerates seven Russian pre-Christian divinities: PERUN, Volos, Khors, Dazhbog, STRIBOG, Simargla, and Mokosh. A Russian glossary to the 6th-century Byzantine writer John Malalas' *Chronographia* mentions a SVAROG, apparently the son of Dazhbog. Of all these figures only two, Perun and Svarog, are at all likely to have been common to all the Slavs.

DEADLY SIN, *also called* cardinal sin, any of the most serious class of SINS, usually numbering seven, dating to the early history of Christian MONASTICISM. A sin was classified as deadly not merely because it was a serious offense morally but because "it gives rise to others, especially in the manner of a final cause" or motivation (from the *Summa Theologica* of St. Thomas Aquinas). The traditional catalog is: (1) vainglory, or pride; (2) covetousness; (3) lust; (4) envy; (5) gluttony, which usually included drunkenness; (6) anger; and (7) sloth. The deadly sins were a popular theme in the morality plays and art of the Middle Ages.

DEAD SEA SCROLLS, several caches of ancient, mostly Hebrew, manuscripts found between 1947 and 1956 on the northwestern shore of the Dead Sea. These writings come from various sites and date from between 3rd century BCE and 2nd century CE. The term usually refers more specifically to manuscripts deposited in 11 caves in the vicinity of the ruins of QUMRĀN, which most scholars think was the home of a community to which the scrolls belonged. The relevant period of occupation of this site runs from c. 100 BCE to c. 68 CE, and the scrolls themselves nearly all date from 3rd to 1st century BCE. The 15,000 fragments (most of them tiny) represent the remains of between 800 to 900 original manuscripts. They are conventionally labeled by cave number and the first letter (or letters) of the Hebrew title—e.g., 1QM = Cave 1, Qumrān, Milhamah (the Hebrew for "war"); or 4QTest = Cave 4, Qumrān, Testimonia (i.e., a collection of proof-texts). Each manuscript has also been given an individual number.

The community at Qumrān has been identified with many Jewish sects of the time. Most scholars believe the community to have been ESSENES; some, however, believe them to have been a branch of SADDUCEES, or perhaps ZEALOTS. The group is believed to have fled, or been driven, to the Judean wilderness as a result of a dispute with the

Two columns of the Rule of the Community, from the Dead Sea Scrolls
By courtesy of the Palestine Archaeological Museum

priestly leaders in Jerusalem over the sacred calendar and matters of legal interpretation. At Qumrān this group not only preserved their beliefs but developed a sectarian worldview that rejected the rest of the Jewish people, espoused a highly dualistic view of the world (*i.e.*, sharply divided between GOOD AND EVIL, light and darkness), and looked for an imminent divine judgment of the wicked. They also cultivated a communal life of extreme ritual purity, necessitated by their rejection of the Temple cult. The history of this community may be glimpsed, though darkly, through the Scrolls. Calling itself the “Union,” it was apparently founded by a messianic figure called the “Teacher of Righteousness.” It may have been a splinter group from a wider movement. It offers a fascinating example of a Jewish messianic movement and a parallel to the early Christians. Other parallels between the two groups, such as certain teachings and a belief that SCRIPTURE foretold the history of their own times, have sometimes been thought to indicate a direct connection but can as easily be explained by the Jewish background common to both.

The importance of these texts, it has become clear, is that they represent a collection taken from a wider spectrum of Jewish belief and practice. A quarter of the texts are biblical manuscripts—to which can be added copies of works such as the books of Enoch, Jubilees, and Tobit, previously known and not thought to be sectarian (though in many cases it is difficult to be certain whether a particular text is sectarian or not). Thus, the scrolls tell about more than merely the sect that possessed them. Indeed, it has been argued that the Qumrān scrolls actually represent the contents of libraries from Jerusalem, hurriedly hidden shortly before the Roman siege of the city during the war of 66–73 and reflecting quite diverse Jewish origins. This is not an improbable explanation for the concealment of the scrolls, since the evidence connecting scrolls and the site of Qumrān is largely circumstantial, but the diversity of these scrolls is not as wide as this account would suggest. Clearly many scrolls do originate from outside the sect, and this realization makes the importance of the Scrolls to ancient JU-

DAISM even greater than if they were entirely sectarian.

The greatest interest remains with the sectarian writings, which can be classified as follows: (1) rules, or manuals, like the *Rule of the Community*, describing the doctrine, constitution, and regulations of the Union; and the War Scroll, which tells how the “children of light” finally conquer the “children of darkness”; (2) interpretations of biblical texts, such as commentaries on Isaiah, Habakkuk, Nahum, or Psalms, or groupings of texts by topic, such as the Florilegium or the MELCHIZEDEK Fragments—all of these typically relating scriptural passages to the sect and its times; (3) liturgical texts, including the *Songs of the Sabbath Sacrifice*, which focus on the angelic worship in the heavenly Temple (anticipating later Jewish mystical traditions), and the *Thanksgiving Hymns*, which express a powerful sense of human depravity redeemed through divine grace; (4) collections of laws, frequently dealing with cultic purity, such as the Halakic Letter, the DAMASCUS DOCUMENT, and the Temple Scroll; and (5) ethical tracts (*e.g.*, several wisdom works, and the *Song of the Sage*).

This unique collection of sectarian and non-sectarian writings is the most important archive for late Second-Temple Judaism known. This is because it reflects the beliefs and practices of Jewish groups during a highly volatile period of Judean history. By contrast, the NEW TESTAMENT literature was written by and for both diaspora Jews and non-Jews; and the rabbinic writings stem from a later period and quite different circumstances.

Above all else, the Scrolls show the remarkable flexibility and variety of Jewish thought and practice, destroying any notion of a basically uniform “Judaism” at this time. They show that the notion of cultic holiness and sacrifice could be contemplated without the Temple, that different liturgical calendars (implying different times for festivals and different priestly rotas at the Temple) existed at the same time; that the distinction between ISRAEL and the GENTILES could be displaced by a notion of two predestined groups of saved and damned individuals; that the worship of the celestial Temple could be witnessed and described (foreshadowing a tradition of Jewish MYSTICISM); and that good works could replace sacrifice, even before the destruction of the Temple. But they also show what may have been more widely shared features of Judaisms of the period: a belief in the imminent culmination of history, the advent of a messianic figure, and the absolute necessity of complete obedience to the Law of Moses (however interpreted).

DEATH AND THE AFTERLIFE, complex of beliefs concerning death and its aftermath within various religions. For a description of many rituals surrounding death and its aftermath, see FUNERARY CUSTOMS.

Concepts of life and death. Belief in an afterlife is an idea with an extremely long history; there are Paleolithic burials dating as early as 50,000 BCE, indicating that various ideas were held about death and the state of the dead. The provision of these graves with food, ornaments, and tools implies a general belief that the dead continued to exist with the same needs as in this life. The fact that in Paleolithic burials the skeleton has often been found lying on

Monument to the Dead, sculpture by Bartholomé, 1895; in the Père-Lachaise Cemetery, Paris

Giraudon—Art Resource

its side in a crouched position has sometimes been interpreted as evidence of belief in rebirth, since the posture of the corpse imitates the position of the child in the womb. The data, however, are sparse and difficult to interpret.

That death was sometimes regarded as transforming those who experienced it into a state of being different from—and sometimes even hostile to—that of those living in this world is evident in later mortuary rites and customs. Indeed, the proper performance of funerary rites was deemed essential by many peoples to enable the dead to depart to the place and condition in which they properly belonged. Failure to expedite their departure could have dangerous consequences. Many ancient Mesopotamian divinatory texts reveal a belief that disease and other misfortunes could be caused by dead persons deprived of proper burial. The idea that the dead had to cross some barrier that divided the land of the living from that of the dead also occurs in many religions: The Greeks and Romans believed that the dead were ferried across a river, the Acheron or STYX, by a boatman called CHARON, for whose payment a coin was placed in the mouth of the deceased; in ZOROASTRIANISM the dead cross the Bridge of the Requirer (Činvato Paratu). Bridges also figure in Muslim and Scandinavian eschatologies (speculations concerning the end of the world and the afterlife)—the Širāt bridge and the bridge over the Gjöll River (Gjallarbrú)—and Christian folklore included a Brig o' Dread, or Brig o' Death.

It is significant that in few religions has death been regarded as a natural event. Instead, it has generally been viewed as resulting from the attack of some supernatural power or god. In Etruscan sepulchral art a fearsome being called Charun strikes the deathblow, and medieval Christian art depicted the skeletal figure of Death with a dart. In many mythologies death is represented as resulting from some primordial mischance. According to Christian theology, death entered the world through the ORIGINAL SIN committed by ADAM AND EVE, the progenitors of humankind.

Human substance and nature. The conception of death in most religions is closely related to the particular view held about the constitution of human nature. Two major traditions have provided the basic assumptions of religious eschatologies and have often found expression in mortuary rituals and funerary practice. In the integralistic view of human nature, the individual person is a psychophysical organism of which both the material and the nonmaterial constituents are essential. In this view death is the fatal shattering of personal existence. Although some element of the living person survives this disintegration, it has not been regarded as conserving the essential self or personality.

The consequences of this view can be seen in the beliefs concerning an afterlife of many religions. The ancient Mesopotamians and Greeks thought that after death only a shadowy wraith descended to the realm of

the dead, where it existed miserably in dust and darkness. Similarly, in ancient JUDAISM the existence of the dead in *sheol* (the UNDERWORLD) was merely the shadow or echo of living. For most of the biblical writers this existence was without experience, either of God or of anything else.

Such a conception of humanity, in turn, has meant that, where the possibility of an effective afterlife has been envisaged, the idea of a reconstitution or RESURRECTION of the body has also often been involved; for it has been deemed essential to restore the psychophysical complex of personality. In ancient Egypt, provision was made for the eventual reconstitution in an elaborate mortuary ritual which included the mummification of the corpse to preserve it from disintegration. The early Jewish notion of *sheol*, along with the belief in the possibility of occasional miraculous restorations of dead individuals to life, provided a foothold for the later development of belief in the resurrection of the dead body at some time in the future.

The alternative view of human nature may be termed dualistic. It conceives of the individual person as comprising an inner, nonmaterial self or soul and a physical body. In many religions that expound this view of human nature, the soul is regarded as being essentially immortal and existing before the body was formed. At death the soul leaves the body, and its subsequent fate is determined by the manner in which it has fulfilled what the particular religion concerned has prescribed for the achievement of salvation. For example, Jewish apocalyptic literature developed a sharper distinction between body and soul than is evident in the biblical materials, and the latter was conceived of as existing separately in a disembodied state after death. Although at this point the doctrine of the resurrection of the body was not put aside, the shades of *sheol* came to be thought of as souls, and real personal survival—with continuity between life on earth and in *sheol*—was posited.

In some religions the soul's incarnation in the body is interpreted as a penalty incurred for some SIN or error com-

mitted in primordial times or during the course of a previous incarnation. This view was taught in such mystical cults and philosophies of the Greco-Roman world as Orphism (an ancient Greek religious movement), Gnosticism (a system of thought that viewed spirit as good and matter as evil), Hermeticism (a Hellenistic esoteric occult movement), and Manichaeism (a system of thought founded by Mani in ancient Iran). It finds its most notable modern expression in Hinduism and, in a subtly qualified sense, in Buddhism. Within these systems the idea of rebirth or Reincarnation has inspired a cyclical view of time and produced esoteric explanations of how the soul becomes reborn into a physical body, whether human or animal.

Geography of the afterlife. The practice of burial may originally have prompted the idea that the dead lived beneath the ground. The mortuary cults of many peoples indicate that the dead were imagined as actually residing in their tombs and able to receive the offerings of food and drink made to them; e.g., some graves in ancient Crete and Ugarit (Ras Shamra) were equipped with pottery conduits from the surface for libations. Often, however, the grave has been thought of as an entrance to a vast, subterranean abode of the dead. In some religions this underworld has been conceived as an immense pit or cavern, dark and grim (e.g., *sheol*, the Mesopotamian *kur-nu-gi-a* ["land of no return"], the Greek Hades, and the Scandinavian Hel). Sometimes it is ruled by an awful monarch, such as the Mesopotamian god Nergal, the Greek god Hades, or the Yama of Hinduism and Buddhism. According to the view of human nature and destiny held in a particular religion, this underworld may be a gloomy, joyless place where the shades of all the dead merely survive, or it may be a place of awful torments where the damned suffer for their misdeeds.

In those religions in which the underworld has been conceived as a place of postmortem retribution, the idea of a separate abode of the blessed dead generally became necessary. Such an abode has various locations. In most religions it is imagined as being in the sky or in a divine realm beyond the sky (e.g., in Christianity, Gnosticism, Hinduism, and Buddhism); sometimes it has been conceived as the "Isles of the Blessed" (e.g., in later Greek and Celtic mythology) or as a beautiful garden or paradise such as the *al-firdaws* of Islam. Christian eschatology, which came to conceive of both an immediate judgment and a final judgment, developed the idea of a Purgatory where the dead expiated their venial sins in readiness for the final judgment. The 10 hells of Chinese Buddhist eschatology may be considered as purgatories, for in them the dead expiated their sins before being incarnated once more in this world.

Those religions that have taught the possibility of a happy afterlife have also generally devised forms of postmortem testing of merit for eternal bliss. In ancient Egypt the judgment of the dead finds graphic expression in the vignettes that illustrate the Book of the Dead. The heart of the deceased is represented as being weighed against the symbol of Ma'at (Truth) in the presence of Osiris, the god of the dead. A monster named Am-mut (Eater of the Dead) awaits an adverse verdict. The judgment of the dead in other religions (e.g., Christianity, Islam, Zoroastrianism, Orphism) is basically a test of orthodoxy or ritual status, although moral qualities were included to varying degrees.

Means of approach to the underworld. The idea that the dead had to make a journey to the underworld, to which they belonged, finds expression in many religions. The oldest evidence occurs in the Egyptian Pyramid Texts (c. 2375–c. 2200 BCE). The journey is conceived in various

images. The dead pharaoh flies up to heaven to join the sun god Re in his solar boat on his unceasing voyage across the sky; or he joins the circumpolar stars, known as the "Imperishable Ones"; or he ascends a ladder to join the gods in heaven. Later Egyptian funerary texts depict the way to the next world as beset by awful perils: fearsome monsters, lakes of fire, gates that cannot be passed except by the use of magical formulas, and a sinister ferryman who must be thwarted. Ancient Mesopotamian literature records the visit of the goddess Ishtar to the realm of the dead, the way to which was barred by gates. At each gate the goddess was deprived of some article of clothing, so that she was naked when she finally came before Ereshkigal, the queen of the underworld. The stripping-off of her clothing may have represented the decomposition of the corpse.

Such myths most likely reflect a feeling that the dead cease to belong to the world of the living; they have become uncanny and dangerous, and their departure to the world of the dead must be expedited. To assist these journeys, various aids have been provided. Thus, on some Egyptian coffins of the 11th dynasty a plan of the "Two Ways" to the underworld was painted, and from the New Kingdom period (c. 1567–1085 BCE) copies of the Book of the Dead, containing spells for dealing with perils encountered en route, were placed in the tombs. Orphic communities in southern Italy and Crete provided their dead with instructions about the next world by inscribing them on gold laminae deposited in the graves. Advice about dying was given to medieval Christians in a book entitled *Ars moriendi* ("The Art of Dying") and to Tibetan Buddhists in the *Bardo Thödol* ("Book of the Dead"). Chinese Buddhists were informed in popular prints of what to expect as they passed after death through the 10 hells to their next incarnation. More practical equipment for the journey to the next world was provided for the Greek and Roman dead: In addition to the money to pay Charon for their passage across the Styx, they were also provided with honey cakes for Cerberus, the three-headed dog that guarded the entrance to Hades.

DEBORAH \ˈde-bə-rə, -brə \, prophet and heroine in the Old Testament (Judges 4 and 5), who inspired the Israelites to a mighty victory over their Canaanite oppressors; the "Song of Deborah" (Judges 5), putatively composed by her, is perhaps the oldest section of the Bible and is of great importance for providing a contemporary glimpse of Israelite civilization in the 12th century BCE. According to rabbinic tradition, she was a keeper of Tabernacle lamps.

The two narratives of her exploit, the prose account in Judges 4 and the martial poem comprising Judges 5, differ in important details. The most obvious discrepancy is in the identity of the chief foe of the Israelites. Judges 4 makes him Jabin, king of Hazor (present Tell el-Qedah, about 3 miles southwest of Hula Basin), though a prominent part is played by his commander in chief, Sisera of Harosheth-hagoiim (possibly Tell el-'Amr, approximately 12 miles northwest of Megiddo). In the poem Jabin does not appear, and Sisera is an independent king of Canaan.

Assuming that the account preserved in Judges 5 is the older (probably written in 1125 BCE), the reader can reconstruct the actual history of the events. Israel holds the wilder parts of the country, the hills and the forests, but the Israelite settlements in the central range are cut off from those in the northern hills by a chain of Canaanite (or possibly Egyptian) fortresses down the Plain of Esdraelon (between Galilee and Samaria). At the instigation of Deborah, a charismatic counselor (or judge) and prophet, Barak gath-

ers the tribes of EPHRAIM, BENJAMIN, Machir (MANASSEH), ZEBULUN, ISSACHAR, and his own tribe of NAPHTALI. ASHER, DAN, Gilead (GAD), and REUBEN remain aloof. JUDAH and SIMEON are not mentioned (attesting to the antiquity of the poem). The Israelite clans fall on the enemy at Taanach; a thunderstorm, in which Israel sees the coming of God from MOUNT SINAI, strikes terror into the Canaanites; their fabled 900 chariots of iron are useless on the sodden ground; and the Kishon River, swollen by torrential rains, sweeps away the fugitives. Sisera escapes on foot, pursued by Barak, taking refuge in the tent of Heber the KENITE (the Kenites, a nomadic tribe, were supposedly at peace with Canaan); he is offered protection by Heber's wife, Jael, as he drinks a bowl of milk, she pierces his head with a tent peg and kills him (thus fulfilling Deborah's prophecy—that "the Lord will sell Sisera into the hand of a woman").

DEE, JOHN \ˈdē-,i-zəm, ˈdā-\ (b. July 13, 1527, London, Eng.—d. December 1608, Mortlake, Surrey), English alchemist, astrologer, and mathematician.

After lecturing and studying in Europe between 1547 and 1550, Dee returned to England in 1551 and was granted a pension by the government. Dee became astrologer to the queen, Mary Tudor, and shortly thereafter was imprisoned for being a magician but was released in 1555. Besides practicing ASTROLOGY and horoscopy in the court of Elizabeth I, he also gave instruction and advice to pilots and navigators exploring the New World. He was asked to name a propitious day for Elizabeth's coronation, and he gave her lessons in the mystical interpretation of his writings.

In 1570 the first English translation of Euclid's work appeared; although it is credited to Sir Henry Billingsley, who became sheriff and later lord mayor of London, Dee probably wrote part or all of it. He certainly wrote the preface, which encouraged interest in the mathematical arts.

Dee later toured Poland and Bohemia (1583–89), giving exhibitions of magic at the courts of various princes. He became warden of Manchester College in 1595.

DEIRDRE \ˈdir-drē, -drə; ˈdar-drā\, *Old Irish* Deirdriu, in early Irish literature, the gentle and fair heroine of *The Exile of the Sons of Uisliu* (*Longes Mac n-Uislienn*), the great love story of the ULSTER CYCLE. First composed in the 8th or 9th century, the story was revised and under the title *The Fate of the Sons of Uisnech* (*Oidheadh Chloinne Uisneach*) was combined in the 15th century with *The Fate of the Children of Tuireann* (*Oidheadh Chloinne Tuireann*) and *The Fate of the Children of Lir* (*Oidheadh Chloinne Lir*) into *The Three Sorrows of Storytelling* (*Tri Truaighe Scéalaigheachta*). The older version, preserved in *The Book of Leinster* (c. 1160), is more starkly tragic, less polished, and less romantic than the later version. It describes a Druid's foretelling, at Deirdre's birth, that many men would die on her account. Raised in seclusion, she grew to be a woman of astonishing beauty. King CONCHOBAR MAC NESSA fell in love with her, but Deirdre fell in love with Noise, son of Uisnech. They eloped and fled to Scotland, but Conchobar (untruly) promised them safety in Ireland, and so they returned. The sons of Uisnech were slain, causing revolt and bloodshed in Ulster. Deirdre took her own life rather than belong to Conchobar. (The later version omits the first half of the story and expands the tragic ending by making Deirdre live for a year with Conchobar, never smiling, before killing herself.)

The story was immensely popular in Ireland and Scotland and survived to the 20th century in Scottish Gaelic

oral tradition; its influence continued into the 20th century, when the Anglo-Irish writers, notably William Butler Yeats and John Millington Synge, dramatized the theme.

DEISM \ˈdē-,i-zəm, ˈdā-\, an unorthodox religious attitude that found expression especially among a group of English writers beginning with Edward Herbert in the first half of the 17th century and ending with Henry St. John, 1st Viscount Bolingbroke, in the middle of the 18th century. In general, Deism refers to the acceptance of a certain body of religious knowledge that is inborn or that can be acquired by the use of reason, as opposed to knowledge acquired through revelation or the teaching of any church. The proponents of NATURAL RELIGION were strongly influenced by faith in human reason, distrust of religious claims of revelation that lead to dogmatism and intolerance, and an image of God as the rational architect of an ordered world.

Renaissance humanism had rejected the orthodox Christian emphasis upon the corruption of reason through SIN and had affirmed a general faith that reason could discern universal religious and moral truths apart from any supernatural revelation or specific church teachings. Similarly, Deists argued that within the world's religions and the various Christian churches there was a common rational core of universally accepted religious and moral principles. The early Deists asserted that differences of ritual and dogma were insignificant and should be tolerated. By the turn of the 17th century, however, a number of Deists, notably John Toland, the Earl of Shaftesbury, Matthew Tindal, Thomas Woolston, and Anthony Collins, came to reject the liturgical practices and institutional trappings of ROMAN CATHOLICISM as analogous to ancient PAGAN superstition. In place of the noxious "enthusiasm" and strict individual piety of the Protestant sects, they sought to promote the sober moral striving and tolerance of the religion of reason.

In place of the orthodox Judeo-Christian conception of God as involved actively in shaping and sustaining human history, the Deists argued that after God's initial work of creation, he withdrew into detached transcendence, leaving the world to operate according to rational natural rules. Borrowing upon the prestige of Isaac Newton's vision of the universe as a mechanism obeying stable rational laws, they propounded variations on the classic argument from design wherein the existence of a rational creator is inferred from the evidence of the ordering of the world.

By the end of the 18th century, in addition to becoming a dominant religious attitude among English, French, and German intellectuals, Deism had crossed the Atlantic to shape the religious views of upper-class Americans. The first three presidents of the United States all subscribed to Deist beliefs.

DELIA \ˈdē-lē-ə\, quadrennial festival of the Ionians, held on Delos (hence the name) in honor of the Greek god APOLLO. The local title was Apollonia. It later declined along with the political importance of Ionia but was revived in 426 BCE by the Athenians as part of their imperial policy.

DELILAH \də-ˈlī-lə\, in the OLD TESTAMENT, a central figure in the story of SAMSON (Judges 16). She was a Philistine who, bribed to entrap Samson, coaxed him into revealing that the secret of his strength was his long hair, whereupon she betrayed him to his enemies.

DELPHI \ˈdel-ḥī\, seat of the most important ancient Greek temple and oracle of APOLLO. It lay in the territory of Phocis

on the steep lower slope of Mount Parnassus, about six miles from the Gulf of Corinth. Delphi was considered in ancient GREEK RELIGION to be the center of the world. According to ancient myth, ZEUS released two eagles, one from the east, the other from the west, and caused them to fly toward the center. They met at Delphi, and the spot was marked by a stone in the temple; this stone was known as the omphalos (navel). According to legend, the oracle at Delphi originally belonged to GAEA, the Earth goddess, and was guarded by the serpent PYTHON; later, Apollo slew Python and founded his own oracle there.

Delphi has been continuously inhabited from late Mycenaean times (14th century BCE), but its history really begins in the 6th century BCE, when the Sacred War of about 590 BCE destroyed the nearby town of Crisa, which had been taxing pilgrims, and opened free access to Delphi. The Delphic oracle was consulted not only on private matters but also on affairs of state, and its utterances often swayed national policy. It was also consulted whenever a colony was to be sent out from Greece proper, and so its fame spread to the limits of the Greek-speaking world.

In Roman times Delphi was frequently pillaged; Nero is said to have removed 500 statues from the vicinity. With the spread of CHRISTIANITY, the old SANCTUARY of Delphi fell

Ruins of the temple of Apollo at Delphi

Gianni Tortoli—Photo Researchers

Delilah shears Samson's locks; French manuscript illumination, c. 1250

The Granger Collection

into decay. Julian the Apostate attempted to restore the temple in the mid-4th century CE, but with little success.

The temple sanctuary was a large, roughly rectangular area enclosed by a wall. A sacred way lined with monuments and treasuries wound up through the sanctuary to the temple of Apollo itself. The monuments along the way were offerings to Apollo erected by states or individuals in thanks for favors bestowed by the god. The existing temple, of which only the foundation and some steps and a few columns are preserved, was built in the 4th century BCE. The Delphic oracle was in a chamber at the rear of the temple. Two earlier temples of Apollo on the site are known from their actual remains. Of the first, dating from about 600 BCE, some archaic capitals and wall blocks are preserved. This temple was burned in 548 BCE. Of the second temple, built at the end of the 6th century BCE, many wall blocks and some pediment sculptures are extant.

DEMA DEITY \ˈdā-mə\, any of several mythical ancestral beings of the Marind-Anim of southern New Guinea, the center of a body of mythology in which the decisive act is the slaying of a *dema* (ancestral) deity by the ancestral tribe. This act brings about the transition from the ancestral world to the human one. In many ancient myths, the creation of humans and their particular attributes—sexuality, the cultivation of food, and death—is a decisive break with the previous mode of existence, which was characterized by asexual reproduction, the spontaneous production of food, and immortality.

The most widely quoted example of such myths is the Ceramese (from Ceram, Indonesia) myth of Hainuwele, quoted by the Danish anthropologist Adolf E. Jensen. In this myth, a *dema* man named Amenta found a coconut speared on a boar's tusk and in a dream was instructed to plant it. In six days a palm had sprung from the nut and flowered. Amenta cut his finger and dripped his blood on the blossom. Nine days later a girl grew asexually from the blossom, and in three more days she became sexually mature. Amenta named her Hainuwele, which means Coconut Branch. During a major religious festival Hainuwele

DEMETER

stood in the midst of the dance grounds and excreted valuable objects. After nine days of this activity, the *dema* men dug a hole in the middle of the dance ground, threw Hainuwele in, and danced the ground firm on top of her. Amenta dug up her corpse, dismembered it, and planted the pieces. These pieces gave birth to plant species previously unknown, especially tubers, which have since been the Ceramese's chief food. Another *dema* goddess forced the *dema* men to go through a labyrinth. Some became ordinary mortals; others changed into animals and spirits.

This mythic complex is characteristic of the culture of many tuber cultivators. The motif of death and dismemberment appears to reflect the fact that a tuber must be cut up and the pieces buried in order to be propagated.

DEMETER \di-'mē-tər\, in GREEK RELIGION, daughter of the deities CRONUS and RHEA, sister and consort of ZEUS, and goddess of agriculture.

Demeter is rarely mentioned by Homer, nor is she included among the Olympian gods, but she is probably an ancient goddess. Her primary myth centered on the story of her daughter PERSEPHONE, who was abducted by HADES. Demeter went in search of Persephone and, during her journey, revealed her secret rites to the people of Eleusis, who had hospitably received her. Her distress at her daughter's disappearance was said to have diverted her attention from the harvest and caused a famine. In addition to Zeus, Demeter had a consort, IASION (a Cretan), to whom she bore Plutus (Wealth; *i.e.*, abundant produce of the soil).

Demeter appeared most commonly as a grain goddess. The influence of Demeter, however, was not limited to grain but extended to vegetation generally and to all the fruits of the earth, except the bean. In that wider sense Demeter was akin to GAEA (Earth), with whom she had several epithets in common, and was sometimes identified with the GREAT MOTHER OF THE GODS (Rhea, or Cybele).

Another important aspect of Demeter was that of a divinity of the Underworld; she was worshiped as such at Sparta, and especially at the festival of Chthonia at Hermione in Argolis, where a cow was sacrificed by four old women. The epithets Erinys ("Raging") and Melaina ("the Black One") as applied to Demeter were localized in Arcadia and stress the darker side of her character.

Demeter also appeared as a goddess of health, birth, and marriage. A certain number of political and ethnic titles were assigned to her, the most important being Amphiktyonis, as patron goddess of the Amphictyonic League, well known in connection with the temple at DELPHI.

Among the agrarian festivals held in honor of Demeter were the following: (1) Haloa, apparently derived from *halōs* ("threshing floor"), begun at Athens and finished at Eleusis, where there was a threshing floor of Triptolemus, her first priest and inventor of agriculture; it was held in the month Poseideon (December). (2) Chloia, the festival of the grain beginning to sprout, held at Eleusis in the early spring (Anthesterion) in honor of Demeter Chloë ("the

Demeter of Cnidus, sculpture from the mid-4th century BCE

By courtesy of the trustees of the British Museum

Green"), the goddess of growing vegetation. This festival is to be distinguished from the later sacrifice of a ram to the same goddess on the sixth of the month Thargelion, probably intended as an act of propitiation. (3) Proerosia, at which prayers were offered for an abundant harvest, before the land was plowed for sowing. It was also called Proarktouria, an indication that it was held before the rising of Arcturus. The festival took place, probably sometime in September, at Eleusis. (4) Thalsia, a thanksgiving festival held in autumn after the harvest in the island of Cos. (5) The THESMOPHORIA, a women's festival meant to improve the fruitfulness of the seed grain. (6) The Skirophoria held in midsummer, a companion festival.

Her attributes were connected chiefly with her character as goddess of agriculture and vegetation—ears of grain, the mystic basket filled with flowers, grain, and fruit of all kinds. The pig was her favorite animal, and as a chthonian (underworld) deity she was accompanied by a snake. In Greek art Demeter resembled HERA, but she was more matronly and of milder expression; her form was broader and fuller. She was sometimes riding in a chariot drawn by horses or dragons, sometimes walking, or sometimes seated upon a throne, alone or with her daughter.

DEMIGOD (male), *female* demigoddess, mythological being with more power than a mortal but less than a god.

DEMIURGE \de-mē-ərj\, *plural* Demiourgoi, a subordinate god who fashions and arranges the physical world. Plato adapted the term, which in ancient Greece had originally been the ordinary word for "craftsman" or "artisan," and which in the 5th century BCE had come to designate certain magistrates or elected officials.

Plato used the term in the dialogue *Timaeus*, an exposition of COSMOLOGY in which the Demiurge is the agent who takes the preexisting materials of CHAOS, arranges them according to the models of eternal forms, and produces all the physical things of the world, including human bodies. The Demiurge is sometimes thought of as the Platonic personification of active reason. The term was later adopted by some of the Gnostics, who, in their dualistic worldview, saw the Demiurge as one of the forces of evil, who was responsible for the creation of the despised material world and was wholly alien to the supreme God of goodness.

DEMON, *also spelled* daemon, from the Greek *daimōn*, in religions worldwide, any of numerous beings, powers, or principles that mediate between gods and humans.

In ancient Greece a *daimōn* was a supernatural power, and the term was employed almost interchangeably by Homer with *theos*, for a god, though *theos* emphasized the personality of a particular god, whereas *daimōn* referred to a more general, indistinct divine force. Hence, the term

was regularly applied to sudden or unexpected supernatural interventions not attributable to any particular deity. It became commonly the power determining a person's fate, and an individual could have a personal *daimōn*. As early as Hesiod, the dead of the Golden Age became *daimōns*; and later philosophical speculation envisaged them as lower than the gods (possibly mortal) but as superior to humanity.

In ZOROASTRIANISM, a hierarchy of demons (*daevas*) is headed by Angra Mainyu (later called AHRIMAN), the Evil, or Destructive, Spirit. The demons are in constant battle with AHURA MAZDĀ (later called Ormazd), the Good Lord. The hierarchy of demons in JUDAISM, which is rooted in ancient Middle Eastern and Zoroastrian demonology after the post-exilic period (after 538 BCE), is quite varied. In Judaism, evil beings—in Hebrew *shedim*, meaning “demons” and applied to foreign gods, or *se'irim*, meaning “hairy demons”—often were believed to inhabit desert wastes, ruins, and graves and to inflict humanity with various physical, psychological, and spiritual disorders. The prince of these demons was called by different names: SATAN (the Antagonist), Belial (the spirit of perversion, darkness, and destruction), Mastema (Enmity, or Opposition), and others. Though the OLD TESTAMENT refers to Satan as the prosecutor of God's celestial court (Zechariah 3; Job 1–2), a hierarchy of demons under Satan or other princes of evil was developed in intertestamental literature and later Judaism.

The hierarchy of demons in CHRISTIANITY is based on various sources: Jewish, Zoroastrian, gnostic, and the indigenous religions that succumbed to Christian missionizing. In the NEW TESTAMENT, Jesus speaks of BEELZEBUB as the chief of demons and equates him with Satan. In the European Middle Ages and the REFORMATION period, various hierarchies of demons were developed, such as that associated with the seven DEADLY SINS: LUCIFER (pride), Mammon (avarice), ASMODEUS (lechery), Satan (anger), Beelzebub (gluttony), Leviathan (envy), and Belphegor (sloth).

In ISLAM the hierarchy of demons is headed by IBLĪS (the devil), who also is called *Shayṭān* (Satan) or *'aduww Allāh* (“Enemy of God”). Based to a great extent on Jewish and Christian demonology, Iblis became the leader of a host of JINN, spiritual beings that generally bode evil.

In HINDUISM, the ASURAS (the Zoroastrian *ahuras*) are the demons who oppose the DEVAS (the gods). Among the various classes of *asuras* are *nāgas* (serpent demons), Ahi (the demon of drought), and Kāmsa (an archdemon). Demons that afflict humans include the *rākṣasas* (grotesque beings

who haunt cemeteries, impel the performance of foolish acts, and attack *sadhus* (saintly men) and *piśacas* (beings who haunt places where violent deaths have occurred).

Buddhists often view their demons as forces that inhibit the achievement of NIRVANA (bliss, or the extinction of desire); an important example is MĀRA, an arch tempter, who, with his daughters, Rati (Desire), Rāga (Pleasure), and Tanhā (Restlessness), attempted to dissuade Siddhārtha Gautama, the BUDDHA, from achieving his enlightenment. As MAHĀYĀNA (Greater Vehicle) Buddhism spread to Tibet, China, and Japan, many of the demons of the folk religions of these areas (e.g., the Chinese *kuei-shen*; the Japanese *oni*) were incorporated into Buddhist beliefs.

DEMOPHON \ˈde-mə-ˌfān\, also spelled Demophon, in Greek mythology, the son of Celeus, king of Eleusis. The goddess DEMETER, wandering in search of her daughter PERSEPHONE, became Demophon's nurse. She attempted to immortalize him by burning out his mortal parts but was surprised in the act by his mother, who thought that she was harming the boy. Incensed, Demeter quickly withdrew the child from the fire, thus leaving him susceptible to death; he grew up to be the first priest of her Mysteries. In another version the surprise resulted in Demophon's death in the flames.

DEOBAND SCHOOL \ˈdə-ə-ˌbænd\, Urdu Dār al-ʿUlūm (“House of Learning”), the leading center of Islamic learning (MADRASA) in India. It was founded in 1867 by Muhammad ʿAbid Husayn in the small town of Deoband in the Sahāranpur district of Uttar Pradesh. The theological position of Deoband is heavily influenced by the 18th-century Muslim reformer Shāh Walī Allāh and the early 19th-century Indian Wahhābiya. During the anti-British independence movement (1905–47), Deobandis generally opposed

partition of the country into Hindu and Muslim states. The school also inspired the Tablighī Jamāʿat, a grassroots Muslim missionary movement of the 1920s.

The program of studies is highly traditional, stressing Ḥanafī jurisprudence (FIQH), Qurʾānic EXEGESIS (TAFSĪR), the study of traditions (HADITH), scholastic theology (KALĀM), and philosophy (*falsafa*). Modern disciplines are ignored, on the grounds that they are not relevant to a proper knowledge of ISLAM and can lead to sinful innovation (BIDʿA). Popular Muslim practices and beliefs are studied only in order to purify them of unorthodox accretions, but links with “sober” SUFI orders are maintained.

Deoband's enrollment of about 1,500 students represents all parts of the Muslim world. The *madrassa* boasts a library

DEREKH ERETZ

of 67,000 printed books and manuscripts in Arabic, Persian, and Urdu. A mosque, lecture halls, and student residences further serve the scholarly community. Its graduates have succeeded in establishing thousands of other Deobandi schools throughout the subcontinent.

DEREKH ERETZ \ˈder-ek-ˈer-ets\ (Hebrew: “correct conduct,” or “way of the land”), also spelled *Derekh Erez*, in JUDAISM, decorum, dignified behavior, and gentlemanly conduct. Rabbinic scholars have applied the notion to all aspects of family life and marriage, to the qualities expected of a scholar, and to relationships between friends. *Derekh Eretz* applies also to one’s manner of speaking, of eating, and of dressing and imposes on everyone the obligation of supporting himself so that others will not be unduly burdened. *Derekh Eretz* manifests itself in politeness toward others, whoever they be, and in genuine concern for their welfare. Two independent treatises on the subject are appended to the Babylonian Talmud (TALMUD BAVLI): *Derekh Eretz Rabba* (“the Great”) and *Derekh Eretz Zuta* (“the Minor”).

DERVISH, Arabic *darwīsh*, any member of a Sufi fraternity, or *ṭarīqa*. Within the Sufi fraternities, which were first organized in the 12th century, an established leadership and a prescribed discipline obliged the dervish postulant to serve his SHAYKH, or master, and to establish a rapport with him.

Dervishes
Culver Pictures

The postulant was also expected to learn the *silsila*, the spiritual line of descent of his fraternity.

The rituals of the Sufi brotherhoods stress the dervishes’ attainment of hypnotic states and ecstatic trances through the *DHIKR*, the repeated recitation of a devotional formula in praise of God, and through such physical exertions as whirling and dancing. Dervishes can be either resident in community or lay members, both of these groups being generally drawn from the lower classes. In the Middle Ages, dervish communities played a vital role in religious, social, and political life in the central Islamic lands, but their monasteries now are often under government control, and their theological standing is discounted by orthodox theologians.

A wandering or MENDICANT dervish is called a FAKIR (Arabic: *faqīr*, “poor”). In mystical usage, the word refers to the human spiritual need for God, who alone is self-sufficient. Although of Muslim origin, the term has come to be applied in India to Hindus as well. Fakirs are generally regarded as holy men who are possessed of miraculous powers, such as the ability to walk on fire. While less influential in urban areas since the spread of education and technology, fakirs retain some hold over the people of the villages and the interior of India. Among Muslims the leading Sufi orders of fakirs are the CHISHTIYA, QĀDIRIYA, NAQSHBANDIYA, and SUHRAWARDIYA.

DEUCALION \dü-ˈkāl-ē-än, dyü-/, in Greek myth, the son of Prometheus, king of Phthia in Thessaly, and husband of Pyrrha; he was also the father of HELLEN, the mythical ancestor of the Greek race.

When ZEUS, the king of the gods, resolved to destroy all humanity by a flood, Deucalion constructed an ark in which, according to one version, he and his wife rode out the flood and landed on Mount Parnassus. Offering sacrifice and inquiring how to renew the human race, they were ordered to cast behind them the bones of their mother. The couple correctly interpreted this to mean they should throw behind them the stones of the hillside (“mother earth”), and did so. Those stones thrown by Deucalion became men, while those thrown by Pyrrha became women.

DEUS OTIOSUS \ˈdē-əs-ō-shē-ˈō-səs\ (Latin: “inactive god”), in the history of religions and philosophy, a HIGH GOD who has withdrawn from the immediate details of the governing of the world. The god has delegated all work on earth to ancestors or nature spirits, who act as mediators between the god and humans. This concept of god occurs widely in Africa, Melanesia, and South America.

In Western philosophy, the *deus otiosus* concept has been attributed to DEISM, a 17th–18th-century Western rationalistic religio-philosophical movement, in its view of a nonintervening creator of the universe. Although this stark interpretation was accepted by very few deists, many of their antagonists attempted to force them into the position of stating that after the original act of creation God virtually withdrew and refrained from interfering in the processes of nature and human affairs.

DEUTEROCANONICAL BOOKS \dü-tə-rō-kə-ˈnā-ni-kəl, dyü-/, biblical literature accepted in the Roman Catholic and Eastern Orthodox canon but treated as APOCRYPHA by Jewish and Protestant canons; also, an authentic biblical work added to the canon later.

DEUTERONOMIC REFORM \dü-tə-rə-ˈnā-mik, dyü-/, great reformation instituted in the reign of King JOSIAH of JUDAH (c. 640–609 BCE). It was so called because the book of the Law found in the TEMPLE OF JERUSALEM (c. 622 BCE), which was the basis of the reform, is considered by some scholars to be the same as the law code in the book of Deuteronomy (chapters 12–26). The reform consisted of removing PAGAN altars and idols from the Temple, destroying rural sanctuaries and fertility cults, and centralizing worship at the Temple of Jerusalem.

DEUTERONOMIST SOURCE \dü-tə-ˈrā-nə-mist, dyü-/, *abbreviated* D, one of the hypothetical sources of a portion of the PENTATEUCH (the first five books of both the Jewish and the Christian BIBLES)—in particular, the source of the book

of Deuteronomy, as well as JOSHUA, Judges, 1 and 2 Samuel, and 1 and 2 Kings. D uses a distinctive vocabulary and style of exhortation to call for Israel's conformity with the laws of Yahweh's COVENANT and to stress YAHWEH's election of ISRAEL as his special people.

In the name of MOSES, D states, "Here is God's law, which you will keep as your side of the contract that God made with you in bringing you out of Egypt and into the promised land." The book of Deuteronomy in its earliest phase came to light toward the end of the 7th century BCE, about 620, some 35 years prior to the destruction of the First TEMPLE OF JERUSALEM. At that time, Israel had spent more than a generation under Assyrian domination and was only just emerging from that cultural influence. The message of Deuteronomy and the books that flow from it, as stated by W. Lee Humphreys, is this: "Israel had prospered when it was loyal to the covenant and had suffered when it was disloyal. This pattern is revealed in the framework that was used to bind together the once separate stories about the federation's tribes and judges in the Book of Judges. . . . Loyalty to Yahweh and his stipulations brings life and security, gifts of the god who first called Israel into being from Egyptian slavery. Disloyalty will result only in death." See also ELOHIST SOURCE; YAHWIST SOURCE; PRIESTLY CODE.

DEVA \ˈdā-və, ˈdē-,\ *Iranian daeva* (Sanskrit: "divine"), in the VEDIC RELIGION of India, one of many divine powers, roughly divided on the basis of their identification with the forces of nature into sky, air, and earth divinities (e.g., VARUṆA, INDRA, SOMA). In the monotheistic systems that emerged by the Late Vedic period, the *devas* became subordinate to the one supreme being. During the Vedic period the gods were divided into two classes, the *devas* and the ASURAS (in Avestan, *daevas* and *ahuras*). In India the *devas* came to be more powerful than the *asuras*, and the latter word eventually took on the meaning of DEMON. In Iran the reverse took place, and the *daevas* were denounced as demons by ZOROASTER.

Buddhist COSMOLOGY posits the existence of three realms, in which the realm of the *devatās* (gods and goddesses) is the highest of the six *gatis*, or destinies, of the lowest realm, the *kāma-dhātu* ("realm of desire"). Within this destiny there are many heavens, each inhabited by many deities. Mythologically the most important are the Tuṣita Heaven where the future Buddha, MAITREYA, awaits the time for his coming to Earth; the Heaven of the Thirty-Three Gods, which is presided over by Indra (Sanskrit: INDRA; a deity sometimes called Sakka [Sanskrit: Śakra]); and the Heaven of the Four Guardian Kings, who are important protective deities in many Buddhist contexts.

DEVADĀSĪ \ˈdā-və-ˈdā-sē\ (Sanskrit: "female servant of a god"), group of women who dedicated themselves to the service of the patron god of the great temples in eastern and southern India.

This order or CASTE appears to date from the 9th and 10th centuries. The women attended the god—fanned the icon, honored it with lights, and sang and danced for the god's amusement—thus offering to the deity their auspicious presence. They played an important part in preserving elements of Hindu culture, for example, performing the great Sanskrit poem *Gītāgovinda* for its hero KRISHNA in the temple dedicated to him in Puri. Devadāsīs' sons and daughters had equal rights of inheritance, an unusual practice among Hindu castes. Until the 20th century they were quite visible; about 1800 the main temple of Kanchipuram

(Conjeeveram) had 100 Devadāsīs. As their occupation also involved temple prostitution, they came to be held in low social regard and have now largely disappeared.

DEVADATTA \ˈdā-və-ˈdāt-tə\ (fl. 6th century BCE, India), Buddhist monk who sought to reform the SANGHA. Tradition relates that he was a cousin of the BUDDHA GOTAMA.

Devadatta is said to have joined the *sangha* in the 20th year of Gotama's ministry. Years later Devadatta proposed that the Buddha retire and hand over the leadership to him. This proposal was rejected, and Devadatta is said to have made three abortive attempts to bring about the death of the Buddha. The stories relate that Devadatta, sensing popular approval, proposed stricter ascetic rules for the *sangha* and when these were refused, he persuaded some 500 of the Buddha's followers to join in a secession. Nothing further is known about Devadatta's movement, but it may possibly be referred to under the name of the Gotamakas in the *Āṅguttara Nikāya* (a canonical text), for Devadatta's family name was Gotama.

DEVEQUT \ˈde-ve-ˈkūt\ (Hebrew: "attachment"), in Judaic QABBALAH texts, an adherence to or communion with God that stops short of mystical union. The notion of *devequt* apparently derived from the biblical reference to "loving the Lord your God, walking in all his ways, and holding fast to him" (Deuteronomy 11:22). As a fundamental concept of the Qabbalah, *devequt* was considered one of the three highest values and, for some, was equated with ECSTASY.

The Qabbalistic view of *devequt* as a privilege of the spiritual aristocracy was modified in HASIDISM, for, in its lower, or minor, stage, *devequt* found expression in the social sphere and was, in principle, open to every Hasid.

DEVĪ \ˈdā-vē\ (Sanskrit: "Goddess," "Lady," "Queen"), in HINDUISM, a general designation for "goddess," sometimes used as an honorific title for human women. The term has always been somewhat generic and is now often used in situations where it serves as a blanket designation for the local and often quite individual female divinities whose presences are felt in regions throughout India.

Historically, various goddesses are documented in the texts from the earliest layers of Hinduism. The VEDAS refer to goddesses who are associated with power, materiality, forces of nature, and speech, but not in a formulaic manner. Female energy in the forms of *prakṛti* ("matter"), *śakti* ("energy"), and *māyā* ("illusion") appear in later philosophical writings, but they are not thought of as being more than linguistically or abstractly feminine until the 5th and 6th centuries, when *purāṇic* texts such as the DEVĪ BHĀGAVATA PURĀṆA and the DEVĪ MĀHĀTMYA began to identify Devī, the Great Goddess, as the embodiment of matter, energy, and illusion. See ŚAKTISM; DURGĀ; KĀLĪ.

DEVĪ BHĀGAVATA PURĀṆA \ˈdā-vē-ˈbā-gə-və-tə-pū-ˈrā-nə\, text of the devotional HINDUISM called ŚAKTISM, in which the Great Goddess (Devī) is worshiped as primary. The *Devī Bhāgavata Purāṇa* is usually listed among the 18 "minor" or sectarian PURĀṆAS (encyclopedic compendiums whose topics range from COSMOGONY and COSMOLOGY to ritual instructions for worship of the gods). The date of its composition is unknown; scholars have dated it as early as the 6th century CE and as late as the 14th century. It was, in all probability, composed in Bengal, possibly over a period of time, by members of the local sect whose devotion centered on Devī.

DEVĪ MĀHĀTMYA

The work is divided into 12 sections and 318 chapters. It opens (like other *Purānas*) with an account of the creation of the universe—an act here attributed to Devī, who manifests herself in the form of three ŚAKTIS, or cosmic powers. The remainder of the text is largely given over to mythological accounts concerning various Hindu deities, usually featuring the Goddess (in one or another of her many manifestations), who is said to be the active force behind all the gods and the consort of the principal male divinities. The text also includes instructions for the worship of Devī and her sacred places and holy days, as well as various hymns and eulogies dedicated to her.

DEVĪ MĀHĀTMYA \ˈdā-vē-mə-ˈhāt-myə\, Sanskrit text, written about the 5th or 6th century CE, that forms a portion of a larger work known as the *Mārkaṇḍeya-Purāna*. It is the first such text that revolves entirely around the figure of the Goddess (DEVĪ) as the primary deity.

While goddesses were worshiped in India before this period, the *Devī Māhātmya* is significant in that it is the earliest appearance in the high Sanskrit literary and religious tradition of a treatise in which the Goddess is elevated to a place of ultimate prominence. The work has been passed down as a self-contained text that is memorized and recited, word for word, as part of the religious practice of those Hindus who worship Devī as the highest divinity.

The *Devī Māhātmya* is also significant in that it regards various forms of the Goddess—ranging from the fearsome and dangerous KĀLĪ to the benign and gentle ŚRĪ—as fundamentally unified. Chief among these forms is DURGĀ, a warrior figure whose salvific actions are recounted in this work. Durgā is depicted as aiding male deities, energizing them for the task of slaying the DEMONS. She is also active in her own right, most famously in her battle with the great buffalo-demon Mahiṣasura. Durgā is described as having many arms, each of which wields a weapon, and riding a fierce lion. Although a conquering warrior, Durgā is also portrayed as beautiful and is sometimes referred to as “Mother,” which displays the many-sided nature of this goddess.

DEVIL (from Greek: *diabolos*, “slanderer,” or “accuser”), the spirit or power of evil. Though sometimes used for minor demonic spirits, the word devil generally refers to the prince of evil spirits and as such takes various forms in Western religions.

In the monotheistic Western religions, the devil is viewed as a fallen ANGEL who in pride has tried to usurp the position of the one and only God. In JUDAISM, and later CHRISTIANITY, the devil was known as SATAN. In the OLD TES-

TAMENT, Satan is viewed as the prosecutor of Yahweh’s court, as in Job, chapters 1 and 2, but he is not regarded as an adversary of God. In postbiblical Judaism and in Christianity, however, Satan became known as the “prince of devils” and assumed various names: BEELZEBUB (“Lord of Flies”) in Matthew 12:24–27, often cited as Beelzebub (“Lord of Dung”), and LUCIFER (the fallen angel of Light).

In Christian theology the devil’s main task is to tempt humans to reject the way of life and redemption and to accept the way of death and destruction. The leader of the angels who have fallen from heaven because of pride, Satan has as his main adversary in legend and iconography the ARCHANGEL Michael, leader of God’s heavenly hosts.

The theology of ISLAM is rich in references to IBLĪS, the personal name of the devil, who is also known as *ash-Shayṭān* (“The Demon”) and *ʿaduww Allāh* (“Enemy of God”). Iblīs is an angel, a *jinn* (spiritual creature capable of good or evil), or an angel who was the leader of the *jinni*. In the QUR’AN, Iblīs first appears in the story of the creation of the world. He alone of the angels refuses God’s order to bow before Adam, the first man. He is then cursed by God; his punishment is to come on the Day of Judgment, but until then he is empowered to tempt the unfaithful (but not true believers). Iblīs next appears as the tempter of ADAM AND EVE in the GARDEN OF EDEN. The questions of his sins of pride and disobedience are especially important in the SUFI traditions, in which he is sometimes presented as a true monotheist who would bow only to God.

DEVIL’S ADVOCATE, *Latin* advocatus diaboli, in the ROMAN CATHOLIC church, the promoter of the faith who critically examines the life of and miracles attributed to an individual proposed for BEATIFICATION OR CANONIZATION. Popular usage of the term “devil’s advocate” derives from the fact that his presentation of facts

includes everything unfavorable to the candidate. Sixtus V formally established the office in 1587.

DEVOTIO MODERNA, religious movement within ROMAN CATHOLICISM from the end of the 14th to the 16th century stressing meditation and the inner life, attaching little importance to ritual and external works. *Devotio moderna* (Latin: “modern devotion”) originated in the Netherlands and spread south within Europe. Two communities—the BRETHREN OF THE COMMON LIFE and the AUGUSTINIAN Canons at Windesheim (near Zwolle, Holland)—became the principal exponents of *Devotio moderna*. The IMITATION OF CHRIST, traditionally attributed to THOMAS À KEMPIS, is a classic expression of the movement.

DGE-LUGS-PA \ˈgā-lūk-bä\, also spelled Gelukpa (Tibetan: “Model of Virtue”), also called Yellow Hat Sect, since the

Lucifer’s Descent into Hell, *illumination from Queen Mary’s Psalter*

By courtesy of the trustees of the British Library

17th century the predominant BUDDHIST order in Tibet and the sect of the DALAI and PANCHEN LAMAS.

The Dge-lugs-pa sect was founded in the late 14th century by TSONG-KHA-PA, a member of the austere Bka'-gdams-pa school. Tsong-kha-pa's reforms included strict monastic discipline, CELIBACY and the prohibition of alcohol and meat; a higher standard of learning for monks; and the use of Tantric and magical rites in moderation. Three large monasteries were quickly established near Lhasa: at Dga'ldan (Ganden) in 1409, 'Bras-spungs (Drepung) in 1416, and Se-ra in 1419. The abbots of the 'Bras-spungs monastery first received the title Dalai Lama in 1578, and a period of struggle for the leadership of Tibet followed, principally with the Karma-pa sect. The Dge-lugs-pa eventually appealed for help to the Mongol chief Gūūshi Khan, who secured their authority in Tibet. They continued to rule through their leader, the Dalai Lama, until the Chinese communists took over the country in 1950. During a popular revolt at Lhasa in 1959 the Dalai Lama escaped to India.

The name Yellow Hat refers to the distinctive yellow headdress adopted by the Dge-lugs-pa to distinguish themselves from the Karma-pa sect, whose monks wear red hats.

DHAMMAPADA \,dā-mə-'pā-də\ (Pāli: "Words of Doctrine," or "Way of Truth"), probably the best-known book in the Pāli Buddhist canon. It is an anthology of basic BUDDHIST teachings (primarily ethical teachings) in a simple aphoristic style. As the second text in the *Khuddaka Nikāya* of the SUTTA PIṬAKA, the *Dhammapada* appears in somewhat different versions in Prākṛit, Sanskrit, and Chinese, and there are translations in other languages. More than half the verses are excerpted from other canonical texts and include many of the most famous Buddhist sayings; others come from the storehouse of pithy sayings drawn upon by much of Indian literature. The book is popular in Buddhist countries of both THERAVĀDA and MAHĀYĀNA traditions. In Sri Lanka it has been used for centuries as a manual for novices, and it is said that every monk can recite it from memory.

DHĀRAṆĪ \ 'dār-ə-,nē\, in BUDDHISM and HINDUISM, a sacred verse of great efficacy, used by a common person as a verbal protective device or talisman and by a yogi (spiritual adept) as a support or instrument for concentration. The *dhāraṇī* is a short summary of the essential doctrine contained in a much longer sacred text and serves as an aid to its retention. Properly recited, the *dhāraṇī* conveys the same merit as reading the entire work. The meaning of a *dhāraṇī* is often very difficult to determine. A *dhāraṇī* may sound to the uninitiated like a string of meaningless words, but its accuracy is in fact carefully guarded when passed on from teacher to pupil. *Compare* MANTRA.

DHARMA \ 'dər-mə-, 'dār-\ (Sanskrit: "that which is established," thence "religion," "custom," "law," or "duty"), Pāli dhamma, key concept with multiple meanings in HINDUISM, BUDDHISM, and JAINISM.

In Hinduism dharma is the religious and moral law governing individual and group conduct and one of the four ends of life. One of its distinctive features is its contextual sensitivity. Although certain aspects of dharma are regarded as universal and perennial, others are to be followed according to one's class, status, and station in life. It constitutes the subject matter of the DHARMA SUTRAS, religious manuals that are the earliest source of Hindu law, and in the course of time was extended into lengthy compilations

of law and custom, the DHARMA ŚĀSTRAS. The best-known *Dharma Śāstra* is the so-called *Laws of Manu*, which had become authoritative by the early centuries CE, but it remains a question whether it ever functioned in actual judicial practice until British authorities integrated certain aspects of it into colonial law.

In Buddhism, dharma is the universal truth common to all individuals at all times, as discovered and proclaimed by the BUDDHA GOTAMA. Dharma, the Buddha, and the SANGHA (the Buddhist monastic order) make up the TRIRATNA, or "three jewels," the primary sources of Buddhist doctrine and practice. In Buddhist metaphysics the term in the plural (dharmas) is used to describe the interrelated elements that make up the empirical world.

In Jain philosophy dharma, in addition to being commonly understood as moral virtue, also has the meaning—unique to Jainism—of an eternal "substance" (*dravya*), the supporting medium that allows beings to move.

DHARMAGUPTA \,dər-mə-'gūp-tə-, 'dār-\, one of the so-called "18 schools" of Indian BUDDHISM. Named after the school's purported founder, the Dharmaguptakas (followers of Dharmagupta) were descendants of the Sthaviravāda lineage, which came into existence after the first major division of the Buddhist community. The Dharmaguptakas appear to have split away from the Mahīśāsaka school over a dispute concerning whether the BUDDHA GOTAMA should be considered a member of the monastic community or whether he stood outside of the community entirely. The Dharmaguptakas maintained that the Buddha was separate from the monastic community, and, as a result, gifts given to him alone would produce great merit. Similarly, the Dharmaguptakas also held that honoring Buddhist STUPAS, which often housed the corporeal remains of the Buddha or a fragment of a Buddhist text, produced much merit.

The Dharmaguptakas played a key role in the transmission of Buddhism through Central Asia, and there is evidence that the school was established in that region by the 3rd century CE. In addition, the Dharmaguptakas were important in the development of early Chinese Buddhism, and their *vinaya* (monastic rules) achieved a prominent place as the basis for MONASTICISM in many, if not all, centers of early Chinese Buddhism. Toward the middle of the 7th century the Chinese pilgrim HSÜAN-TSANG made his famous PILGRIMAGE to India in search of Buddhist SCRIPTURES. He wrote that the Dharmaguptaka *vinaya* was one of five *vinaya* still being studied among Buddhist practitioners he encountered, although the school's immediate followers were virtually nonexistent. As a result, by this time, the Dharmaguptakas had ceased to be an important Buddhist sect in India, surpassed by the growing number of SARVĀSTIVĀDIN, MAHĀSĀNGHIKA, and MAHĀYĀNA practitioners.

DHARMAKĪRTI \,dər-mə-'kir-tē-, 'dār-\ (fl. 7th century), Indian Buddhist philosopher and logician. He asserted that inference and direct perception are the only valid kinds of knowledge. According to him, the object of inference is the universal (*sāmānyalakṣaṇa*) and the object of perception—which may be perceived by the five senses, by the mind, by self-consciousness, or by the practice of YOGA—is the pure particular (*svalakṣaṇa*). Dharmakīrti claimed that every person is a transitory being and, in his turn, assumes the continuous existence of an individual.

DHARMA ŚĀSTRA \ 'dər-mə-'shäs-trə-, 'dār-\, also spelled *Dharmaśāstra*, or *Dharmashastra*, *Sanskrit* *Dharma-śāstra*

("Teachings on Proper Conduct"), ancient Indian body of jurisprudence that survives in the family law of Hindus living in territories outside India (e.g., Pakistan, Malaysia, East Africa) and has broader scope, subject to legislative modification, in India itself. *Dharma Śāstra* is not primarily concerned with legal administration, though courts and their procedures are dealt with comprehensively, but with the right course of conduct in every dilemma. Some basic principles of *Dharma Śāstra* are known to most Hindus brought up in a traditional environment. These include the principles that duties are more significant than rights, that women are under perpetual guardianship of their closest male relatives, and that the king (*i.e.*, the state) must protect the subjects from all harm, moral as well as material.

The *Dharma Śāstra* literature, written in Sanskrit, exceeds 5,000 titles. It can be divided into three categories: (1) SŪTRAS (terse maxims); (2) SMṚTIS (shorter or longer treatises in stanzas); and (3) *nibandhas* (digests of *smṛti* verses from various quarters) and *vṛttis* (commentaries upon individual continuous *smṛtis*). The *nibandhas* and *vṛttis* are juridical works intended for legal advisers and exhibit much skill in harmonizing divergent *sūtras* and *smṛtis*.

The techniques of the *Dharma Śāstra* are mainly to state the ancient text, maxim, or stanza and to explain its meaning (where obscure), and to reconcile divergent traditions, if necessary by use of the traditional science of interpretation (MĪMĀṂSĀ). Where possible, *Dharma Śāstra* permits custom to be enforced, if it can be ascertained and if its terms are not repugnant to the principles of life as understood by BRAHMINS (those of the priestly class). Brahmin ethics have given *Dharma Śāstra* its color and provided a test under which many customs of the Hindu peoples could be administered by Hindu kings.

Dharma Śāstra is equal in age to Jewish law, but its sources are more varied and less codified. It differs from Roman law in these respects but especially in its greater continuity and longevity. The British colonial administration in India affected the system of Hindu law by applying the traditional rules in a hard-and-fast way and by introducing the concept of precedent. Rapid social change, following foreign rule, required many adjustments to India's body of Hindu law. There was, for example, no provision in the *Dharma Śāstra* for the development of judicial divorce or the allotting of equal shares to daughters along with sons in their fathers' estate at his death. Hence, first piecemeal and later comprehensive legislation, in 1955–56, altered the system of Indian law administered in the courts. Gradually, as judges lost familiarity with Sanskrit, the ancient texts began to be replaced with contemporary, cosmopolitan juridical and social concepts.

DHARMA SUTRA \,dər-mə-'sü-trə, ,där-, *Sanskrit* Dharma-sūtra ("text on dharma"), in HINDUISM, any of several manuals of human conduct that form the earliest body of religious law. They consist chiefly of strings (SŪTRA) of terse rules regarding human beings in their social, economic, and religious relations. Formulated in prose, they were intended to be committed to memory and expounded orally by teachers. Eventually these rules came to be interspersed with stanzaic verses in various meters, each generally giving the substance of the rule immediately preceding it. The verses themselves became increasingly popular and ultimately led to the appearance of works entirely in verse. These metrical versions of previously existing *Dharma Sūtras* came to be called DHARMA ŚĀSTRAS, though in modern times that term more commonly is used to denote the

whole body of customary rules and observances governing Hindu religious and social life.

DHARMA-ṬHĀKUR \'dər-mə-'tä-kür, 'där-, *also called* Dharma-Rāy, folk deity of eastern India of complex characteristics and obscure origins. Dharma-Ṭhākur is worshiped as the "high god" of a large number of villages of Raṛh, a region that comprises the greater part of modern West Bengal state. Dharma-Ṭhākur has no prescribed form; he is worshiped in the form of stones, as a wooden votive slab, or through a pair of wooden sandals. Among other attributes he is a fertility god and a healer of disease. Worship of him is correlated with SUN WORSHIP, and his annual worship, known as Dharma-pūjā, has been described as a kind of sympathetic magic to bring on the monsoon rains.

Scholars are not agreed on the origins of this worship. Some find in the deity and his worship a degenerate form of the Buddha and Buddhism; others trace the cult and deity to either pre-Aryan or tribal sources. Among the neighboring literate tribal peoples there are a number of cult practices and deities that share some of the characteristics of Dharma-Ṭhākur and his cult. The majesty and exploits of Dharma-Ṭhākur are presented in a major class of works in Bengali literature known as *Dharma-maṅgal*.

DHIKR \'ṭhi-kər, *also spelled* zikr \'zi-kər\ (Arabic: "remembrance," or "mention"), ritual prayer or litany practiced by Muslim mystics (SUFIS) to glorify God and achieve spiritual perfection. Based on the Qur'anic injunctions "Remind yourself [*udhkur*] of your Lord when you forget" (Qur'an 18:24) and "O you who believe! Remember [*udhkurū*] God often" (Qur'an 33:41), the *dhikr* is essentially a "remembering" of God by the frequent repetition of his names. Originally a simple recitation of the QUR'AN and various religious writings among ascetics and mystics, the *dhikr* gradually became a formula (e.g., *lā ilāha illa 'llāh*, "there is no god but God"; *Allāhu akbar*, "God is greatest"; *al-ḥamdu l'illāh*, "praise be to God"; *astaghfiru 'llāh*, "I ask God's forgiveness," *Allāh*; or simply *hū*, "He"), repeated aloud or softly, accompanied by prescribed posture and breathing. As the Sufi brotherhoods (ṬARĪQAS) were established, each adopted a particular *dhikr*, to be recited in solitude following each of the five obligatory daily prayers or as a community. The *ṭarīqas* usually traced their litanies back to MUHAMMAD or one of his Companions through a chain of spiritual authorities. The *dhikr*, like *fikr* (meditation), is a method the Sufi may use to achieve oneness with God.

DHIMMA \'ṭhi-mə\ (Arabic: "protection"), in ISLAM, protected status of non-Muslims within a Muslim state. Strictly speaking, such status is open only to the "People of the Book"—*i.e.*, Jews, Christians, and Zoroastrians. Dhimmis are not citizens, but they are guaranteed the right to life and property and are allowed to practice their religion, though a special tax is often levied and they may be subject to other legal restrictions. The institution has been the basis of official religious toleration within Islamic states.

DHOLĀ \dō-'lā, *also called* Nal Purāṇa, oral epic that is sung in various Hindi dialects in honor of the goddess ŚAKTI and is performed in the western portion of Uttar Pradesh, as well as in parts of Rajasthan, Punjab, and Madhya Pradesh. Two major themes run through *Dhola*: the use of Śākta subjects (*see* ŚĀKTISM) and the incorporation and validation of a much wider range of CASTE and gender images than is common in the dominant Sanskrit epics. Telling the

story of Rājā Nal, his wives Motinī and Damayantī, and his son Dholā, the epic incorporates Śākta elements, for it is the goddess who responds to the devotion of the human actors and resolves the many problems encountered by its human heroes. Another Śākta element is the tantric magic of Nāth yogis that is used by the heroines as they work to resolve the conflicts created by their men. Caste and gender images reflect the multi-caste peasant farming communities where the epic is popular; Rājā Nal's friend and helper is a Gūjar (a herding caste), while as the epic unfolds, Rājā Nal is given or takes on various disguises, as a trader, an acrobat, an oil presser, a charioteer, a cripple, and a woman. These elements in the epic speak to its lower-caste singers (always male) and its rural audiences.

Dholā has recognizable narrative connections to the Nalā-Damayantī story found in the MAHĀBHĀRATA as well as to the Rajasthani ballad known as *Dholā-Mārū*. Portions of the epic are found in chapbook literature, with some printed pieces dating to the late nineteenth century, but it is the oral performances, now also available on commercial tape cassettes, that are its primary form of transmission.

DHŪ AL-FAQĀR \d̥hū-āl-fā-'kār\, in the mythology of ISLAM, the two-pointed magical sword that represents 'ALĪ, fourth CALIPH and son-in-law of MUHAMMAD. Originally owned by an unbeliever, al-'Aṣ ibn Munabbih, Dhū al-Faqār came into Muhammad's possession as booty from the BATTLE OF BADR (624). He in turn passed it on to 'Alī, and the sword, said to have borne an inscription ending in the words *lā yuqṭal Muslim bi-kāfir* ("no Muslim shall be slain for [the murder of] an unbeliever"), eventually rested with the 'Abbāsid caliphs.

As 'Alī's legendary status grew, the importance of his association with Dhū al-Faqār also increased. Particularly in legends surrounding the Battle of Šiffīn (657), Dhū al-Faqār, the two points of which were useful for blinding an enemy, is credited with enabling 'Alī to decapitate or cut in half more than 500 men.

In Muslim countries, fine swords have traditionally been engraved with the phrase *lā sayfa illā Dhū al-Faqār* ("there is no sword but Dhū al-Faqār"), often with the addition *wa lā fatā illā 'Alī* ("and there is no hero but 'Alī").

DHYĀNADEV: see JÑĀNEŚVAR.

DHYĀNI-BUDDHA \d̥yā-nē-'būd-də, -bū-də\, in MAHĀYĀNA and VAJRAYĀNA (Tantric) BUDDHISM, any of a group of five "self-born" buddhas who have existed from the beginning of time, usually identified as VAIROCANA, AKṢOBYHA, Ratnasambhava, AMITĀBHA, and AMOGHASIDDHI.

The five are almost identically represented in art but are distinguished by characteristic colors, symbols, poses of hands, and the directions they face. Each of the five represents one of the five SKANDHAS, or mental and physical aggregates that make up the whole of cosmic as well as individual existence. Most of the other deities in the Buddhist pantheon are related to one of the five buddhas as members of his "family" and reflect his distinguishing characteristics, such as color, direction, and symbol. Each of the "self-born" buddhas is also said to have manifested himself as an

earthly buddha and as a BODHISATTVA. Each has his own consort, mount, sacred syllable, natural element, special sense organ and perception, and symbolic location in the human body.

In order to counter any tendency toward POLYTHEISM suggested by the five-fold scheme, some sects elevated one of the five, usually Vairocana, to the role of ĀDI-BUDDHA (first, or primal, Buddha). Sometimes a sixth deity is worshipped as the Ādi-Buddha. The Lamaist sects of Tibet identify the Ādi-Buddha as Vajradhara; some sects of Nepal give this role to Vajrasattva.

DIAMOND CUTTER SUTRA \sü-trə\, Sanskrit Vajracchedikā-Sūtra, Chinese *Chin-kang Ching*, MAHĀYĀNA Buddhist text that is perhaps the best known of the 18 smaller "Wisdom" texts, which together with their commentaries are known as the PRAJÑĀPĀRAMITĀ. It takes the form of a dialogue between the BUDDHA GOTAMA as teacher and a disciple as questioner. The Chinese translation, *Chin-kang Ching* ("Diamond Sutra"), appeared about 400 CE.

The sutra expresses the *Prajñāpāramitā* emphasis upon the illusory nature of phenomena in these words: "Just as, in the vast ethereal sphere, stars and darkness, light and mirage, dew, foam, lightning, and clouds emerge, become visible, and vanish again, like the features of a dream—so everything endowed with an individual shape is to be regarded." As with most of the shorter (and later) *Prajñāpāramitā* texts, the ideas are not argued or explained but boldly stated, often in striking paradoxes. This, to some extent, is why the sutra is considered the Sanskrit work closest in spirit to the philosophy of ZEN.

DIANA

DIANA \dī-'a-nə\, in ROMAN RELIGION, goddess of wild animals and the hunt, virtually indistinguishable from the Greek goddess ARTEMIS. Her name is akin to the Latin words *dium* ("daylight sky") and *dius* ("lit by daylight"). She was also a goddess of domestic animals. As a fertility deity she was invoked by women to aid conception and delivery. There was probably no original connection between Diana and the moon, but she later absorbed Artemis' identification with both SELENE (Luna) and HECATE, a CHTHONIC (Underworld) deity; hence the characterization *triformis* sometimes used in Latin literature.

The most famous place of worship for the Italian goddess was the grove of Diana Nemorensis ("Diana of the Wood") on the shores of Lake Nemi at Aricia, near Rome. This was a shrine common to the cities of the Latin League. Associated with Diana at Aricia were EGERIA, the spirit of a nearby stream who shared with Diana the guardianship of childbirth, and the hero Virbius, who was said to have been the first priest of Diana's cult at Aricia.

At Rome the most important temple of Diana was on the Aventine. This temple housed the foundation charter of the Latin League and was said to date back to King Servius Tullius (6th century BCE). In her cult there Diana was also considered the protector of the lower classes, especially slaves; the Ides (13th) of August, her festival at Rome and Aricia, was a holiday for slaves. Another important center for the worship of Diana was at Ephesus, where the Temple of Artemis (or Diana) was one of the Seven Wonders of the World. In Roman art Diana usually appears as a huntress with bow and quiver, accompanied by a hound or deer.

DIAN CÉCHT \d'v̄ē-ən-'k'v̄ākt\, one of the TUATHA DÉ DAN-ANN, the gods of Celtic Ireland. He was the physician of the gods and father of Cian, who in turn was the father of the most important god, Lugh (see LUGUS). When NUADU, the king of the gods, had his hand cut off in the battle of MAG TUÍRED, Dian Cécht fashioned him a silver hand that moved as well as a real hand. Dian Cécht's son Miach, however, was able to give Nuadu a functional human hand; Dian Cécht killed his son in a fit of jealousy.

Dian Cécht claimed to be able to restore any man who was mortally wounded. He did this by throwing the wounded into a well and pulling them out alive. This may refer to Celtic ritual involving ritual bathing or drowning.

DIASPORA, JEWISH \dī-'as-pə-rə, dē-\: see ISRAEL.

DIDACHĒ \dī-də-kē\ (Greek: "Teaching"), also called Teaching of the Twelve Apostles, the oldest surviving

Christian church order, probably written in Egypt or Syria in the 2nd century. It presents a general program for instruction and initiation into the primitive church. Chapters 1–6 give ethical instruction concerning the two ways, of life and of death, and reflect an early Christian adaptation of a Jewish pattern of teaching in order to prepare CATECHUMENS (candidates for Christian BAPTISM). Chapters 7–15 discuss baptism, fasting, prayer, the EUCHARIST, how to receive and test traveling apostles and prophets, and the appointment of bishops and deacons. Chapter 16 considers the signs of the SECOND COMING of the Lord.

Some early Christian writers considered the *Didachē* to be canonical. It formed the basis of chapter 7 of the 4th-century APOSTOLIC CONSTITUTIONS, a collection of early Christian ecclesiastical law. It was known only through such references in early Christian works until a Greek manuscript of it, written in 1056, was discovered in Istanbul in 1873 by Philotheos Bryennios (1833–1914), an Eastern Church theologian and METROPOLITAN. From these discoveries, Bryennios published *The Teaching of the Twelve Apostles* (1883), with valuable notes of his own.

DIDO \dī-dō\, also called Elissa \i-'li-sə\, in Greek legend, the reputed founder of Carthage, daughter of the Tyrian king Muto (or Belus), and wife of Sychaeus (or Acerbas).

Her husband having been slain by her brother Pygmalion, Dido fled to the coast of Africa, where she purchased from a local chieftain, Iarbas, a piece of land on which she founded Carthage. The city soon prospered, and Iarbas sought Dido's hand in marriage. To escape from him, Dido constructed a funeral pyre, on

which she stabbed herself before the people. Virgil, however, made Dido a contemporary of AENEAS, whose descendants founded Rome. Dido fell in love with Aeneas after his landing in Africa, and Virgil attributes her suicide to his abandonment of her at the command of JUPITER. Dido was identified with the Virgo Caelestis; i.e., TANIT, the tutelary goddess of Carthage.

DIDYMA \dī-di-mə\, also called Didymi, or Branchidae, ancient SANCTUARY and seat of an oracle of APOLLO, located south of Miletus in modern Turkey. Before being plundered and burned by the Persians (c. 494 BCE), the sanctuary was in the charge of the Branchids, a priestly caste named after Branchus, a favorite youth of Apollo. After Alexander the Great conquered Miletus (334), the oracle was resanctified and the city administered the cult, annually electing a prophet. About 300 BCE the Milesians began to build a new temple, intended to be the largest in the Greek world. The

Dido on her funeral pyre
Culver Pictures

annual festival held there, the Didymeia, became Panhellenic in the beginning of the 2nd century BCE.

DIEVS \ˈdē-əfs\ (Latvian), also called *Debestēvs* \ˈde-bes-ˌtəfs\, Lithuanian *Dievas* \dʲeˈe-väs\, Old Prussian *Deivas*, in BALTIC RELIGION, the sky god. Dievs and LAIMA, the goddess of human fate, determine human destiny and world order. Dievs is a wooer of SAULE, the sun. As pictured by the pre-Christian Balts, he is an Iron Age Baltic king who lives on a farmstead in the sky. Wearing a silver gown, pendants, and a sword, he occasionally rides down to earth, on horseback or in a chariot, to watch over farmers and their crops.

Dievs has two sons (Dieva dēli in Latvian; Dievo sūneliai in Lithuanian), who are known as the Heavenly Twins and the morning and evening stars. Like their Greek (DIOSCURI) and Vedic (Aśvins, or Nāsatyas) counterparts, Dieva dēli are skilled horsemen. They associate with Saules meita, the daughter of the sun, and when she is sinking into the sea with only her crown still visible, they come to her rescue.

In name, Dievs is cognate with the Vedic Dyaus-Pitr, the Latin Dies-piter (JUPITER), and the Greek ZEUS, denoting originally the bright daylight sky. The word *dievs* and its cognates were also used by the ancient Balts to denote god in general and in modern usage refer to the Christian God.

DIGAMBARA \dē-ˈgəm-bə-rə\ (Sanskrit: “Sky-clad”), in JAINISM, one of the two principal sects, whose ascetics, shunning all property, wear no clothes. The ascetics of the other sect, the ŚVETĀMBARA (“White-robed”), wear only simple white loin cloths or robes.

The schism that gave rise to the two sects is traditionally said to have taken place following a migration of Jain monks southward from the Gaṅgā (Ganges) River or from Ujjain to Karnataka during a serious famine in the reign of Candragupta Maurya. Bhadrabāhu, the leader of the emigrants, insisted on the observance of nudity, thus following MAHĀVĪRA, the last of the Jain TĪRTHĀṆKARAS (exemplars). Sthūlabhadra, the leader of the monks who remained behind in the north, allowed the wearing of white garments.

The philosophical doctrines of the two groups never significantly differed, but their members by and large have not intermarried. Since the northern and southern branches lived at a distance from one another, however, variations in their ritual, mythology, and literature did arise. The most serious issue, the question of whether it was possible for a monk who owned property (e.g., wore clothes) to achieve MOKṢA (spiritual release), led to the division into two sects in 80 CE (according to the Śvetāmbaras, 83 CE).

Other points of difference held by the Digambaras are (1) the belief that the perfect saint (*kevalin*) needs no food to stay alive, (2) the belief that Mahāvīra never married, (3) the view that no woman can reach *mokṣa* without being reborn as a man, and (4) the representation in their images of every Tirthāṅkara as always naked, without ornaments, and with downcast eyes. Also, the Digambaras do not recognize the Śvetāmbara canon of religious texts but maintain that the early literature was gradually forgotten and lost completely by the 2nd century CE.

The Digambara influence on various political dynasties in southern India in roughly the 1st millennium CE was considerable, but it diminished in importance as devotional ŚAIVISM and VAIṢṆAVISM grew. The sect continues mainly in southern Maharashtra and Karnataka states.

DIGNĀGA \dig-ˈnā-gə\ (c. 480–540 CE), Buddhist logician and author of the *Pramāṇasamuccaya* (“Compendium of

the Means of True Knowledge”), a work that laid the foundations of Buddhist logic. Dignāga gave a new definition of “perception”: knowledge that is free from all conceptual constructions, including name and class concepts. In effect he regarded only pure sensation as perception. In his theory of inference he distinguished between inference for oneself and inference for the other and laid down three criteria of a valid middle term (*hetu*)—i.e., that it should “cover” the minor premise (*pakṣa*), be present in the similar instances (*sapaṅśa*), and be absent in dissimilar instances (*vīpakṣa*). In his *Hetucakra* (“The Wheel of ‘Reason’”), Dignāga set up a matrix of nine types of middle terms, of which two yield valid conclusions, two contradictory, and the rest uncertain conclusions. Dignāga’s tradition was further developed in the 7th century by DHARMAKĪRTI.

DĪKṢĀ \ˈdēk-shə\, rite of consecration that preceded the sacrifice in the VEDIC RELIGION of ancient India; in later and modern HINDUISM, the term denotes the initiation of a layman by his GURU (spiritual guide) into a religious sect.

In the SOMA sacrifices of the Vedic period, the lay sacrificer, after bathing, kept a daylong (in some cases up to a yearlong) silent vigil inside a special hut in front of a fire. He was dressed in garments of black antelope skin, which he also used to sit on, and at nightfall drank only cooked milk. The TAPAS (mystical heat that was a basis of all Indian ascetic practices) produced was considered to be a sign, and a means, of passing from the realm of the profane to that of the sacred. Like similar rites observed throughout the world, *dīkṣā* also carried with it the meaning of “rebirth,” and the SCRIPTURES describing the ceremony made use of explicit symbolism, such as the “womb” of the hut.

At the end of the *soma* ritual, the sacrificer went through a reverse ceremony, the *avabhṛtha* (“concluding bath”), in which he again bathed, and his sacred garments, the ritual utensils, and the pressed shoots of the *soma* plant were all cast into the water.

In modern Hinduism, rites of consecration and initiation show many regional and sectarian variations. They are generally preceded by preparatory fasting, bathing, and dressing in new clothes and include in the act of initiation the placing of special marks on the body or forehead, taking on a new name, receiving from the preceptor a selected MANTRA (prayer formula), and worship.

DINAH \ˈdī-nə\, in the OLD TESTAMENT (Genesis 30:21; 34; 46:15), daughter of JACOB by Leah; Dinah was abducted and raped near the city of Shechem, by Shechem, son of Hamor the Hivite (the Hivites were a Canaanitish people). Because Shechem then wished to marry Dinah, Hamor suggested to Jacob that their two peoples initiate a policy of commercial and social intercourse. Dinah’s brothers SIMEON and Levi pretended to agree to the marriage and the COVENANT if Shechem and all the other males of the city of Shechem were circumcised. After the operations, while the men were still weakened, Simeon and Levi attacked the city, killed all the males, and freed Dinah.

DĪN-I ILĀHĪ: see AKBAR.

DIOCESE \ˈdī-ə-səs, -sēs, -sēz\, in some Christian churches, a territorial area administered by a BISHOP. The word originally referred to a governmental area in the Roman Empire, governed by an imperial VICAR.

The original unit of ecclesiastical administration was the PARISH, which in the EASTERN ORTHODOX CHURCH still remains

DIOMEDES

the designation of the area administered by the bishop, whereas the diocese is the larger area administered by the PATRIARCH. The use of these terms was fluid in the West until about the 13th century, from which time diocese meant the territory administered by a bishop. In the ROMAN CATHOLIC church only the pope can divide or merge dioceses or create new ones. All dioceses are divided into parishes, each with its own church; dioceses are also sometimes divided into rural deaneries, which contain several parishes.

DIOMEDES \,dī-ə-'mē-dēz\, in Greek legend, commander of 80 Argive ships and one of the most respected leaders in the Trojan War. His famous exploits include the wounding of APHRODITE, the slaughter of Rhesus and his Thracians, and seizure of the sacred image of the goddess ATHENA that protected Troy. After the war Diomedes returned home to find that his wife had been unfaithful (Aphrodite's punishment) and that his claim to the throne of Argos was disputed. He fled to Italy and founded Argyripa (later Arpi) in Apulia, eventually making peace with the Trojans. He was worshiped as a hero in Argos and Metapontum. According to Roman sources, his companions were turned into birds by Aphrodite, and, hostile to all but Greeks, they lived on the Isles of Diomedes off Apulia.

DIONE \dī-'ō-nē\, in Greek mythology, a consort and, in one remote region, cult partner of ZEUS, the king of the gods. Her name is the female form of Zeus. In the *Iliad* she is mentioned as the mother of the goddess APHRODITE by Zeus; in Hesiod's *Theogony*, however, she is simply identified as a daughter of OCEANUS. Other writers identified her as the mother of DIONYSUS.

DIONYSIUS THE AREOPAGITE

\,dī-ə-'ni-shē-əs, -shəs; -'nī-sē-əs... ,ar-ē-'ā-pə-'gīt\ (fl. 1st century CE), biblical figure, converted by St. PAUL THE APOSTLE at Athens (Acts 17:34), who acquired a notable posthumous reputation primarily through confusion with later Christians similarly named. In the 2nd century he was held to have been the first bishop of Athens.

About 500 CE, some writings were forged in his name: The so-called Pseudo-Dionysius, probably a Syrian monk, wrote a series of Greek treatises and letters for the purpose of uniting NEOPLATONIC philosophy with Christian theology and mystical experience. These writings established a Neoplatonic strain in medieval Christian doctrine and spirituality—especially in the Western Latin church—traces of which survive to the present time. Historical research has been unable to identify the author, who could have been one of several Christian writers familiar with the Neoplatonic system of the 5th-century Athenian Proclus.

The treatises "On the Divine Names," "On Mystical Theology,"

"On the Celestial Hierarchy," and "On the Ecclesiastical Hierarchy" comprise the bulk of the Dionysian corpus of writings, supplemented with 10 letters affecting a 1st-century primitive Christian atmosphere. Their doctrinal content forms a complete theology, covering the TRINITY and angelic world, the INCARNATION and redemption, and the last things (see ESCHATOLOGY), and provides a symbolic and mystical explanation of all that is. The system is essentially dialectical, or "crisis" (from the Greek word meaning "crossroads, decision"), theology—*i.e.*, the simultaneous affirmation and denial of paradox in any statement or concept relative to God. God's transcendence above all rational comprehension and categorical knowledge ultimately reduces any expression of the divinity to polar pairs of contraries: GRACE and judgment, freedom and necessity, being and nonbeing, time and eternity. The incarnation of the Word, or Son of God, in JESUS CHRIST, consequently, was the expression in the universe of the inexpressible, whereby the One enters into the world of multiplicity. Still, the human intellect can apply to God positive, analogous terms or names such as The Good, Unity, Trinity, Beauty, Love, Being, Life, Wisdom, or Intelligence, assuming that these are limited forms of communicating the incommunicable.

The "Divine Names" and "Mystical Theology" treat the nature and effects of CONTEMPLATIVE prayer—the disciplined abandonment of senses and intelligible forms to prepare for the immediate experience of "light from the divine darkness" and ecstatic union—in a manner and scope that make them indispensable to the history of Christian theology and piety. His treatises on the hierarchies, wherein he theorized that all that exists—the form of Christian society, the stages of prayer, and the angelic world—is structured as triads that are the images of the eternal Trinity, introduced a new meaning for the term hierarchy.

Dionysus, bas-relief sculpture; in the National Archaeological Museum, Naples
Alinari—Art Resource

DIONYSUS \,dī-ə-'nī-səs, -'nē-\, also called Bacchus \ˈbɑ-kəs, 'bɑ-\, or (in Rome) Liber, in GREEK RELIGION and in ROMAN RELIGION, a god of fruitfulness and vegetation, especially known as a god of wine and ecstatic dance. He was introduced to Greece from Thrace and Phrygia.

According to the most popular tradition, Dionysus was the son of ZEUS and SEMELE, a daughter of CADMUS (king of Thebes). HERA, the wife of Zeus, out of jealousy persuaded Semele to prove her lover's divinity by requesting him to appear in his real person. Zeus complied, but his power was too great for the mortal Semele, who was blasted with thunderbolts. Zeus, however, saved his son by sewing him up in his thigh, keeping him there until he reached maturity. Dionysus was then conveyed by the god HERMES to be brought up by bacchantes (Maenads, or Thyiads).

As Dionysus apparently represented the sap, juice, or lifeblood element in nature, lavish festal or-

gia (rites) called Dionysia (or BACCHANALIA) in his honor were widely instituted. According to tradition, Pentheus, king of Thebes, was torn to pieces by the bacchantes when he attempted to spy on their activities, while the Athenians were punished with impotence for dishonoring the god's cult. Forming *thyasi* (holy bands) and waving *thyrsoi* (fennel wands bound with vine leaves and tipped with ivy), the bacchantes danced by torchlight to the rhythm of the flute and the *tympanum*. While they were under the god's inspiration, they were believed to possess the ability to charm snakes and suckle animals, as well as preternatural strength that enabled them to tear living victims to pieces before indulging in a ritual feast (*omophagia*). The bacchantes hailed the god by his titles of Bromios (Thunderer), Taurokeros (Bull-Horned), or Tauroprosopos (Bull-Faced). The worship of Dionysus flourished in Asia Minor, particularly in Phrygia and Lydia, and his cult was closely associated with that of numerous Asiatic deities.

Although Dionysus was said to have descended to the UNDERWORLD to bring back his mother and was also associated with PERSEPHONE in southern Italy, any original connection between the god and the netherworld seems doubtful. He did, however, possess the gift of PROPHECY, and at DELPHI he was received by the PRIESTHOOD on almost equal terms with APOLLO. He had an oracle in Thrace and was later patron of a healing shrine at Amphicleia in Phocis.

The followers of Dionysus included spirits of fertility, such as the satyrs, and in his ritual the phallus was prominent. He often took on an animalistic shape and was associated with various animals. His personal attributes were an ivy wreath, the THYRSUS, and the kantharos, a large two-handled goblet. In early art he was represented as a bearded man, but later he was portrayed as youthful. Bacchic revels were a favorite subject with vase painters, though the private lodges of BACCHUS were rigorously suppressed throughout Italy by senatorial edict in 186 BCE.

DIOSCURI \dī-ə-'skūr-ē, -'skyūr-; dī-'ās-kūr-ē, -kyūr- \ (from Greek: *Dioskouroi*, "Sons of Zeus"), also called Castor and Pollux, or Castor and Polydeuces, in Greek and Roman mythology, twin deities who aided shipwrecked sailors and received sacrifices for favorable winds. They were the children of LEDA and either ZEUS or Tyndareus, Leda's husband. According to some versions, Castor was the son of Tyndareus and thus a mortal, while Pollux was the son of Zeus.

The twins were renowned for their athletic ability. When Castor died, Pollux refused immortality in which his brother had no share. Zeus allowed them to remain together alternately in the heavens and the netherworld. Later he transformed them into the constellation Gemini.

The introduction of their cult at Rome goes back traditionally to 484 BCE. The building of their temple in the Forum followed a vow of Aulus Postumius at the battle of Lake Regillus, where, according to legend, the Dioscuri fought on the side of the Romans and carried the news of victory to Rome. In art the twins are represented as two youths, usually horsemen, holding spears and wearing helmets; their image appeared on early Roman coins.

DISCIPLES OF CHRIST, group of Protestant churches that originated in the religious revival movements of the American frontier in the early 19th century. The three major bodies are the Churches of Christ, the Christian Church (Disciples of Christ), and the Undenominational Fellowship of Christian Churches and Churches of Christ. Related churches exist outside the United States. All have attempt-

ed to restore what they believe to be the "ancient order" of the church and have repudiated "human creeds."

The Great Western Revival (1801) produced a variety of religious movements dedicated to overcoming the barriers of denominationalism through a return to primitive CHRISTIANITY. Two of these movements, located on the trans-Appalachian frontier and associated with the names of Thomas and ALEXANDER CAMPBELL and Barton W. Stone, merged in 1832 to become the Disciples of Christ. The new denomination grew rapidly with the frontier.

Despite the merger, the essential program of the Disciples—the unity of all Christians on the basis of NEW TESTAMENT faith and practice—failed to unite a divided PROTESTANTISM, and, in fact, proved to be divisive even within the movement. For the segment of Disciples that was to become the Churches of Christ, that platform meant that every aspect of faith, organization, and worship had to conform to New Testament prescription or precedent. Hence when societies for MISSIONS and for the publication of tracts appeared around 1849, and when churches began using reed organs during worship, charges of unscriptural innovation were raised. A division emerged during and after the American Civil War and was formally ratified by a request from the conservatives for a separate listing in the 1906 U.S. census (*see* CHRIST, CHURCH OF).

Following a very different path, the Christian Church (Disciples of Christ) gradually abandoned its primitivist platform and advocated instead a program of unity based on an already existing and generally recognized common faith in Christ. This branch of Disciples is the most widely known of the three. It participates in the National Council of Churches and the WORLD COUNCIL OF CHURCHES and generally supports the positions of these organizations. In 1985 the Disciples of Christ entered into an ecumenical partnership with the United Church of Christ.

While some congregations have experimented with liturgical forms, typical Christian Church worship still generally retains the basic elements of prayer, singing, preaching, and a weekly memorial observance of the Lord's Supper.

A number of congregations tracing their roots to the Disciples movement neither claim affiliation with the Christian Church (Disciples of Christ) denomination nor reject the use of musical instruments in worship. Most of these congregations continue to hold to a "Restoration" program. They began to separate from the Christian Church (Disciples of Christ) during and after World War I over such issues as ecumenical cooperation in missions, BIBLICAL CRITICISM, and the rising influence of liberal theology. As early as the 1920s alternative strategies for overseas missions were developed, Bible colleges were established to prepare a ministry true to the Restoration tradition, and in 1927 a separate annual gathering, the North American Christian Convention, was called. The division was formalized in the late 1960s when the Christian Church (Disciples of Christ) underwent restructuring, and many conservative congregations formally withdrew. As a group they continue to reject denominational status, retaining their group identity as a "movement" mainly through periodicals, annual conventions, and Bible colleges and seminaries.

The World Convention of Churches of Christ remains the only institutional manifestation of the common Disciples of Christ heritage. Organized in 1930, it meets every five years for worship and fellowship.

DIS PATER \dīs-'pā-tər- \ (Latin: "Rich Father"), in ROMAN RELIGION, god of the infernal regions, the equivalent of the

DITCH, BATTLE OF THE

Greek HADES, or PLUTO (Rich One). Also known to the Romans as ORCUS, he was believed to be the brother of JUPITER. His wife, Proserpina (a Roman adaptation of the Greek PERSEPHONE), was identified with vegetation, being regarded as a goddess of death during her annual sojourn in the Underworld and of abundance during her term in the upper regions. Caesar claimed that the Celtic Gauls believed themselves to be descendants of Dis Pater.

DITCH, BATTLE OF THE, *Arabic* Al-Khandaq ("The Ditch"), early Muslim victory that ultimately forced the authorities at MECCA to recognize the political and religious strength of the Muslim community in MEDINA.

A Meccan army of 3,000 men had defeated the undisciplined Muslim forces at Uḥud, near Medina, in 625, wounding MUHAMMAD himself. In March 627, when they had persuaded a number of Bedouin tribes to join their cause, the Meccans brought a force of 10,000 men against Medina. Muhammad then resorted to tactics unfamiliar to the Arabs, who were accustomed to brief, isolated raids. Rather than sally out to meet the enemy in the usual way, he had a ditch dug around Medina (according to tradition he did so at the suggestion of a Persian convert, Salmān). The Meccan horsemen were disconcerted and soon bored, and the coalition of Bedouin tribes started breaking up. After an unsuccessful siege the Meccans dispersed. With the Muslim and Meccan forces now more evenly matched and the Meccans tiring of a war that was damaging their trade, Muhammad used his victory to negotiate greater concessions for the Muslims in a treaty at al-Ḥudaybiyya (628).

DĪVĀLĪ \di-'vā-lē, -'wä-, also spelled Diwālī, or Dīpāvali, one of the major religious festivals in HINDUISM, celebrated in India over a five-day period from the 13th day of the dark half of the lunar month Āśvina to the 2nd day of the light

half of Kārttika. (The corresponding Gregorian dates usually fall in late October.) The name is derived from the Sanskrit term *dīpāvali*, or row of lights, for the lights that are lit on the new-moon night to bid the presence of LAKṢMĪ, the goddess of wealth. In Bengal, however, the goddess KĀLĪ is worshipped, and in northern India the festival also celebrates the return of RĀMA, SĪTĀ, Lakṣmaṇa, and HANUMĀN to the city of AYODHYA, where Rāma's rule of righteousness would commence.

During the festival, small earthenware lamps filled with oil are lighted and placed in rows along the parapets of temples and houses and set adrift on rivers and streams. The fourth day—the main Dīvālī festival day and the beginning of the lunar month of Kārttika—marks the beginning of the new year according to the Vikrama calendar. Merchants perform religious ceremonies and open new account books. It is generally a time for visiting, exchanging gifts, decorating houses, feasting, and wearing new clothes. Gambling is encouraged at this season, as a way of ensuring good luck for the coming year and in remembrance of Lord SHIVA and PĀRVATĪ'S games of dice played on Mount Kailāsa, or similar contests between RĀDHĀ and KRISHNA. Ritually, in honor of Lakṣmī, the female partner always wins.

Dīvālī is also an important festival in JAINISM. For the Jain community, many of whose members belong to the merchant class, the day commemorates the passing into NIRVANA of MAHĀVĪRA, the most recent of the Jain TĪRTHĀṆKARAS. The lighting of the lamps is explained as a material substitute for the light of holy knowledge that was extinguished with Māhavira's passing. Since the 18th century Dīvālī has been celebrated in SIKHISM as the time GURŪ HARGOBIND returned to AMRITSAR from a supposed captivity in Gvalior—apparently an echo of Rāma's return to Ayodhya. Residents of Amritsar are said to have lit lamps throughout the city to celebrate the occasion.

DIVINATION, the practice of determining the hidden significance or cause of events by various natural, psychological, and other techniques. Found in all civilizations and in all areas, it is known in the Western world primarily in the form of ASTROLOGY.

Divinatory methods may be classified as inductive, interpretive, or intuitive. Inductive and interpretive divination are performed by inference from external facts. Manipulated accident is the essential dramatic element of interpretive divination. A diviner may randomly toss a bunch of selected objects on the ground and foretell the future by interpreting the final alignment of the objects where they fall. The casting of lots was common in classical antiquity and survives in the throwing of dice. The use of lots and number lore requires consultation of the I CHING in Chinese tradition.

In haruspication (the inspection of entrails), in scapulimancy (divination by the scapula, or shoulder blade), and in divination by footprints in ashes, the diviner foretells the future by interpreting the visual appearance or condition of a particular object or objects. In the case of AUGURY and OMENS, the behavior and cries of birds, encounters with ominous animals, and so on are interpreted. Astrology, based upon observation of the heavenly bodies, is an inductive divining method of great antiquity. Other phenomena commonly subject to such interpretation include dreams, weather, and sequences of cards (*e.g.*, TAROT cards).

Intuitive divination depends for its results on sensory or motor automatism or mental impressions. The prototype of the intuitive diviner is the SHAMAN who employs trance

Barotse basket diviner, who shakes various objects in a winnowing basket and interprets their final juxtaposition to determine the source and outcome of an illness

By courtesy of the Livingstone Museum, Republic of Zambia

states—either spontaneous, self-induced, or drug-induced—to achieve contact with superior forces and thereby gain insight into the future. Among sensory automatisms, crystal gazing is used to induce visions of future events. The OUIJA BOARD is a popular method of motor automatism.

DIVINE, FATHER, also called Major J. Devine, byname of George Baker (b. 1877?, Hutchinson's Island, near Savannah, Ga., U.S.—d. Sept. 10, 1965, Philadelphia, Pa.), American religious leader who in 1919 founded the PEACE MISSION movement.

Baker began preaching in Baltimore, Md., where he became known as “The Messenger” among his followers. After briefly returning to Georgia, he moved to New York City in 1915. He adopted the name Major J. Devine (later Divine) shortly thereafter and in 1919 established his first “heaven,” or communal dwelling, in Sayville, Long Island, N.Y. His predominantly African-American following expanded rapidly in the 1930s and '40s, and more “heavens” were provided in other cities. Father Divine was regarded by his followers as God, and he did not permit them to smoke, drink liquor, or use cosmetics. The movement declined after his death.

DIVYĀVADĀNA \ˈdi-,vyä-və-ˈdä-nə\ (Sanskrit: “Divine Avadāna”), important anthology of AVADĀNA (legendary material centering on the Buddha's explanations of events by a person's worthy deeds in a previous life) of the SARVĀSTIVĀDA (“Doctrine That All Is Real”) school. The *Divyāvadāna* consists of 38 legends, including some about the great Buddhist emperor AŚOKA. In the Buddhist chronicles of Sri Lanka and the works of the northern Buddhist tradition—the *Divyāvadāna* and the *Aśokāvadāna*—he is extolled as a Buddhist emperor par excellence whose sole ambition was the expansion of BUDDHISM.

DOCETISM \dō-ˈsē-ti-zəm, ˈdō-sə-\ (from Greek *dokein*, “to seem”), in CHRISTIANITY, a HERESY and one of the earliest sectarian doctrines, affirming that Christ did not have a real or natural body during his life on earth but only an apparent or phantom one. Though its incipient forms are alluded to in the NEW TESTAMENT, such as in the Letters of John [e.g., 1 John 4:1–3; 2 John 7], Docetism became more fully developed as an important doctrinal position of Gnosticism, developed from speculations about the imperfection or essential impurity of matter. More thoroughgoing Docetists asserted that Christ was born without any participation of matter and that all the acts and sufferings of his life, including the CRUCIFIXION, were mere appearances. They consequently denied Christ's RESURRECTION and ASCENSION into heaven. Milder Docetists attributed to Christ an ethereal and heavenly body but disagreed on the degree to which it shared the real actions and sufferings of Christ.

DODONA \dō-ˈdō-nə\, ancient SANCTUARY of the chief Greek god, ZEUS, in Epirus, Greece; the ceremonies held there had many remarkable and abnormal features. The earliest mention of it is in the *Iliad* (xvi, 234), where its priests are called the Selloi (or Helloi) and are described as “of unwashed feet, sleeping on the ground.” Homer (*Odyssey*, xiv, 327) was the first to mention the oracle at Dodona. A tree (or trees) was reputed to give oracles, presumably through the rustling of its leaves and other sounds. Herodotus mentions priestesses, whom he describes as the givers of the oracles, doubtless under the god's inspiration. A further peculiarity of Dodona was the “bronze,” a large gong

set vibrating at every breeze by a scourge held in the hand of a figure standing over it; the persistent ringing passed into a Greek proverbial phrase—*Khalkos Dōdōnēs* (“Brass of Dodona”)—for a continuous talker who has nothing to say.

DŌGEN \ˈdō-gen\, also called Jōyō Daishi \ˈjō-yō-ˈdi-shē\, or Kigen Dōgen \kē-ˈgen-\ (b. Jan. 19, 1200, Kyōto, Japan—d. Sept. 22, 1253, Kyōto), Japanese Buddhist who introduced ZEN to Japan in the form of the SŌTŌ school.

Dōgen was ordained a monk at 13 and studied the holy SCRIPTURES OF BUDDHISM on MOUNT HIEI, the center of Tendai (T'ĪEN-T'AI) Buddhism, without, however, fully satisfying his spiritual aspirations. Between 1223 and 1227 he studied meditation in China and gained enlightenment under the Zen master Ju-ching. Back in Japan again, he lived at various temples and worked for the spread of Zen practice. He spent his last years at Eihei Temple, which he founded. His first literary work, *Fukan zazen gi* (1227; “General Teachings for the Promotion of Zazen”), contains a brief introduction to the Zen practice. His chief work, *Shōbōgenzō* (1231–53; “Treasury of the True Dharma Eye”), containing 95 chapters and written over a period of more than 20 years, consists of his elaboration of Buddhist principles.

DOLMEN \ˈdōl-mən, ˈdōl-, ˈdäl-\, prehistoric monument usually consisting of several stone slabs set edgewise to support a flat roofing stone. Designed as a burial chamber, the structure is typical of the Neolithic Period in Europe. Dolmens, although found in covered form as far east as Japan, are mainly confined to Europe, the British Isles, and northern Africa.

DOME OF THE ROCK, Arabic Qubbat al-ṣakhra, also called Mosque of Omar, shrine in Jerusalem that is the oldest extant Islamic monument. The rock over which the shrine was built is sacred to both Muslims and Jews. In ISLAM, the Prophet MUHAMMAD is traditionally believed to have ascended into heaven from the site. In the tradition of JUDAISM, it is here that ABRAHAM, the progenitor and first PATRIARCH of the Hebrew people, is said to have prepared to sacrifice his son ISAAC. The Dome and the AL-AQṢĀ MOSQUE are both located on the Temple Mount, which was previously the site of Solomon's Temple and its successors (see JERUSALEM, TEMPLE OF), an area known to Muslims as *al-ḥaram al-sharīf* (the Noble Sanctuary).

The Dome of the Rock was built between 685 and 691 CE by the CALIPH ʿAbd al-Malik ibn Marwān as a MASHHAD, a shrine for pilgrims modeled after Christian *martyria*. It is rich with mosaic, faience, and marble, much of which was added several centuries after its completion. Basically octagonal, a wooden dome—approximately 60 feet in diameter and mounted on an elevated drum—rises above a circle of 16 piers and columns. Surrounding this circle is an octagonal arcade of 24 piers and columns. The outer walls repeat this octagon, each of the eight sides being approximately 60 feet wide and 36 feet high. Both the dome and the exterior walls contain many windows.

Its elaborate mosaics and Qur'anic inscriptions suggest that its original purpose was to openly declare Islamic doctrine about JESUS as a prophet, not the Son of God, and to display the Muslim triumph over the Byzantine and Persian empires. Christians and Muslims in the Middle Ages believed the Dome itself to be the Temple of SOLOMON (Templum Domini). The Knights TEMPLARS were quartered there in the Crusades, and Templar churches in Europe im-

Dome of the Rock in Jerusalem, built 685–691

D. Edwards—FPG

itated its plan. During the 20th century it became a symbolic focal point for the Palestinian nationalist cause against the Israeli government.

DOMINIC, SAINT \ˈdä-mə-nik\ (b. c. 1170, Caleruega, Castile—d. Aug. 6, 1221, Bologna, Romagna; canonized July 3, 1234; feast day August 8), founder of the Order of Friars Preachers (O.P., also known as the DOMINICANS), a religious order of MENDICANT friars.

Domingo de Guzmán was born in Castile, possibly a year or two later than 1170, the traditional date. He studied at Palencia and then joined the canons regular (a religious community attached to the cathedral of a DIOCESE) of Osma about 1196. In 1203, Diego, bishop of Osma, took Dominic with him on a royal mission abroad.

This journey first made Dominic aware of the threat posed by the HERESY of the ALBIGENSES, or CATHARI, and their Manichaean teaching that two supreme beings rule spirit and matter respectively, so that whatever concerns the body—eating, drinking, procreation—is essentially evil, and the ideal is the renunciation of these things and even of life itself. Local feudal lords, especially the count of Toulouse, supported the Albigenses.

In 1206 the papal legates and preachers, depressed at their failure to convert the heretics back to orthodoxy, consulted the bishop and Dominic, who reasoned that the heretics would be regained only by an austerity equal to their own; preachers must tramp the roads barefoot and in poverty. This was the birth of Dominic's "evangelical preaching." A key part of his campaign was the establishment of a CONVENT of nuns at Prouille, formed in 1206 from a group of women converted from the heresy.

In 1208 the papal legate, Peter de Castelnau, was murdered by an emissary of the Count of Toulouse. A civil war ensued until 1213, when the Catholic party won. The Catholic party entered Toulouse, and Dominic and his friends were welcomed by the bishop, Foulques, and established as "diocesan preachers" in 1215.

From Foulques's charter in that year, Dominic's design for an order devoted to preaching developed rapidly. In 1215

he went to Rome with Foulques (bound for the Fourth LATERAN COUNCIL) to lay his plans before the pope, who, however, recommended adoption of the rule of one of the existing orders. (It was, perhaps, at this time that Dominic met FRANCIS OF ASSISI, and the friendship of the two saints is a strong tradition in both orders.) In the summer of 1216 Dominic was back at Toulouse conferring with his companions, now 16 in number. This meeting has been called the *capitulum foundationis* ("chapter, or meeting, of foundation"). The rule of St. Augustine was adopted, as well as a set of *consuetudines* ("customs") concerning the divine office, monastic life, and religious poverty; these are still the core of Dominican legislation. In July, INNOCENT III died, and his successor, Honorius III, granted Dominic formal sanction of his order.

In 1217 Dominic sent his men to Paris and to Spain, leaving two each at Toulouse and Prouille, while he and another went to Bologna and Rome. He placed his two principal houses near the universities of Paris and Bologna and decided that each of his houses should form a school of theology. This at once determined the role that the Dominicans would play in university studies.

At PENTECOST in 1220 the first general chapter of the order was held at Bologna, and a system of democratic representative government was devised. At the second general chapter, held on Pentecost in 1221, also at Bologna, the order was divided geographically into provinces.

Dominic was gifted in being able to conceive his ideal, to form his men to that ideal, and then to trust them completely. His leadership had great clarity of vision, firmness of command, and certainty of execution. Yet it was said that his gentleness was such that anyone who came to speak to him, even for reproof, went away happier.

DOMINICAN \də-ˈmi-ni-kən\, *byname* Black Friar, member of Order of Friars Preachers, one of the four great MENDICANT orders of the ROMAN CATHOLIC church, founded by St. Dominic in 1215. For a history of the order during Dominic's life, see DOMINIC, SAINT.

From the beginning the order has been a synthesis of the CONTEMPLATIVE life and the active ministry. The members live a community life, and a careful balance is maintained between democratically constituted chapters and strong but elected superiors. In contrast to the monastic orders that predated it, the Dominican order was not a collection of autonomous houses; it was an army of priests, organized in provinces under a master general. The individual belonged to the order, not to any one house, and could be sent anywhere at any time about its business; this innovation has served as a model for many subsequent bodies.

Within 40 years of the order's foundation, talented members were concentrated in the schools at Paris, Bologna, Cologne, and Oxford. Originally students of theology only, they were led by ALBERTUS MAGNUS and his pupil THOMAS AQUINAS to a study of the newly available works of Aristotle that had been transmitted to Europe by Muslim scholars, and to the integration of philosophy and theology. Meanwhile, the Dominicans pursued their vocation of preaching.

St. Dominic, detail of a 15th-century panel, in the National Archaeological Museum, Palermo, Italy
Anderson—Alinari from Art Resource

In southern France they spoke out against the ALBIGENSES and, in Spain and elsewhere, against the Moors and Jews. They evangelized in northern and eastern Europe, in the eastern Mediterranean, and in India. When the INQUISITION was established, Dominicans were entrusted with its execution. They were among the first and most energetic missionaries under the Spanish and Portuguese explorers and later under the French.

The Dominican order has continued its unswerving orthodoxy, based upon the teaching of Aquinas, and has steadfastly opposed novelty or accommodation in theology. The 19th and 20th centuries saw a tremendous development of congregations of Dominican sisters engaged in teaching, nursing, and charitable works.

DOMOVOY \də-mə-'vɔɪ\, in Slavic myth and folklore, a household spirit appearing under various names and having its origin in ANCESTOR WORSHIP. A *domovoy* dwells in any number of places in each home: near the oven, under the doorstep, in the hearth. He never goes out beyond the boundaries of the household.

The *domovoy* is the guardian of the family and its wealth, but he is partial to conscientious and hard-working people. Any displeasure the *domovoy* feels with the actions of its family is displayed in troubles with the farm animals or in strange knocks and grating noises in the house. These

last, however, could just be the *domovoy* amusing himself. He can, in any case, be easily placated.

The *domovoy* sees to it that the various traditional properties are observed. He can foresee the future, and his groans and weeping or singing and jumping are interpreted as portents of evil or good. No household would consider moving to a new location without formally inviting the *domovoy* to join it. Similar to the *domovoy* are the *ovinnik*, which inhabits the drying-house, and the *gumenik*, which occupies the storehouse.

DÔN \ˈdɒn\, the Welsh counterpart of the Irish goddess DANU, a Celtic mother-goddess. In the Irish tales Danu is the mother of the race of gods, while Dôn in the Welsh MAB-INOIGION is mentioned as the mother of some of the more important characters and the sister of the magician-king MATH. Dôn's children included GWYDION, a master of magic, and Arianrhod. It was Arianrhod who was the mother of Llew Llaw Gyffes (Llew of the Dextrous Hand)—who is probably the Welsh form of the pan-Celtic deity LUGUS—and Dylan, who is presumably a god of the sea. Neither Gwydion nor Arianrhod seem to be very moral characters; for example, Arianrhod gives birth to Dylan and Llew during a test of her virginity.

DONATISM \ˈdɒ-nə-ti-zəm, ˈdä-\, Christian movement in North Africa that broke with the Roman church in 312 over the election of Caecilian as bishop of Carthage. The name derived from their leader, Donatus (d. c. 355). The Donatists opposed state interference in church affairs, and, through the peasant warriors called Circumcellions, they had a program of social revolution combined with eschatological hopes. Martyrdom following a life of penance was the goal of the religiously minded Donatist. Despite almost continuous pressure from successive Roman, Vandal, and Byzantine rulers of North Africa, the Donatist church survived until the extinction of CHRISTIANITY in North Africa in the 7th century.

The ultimate causes of the SCHISM were both doctrinal and social. Throughout the 3rd century the African church had regarded itself as a body of the ELECT. A corollary of this view was the belief that the validity of sacerdotal acts depended on the presence of the HOLY SPIRIT in the minister and that a minister who was not in a state of GRACE could not administer a valid SACRAMENT.

In 311 Caecilian was elected bishop, but he was opposed by many because he allowed himself to be consecrated by a *traditor* bishop (one who had surrendered copies of SCRIPTURE to the authorities during Emperor Diocletian's persecution of Christians, beginning in 303). The PRIMATE of Numidia, Secundus of Tigisi, who had acquired in the previous 40 years the right of consecrating the bishop of Carthage, arrived in Carthage with 70 bishops and in solemn council declared Caecilian's election invalid.

The new emperor, CONSTANTINE the Great, ordered arbitration of the controversy. A commission of bishops under the bishop of Rome found Caecilian innocent of all charges on Oct. 2, 313. Donatus, who was the other candidate for bishop, appealed. Constantine summoned another council of bishops and again Caecilian was upheld and his position strengthened by a canon that ORDINATION was not invalid if it had been performed by a *traditor*. Despite further appeals by Donatus and his supporters, Constantine gave a final decision in favor of Caecilian in November 316.

The schism did not die out. In May 321 Constantine grudgingly granted toleration to the Donatists. The move-

ment gained strength for several years, but in August 347 Emperor Constans I exiled Donatus and other leaders to Gaul, where Donatus died about 355.

When Julian the Apostate became emperor in 361, the exiled Donatists returned to Africa and were the majority Christian party for the next 30 years. Their opponents, however, now led by St. AUGUSTINE OF HIPPO, gained strength, and in 411 a council decided against the Donatists and for the Catholics. In 412 and 414 severe laws denied the Donatists civil and ecclesiastical rights; however, the Donatists expected hostility from the world and, thus, persecution did not obliterate the movement.

DÖNME \dɔn-'me, Angl ,dɔn-'mä\, also spelled Dönme (Turkish, literally, "convert"), sect of JUDAISM founded in Salonika (now Thessaloníki, Greece) in the late 17th century, after the conversion to ISLAM of SHABBETAI TZEVI, whom the sectarians believed to be the MESSIAH. The Dönme, who numbered about 15,000 in the late 20th century, are found primarily in Istanbul, Edirne, and İzmir, Turkey.

Shabbetai Tzevi had proclaimed himself the Messiah in 1648 and quickly gained financial support and a considerable following among Jews throughout the Holy Land, Europe, and North Africa. Early in 1666 he was arrested by Ottoman Turks and, faced with the choice of conversion or death, accepted Islam by the end of the year. The Dönme believed that the conversion of Shabbetai Tzevi was a step in the fulfillment of the messianic PROPHECY. They therefore also converted to Islam but secretly practiced various Judaic rites, preserved some knowledge of Hebrew, kept secret Hebrew names, forbade intermarriage with the Muslim population, and conducted their marriage and funeral rites in secret. Internally they split into a number of subsects, reflecting social distinctions and disputes over the successors to Shabbetai.

At the turn of the 20th century the Dönme, well represented in the professional classes, took an active part in the Young Turk movement and the revolution of 1908. After the Greco-Turkish War of 1921–22 the central Dönme community of Thessaloníki was moved to Istanbul, and a gradual process of assimilation set in. Contact with Jews was lost, and the Dönme themselves resisted Jewish attempts to return them to Judaism.

DORT, SYNOD OF \ˈdɔrt\, assembly of the REFORMED CHURCH of the Netherlands that met at Dort (in full Dordrecht) from Nov. 13, 1618, to May 9, 1619. The SYNOD tried to settle disputes concerning ARMINIANISM. In 1610 the Dutch followers of JACOBUS ARMINIUS presented a Remonstrance in five articles that contained their theological views; thus, Dutch Arminians were also called REMONSTRANTS. They rejected the strict Calvinist doctrine of PREDESTINATION, the doctrine that God elects or chooses those who will be saved. Those who opposed the Remonstrants were the Gomarists, the followers of Franciscus Gomarus, a Dutch theologian who upheld a rigid CALVINISM.

The synod was attended by Gomarist Dutch delegates and also by delegates from Reformed churches in Germany, Switzerland, and England. The opening sessions dealt with a new Dutch translation of the BIBLE, a CATECHISM, and the censorship of books. The synod then called upon Remonstrants to express their beliefs, but they refused to accept the rules of the synod and eventually were expelled.

The synod then studied the theology of the Remonstrants and declared that it was contrary to SCRIPTURE. The canons of Dort were produced; they discussed the errors of

the Remonstrants that were rejected as well as the doctrines that were affirmed. The doctrines affirmed were that predestination is not conditional on belief; that Christ did not die for all; the total depravity of man; the irresistible GRACE of God; and the impossibility of falling from grace.

DOXOLOGY, an expression of praise to God. In Christian worship there are three common doxologies:

1. The greater doxology, or Gloria in Excelsis, is the Gloria of the ROMAN CATHOLIC and ANGLICAN masses, and in its hundreds of musical settings it is usually sung in Latin. It is used in the Roman Catholic liturgy in a contemporary translation and, often in older translations, in many Anglican, Lutheran, and other Protestant worship services. The Latin text, from the *Roman Missal*, follows:

◆ *Gloria in excelsis Deo. Et in terra pax hominibus bonae voluntatis. Laudamus te. Benedicimus te. Adoramus te. Glorificamus te. Gratias agimus tibi propter magnam gloriam tuam. Domine Deus, Rex caelestis, Deus Pater Omnipotens. Domine Fili unigenite Jesu Christe. Domine Deus, Agnus Dei, Filius Patris. Qui tollis peccata mundi, miserere nobis. Qui tollis peccata mundi, suscipe deprecationem nostram. Qui sedes ad dexteram Patris, miserere nobis. Quoniam tu solus sanctus. Tu solus Dominus. Tu solus altissimus, Jesu Christe. Cum sancto Spiritu, in gloria Dei Patris.*

Amen. ◆

The modern Roman Catholic English version reads:

◆ **Glory to God in the highest, and peace to his people on earth. Lord God, heavenly King, almighty God and Father, we worship you, we give you thanks, we praise you for your glory. Lord Jesus Christ, only Son of the Father, Lord God, Lamb of God you take away the sin of the world: have mercy on us; you are seated at the right hand of the Father: receive our prayer. For you alone are the Holy One, you alone are the Lord, you alone are the Most High, Jesus Christ, with the Holy Spirit in the glory of God the Father.**

Amen. ◆

2. The lesser doxology, or Gloria Patri, is used in most Christian traditions at the close of the psalmody:

◆ **Glory be to the Father, and to the Son, and to the Holy Spirit, as it was in the beginning, is now, and ever shall be, world without end.**

Amen. ◆

3. Metrical doxologies are usually variations upon the Gloria Patri. The most familiar in English is by the 17th-century Anglican bishop and hymn writer Thomas Ken:

◆ **Praise God, from whom all blessings flow;
Praise him, all creatures here below;
Praise him above, ye heavenly host;
Praise Father, Son, and Holy Ghost.**

Amen. ◆

Most Protestant churches use this form, often in conjunction with the presentation of TITHES and offerings.

DRAMA AND RELIGION, the presentation in theatrical form of religious concepts or the reenactment of events from the history or mythology of a religion. Historians agree that drama emerged from religious ritual. At what point ritual became drama is uncertain, but drama is first known in the context of ancient Greek Dionysiac festivals. Religious festivals gave rise to drama by reenacting the passion and trials of a god or human-god. In Christian Europe, biblical plays were attached to particular festivities, notably the FEAST OF CORPUS CHRISTI. The story of the assassination of the 7th-century Shi'ite hero AL-HUSAYN IBN 'ALI, grandson of the Prophet MUHAMMAD, was enacted at the Muslim festival of *tā'ziyah*.

With the disappearance of classical theater in the West, drama was reborn in the Middle Ages within the ROMAN CATHOLIC church. From early times, dramatic elements were introduced into church offices; from this practice liturgical drama sprang. Performances took place inside churches, with the cast of clergy moving from place to place in the sanctuary. At first only Latin was used, though occasionally vernacular verses were included. Stories from the BIBLE and lives of the saints were dramatized, but as the scope of the dramas broadened, more plays were performed outside the church and in the vernacular. Mystery plays, which enacted biblical episodes, and miracle plays, which offered a depiction of a saint's life, also developed.

The religious drama of ancient Greece, the temple drama of early India and Japan, the mystery cycles of medieval Europe, all have in common more than their religious content: when the theater is a place of worship, its drama goes to the roots of belief in a particular community. The dra-

matic experience becomes a natural extension of one's life both as an individual and as a social being.

DREAMING, THE, also called Dream-Time, or World Dawn, *Australian Aboriginal languages* Altjira, Altjiranga, Alcheringa, Wongar, or Djugurba, in the religion of Australian Aboriginal peoples, a mythological period of time that had a beginning but no foreseeable end, during which the natural environment was shaped and humanized by the actions of mythic beings. Many of these beings took the form of human beings or of animals; some changed their forms. They were credited with having taken long journeys and having established the local social order. Some were responsible for creating human life. In the Dreaming, humanity is regarded as part of nature, not fundamentally dissimilar to the mythic beings or to the animal species, all of which share a common life force.

Mythic beings of the Dreaming are eternal. Although in the myths some were killed or disappeared beyond the boundaries of the people who sang about them, and others metamorphosed into features such as rocky outcrops or waterholes or were manifested as, or through, ritual objects, their essential quality remained undiminished. In Aboriginal belief, they are spiritually as much alive today as they ever were. The places where the mythic beings were believed to have performed some action or were turned into something else became sacred centers of ritual.

The expressions "Dreaming" or "Dream-Time" are approximate translations of *aljerreŋe*, a word in Aranda (an Aboriginal language spoken in the vicinity of Alice Springs in the Northern Territory), formed from *aljerre*, "dream," and *-ŋe*, "of, from."

DRESDEN CODEX \ˈdrez-dən-ˈkɒ-deks\; see MAYA CODICES.

DREXEL, SAINT KATHARINE (b. Nov. 26, 1858, Philadelphia, Pa., U.S.—d. March 3, 1955, Cornwells Heights, Pa.; canonized Oct. 1, 2000; feast day March 3), American missionary. The niece of banker and philanthropist Anthony J. Drexel, she inherited a vast fortune, which she used to fund her charitable enterprises. She built mission schools in Minnesota, South Dakota, Wyoming, and New Mexico. In 1887 POPE LEO XIII asked her to become a missionary. In 1891 she founded the Blessed Sacrament Sisters for Indians and Colored People (now Sisters of the Blessed Sacrament), a congregation of missionary nuns dedicated to the welfare of Native Americans and African-Americans. She established several schools for minority students as well as Xavier University in New Orleans (1915). She was canonized in 2000.

DRUID, member of the learned class among the ancient Celts. They seem to have acted as priests, teachers, and judges. The earliest known records of the Druids come from the 3rd century BCE.

Julius Caesar is the chief source of information about the Druids, but he may have received some of his information from the Stoic philosopher Poseidonius, whose account is often confirmed by early medieval Irish sagas. According to Caesar, there were two groups of men in Gaul that were held in honor, the Druids and the noblemen. The Druids took charge of public and private sacrifices, and many young men went to them for instruction. They judged all public and private quarrels and decreed penalties. If anyone disobeyed their decree, he was barred from sacrifice, which was considered the gravest of punishments. One Druid was

In an example of a religious drama, a scene from a 1960 performance of the Passion play at Oberammergau in which Christ appears before Pilate and Herod
Bavaria-Verlag, Munich

made the chief; upon his death, another was appointed. If several were equal in merit, the Druids voted, although they sometimes resorted to violence. Once a year they assembled at a sacred place in the territory of the Carnutes, which was believed to be the center of all Gaul.

Caesar also recorded that the Druids were exempt from warfare and paid no tribute. Attracted by those privileges, many joined the order voluntarily or were sent by their families. They studied ancient verse, natural philosophy, astronomy, and the lore of the gods, some spending as much as 20 years in training. The Druids' principal doctrine was that the soul was immortal and passed at death from one person into another.

The Druids were said to offer HUMAN SACRIFICES for those who were gravely sick or in danger of death in battle. Huge wickerwork images were filled with living men and then burned; although the Druids preferred to sacrifice criminals, they would choose other victims if necessary.

The Druids were suppressed in Gaul by the Romans under Tiberius (reigned 14–37 CE) and probably in Britain a little later. In Ireland they lost their priestly functions after the coming of CHRISTIANITY and survived as poets, historians, and judges. Some scholars believe that the Hindu BRAHMIN in the East and the Celtic Druid in the West were lateral survivals of an ancient Indo-European PRIESTHOOD.

DRUZE \ˈdruːz/, also spelled *Druse*, Arabic plural *Durūz*, singular *Darazī*, originating in ISLAM, a Middle Eastern religious sect characterized by an eclectic system of doctrines and by a cohesion and loyalty among its members that have enabled them to maintain through almost a thousand years of turbulent history their close-knit identity and distinctive faith. They numbered about 1,000,000 in the early 21st century and lived mostly in Lebanon and Syria, with smaller communities in Israel and Jordan. They call themselves MUWAḤḤIDŪN (“unitarians”).

The Druze permit no conversion from or to their religion, and no intermarriage. Their religious system is kept secret not only from outsiders but in part even from their own number; only an elite of initiates, known as ʿUQĀL (“knowers”), participate fully in the services and have access to the secret teachings of the *ḥikma*, the Druze religious doctrine. In times of persecution a Druze is allowed to deny his faith outwardly if his life is in danger. This concession, or TAQĪYA, is granted by *al-Taʿlīm* (“Instruction”), the anonymously written “catechism” of Druze faith.

It is not known to what extent the Druze were self-conscious and distinct before adopting their present religion. Druze religious beliefs developed out of Ismāʿīlī teachings. Various elements of JUDAISM, CHRISTIANITY, GNOSTICISM, NEO-PLATONISM, and Iranian religion, however, are combined under a doctrine of strict MONOTHEISM. Propagation of the new religion began in Cairo in 1017 CE, led by Ḥamza ibn ʿAlī; it is from the name of Ḥamza’s subordinate, Muhammad ad-Darazī, that the group derives its name. The Druze maintain a doctrine of the soteriological divinity of AL-ḤĀKIM bi-Amr Allāh (“Ruler by the Command of Allāh”), the sixth CALIPH (996–1021) of the Fātimid dynasty of Egypt, whom they call al-Ḥākīm bi-Amrih (“Ruler by His Own Command”). The Druze believe that al-Ḥākīm did not die but vanished and will one day return in triumph to inaugurate a golden age.

During the 20th century, the Druze gained representation in the Lebanese parliament, allied themselves with the Baʿth party in Syria, and, unlike other Arabs, served voluntarily in the Israeli army. See also ISMĀʿĪLĪS.

DUALISM, in religion, belief in two supreme opposed powers or gods, or sets of divine or demonic beings, that control the world. Dualism is a phenomenon of major importance in the religions of the ancient world.

A certain kind of dualism is implied in many religions by the simple fact that the sacred is often considered to be radically different from and opposed to the profane. HINDUISM, for instance, posits an eternal dialectical tension between ultimate reality and the illusory world of phenomena. In Chinese TAOISM the entire inventory of opposing principles in the world is embraced in the dualistic doctrine of YIN-YANG.

In terms of MYTHOLOGY, most polytheistic religions recognize a class of supernatural beings (such as DEMONS, TITANS, or monsters) that are different from and antagonistic to the gods. Even within a single pantheon there may be noted a tension and a conflict between the celestial and the terrestrial or CHTHONIC gods (e.g., the AESIR and the VANIR in Germanic mythology), or between constructive and destructive deities (e.g., OSIRIS and SETH in EGYPTIAN RELIGION).

Another very characteristic type of religious dualism, exemplified in numerous cosmogonies worldwide, explains the introduction of evil into a previously perfect universe. In ancient Persia, ZOROASTER proclaimed an irreducible opposition between AHURA MAZDĀ, the Wise Lord (or Ormazd), and Angra Mainyu, the Evil Spirit (or AHRIMAN). According to Zoroaster, Ahriman freely chose to do evil, thus bringing misery, illness, and death into the world. Later Zoroastrianism presented Ormazd and Ahriman as two coeternal principles of good and evil—the Creator and the Destroyer. MANICHAISM adopted this valuation and blended it with the movement’s own myth of corrupted creation.

Under the influence of Iranian ESCHATOLOGY, some dualistic elements found their way into Jewish apocalyptic literature, but only in subordination to absolute MONOTHEISM. Although CHRISTIANITY accepts a radical difference between GOOD AND EVIL, it rejects a metaphysical dualism. The NEW TESTAMENT utilizes some old dualistic formulas, but in a different sense, denoting antithetical phases in the history of salvation.

DUBNOW, SIMON MARKOVICH \ˈdüb-nōf\ (b. Sept. 10, 1860, Mstislavl, Russia [now in Belarus])—d. December 1941, Riga, Latvia, U.S.S.R.), Jewish historian who introduced a sociological emphasis into the study of Jewish history, particularly that of eastern Europe.

Simon Dubnow, 1921

By courtesy of the YIVO Institute for Jewish Research, New York

Early in his life, Dubnow ceased to practice Jewish rituals. He later came to believe that his vocation as a historian of JUDAISM was as true to the faith of his ancestors as were the Talmudic studies of his piously Orthodox grandfather. Largely a self-educated man who supported himself as a teacher and writer, in 1882 he began his long association with the Russian-Jewish periodical *Vos-*

khod ("Rising"), to which he contributed many of his most famous scholarly and literary works. He left Russia in 1922 because of his hatred for Bolshevism and settled in Berlin. In 1933 he fled Germany because of the anti-Jewish policies of the Nazi government and sought refuge in Riga. He was killed during the deportation of most of Riga's Jewish population to extermination camps.

Dubnow was one of the first scholars to subject HASIDISM to systematic study; this work appeared in *Geschichte des Chassidismus* (1931; "History of Hasidism"). The mature fruit of Dubnow's historical studies is his monumental *Die Weltgeschichte des jüdischen Volkes*, 10 vol. (1925–30; "The World History of the Jewish People"; Eng. trans. *History of the Jews*), which is notable for its scholarship and cognizance of social and economic currents in Jewish history. According to Dubnow, the Jews possess the distinctive characteristics of a cultural nationality and as such create their own forms of autonomous social and cultural life. As a cultural nationalist Dubnow rejected Jewish assimilation but at the same time believed that political ZIONISM was messianic and unrealistic.

DUKHA \ˈdük-kə\ (Pāli), *Sanskrit* Duḥkha ("sorrow," "suffering," or "imperfection"), in Buddhist thought, the true nature of all existence. Suffering, its reality, cause, and means of suppression, formed the subject of the BUDDHA'S first sermon on the FOUR NOBLE TRUTHS. Recognition of the fact of suffering as one of three basic characteristics of existence—along with impermanence (ANICCA) and the absence of a self (*anattā*)—constitutes the "right knowledge" that is the first step on the EIGHTFOLD PATH that leads ultimately to enlightenment (NIRVANA). Three types of suffering are distinguished: they result, respectively, from torment, such as old age, sickness, and death; from the absence of pleasure; and from the necessity of giving up what one loves and has become attached to, because of the inescapable transitory quality of all phenomena.

DUMUZI-ABZU \ˈdü-mü-zē-ˈäb-zü\, in MESOPOTAMIAN RELIGION, Sumerian deity, city goddess of Kinirsha near Lagash in the southeastern marshland region. She represented the power of fertility and new life in the marshes. Dumuzi-Abzu corresponded to the Sumerian god Dumuzi of the central herding area, and thus around Eridu she was viewed as male and as son of Enki (Akkadian: EA, also called the Lord of Apsu).

DUMUZI-AMAUSHUMGALANA \ˈdü-mü-zē-ä-mä-ˈü-shüm-gä-ˈlä-nä\, in MESOPOTAMIAN RELIGION, Sumerian deity especially popular in the southern orchard regions and later in the central grassland area. He was the young bridegroom of the goddess Inanna (Akkadian: ISHTAR), a fertility figure sometimes called the Lady of the Date Clusters. As such, he represented the power of growth and new life in the date palm. In Erech the marriage of Inanna, in her role as goddess of the storehouse, to Dumuzi-Amaushumgalana was essentially a harvest festival. Dumuzi-Amaushumgalana was essentially a form of Dumuzi, the Sumerian god of fertility and reproduction.

DUNS SCOTUS, JOHN \ˈdanz-ˈskō-təs\, *Latin given name* Joannes (b. c. 1266, Duns, Lothian, Scot.—d. Nov. 8, 1308, Cologne), influential FRANCISCAN realist philosopher and scholastic theologian.

Little is known of the life of Duns Scotus. Early 14th-century manuscripts offer little more than that John Duns

was a Scot, from Duns, who belonged to the English province of FRIARS MINOR (the order founded by FRANCIS OF ASSISI), that "he flourished at Cambridge, Oxford, and Paris and died in Cologne."

Jurisdictionally, the Scots belonged to the Franciscan province of England, whose principal house of studies was at the University of Oxford, where Duns Scotus apparently spent 13 years (1288–1301) preparing for inception as master of theology. He was ordained in 1291. From a date mentioned in the work's prologue, it is clear that in 1300 Duns Scotus was already at work on his monumental Oxford commentary on PETER LOMBARD'S *Sentences*, known as the *Ordinatio* or *Opus Oxoniense*. By June of 1301 he had completed all the requirements for the mastership in theology.

When the turn came for the English province to provide a candidate for the Franciscan chair of theology at the more prestigious University of Paris, Duns Scotus was appointed. One *reportatio* of his Paris lectures indicates that he began commenting on the *Sentences* there in the autumn of 1302 and continued to June 1303. Before the term ended, however, the university was affected by the feud between King Philip IV the Fair and Pope BONIFACE VIII. Scotus remained loyal to the pope and was exiled from France.

Where Duns Scotus spent the exile is unclear. He was back in Paris before the summer of 1304, for he was the bachelor respondent in the *disputatio in aula* (public disputation) when his predecessor, Giles of Ligny, was promoted to master. Duns Scotus was assigned as Giles' successor.

The period following Duns Scotus' inception as master in 1305 was one of great literary activity. Aided by associates and secretaries, he set to work to complete his *Ordinatio* and the less extensive but equally important *Quaestiones quodlibetales*—discussions of 21 questions organized under two main topics, God and creatures. Duns Scotus' renown depends principally on these two major works. The short but important *Tractatus de primo principio*, a compendium of what reason can prove about God, draws heavily upon the *Ordinatio*.

In 1307 Duns Scotus was appointed professor at Cologne. He may have been sent there for his own safety. Scotus pioneered the classical defense of the doctrine that MARY, the mother of JESUS, was conceived without ORIGINAL SIN (the IMMACULATE CONCEPTION); some felt, however, that this doctrine conflicted with the doctrine of Christ's universal redemption. Though his brilliant defense of the Immaculate Conception marked the turning point in the history of the doctrine, it was immediately challenged by secular and DOMINICAN colleagues. The secular master Jean de Pouilly, for example, declared the Scotist thesis not only improbable, but even heretical—this at a time when Philip IV the Fair had initiated HERESY trials against the wealthy Knights TEMPLARS. There seems to have been something hasty about Duns Scotus' departure for Cologne in any case. He lectured there until his death.

Duns Scotus left his *Ordinatio* and *Quodlibet* unfinished. Eager pupils completed the works, substituting materials from *reportationes examinatae* for the questions Duns Scotus left undictated. The critical Vatican edition begun in 1950 is aimed, among other things, at reconstructing the *Ordinatio* as Duns Scotus left it, with all his corrigenda, or corrections.

Despite their imperfect form, Duns Scotus' works were widely circulated. His claim that universal concepts are based on a "common nature" in individuals was one of the central issues in the 14th-century controversy between Realists and Nominalists. His strong defense of the PAPACY

DURAN, SIMEON BEN ZEMAH

against the divine right of kings made him unpopular with the English Reformers of the 16th century for whom “dunce” (a Dunsman) became a word of obloquy, yet his theory of intuitive cognition suggested to JOHN CALVIN, the Genevan Reformer, how God may be “experienced.”

DURAN, SIMEON BEN ZEMAH \dü-'rän\, also called (by acronym) Rashbaz \räsh-'bäth\ (b. 1361, Majorca, Balearic Islands [now part of Spain]—d. 1444, Algiers [Algeria]), first Spanish Jewish RABBI to be paid a regular salary by the community and author of an important commentary on *Avot* (“Fathers”), a popular ethical tractate in the TALMUD. Before the 14th century the rabbinical post had been almost invari-

buffalo-demon. The DURGĀ-PŪJĀ, held annually in her honor, is one of the great festivals of northeastern India.

DURGĀ-PŪJĀ \'dūr-gä-'pū-jä\, in HINDUISM, one of the greatest festivals of northeastern India, held annually in September–October in honor of the goddess DURGĀ. Special images of the goddess are made that are worshiped for nine days, then immersed in water, all accomplished with large processions and much public and private festivity.

DURKHEIM, ÉMILE \dü-'kem, Angl 'därk-'hīm\ (b. April 1858, Épinal, France—d. Nov. 15, 1917, Paris), French social scientist, widely regarded as the founder of the French school of sociology.

Durgā killing the demon Mahiṣāsura, watercolor; in the Victoria and Albert Museum, London

Art Resource

ably honorary; Duran set a precedent in accepting a salary. His commentary *Magen Avot* (“The Shield of the Fathers”), which influenced the great medieval Jewish philosopher JOSEPH ALBO, is important for reducing the THIRTEEN ARTICLES OF FAITH of MOSES MAIMONIDES (1135–1204) to three essential dogmas: the existence of God, the divine origin of Jewish law, and the reality of divine reward and retribution.

DURGĀ \'dūr-gä\ (Sanskrit: “the Inaccessible”), in the mythology of HINDUISM, a principal form of the Goddess DEVĪ or ŚAKTI, and the wife of SHIVA. According to legend, Durgā was created for the slaying of the buffalo-demon Mahiṣāsura, by BRAHMĀ, VISHNU, Shiva, and the lesser gods who were otherwise powerless to overcome him. Embodying their collective energy (*śakti*), she is in one sense derivative from the male divinities and in another the true source of their inner power, and greater than any of them. Durgā was born fully grown and beautiful; nevertheless, she presents a fierce menacing form to her enemies. She is usually depicted riding a lion (sometimes shown as a tiger) and with 8 or 10 arms, each holding the special weapon of one or another of the gods, who gave them to her for her battle against the

teacher of philosophy at the state secondary schools of Sens, Saint-Quentin, and Troyes between 1882 and 1887. In 1887 he was appointed as lecturer at the University of Bordeaux, where he subsequently became professor and taught social philosophy until 1902.

In truth, Durkheim’s vital interest did not lie in the study for its own sake of so-called primitive tribes, but rather in the light such a study might throw on the present. Much of what he thought and wrote stemmed from the events that he witnessed in his formative years. The latter half of the 19th century in France had seen the collapse of the Second Empire, the rise of the Paris Commune, the bloody repressions that followed the Commune’s fall, and the later resurgence of nationalism and ANTI-SEMITISM. Durkheim was one of several young philosophers and scholars who became convinced that progress was not the necessary consequence of the development of science and technology. He perceived around him the prevalence of anomie, a personal sense of rootlessness fostered by the absence of social norms. Material prosperity set free greed and passions that threatened the equilibrium of society. Durkheim’s earlier works, including his doctoral thesis, *De*

la division du travail social (1893; *The Division of Labor in Society*), and *Le Suicide* (1897; *Suicide*), articulated this view that ethical and social structures were being endangered by the advent of technology and mechanization.

The Dreyfus Affair—resulting from the false charge against a Jewish officer, Alfred Dreyfus, of spying for the Germans—erupted in the last years of the century, and the slurs aimed at Jews opened Durkheim's eyes to the latent hatred hitherto half concealed under the varnish of civilization. He took an active part in the campaign to exonerate Dreyfus. He was not elected to the Institut de France, although his stature as a thinker suggests that he should have been. He was, however, appointed to the University of Paris in 1902 and made a full professor there in 1906.

More and more, the sociologist's thought became concerned with education and religion as the two most potent means of reforming humanity or of molding the new institutions required by the deep structural changes in society. He participated in numerous committees to prepare new curriculums and methods; worked to enliven the teaching of philosophy, which too long had dwelt on generalities; and attempted to teach teachers how to teach.

An important work of Durkheim's latter years dealt with the origin and nature of religion under the title of *Les Formes élémentaires de la vie religieuse* (1915; *The Elementary Forms of the Religious Life*). This text remains a classic in the study of religion; its thesis is that the object of religion is social life. It begins with a summary of theories and definitions of the ORIGIN OF RELIGION and ends with a brilliant reflection on the relation between SCIENCE AND RELIGION. Durkheim founded the SOCIOLOGY OF RELIGION, a discipline which taught that religion, including both belief and practice, was a representation in symbolic form of society. His DEFINITION OF RELIGION entailed both cognitive and moral elements and thus also established what is now known as the sociology of knowledge. Durkheim thought that the origin of religion could be found in the institution called "totemism." Although Lévi-Strauss showed that this institution does not exist, Durkheim's book remains a monument in both sociology and the STUDY OF RELIGION.

The outbreak of World War I came as a cruel blow to Durkheim. His only son was killed in 1916, while fighting on the Balkan front. Durkheim died in November 1917.

Durkheim left behind him a brilliant school of researchers, including his nephew, MARCEL MAUSS. With Durkheim, sociology had become in France a seminal discipline that broadened and transformed the study of law, economics, linguistics, ethnology, art history, and history.

DVAITA \ˈdvi-tə\ (Sanskrit: "Dualism"), important school in the orthodox Hindu philosophical system of VEDĀNTA. Its founder was MADHVA, also called Ānandatīrtha (13th century). Already during his lifetime Madhva was regarded by his followers as an incarnation of the wind god Vāyu, who had been sent to earth by the lord VISHNU to save the good, after the powers of evil had sent the philosopher ŚAMKARA, an important proponent of the ADVAITA ("Nondualist") school.

In his expositions, Madhva maintains that Vishnu is the supreme God, thus identifying the BRAHMAN of the UPANISHADS with a personal God. There are in Madhva's system three eternal, ontological orders: that of God, that of soul, and that of inanimate nature. The existence of God is demonstrable by logic, though only SCRIPTURE teaches his nature. He is the epitome of all perfections and possesses a nonmaterial body, which consists of *saccidānanda* (being, spirit, and bliss). God is the efficient cause of the universe,

but Madhva denies that he is the material cause, for God cannot have created the world by splitting himself nor in any other way, since that contradicts the doctrine that God is unalterable; in addition, it is blasphemous to accept that a perfect God changes himself into an imperfect world.

Individual souls are countless in number and are of atomic proportions. They are a "portion" of God and exist completely by the grace of God and are totally subject to Him.

Ignorance, which for Madhva as for many other Indian philosophers means mistaken knowledge (*ajñāna*), can be removed or corrected by means of devotion (BHAKTI). Devotion can be attained in various ways: by solitary study of the scriptures, by performing one's duty without self-interest, or by practical acts of devotion. This devotion is accompanied by an intuitive insight into God's nature.

The present-day following of Dvaita is centered in a monastery at Udipi, in Karnataka state, which was founded by Madhva himself and has continued under an uninterrupted series of abbots.

DVIJA \ˈdvi-jä\ (Sanskrit: "twice-born"), in the Hindu social system, members of the three upper VARNAS, or social classes—the BRAHMINS (priests and teachers), KṢĀTRIYA (warriors), and VAISYA (merchants)—whose sacrament of initiation is regarded as a second or spiritual birth. The initiation ceremony (UPANAYANA) invests the male CASTE members with a sacred thread, a loop worn next to the skin over the left shoulder and across the right hip. The lowest Hindu *varṇa*, the SUDRA, and people whose status eludes the four-*varṇa* system altogether are regarded by it as theoretically ineligible to study or even to listen to the VEDAS. However, a vital tradition of protest against this and similar ideas has long existed in India. The position of women in the *dviija* system is anomalous. On the one hand, women are clearly marked by caste; on the other, high-caste women are not considered eligible for Vedic study according to traditional canons. Especially since the 19th century, increasing numbers of such women have challenged the traditional view, becoming students of Sanskrit and Vedic subjects, notably in India's public institutions of higher learning, chanting Vedic verses, and even offering their services as specialists in Brahminical rituals.

DYBBUK \ˈdi-bək\, in Jewish FOLKLORE, a disembodied human spirit that, because of former SINS, wanders restlessly until it finds a haven in the body of a living person. Belief in such spirits was especially prevalent in 16th–17th-century eastern Europe. It was believed that only a miracle-working RABBI (BA'AL SHEM) could expel the harmful dybbuk through a religious rite of EXORCISM.

Isaac Luria (1534–72), laid the grounds for Jewish belief in a dybbuk with his doctrine of transmigration of souls (*gilgul*), which he saw as a means whereby souls could continue their task of self-perfection. His disciples went one step further with the notion of possession by a dybbuk.

DZIADY \ˈjä-də\, in SLAVIC RELIGION, all the dead ancestors of a family, the rites that are performed in their memory, and the day on which those rites are performed. *Dziady* take place three or four times a year; they are generally celebrated in the winter before the beginning of ADVENT and in the spring on the Sunday of Doubting THOMAS. A funeral feast (*pominki*) is prepared and attended by the family; the *dziady* themselves are addressed and invited to join their kinsmen. The *dziady*, however, are not considered family guardians and are never asked for favors or protection.

EA ʿā-ä (Akkadian), *Sumerian* Enki ʿen-kē, in MESOPOTAMIAN RELIGION, god of water and a member of the triad of deities completed by ANU (Sumerian An) and BEL (ENLIL). From a local deity worshiped in the city of Eridu, Ea evolved into a major god, Lord of Apsu, the fresh waters beneath the earth (although Enki means literally “lord of the earth”). In the Sumerian myth known as “Enki and the World Order,” Enki is said to have fixed national boundaries and assigned gods their roles. In another, Enki is the creator, having devised men as slaves to the gods. In his original form, as Enki, he was associated with semen and amniotic fluid, and therefore with fertility. He was commonly represented as a half-goat, half-fish creature, from which the modern astrological figure for Capricorn is derived.

Ea, the Akkadian counterpart of Enki, was the god of ritual purification: ritual cleansing waters were called “Ea’s water.” Ea governed the arts of SORcery and incantation. In some stories he was also the forgiving god, and thus the patron of craftsmen and artists; he was known as the bearer of culture. As adviser to the king, Ea was a wise god although not a forceful one. In Akkadian myth, he appears frequently as a clever mediator who could be devious and cunning. He is also significant in Akkadian mythology as the father of MARDUK, the national god of Babylonia.

EARTH MOTHER, in ancient and modern nonliterate religions, the eternally fruitful source of all things. The Earth Mother is not necessarily a specific source of vitality who must periodically undergo sexual intercourse, but is simply the mother; there is nothing separate from her. All things come from her, return to her, and are her.

The Earth Mother may transcend all specificity and sexuality, manifesting herself in any form. In other mythological systems, however, she may become the feminine earth, consort of the masculine sky; she is fertilized by the sky in the beginning and brings forth terrestrial creation. In some agricultural traditions she is simply the earth and its fertility.

EASTER, *Latin and Greek* Pascha (from Hebrew: *Pesah*, “Passover”), principal festival of the Christian church year, celebrating the RESURRECTION of JESUS CHRIST on the third day after his CRUCIFIXION. The origins of Easter date to the beginnings of CHRISTIANITY, and it is probably the oldest Christian observance after the SABBATH (originally observed on Saturday, later on Sunday); the Sabbath subsequently came to be regarded as the weekly celebration of the Resurrection. According to the Anglo-Saxon historian BEDE, the name *Easter* (Old English: *ēastre*) was taken from the name of a Germanic spring goddess Eostre, though evidence for such a deity is not otherwise known.

Date of Easter. Western Christians celebrate Easter on the first Sunday after the full moon (the paschal moon) that occurs upon or next after the vernal equinox (taken as March 21). If the paschal moon, which is calculated from a

system of golden numbers and epacts and does not necessarily coincide with the astronomical full moon, occurs on a Sunday, Easter day is the succeeding Sunday. Easter, therefore, can fall between March 22 and April 25. This rule was fixed after much controversy and uncertainty. In the EASTERN ORTHODOX church, however, a slightly different calculation is followed, with the result that the Orthodox Easter, although sometimes coinciding with that of the West, can fall one, four, or five weeks later.

Religious observances. The festival of Easter occurs on a particular Sunday, but its importance is emphasized in the worship of the church by the long preparation of LENT, by HOLY WEEK, with its solemn services, and by the following 50 days until PENTECOST (Whitsunday). Easter is central to the whole Christian year; not only does the entire ecclesiastical calendar of movable feasts depend upon its date but the whole liturgical year of worship is arranged around it. In the liturgical texts the emphasis is laid on its being the Christian PASSOVER (the time of redemption).

By the time that the Christian liturgy had begun to take shape (2nd century), the Sunday EUCHARIST was preceded by a vigil service of SCRIPTURE readings and psalms. In this must be seen the origin of the Easter Vigil service; from being a weekly observance the vigil has turned into an annual one at Easter only. As it is now constituted in the ROMAN CATHOLIC missal, this vigil consists of the blessing of the new fire (a practice introduced during the early Middle Ages); the lighting of the paschal candle; a service of lessons, called the prophecies; followed by the blessing of the font and BAPTISMS and then the MASS of Easter. A similar form is used in some Lutheran and Anglican churches.

The connection of baptism with Easter is of early date. During the church’s first centuries the whole of Lent was not only a time of penance but also the period during which the CATECHUMENS were prepared for baptism, which was given only once a year, at Easter. The catechuminate came to an end with the solemn baptisms of the Easter vigil. This is the explanation of the present practice of the long ceremony of blessing the font on Easter night and of the great emphasis on baptism and its meaning and the many allusions to it still present in the Easter services.

Among the Eastern Orthodox and Russian Orthodox churches, perhaps even greater emphasis is laid on the central position of Easter. The vigil service is preceded by a PROCESSION outside the church representing a fruitless search for the body of Christ. Then comes the joyful announcement, “Christ is risen,” followed by the Easter Eucharist. When the procession first leaves the church, there are no lights anywhere, but on its return hundreds of candles and colored lamps are lighted to show the splendor of Christ’s Resurrection.

In PROTESTANTISM, Easter Sunday observances are the culminating point of a series of services held during Holy Week, beginning with PALM SUNDAY. It is customary for the

Ea (seated) and attendant deities, Sumerian cylinder seal, c. 2300 BCE

By courtesy of the Pierpont Morgan Library, New York

Sacrament of Holy Communion to be administered during Holy Week, but the time of its observance varies. Many Protestant churches hold joint interdenominational GOOD FRIDAY services, prepared under the auspices of the local ministerial association. These services in many communities center on the traditional seven last “words” (or sayings) of Christ and are conducted from 12:00 noon to 3:00 PM with choirs and clergy of the participating denominations. This interdenominational pattern culminates in the Easter dawn service. The origin of the sunrise service is not known, but it would appear to be rooted in the Gospel narratives describing the Resurrection of Christ—*e.g.*, John 20, “Now on the first day of the week, Mary Magdalene came to the tomb early, while it was still dark.”

Popular customs. Around the Christian observance of Easter as the climax of the liturgical drama of Holy Week and Good Friday, folk customs have collected, many of which have been handed down from the ancient symbolism of European and Middle Eastern pre-Christian spring festivals brought into relation with the resurrection theme. These customs have taken a variety of forms, in which, for example, eggs, formerly forbidden to be eaten during Lent, have been prominent as symbols of new life and resurrection. Thus, brightly colored or decorated eggs are hidden for children to find on Easter morning.

EASTERN ORTHODOXY, one of the major branches of CHRISTIANITY, characterized by its continuity with the apostolic church, its liturgy, and its territorial churches.

Eastern Orthodoxy is the large body of Christians who follow the faith and practices defined by the first seven ecumenical councils. The official designation of the church in Eastern Orthodox liturgical or canonical texts is “the Orthodox CATHOLIC Church.” Because of the historical links of Eastern Orthodoxy with the Eastern Roman Empire and Byzantium (Constantinople), however, in English usage it is referred to as the “Eastern” or “Greek Orthodox”

church. These terms are sometimes misleading, especially when applied to Russian or Slavic churches and to the Orthodox communities in western Europe and America.

The SCHISM between the churches of the East and the West (1054) was the culmination of an estrangement that began in the first centuries of the Christian Era. At the time of the Schism of 1054, the membership of the Eastern Orthodox Church was spread throughout the Middle East, the Balkans, and Russia, with its center in Constantinople. The vicissitudes of history have greatly modified the internal structures of the Orthodox church, but, even today, the bulk of its members live in the same geographic areas. Missionary expansion toward Asia and emigration toward the West, however, have helped to

maintain the importance of Orthodoxy worldwide.

The Orthodox church is a fellowship of “autocephalous” churches (governed by their own head bishops), with the Ecumenical PATRIARCH of Constantinople holding titular or honorary primacy. The number of AUTOCEPHALOUS CHURCHES has varied. Today there are many: the Church of Constantinople (Istanbul), the Church of Alexandria (Egypt), the Church of Antioch (with headquarters in Damascus, Syria), and the churches of Jerusalem, Russia, Ukraine, Georgia, Serbia, Romania, Bulgaria, Cyprus, Greece, Albania, Poland, the Czech Republic and Slovakia, and America. Several are de facto national churches, by far the largest being the Russian Church; however, it is not the criterion of nationality but rather the territorial principle that is the norm of organization in the Orthodox church.

All Orthodox credal formulas, liturgical texts, and doctrinal statements affirm the claim that the Orthodox church has preserved the original apostolic faith. The Orthodox church recognizes as ecumenical the seven councils of NICAEA (325), CONSTANTINOPLE (381), EPHESUS (431), CHALCEDON (451), CONSTANTINOPLE (553), CONSTANTINOPLE (680), and NICAEA (787) but considers that the decrees of several other later councils also reflect the same original faith (*e.g.*, the councils of Constantinople that endorsed the theology of ST. GREGORY PALAMAS in the 14th century). Finally, it recognizes itself as the bearer of an uninterrupted living tradition of true Christianity that is expressed in its worship, in the lives of the saints, and in the faith of the whole people of God. When expressing the beliefs of his church, the Orthodox theologian, rather than seeking literal conformity with any of these particular confessions, will rather look for consistency with SCRIPTURE and tradition, as it has been expressed in the ancient councils, the early Fathers, and the uninterrupted life of the liturgy.

The Greek Fathers of the church always implied that the phrase found in the biblical story of the creation of man (Genesis 1:26), according to “the image and likeness of

EASTERN RITE CHURCH

God," meant that humans are not autonomous beings and that their ultimate nature is defined by relation to God, the human "prototype." Thus, the concept of SIN implies separation from God and the reduction of humans to a separate and autonomous existence, one deprived of both natural glory and freedom. In this perspective, "original sin" is understood not so much as a state of guilt inherited from Adam but as an unnatural condition of human life that ends in death. From this vicious circle of death and sin, humans are understood to be liberated by the death and RESURRECTION of JESUS CHRIST, which is actualized in BAPTISM and the sacramental life in the church. Hence the aim of the Christian is communion with God and deification. The church is regarded as a communion in which God and humans meet and a personal experience of divine life becomes possible.

The stress on Jesus Christ's identity with the preexistent Son of God, the LOGOS (Word) of the Gospel According to John, characterizes Orthodox Christology. Similarly, the liturgy consistently addresses the Virgin MARY as THEOTOKOS ("God-Bearer"); this term reflects the doctrine of Christ's unique divine Person, and Mary is thus venerated only because she is his mother "according to the flesh." The theopaschite formula ("God suffered in the flesh") became a standard of orthodoxy in the Eastern church, especially after the second Council of Constantinople (553). It implied that Christ's humanity was indeed real not only in itself but also for God, since it brought him to death on the cross, and that the salvation and redemption of humanity can be accomplished by God alone—hence the necessity for him to condescend to death, which held humanity captive.

Normally, the content of the Orthodox liturgy is directly accessible to the faithful through use of vernacular language in the liturgy, though liturgical conservatism leads to the preservation of antiquated languages. The liturgies of ST. JOHN CHRYSOSTOM and of ST. BASIL THE GREAT are most generally used in Orthodox worship. These liturgies differ only in the text of the eucharistic canon: their overall structures, established in the high Middle Ages, are identical. The church recognizes seven *mysteria*, or "SACRAMENTS": baptism, chrismation, communion, holy orders, penance, anointing of the sick (the "extreme unction" of the medieval West), and marriage. The underlying sacramental theology of the church is based on the notion that the ecclesiastical community is the unique *mysterion*, of which the various sacraments are the normal expressions.

EASTERN RITE CHURCH, also called Eastern Catholic church, any of a group of Eastern Christian churches that trace their origins to various ancient national or ethnic Christian bodies in the East but have established union or canonical communion with the Roman Apostolic See and, thus, with the ROMAN CATHOLIC church. In this union they accept the Roman Catholic faith, keep the seven SACRAMENTS, and recognize the POPE of Rome as supreme head of the church. The special status of the Catholic churches of the Eastern rite was guaranteed at the time of each rite's union with Rome and was approved again by the decree of the SECOND VATICAN COUNCIL (1962–65), in *De ecclesiis catholicis orientalibus*, promulgated on Nov. 21, 1964. In the late 20th century, the number of Eastern Catholics throughout the world numbered more than 12 million.

Despite the failure of the ecclesiastical authorities at the COUNCIL OF FERRARA-FLORENCE in 1439 to unite Christians of the East and West, the continued efforts of the proponents of Christian reunion, added to the missionary activities of

such monastic orders as the JESUITS, DOMINICANS, FRANCISCANS, and Capuchins, began to achieve some success. The Brest-Litovsk Union of 1596, under which all but two Ukrainian Orthodox bishops accepted the primacy of the pope, signaled the effective advent of Eastern rite churches.

Prior to this event, Eastern Catholics were few, limited to Italo-Albanians in southern Italy and Sicily, a large number of Maronites (Lebanese Christians of the Syro-Antiochene rite) who became associated with Rome in the 12th century, and some Armenians in the Syria-Lebanon region who also trace their relationship with Rome to the 12th century. A number of NESTORIANS were united with Rome in 1551, Ruthenians (an east-central European people) in 1595, Romanians of Transylvania in 1698, and Melchites (Syrian Christians of the BYZANTINE RITE) in 1724.

From the viewpoint of EASTERN ORTHODOXY, Eastern Catholics may be looked upon with suspicion, primarily because of the Latinizing influence found in their ranks. Hence the majority of Orthodox and Eastern independent churches characterize Eastern Catholics as "Uniate" churches. The expression Uniate is taken from Ukrainian *uniya*, a term coined by the opponents of the Brest-Litovsk Union. "Uniatism" implies hybridism, or the tendency for Latinization, and hence a betrayal of one's ancient and nationalistic tradition. Eastern rite churches prefer to be considered united churches rather than Uniate, with its negative implications.

Eastern Catholic rites permit a married clergy and the immediate admission of baptized infants to the sacraments of the EUCHARIST (the Lord's Supper) and CONFIRMATION.

The supreme head of the Eastern rite churches is the pope. The central organ of the Holy See is the Congregation for the Eastern Churches, the prefect of which is the pope, while a CARDINAL pro prefect performs the ordinary functions of chairman. The Congregation is competent for the Eastern churches in all matters (except certain specified cases) and has exclusive jurisdiction in specified countries in eastern Europe and the Middle East. The individual Eastern Catholic churches are organized differently according to their historical and ethnic situation, the number of adherents, the degree of evolution, and so on.

Patriarchates comprise a certain number of DIOCESES of a single rite, under the jurisdiction of a PATRIARCH. The patriarchs, according to the Eastern CANON LAW, have special rights and privileges; in the general hierarchy they rank with the cardinals according to seniority (following the titular cardinal bishops of the suburban sees of Rome) and before all other bishops. In the late 20th century there were six Eastern Catholic patriarchates: one of Alexandria, for the Copts; three of Antioch, one each for the Syrians, Maronites, and Greek Melchites; one of Babylonia, for the Chaldeans; and one of Sis, or Cilicia, for the Armenians. The patriarchs of Babylonia and of Sis are called *katholikos*. Major archiepiscopates are those that govern a certain number of dioceses of their rite but whose territory has not yet been erected into a patriarchate. Metropolitanates govern ecclesiastical provinces independent of the patriarchates and major archiepiscopates and comprise a number of dioceses. One of them is the metropolis; and its archbishop, the METROPOLITAN, is the head of the whole metropolitanate. Eparchies correspond to the Latin dioceses. Although they are usually subject to one of the aforementioned higher organizations, a few are immediately subject to the Holy See or to a Latin metropolitan see.

The term "rite" in "Eastern Catholic rite" signifies not only liturgical ceremonies but the whole organization of

particular churches. In the late 20th century, there were five distinct Eastern rite traditions—the Byzantine, the Alexandrian, the Antiochene, the Chaldean, and the Armenian—each (except the last) with two or more branches. The Byzantine rite affects the most persons and most territories worldwide. Its liturgy is based on the rite of St. James of Jerusalem and the churches of Antioch, as reformed by ST. BASIL and ST. JOHN CHRYSOSTOM. The liturgy is used by the majority of Eastern Catholics and by the Eastern Orthodox Church (which is not in union with Rome). The Coptic liturgy of the Alexandrian rite (known as the Liturgy of St. Mark) is derived from the Greek Liturgy of Alexandria, modified by several elements, including the Byzantine rite of St. Basil. The Antiochene rite can be traced to Book 8 of the APOSTOLIC CONSTITUTIONS and to the Liturgy of St. James of Jerusalem. The Chaldean rite, though derived from the Antiochene rite, is listed as a separate and distinct rite by the Sacred Congregation for the Eastern Churches. The ARMENIAN RITE, using the liturgical language of classical Armenian, is based on the Greek Liturgy of St. Basil, as modified by elements of the Antiochene rite.

ECCE HOMO \ˈe-kē-ˈhō-mō, ˈe-kā-, ˈek-sē-\ (Latin: “Behold the Man”), theme prevalent in western Christian art of the 15th to 17th century, so called after the words of PONTIUS PILATE to the Jews who demanded the CRUCIFIXION OF JESUS (John 19:5). Paintings on this theme generally conform to one of two types: images of the head or half-figure of Jesus, or narrative depictions of the judgment hall scene. In either type, Christ is shown wearing a crown of thorns and purple robe placed on him by the Roman soldiers, and his face expresses compassion toward his accusers. In the narrative versions, two guards are often shown supporting the suffering figure while Pontius Pilate gestures toward Christ, illustrating his words.

ECHIDNA \i-ˈkɪd-nə\ (Greek: “Viper,” “Snake”), in Greek mythology, a woman-serpent hybrid. Her parents were either the sea deities Phorcys and Ceto or Chrysaor, the son of MEDUSA, and Callirrhōē, the daughter of OCEANUS. Among Echidna’s progeny by the 100-headed TYPHON were Ladon (the serpent who protected the Golden Apples of the HESPERIDES), the monster who protected the Golden Fleece, the HYDRA, the CHIMERA, and the hounds Orthus and Cerberus.

The SPHINX and the Nemean lion, both sired by Orthus, were also among her offspring.

ECHO, in Greek mythology, a mountain NYMPH, or oread. Ovid’s *Metamorphoses* relates that Echo offended the goddess HERA by keeping her in conversation, thus preventing her from spying on one of Zeus’s amours. To punish Echo, Hera deprived her of speech, except for the ability to repeat the last words of another. Echo’s hopeless love for NARCIS-SUS, who fell in love with his own image, made her fade away until all that was left of her was her voice.

According to the Greek writer Longus, Echo rejected the advances of the god PAN; he thereupon drove the shepherds mad, and they tore her to pieces. GAEA buried her limbs but allowed her to retain the power of song.

ECK, JOHANN \ˈek \, original name Johann Maier (b. Nov. 13, 1486, Egg, Swabia [Germany]—d. Feb. 10, 1543, Ingolstadt, Bavaria [Germany]), theologian who was MARTIN LUTHER’s principal ROMAN CATHOLIC opponent.

Early in his career Maier adopted the name of his home village, Egg (or Eck). He studied at the universities of Heidelberg, Tübingen, Cologne, and Freiburg im Breisgau. He was ordained to the PRIESTHOOD in 1508 and became a doctor of theology in 1510. In that year he became professor of theology at the University of Ingolstadt.

Eck was friendly with Luther until the appearance in 1517 of the lat-

ter’s NINETY-FIVE THESES, which Eck assailed as heretical in a tract published in 1518. In the Leipzig disputation of 1519, Eck debated Luther on such topics as papal primacy and the infallibility of church councils. In 1520 Eck visited Rome, where he helped compose the papal bull *Exsurge Domine* (June 1520), in which Pope Leo X condemned 41 of Luther’s theses and threatened EXCOMMUNICATION. Leo then commissioned Eck to publish and enforce the bull throughout Germany.

Eck went on to write extensively in defense of papal authority and traditional doctrine. Traveling throughout Europe, he organized Roman Catholic opposition to German PROTESTANTISM, and he drafted the Catholic refutation (1530) of the Lutheran creed contained in the AUGSBURG CONFESSION. Eck was a prolific writer in Latin, and his many works in that language are notable as learned defenses of the Roman Catholic faith. His treatise entitled *Enchiridion*

Ecce Homo, oil painting by Hieronymus Bosch

ECKHART, MEISTER

Against the Lutherans (1525) was a summary of contested Catholic beliefs, Protestant objections to them, and answers to these difficulties. The *Enchiridion* proved to be the most popular of Eck's works and went through 91 editions in various languages before 1600.

ECKHART, MEISTER \ˈmīs-tər-ˈek-härt\, *English* Master Eckhart, *original name* Johannes Eckhart (b. c. 1260, Hochheim, Franconia [now in Germany]—d. 1327/28?, Avignon, France), DOMINICAN theologian and writer who was the greatest German speculative mystic.

Johannes Eckhart entered the Dominican Order when he was 15 and studied in Cologne, perhaps under the Scholastic philosopher ALBERTUS MAGNUS. The intellectual spirit there was influenced by the great Dominican theologian THOMAS AQUINAS, who had recently died. In his mid-30s, Eckhart was nominated VICAR (the main Dominican official) of Thuringia. Before and after this assignment he taught theology at Saint-Jacques's priory in Paris.

Eckhart wrote four works that are usually called "treatises." About the age of 40 he wrote the *Talks of Instruction*, on self-denial, the nobility of will and intellect, and obedience to God. The other works of this middle part of his life are the *Book of Divine Consolation*, dedicated to the Queen of Hungary, *The Nobleman*, and *On Detachment*.

In his mature teachings Eckhart described four stages of the union between the soul and God: dissimilarity, similarity, identity, and breakthrough. At first, God is all, the creature is nothing; at the ultimate stage, "the soul is above God." The driving power of this process is detachment.

1. Dissimilarity: "All creatures are pure nothingness. I do not say they are small or petty: they are pure nothingness." Whereas God inherently possesses being, creatures do not possess being but receive it derivatively.

2. Similarity: Man thus detached from the singular (individual things) discovers himself to be an image of God. Divine resemblance then emerges: the Son, image of the Father, engenders himself within the detached soul.

3. Identity: Eckhart's numerous statements on identity between God and the soul can be easily misunderstood. He never has substantial identity in mind, but God's operation and man's becoming are considered as one. God is no longer outside man, but he is perfectly interiorized.

4. Breakthrough: Identity with God is still not enough; to abandon all things without abandoning God is still not abandoning anything. Man must live "without why." He must seek nothing, not even God. For Eckhart, God exists as "God" only when the creature invokes him. Eckhart calls "Godhead" the origin of all things that is beyond God. "God and the Godhead are as distinct as heaven and earth." The soul is no longer the Son. The soul is now the Father: it engenders God as a divine person. "If I were not, God would not be God."

In his 60th year Eckhart was called to a professorship at Cologne. Heinrich von Virneburg—a FRANCISCAN, unfavorable to Dominicans, anyway—was the archbishop there, and it was before his court that the now immensely popular Meister Eckhart was first formally charged with HERESY. To a list of errors, he replied by publishing a Latin *Defense*. When ordered to justify a new series of propositions drawn from his writings, he declared: "I may err but I am not a heretic, for the first has to do with the mind and the second with the will!" The bull of Pope John XXII, dated March 27, 1329, condemns 28 propositions extracted from the two lists. Since it speaks of Meister Eckhart as already dead, it

is inferred that Eckhart died some time before, perhaps in 1327 or 1328. It also says that Eckhart had retracted the errors as charged.

Although Eckhart's philosophy amalgamates Greek, Neoplatonic, Arabic, and Scholastic elements, it is unique. His doctrine, sometimes abstruse, always arises from one simple, personal mystical experience to which he gives a number of names. In the second half of the 20th century, there was great interest in Eckhart among some Marxist theorists and ZEN Buddhists.

ECSTASY (Greek: *ekstasis*, literally, "act of standing aside"), in **MYSTICISM**, the experience of an inner vision of God or of one's relation to or union with the divine. Various methods have been used to achieve ecstasy, which is a primary goal in most forms of religious mysticism. The most typical consists of four stages: (1) purgation (of bodily

The Ecstasy of St. Teresa, *marble and gilded bronze sculpture* by Gian Lorenzo Bernini, 1645–52; in the *Coronaro Chapel, Sta. Maria della Vittoria, Rome*
SCALA—Art Resource

desire); (2) purification (of the will); (3) illumination (of the mind); and (4) unification (of one's being or will with the divine). Other methods are: dancing (as used by the MAWLAWIYA, or whirling dervishes, a Muslim SUFI sect); the use of sedatives and stimulants (as utilized in some Hellenistic MYSTERY RELIGIONS); and the use of certain drugs, such as PEYOTE, mescaline, hashish, and LSD (in certain Islamic sects and modern experimental religious groups). Most mystics, both in the East and in the West, frown on the use of drugs.

In certain ancient Israelite prophetic groups, music was used to achieve the ecstatic state, in which the participants, in their accompanying dancing, were believed to have been seized by the hand of YAHWEH. The Pythia (priestess) of the Greek oracle at DELPHI often went into an ecstatic state during which she uttered sounds mystically revealed to her after drinking water from a certain spring. Her utterances were then interpreted by a priest to help answer the suppliant's question.

ECUMENISM \e-'kyü-mə-,ni-zəm, 'e-kyü-\, in CHRISTIANITY, the movement or tendency toward worldwide unity or cooperation. The term, of recent origin, emphasizes what is viewed as the universality of the Christian churches; it is derived from Greek *oikoumenē*, "the inhabited world"—in a NEW TESTAMENT context, as in Matthew 24:14, the site of God's reconciling mission to all people. The ecumenical movement seeks to recover the apostolic sense of the early church for unity in diversity, and it confronts the frustrations and difficulties of the modern pluralistic world.

The possibility of an ecumenical approach to Christianity increased in the 17th and 18th centuries, when English dissenting sects and Pietist groups on the Continent began to promote evangelistic, revivalistic, and missionary endeavor. This, along with the simultaneous effect of Enlightenment thought, broke down many of the traditional foundations that supported separate church structures. Additionally, the separation of CHURCH AND STATE in the United States signaled the need for civility and respect for religious rights in a land of many religions.

After the International Missionary Conference held at Edinburgh in 1910, Protestants began to use the term ecumenism to describe the gathering of missionary, evangelistic, service, and unitive forces. Roman Catholics used ecumenism to refer to the renewal of the whole life of the church, undertaken to make it more responsive to "separated churches" and to the needs of the world.

Early 20th-century ecumenism derived impetus from the convergence of three movements: international missionary conferences (PROTESTANT), beginning with the Edinburgh Conference and taking shape as an institution in the International Missionary Council (1921); the Faith and Order Conferences (on church doctrine and polity), commencing in the conference at Lausanne (1927); and the Life and Work Conferences (on social and practical problems), beginning with the Stockholm Conference (1925). The WORLD COUNCIL OF CHURCHES, a consultative and conciliar agent of ecumenism, working with national, denominational, regional, and confessional bodies, was inaugurated in Amsterdam in 1948. The International Missionary Council joined the World Council of Churches in 1961.

Protest movements against the developments that led to and continued in the World Council of Churches have produced an ecumenical convergence of their own. Most participants in this convergence prefer to be called "evangelical." In the United States the National Association of Evangelicals was formed in 1943, in large part to counter

the Federal Council of Churches, which began in 1908 and reorganized as the National Council of Churches in 1950.

In 1961 POPE JOHN XXIII established the Secretariat for the Promotion of Christian Unity, and the Orthodox churches created the Pan-Orthodox Conference.

Roman Catholic ecumenism received definitions and momentum at the SECOND VATICAN COUNCIL (1962–64). The church gave the ecumenical movement new hope and language in the "Decree on Ecumenism" (1964), one of the classic ecumenical teaching documents. Another result of Vatican II was the establishment of a wide variety of international theological dialogues, commonly known as bilateral conversations. These include Roman Catholic bilaterals with Lutherans (1965), Orthodox (1967), Anglicans (1967), Methodists (1967), Reformed (1970), and the Disciples of Christ (1977). Topics identified for reconciling discussions include BAPTISM, the EUCHARIST, episcopacy and PAPACY, authority in the church, and mixed marriage.

Central to 20th-century ecumenism is the birth of united churches, which have reconciled formerly divided churches. The most heralded examples of this ecumenism are the United Church of Canada (1925), the Church of South India (1947), and the Church of North India (1970). Strategic union conversations were undertaken in the United States by the nine-church Consultation on Church Union (1960) and by such uniting churches as the United Church of Christ (1957), the Presbyterian Church, U.S.A. (1983), and the Evangelical Lutheran Church in America (1988).

EDDA \'e-də\, body of old Icelandic literature contained in two 13th-century books commonly distinguished as the *Prose*, or *Younger Edda* and the *Poetic*, or *Elder Edda*. It is the fullest and most detailed source for modern knowledge of Germanic mythology.

The Prose Edda. The *Prose Edda* was written by the Icelandic chieftain, poet, and historian Snorri Sturluson, probably in 1222–23. Being the only book actually called *Edda*, it is a textbook on poetics intended to instruct young poets in the difficult meters of the early Icelandic skalds (court poets) and to provide for a Christian age an understanding of the mythological subjects treated or alluded to in early poetry. It consists of a prologue and three parts. The section entitled *Gylfaginning* ("The Beguiling of Gylfi") describes the visit of Gylfi, a king of the Swedes, to ASGARD, the citadel of the gods. In answer to his questions, the gods tell Gylfi the Norse myths about the beginning of the world, the adventures of the gods, and the fate in store for all in the RAGNARÖK (Doom [or Twilight] of the Gods).

The Poetic Edda. The *Poetic Edda* is the name given to a later manuscript dating from the second half of the 13th century but containing older materials (hence its alternative title, the *Elder Edda*). It is a collection of anonymous mythological and heroic poems of unknown authorship, composed over a long period (800–1200 CE). They are usually dramatic dialogues in a terse, simple, archaic style that is in decided contrast to the artful poetry of the skalds. Many of the poems are quoted in the *Prose Edda* and must therefore be older.

The mythological cycle is introduced by *Völuspá* ("Sibyl's Prophecy"), which reviews the history of the gods, humans, and dwarfs, from the birth of the world to the death of the gods and the world's destruction.

It is followed by *Hávamál* ("Sayings of the High One"), a group of disconnected, fragmentary, didactic poems that sum up the wisdom of the divine wizard-king, ODIN. The latter part contains the myth of how Odin acquired the

magical power of the runes (alphabetical characters) by hanging himself from a tree and suffering hunger and thirst for nine nights. The poem ends with a list of magic charms.

One of the finest poems is the humorous *Thrymskvida* ("Lay of Thrym"), in which the giant THRYM steals the hammer of THOR and demands the goddess FREYJA in marriage for its return. Thor himself journeys to Thrym, disguised as a bride—the "bride" proceeds to astonish the wedding party with her manners at the feast, where she consumes an ox, eight salmon, and three vessels of mead.

The second half of the *Poetic Edda* contains lays about the Germanic heroes. Except for the *Völundarkvida* ("Lay of Völundr"; *i.e.*, Wayland the Smith) these are connected with the hero Sigurd (SIEGFRIED), recounting his youth, his marriage to Gudrun, his death, and the tragic fate of the Burgundians (Nibelungs). These lays are the oldest surviving poetic forms of the Germanic legend of deceit, slaughter, and revenge that forms the core of the great medieval German epic *Nibelungenlied*.

EDDY, MARY BAKER \ˈbā-kər-ˈe-dē\ (b. July 16, 1821, Bow, near Concord, N.H., U.S.—d. Dec. 3, 1910, Chestnut Hill, Mass.), founder of CHRISTIAN SCIENCE.

A daughter of CONGREGATIONALISTS, Mary had limited formal education, but she began to write both prose and poetry at an early age. In 1843 she married George W. Glover, who died before the birth of their son, George. Because of her ill health, the boy was reared primarily by others and had little contact with his mother.

Suffering almost constantly from a spinal malady, she was preoccupied with questions of health. She experimented with homeopathy and in 1853 married Daniel Patterson, a dentist who shared this interest. Before their marriage ended in divorce in 1873, Mrs. Patterson sought out and was healed by Phineas P. Quimby of Portland, Maine, who performed remarkable cures without medication. She thought he had rediscovered the healing method of Jesus, and she lectured and wrote of it in regional periodicals. Despite subsequent official statements of her church denying any influence of Quimby, some scholars have considered him an important source of her views.

Soon after Quimby died her illness recurred, and in 1866 she suffered a severe fall but was healed after reading in the NEW TESTAMENT, which she marked as the point of her discovery of Christian Science. Separated from her husband, she spent several years in writing and evolving her system, teaching it to Hiram S. Crafts, Richard Kennedy, and others who subsequently became successful healers. In 1875 she published *Science and Health*, which was revised before her death as *Science and Health with Key to the Scriptures*. Regarded by her followers as divinely inspired, this work and the BIBLE formed the SCRIPTURE of the new faith. She soon held public meetings in Lynn, Roxbury, and Boston, Mass., and in 1877 married one of her followers, Asa G. Eddy (d. 1882).

Steps were taken to organize the First Church of Christ, Scientist, in Boston in 1879. In 1881 Mrs. Eddy founded the Massachusetts Metaphysical College, where she taught until it closed in 1889. Meetings in Boston moved in 1895 from rented halls to the newly dedicated Mother Church and then to its larger "extension" in 1906. Branch churches, following organizational directives issued by Mrs. Eddy and collected in the *Church Manual*, were started in other cities; their members often belonged also to the Mother Church in Boston.

A board of directors, set up by Mrs. Eddy, operated as the

ruling authority according to the *Manual*, which is considered inspired and may not be amended. In 1883 she founded the monthly *Christian Science Journal*, in 1898 the weekly *Christian Science Sentinel*, and in 1908 *The Christian Science Monitor*, which has achieved a reputation as one of the leading daily newspapers in the United States. Among her major works are *Miscellaneous Writings* (1896), *Retrospection and Introspection* (1892), *Unity of Good* (1887), and *Rudimental Divine Science* (1908).

EDEN, GARDEN OF, in JUDAISM and CHRISTIANITY, the biblical earthly paradise inhabited by the first created man and woman, ADAM AND EVE, prior to their expulsion for disobeying the commandments of God. The term *Eden* probably is derived from the Akkadian word *edinu*, borrowed from the Sumerian *eden*, meaning "plain." According to the Genesis story there were four rivers that flowed out of Eden to all areas of the world. Similar stories in Sumerian records indicate that an earthly paradise theme belonged to the MYTHOLOGY of the ancient Middle East.

In ISLAM a paradisaal garden was the original home of Adam and his mate, but Eden (Arabic 'Adn) became the destination of the blessed after resurrection. The QUR'AN describes it as a place of multiple gardens and rivers where the righteous will be greeted by ANGELS, reunited with family members, dwell eternally in beautiful homes, and enjoy other luxurious heavenly rewards (see for example Qur'an 9:72, 13:23, and 35:33). Later Muslim scholars speculated that it was located in the highest ranks of the heavens.

EDWARDS, JONATHAN \ˈed-wərdz\ (b. Oct. 5, 1703, East Windsor, Conn. [U.S.]—d. March 22, 1758, Princeton, N.J.), theologian, stimulator of the religious revival known as the "Great Awakening."

After a rigorous schooling at home, Edwards entered Yale College in New Haven, Conn., at the age of 13. He was graduated in 1720 but remained at New Haven for two years, studying divinity; he received the M.A. degree in 1723. In 1727 he became a pastor at his grandfather's church at Northampton, Mass.

Although he was the son of a minister, Edwards did not accept his theological inheritance passively. In his "Personal Narrative" he confesses that, from his childhood on, his mind "had been full of objections" against the doctrine of PREDESTINATION. Though he gradually worked through his intellectual objections, it was only with his conversion (early in 1721) that he came to a "new sense" of God's glory revealed in SCRIPTURE and in nature. This became the center of Edwards' piety: a direct, intuitive apprehension of God in all his glory, a sight and taste of Christ's majesty and beauty far beyond all "notional" understanding. What such a God does must be right; hence, Edwards' cosmic optimism. The acceptance and affirmation of God as he is and does and the love of God simply because he is God became central motifs in all of Edwards' preaching.

Upon his grandfather's death in 1729, Edwards became sole occupant of the Northampton pulpit, the most important in Massachusetts outside of Boston. In his first published sermon Edwards blamed New England's moral ills on its assumption of religious and moral self-sufficiency. Because God is the saints' whole good, faith, which abases man and exalts God, must be insisted on as the only means of salvation. The English colonists' enterprising spirit made them susceptible to a version of Arminianism; it minimized the disabling effects of ORIGINAL SIN, stressed FREE WILL, and tended to make morality the essence of religion.

Adam and Eve in the Garden of Eden, 15th-century book illustration in the Museo dell'Opera del Duomo, Florence, Italy
 SCALA—Art Resource

Against these ideas Edwards also delivered a series of sermons on “Justification by Faith Alone” in November 1734. The result was a great revival in Northampton and along the Connecticut River valley in the winter and spring of 1734–35, during which period more than 300 of Edwards’ people made professions of faith.

In 1740–42 came the GREAT AWAKENING throughout the colonies. George Whitefield, a highly successful evangelist in the English Methodist movement, and Gilbert Tennent, a PRESBYTERIAN minister from New Jersey, drew huge crowds; their “pathetical” (*i.e.*, emotional) sermons resulted in violent emotional response and mass conversions. The Awakening produced not only conversions and changed lives but also excesses, disorders, and ecclesiastical and civil disruptions. Though increasingly critical of attitudes and practices associated with the revival, Edwards maintained that it was a genuine work of God, which needed to be furthered and purified.

Meanwhile, Edwards’ relations with his own congregation had become strained; one reason for it was his changed views on the requirements for admission to the Lord’s Sup-

per. The custom was that baptized but unconverted children of believers might have their own children baptized by “owning the COVENANT”; and, Northampton church followed the widespread practice of admitting to the EUCHARIST all who were thus “in the covenant,” even if they knew themselves to be unconverted. Edwards gradually came to believe that the profession required for admission to full communion should be understood to imply genuine faith, not merely doctrinal knowledge and good moral behavior.

The public announcement of his position in 1749 precipitated a violent controversy that resulted in his dismissal. On July 1, 1750, Edwards preached his dignified and restrained “Farewell-Sermon.” Though Edwards himself was defeated, his position finally triumphed and provided New England CONGREGATIONALISM with a doctrine of church membership more appropriate to its situation after disestablishment.

In 1751 Edwards became pastor of the frontier church at Stockbridge, Mass., and missionary to the Indians there. Hampered by language difficulties, illness, Indian wars, and conflicts with powerful personal enemies, he nevertheless discharged his pastoral duties and found time to write his famous work on the *Freedom of Will* (1754). By 1757 Edwards had finished his *Great Christian Doctrine of Original Sin Defended* (1758), which was mainly a reply to the English divine John Taylor of Norwich, whose works attacking CALVINISM had “made a mighty noise in America.” In 1757 he accepted the presidency of the College of New Jersey (later Princeton University) and arrived there in January. He had hardly assumed his duties when he contracted smallpox and died.

Edwards’ influence on the intellectual character of American PROTESTANTISM for a century after his death was very pronounced. In a general revolt against PURITANISM and Calvinism after the American Civil War (1861–65), Edwards’ prestige declined. In the 1930s and after, he was rediscovered by theologians. Edwards’ ability to combine religious intensity with intellectual rigor, the sweep of his theological vision, his emphasis on faith as an “existential” response to reality, and his insistence that love is the heart of religion are some of the reasons his life and writings are again being seriously studied.

EGERIA \i-ˈjir-ē-ə, ē-, in ROMAN RELIGION, a water spirit worshiped in connection with DIANA at Aricia and also with the Camenae in their grove outside the Porta Capena at Rome. Like Diana, she was a protectress of pregnant women and, like the Camenae, was considered to have prophetic powers. Traditionally she was the wife, or mistress, and adviser of the second king of Rome, Numa Pompilius, who established the grove at Rome and consorted with her there. Numa created Rome’s religious institutions on her advice.

EGYPTIAN RELIGION

The indigenous beliefs of ancient Egypt from predynastic times (4th millennium BCE) to the disappearance of the traditional culture in the first centuries CE constitute a display of remarkable continuity over so long a span of time.

KING, COSMOS, AND SOCIETY

The Egyptians conceived of the cosmos as including the gods and the present world—whose center was Egypt—and as being surrounded by the realm of disorder, from which order had arisen and to which it would finally revert. Disorder had to be kept at bay. The task of the king as the protagonist of human society was to retain the benevolence of the gods by maintaining order against disorder. This view of the cosmos formed a powerful political legitimation of the king and elite in their task of preserving order. The king was the center of human society, the recipient of god-given benefits including life itself, and the benevolent ruler of the world for humanity. He was ultimately responsible for the cults of the dead, for both his predecessors in office and the dead in general.

The king had a superhuman role, being a manifestation of a god or of various deities on earth. The king's principal original title, the HORUS name, proclaimed that he was an aspect of one of the chief gods, Horus, a sky god who was depicted as a falcon. Other identifications were added to this one, notably "Son of RE [the sun god]" and "Perfect God," both introduced during the 4th dynasty (c. 2575–2465 BCE), when the great PYRAMIDS were constructed. The epithet "Son of Re" placed the king in a close but dependent relation with the leading figure in the pantheon.

"Perfect God" (often rendered "Good God") indicated that the king had the status of a minor deity, for which he was "perfected" through accession to his office; it restricted the extent of his divinity and separated him from full deities. Some kings, notably Amenhotep III (reigned 1390–53 BCE), Ramses II (1279–13 BCE), and several of the Ptolemies (305–145 BCE), sought deification during their own lifetimes, while others, such as Amenemhet III (1818–c. 1770 BCE), became minor gods after their deaths. These very attempts at further deification show how restricted royal divinity actually was.

The gods, the king, humanity, and the dead existed together in the cosmos, which Re the creator god had brought into being from the preexistent CHAOS. All living beings, except perhaps the creator, would die at the end of time. The sun god aged and needed to be rejuvenated and reborn daily. The ordered cosmos was surrounded by and shot through with disorder, which menaced most strongly at such times of transition as the passage from one year to the next or the death of a king. Thus, the king's role in maintaining order was cosmic and not merely social. His exaction of service from the people was necessary to the cosmos.

The concept of MA'AT ("order") was fundamental in Egyptian thought. The king's role was to set *ma'at* in place of *izfet* ("disorder"). *Ma'at* was crucial in human life and embraced notions of reciprocity, justice, truth, and moderation. *Ma'at* was personified as the creator's daughter, a goddess who received a cult of her own. The king's offering of *ma'at* to a deity encapsulated the relationship between humanity, the king, and the gods; as the representative of humanity, he returned to the gods the order that came from them and of which they were themselves part. *Ma'at* extended into the world of the dead. In the weighing of the heart after death, shown on papyri deposited in burials, the heart occupies one side of the scales and a representation of *ma'at* the other. The papyrus text asserts that the deceased behaved correctly on earth and did not overstep the boundaries of order, declaring that the person did not "know that which is not"—that is, things that were outside the created and ordered world.

GODS

Egyptian religion was polytheistic. The gods who inhabited the bounded and ultimately perishable cosmos varied in nature and capacity. The word *netjer* ("god") described a much wider range of beings than the deities of monotheistic religions, including what might be termed DEMONS. Gods were neither all-powerful nor all-knowing, but their power was immeasurably greater than that of human beings, and they had the ability to live almost indefinitely, to survive fatal wounds, to be in more than one place at once, and to affect people in visible and invisible ways.

Most gods were generally benevolent, but their favor could not be counted on, and they had to be propitiated and encouraged to inhabit their cult images so that they could receive the cult and further the reciprocity of divine and human. Some deities, notably such goddesses as NEITH, SEKHMET, and MUT, had strongly ambivalent characters. The god SETH embodied the disordered aspects of the ordered world, and in the 1st millennium BCE he came to be seen as an enemy who had to be eliminated (but would remain present).

The characters of the gods were not neatly defined. Most had a principal association, such as that of Re with the sun or that of the goddess HATHOR with women, but there was much overlap, especially among the leading deities. In general the more closely circumscribed a deity's character, the less powerful that deity was. All the main gods acquired the characteristics of creator gods. A single figure could have many names. Among those of the sun god the most important were KHEPRI (the morning form), ATUM (the old, evening form), and Re-Harakhty (the form of Re in association with Horus). There were three principal "social" categories of deity—gods, goddesses, and youthful deities, mostly male.

Deities had many manifestations, and most gods were associated with one or more species of animal. For gods the most important forms were the falcon and bull, whereas those for goddesses were the cow, cobra, vulture, and lioness. Rams were widespread, while some manifestations were as modest as the millipede of the god Sepa. Some gods were very strongly linked to particular animals, as SEBEK was with the crocodile and Khepri with the SCARAB beetle. THOTH had two animals, the ibis and the baboon. Some animal cults were only partly integrated with specific gods, notably the Ram of Mendes in the Delta and the APIS and MNEVIS bulls at Memphis and HELIOPOLIS, respectively. Changeable animal forms could express aspects of a deity's nature; some goddesses were lionesses in their fiercer aspect but were cats when mild.

These variable forms relate to aspects that were common to gods and people. The most significant of these were the KA, which was the vital essence of a person

that survived the death of the body, the BA, which granted freedom of movement and the ability to take on different forms, principally in the next world, and the AKH, which was the transfigured spirit of a person in the next world.

Gods were also frequently represented as human, and many deities had only human form. Among these deities were very ancient figures such as the fertility god MIN and the creator and craftsman PTAH. The cosmic gods SHU, of the air and sky, and GEB, of the earth, had human form, as did OSIRIS, ISIS, and Nephthys, deities who provided a model of human society.

Gods having animal manifestations were shown with a human body and the head of their animal. The opposite convention, a human head and an animal body, was used for the king, who was shown as a SPHINX, which had a lion's body. Sphinxes could have a different type of head, notably that of a ram or falcon, associating the form with AMON and Re-Harakhty.

Demons were represented in more extravagant forms and combinations; these became common in the 1st millennium BCE. Among demons the most important figure was APOPIS, shown as a colossal snake, who was the enemy of the sun god in the god's daily cycle through the cosmos. Apopis existed outside the ordered realm; he had to be defeated daily, but, since he did not belong to the sphere of existence, he could not be destroyed.

Few myths have survived. The narratives that did survive include episodes of the rule of the sun god on earth, tales of the childhood of Horus in the delta marshes, and the Osiris myth and ones with similar themes but differently named protagonists. The rule of the sun god was followed by his withdrawal into the sky, motivated by his age and by the lack of tranquility in the world. One narrative recounts how Isis obtained a magical substance from Re's senile dribbling and fashioned from it a snake that bit him. To make her still the agony of the snakebite, he finally revealed to her the secret of his "true" name. A myth with varied realizations recounts how Re grew weary of humanity's recalcitrance and dispatched his daughter or "Eye" to destroy them. Later regretting his action, he arranged to have the bloodthirsty goddess tricked into drunkenness by spreading beer tinted the color of blood over the land.

CULTS

Most cults centered on the worship of an image of a deity, the daily tending of which was analogous to the pattern of human life. The shrine containing the im-

Anubis weighing the soul of the scribe Ani, in the Papyrus of Ani, from an Egyptian Book of the Dead, c. 1275 BCE

© The British Museum/Heritage-Images

age was opened at dawn, and then the deity was purified, greeted, praised, clothed, and fed. There were several further services, and the image was finally returned to its shrine for the night. This activity took place within the temple and was performed by a small group of priests. The daily cult was a state concern, conducted largely in isolation from the people.

The numerous festivals, however, allowed more direct interaction between people and the gods. The shrine and image of the deity were taken out from the SANCTUARY on a portable bark, carried among the people, and often brought to visit other temples. Questions were often asked of a deity, and responses might be given by a forward or backward movement of the bark carried on the priests' shoulders. Oracles, of which this was one form, were invoked by the king to obtain sanction for his plans, including military campaigns and important appointments. Although evidence is sparse, consultation with deities may have been part of religious interaction in all periods and for all levels of society. Festivals were also times of communal celebration and often of public reenactment of myths such as the death and vindication of Osiris at ABYDOS or the defeat of Seth by Horus at Idfu.

In the Late period (664–332 BCE) there was a vast expansion in animal cults. They involved a variety of practices centering on the mummification and burial of animals. The principal BULL CULTS focused on a single animal, which gave important oracles and was kept in a special shrine. The burial of an Apis bull was a major occasion involving vast expenditure. Some animals, such as the sacred ibis (connected with Thoth) were kept, and buried, in millions. The dedication of a burial seems to have counted as a pious act. The best-known area for these cults is the NECROPOLIS of northern Saqqārah, which served the city of Memphis. Numerous species were buried there, and people visited the area to consult oracles, to spend the night in a temple area, and to receive a healing dream. A few people

resided permanently in the animal necropolis in a state akin to monastic seclusion.

The main audience for the most important festivals of the principal gods of state held in capital cities may have been the ruling elite rather than the people as a whole. In the New Kingdom (c. 1539–c. 1075 BCE) these cities were remodeled as vast cosmic stages for the enactment of royal-divine relations and rituals. Despite the importance of temples and their architectural dominance, evidence does not point to mass participation in temple religion.

WORLD OF THE DEAD

The basic purpose of mortuary preparation was to ensure a safe and successful passage into the hereafter. Belief in an afterlife and a

Painted wooden stela of a musician playing the harp before Horus, c. 950–730 BCE; in the Louvre, Paris

Giraudon—Art Resource

passage to it is evident in predynastic burials, which are oriented to the west, the domain of the dead, and which include pottery grave goods as well as personal possessions of the deceased. The most striking development of later mortuary practice was mummification, which was an expression of the belief that the body must continue intact in order for the deceased to live in the next world (see MUMMY). Mummification evolved gradually from the Old Kingdom (c. 2575–c. 2130 BCE) until the early 1st millennium BCE, after which it declined. It was always too elaborate and costly to be available to the majority.

The next world was variously thought to be located in the area around the tomb (and consequently near the living); on the “perfect ways of the West,” as it is expressed in Old Kingdom invocations; among the stars or in the celestial regions with the sun god; or in the underworld, the domain of Osiris. One prominent notion was of the “Elysian Fields,” where the deceased could enjoy an ideal existence in a land of plenty. The journey to the next world was fraught with obstacles. It could be imagined as a passage by ferry past a succession of portals or through an “Island of Fire.” The judgment after death was a subject often depicted from the New Kingdom onward. The related text, Chapter 125 of the BOOK OF THE DEAD, presented the dangers of the judgment, which assessed the deceased’s conformity with *ma’at*. Those who failed the judgment would “die a second time” and would be cast outside the ordered cosmos. In the demotic story of Setna (3rd century BCE) this notion of moral retribution acquired overtones similar to those of the Christian judgment after death.

Because the recently deceased were believed to exert influence on the living, either for good or for bad, the offerings that were made to the dead were intended, among other purposes, to make them well disposed. People occasionally deposited with their offerings a letter telling the deceased of their problems and asking for assistance. This written communication with the dead was confined to the very few literate members of the population, but it was probably part of a more widespread oral practice. Some tombs of prominent people acquired minor cults, which may have originated in frequently successful outcomes to requests for assistance.

Offerings to the dead generally did not continue long after burial, and most tombs were robbed within a generation or so. Thus relations with dead kin probably focused on the recently deceased. Nonetheless, the dead were respected and feared more widely. The attitudes attested were almost uniformly negative. The dead were held accountable for much misfortune, both on a local, domestic level and in the broader context of the state. People were also concerned that, when they died, those in the next world would oppose their entry, because as newcomers they might oust the less-recently dead.

EHUD \ˈē-həd\, in the OLD TESTAMENT (Judges 3:12–4:1), son of Gera, the Benjaminite. Ehud was an Israelite hero who delivered his country from 18 years of oppression by the MOABITES. Ehud tricked Eglon, king of Moab, and killed him. He then led the tribe of EPHRAIM to seize the fords of the Jordan, where they killed about 10,000 Moabite soldiers. As a result, Israel enjoyed peace for about 80 years.

EID \ˈēd\; *see* ID.

EIGHTFOLD PATH, fundamental Buddhist doctrine; *see* MĀRGA.

EILEITHYIA \,i-lī-ˈthī-ə\, Greek goddess of childbirth who hindered or facilitated the process according to her disposition. The earliest evidence for her cult is at Amnisus, in Crete, where excavations indicate that she was worshipped continuously from Neolithic to Roman times. In Homer she appears, sometimes in the plural, as a personification of birth pangs, and is described as the daughter of HERA, the consort of ZEUS. In later times Eileithyia tended to be identified with Hera or ARTEMIS, goddesses who were also associated with marriage and childbirth.

EISAI \ˈā-ˈsī\ (b. 1141—d. 1215), Buddhist monk who contributed to the flowering of ZEN (Ch’an) BUDDHISM in Japan. Eisai, who founded the RINZAI school in 1191, was a Tendai monk who wished to restore pure Buddhism to Japan and with that aim visited China, first in 1168 and again in 1187. When he returned he taught a strict meditational system based on the use of the KOAN phrases. Unlike the Ch’an schools, Eisai also taught that Zen should defend the state and could observe ceremonial rules and offer prayers and incantations. These teachings influenced the warrior class and led to a Zen influence over the martial arts of archery and swordsmanship. Eisai founded Rinzaï temples at Hakata in Krūshu (1191) and Kyōto (1215) and was appointed by the Shōgun Minamoto Yoriie as the head of the monastery of Kennin-ji in Kyōto in 1204. DŌGEN, the founder of the SŌTŌ Zen lineage, was one of his students.

EKNĀTH \ˈāk-nāth, -nāt\, *also spelled* Ekanātha (b. 1544, Paithan, Mahārāshtra, India—d. 1599), Hindu poet-saint and mystic of the tradition of VAIṢNAVISM. Eknāth is best known for his translations of various Sanskrit texts into Marathi (the local language of the Maharashtra region of central India), his authorship of others (*e.g.*, a *Rāmāyaṇa*) in that language, and his restored edition of the then-corrupted classic of Marathi literature, the *Jñāneśvarī* of JÑĀNEŚVAR. The object of his scholarship was to bring the means of salvation through devotion, or BHAKTI, within the reach and understanding of ordinary people, including outcastes and women.

Although himself a BRAHMIN, Eknāth came into conflict with some of the more orthodox Brahmins in his hometown of Paithan over the issue of CASTE. Eknāth insisted that there is no caste distinction in the eyes of God, and in his own life and writings he recognized no inherent difference between the Brahmin and the outcaste. His radical form of religious egalitarianism led him not only to argue that low-caste persons were eligible for God’s grace but also to go so far as to claim in one of his compositions that “the dog and God are identical.” Several temples dedicated to Eknāth exist to this day in Paithan—one at the site of his home and another near the place where he died in the Godāvāri River.

EL \ˈel\ (Semitic: “God”), the chief deity of the West Semites. In the ancient texts from Ras Shamra (ancient UGARIT) in Syria, El (El the Bull) was described as the titular head of the pantheon, husband of ASHERAH, and father of all the other gods (except for BAAL). Although a venerable deity, he was not active in the myths, which primarily concerned his daughters and sons.

He was usually visually portrayed as an old man with a long beard and, often, two wings. Writers of the OLD TESTAMENT used the word El both as a general term for “deity” and as a synonym for YAHWEH.

ELEAZAR BEN JUDAH OF WORMS \,e-lē-ˈā-zər-ben-ˈjü-də . . . ˈwɔrmz, ˈvɔrms\, *original name* Eleazar ben Judah ben Kalonymos, *also called* Eleazar Rokeaḥ (b. c. 1160, Mainz, Franconia [Germany]—d. 1238, Worms), Jewish RABBI, mystic, Talmudist, and codifier. Along with the SEFER HASIDIM (1538; “Book of the Pious”), of which he was a co-author, his voluminous works are the major extant documents of medieval German HASIDISM.

Eleazar was a member of the eminent Kalonymos family, which gave medieval Germany many of its spiritual leaders and mystics; another member of that family, the semi-legendary pietist JUDAH BEN SAMUEL, the Hasid of Regensburg, was his teacher and spiritual master. In 1196 two Christian crusaders broke into Eleazar’s house and murdered his wife and two daughters, yet he continued to teach a doctrine of love of humanity. He became a rabbi at Worms in 1201 and in 1223 took part in a SYNOD at Mainz, which considered such questions as business relations with Christians and the inequitable exemptions of particularly favored Jews from the tax imposed by the government.

Eleazar was a man of great erudition who did not compartmentalize his knowledge of the QABBALAH and the TALMUD; rather, he tried to unify these opposing aspects of JUDAISM in his writings, often with strange results. His greatest work is his ethical code *Rokeaḥ* (1505; “Dealer in Spice”), for which he is sometimes known as Eleazar Rokeaḥ. The work is prefaced with a number of chapters dealing with the essential principles of Judaism, in which Eleazar attempts to explain mystical concepts, including the unity of God, in terms of HALAKHAH [Law]. The work itself, which is not complete, contains some 497 sections addressed to every aspect of Jewish life, from SABBATH law, holiday rituals, and the marriage ceremony to penance for SINS, the latter a preoccupation of the German Hasidim.

Eleazar was an angelologist, not only in his mystic theories of theurgy (the art of persuading or compelling supernatural beings to one’s bidding) but also in his writings on the *kavod* (“divine glory”). Eleazar believed that the *kavod*, a ruling ANGEL, was an emanation from God and the knowable aspect of him, while God himself was infinitely transcendent and unknowable. Eleazar also wrote TOSAFOT (commentaries) on a number of Talmudic tractates, as well as mystical commentaries on the five scrolls (Song of Solomon, Ruth, Lamentations, Ecclesiastes, and Esther) and on the PENTATEUCH.

ELECT, in CHRISTIANITY, those chosen for salvation by God; *see* PREDESTINATION.

ELECTRA \i-lek-trə\ (Greek: “Bright One”), in Greek myth, the daughter of AGAMEMNON and Clytemnestra who saved the life of her young brother ORESTES by sending him away when their father was murdered. When he later returned, she helped him to slay their mother and their mother’s lov-

er. Electra then married Orestes' friend Pylades. The plays of the same name written by Sophocles and Euripides and the *Choephoroi* by Aeschylus vary the theme in detail.

ELEUSINIA \,el-yü-'si-nē-ə\, ancient Greek festival in honor of the goddess DEMETER, unconnected with the ELEUSINIAN MYSTERIES despite the similarity of names. The Eleusinia, which included games and contests, was held every two years, probably in the month of Metageitnion (August–September). Every second festival had a particularly elaborate observance and was known as the Great Eleusinia. Its purpose was thanksgiving and sacrifice to Demeter for the gift of grain.

ELEUSINIAN MYSTERIES \,el-yü-'si-nē-ən\, most famous of the MYSTERY RELIGIONS of ancient Greece. According to the Homeric *Hymn to Demeter*, the goddess Demeter went in disguise to Eleusis in search of her daughter Kore (PERSEPHONE), who had been abducted by HADES. Befriended by the royal family of Eleusis, she agreed to rear the queen's son. She was, however, prevented by the queen's fear from making the boy eternally young. Thereupon she revealed her identity to the royal family and commanded that a temple be built for her into which she retired.

According to the *Hymn*, the Mysteries at Eleusis originated in the twofold story of Demeter's life—her separation from and reunion with her daughter and her failure to make the queen's son immortal. After Eleusis was incorporated, the city of Athens took responsibility for the festival, but the festival never lost its local associations.

The Mysteries began with the march of the *mystai* (initiates) in PROCESSION from Athens to Eleusis. The rites that they then performed in the Telesterion, or Hall of Initiation, were and remain a secret. Something was recited, something was revealed, and acts were performed, but there is no sure evidence of what the rites actually were, though some garbled information was given by later Christian writers. It is clear that neophytes were initiated in stages and that the annual process began with purification rites at what were called the Lesser Mysteries held at Agrai (Agrae) on the stream of Ilissos, outside of Athens, in the month of Anthesterion (February–March). The Greater Mysteries was celebrated annually in the month of Boedromion (September–October). It included a RITUAL BATH in the sea, three days of fasting, and completion of the still-myste-

Sculpture by Gian Lorenzo Bernini illustrating the base myth for the Eleusinian Mysteries, in which Persephone is abducted by Hades; sculpted in 1621–22, now in the Borghese Gallery, Rome

Anderson—Alinari from Art Resource

rious central rite. These acts completed the initiation, and the initiate was promised benefits in the afterlife.

ELIADE, MIRCEA \,e-lē-'ä-də\ (b. March 9, 1907, Bucharest, Rom.—d. April 22, 1986, Chicago, Ill., U.S.), historian of religions and man of letters, distinguished for his researches in the symbolic language used by various religious traditions and for his attempt to integrate their meaning into types of underlying primordial myths that provide the basis for mystical phenomena.

Eliade took an M.A. in philosophy from the University of Bucharest in 1928. He studied Sanskrit and Indian philosophy at the University of Calcutta (1928–31) and then lived for six months in the ASHRAM of Rishikesh in the HIMALAYAS. He earned his Ph.D. in 1933 with the dissertation *Yoga: Essai sur les origines de la mystique indienne* ("Yoga: Essay on the Origins of Indian Mysticism") and then taught the history of religions and Indian philosophy at Bucharest (1933–39). In 1945 he went to Paris as a visiting professor at the École des Hautes Études of the Sorbonne. In 1956 he joined the faculty of the University of Chicago. In 1961 he founded the journal *History of Religions*.

Eliade considered RELIGIOUS EXPERIENCE in traditional and contemporary societies as credible phenomena that he termed hierophanies (i.e., manifestations of the sacred in the world). His "morphological analyses" traced the forms that these hierophanies have taken throughout the world and through time. Eliade's

interpretation of traditional religious cultures and his analysis of the forms of mystical experience characterize his major works: *Traité d'histoire des religions* (1949; *Patterns of Comparative Religion*), *Le Mythe de l'éternel retour* (1949; *The Myth of the Eternal Return*), and *Le Chamanisme et les techniques archaïques de l'extase* (1951; *Shamanism: Archaic Techniques of Ecstasy*). He also expressed his views in works of fiction, notably the novels *Forêt interdite* (1955; *The Forbidden Forest*) and *The Old Man and the Bureaucrats* (1979). His works include two collections of essays, *The Quest: History and Meaning in Religion* (1969) and *Occultism, Witchcraft, and Cultural Fashion: Essays in Comparative Religion* (1976). He also wrote a three-volume work entitled *A History of Religious Ideas* (1978–85) and was editor in chief of the 16-volume *Encyclopedia of Religion* (1987).

Elijah's ascent into heaven, fresco, c. 1325; from the Kirkerup Church at Sealand, Denmark

The Granger Collection

ELIJAH \i-'lī-jə, ē-\, also spelled *Elias*, or *Elia*, Hebrew *Eliyahu* (fl. 9th century BCE), Hebrew prophet who ranks with **MOSES** in saving the religion of **YAHWEH** from being corrupted by the nature worship of **BAAL**. Elijah's name means "Yahweh is my God" and is spelled *Elias* in some versions of the **BIBLE**. The story of his prophetic career in the northern kingdom of Israel during the reigns of Kings **AHAB** and **Ahaziah** is told in 1 Kings 17–19 and 2 Kings 1–2 in the **OLD TESTAMENT**. He is commemorated by Christians on July 20 and is recognized as a prophet by **ISLAM**.

The Israelite king **Omri** had allied himself with the Phoenician cities of the coast, and his son **Ahab** was married to **JEZEBEL**, daughter of **Ethbaal**, king of Tyre and Sidon. Jezebel propagated her native religion in a **SANCTUARY** built for **Baal** in the royal city of Samaria. This meant that the Israelites accepted **Baal** as well as **Yahweh**, putting **Yahweh** on a par with a nature-god celebrated often in an orgiastic cult.

Elijah was from Tishbe in Gilead. The narrative in 1 Kings relates how he suddenly appears during **Ahab's** reign to proclaim a drought in punishment of the cult of **Baal**. Later Elijah meets 450 prophets of **Baal** in a contest of strength on Mount Carmel to determine which deity is the true God of Israel. Sacrifices are placed on an altar to **Baal** and one to **Yahweh**. The **PAGAN** prophets' appeals to **Baal** to kindle the wood on his altar are unsuccessful, but Elijah's prayers to **Yahweh** are answered by a fire on his altar. This outcome is taken as decisive by the Israelites, who slay the priests and prophets of **Baal** under Elijah's direction. The drought thereupon ends with the falling of rain.

Elijah flees the wrath of Jezebel by undertaking a **PILGRIMAGE** to Mount Horeb (**SINAI**), where he is at first disheartened in his struggle and then miraculously renewed. In a further

narrative, King **Ahab** has a man named **Naboth** condemned to death in order to gain possession of his vineyard. Elijah denounces **Ahab** for his crimes, asserting that all men are subject to the law of God and are therefore equals. Later **Ahab's** son, King **Azariah**, appeals to **Baal** to heal him of an illness, and Elijah once more upholds the exclusive rights of **Yahweh** by bringing down "fire from heaven." After bestowing his mantle on his successor, **ELISHA**, the prophet Elijah is taken up to heaven in a whirlwind.

Elijah's words proclaimed that there is no reality except the God of Israel, that there are no other beings entitled to the name of divinity. The acclamation of the people, "Yahweh, he is God," expresses a fully conscious **MONOTHEISM**, as it had never before perhaps been brought home to them. Elijah's deepest prophetic experience takes place on his pilgrimage to Horeb, where he learns that God is not in the storm, the earthquake, or the lightning. Nature, so far from being God's embodiment, is not even an adequate symbol. The transcendence of God receives here one of its earliest expressions. Elijah's story also expresses for the first time a thought that was to dominate Hebrew **PROPHETCY**: salvation is bestowed only on

those purified by God's judgment. The theme of the later prophets, that morality must be at the heart of ritual worship, is also taught by Elijah, who upholds the unity of law and religion.

ELIJAH BEN SOLOMON \i-'lī-jə-ben-'sä-lə-mən\, in full *Elijah ben Solomon Zalman*, also called by the acronym *Ha-Gra* \hä-'grä\ (b. April 23, 1720, Sיעל, Lithuania, Russian Empire—d. Oct. 9, 1797, Vilna [now Vilnius, Lithuania]), the **GAON** ("excellency") of Vilna, and the outstanding authority in Jewish religious and cultural life in 18th-century Lithuania.

Born into a long line of scholars, Elijah traveled among the Jewish communities of Poland and Germany in 1740–45 and then settled in Vilna, which was the cultural center of eastern European Jewry. There he refused rabbinic office and lived as a recluse while devoting himself to study and prayer, but his reputation as a scholar had nonetheless spread throughout the Jewish world by the time he was 30. As a mark of nearly universal reverence, the title *gaon*, borne by the heads of the Babylonian academies and virtually extinct for many centuries, was bestowed upon him by the people.

Elijah's scholarship embraced mastery of every field of study in the Jewish literature. His vast knowledge of the **TALMUD** and **MIDRASH** and of biblical **EXEGESIS**, as well as of mystical literature and lore, was combined with a deep interest in philosophy, grammar, mathematics, astronomy, and folk medicine.

Elijah's most important contributions were his synoptic view of Jewish learning and his critical methods of study. In an age of narrow, puritanical piety, he broadened the con-

Elijah ben Solomon, engraving

Picture from the photographic archive of the Jewish Theological Seminary of America, New York, Frank J. Darmstaedter

ception of TORAH learning to include the natural sciences and asserted that a complete understanding of Jewish law and literature necessitated the study of mathematics, astronomy, geography, botany, and zoology. He encouraged translations of works on these subjects into Hebrew. Elijah also introduced the methods of textual criticism in the study of the BIBLE and the Talmud.

Elijah condemned HASIDISM as a superstitious and anti-scholarly movement and ordered the EXCOMMUNICATION of its adherents and the burning of their books. He became the leader of the Mitnaggedim (opponents of Hasidism) and was temporarily able to check the movement's spread in Lithuania. He was also mildly opposed to the HASKALAH, or Jewish Enlightenment. His writings, published posthumously, include commentaries and numerous annotations on the Bible, Talmud, Midrash, and other works.

ELIMELECH OF LIZHENSK \e-li-'me-lek . . . 'lē-zhensk \ (b. 1717—d. 1787, Lizabeth, Galicia [now in Poland]), Jewish teacher and author, one of the founders of HASIDISM in Galicia.

Elimelech was a disciple of Ṭov Baer, one of the early Hasidic leaders, and after Baer's death he settled in Lizabeth, which subsequently became an important Hasidic center. Elimelech emphasized the importance of the leader (ZADDIK, meaning "righteous one"), who, he believed, is mediator between God and the people and possesses authority

not only in the spiritual sphere but in all areas of life. Although the *zaddik* belongs to a higher world, he descends to the level of the community to redeem it, and his capacity to SIN is a necessary part of his mission of transforming evil into good. Elimelech's ideas are set forth in his treatise *No'am Elimelekh*, which was published after his death by his son Eleazar.

ELISHA \i-'li-shə, ē-\, in the OLD TESTAMENT, Israelite prophet, the pupil of ELIJAH and also his successor (c. 851 BCE). He instigated and directed JEHU's revolt against the house of Omri, which was marked by a bloodbath at Jezreel in which King AHAB and his family were slaughtered.

The popular traditions about Elisha (2 Kings 2–13) sketch a charismatic, quasi-ecstatic figure, very similar to Elijah. Like his mentor, Elisha was a passionate exponent of the ancient religious and cultural traditions of ISRAEL, which both prophets felt to be threatened by the ruling dynasty of Omri, then in alliance with Phoenicia. As a prophet, Elisha was a political activist and revolutionary. He led a war that extinguished the house of Omri in Jerusalem as well as in Samaria (2 Kings 9–10).

In popular estimation Elisha always remains partly in the shadow of his master Elijah. The story of the beginning of his apprenticeship (1 Kings 19:19–21) and the account in which he becomes Elijah's heir and successor (2 Kings 2:8–18) both feature the prophetic "mantle," which carries connotations of power and authority. In the first, Elijah casts it upon his pupil; in the second, Elisha picks it up.

ELISHA BEN ABUYAH \i-'li-shə, ben-ä-'bü-yä\, *byname* Aḥer, early rabbinic authority, born prior to the destruction of the Second TEMPLE OF JERUSALEM (70 CE). While early in his career Elisha was an important and respected RABBI, he later was opposed as an apostate. He came to be so reviled that he generally is referred to simply as "the Other" (*Aḥrabbinicer*), a term used to designate a thing so repellent that even its name causes offense.

The paucity of early sources regarding Elisha and the extent to which all later sources presuppose his APOSTASY make it difficult to discern his true biography. The rabbinic literature paints a picture of a scholar with a broad education both in Jewish learning and Greek thought. He reportedly never ceased singing Greek songs and is said to have kept sectarian books hidden in his clothes, even while he was a rabbinic master.

Elisha's HERESY is said to have arisen from a mystical experience in which he, Ben Azzai, Ben Zoma, and AKIBA BEN JOSEPH entered paradise (Hagigah 14b [Talmud BAVLI]). The Bavli associates this experience with the emergence of what it sees as Elisha's heretical dualistic theology. The Talmud YERUSHALMI, by contrast, accuses Elisha of attempting to entice schoolchildren from the study of TORAH to more practical activities and, during the Hadrianic persecutions that followed the BAR KOKHBA revolt, of informing the Roman government against PHARISEES who continued to study and abide by Jewish law.

In his assigned role of the paradigmatic apostate, Elisha is charged with other heretical acts that define separation from the rabbinic community, such as riding through Jerusalem on a Day of ATONEMENT that coincided with the SABBATH and overstepping the Sabbath boundary. While the specifics of what Elisha actually did, or why, are lost, he is important in demonstrating how rabbinic culture viewed insider and outsider status and how it defined the character and results of apostasy.

ELLORA CAVES

ELLORA CAVES \e-'lōr-ə, -'lōr-\, series of rock-cut temples of the Gupta Period (c. 320–540 CE), near the village of Ellora, central Mahārāshtra state, western India. The temples are excavated out of rock cliffs and are of Buddhist, Hindu, and Jain origins. The most remarkable of the monuments is the Kailāsa Temple, 165 feet long and 96 feet high, cut from a single outcropping of rock. It is extensively carved with sculptures of Hindu divinities and mythological figures, many in erotic and voluptuous poses. The temple, dedicated to the Hindu god SHIVA, was built in the 8th century during the reign of the Rāshtrakūṭas.

ELOHIM \e-lō-'hēm, i-'lō-him\, *singular* Eloah (Hebrew: “God”), the God of Israel in the OLD TESTAMENT. Though Elohim is sometimes used for other deities, such as the MOABITE god CHEMOSH, the Sidonian goddess ASTARTE, and also for other majestic beings such as ANGELS, kings, judges (the Old Testament *shofetim*), and the MESSIAH, it is usually employed in the Old Testament for the one and only God of Israel, whose personal name was revealed to MOSES as YHWH, or YAHWEH. When referring to Yahweh, *elohim* very often is accompanied by the article *ha-*, to mean, in combination, “the God,” and sometimes with a further identification *Elohim hayyim*, meaning “the living God.”

Though plural in form, “Elohim” is commonly understood in the singular sense. The Israelites probably borrowed the Canaanite plural and made it singular in meaning in their cultic practices and theological reflections.

ELOHIST SOURCE \e-lō-'hist, i-'lō-\, *abbreviated* E, one strand of four source texts that compose the PENTATEUCH (the first five sections, or books, of both the Jewish and the Christian BIBLES), identified for ELOHIM, the name for God used therein. As an example, in the YAHWIST SOURCE (abbreviated J), along with YAHWEH as God’s name, Moses’ father-in-law is called Reuel, the mountain is called Sinai, and the people living in the region Palestine are referred to as Canaanites. In a strand where God is called Elohim, Moses’ father-in-law is JETHRO, the mountain is Horeb, and the people living in the region Palestine are Amorites. Unlike J, the Elohist source presents God as abstract and not directly accessible. The Elohist prefers PROPHECY as the medium of God’s revelation, thus treating ABRAHAM as a prophet and showing MOSES as the prophet who intercedes with God on Israel’s behalf.

E is generally thought to have been produced in the northern kingdom of Israel in the 8th century BCE and later to have been combined with J, yielding the source JE, identified where God is called “Yahweh Elohim”—*i.e.*, the Lord God. *See also* DEUTERONOMIST SOURCE; PRIESTLY CODE.

ELYSIUM \i-'li-zhē-əm, -zē-\, *also called* Elysian Fields, or Elysian Plain, in Greek mythology, originally the paradise to which heroes on whom the gods conferred immortality were sent. In Homer’s writings the Elysian Plain was a land of perfect happiness at the end of the earth, on the banks of

the Oceanus River. A similar description was given by Hesiod of the Isles of the Blessed. In the earlier authors, only those specially favored by the gods entered Elysium and were made immortal. Later Elysium became a place for the blessed dead, and, from Pindar on (c. 500 BCE), entrance was gained by a righteous life.

EMAIN MACHA \e-vən^y-'vā-kə\, the political center of the northernmost of Ireland’s provinces, Ulster, during mythical times. In the early Christian times (the 5th and 6th centuries) this region was known under the Old Irish name Ulaid (Latin: Ultonia; English: Ulster) centered on Emain Macha near the modern-day town of Armagh. The place is now called Navan Fort and is the site of a remarkable construction from the Iron Age, which probably had religious significance.

Ulster is of special importance in the mythic history of Ireland because its rulers and their champions played a prominent role in the rich Irish sagas of the Middle Ages. The semi-historical king CONCHOBAR (mac Nessa) reigned from Emain Macha. He and his prodigious warriors of the Red Branch, the most celebrated of whom was CÚ CHULAINN, are the major figures of the ULSTER CYCLE. The best-known and longest tale of this cycle is the *Táin Bó Cúailgne* (*The Cattle Raid of Cooley*), which recounts the invasion of Ulster by the other provinces, led by Queen MEDB of Connaught (Connacht, the traditional western province; literally, the “descendants of Conn”) in pursuit of a wonderful bull. Eventually the men of Connacht are repulsed by the Ulstermen and their spectacular hero, Cú Chulainn.

The most successful Christian missionary in Ireland, the 5th-century Patrick, was predominantly based in Ulster and was associated with its rulers. He established his ecclesiastical center near Emain Macha, at Armagh, which is still the primatial see of both the Roman Catholic Church in Ireland and of the Protestant Church of Ireland.

EMBALMING, the treatment of a dead body so as to sterilize it or to protect it from decay. For practical as well as

theological reasons a well-preserved body has long been a chief mortuary concern (*see* FUNERARY CUSTOMS). The application of spices and perfumed unguents to minimize putrefaction was so common a practice that the English word embalming had as its original meaning “to put on balm.” Generally, however, the word is used to describe the introduction of agents into the body to ensure preservation.

The beginnings of the art and techniques of embalming are associated principally with ancient Egypt, where, as in parts of Asia and South America, a dry soil and climate encouraged its development. The early practice of wrapping the dead in cloth and burying them in charcoal and sand beyond the reach of the Nile waters preserved the corpses, which retained form and features for a long period.

Although it is held that embalming skill reached a peak during the New Kingdom period between 1738 and 1102 BCE, the most detailed description of methods used to prepare a MUMMY was given by the 5th-century-BCE Greek historian Herodotus. The most elaborate method, at first reserved for the royal dead, involved surgical procedures. The brain, intestines, and other vital organs were removed, washed in palm wine, and placed in vases, known as CANOPIC JARS, filled with herbs. The body cavities were filled with powder of myrrh and other aromatic resins and perfumes. The incisions were stitched, and the body was placed in niter (potassium nitrate, or saltpetre) for 70 days, after which it was washed, wrapped in cotton bandages, dipped in a gummy substance, and finally coffined and entombed. In a less expensive procedure, oil of cedar was injected into the body, which was then placed in niter for 70 days. When the body was removed, the oil was withdrawn along with fleshy parts of the body, so that only skin and bones remained. A third method, employed on the bodies of the poor, consisted of purging the intestines and covering the body with niter for the prescribed period.

A number of other early peoples also practiced embalming of a sophisticated nature. Archaeologists have found evidence of a high degree of embalming skill in the burial chambers of the prehistoric Paraca Indians of Peru. The Guanches of the Canary Islands used methods much like those of the Egyptians, removing the viscera and filling the cavity with salt and vegetable powders. The Jívaro tribes of Ecuador and Peru took the additional precaution of ensuring the immortality of their chiefs by roasting their embalmed bodies over very low fires. In Tibet some bodies are still embalmed according to an ancient formula: the corpse is put in a large box and packed in salt for about three months, after which it is in a mummified condition.

Although there is evidence that some early Christians were embalmed, generally they rejected embalming as well as CREMATION, considering them PAGAN customs that mutilated the corpse. Such scruples were sometimes overcome by the desire to have an outstanding person linger on, a desire that was reinforced by the belief that the bodies of some of the devout were kept intact after death as a mark of divine favor. Consequently, some Christians were embalmed, a notable example being Charlemagne, whose embalmed and richly dressed corpse was placed in a sitting position in his tomb at Aachen after his death in 814.

EMDEN, JACOB ISRAEL ^ˈem-dən, *original name* Jacob ben Zebi, *also called* Yaabetz ^ˈyä-bets (b. June 4, 1697, Altona, Holstein [now in Germany]—d. April 19, 1776, Altona), RABBI and Talmudic scholar primarily known for his lengthy quarrel with Rabbi JONATHAN EYBESCHÜTZ, an antagonism that divided European Jewry.

Emden was thoroughly trained as a scholar of the TALMUD and also studied Latin and Dutch, though he believed that a Jew should pursue such secular subjects only during the twilight hours. Emden was a rabbi, serving four years in the city from which he took his name. After moving to Altona he established his own SYNAGOGUE and printing press and engaged in frequent disputes with members of the Jewish community. He attacked such people as the chief rabbi of the community, Ezekiel Katzenellenbogen, for his Talmudic decisions. When Katzenellenbogen died Jonathan Eybeschütz, a rabbi of great popularity and reputation in Europe, was chosen to take his place. Eybeschütz prescribed AMULETS to save women from death in childbirth, and one of the charms, with a prayer in cipher to SHABBETAI TZEVI, the most important of the Jewish false MESSIAHS, fell into Emden's hands. He publicly denounced the maker of the amulet (without specifying Eybeschütz) as a heretic deserving EXCOMMUNICATION, thereby initiating a long, often violent quarrel.

EMERALD BUDDHA, statue of the BUDDHA carved of green jasper and dating from around the 15th century.

The Emerald Buddha was originally at a temple in the town of Chiang Rai (now in Northern Thailand) until 1436, when it was removed to Chiang Mai. It was kept there until Sethathirat I, king of Chiang Mai and Laos, moved the statue to his capital, Vientiane (now in Laos), in 1560. There he built a majestic temple to house it. When King Rama I (reigned over Siam [now Thailand] 1782–1809) captured the town of Vientiane, he returned the Emerald Buddha to Thailand. Rama I established Bangkok as his capital, and in 1784 the image was placed there in the Temple of the Emerald Buddha.

The Emerald Buddha has seasonal costumes, which are changed ceremonially three times a year.

EMPIRICISM (from Greek *empeiria*, “experience”), in philosophy, an attitude expressed in a pair of doctrines: (1) that all concepts are derived from the experience to which they are applied; and (2) that all knowledge of matters of fact is based on, or derived from, experience. Accordingly, all claims to knowledge of the world can be justified only by experience.

Empiricism argues that knowledge derived from *a priori* reasoning (involving definitions or principles assumed) either does not exist or is confined to “analytical” truths, which have no content beyond the mere meanings of the words used to express them. Hence a metaphysics that seeks to combine the *a priori* validity of logic with a scientific content is impossible. Likewise there can be no “rational” method; the nature of the world cannot be discovered through pure reason or reflection.

The first Western empiricists were the ancient Greek Sophists, who concentrated their philosophical inquiries on such relatively concrete entities as human and society, rather than the speculative fields explored by their predecessors. Later ancient philosophers with empiricist tendencies were the Stoics and the Epicureans, although both were principally concerned with ethical questions. The majority of Christian philosophers in the Middle Ages were empiricists; for example, WILLIAM OF OCKHAM argued that all knowledge of the physical world is attained by sensory means.

The following ideas may be attributed to empiricist influence, although not all of them need be held by any particular empiricist thinker: (1) Experience is intelligible in

isolation without reference to the nature of its object or to the circumstances of its subject. Hence an experience can be described without saying anything about the mind that has it, the thoughts that describe it, or the world that contains it. (2) The person who undergoes experience is in some sense the recipient of data that are imprinted upon his intelligence irrespective of his activity; the person brings nothing to experience, but gains everything from it. (3) All method is scientific method. To discover the nature of the world it is necessary to develop a method of experiment whereby all claims to knowledge are tested by experience, since nothing but experience can validate them. (4) REDUCTIONISM: All facts about the world are known by the experiences that confirm claims to knowledge as fact; hence no claims to knowledge of a transcendental world can have any foundation.

In the metaphysical sphere empiricism generates a characteristic view of causation. According to empiricist metaphysics the world consists of a set of contingently connected objects and situations, united by regularities rather than necessities, and unrelated to any transcendental cause or destiny. Science, according to this view, investigates connections, and its aim is to make predictions on the basis of observed regularities. Furthermore, judgments of value have no place in science, say the empiricists, as such judgments are subjective preferences of the investigator.

EMPTINESS, also called nothingness, or void, in MYSTICISM and religion, a state of "pure consciousness" in which the mind has been emptied of all particular objects and images; also, the undifferentiated reality (a world without distinctions and multiplicity) or quality of reality that the emptied mind reflects or manifests. The particular meanings of "emptiness" vary with the particular context and the religious or cultural tradition in which it is used. The concept, with a subjective or objective reference (sometimes the two are identified), has figured prominently in mystical thought in many historical periods and parts of the world. The emptying of the mind and the attainment of an undifferentiated unity is a theme that runs through mystical literature from the UPANISHADS (ancient Indian meditative treatises) to medieval and modern Western mystical works. The concepts of HSÜ in TAOISM, *sunyata* in MAHĀYĀNA BUDDHISM, and *En Sof* in Jewish mysticism are pertinent examples of "emptiness," or "holy nothing," doctrines. Buddhism, with its basic religious ultimate of NIRVANA, as well as its development of the *sunyata* doctrine, has probably articulated emptiness more fully than any other religious tradition; it has also affected some modern Western considerations of the concept. A good deal of 19th–20th century Western imaginative literature has been concerned with emptiness, as has a certain type of existentialist philosophy and some forms of the Death of God movement.

ENCYCLICAL, pastoral letter written by the POPE for the whole ROMAN CATHOLIC church on matters of doctrine, morals, or discipline. Although formal papal letters for the entire church were issued from the earliest days of the church, the first commonly called an encyclical was published by Benedict XIV in 1740. Encyclicals are normally addressed to the bishops of the church, but a few (notably *Pacem in terris* by John XXIII) have been addressed also to "all men of good will." The formal title of an encyclical consists of the first few words of the official text; the language is usually Latin, and the document is not considered to be infallible. *Compare* BULL.

ENDYMION \en-'di-mē-ən\, in Greek mythology, a beautiful youth who spent much of his life in perpetual sleep. Endymion's parentage varies among the different ancient references and stories, but several traditions say that he was originally the king of Elis. According to one tradition, ZEUS offered him anything that he might desire, and Endymion chose an everlasting sleep in which he might remain youthful forever. According to another version of the myth, Endymion's eternal sleep was a punishment inflicted by Zeus because he had fallen in love with Zeus's wife, HERA. In any case, Endymion was loved by SELENE, the goddess of the moon, who visited him every night while he lay asleep in a cave on Mount Latmus in Caria; she bore him 50 daughters. Another form of the myth represents Endymion as having been put to sleep by Selene herself so that she might enjoy his beauty undisturbed.

ENKIDU \en-kē-dü, 'en-\, friend and companion of the Mesopotamian hero GILGAMESH. Their story is related in the *Epic of Gilgamesh*, which dates from the middle of the 2nd millennium BCE to the middle of the 1st millennium BCE. Enkidu was created as a wild man by the god ANU to act as a foil to Gilgamesh. After Gilgamesh defeats Enkidu, the two become friends (or sometimes Enkidu becomes the servant of Gilgamesh). Enkidu's death following the two heroes' de-

Endymion, in Greek myth, a youth of great beauty who sleeps eternally

Culver Pictures

feat of the Bull of Heaven motivated Gilgamesh's subsequent pursuit of immortality, the story of which forms the latter portions of the *Epic of Gilgamesh*.

ENLIL \ˈen-lil\, Mesopotamian god of the atmosphere and a member of the triad of gods completed by ANU and EA. Enlil meant Lord Wind: both the hurricane and the gentle winds of spring were the breath issuing from his mouth or, later, his word or command. He was sometimes called Lord of the Air.

Although Anu held authority over the Sumerian pantheon, Enlil played a more important role: he embodied energy and force. Enlil was also the god of agriculture, who separated heaven and earth to make room for seeds to grow. He then invented the hoe and broke the hard crust of earth; men sprang forth from the hole. Another myth relates Enlil's rape of his consort Ninlil, a grain goddess, and his subsequent banishment to the underworld. This may reflect the agricultural cycle of fertilization, ripening, and winter inactivity. Enlil's cult center was Nippur. *See also* BEL.

ENNIN \ˈen-nēn\, *original name* Mibu, *also called* Jikaku Daishi \jē-ˈkū-kū-ˈdī-shē\ (b. 794, Tsuga District, Shimotsuke Province, Japan—d. Feb. 24, 864, Japan), Buddhist priest of the early Heian period, founder of the still-extant Sammon branch of the Tendai (T'EN-T'AI) sect.

Ennin began his education at Dai-ji (*ji*, "temple"), entering the monastery of Enryaku-ji near Kyōto when he was 15. He became a disciple of the priest SAICHŌ, founder of the temple. Efforts were under way to harmonize BUDDHISM and SHINTŌ, and the emperor Nimmyō named Ennin to a large study mission to T'ang China, where Saichō's inspiration for Tendai had originated.

Ennin, returning home in 847, brought with him 559 volumes of Chinese Buddhist literature and many religious implements for Buddhist rituals. Ennin also brought back the method of musical notation for chants used in China, a system of curved and shaped lines and figures called neumes, whose use continues in Japan. Among his voluminous writings was a detailed journal of his Chinese travels.

It was also Ennin who introduced to Japanese Buddhism *nembutsu*, the practice of chanting the name of Amida (AMITĀBHA) Buddha, and this contributed to a new piety which developed in rural Japan. The Imperial Court recognized Ennin's contributions by naming him *daihosshi* ("great priest") in 848. Ennin's doctrines and teachings, stressing piety and the possibility of becoming a buddha in this life, influenced the course of Japanese Buddhism for centuries to come. The title *hōin daichi* (the highest priestly rank, in effect, "high priest of supreme wisdom") was posthumously conferred on him, and two years later he was given the honorific name Jikaku Daishi.

EOS \ˈē-ās\, in Greek mythology, the personification of the dawn. According to the poet Hesiod, she was the daughter of the TITAN Hyperion and the Titaness Theia and sister of HELIOS, the sun god, and SELENE, the moon goddess. By the Titan Astraeus she was the mother of the winds Zephyrus, Notus, and BOREAS, and of HESPERUS (the Evening Star) and the other stars; by TITHONUS of Assyria she was the mother of MEMNON, king of the Ethiopians. She bears in Homer's works the epithet Rosy-Fingered.

Eos was also represented as the lover of the hunter ORION and of the youthful hunter CEPHALUS, by whom she was the mother of PHAETHON. In works of art she is represented as a young woman, either walking fast with a youth in her arms

or rising from the sea in a chariot drawn by winged horses; sometimes, as the goddess who dispenses the dew of the morning, she has a pitcher in each hand.

EPHESUS, COUNCILS OF \ˈe-fə-səs\, three assemblies held in Asia Minor to resolve problems of the early Christian church.

In 190 Polycrates, bishop of Ephesus, convened a SYNOD to establish the 14th of Nisan (the date of the Jewish PASS-OVER) as the official date of EASTER. Pope Victor I, preferring a Sunday as more convenient and desiring uniformity, repudiated the decision.

In 431 Pope Celestine I commissioned CYRIL OF ALEXANDRIA, to conduct proceedings against NESTORIUS. When the Eastern bishops (more sympathetic to Nestorius) arrived and learned that the council had been started without them, they set up a rival synod under John of Antioch and excommunicated Cyril. When Pope Celestine pronounced his EXCOMMUNICATION of Nestorius and ratified his deposition as bishop of Constantinople, the Emperor Theodosius II sided with Cyril. This council is known as the third ecumenical council of the church.

In 449 Emperor Theodosius II convened a council in Ephesus to uphold the MONOPHYSITE Eutyches in his battle against Flavian, patriarch of Constantinople, who championed the doctrine of two natures in Christ. Dioscorus (Cyril's successor at Alexandria) supported Eutyches and concurred in the anathematization of Flavian and other bishops over the protests of the papal legate. Dioscorus even attempted to excommunicate Pope Leo I, who referred to the gathering as the "Robber Synod."

EPHOD \ˈē-fād, ˈe-\, *also spelled* efod, part of the ceremonial dress of the HIGH PRIEST of ancient Israel described in the OLD TESTAMENT (Exodus 28:6–8; 39:2–5). It was worn outside the robe and probably kept in place by a girdle and by shoulder pieces, from which hung the breast piece (or pouch) containing the sacred lots, Urim and Thummim. Its association with the sacred lots indicates that the ephod was used for DIVINATION.

A similar vestment, made of linen, was worn by persons other than the high priest. Samuel wore the ephod when he served before the TABERNACLE at SHILOH (1 Samuel 2:18), as did David when he danced before the ARK at its entry into Jerusalem (2 Samuel 6:14).

EPHRAEM SYRUS, SAINT \ˈē-frā-əm-ˈsī-rəs, -frē-\, *Syrian* Aphrem (b. c. 306, Nisibis, Mesopotamia—d. June 9, 373, Edessa, Osroëne; Western feast day June 9, Eastern feast day January 28), Christian theologian, poet, hymnist, and as doctrinal consultant to Eastern churchmen, the most authoritative representative of 4th-century Syriac CHRISTIANITY.

Deacon to Bishop James of Nisibis and tutor in theology, Ephraem went to teach at the academy in Edessa when his native town was ceded to the Persians in 363; his record of these events in verse, *Carmina Nisibena* ("Songs of Nisibis") constitutes a valuable historical source. Declining any higher office in the church (he escaped being consecrated bishop by feigning madness), he produced a wealth of theological literature. As a biblical exegete, Ephraem wrote commentaries on the OLD TESTAMENT books of GENESIS and EXODUS and annotated the important 2nd-century Syriac-Greek version of the NEW TESTAMENT, the *Diatessaron*. His favorite literary form was verse, in which he composed treatises, sermons, and HYMNS. Much of his hymnology was

directed against the principal heresies of his day, particularly Gnosticism. Ephraem further emphasized devotion to the Virgin MARY, particularly her sinlessness and exemplary fidelity. Additional doctrinal themes integrated in his prose and poetry include the union of divinity and humanity in JESUS CHRIST; the essential function of the HOLY SPIRIT in prayer, especially in rendering Christ's actual Presence in the EUCHARIST; the RESURRECTION of all men, wherein he maintained the traditional Syriac belief that each individual would need to await the LAST JUDGMENT to gain heavenly beatitude. Ephraem's graphic description of heaven and hell contributed to the inspiration of Dante's *Divine Comedy*.

EPHRAIM \ˈɛ-frē-əm\, one of the TWELVE TRIBES OF ISRAEL that in biblical times comprised the people of ISRAEL (Genesis 41:50–52; 48; Joshua 17:17; 18:5; Judges 1:23, 35). The tribe was named after one of the younger sons of JOSEPH, himself a son of JACOB.

After the death of MOSES, members of JOSHUA's tribe settled in the fertile, hilly region of central Palestine (Joshua 16:5–10). They gradually gained great power, for the Ephraimites acted as hosts to the tribal assemblies and had within their borders such religiously important centers as SHILOH and BETHEL (Judges 4:5; 7:24–25; 17:ff; 21:2; 1 Samuel 1:1–3).

In 930 BCE the tribe of Ephraim led the 10 northern tribes in a successful revolt against the south and established the Kingdom of Israel, with Jeroboam I, an Ephraimite, as king (1 Kings 11:26ff; 2 Chronicles 10). The seventh king of Israel, AHAB (reigned c. 874–c. 853 BCE), was also an Ephraimite (1 Kings 16:29). From about 745 BCE, the northern kingdom was often referred to as the Kingdom of Ephraim, a reflection of the tribe's importance (Isaiah 7:2–17; 11:13; Jeremiah 31:9, 18–20; Ezekiel 37:16–19). Assyrian conquerors overran the kingdom in 721 BCE, dispersing some of the inhabitants and gradually assimilating others, occurrences that account for the eventual disappearance of the tribe of Ephraim along with the nine other northern tribes (2 Kings 18:9–12). They have become known in legend as the TEN LOST TRIBES OF ISRAEL.

EPICLESIS \e-pi-ˈklē-sis\ (Greek: "invocation"), in CHRISTIANITY, the portion of the prayer (anaphora) introducing the EUCHARIST that serves as a special invocation of the HOLY SPIRIT. In most Eastern Christian liturgies it follows the words of institution—the words used, according to the NEW TESTAMENT, by Jesus himself at the LAST SUPPER: "This is my body . . . this is my blood"—and has a clearly consecratory character. The epiclesis specifically asks that bread and wine be made the body and blood of Christ, and the actual change (Greek *metabolē*) is attributed to the Holy Spirit. It reflects the prevailing sacramental theology of the Eastern church, which interprets the effectiveness of the SACRAMENTS as an answer of God to the prayer of the church rather than as a result of the vicarious powers of a priest pronouncing the appropriate formula. The epiclesis also maintains the trinitarian character of the eucharistic prayer, which is addressed to the Father, commemorates the saving action of the Son, and invokes the power of the Spirit.

In the 14th century the epiclesis became an issue between Greeks and Latins because the Roman MASS did not invoke the Holy Spirit. Latin theology did not require the epiclesis since it was believed that the consecration of bread and wine and their TRANSUBSTANTIATION took place when the priest pronounced the words of institution.

The medieval Latin view was endorsed by the COUNCIL OF TRENT (1545–63), but the liturgical reforms adopted in ROMAN CATHOLICISM after the SECOND VATICAN COUNCIL (1962–65) have included the introduction of an epiclesis in the canon of the mass. This epiclesis, however, is placed before the words of institution so that the consecratory function of the latter can still be maintained.

EPICUREANISM \,e-pi-kyū-ˈrē-ə-,ni-zəm, ,e-pi-ˈkyūr-ē-\, in a strict sense, the philosophy of the ancient Greek Epicurus (341–270 BCE); and in a broad sense, a system of ethics traceable to the principles of his philosophy. In physics, Epicureanism espouses atomism and a largely mechanical conception of causality, with the gods remaining extraneous; and, in ethics, the identification of good with pleasure and the absence of pain, utility and the limitation of desire, and a withdrawn and quiet life enriched by the company of friends.

Epicurus founded a school of philosophy in Athens. Because the society that he gathered round him included women as well as men, it frequently evoked public scandal and even persecution. Nonetheless, communities modeled on the original were founded throughout the Mediterranean world. The most significant revival of Epicureanism was the Christian interpretation developed by Pierre Gassendi in the 17th century.

The philosophic outlook of Epicurus was fundamentally ethical. For Epicurus the sole criterion of GOOD AND EVIL is sensation; so that "we declare pleasure to be the beginning and end of the blessed life." However, while every pleasure is in itself good, not all pleasures are to be chosen, since certain pleasures are produced by means which entail annoyances many times greater than the pleasures themselves. Thus pleasure as contemplated by Epicurus is not so much active enjoyment as the absence of pain.

According to Epicurus, the SOUL is a material body of fine parts and is distributed through the whole bodily structure. So long as it is protected by the body, it is capable of sensation and of communicating sensation to the body. When it leaves the body, it is dissipated into the primordial atoms of which it was compounded; the body, on the other hand, is no longer capable of sensation. Thus there can be no life to come, and death is not to be feared.

Epicurus holds that sensory perception is a purely material process. From the surface of all bodies there are continually being discharged images, hollow films of exceedingly fine texture, which in shape are exact replicas of the bodies. Sensation of such images is the sole source of knowledge, and all sensuous perceptions are true. Error can arise only when, beyond what is given in sensation, the mind forms an opinion that is afterward contradicted or unconfirmed. Epicurus does not deny the existence of the gods; rather he holds that "their existence is known to us by immediate apprehension." Fashioned of finer stuff than humankind, they dwell afar in the intermundial spaces, neither troubling human affairs nor troubled by them.

EPIMENIDES \,e-pi-ˈme-nə-,dēz\ (fl. 6th century BCE?), Cretan seer, reputed author of religious and poetical writings. He conducted purificatory rites at Athens about 500 BCE according to Plato (about 600 according to Aristotle). All surviving fragments, including a line quoted by St. Paul (Titus 1:12), are attributable to other sources. Stories of his advanced age (157 or 299 years), his miraculous sleep of 57 years, and his wanderings outside the body have led some scholars to regard him as a legendary SHAMAN.

EPIPHANIUS OF SALAMIS, SAINT \,e-pə-'fā-nē-əs . . . 'sa-lə-məs\ (b. c. 315, Palestine—d. May 403, at sea; feast day May 12), bishop noted in the history of the early Christian church for his struggle against beliefs he considered heretical. His chief target was the teachings of ORIGEN, a major theologian in the Eastern church. The harsh attacks by Epiphanius, who considered Origen more a Greek philosopher than a Christian, did much to discredit Epiphanius' principles.

Epiphanius studied and practiced MONASTICISM in Egypt and then returned to his native Palestine, where he founded a monastery and became its superior. In 367 he was made bishop of Salamis (Constantia) in Cyprus. He spent the rest of his life in that post.

In 403 Epiphanius went to Constantinople (Istanbul) to campaign against the bishop there, ST. JOHN CHRYSOSTOM, who had been accused of sheltering four monks expelled from Alexandria for their Origenistic views. Becoming convinced of the falsity of this and related charges made by Bishop Theophilus of Alexandria (who wanted to depose John), Epiphanius set sail for Cyprus but died en route.

A zealous bishop and a revered ascetic, Epiphanius was lacking in moderation and judgment. These defects are reflected in his writings, of which the chief work is the *Panarion* (374–377). His works are valuable as a source for the history of theological ideas.

EPIPHANY (from Greek: *epiphaneia*, “manifestation”), festival celebrated on January 6; it is one of the three principal and oldest festival days of the Christian church (including EASTER and CHRISTMAS). In the Western church, it commemorates the first manifestation of JESUS CHRIST to the GENTILES, represented by the MAGI. In the Eastern church it commemorates the manifestation of his divinity, as it occurred at his BAPTISM in the Jordan River. In the West the evening preceding Epiphany is called Twelfth Night.

EPONA \ˈe-pō-nə\, the Gaulish version of a Celtic mare goddess who is also recognizable in the Welsh RHIANNON (“Great Queen”) and the Irish MACHA.

In the Welsh and Irish stories, the goddess is strongly tied to the functions of kingship and fertility. Epona, whose name means “Divine Mare” or “Mare Goddess,” was worshiped almost everywhere in the western part of the Roman Empire, her cult evidently being spread by the army, especially members of the cavalry.

ERASMUS, DESIDERIUS \i-'raz-məs\ (b. Oct. 27, 1469, Rotterdam, Holland [now in The Netherlands]—d. July 12, 1536, Basel, Switz.), European scholar who helped lay the groundwork for the historical-critical study of the past, especially in his studies of the Greek NEW TESTAMENT and the CHURCH FATHERS.

Erasmus was the illegitimate son of Roger Gerard, a priest. Erasmus entered the monastery of the AUGUSTINIAN canons regular at Steyn in 1485, where his monastic superiors discouraged his classical studies. Thus, after his ORDINATION to the PRIESTHOOD (April 1492), he was happy to escape the monastery by accepting a post as Latin secretary to the influential Henry of Bergen, bishop of Cambrai. The bishop was induced to send him to the University of Paris to study theology (1495). To support his classical studies, he began taking in pupils; from this period (1497–1500) date the earliest versions of those aids to elegant Latin—including the *Colloquia* and the *Adagia*—that before long would be in use in humanist schools throughout Europe.

In 1499 a pupil invited Erasmus to England. There he met Thomas More, who became a friend for life, and John Colet, the theologian and founder of St. Paul's School, London. Erasmus returned to the Continent with a Latin copy of St. Paul's Epistles and the conviction that “ancient theology” required mastery of Greek. By 1502 he had settled in Louvain (Brabant) and was reading ORIGEN and ST. PAUL in Greek. The fruit of his labors was *Enchiridion militis Christiani* (1503/04; *Handbook of a Christian Knight*). The *Enchiridion* was a manifesto of lay piety in its assertion that “monasticism is not piety.”

Erasmus found an opportunity to travel to Italy as tutor to the sons of the future Henry VIII's physician. There he produced the monumental final version of *Adagia* and *De pueris instituendis* (published 1529), the clearest statement of Erasmus' enormous faith in the power of education.

The celebrated *Moriae encomium*, or *Praise of Folly*, written at Thomas More's house (1511), expresses a very different mood. For the first time the earnest scholar saw his own efforts along with everyone else's as bathed in a universal irony, in which foolish passion carried the day. In other works of about the same time Erasmus showed a new boldness in commenting on the ills of Christian society—popes who in their warlike ambition imitated Caesar rather than Christ; princes who hauled whole nations into war to avenge a personal slight; and preachers who looked to their own interests by pronouncing the princes' wars just. To remedy these evils Erasmus looked to education.

Erasmus, oil painting by Hans Holbein the Younger, 1523; in the Louvre, Paris

Giraudon—Art Resource

From about 1514 Erasmus' home base was Brabant. He joined the faculty of Louvain and was named honorary councillor to the 16-year-old archduke Charles, the future Charles V, for whom he wrote *Institutio principis Christiani* (1516; *The Education of a Christian Prince*) and *Querela pacis* (1517; *The Complaint of Peace*). It was at this time too that he completed his annotated Greek New Testament and began his *Paraphrases* of the books of the New Testament, each one dedicated to a monarch or a prince of the church.

From the very beginning of Martin Luther's challenge to papal authority, Erasmus' foes blamed him for inspiring Luther. In fact, Erasmus found much to admire in Luther's writings. When he quit Brabant for Basel (December 1521), he did so lest he be faced with a personal request from the emperor to write a book against Luther, which he could not have refused.

For Erasmus the root of the Protestant SCHISM was not theology but anticlericalism and lay resentment of the laws and "ceremonies" that the clergy made binding under pain of hell. As he wrote to Pope Adrian VI, whom he had known at Louvain, there was still hope of reconciliation, if the church would, for instance, grant the CHALICE to the laity and permit priests to marry.

When Adrian VI was succeeded by Clement VII, Erasmus could no longer avoid theological combat. *De libero arbitrio* (1524) defended the place of human free choice in the process of salvation and argued that the consensus of the church through the ages is authoritative in the interpretation of SCRIPTURE. In reply Luther wrote one of his most important theological works, *De servo arbitrio* (1525), to which Erasmus responded with a lengthy, two-part *Hyperaspistes* (1526–27).

In 1529, when Protestant Basel banned CATHOLIC worship altogether, Erasmus moved to the Catholic university town of Freiburg im Breisgau. He returned to Basel to see his manual on preaching (*Ecclesiastes*, 1535) through the press, and it was there he died.

ERATO \ˈer-ə-tō\, in GREEK RELIGION, one of the nine MUSES, the patron of lyric and erotic poetry or hymns. She is often depicted playing a lyre.

ERECHTHEUM \er-ek-ˈthē-əm\, Ionic temple of ATHENA, built during 421–407 BCE on the Acropolis at Athens, famous largely for its complexity and for the exquisite perfection of its details. The temple's Ionic capitals are the most

beautiful that Greece produced, and its distinctive porch, supported by caryatid figures, is unequalled.

The name, of popular origin, is derived from a shrine dedicated to the Greek hero Erichthonius. It is believed by some that the temple was erected in honor of the legendary

Erechtheum, on the Acropolis, Athens

John Lamb—Stone/Getty Images

king ERECHTHEUS. The temple contained a revered image of Athena Polias (Athena as goddess of the Acropolis), as well as altars to other gods and sacred objects. The architect was probably Mnesicles.

ERECHTHEUS \i-ˈrek-,thūs, -thē-əs\, legendary king and probably also a divinity of Athens. According to the *Iliad*, he was born from the corn land and raised by the goddess ATHENA, who established him in her temple at Athens. In later times only a great snake was thought to share the temple with Athena, and there is evidence that Erechtheus was or became a snake.

The earliest Athenian kings tended to have similar names suggesting a connection with the earth (*chthōn*; e.g., Erichthonius, Erysichthon), to have been born of the earth and raised by Athena, and to have something serpentine about them. Snakes were often believed to embody earth or ancestor spirits, so that Athena's sharing her temple with Erechtheus, whom she herself nurtured, may have been the mythical way of expressing her guardianship of the ancient royal house of Athens and of the land itself and its fertility, with which the ancient understanding of kingship was intimately connected.

In his lost play *Erechtheus*, Euripides gave that king three daughters, one of whom was appropriately named Chthonia. At war with neighboring Eleusis and its ally King EUMOLPUS, Erechtheus learned from the god APOLLO that Athens would win if he sacrificed his daughter. He sac-

rificed Chthonia and Athens won but Erechtheus was destroyed by POSEIDON or by a thunderbolt from ZEUS.

ERESHKIGAL \ä-'resh-,kē-gə\, in MESOPOTAMIAN RELIGION, goddess in the Sumero-Akkadian pantheon who was Lady of the Great Place (*i.e.*, the abode of the dead) and, in texts of the 3rd millennium BCE, wife of the god NINAZU (elsewhere accounted her son); in later texts she was the wife of NERGAL. Ereshkigal's sister was Inanna (Akkadian ISHTAR), and between the two there was great enmity. Ereshkigal reigned in her palace, on the watch for lawbreakers and on guard over the fount of life lest any of her subjects take of it and so escape her rule. Her offspring and servant was Namtar, the DEMON of Death. Her power extended to earth where, in magical ceremony, she liberated the sick possessed of evil spirits. Ereshkigal's cult extended to Asia Minor, Egypt, and southern Arabia. In Mesopotamia the chief temple known to be dedicated to her was at Cuthah.

ERIDU GENESIS \e-'rē-dü\, in the literature of MESOPOTAMIAN RELIGION, Sumerian epic primarily concerned with the creation of the world, the building of cities, and the flood. According to the epic, after the universe was created out of the primeval sea and the gods were given birth, the deities fashioned humans from clay to cultivate the ground, care for flocks, and perpetuate the worship of the gods.

Cities were soon built and kingship was instituted on Earth. Because of their noise-making, however, the gods determined to destroy mankind with a flood. Enki (Akkadian EA), who did not agree with the decree, revealed it to ZIUSUDRA (UTNAPISHTIM), a man well known for his humility and obedience. Ziusudra did as Enki commanded and built a huge boat, in which he successfully rode out the flood. Afterward, he prostrated himself before the gods An (ANU) and ENLIL (BEL), and, as a reward for living a godly life, was given immortality.

ERIGONE \i-'ri-gə-nē\, in Greek mythology, daughter of Icarus, the hero of the Attic deme (township) of Icaria. Her father had been taught by the god DIONYSUS to make wine, and he gave some to several shepherds, who became intoxicated. Their companions, thinking they had been poisoned, killed Icarus and buried him under a tree. Erigone, guided by her dog Maera, found his grave and hanged herself on the tree. Dionysus sent a plague on the land, and all the maidens of Athens, in a fit of madness, hanged themselves. Icarus, Erigone, and Maera were set among the stars as Boötes (or Arcturus), Virgo, and Procyon, and to propitiate Icarus and Erigone, the festival called Aïora (the Swing) was instituted. During this festival various small images were swung from trees, and offerings of fruit were made. The story of Erigone may have been intended to explain the origin of this cult practice.

ERINYES \i-'ri-nē-ēz\, *singular* Erinys \i-'ri-nis, -'rī-\, *also called* Eumenides \yü-'me-ni-'dēz\ ("Kind Ones"), or Furies, in Greek mythology, goddesses of vengeance. They were probably personified corpses but possibly were originally conceived of as ghosts of the murdered. A goddess Erinys appears in a Mycenaean text, but later sources referred to them in the plural. According to the Greek poet Hesiod they were the daughters of GAEA (Earth) and sprang from the blood of OURANUS; in the plays of Aeschylus they were the daughters of NYX (Night); in those of Sophocles they were the daughters of Erebus (Darkness) and of Gaea. Euripides was the first to speak of them as three in number. Later

writers named them Alecto ("Unceasing in Anger"), Tisiphone ("Avenger of Murder"), and Megaera ("Jealous"). They lived in the Underworld and ascended to earth to pursue the wicked. Because the Greeks feared to utter the dreaded name Erinyes, the goddesses were often addressed by the euphemistic names Eumenides or Semnai Theai ("Venerable Goddesses").

ERIS \er-'is, 'ir-\, in Greek mythology, the personification of strife, daughter of NYX, and sister and companion of ARES. Eris is best known for her part in starting the Trojan War. When she alone of the gods was not invited to the marriage of PELEUS and THETIS, she threw among the guests a golden apple inscribed "For the most beautiful." HERA, ATHENA, and APHRODITE each claimed it, and ZEUS assigned the decision to PARIS. Paris awarded the apple to Aphrodite, who then helped him win HELEN of Troy. In the war that resulted, Hera and Athena were implacable enemies of Troy.

EROS \er-'äs, 'ir-\, in GREEK RELIGION, god of love. In the *Theogony* of Hesiod (fl. 700 BCE), Eros was a primeval god, son of CHAOS, the original primeval emptiness of the universe; but later tradition made him the son of APHRODITE by either ZEUS, ARES, or HERMES. Eros was god not simply of passion but also of fertility. His brother was Anteros, the god of mutual love, who was sometimes described as his opponent. The chief associates of Eros were Pothos and Himeros (Longing and Desire). In Alexandrian poetry he degenerated into a mischievous child. In archaic art he was represented as a beautiful winged youth but tended to be made younger and younger until, by the Hellenistic period, he was an infant. His chief cult center was at Thespieae in Boeotia, where the Erotidia were celebrated. He also shared a SANCTUARY with Aphrodite in the Acropolis at Athens.

ESAGILA \ä-sä-'gē-lä\, most important temple complex in ancient Babylon, dedicated to the god MARDUK, the tutelary deity of that city. The temple area was located south of the huge ZIGGURAT called Etemenanki; it measured 660 feet on its longest side, and its three vast courtyards were surrounded by intricate chambers. The whole complex reflects centuries of building and rebuilding by the Babylonian kings, especially Nebuchadrezzar II (reigned 604–562 BCE). The tremendous wealth of Esagila was recorded by the Greek historian Herodotus, who is believed to have visited Babylon in the 5th century BCE. Babylon was excavated in 1899–1917 by German archaeologists; few objects of value, however, were found in Esagila, which had been thoroughly plundered in antiquity.

ESAU \ē-'sò\, *also called* Edom \ē-'dəm\, in the OLD TESTAMENT, son of ISAAC and Rebekah, elder twin brother of JACOB, and in Hebrew tradition the ancestor of the Edomites.

At birth, Esau was red and hairy (Genesis 25:25), and he became a wandering hunter, while Jacob was a shepherd (Genesis 25:27). Although younger, Jacob dominated him by deception. At one time, when Esau was hungry, Jacob bought Esau's birthright (*i.e.*, the rights due him as the eldest son) for some soup (Genesis 25:29–34). When Isaac was dying, Jacob, with Rebekah's help, cheated Esau out of his father's blessing (Genesis 27:1–40). Esau would have killed Jacob, but Jacob fled (Genesis 27:41–45); when he returned 20 years later, Esau forgave him (Genesis 33:4).

The story was partly intended to explain why Israel (in the time of the United Monarchy) dominated the kingdom of Edom, although the latter was older.

ESCHATOLOGY \,es-kə-ˈtā-lə-jē\, the doctrine of last things, especially in JUDAISM, CHRISTIANITY, and ISLAM, concerning beliefs about the end of history, the resurrection of the dead, the LAST JUDGMENT, and related matters. Similar concepts are found in the religions of nonliterate peoples, ancient Mediterranean and Middle Eastern cultures, and Eastern civilizations.

By and large, eschatologies have appeared in two radically divergent forms, distinguished by their attitude toward time and history. In mythical eschatologies, so called after their characteristic representations of the eternal struggle between cosmos (order) and CHAOS (disorder), the meaning of history is found in a celebration of the eternity of the cosmos and the repeatability of the origin of the world. Historical eschatologies, on the other hand, are grounded not in a mythical primal happening but in datable events that are perceived as key experiences fundamental for the progress of history.

Historical eschatology is basic to the OLD TESTAMENT and thus enters into the structure of faith of those religions, primarily Judaism, Christianity, and Islam, that draw upon it. Old Testament eschatology consists in the conviction that the catastrophes that beset the people of Israel happened because of their disobedience to the laws and will of God. Subsequent conformity to the will of God would result in a return for the Jews to a final condition of righteousness and moral and material renewal, in which God's purpose would at last be fulfilled. Old Testament eschatology is closely bound to the concept of a redemptive history, in which the Jewish people are viewed as God's chosen instrument for the carrying out of his purpose and in which, upon the fulfillment of God's promises, the Jewish people would be the vehicle for both their own salvation and that of the world.

Christian eschatology is centered in the figure of JESUS CHRIST as the anticipation of the future KINGDOM OF GOD. Jesus is viewed as the MESSIAH of God, through whom and by whom the new age of God's redemption has been opened. The historical development of Christianity was marked by widely differing interpretations and degrees of acceptance of this original eschatology, however. Distinctions can be made between the hopes of messianism (directed toward a salvatory or vindicating figure to come), millenarianism (directed toward the prophesied 1,000-year Kingdom of Christ), and APOCALYPTICISM (directed toward the cataclysmic intervention of God in history). The eschatological views of Christianity also include a belief in the "restoration of all things," which some Christians, beginning with ORIGEN, have taken to include universal salvation.

ESSENE \i-ˈsēn, ˈe-sēn\, member of a religious sect or brotherhood that flourished in Palestine from about the 2nd century BCE to the end of the 1st century CE. Accounts given by the historians FLAVIUS JOSEPHUS, PHILO JUDAEUS, and Pliny the Elder sometimes differ in significant details, perhaps indicating a diversity that existed among the Essenes themselves.

The Essenes clustered in monastic communities that generally excluded women. Property was held in common, and all details of daily life were regulated by officials. The Essenes were never numerous; Pliny fixed their number at some 4,000 in his day. They meticulously observed the Law of MOSES, the SABBATH, and ritual purity (see TOHORAH). They also professed belief in immortality and divine punishment for SIN, but they denied the resurrection of the body. With few exceptions, they shunned Temple worship and lived as-

cetic lives of manual labor in seclusion. The sabbath was reserved for day-long prayer and meditation on the TORAH. OATHS were frowned upon, but once taken they could not be rescinded.

After a year's probation, proselytes received their Essene emblems but could not participate in common meals for two more years. Those who qualified for membership were called upon to swear piety to God, justice toward men, hatred of falsehood, love of truth, and faithful observance of all other tenets of the Essene sect. Thereafter new converts were allowed to take their noon and evening meals in silence with the others.

Following the discovery of the DEAD SEA SCROLLS (late 1940s and 1950s) in the vicinity of Khirbet QUMRĀN, many scholars hold that the Qumrān community was Essenian.

ESTABLISHED CHURCH, church recognized by law as the official church of a state or nation and supported by civil authority. The church is not free to make changes in such things as doctrine, order, or worship without the consent of the state. In accepting such obligations, the church usually, though not always, receives financial support and other special privileges.

Among numerous examples of established churches or state religions are the following: the ANGLICAN church in England, LUTHERANISM in the Scandinavian countries, ROMAN CATHOLICISM in Italy and Spain, EASTERN ORTHODOXY in pre-Revolutionary Russia, JUDAISM in Israel, ISLAM in Saudi Arabia and Egypt, BUDDHISM in Thailand and Sikkim, and SHINTŌ in Japan before World War II. In pluralistic societies and under modern forms of government, religious establishment has tended to diminish in importance.

ESUS \ˈē-səs\ (Celtic: "Lord," or "Master"), important Celtic deity, one of three mentioned by the Roman poet Lucan in the 1st century CE; the other two were TARANIS ("Thunderer") and TEUTATES ("God of the People"). Esus' victims, according to later commentators, were sacrificed by being ritually stabbed and hung from trees. A relief from the Cathedral of Notre-Dame in Paris portrays Esus as a bent woodman cutting a branch from a willow tree. This and a related relief from Trier, Germany, associate him with the sacred bull and with his accompanying three cranes or egrets.

ETANA EPIC \ā-ˈtā-nā\, ancient Mesopotamian tale concerned with the question of dynastic succession. In the beginning, according to the epic, there was no king on the earth; the gods thus set out to find one and apparently chose Etana, who proved to be an able ruler until he discovered that his wife, though pregnant, was unable to give birth, and thus he had no heir to the throne. The one known remedy was the birth plant, which Etana was required to bring down personally from heaven. Etana, therefore, prayed to the god SHAMASH, who heard his request and directed him to a mountain where a maimed eagle, languishing in a pit (into which it had been thrown as punishment for breaking a sacred pact), would help him obtain the special plant. Etana rescued the eagle, and as a reward it carried him high up into the sky.

The result of Etana's quest is uncertain because of the incomplete state of the texts. According to one fragment, Etana reached heaven and prostrated himself before the gods. There the text breaks off. According to another fragment, however, Etana either became dizzy or lost his nerve before reaching heaven and crashed to the ground. If Etana was

successful, the myth may have been used to support early dynastic claims. Etana of the myth is probably the Etana who ruled Kish in southern Mesopotamia sometime in the first half of the 3rd millennium BCE.

ETHIOPIANISM \ˌē-thē-ˈō-pē-ə-ni-zəm\, religious movement among sub-Saharan Africans that embodied the earliest stirrings toward religious and political autonomy in the modern colonial period. The movement was initiated in the 1880s when South African MISSION workers began forming independent all-African churches, such as the Tembu tribal church (1884) and the Church of Africa (1889). A former Wesleyan minister, Mangena Mokone, was the first to use the term when he founded the Ethiopian Church (1892). Among the main incentives for the movement were the frustrations experienced by Africans who were denied advancement in the hierarchy of mission churches, racial discontent, and the desire for a more African and relevant CHRISTIANITY and the restoration of tribal life.

The mystique of the term Ethiopianism derived from its occurrence in the BIBLE (where Ethiopia is also referred to as Kush, or Cush) and was enhanced when the ancient independent Christian kingdom of Ethiopia defeated the Italians at Adwa (Adowa) in 1896. The word therefore represented Africa's dignity and place in the divine dispensation and provided a charter for free African churches and nations of the future. Early Ethiopianism included tribalist, nationalist, and Pan-African dimensions, which were encouraged by association with independent American black churches and leaders with "back to Africa" ideas and an Ethiopianist ideology. This ideology was explicit in the thought of such pioneers of African cultural, religious, and political independence as E.W. Blyden and J.E. Casely-Hayford of Ghana.

Parallel developments occurred elsewhere and for similar reasons. In Nigeria the so-called African churches—the Native Baptist Church (1888), the formerly Anglican United Native African Church (1891) and its later divisions, and the United African Methodist Church (1917)—were important. Other Ethiopian-related movements included the Cameroun Native Baptist Church (1887); the Native Baptist Church (1898) in Ghana; in Rhodesia a branch (1906) of the African-American denomination, the AFRICAN METHODIST EPISCOPAL CHURCH, and Nemapare's African Methodist Church (1947); and in Kenya the Kenyan Church of Christ in Africa (1957), which was formerly Anglican.

Ethiopian movements played some part in the Zulu rebellion of 1906

and especially in the Nyasaland rising of 1915 led by John Chilembwe, founder of the independent Providence Industrial Mission. From about 1920, political activities were channeled into secular political parties and trade unions, and the use of the term Ethiopian then narrowed to one section of African independent religious movements. These Ethiopian-type churches originated by secession (and further sub-secessions) from a mission-connected church, which they resemble in beliefs, polity, and worship but from which they differ in certain cultural and ethnic practices. By the early 1970s the term Ethiopianism was not in popular use outside southern Africa.

ETHIOPIAN ORTHODOX CHURCH, *also called* Ethiopian church, independent Christian patriarchate in Ethiopia holding to MONOPHYSITE doctrine. The church recognizes the honorary primacy of the Coptic PATRIARCH of Alexandria. It is headquartered in Addis Ababa.

Ethiopia was Christianized in the 4th century CE by two brothers from Tyre—St. Frumentius, later consecrated the first Ethiopian bishop, and Aedesius. They won the confidence of King Ezana at Aksum (a powerful kingdom in northern Ethiopia) and were allowed to evangelize. Toward the end of the 5th century, nine monks from Syria, probably Monophysites, are said to have brought MONASTICISM to Ethiopia and encouraged the translation of the SCRIPTURES into the Ge'ez language. The Ethiopian church followed the Coptic church in continuing to adhere to the Monophysite doctrine after this doctrine had been condemned by the bishops of Rome and Constantinople.

In the 7th century the conquests of the Muslim Arabs cut off the Ethiopian church from contact with most of its Christian neighbors. The church absorbed various syncretic beliefs in the following centuries, but contact with the

Fourteenth-century church in Gorgora, Ethiopia

Alain Froissafdey—Atlas Photos

outside Christian world was maintained through the Ethiopian monastery in Jerusalem.

Beginning in the 12th century, the patriarch of Alexandria appointed the Ethiopian archbishop, known as the *abuna* (Arabic: "our father"), who was always an Egyptian Coptic monk; this created a rivalry with the native *itshage* (ABBOT general) of the strong Ethiopian monastic community. Attempts to shake Egyptian Coptic control were made from time to time, but not until 1950 was Basil, a native Ethiopian *abuna*, appointed, and in 1959 an autonomous Ethiopian patriarchate was established.

The Amhara and Tigray peoples of the northern and central highlands have historically been the principal adherents of the Ethiopian Orthodox church. Under the Amhara-dominated Ethiopian monarchy, the Ethiopian Orthodox church was declared to be the state church of the country, and it was a bulwark of the regime of Emperor Haile Selassie. Upon the abolition of the monarchy and the institution of socialism in the country beginning in 1975, the church was disestablished, its patriarch was removed, and the church was divested of its extensive landholdings. The church was placed on a footing of equality with ISLAM and other religions in the country, but it nevertheless remained Ethiopia's most influential religious body.

The clergy is composed of priests and deacons, who conduct the religious services, and *debtora*, who, though not ordained, perform the music and dance associated with church services and also function as astrologers, scribes, wizards, and fortune-tellers. Ethiopian Orthodox CHRISTIANITY blends Christian conceptions of God, saints, and ANGELS with non-Christian beliefs in benevolent and malevolent spirits. Considerable emphasis is placed on the OLD TESTAMENT. CIRCUMCISION is almost universally practiced; the Saturday SABBATH (in addition to Sunday) is observed by some devout believers; the ARK is an essential item in every church; and rigorous fasting is still practiced.

There are theological seminaries in Addis Ababa and Harer. Monasticism is widespread. Each community also has its own church school, which until 1900 was the sole source of education. The liturgy and scriptures are typically in Ge'ez, though both have been translated into Amharic, the principal modern language of Ethiopia. In the late 20th century the church had about 20,000,000 adherents in Ethiopia, with additional adherents spread through Eritrea, Jamaica, and Guyana.

ETRUSCAN RELIGION, beliefs and practices of the ancient people of Etruria, in Italy between the Tiber and Arno rivers west and south of the Apennines, whose urban civilization reached its height in the 6th century BCE. Many features of Etruscan culture were adopted by the Romans, their successors to power in the peninsula. Our knowledge and conjectures about Etruscan religion are chiefly dependent upon the later Roman commentaries.

Cosmology. The essential ingredient in Etruscan religion was a belief that human life was but one small meaningful element in a universe controlled by gods who manifested their nature and their will in every facet of the natural world, as well as in objects created by humans. Roman writers give evidence that the Etruscans regarded every bird and every berry as a potential source of knowledge of the gods and that they had developed an elaborate lore and attendant rituals for using this knowledge. Their myths explained the lore as having been communicated by the gods through a prophet, Tages, a miraculous child with the features of a wise old man, who sprang from a plowed

furrow in the fields of Tarquinii and sang out the elements of what the Romans called the *Disciplina Etrusca*.

The literary, epigraphic, and monumental sources provide a glimpse of a COSMOLOGY whose image of the sky with its subdivisions is reflected in consecrated areas on the earth and even in the viscera of animals. The concept of a sacred space or area reserved for a particular deity or purpose was fundamental, as was the corollary theory that such designated areas could correspond to each other. The celestial dome was divided into 16 compartments inhabited by the various divinities: major gods to the east, astral and terrestrial divine beings to the south, infernal and inauspicious beings to the west, and the most powerful and mysterious gods of destiny to the north. The deities manifested themselves by means of natural phenomena, principally by lightning and in the liver of animals (a bronze model of a sheep's liver found near Piacenza bears the incised names of divinities in its 16 outside divisions and in its internal divisions).

Divination. These conceptions are linked closely to the art of DIVINATION, for which the Etruscans were especially famous in the ancient world. Public and private actions of any importance were undertaken only after the gods had been interrogated; negative or threatening responses necessitated undertaking complex preventive or protective ceremonies. The most important form of divination was haruspicy, or hepatoscopy—the study of the details of the viscera, especially the livers, of sacrificial animals. Second in importance was the observation of lightning and of such other celestial phenomena as the flight of birds (also important in the religion of the Umbri and of the Romans). Finally, there was the interpretation of prodigies—extraordinary and marvelous events observed in the sky or on the earth. These practices, extensively adopted by the Romans, are explicitly attributed by the ancient authors to the religion of the Etruscans.

Gods and goddesses. The Etruscans recognized numerous deities (the Piacenza liver lists more than 40), and many are unknown today. Their nature was often vague, and references to them are fraught with ambiguity about number, attributes, and even gender. Some of the leading gods were equated with major deities of the Greeks and Romans, as may be seen especially from the labeled representations on Etruscan mirrors. Tin or TINIA was equivalent to ZEUS/JUPITER, Uni to HERA/JUNO, Sethlansto to HEPHAESTUS/VULCAN, Turms to HERMES/MERCURY, Turanto to APHRODITE/VENUS, and Menrva to ATHENA/MINERVA. But their characters and mythologies often differed sharply from those of their Greek counterparts. Menrva, for example, an immensely popular deity, was regarded as a sponsor of marriage and childbirth, in contrast to the virgin Athena. Many of the gods had healing powers, and many of them had the authority to hurl a thunderbolt. There were also deities of a fairly orthodox Greco-Roman character, such as Herclé (HERACLES) and Apulu (APOLLO), who were evidently introduced directly from Greece yet came to have their designated spaces and cults.

Temple architecture. Etruscan temples generally had a columniated, deep front porch and a cella that was flush with the podium on which it stood. The materials were frequently perishable (timber and mud brick, on a stone foundation) except for the abundant terra-cotta sculptures that adorned the roof. Especially well-preserved are the *acrotéria*, or roof sculptures, from the Portonaccio temple at Veii (late 6th century BCE) representing Apulu and other mythological figures.

EUCCHARIST, also called Holy Communion, or Lord's Supper, in CHRISTIANITY, a SACRAMENT commemorating the action of JESUS CHRIST at his LAST SUPPER with his disciples, when he gave them bread saying, "This is my body," and wine saying, "This is my blood." The story of the institution of the Eucharist by Jesus on the night before his CRUCIFIXION is reported in all of the SYNOPTIC GOSPELS.

The Eucharist has formed a central rite of Christian worship. However, although the Eucharist is intended as a symbol of the unity of the church and as a means of fostering that unity, it has been a source of disunity and contention as well. All Christians would agree that it is a memorial action in which the church recalls what Jesus Christ was, said, and did; they would also agree that participation in the Eucharist enhances and deepens the communion of believers not only with Christ but also with one another. The Eucharist is recognized by every Christian denomination as the central symbol of the death of Jesus Christ on the Cross. Most traditions teach that Jesus is present in the Eucharist in some special way, though they disagree about the mode, the locus, and the time of that presence.

According to the doctrine of ROMAN CATHOLICISM, the elements of bread and wine are "transubstantiated" into the body and blood of Christ; *i.e.*, their whole substance is converted into the whole substance of the body and blood, although the outward appearances of the elements, their "accidents," remain. Such practices as the adoration and reservation of the Host follow from this doctrine.

The eucharistic beliefs and practices of EASTERN ORTHODOXY differ principally in the area of piety and liturgy. The major difference is the use of leavened rather than of unleavened bread. While Roman Catholic theology maintains that the recitation of the words of institution constitutes the Eucharist as a sacrament, Eastern theology has taught that the invocation of the HOLY SPIRIT upon the elements (EPICLESIS) is part of the essential form of the Eucharist.

Celebrating the Eucharist, the priest consecrates the Host

Mimi Forsyth—Monkmeyer

Among other Western Christians, those that adhere most closely to the traditions of Catholic eucharistic doctrine and practice are the Anglicans and the Lutherans. In the 16th century, LUTHERANISM unequivocally affirmed the Real Presence of the body and blood of Christ "in, with, and under" the bread and wine and emphasized that the reason for the Eucharist is the remission of SINS.

In Reformed Christianity, HULDRYCH ZWINGLI emphasized the memorial aspect of the Eucharist. JOHN CALVIN, however, taught a "real but spiritual presence" of the living Christ, but in the sacramental action rather than in the elements. In other traditions within PROTESTANTISM the sacraments have become "ordinances," not channels of GRACE but expressions of faith and obedience of the Christian community. Among BAPTISTS the practice of "close communion" has restricted the ordinance to those who are baptized properly, *i.e.*, as adults upon a profession of faith. The SOCIETY OF FRIENDS (Quakers) dropped the use of the Eucharist altogether in its reaction against formalism.

As a result of these variations in both doctrine and practice, the Eucharist has been a central issue in the discussions and deliberations of the ecumenical movement.

EUHEMERISM \yü-'hē-mə-ri-zəm, -'he-\, approach to the STUDY OF RELIGION that seeks to establish a historical basis for mythical beings and events. Euhemerism is named for EUHEMERUS (fl. 300 BCE), a Greek mythographer who first established the tradition. Euhemerus is chiefly known by his *Sacred History*, a work in which he asserted that the Greek gods were originally heroes and conquerors who had earned a claim to veneration because of their benefactions to mankind.

This system spread widely. The early Christian CHURCH FATHERS adopted an attitude of modified Euhemerism, according to which classical mythology was to be explained in terms of mere men who had been raised to superhuman,

demonic status because of their deeds. By this means Christians were able to incorporate myths from the culturally authoritative classical past into a Christian framework while defusing their religious significance—the gods became ordinary humans. The word euhemeristic is applied to such explanations of religion and mythology. There is some element of truth in this approach, for, among the Romans, the gradual deification of ancestors and emperors was a prominent feature of religious development. Thus, among some peoples, it is possible to trace family and tribal gods back to great chiefs and warriors. But it is not accepted by scholars as the sole explanation of the origin of gods.

EUHEMERUS \yü-'hē-mə-rəs, -'he-\, also spelled Euemeros, or Evemerus (fl. c. 300

BCE), Greek mythographer who established the tradition of seeking an actual historical basis for mythical beings and events. He lived at the court of Cassander, king of Macedonia, from about 301 to 297 BCE. He is chiefly known by his *Sacred History*, a philosophic romance based upon archaic inscriptions that he claimed to have found in his travels in various parts of Greece.

In this work he systematized for the first time an old Oriental (perhaps Phoenician) method of interpreting the popular myths; he asserted that the gods were originally heroes and conquerors who had earned a claim to the veneration of their subjects. This system spread widely, and the early Christians, especially, used it as a confirmation of their belief that ancient MYTHOLOGY was merely an aggregate of fables of human invention. The word euhemeristic is applied to such explanations of mythologies.

EUMOLPUS \yü-'mäl-pəs\, mythical ancestor of the priestly clan of the Eumolpids at Eleusis in ancient Greece, the site of the ELEUSINIAN MYSTERIES. His name (meaning "good or strong singer"; *i.e.*, a priest who could chant his litanies clearly and well) was a personification of the clan's hereditary functions. His legend fluctuated so greatly that three identities for Eumolpus have been assumed:

1. Being a "sweet singer," he was connected with Thrace, the country of ORPHEUS. He was the son of the god POSEIDON and Chione ("Snow Girl"), daughter of the north wind, Boreas; after various adventures he became king in Thrace but was killed while helping the Eleusinians in their war against Erectheus of Athens.

2. As one of the originators of the Eleusinian Mysteries, he was an Eleusinian, a son of Gaia, father of Keryx, and the mythical ancestor of the Kerykes (Heralds).

3. Because Orpheus and his followers were closely connected with mysteries of all sorts, Eumolpus was believed to be the son, father, or pupil of Musaeus, a mythical singer closely allied with Orpheus.

EUROPA \yü-'rō-pə\, in Greek mythology, the daughter either of Phoenix or of Agenor, king of Phoenicia. The beauty of Europa inspired the love of ZEUS, who approached her in the form of a white bull and carried her away from Phoenicia to Crete. There she bore Zeus three sons: King MINOS of Crete, King Rhadamanthus of the Cyclades Islands, and, according to some legends, Prince SARPEDON of Lycia. She later married the king of Crete, who adopted her sons, and she was worshiped under the name of Hellotis in Crete, where the festival Hellotia was held in her honor.

EURYDICE \yü-'ri-də-sē\, in Greek mythology, the wife of ORPHEUS, whose unsuccessful attempt to retrieve her from HADES is the basis of one of the most popular Greek myths.

EUSEBIUS OF CAESAREA \yü-'sē-bē-əs\, also called Eusebius Pamphili (fl. 4th century, Caesarea Palestinae, Palestine), bishop, exegete, polemicist, and historian whose *Eccelesiastical History* is a landmark in historiography.

Eusebius was baptized and ordained at Caesarea, where he was taught by the learned presbyter Pamphilus, who was persecuted for his beliefs by the Romans and died a martyr in 310. Eusebius may have been imprisoned at Caesarea, and he was taunted many years later for having escaped by allegedly performing some act of submission.

Eusebius' fame rests on his *Eccelesiastical History*, which he began during the Roman persecutions and revised several times between 312 and 324. In this work Eusebius pro-

duced what may be called, at best, a fully documented history of the Christian church, and, at worst, collections of passages from his sources. In it he constantly quotes or paraphrases his sources, and he thus preserved portions of earlier works that are no longer extant. He enlarged his work in successive editions to cover events down to 324, the year before the COUNCIL OF NICAEA. Eusebius, however, was not a great historian. His treatment of HERESY, is inadequate, and he knew little about the Western church.

Eusebius became bishop of Caesarea about 313. About 318 the theological views of ARIUS became the subject of controversy. Expelled from Alexandria for heresy, Arius found sympathy at Caesarea. Eusebius did not fully support Arius or Alexander, bishop of Alexandria, whose views appeared to tend toward Sabellianism (a heresy that taught that God was manifested in progressive modes as Father, Son, and HOLY SPIRIT). Eusebius wrote to Alexander, stating that Arius had been misrepresented, and he urged Arius to return to communion with his bishop. At an anti-Arian SYNOD at Antioch, however, Eusebius was provisionally excommunicated for Arian views. When the Council of Nicaea, called by Emperor CONSTANTINE I, met later in the year, Eusebius was exonerated with the emperor's approval.

Eusebius remained in the emperor's favor, and, after Constantine's death in 337, he wrote his *Life of Constantine*, a panegyric that possesses some historical value, chiefly because of its use of primary sources. Eusebius also wrote apologetic works, commentaries on the BIBLE, and works explaining the parallels and discrepancies in the Gospels.

EUTERPE \yü-'tər-pē\, in Greek mythology, one of the nine MUSES, patron of tragedy or flute playing. In some accounts

Europa being abducted by Zeus disguised as a bull, detail from an Attic krater (vessel used for mixing wine and water), 5th century BCE

By courtesy of the Museo Nazionale Tarquiniense, Tarquinia, Italy; photograph, Hirmer Fotoarchiv, Munchen

she was the mother of Rhesus, the king of Thrace, whose father was sometimes identified as Strymon, the river god of Thrace.

EUTHYMIUS OF TŪRNOVO \yü-'thi-mē-əs . . . 'tər-nə-vō\ (b. c. 1317—d. c. 1402), Orthodox PATRIARCH of Tŭrnovo (now Veliko Tŭrnovo), monastic scholar and linguist whose literary activity led the renaissance in Bulgaria.

Euthymius joined the monastery of Kilifarevo, where he became the disciple of Theodosius, whom he succeeded as spokesman for HESYCHASM, the Byzantine movement of contemplative prayer. In 1375 he was elected patriarch of Tŭrnovo and PRIMATE of the Bulgarian ORTHODOX CHURCH. After Tŭrnovo fell to the Turks in 1393 he went into exile.

In order to promote orthodoxy, Euthymius began a reform of Church Slavic. The original, single Slavic tongue had splintered into distinct languages and dialects. Church Slavic, however, had by and large retained the grammatical and syntactical structure of the old 9th-century form and, by increasing divergence from the various Slavic idioms, in effect had become a dead language. The biblical and liturgical texts, moreover, had grown ambiguous through a series of coarse revisions and had occasioned the spread of heretical sects, principally the dualistic BOGOMILS, who held that the visible, material world was created by the devil.

Euthymius' reform followed his conviction that public morality and theological orthodoxy were essentially related to the accuracy and literary qualities of the sacred SCRIPTURES. Thus he revived an international Old Church Slavic with its Cyrillic written form but more intricately interwoven with the Greek rhetorical and emphatic style.

Applying his Hesychast background, Euthymius made this monastic culture the energy source of his theological and literary reform. Thus, the Bulgarian monastic centers of Paroria and Kilifarevo and the monk missionaries, both native Slav and Greek refugee scholars, carried the Euthymian reform throughout eastern Europe.

EVAGRIUS PONTICUS \i-'va-grē-əs-'pän-ti-kəs\ (b. 346, Ibora, Pontus—d. 399, Cellia, Nitrian Desert, Egypt), Christian mystic and writer whose theology of CONTEMPLATIVE prayer and ASCETICISM laid the groundwork for a tradition of spiritual life in both Eastern and Western churches.

Historical research has suggested that Evagrius produced the first major philosophical-theological exposition of monastic MYSTICISM by developing the Neoplatonic biblical theology of ORIGEN (d. c. 254). Evagrius' *Gnostic Centuries* emphasized that the essential function of spiritual beings is to experience union with God, the transcendent One, expressed as pure light. Because of an original, alienating fault, man can find reconciliation only by an ascetic process whereby the spirit regains its rule over matter and realizes its capacity to experience the divine simplicity. Only fragments remain of Evagrius' other written works.

His doctrine affected CHRISTIANITY in the Greek tradition through the 6th-century Neoplatonic philosopher-mystic PSEUDO-DIONYSIUS the Areopagite and the 7th-century mystical theologian Maximus the Confessor. In the Latin culture, he inspired the 5th-century writer John Cassian. Western Christianity, however, has long suspected Evagrius of HERESY. His teachings were denounced by the second general COUNCIL OF CONSTANTINOPE in 553 as permeated with Origenist error. Nevertheless, he is considered the great doctor of mystical theology among the Syrians and other Eastern Christians, and his philosophy is sometimes seen as the Christian analogue of ZEN BUDDHISM.

EVANDER \ē-'van-dər\, in Roman legends, a migrant from Pallantium in Arcadia (central part of the Peloponnesus) who settled in Italy and founded a town named Pallantium, after his native place. The site of the town, at Rome, became known as the Palatine Hill, after his daughter Pallantia. Evander was the son of the goddess Carmentis (or Carmenta) and the god HERMES. Traditionally he instituted the LUPERCALIA and introduced some of the blessings of civilization, including writing.

EVANGELICAL CHURCH, any Protestant church that stresses conversion experiences, the Bible as the only basis for faith, and evangelism at home and abroad.

The religious revival that occurred in Europe and America during the 18th century is referred to as the evangelical revival. It included PIETISM in Europe, METHODISM in Britain, and the GREAT AWAKENING in America. In London in 1846, the Evangelical Alliance was organized by Christians from several denominations and countries. In the U.S., the movement grew because of the popularity of preachers such as BILLY GRAHAM, the creation of institutions such as Wheaton College, the publishing of *Christianity Today*, and the founding of groups such as the National Association of Evangelicals (1942). The World Evangelical Fellowship (WEF) was formed in 1951. More than 110 regional and national organizations and some 335 million people were affiliated with the WEF in the early 21st century.

EVANS-PRITCHARD, SIR EDWARD (EVAN) \e-'vənz-'pri-çərd\ (b. 1902, Crowborough, Sussex, Eng.—d. Sept. 11, 1973, Oxford, Oxfordshire), English social anthropologist, known for his investigations of African cultures.

After studying modern history at the University of Oxford, Evans-Pritchard did postgraduate work in anthropology at the London School of Economics and Political Science. He then did fieldwork among the Azande and Nuer of southern Sudan. Two books about these peoples, *Witchcraft, Oracles, and Magic Among the Azande* (1937) and *The Nuer* (1940), made his reputation. In 1940 he and Meyer Fortes edited a volume of essays, *African Political Systems*, that revolutionized the study of "primitive" government. His *Theories of Primitive Religion* (1965) remains an authoritative and useful summary of the subject.

Under Evans-Pritchard's guidance, the Oxford school of social anthropology attracted students from many parts of the world, and he sponsored fieldwork in Africa and elsewhere as a member of the Colonial Social Science Research Council. He received numerous academic honors. He was a professor of social anthropology at Oxford and a fellow of All Souls College from 1946 to 1970, and he was subwarden from 1963 to 1965. He was knighted in 1971.

EVIL: *see* GOOD AND EVIL.

EVIL, PROBLEM OF, theological problem that arises for any philosophical or monotheistic religion that affirms the following three propositions: (1) God is omnipotent, (2) God is perfectly good, and (3) evil exists. If evil exists, it seems either that God wants to obliterate evil and is not able to—and thus his omnipotence is denied—or that God is able to obliterate evil but does not want to—and thus his goodness is denied.

The theological problem of evil can be solved logically by denying any one of these three propositions. William James attempted to solve the problem by regarding God as being perfectly good but having limited power. Some have de-

efined the proposition of divine omnipotence to mean that God can do anything that is logically possible. The 17th-century German philosopher Gottfried Wilhelm Leibniz stated that, because God is limited to that which is logically possible, the existence of evil is necessary in this “best of all possible worlds.” Orthodox CHRISTIANITY, however, has generally chosen to live with the tension involved in affirming all three propositions.

See THEODICY; MORALITY AND RELIGION.

EVIL EYE, glance believed to have the ability to cause injury or death to those on whom it falls; children and animals are thought to be particularly susceptible. Belief in the evil eye occurred in ancient Greece and Rome; is found in Jewish, Islamic, Buddhist, and Hindu traditions and in folk cultures and preliterate societies; and has persisted throughout the world into modern times.

The power of the evil eye is sometimes held to be involuntary. More frequently malice toward and envy of prosperity and beauty are thought to be the cause. Thus, in medieval Europe—and sometimes still today—it was considered unlucky to be praised or to have one’s possessions praise, so that some qualifying phrase such as “as God will” was commonly used.

Measures taken to ward off the evil eye may vary among cultures. Some authorities suggest that the purpose of ritual cross-dressing—a practice in the marriage ceremonies of parts of India—is to avert the evil eye. Asian children sometimes have their faces blackened, especially near the eyes, for protection. Among some Asian and African peoples the evil eye is particularly dreaded while eating and drinking, because the soul is thought to be more vulnerable when the mouth is open; thus, the ingestion of substances is either a solitary activity or takes place only with the immediate family and behind locked doors. Other means of protection, common to many traditions, include the wearing of sacred texts, AMULETS, charms, and talismans (which may also be hung upon animals for their protection).

EXCOMMUNICATION, form of ecclesiastical censure by which a person is excluded from the communion of believers, the rites or SACRAMENTS of a church, and the rights of church membership, but not necessarily from membership in the church as such.

ROMAN CATHOLICISM distinguishes between two kinds of excommunication, that which renders a person *toleratus*, tolerated, and that which renders him *vitandus*, one who is to be avoided. The second and more severe form usually requires that the culprit be announced by name in public as

vitandus, in most cases by the Holy See itself; this is reserved for the gravest offenses. Both kinds of excommunication bar the excommunicated person from the sacraments of the church as well as from Christian burial. The actions that may incur excommunication from the Roman Catholic church include abortion, violation of the confidentiality of CONFESSION, profanation of the consecrated communion host, consecration of a bishop without Vatican approval, a physical attack on the pope, and HERESY and “abandoning the faith.” If an excommunicated person confesses his SIN and undergoes penance for it, he is absolved; in some cases this ABSOLUTION may come from any priest, but in many others it is reserved to the bishop or even to the Holy See alone, save *in periculo mortis* (“in danger of death”). Excommunication should be distinguished from two related forms of censure, suspension and interdict. Sus-

pension applies only to clergy and denies them some or all of their rights; interdict does not exclude a believer from the community of the faithful but forbids certain sacraments (such as baptism, marriage, or the anointing of the sick, depending on the type of interdict) and sacred offices, sometimes to an entire area.

Some churches do not use the term excommunication, preferring to speak of church discipline. Churches holding the Reformed order vest the authority for exercising discipline and, if need be, carrying out excommunication, in the session, which consists of the minister and the elders. LUTHERANISM has followed Martin Luther’s CATECHISM in defining excommunication as the denial of the communion to public and obstinate sinners; the clergy and the congregation together have the right to exercise such discipline.

Where a Congregational polity and the principle of “believers’ baptism” are observed (see CONGREGATIONALISM), discipline is often very rigorous. In American denominations of the Free Church tradition, the term “churching” a sinner refers to excommunication.

EXEGESIS \ˌɛk-sə-ˈjē-sis, ˈɛk-sə-jē-\, critical interpretation of a biblical text to discover its intended meaning. Various exegetical methods have been used in JUDAISM and CHRISTIANITY throughout their history, and doctrinal and polemical intentions have often influenced interpretive results; a given text may yield a number of very different interpretations according to the exegetical presuppositions and techniques applied to it. The study of these methodological principles themselves constitutes the field of HERMENEUTICS.

Interpretation of the BIBLE has always been considered a prerequisite for Jewish and Christian theological doctrine, since both faiths claim to be based upon the “sacred history” that makes up a major portion of the Bible. The other

Gregory VII lays a ban of excommunication on the clergy loyal to King Henry IV, drawing from the 12th-century chronicle of Otto von Freising; in the library of the University of Jena, Ger.

Leonard von Matt

portions of the Bible—prophecy, poetry, proverbs, wisdom writings, epistles—are primarily reflections upon this sacred history and its meaning for the religious communities that grew out of that history. To that extent the nonhistorical writings of the Bible are themselves critical interpretations of the sacred history, and in large measure they form the basis for all other biblical exegesis.

The largest portion of the Bible is the Hebrew Bible, which is common to both Jews and Christians and is grounded in the history of the people of Israel. Christians add to this the NEW TESTAMENT (in contrast to the “Old Testament” of the Hebrew Bible), much of which is concerned with the interpretation of the Hebrew Bible in the light of the Christian community’s experience of Jesus. Some Christians also include in their Bible the books of the APOCRYPHA that were excluded from the Hebrew Bible but that appeared in the SEPTUAGINT, sometimes considered to be of doctrinal value because the Septuagint was the “authorized version” of the early church.

Most forms of biblical exegesis employed in the modern era are applicable to many other bodies of literature. Textual criticism is concerned with establishing, as far as is possible, the original texts of the biblical books from the critical comparison of the various early materials available, including Hebrew manuscripts from the 9th century BCE onward and the Hebrew texts from the QUMRAN community of the Dead Sea region, which date from the 3rd century BCE to the 2nd century CE. Other sources are the major translations of the Hebrew texts into Greek (the Septuagint), Syriac (the Peshitta), and Latin (the VULGATE). For the New Testament the textual materials are Greek manuscripts from the 2nd to the 15th century CE, ancient versions in Syriac, Coptic, Armenian, Georgian, Ethiopic, and other languages, and citations in the works of early Christian writers. These manuscripts are usually divided into various “families” of manuscripts that seem to lie within a single line of transmission.

Philological criticism is the study of the biblical languages in respect to grammar, vocabulary, and style, to ensure that they may be translated as faithfully as possible. Literary criticism classifies the various biblical texts according to their literary genre and attempts to use internal and external evidence to establish date, authorship, and intended audience. Tradition criticism attempts to analyze the various sources of the biblical materials in such a way as to discover the ORAL TRADITIONS that lie behind them and to trace their gradual development. Form criticism, a development of tradition criticism that in the 20th century became the dominant exegetical method, operates from the assumption that literary material, writ-

ten or oral, takes on certain forms according to the function the material serves within the community that preserves it. The content of a given narrative is an indication both of its form and of the narrative’s use within the life of the community. Often a narrative will serve a variety of functions within various life settings over a period of time, and its proper analysis will reveal the development of the narrative into its final form.

Redaction criticism examines the way the various pieces of the tradition have been assembled into the final literary composition by an author or editor. The arrangement and modification of these pieces of tradition can reveal something of the author’s intentions and the means by which he hoped to achieve them.

Historical criticism places the biblical documents within their historical context and examines them in the light of contemporary documents. In much the same way “history of religions” criticism compares the RELIGIOUS BELIEFS and practices expressed by the biblical texts to the trends discernible within world religion in general. The features of Israelite religion, for example, are often compared to those of other ancient Middle Eastern religions, while early Christianity may be compared to GNOSTICISM.

EXODUS \ˈɛk-sə-dəs, ˈɛg-zə-, second book of the PENTATEUCH, or Jewish BIBLE (the Christian OLD TESTAMENT). Exodus tells the story of how God liberated the children of Israel from slavery in Egypt through the prophet MOSES, his brother AARON, and his sister Miriam.

As recounted in the book of GENESIS, a famine had descended on the land of CANAAN, home of the Israelites, forcing them to seek refuge in Egypt. With the permission of the pharaoh, they settled in the land of Goshen, where they prospered and multiplied. After a lengthy period, however, a new pharaoh arose who was determined to enslave them.

Israelites crossing the Sea of Reeds in their Exodus from Egypt, illumination from a German Haggadah, 15th century

The Granger Collection

EXORCISM

Chapters 1:1–18:27 of Exodus tell the story of the liberation: 1:1–2:25 deal with the enslavement of the Israelites and the command of Pharaoh that all male infants born to the Hebrew women should be killed; 3:1–7:13 relate God's call to Moses to lead his people; 7:14–13:16, the plagues that persuaded the Egyptians to let the slaves leave and the PASSOVER rite celebrated on the eve of liberation; 13:17–15:21, the passage through the Sea of Reeds (traditionally mislocated as the Red Sea), which opened to allow the Israelites to pass and then closed over their Egyptian pursuers; 15:22–17:16, the way to Sinai; and 18:1–27, the organization of the people under Moses's administration.

Chapters 19:1–24:18 introduce the COVENANT between Israel and God reached at MOUNT SINAI: in 19:1–20:21 God appears and reveals the TEN COMMANDMENTS to Moses; 20:22–23:33 contain further rules and warnings; and 24:1–18 recount the Covenant ceremony. The last third of the book, chapters 25:1–40:38, describes in detail the TABERNACLE that the Israelites built for the worship of God in the wilderness, including its altars, basins, lamps, hangings, and priestly garments. Within this section of the book is the story (32:1–34:35) of the Israelites' betrayal of the Covenant and worship of the GOLDEN CALF and God's punishment and forgiveness on that occasion.

The book of Exodus accounts for the birth of Israel through the act of God, calling into being at Sinai a covenanted community formed out of a mixed multitude, guiding that people to the Promised Land to live under the laws of the Covenant and so form a kingdom of priests and a holy people. In Exodus God establishes his reliability as Israel's protector and savior, and he lays claim upon Israel's loyalty and obedience. In JUDAISM the Exodus is celebrated on the festival of Passover. The topic of the Exodus and God's intervention into history to form a holy community recurs through the liturgy and theology of Judaism and defines the principal motif throughout.

EXORCISM, ritual act addressed to evil spirits to force them to abandon an object, place, or person; technically, a ritual used in many traditions of CHRISTIANITY to expel DEMONS or spirits from persons who have come under their power.

In Christian tradition, Jesus expelled demons by a word and stated that this act was a sign of the coming of God's Kingdom. His followers, and others as well, drove out demons "in his name." In the first two centuries of the Christian era, the power of exorcism was considered a special gift that might be bestowed on anyone, lay or cleric. About 250 CE, however, there appeared a class of the lower clergy, called exorcists, who specialized in this function. About the same time, exorcism became one of the ceremonies preparatory to BAPTISM, and it has remained a part of the ROMAN CATHOLIC baptismal service.

In the THERAVĀDA Buddhist tradition, the Phi (Thailand) or Nats (Myanmar [Burma]) are expelled by specialists who are not monks.

EXTRINSICISM \ek-'strin-zə-,si-zəm, -sə-, in philosophy or theology, the tendency to place major emphasis on external matters rather than on allegedly more profound realities. In terms of morals and ethics, it tends to stress the external observance of laws and precepts, with lesser concern for the ultimate principles underlying moral conduct.

In Christian thought, this is illustrated by the tendency to define the church in terms of such exterior elements as its social structure and rituals rather than in terms of its spiritual elements.

EYBESCHÜTZ, JONATHAN \ˈi-bə-shuets\ (b. c. 1690, Kraków, Pol.—d. 1764, Altona, Holstein [now in Germany]), RABBI and religious scholar noted for his bitter quarrel

A saint, assisted by clerics, exorcising a demon from a possessed man, medieval woodcut

The Granger Collection

with Rabbi JACOB EMDEN, a dispute that split European Jewry and ended the effectiveness of rabbinic excommunication during Eybeschütz's time.

As a rabbi in a number of European towns, Eybeschütz became a celebrated master of the TALMUD, and he attracted a large, fiercely loyal corps of disciples. He was also learned in QABBALAH. When Eybeschütz accepted the pulpit in the triple community of Altona, Hamburg, and Wandsbek (then a domain of the Danish king), the women there hoped that his reputed mystic powers would save them from death in childbirth. He gave them AMULETS that were claimed to have contained, among other incantations, a prayer in cipher to SHABBETAI TZEVI (1626–76), the most famous of the false Jewish MESSIAHS, who had tried to abolish the Talmud. One of these amulets fell into the hands of

Rabbi Jacob Emden, a strict follower of the Talmud who publicly denounced the amulet's maker (without specifying Eybeschütz) as a heretic.

The Polish rabbinate sided with Eybeschütz and the German with Emden in a strident dispute that reflected a fundamental opposition between those who saw the pseudomessianic movement as a danger to JUDAISM and those who saw it as its fulfillment. Eybeschütz succeeded in maintaining his rabbinic post, if not in triumphing over Emden. The quarrel weakened rabbinic authority among the people, and repercussions were felt for a long time.

EZEKIEL \i-'zē-kē-əl\, *also spelled Ezechiel*, *Hebrew* Yehezqel (fl. early 6th century BCE), prophet-priest of ancient ISRAEL and the subject and partial author of an OLD TESTAMENT book that bears his name. Ezekiel's early oracles (from c. 592 BCE) in Jerusalem were pronouncements of violence and destruction; his later statements addressed the hopes of the Israelites exiled in Babylon. The faith of Ezekiel in the ultimate establishment of a new COVENANT between God and the people of Israel has had profound influence on the postexilic reconstruction and reorganization of JUDAISM.

Ezekiel's ministry was conducted in Jerusalem and Babylon in the first three decades of the 6th century BCE. These years saw the elimination of the state of JUDAH by the Babylonian empire under Nebuchadrezzar II (reigned 605–562 BCE). Jerusalem surrendered in 597 BCE. Israelite resistance was nevertheless renewed, and in 587–586 the city was destroyed after a lengthy siege. In both debacles and again in 582 large numbers of the surviving population were deported to Babylonia.

Before the first surrender of Jerusalem Ezekiel was a priest probably attached to the JERUSALEM TEMPLE staff. He was among those deported in 597 to Babylonia, where he was located at Tel-abib on the Kebar canal (near Nippur). Ezekiel's religious call came in July 592 when he had a vision of the "throne-chariot" of God. He subsequently prophesied until 585 and then was not heard of again until 572. His latest datable utterance can be dated about 570 BCE, 22 years after his first.

Ezekiel's earlier oracles to the Jews in Palestine were pronouncements of God's judgment on a sinful nation for its APOSTASY, declaring that Judah was guiltier than Israel had been and that Jerusalem would fall to Nebuchadrezzar and its inhabitants would be killed or exiled. According to Ezekiel, Judah trusted in foreign gods and foreign alliances, and Jerusalem was a city full of injustice.

After the fall of Jerusalem Ezekiel addressed himself more pointedly to the exiles and sought to direct their hopes for the restoration of their nation. Ezekiel prophesied that the exiles from both Judah and Israel would return to Palestine, leaving none in the Diaspora. In the imminent new age a new covenant would be made with the restored house of Israel, to whom God would give a new spirit and a new heart. The restoration would be an act of divine GRACE for the sake of God's name. Ezekiel's prophecies conclude with a vision of a restored Temple in Jerusalem. In contrast to those hoping for national restoration under a Davidic king, Ezekiel envisaged a theocratic community revolving around the Temple and its cult.

More than any of the classical biblical prophets Ezekiel was given to symbolic actions, strange visions, and even trances. He ate a scroll on which words of PROPHECY were written, in order to symbolize his appropriation of the message (3:1–3); he lay down for an extended time to symbolize

Israel's punishment (4:4ff); and he was apparently struck dumb on one occasion for an unspecified length of time (3:26). As other prophets had done before him, he saw the relationship of God to people as analogous to that of husband to unfaithful wife and therefore understood the collapse of the life of Judah as a judgment for essential infidelity. *See also* MERKABAH MYSTICISM AND HEKHALOT WRITING.

EZRA \'ez-rə\, *Hebrew* 'Ezra (fl. 5th–4th century BCE, Babylon and Jerusalem), Jewish religious leader and reformer who returned from exile in Babylon to reconstitute the Jewish community on the basis of the TORAH. His work helped make JUDAISM a religion in which law was central, enabling the Jews to survive as a community when they were dispersed all over the world. Ezra has with some justice been called the father of Judaism; *i.e.*, the specific form the Jewish religion took after the BABYLONIAN EXILE.

Knowledge of Ezra is derived from the biblical books of Ezra and NEHEMIAH, supplemented by the Apocryphal book of 1 Esdras, which preserves the Greek text of Ezra and a part of Nehemiah. It is said that Ezra came to Jerusalem in the seventh year of King Artaxerxes (which Artaxerxes is not stated) of the Persian dynasty then ruling the area. Since he is introduced before Nehemiah, who was governor of the province of JUDAH from 445 to 433 BCE and again, after an interval, for a second term of unknown length, it is sometimes supposed that this was the seventh year of Artaxerxes I (458 BCE). Many scholars, however, now believe that the biblical account is not chronological and that Ezra arrived in the seventh year of Artaxerxes II (397 BCE), after Nehemiah had passed from the scene. Still others, holding that the two men were contemporaries, regard the seventh year as a scribal error and believe that perhaps Ezra arrived during Nehemiah's second term as governor.

When Ezra arrived in Judah, the Law was widely disregarded and public and private morality was at a low level. Moreover, intermarriage with foreigners posed the threat that the community would lose its identity. Ezra was a priest and "a scribe skilled in the law." He apparently had official status as a commissioner of the Persian government, and his title, "scribe of the law of the God of heaven," is best understood as "royal secretary for Jewish religious affairs," or the like. The Persians were tolerant of native cults but, in order to avert internal strife and to prevent religion from becoming a mask for rebellion, insisted that these be regulated under responsible authority. The delegated authority over the Jews of the satrapy (administrative area) "beyond the river," or west of the Euphrates River, was entrusted to Ezra, for a Jew to disobey the Law he brought was to disobey "the law of the king."

Ezra probably presented the Law to the people during the Feast of Tabernacles (SUKKOT) in the autumn, most likely in the year of his arrival. He also took action against mixed marriages and succeeded in persuading the people to divorce their foreign wives. His efforts reached their climax when the people engaged in solemn COVENANT before God to enter into no more mixed marriages, to refrain from work on the SABBATH, to levy on themselves an annual tax for the support of the Temple, regularly to present their TITHES and offerings, and otherwise to comply with the demands of the Law.

Nothing further is known of Ezra after his reforms. The 1st-century Hellenistic Jewish historian JOSEPHUS states that he died and was buried in Jerusalem. According to another tradition, he returned to Babylonia, where his supposed grave is a holy site.

FAFNIR \ˈfäf-nir, ˈfäv-\, in Nordic mythology, name of the great dragon slain by Sigurd, the Norse version of the German hero SIEGFRIED. As told in the *Völsunga saga* ("Saga of the Volsungs"), Fafnir slew his father, Hreithmar, to obtain the vast amount of gold which Hreithmar had demanded of ODIN as a compensation for the loss of one of his sons. Odin gave the gold but put a curse on it. Full of greed, Fafnir changed into a dragon to guard his treasure and was later slain by the young hero Sigurd. Sigurd was spurred on by another brother of Fafnir, the blacksmith Regin. Once Sigurd, under the advice of Odin, had killed Fafnir, Regin asked him to cook the dragon's heart for him. Sigurd touched the heart as it was cooking to test if it was done and burned his thumb. He put his thumb into his mouth and was then able to understand the language of birds. (In this tale, knowledge is given to one who eats the heart of a dragon.) The birds told Sigurd that it was Regin's intention to kill him, so instead Sigurd killed Regin and left with Fafnir's treasure.

FA-HSIANG \ˈfä-'shyän\, school of Chinese BUDDHISM derived from the Indian YO-GĀCĀRA school.

FA-HSIEN \ˈfä-'shyen\, *Pinyin* Faxian, *original name* Sehi (fl. 399–414 CE), Chinese Buddhist monk whose PILGRIMAGE to India in 402 initiated Sino-Indian relations and whose writings give important information about the BUDDHISM of the period.

Sehi, who later adopted the name Fa-hsien ("Splendor of Religious Law"), was born at Shansi during the 4th century CE. Living at the time of the Eastern Chin dynasty, when Buddhism enjoyed an imperial favor seldom equaled in Chinese history, he was stirred by a profound faith to go to India, the fountainhead of Buddhism.

The historical importance of Fa-hsien is twofold. A famous record of his journeys—*Fo Kuo Chi* ("Record of Buddhist Kingdoms")—contains valuable information not found elsewhere concerning the history of Indian Buddhism during the early centuries CE. Because of his fairly detailed descriptions, it is possible to envision Buddhist India before it was overcome by the counter-reforms of HINDUISM and eclipsed by the Muslim invasion. He also strengthened Chinese Buddhism by helping provide a better knowledge of Buddhist sacred texts. After studying them for 10 years in India, he brought back to China a great number of copies of Buddhist texts and translated them from Sanskrit into Chinese. Among them, two of the most important were the *Mahāparinirvāṇa-sūtra*, a text glorifying the eternal, personal, and pure nature of NIRVANA—on which the Nirvana school in China then based its doctrines—and the rules of monastic discipline of the MAHĀ-SANĠHIKA school.

In northwestern India, which he entered in 402, Fa-hsien visited the most important seats of Buddhist learning: Udyāna, Gandhāra, Peshāwar, and Taxila. Above all, however, he was attracted by eastern India, where the Buddha had

spent his life and had taught his doctrines. His pilgrimage was completed by visits to the most holy sites of the Buddha's life: Kapilavastu, where he was born; BODH GAYA, where he acquired the supreme enlightenment; Banares (VARANASI), where he preached his first sermon; and Kuśinagara, where he entered into *parinirvāṇa*. Everywhere Fa-hsien was amazed at the extraordinary flowering of the Buddhist faith.

Then he stayed a long time at Pāṭaliputra, conversing with Buddhist monks and studying Sanskrit texts with Buddhist scholars. When he had deepened his knowledge of Buddhism and was in possession of sacred texts that had not yet been translated into Chinese, he decided to go back to China. Fa-hsien took the sea route, first spending two years in Ceylon (now Sri Lanka), at that time one of the most flourishing centers of Buddhist studies.

FAITH, *Greek* *pistis*, *Latin* *fides*, a common synonym for religion. Faith is an inner attitude, conviction, or trust relating man to a supreme God or ultimate salvation. In religious traditions stressing divine GRACE, it is the certainty or attitude of love granted by God himself. In Christian theology, faith is the divinely inspired human response to God's revelation through JESUS CHRIST and, consequently, is of crucial significance. While in English usage, when one speaks of "the Christian faith" or "the Buddhist faith," the word is used as a synonym for religion, no definition actually allows for the identification of "faith" with "religion."

In biblical JUDAISM, "faith" is principally juridical; it is the faithfulness or truthfulness with which persons adhere to a treaty or promise and with which God and ISRAEL adhere to the COVENANT between them. In ISLAM and CHRISTIANITY, both rooted in this tradition, the notion of faith reflects that

view. In Islam, faith (Arabic *īmān*) is what sets the believer apart from others; at the same time, it is ascertained that "None can have faith except by the will of Allāh" (Qur'an 10:100). In Christianity, ST. PAUL similarly asserts that faith is a gift of God (1 Corinthians 12:8–9), while the Letter to the Hebrews (11:1) defines faith (*pistis*) as "the assurance of things hoped for, the conviction of things not seen." Some scholars think that ZOROASTRIANISM, as well as Judaism, may have had some importance in the development of the notion of faith in Western religion; the prophet ZOROASTER (c. 628–c. 551 BCE) may have been the first founder of a religion to speak of a new, conscious religious choice on the part of humans for truth (*asha*).

The intellectual component of Christian faith is stressed by ST. THOMAS AQUINAS. A major issue of the PROTESTANT movement was the theological problem of JUSTIFICATION by faith alone. LUTHER stressed the element of trust, while CALVIN emphasized faith as a gift freely bestowed by God.

FAITH HEALING, recourse to divine power to cure mental or physical disabilities, either in conjunction with orthodox medical care or in place of it. Often an intermediary is

involved, whose intercession may be all-important in effecting the desired cure. Sometimes the faith may reside in a particular place, which then becomes the focus of PILGRIMAGES for the sufferers.

In CHRISTIANITY, faith healing is exemplified especially in the miraculous cures wrought by JESUS (40 healings are attested) and by his APOSTLES. The early church later sanctioned faith healing through such practices as anointing and the IMPOSITION OF HANDS. Faith healing has also been associated with the intercessory miracles of saints.

During the 19th and 20th centuries, faith healing has often motivated pilgrimages and healing services in many Christian denominations. The apparent healing gifts of individuals have also attracted wide attention: Leslie Weatherhead, Methodist pastor and theologian, and Harry Edwards, spiritualist, in England; Elsie Salmon, wife of a Methodist minister, in South Africa; Oral Roberts, a converted Methodist and mass-meeting evangelist, Agnes Sanford, wife of an Episcopal rector, and Edgar Cayce, a clairvoyant of Presbyterian background, in the United States. A different approach to the idea of divine healing is represented by the metaphysical healing movement in the United States called NEW THOUGHT. Phineas P. Quimby and MARY BAKER EDDY published numerous tracts exhorting their fol-

lowers to beliefs that stressed the immanence of God and a link between bodily ills and mistaken convictions. CHRISTIAN SCIENCE was unique in its view of sickness as a material state, subject to the transcendental power of the individual's spiritual being.

FAKHR AL-DĪN AL-RĀZĪ \ˈfɑːkər-əd-ˈdēn-är-ˈrɑːzē\, *in full* Abū ʿAbd Allāh Muhammad ibn ʿUmar ibn al-Ḥusayn Fakhr al-Dīn al-Rāzī (b. 1149, Rayy, Iran—d. 1209, near Herāt, Khwārezm), Muslim theologian and scholar, author of one of the most authoritative commentaries on the QURʼĀN.

Al-Rāzī was the son of a preacher. After a broad education, in which he specialized in theology and philosophy, he traveled through present-day northwestern Iran and Turkmenistan and finally settled in Herāt (now in Afghanistan). Wherever he went, he debated with famous scholars and was patronized and consulted by local rulers. He wrote about 100 books and gained fame and wealth.

Al-Rāzī lived in an age of political and religious turmoil. The empire of the Baghdad CALIPHS was disintegrating; its numerous local rulers were virtually independent. Religious unity, too, had long since crumbled: in addition to the division of Islam into two major groups—the SUNNIS and the SHĪTES—countless small sects had developed, often with the support of local rulers, and SUFISM was gaining ground. Al-Rāzī attempted to reconcile a rationalistic theology and philosophy incorporating concepts taken from Aristotle and other Greek philosophers with the Qurʼān. This attempt inspired *al-Mabāḥith al-mashriqīya* (“Eastern Discourses”), a summation of his philosophical and theological positions, and several commentaries on IBN SĪNĀ (Avicenna), as well as his extremely wide-ranging commentary on the Qurʼān (*Mafāṭīḥ al-ghayb* or *Kitāb al-tafsīr al-kabīr*; “The Keys to the Unknown” or “The Great Commentary”), which ranks among the greatest works of its kind in Islam. Equally famous is his *Muḥaṣṣal afkār al-mutaqaddimīn wa-al-mutaʾakhhirīn* (“Collection of the Opinions of Ancients and Moderns”), which was accepted from the first as a classic of KALĀM (Muslim theology). His other books, in addition to a general encyclopedia, dealt with subjects as varied as medicine, ASTROLOGY, geometry, physiognomy, mineralogy, and grammar.

Al-Rāzī was also a master of debate. His ability to refute arguments, together with his aggressiveness, self-confidence, irritability, and bad temper, made many enemies for him, and on occasion he could show extreme malice. He contrived to have his elder brother, who openly resented his success, imprisoned by the Khwārezm-Shāh (ruler of Turkistan); the brother died in prison. A famous preacher with whom he had quarreled was drowned by royal command. Some sources suggest further that al-Rāzī's death was not from natural causes but that he was poisoned by the Karrāmīya (a Muslim sect) in revenge for his attacks on them.

Al-Rāzī loved disputation so much that he went out of his way to present unorthodox and heretical religious views as fully and as favorably as possible, before refuting them. This habit gave his opponents grounds for accusing him of heresy. His thorough presentations of unorthodox views make his works a useful source of information about little-known Muslim sects.

FAKIR: *see* DERVISH.

FALASHA \fə-ˈlɑː-shə\, *also spelled* Felasha, Jewish Ethiopians. The Falasha call themselves House of Israel (Beta Is-

A faith healer ministers to a hopeful sufferer

Archive Photos

rael) and claim descent from Menilek I, traditionally the son of the Queen of Sheba (Makeda) and King SOLOMON. Their ancestors were probably local Agew peoples in Ethiopia who were converted by Jews living in southern Arabia. The Falasha remained faithful to JUDAISM after the conversion of the powerful Ethiopian kingdom of Aksum to CHRISTIANITY in the 4th century CE; thereafter they were persecuted and forced to retreat to the area around Lake Tana, in northern Ethiopia. Despite Ethiopian Christian attempts to exterminate them in the 15th and 16th centuries, the Falasha retained their independence until the 17th century, when the emperor Susenyos crushed them and confiscated their lands. Their conditions improved in the late 19th and 20th centuries, at which time tens of thousands of Falasha lived north of Lake Tana.

The Falasha have a BIBLE and a prayer book written in Ge'ez, the ancient Ethiopian language. They have no Talmudic laws, but they observe the SABBATH, practice CIRCUMCISION, have SYNAGOGUE services led by priests (*kohanim*), follow Jewish dietary laws, observe laws regarding ritual purity, offer sacrifices on Nisan 14 in the Jewish religious year, and observe some of the major Jewish festivals.

From 1980 to 1992 some 45,000 Falasha fled drought- and war-stricken Ethiopia and emigrated to Israel. The number of Falasha remaining in Ethiopia was uncertain, possibly only a few thousand. The ongoing absorption of the Falasha community into Israeli society was a source of controversy and ethnic tension in subsequent years.

FALSE DECRETALS \di-'krē-təlz, 'de-krē-təlz\, a 9th-century collection of ecclesiastical legislation containing some forged documents.

The False Decretals—also called the Decretals of Pseudo-Isidore, because their compilers passed as St. Isidore of Seville, a Spanish encyclopedist and historian—purports to be a collection of decrees of councils and decretals of popes (written replies on questions of ecclesiastical discipline) from the first seven centuries. The collection contains (1) letters of the popes preceding the COUNCIL OF NICAIA (325) from Clement I (died 97 or 101) to Miltiades (died 314), all of which are forgeries; (2) a collection of the decrees of councils, most of which are genuine, though the forged DONATION OF CONSTANTINE is included; (3) a large collection of letters of the popes from Sylvester I (died 335) to Gregory II (died 731), which contains more than 40 falsifications.

The False Decretals seems to have been used first at the Council of Soissons in 853. It was known at the end of the 9th century in Italy but had little influence there until the end of the 10th century. For the next few centuries, it was generally accepted by canonists, theologians, and councils as authentic. It was not until the 17th century that David Blondel, a Reformed theologian, clearly refuted its defenders. Since that time, research has concentrated on the origin, extent, and purpose of the falsification.

FALUN GONG, or Falun Dafa, controversial spiritual movement combining physical exercise with meditation for the purpose of “moving to higher levels.” Its teachings draw from BUDDHISM, CONFUCIANISM, TAOISM, and the Western New Age movement.

Falun Gong is based on the traditional Chinese practice of *qi gong* (Chinese: “Energy Working”), the use of exercise and meditation to achieve good health and peace of mind. Until recently, practitioners of *qi gong* in communist China presented their technique as purely secular in an effort to escape official restrictions on independent religious

activity. In the late 20th century, however, some *qi gong* masters began to teach forms of the technique that were rooted in religion. One of these teachers, Li Hongzhi, became the spiritual leader of Falun Gong in 1992. He emigrated to the U.S. in 1998, and the following year the Chinese government began arresting and imprisoning Falun Gong leaders, charging that the movement was a harmful cult. Falun Gong claims to have 100,000,000 followers in China; Chinese authorities put the figure at 2,000,000 to 3,000,000.

FAMA \'fā-mə, 'fä-\ (Latin), Greek PHEME, in Greco-Roman mythology, the personification of popular rumor. PHEME was more a poetic personification than a deified abstraction, although there was an altar in her honor at Athens. The Greek poet Hesiod portrayed her as an evildoer, easily stirred up but impossible to quell. The Athenian orator Aeschines distinguished Popular Rumor (PHEME) from Slander (Sykophantia) and Malice (Diabole). Virgil described her (*Aeneid*, Book IV) as a swift, birdlike monster with as many eyes, lips, tongues, and ears as feathers, traveling on the ground but with her head in the clouds. According to Ovid in the *Metamorphoses*, she inhabited a reverberating mountaintop palace of brass.

FAMILIAR, in Western demonology, a small animal or imp kept as a witch's attendant, given to her by the devil or inherited from another witch. The familiar was a low-ranking DEMON that assumed the form of an animal, such as a toad, a dog, an insect, or a black cat. Sometimes the familiar was described as an amalgam of several creatures.

The familiar was believed to subsist by sucking blood from a witch's fingers or from protuberances on her body such as moles or warts. During the European WITCHCRAFT trials of the 15th–17th century, a suspected witch was searched for the “teats” by which she fed her familiar, and these were considered sure signs of her guilt.

FAMILIST \'fā-mə-list\, member of the Family of Love, a religious sect led by Hendrik Niclaes, a 16th-century Dutch merchant. In his *Evangelium regni*, issued in English as *A Joyful Message of the Kingdom*, he invited “lovers of truth” of every religion to give up contention over dogma and seek incorporation into the body of Christ.

Niclaes gained many adherents, among them the publisher Christophe Plantin, who surreptitiously printed Niclaes' works. Niclaes apparently made two visits to England, where his sect had the largest following. Queen Elizabeth I denounced the group in 1580, and James I believed it was the source of PURITANISM. The sect died out after the Restoration in 1660.

FAMILY, THE, formerly Family of God, Children of God, or Teens for Christ, youth-oriented Christian communal group, considered part of the Jesus Movement, begun by David Berg in Huntington Beach, Calif., in 1968. In 1969 the group, then known as Teens for Christ, left California because of Berg's prediction of a future earthquake. It reorganized as the Children of God, and Berg became known as Moses David. By 1974, most members had scattered throughout the world to live communally and to spread Berg's message. In 1978 the group was reconstituted as The Family of Love. During this period Berg directed female members to use sex to attract male converts; he also encouraged sexual “sharing” among adult members. The spread of herpes and cases of pedophilia in the group led to

limitations on sexual activity in the 1980s. After his death in 1994 Berg was succeeded by his wife.

The Family teaches a message of Christian love based on scripture and the prophecies of Berg. Members are expected to surrender all their nonpersonal possessions to the group and to become full-time proselytizers. In the early 21st century The Family claimed more than 12,000 adult members in over 100 countries.

FANA \fə-ˈnā\, *Arabic* fanāʾ (literally, “passing away” or “cessation of existence”), in **SUFISM**, the complete denial of self and the realization of God that is one of the steps taken by the Muslim Sufi toward the achievement of union with God. Fana may be attained by constant meditation and by contemplation on the attributes of God, coupled with the denunciation of human attributes. When the Sufi succeeds in purifying himself entirely of the earthly world and loses himself in the love of God, it is said that he has “annihilated” his individual will and “passed away” from his own existence to live only in God and with God.

Many Sufis hold that fana alone is a negative state, for even though ridding oneself of earthly desires and recognizing and denouncing human imperfections are necessary for every pious individual, such virtues are insufficient for those who choose the path of Sufism. Through *fanā* ‘an *al-fanā* (“passing away from passing away”), however, the Sufi succeeds in annihilating human attributes and loses all awareness of earthly existence; he then, through the **GRACE** of God, is revived, and the secrets of the divine attributes are revealed to him. Only after regaining full consciousness does he attain the more sublime state of *baqāʾ* (subsistence) and finally become ready for the direct vision of God.

FĀRĀBĪ, AL- \āl-fā-ˈrā-bē\, *in full* Muhammad ibn Muhammad ibn ʿArkhān ibn Uzalagh al-Fārābī, *Latin name* Alfarabiūs \al-fā-ˈrā-bē-əs\ or Avennasar \,a-və-ˈnā-sər\ (b. c. 878, Turkistan—d. c. 950, Damascus?), Muslim philosopher, one of the preeminent thinkers of medieval **ISLAM**. He was regarded in the Arab world as the greatest philosophical authority after Aristotle.

Al-Fārābī was of Turkic origin and is thought to have been brought to Baghdad as a child by his father, who was probably in the Turkish bodyguard of the **CALIPH**. Al-Fārābī was not a member of the court society, and he did not work in the administration of the central government. In 942 he took up residence at the court of the prince Sayf ad-Dawlah, where he remained, mostly in Ḥalab (modern Aleppo), until the time of his death.

Al-Fārābī’s philosophical thinking was nourished in the heritage of the Arabic Aristotelian teachings of 10th-century Baghdad. He took the Greek heritage, as it had become known to the Arabs, and showed how it could be used to answer questions with which Muslims were struggling. To al-Fārābī, philosophy had come to an end in other parts of the world but had a chance for new life in Islam. Islam as a religion, however, was of itself not sufficient for the needs of a philosopher. He saw human reason as being superior to revela-

tion. Religion provided truth in a symbolic form to nonphilosophers, who were not able to apprehend it in its more pure forms. Of the more than 100 works ascribed to him, the major part of al-Fārābī’s writings were directed to the problem of the correct ordering of the state. Just as God rules the universe, so should the philosopher, as the most perfect kind of man, rule the state.

FARD, WALLACE D. \ˈfärd\, *also called* Walli Farrad, Farad Mohammed, F. Mohammed Ali, or Wallace Fard Muhammad (b. c. 1877, Mecca—d. 1934?), founder of the **NATION OF ISLAM** (sometimes called Black Muslim) movement in the United States.

Fard immigrated to the United States sometime before 1930. In that year, he established in Detroit the Temple of Islam as well as the University of Islam, which was the temple’s school, and the Fruit of Islam, a corps of male guards. Fard preached that African-Americans must prepare for an inevitable race war and that Christianity was the religion of slaveowners. Accordingly, he gave his followers Arabic names to replace those that had originated in slavery. In 1934 he disappeared without a trace. Members of the movement believe Fard to be the incarnation of **ALLĀH**, and his birthday, February 26, is observed as Savior’s Day.

FARRAKHAN, LOUIS \ˈfär-ə-ˌkän, ˈfar-ə-ˌkan\, *in full* Louis Abdul Farrakhan, *original name* Louis Eugene Walcott (b. May 11, 1933, Bronx, New York, N.Y., U.S.), African-American leader, from 1978, of the **NATION OF ISLAM**.

Farrakhan grew up in a Boston neighborhood plagued by racial tensions. He attended Winston-Salem Teachers College for two years and afterward found work as a calypso guitarist and singer. In 1955 he converted from Episcopalianism to the Nation of Islam, also called Black Muslims, the unorthodox form of Islam led by **ELIJAH MUHAMMAD**.

After Elijah Muhammad died in 1975, his son **W. DEEN MUHAMMAD** succeeded him as the leader of the Nation of Islam and altered the organization’s course by integrating its members into the orthodox Muslim community. In 1978

Louis Farrakhan addressing a crowd
UPI/Corbis—Bettmann

Farrakhan formed his own sect, which he also called the Nation of Islam and which retained features of its predecessor. His followers often were recruited from the poor and alienated. Farrakhan emphasized the importance of the family and the need for African-Americans to develop their own economic resources. He preached the inherent wickedness of whites, particularly Jews.

Farrakhan campaigned for U.S. presidential candidate JESSE JACKSON in 1983. He later accused the U.S. government of conspiring to destroy African-Americans with AIDS and addictive drugs. In 1995 Farrakhan was a leading organizer of the "Million Man March" of African-American men in Washington, D.C., which attracted several hundred thousand participants from throughout the United States. After a near-death experience resulting from prostate cancer, he toned down his racial rhetoric and made overtures to other minority groups. In 2000 Farrakhan and W.D. Mohammed recognized each other as fellow Muslims.

FARRAR, FREDERIC WILLIAM (b. Aug. 7, 1831, Bombay, India—d. March 22, 1903, Canterbury, Kent, Eng.) popular English religious writer and author of a sentimental novel of school life, *Eric*; or, *Little by Little* (1858).

Farrar accepted an assistant mastership at Harrow School for boys in 1855. In 1856 he became a fellow of Trinity College, Cambridge, and in 1857 he was ordained a priest in the Church of England. *Eric* was followed by *Julian Home* (1859) and *St. Winifred's* (1862). Farrar was also an expert philologist; for his *Essay on the Origin of Language* (1860) he was elected a fellow of the Royal Society. He is best known for his theological works and scriptural commentaries. His *Life of Christ* (1874) ran through 30 editions in as many years. His other works include *The Witness of History to Christ* (1871), *The Life and Works of St. Paul* (1879), and *The Life of Christ Represented in Art* (1900), as well as several collections of sermons. In 1876 Farrar became canon of Westminster Abbey and in 1883 archdeacon. He was dean of Canterbury from 1895 until his death.

FASCHING \ˈfä-shiŋ\, ROMAN CATHOLIC Shrovetide CARNIVAL as celebrated in German-speaking countries. There are many regional differences in the name, duration, and activities of the carnival. It is known as Fasching in Bavaria and Austria, Fosnat in Franconia, Fasnet in Swabia, Fastnacht in Mainz and its environs, and Karneval in Cologne and the Rhineland. The beginning of the pre-Lenten season generally is considered to be EPIPHANY (January 6), but in Cologne, where the festivities are the most elaborate, the official beginning is marked on the 11th hour of the 11th day of the 11th month of the year. Merrymaking may get under way on the Thursday before LENT, but the truly rambunctious revelry associated with Fasching usually reaches its high point during the three days preceding ASH WEDNESDAY, culminating on Shrove Tuesday. The names of these final days also vary regionally.

Although the exact historical origins of Fasching are unclear, the observance of its rites is mentioned in Wolfram von Eschenbach's *Parzival* (early 13th century). It was a festival that originated in the cities—most notably Mainz and Speyer—and was already established in Cologne by 1234. Traditionally, it was not only a feast before Lent but also a time during which the rules and order of daily life were subverted. This gave rise to such customs as handing over the keys of the city to a council of fools or ceremoniously letting women rule. It also inspired noisy costumed parades and masked balls; satirical and often impertinent plays,

speeches, and newspaper columns; and generally excessive behavior—all of which are still common elements of contemporary Fasching celebrations. After the REFORMATION, Protestant areas of Europe took exception to such Roman Catholic excesses, and carnival practices began to die out.

FASTING, abstinence from food or drink or both for religious or ethical purposes. The abstention may be complete or partial and of long or short duration. Fasting has been practiced by the founders and followers of many religions, by culturally designated individuals (*e.g.*, hunters or candidates for initiation rites), and by individuals or groups as an expression of protest against what they believe are violations of social, ethical, or political principles.

In the religions of ancient peoples and civilizations, fasting was practiced to prepare persons, especially priests and priestesses, to approach the deities. In the Hellenistic MYSTERY RELIGIONS, the gods were thought to reveal their divine teachings in dreams and visions only after a fast that required the total dedication of the devotees. Among the pre-Columbian peoples of Peru, fasting often was one of the requirements for penance after an individual had confessed SINS before a priest. In many cultures the practice was considered a means to assuage an angered deity or to aid in resurrecting a deity who was believed to have died.

In various indigenous religions, fasting is practiced before and during a VISION QUEST (*e.g.*, among the North American Indian peoples of the Great Plains and the Pacific Northwest). Among the Evenk (Tungus) of Siberia, SHAMANS fast and train themselves to see visions and to control spirits. Priestly societies among the Pueblo Indians of the American Southwest fast during retreats before major ceremonies connected with seasonal changes.

In JAINISM, fasting and meditation lead to trances that enable individuals to reach a transcendent state. Buddhist monks of the THERAVADA school fast on certain holy days (*uposatha*) of the month. In China prior to 1949, it was customary to observe a fixed period of fasting and abstinence before the sacrifice during the night of the winter solstice, a time when the heavenly Yang (positive energy) principle was believed to begin its new cycle. In India, Hindu sadhus (holy men) are admired for their personal fasts.

Among the major Western religions, only ZOROASTRIANISM prohibits fasting, because of its belief that such a form of ASCETICISM will not aid in strengthening the faithful in their struggle against evil. JUDAISM, CHRISTIANITY, and ISLAM emphasize fasting during certain periods. Judaism observes several annual fast days, primarily on days of penitence (such as YOM KIPPUR, the Day of Atonement) or mourning. Christianity, especially ROMAN CATHOLICISM and EASTERN ORTHODOXY, observes a fast period during LENT, before EASTER, and during ADVENT, before CHRISTMAS. Among Roman Catholics the observance has been modified since the SECOND VATICAN COUNCIL (1962–65) to allow greater individual choice, with mandatory fasting only on ASH WEDNESDAY and GOOD FRIDAY during Lent. Protestant churches generally leave the decision to fast to individual church members. The month of RAMADAN in Islam is a period of penitence and total fasting from dawn to dusk.

FATE, Greek *Moirai*, plural *Moirai*, Latin *Parcae*, plural *Parcae*, in Greek and Roman mythology, any of three goddesses who determined human destinies, and in particular the span of a person's life and his or her allotment of misery and suffering. Homer speaks of Fate (*moira*) in the singular as an impersonal power and sometimes makes its functions

interchangeable with those of the Olympian gods. However, from the time of Hesiod (8th century BCE), the Fates were personified as three old women who spin the threads of human destiny. Their names were Clotho (Spinner), Lachesis (Allotter), and Atropos (Inflexible). Much later writers assigned the three different tasks: Clotho spun the “thread” of human fate, Lachesis dispensed it, and Atropos cut the thread (thus determining the moment of death). The Romans identified the Parcae, originally personifications of childbirth, with the three Greek Fates. The Roman goddesses were named Nona, Decuma, and Morta.

FĀTIḤA \ˈfā-tē-hä\, also called *fātiḥat al-kitāb* (Arabic: “the opening of the book”), the “opening” or first chapter (*ṣŪRA*) of the *QUR’AN*. In contrast to the other *sūras*, which are usually narratives or exhortations delivered by God, the seven verses of the *fātiḥa* form a short devotional prayer addressed to God and in oral recitation are ended with the word *amīn* (“amen”). Muslim tradition regards it as the essence of the Qur’an. The *fātiḥa* has acquired broad ceremonial usage in ISLAM: it introduces each ritual bowing (*rak’ah*) in the five daily prayers (*ṢALĀT*), is recited at all Muslim sanctuaries, validates important resolutions, appears frequently on AMULETS, and is recited for the dead.

In North Africa, *fātiḥa* (or *faṭḥa*) designates a prayer performed silently with arms outstretched, palms turned upward. The first *sūra* is not necessarily recited but was probably once part of the ceremony.

FĀṬĪMA \ˈfā-ti-mə\, also called *Al-Zahrā* (Arabic: “Shining One”) (b. c. 605, Mecca, Arabia—d. 633, Medina), daughter of MUHAMMAD who in later centuries became the object of deep veneration by many Muslims, especially the SHI’ITES. Alone among Muhammad’s sons and daughters, Fāṭima stood at the head of a genealogy that encompassed all of the Shi’ite IMAMS and that steadily enlarged through the generations.

To the Shi’ites she is particularly important as the wife of ‘ALĪ, whom they consider to be the legitimate heir of the authority of the prophet Muhammad and the first of their imams. The sons of Fāṭima and ‘ALĪ, ḤASAN and ḤUSAYN, are thus viewed by the Shi’ites as the rightful inheritors of the tradition of Muhammad. Thus, many traditions give her life more majesty than it had in reality. The ISMA’ĪLĪ Fāṭimid dynasty, which ruled North Africa, Egypt, and Syria between 909 and 1171, derived its name from hers.

Fāṭima accompanied Muhammad when he emigrated from Mecca to Medina in 622. Soon after her arrival in Medina she married ‘ALĪ, the son of one of the Prophet’s uncles. Their first years were ones of material want. ‘ALĪ was often harsh with her, and Fāṭima brought her case before Muhammad himself; the Prophet took great satisfaction in being able to reconcile husband and wife. When in 632 Muhammad was facing his last illness, Fāṭima was there to nurse him. In general she avoided involvement in political affairs. Yet after Muhammad’s death she had a sharp clash with Abū Bakr, who succeeded Muhammad as leader of the Islamic community, over property that she claimed Muhammad had left her. Abū Bakr refused to sanction her claim, and for six months she and ‘ALĪ refused to recognize his authority. It is not clear whether or not she had become reconciled to Abū Bakr by the time she died.

FAUNA \ˈfō-nə\, in ancient ROMAN RELIGION, a goddess of woodlands, fields, and flocks; she was the counterpart—variously the wife, sister, or daughter—of FAUNUS.

FAUNUS \ˈfō-nəs\, ancient Italian rural deity whose attributes in Roman times were identified with those of the Greek god PAN. Faunus was originally worshiped in the countryside as a bestower of fruitfulness on fields and flocks. He eventually became primarily a woodland deity, the sounds of the forest being regarded as his voice.

A grandson of SATURN, Faunus was typically represented as half man, half goat, a derivation from the Greek Satyr, in the company of similar creatures, known as Fauns. Like Pan, Faunus was associated with merriment, and his twice-yearly festivals were marked by revelry and abandon. At the LUPERCALIA, a festival held partly in his honor each February in Rome well into the Christian era, youths clothed as goats ran through the streets wielding strips of goatskin.

FAYD \ˈfɪd\ (Arabic: “emanation”), in Islamic philosophy, the emanation of created things from God. The word is not used in the *QUR’AN*, which uses terms such as *khalq* (“creation”) and *ibdā* (“invention”) in describing the process of creation. Early Muslim theologians dealt with this subject only in simple terms as stated in the Qur’an, namely, that God had ordered the world to be, and it was. Later Muslim philosophers, such as AL-FĀRĀBĪ (10th century) and IBN SĪNA (11th century) under the influence of NEOPLATONISM conceived of creation as a gradual process. Generally, they proposed that the world came into being as the result of God’s superabundance. The creation process takes a gradual course, which begins with the most perfect level and descends to the least perfect—the world of matter. The degree of perfection is measured by the distance from the first emanation, for which all creative things yearn. The soul, for example, is trapped in the body and will always long for its release from its bodily prison to join the world of spirit, which is closer to the first cause and therefore more perfect. God emanates not out of necessity but out of a free act of will. This process is spontaneous because it arises from God’s natural goodness, and it is eternal because God is always superabundant.

AL-GHAZĀLĪ refuted the *ḥayd* theory on the grounds that it lowers God’s role in the creation to mere natural causality. God, al-Ghazālī maintained, creates with absolute will and freedom, and theories of necessary overflowing and emanation lead logically to the denial of the absoluteness of the divine active will.

FEATHERED SERPENT, major deity of the ancient Meso-American pantheon. See QUETZALCÓATL; PRE-COLUMBIAN MESO-AMERICAN RELIGIONS.

FELICITAS \fi-ˈli-sə-tas\, Roman goddess of good luck to whom a temple was first built in the mid-2nd century BCE. She became the special protector of successful commanders. Caesar planned to erect another temple to her, and it was built by the triumvir Marcus Aemilius Lepidus. The emperors made her prominent as symbolizing the blessings of the imperial regime.

FENG-HUANG \ˈfɛŋ-ˈhwɑŋ\, *Pinyin* fenghuang (Chinese: “phoenix”), in Chinese mythology, a creature whose rare appearance portends some great event or bears testimony to the greatness of a ruler. The *feng-huang* is also a popular symbol in Chinese alchemy and folk tradition. In systematized mythology, the *feng-huang* (phoenix) is the female counterpart of the male dragon. Tradition recounts an appearance of the *feng-huang* before the death of the legendary Yellow Emperor (HUANG-TI), who ruled China in the

FENG-SHUI

27th century BCE. The bird has the breast of a goose, the hindquarters of a stag, the neck of a snake, the tail of a fish, the forehead of a fowl, the down of a duck, the marks of a dragon, the back of a tortoise, the face of a swallow, and the beak of a cock. It was reportedly about nine feet tall.

FENG-SHUI \ˈfɛŋ-ˈʃwɑː\, *Pinyin* fengshui (“wind-water”), traditional Chinese practice of geomancy, the arrangement of the human and social world in auspicious alignment with the forces of the cosmos (*i.e.*, the natural principles of CH’I, YIN-YANG, and *wu-hsiung*); it was developed during the Han dynasty (206 BCE–220 CE). The proper siting of graves, domestic buildings, and temples was a special concern in feng-shui, particularly the harmonious placement of such structures in relation to the twin powers of yin and yang, associated with bodies of water and mountains, respectively. Appropriate placement was done by feng-shui specialists, or diviners, who used a compasslike instrument to determine the precise cosmic forces affecting a site. Feng-shui was popular throughout all levels of Chinese society and continues to be used in both urban and rural communities in China and in the Chinese diaspora. It has gained a recent following in the United States, owing to the publication of a number of popular books on the subject.

FENRIR \ˈfɛn-rər\, also called Fenrisúlfr, monstrous wolf of Norse mythology. He was the son of the god LOKI and a giantess, Angerboda. Fearing Fenrir’s strength and knowing that only evil could be expected of him, the gods bound him with a magical chain made of the sound of a cat’s footsteps, the beard of a woman, the breath of fish, and other occult elements. When the chain was placed upon him, Fenrir bit off the hand of the god TYR. He was gagged with a sword and was destined to lie bound to a rock until the RAGNARÖK (Doomsday), when he will break his bonds and fall upon the gods. According to one version of the myth, Fenrir will devour the sun, and in the Ragnarök he will fight the chief god ODIN and swallow him. Odin’s son Vidar will avenge his father, stabbing the wolf to the heart according to one account and tearing his jaws asunder in another. Fenrir figures prominently in Norwegian and Icelandic poetry of the 10th and 11th centuries, and the poets speak apprehensively of the day when he will break loose.

FER DIÁD \ˈfər-ˌdē-əd\ (Old Irish: “Man of Smoke”), friend and foster brother of the legendary Irish warrior CÚ CHULAINN. He appears in the longest of the ULSTER CYCLE of hero tales, *The Cattle Raid at Cooley* (*Táin Bó Cuailnge*), which deals with the conflict between Ulster and Connaught over possession of the famous brown bull of Cooley. Enlisted in the forces of Connaught, Fer Diád proceeds with the warrior-queen MEDB to seize the brown bull of Cooley from the Ulstermen; there he tragically engages in a three-day battle with Cú Chulainn and is defeated in the last moment.

FERGUS \ˈfər-gəs\, mighty hero of Irish legend, and former king of Ulster. At the time of the battle between Connaught and Ulster in *The Cattle Raid at Cooley* (*Táin Bó Cuailnge*) MEDB (Maev), while married to king Ailill, had an affair with Fergus, distinguished for his prodigious virility. In the tale Fergus, an exile from Ulster at the Connaught court, recalls for Medb and Ailill the heroic deeds of Cú Chulainn’s youth.

FERIAE LATINAE \ˈfɛr-ē-ˌlɑ-ˈtɪ-nē\, in ROMAN RELIGION, the Festival of JUPITER Latiaris (Latialis), held in the spring each year on Mons Albanus (Monte Cavo), in the Alban Hills near Rome. Apparently antedating the foundation of Rome, it eventually was observed by all 47 members of the Latin League.

The ceremony was the initial responsibility of each newly chosen pair of Roman consuls, who offered milk as a LIBATION; the other cities sent cheese and sheep. A white heifer that had never been yoked was then sacrificed. Its flesh was consumed by the delegates of all the league communities on behalf of their constituents.

FERRARA-FLORENCE, COUNCIL OF \fə-ˈrär-ə-ˈflör-əns\, ecumenical council of the ROMAN CATHOLIC church (1438–45) in which the Roman Catholic and EASTERN ORTHODOX churches tried to reach agreement on their doctrinal differences and end the SCHISM between them. The Council of Ferrara-Florence was a continuation of the Council of Basel, which Pope Eugenius IV transferred from Basel and which opened in Ferrara on Jan. 8, 1438. On Jan. 10, 1439, the council was moved from Ferrara to Florence when a plague hit Ferrara.

Discussions were held on PURGATORY and on the phrase FILIOQUE (“and from the Son”) of the NICENE CREED, which sets forth the doctrine that the HOLY SPIRIT proceeds from both the Father and the Son. The Eastern Orthodox held that the Spirit proceeds from the Father only and had refused to accept the *Filioque*. After much discussion, they agreed to accept the *Filioque* and also the Roman Catholic statements on purgatory, the EUCHARIST, and papal primacy. The decree of union between the two groups (*Laetentur Caeli*) was signed on July 6, 1439. After their return to Constantinople, many of the Eastern Orthodox members repudiated the reunion.

Doctrinally, the council is of interest because of the exposition of the Catholic doctrines of purgatory and of the primacy and plenary powers of the pope set out in *Laetentur Caeli*.

FETIAL \ˈfē-shəl\, any of a body of 20 Roman priestly officials who were concerned with various aspects of international relations, such as treaties and declarations of war. Fetials were originally selected from the most noble families and served for life, but, like in all PRIESTHOODS, they could only submit advice, not make binding decisions.

According to the Roman historian Livy, after Rome had been injured by another state, four fetials were sent out to seek redress. One member, the *verbenarius*, carried herbs gathered from the Arx on the Capitoline Hill. Another

Fenrir attacking a warrior, possibly Odin, while another restrains him; engraved stone at Ledberg, Sweden

By courtesy of the Nordisk Presse Foto, Copenhagen

member, called the *pater patratus*, served as the group's representative. Upon reaching the border of the offending state, the *pater patratus* first announced his mission and addressed a prayer to JUPITER in which he affirmed the justice of his errand. Crossing the border, he repeated the same form several times. If, after 30 days (some sources give 33), no satisfaction was given, the *pater patratus* harshly denounced the offending state and returned to Rome, where he reported to the Senate. If Rome decided to wage war, the *pater patratus* returned to the border, pronounced a declaration of war, and hurled across the boundary either a regular spear or a special stake sharpened and hardened in the fire. This ritual was supposed to keep Rome from waging an unjust or aggressive war. If, however, the hostile country was far away, the spear soon came to be cast upon a piece of land in front of the Temple of BELLONA in Rome; that land was treated as belonging to the enemy. Thus the ritual limitations were overcome, and the state entered into any wars that were seen to be to its advantage.

When treaties were concluded, the *verbenarius* and the *pater patratus* were sent to the other nation; after reading the treaty aloud, they pronounced a curse on Rome should that state be the first to break it. The ceremony was concluded by killing a pig with a flint implement. By the time of the late republic, the institution had faded out, although the emperor Augustus (63 BCE–14 CE) revived the group, ceremonially at least, and became a member himself in his effort to restore old Roman traditions.

FETISH, an object (such as a small carving of an animal) believed to have magical power to protect or aid its owner.

FEUERBACH, LUDWIG (ANDREAS) \ˈföi-ər-bäk\ (b. July 28, 1804, Landshut, Bavaria [now in Germany]—d. Sept. 13, 1872, Rechenberg, Ger.), German philosopher and moralist remembered for his influence on Karl Marx and for his humanistic theology.

The fourth son of the eminent jurist Paul von Feuerbach, Ludwig abandoned theological studies to become a student of philosophy under G.W.F. Hegel for two years at Berlin. In 1828 he went to Erlangen to study natural science, and two years later his first book, *Gedanken über Tod und Unsterblichkeit* ("Thoughts on Death and Immortality"), was published anonymously. In this work Feuerbach attacked the concept of personal immortality and proposed a type of immortality by which human qualities are reabsorbed into nature. In his most important work, *Das Wesen des Christentums* (1841; *The Essence of Christianity*), Feuerbach posited the notion that man is to himself his own object of thought and that religion is nothing more than a consciousness of the infinite; thus God is merely the outward projection of man's inward nature. In the first part of his book, which strongly influenced Marx, Feuerbach analyzed the "true or anthropological essence of religion." He argued that the traditional aspects of God correspond to different needs in human nature. In the second section he contended that the view that God has an existence independent of human existence leads to a belief in REVELATION and SACRAMENTS, which are items of an undesirable religious materialism. Nonetheless, Feuerbach denied that he was an atheist.

Attacking religious orthodoxy during the politically turbulent years of 1848–49, Feuerbach was seen as a hero by many of the revolutionaries. His influence was greatest on such anti-Christian publicists as DAVID FRIEDRICH STRAUSS and Bruno Bauer. Some of Feuerbach's views were later en-

dorsed by extremists in the struggle between CHURCH AND STATE in Germany and by those who, like Marx, led the revolt of labor against capitalism. Among his other works are *Theogonie* (1857) and *Gottheit, Freiheit, und Unsterblichkeit* (1866; "God, Freedom, and Immortality").

FIDEISM \ˈfē,-dā,-i-zəm\, a theological position extolling the primacy of faith by making it the ultimate criterion of truth and minimizing the power of reason to know religious truths. Strict fideists assign no place to reason in discovering or understanding fundamental tenets of religion. For them blind faith is supreme as the way to certitude and salvation. They defend such faith on various grounds—e.g., mystical experience, revelation, subjective human need, and common sense. Some go so far as to assert that the true object of faith is the absurd, the nonrational, the impossible, or that which directly conflicts with reason. Such a position was approached in the philosophies of the 2nd-century North African theologian TERTULLIAN, the medieval English scholar WILLIAM OF OCKHAM, the 17th-century French philosopher Pierre Bayle, and more recently in the works of the 18th-century German philosopher Johann Georg Hamann and the 19th-century Danish philosopher SØREN KIERKEGAARD. This modern attitude is often motivated by our apparent inability to find rational solutions for the world's ills.

Moderate fideists generally assert that reason can or must play a role in the search for religious truths: some truths (e.g., God's existence, moral principles) can be known by reason subsequently reinforced and clarified by faith. This position affirms that reason can, in some cases, partially comprehend religious truths after they have been revealed, or shows negatively that no contradiction is necessarily involved in them or that there is a rational basis for accepting truths of faith that the human mind cannot comprehend. Thus, the 17th-century French writer Blaise Pascal held that natural faculties are inadequate for religious certainty but suffice to justify religious faith in matters otherwise unknowable.

FIDES \ˈfī-dēz\, Roman goddess, the deification of good faith and honesty. Many of the oldest Roman deities were embodiments of high ideals (e.g., HONOS, Libertas); it was the function of Fides to oversee the moral integrity of the Romans. Closely associated with JUPITER, Fides was honored with a temple built near his on the Capitoline Hill in 254 BCE. In symbolic recognition of the secret, inviolable trust between gods and mortals, attendants presented sacrificial offerings to her with covered hands.

In the later Roman period, she was called Fides Publica ("Public Faith") and was considered the guardian of treaties and other state documents, which were placed for safekeeping in her temple. There, too, the Senate often convened, signifying her importance to the state.

FILIAL PIETY, Chinese *hsiao*, Pinyin *xiao*, important concept in CONFUCIANISM, the virtue of devotion to one's parents, codified in the *Hsiao-ching* or *Classic of Filial Piety*. See HSIAO.

FILIOQUE \fī-lē-ˈō-kwā, -fī-, -kwē\ (Latin: "And from the Son"), clause affirming that the HOLY SPIRIT proceeds "from the Son" as well as from the Father. It was inserted into the NICENE CREED in Spain during the 6th century and gradually spread to all Western churches but was probably not used in Rome itself until 1014. The addition of the *Filioque*

was one of the causes of the SCHISM between the Eastern and Latin churches that began in 1054. Eastern Christians continue to reject this addition, though now they do not generally regard it as heretical, especially if it is understood in the sense of “through the Son.”

FINNEY, CHARLES GRANDISON \ˈfi-nē\ (b. Aug. 29, 1792, Warren, Conn., U.S.—d. Aug. 16, 1875, Oberlin, Ohio), American lawyer, president of Oberlin College, and a central figure in the wave of religious REVIVALISM of the early 19th century; he is sometimes called the first of the professional evangelists.

After teaching school briefly, Finney studied and then began practicing law. References in his studies to Mosaic institutions drew him to BIBLE study, and in 1821 he underwent a religious conversion. Finney dropped his law practice to become an evangelist and was licensed by the PRESBYTERIANS. Addressing congregations in the manner he

had used earlier in pleading with juries, he fomented spirited revivals in the villages of upstate New York. His methods aroused criticism from theologians educated in the sterner traditions of eastern schools.

His revivals achieved spectacular success in large cities, and in 1832 he began an almost continuous revival in New York City as minister of the Second Free Presbyterian Church. His disaffection from Presbyterian theology and discipline, however, led his supporters to build for him the Broadway Tabernacle in 1834. The following year

Finney, 1850

By courtesy of Oberlin College, Ohio

he became a professor of theology in a newly formed theological school in Oberlin, Ohio, dividing his time between that post and the Tabernacle. He left New York in 1837 to become minister of Oberlin's First Congregational Church, closely related to Oberlin College, where he was president from 1851 to 1866.

FINN MACCUMHAILL \ˈfin-mə-ˈkūl\, also spelled MacCool, in Irish Gaelic literature, a heroic character from tales and ballads known as the Fenian cycle, Fionn cycle, or Ossianic cycle. In these tales both Finn and his war band, the Fianna Éireann, figure prominently. An elite volunteer corps of warriors and huntsmen, skilled in poetry, the Fianna supposedly flourished under the reign of Cormac mac Airt in the 3rd century CE. The long-established Fenian lore attained greatest popularity about 1200, when the cycle's outstanding story, *The Colloquy of the Old Men* (*Acallam na Senórach*), was written down. The Fenian cycle remains a vital part of Irish FOLKLORE and contains many of the best-loved folk tales of the country.

An early tale, *The Boyish Exploits of Finn* (*Macgnímartha Finn*), tells how, after Cumhail (Cool), chief of the Fianna, is killed, his posthumous son is reared secretly in a forest and earns the name Finn (“The Fair”) by his exploits. He grows up to triumph over his father's slayer, Goll Mac-

Morna, and to become head of the Fianna, which later includes his son Oisín (OSSIAN), the poet, his grandson Oscar, the handsome Diarmaid (Dermot), and his former clan enemy Goll MacMorna. The disintegration of the Fianna begins when Diarmaid elopes with Gráinne (Grace), a king's daughter whom Finn, as an old man, wishes to marry. Later, when Diarmaid is wounded, Finn lets him die for lack of water. The king and people finally turn against the overbearing Fianna, a conflict that culminates in the Battle of Gabhra, in which the Fianna is destroyed, Oscar is killed in battle, and Oisín survives but is lured away by a fairy princess to Tír na nÓg (“Land of Youths”).

FINNO-UGRIC RELIGION \,fi-nō-ˈyü-grik, -ˈü-grik\, pre-Christian RELIGIOUS BELIEFS and practices of the Finno-Ugric peoples, who inhabit regions of northern Scandinavia, Siberia, the Baltic area, and central Europe.

The geographic dispersion of the Finno-Ugric peoples is understood mainly through linguistic criteria, since historical and archaeological evidence is scanty. From their ancient home between the Ural Mountains and the Volga River they spread north about 5000–4000 BCE and south, east, and west perhaps a millennium later. Prominent among the many surviving groups are the Sami (Lapps) of the Arctic region, the Finns and the Estonians of the Baltic area, the Hungarians (or Magyars) of central Europe, and the Permic and Volga Finns of central and southern Russia.

Mythology. According to the most widespread Finno-Ugric account of the creation—the so-called earth-diver myth, found also in North America and Siberia—God commands a being (frequently the devil) to dive into the primeval sea and gather sand, from which God fashions the earth. A version of the myth of the creation of the world from an egg also is known in Estonia and Finland, where it is found in the KALEVALA.

Finno-Ugric descriptions of the cosmos entail a number of themes, the central components of which are the sky, the earth, and the Underworld: a stream or sea is said to encircle the round world; the canopy of the heavens pivots on the North Star; a world pole supports the sky; animals carry the earth; and an abyss in the sea swallows ships. The tradition of the god of the sky finds many expressions among the Finno-Ugric peoples, reflecting an ancient form altered by cultural contacts and environment. In the southeast, for example, Turkic influence is evident in the myths of a heavenly court, with servants acting as intermediaries between earthlings and the god of the sky. Also in the south, the sky god portrayed as “begetter” with the “earth mother” reflects an agricultural society, while in the Arctic the corresponding deities promote fishing, hunting, and herding. The HIGH GODS are typically distant and invisible, encountered in connection with specific rites.

Beliefs and practices. On a more intimate level, the patterns of daily life are closely tied to a system of GUARDIAN SPIRITS and spirits of the dead. The former are supranormal beings that appear in visions, auditory experiences, and other such occurrences, especially when a social norm involving a guardian-spirit sanction is broken. They are believed to “govern” and “own” a particular area, such as a cultural locality (e.g., a household), a natural region (a forest or lake), or a natural element or phenomenon (fire or wind). In addition to propitiating these guardians of the world at large, each family privately venerates the spirits of its own ancestors, which are thought to protect family welfare. This cultic practice encompasses rites conducted at the moment of death, funeral preparations and committal

of the body, celebrations in memory of an individual, annual collective memorials, offerings and prayers to the dead for subsistence, and occasional rites (e.g., upon relocation or illness). In some groups, the memory of outstanding leaders and warriors is venerated in cultic fashion. The realm of the dead consists of the actual graveyard, envisioned as an underground village, and a distant land of the dead, far in the north, behind a burning stream.

Religious authorities included SHAMANS or seers, sacrificing priests, guardians of the SANCTUARY, professional weeping women, and the performers of wedding ceremonies. Cult centers ranged from the home sanctuary, perhaps a log structure, to a more communal fenced-off area in the forest, to sacrificial stones along the herding route. Mobile temples—images carried on special sleighs—were also used by the more mobile Finno-Ugric peoples.

FIQH \ˈfɪk\ (Arabic: “understanding”), Muslim jurisprudence, *i.e.*, the science of ascertaining the precise terms of the SHARĪʿA, or Islamic law. The collective sources of Muslim jurisprudence are known as UṢŪL AL-FIQH.

In classical Islamic theory, the four major sources from which law is derived are the QURʿAN, the SUNNA, IJMĀʿ (consensus of scholars), and QIYĀS (analogical deductions from these three). The *uṣūl*, systematized under AL-SHĀFIʿĪ (767–820), were the result of an Islamization of law that began about the 2nd century of the Muslim era (8th century CE).

Law existed apart from religion under the first four CALIPHs and the Umayyad dynasty and was generally administered through existing pre-Islamic institutions of Roman, Byzantine, Jewish, and Persian character. Pious Muslim scholars, who were later grouped into the legal schools of Iraq, Hejaz, and Syria, began to reinterpret the law in an Islamic light. Al-Shāfiʿī completed this Islamization process by establishing a norm for interpretation, the *uṣūl*, but the functions of the individual principles were fixed in legal theory by later scholars. During the 11th century *fiqh* became institutionalized in the curriculum of MADRASAS (Islamic colleges), and those specializing in jurisprudence were known as *fuqahāʾ* (plural of *faqīh*). The SUNNI and SHĪʿITE branches of ISLAM each developed their own traditions of *fiqh*, and lively debates over points of law and their implementation in secular society are occurring at present. Since 1979 the Islamic Republic of Iran has recognized the Shīʿite *faqīh* constitutionally as the foremost religious and political authority in the country, a revolutionary doctrine developed by Ayatollah Khomeini in the 1960s and 1970s.

FIRE WALKING, religious ceremony practiced in many parts of the modern world, classical Greece, and ancient India and China. Fire walking most commonly is the practice of walking swiftly over a layer of embers spread thinly along the bottom of a shallow trench. Sometimes the devotees or priests or oracles have to walk through a blazing log fire. Instead of embers from a wood fire, there may be red-hot stones (Fiji and Mauritius), or embers may be poured over the devotee’s head in a “fire bath,” or the devotee may lash himself with a flaming torch.

Fire walking is said sometimes to ensure a good harvest, other times to purify the participants; a man accused of a crime or of falsehood may undergo the ordeal of fire to prove his innocence. Fire walkers believe that only those who lack faith will suffer from injuries. Devotees also undertake fire walking in fulfillment of vows.

Injuries from burns do occur, but they seem on the whole to be much less frequent than would be expected, especial-

ly as devotees do not apply any artificial preparation before the ordeal to protect their bodies.

FIRST-FRUITS CEREMONY, ceremony centered on the concept that the first fruits of a harvest belong to or are sanctified unto God (or gods).

Although the title signals that first-fruit offerings often are of agricultural produce, other types of offerings are also included under this heading. For instance, in the religions of some native northwest American tribes, there exists the belief that salmon were supernatural beings who voluntarily assumed piscine form to sacrifice themselves annually for the benefit of mankind. On being taken, the spirits of the fish returned to their home beneath the sea, where they were reincarnated if their bones were returned to the water. If offended, however, the salmon-beings would refuse to return to the river. Hence, there were numerous specific prohibitions on acts believed to offend them and observances designed to propitiate them.

The most characteristic motivation behind a first-fruits offering is the belief that, since all good things come from the divine, then a portion of those good things should be offered back to the divinity. Innumerable examples of such rites exist in the historical record. The ancient Greek THARGELIA festival, one of the primary rites dedicated to APOLLO at Athens, was a vegetation ritual named after the first bread baked from the newly harvested wheat. Similarly, in modern Sri Lanka at harvest time the Buddha is ceremonially offered a large bowl of milk and rice, while in SHINTŌ the first rice sheaves of the harvest are presented as offerings (*shinsen*) to the KAMI (god or sacred power) during agricultural and other festivals.

In JUDAISM, the first-fruits ceremony is known as SHAVUOT. The belief is that fruit trees live their own life and are to remain untrimmed for three years after they are planted. But even then their fruits cannot be enjoyed until God is given his share. Within classical Judaism, the idea of the first-fruits offering formed the center of sacrifice as a whole. The rationale for sacrifice is that everything belongs to God; the central point in the sacrifice was the sanctification of the offering, and the surrender of it to God. Its most immediate purpose was to serve as a form of taxation to the priests, since only they were considered holy enough to take possession of the offering following the rite. (*See also* PIDYON HA-BEN.)

The belief that all good things come from God, including the fertility of the fields, is widespread, and consequently first-fruit offerings are also a ubiquitous feature of the world’s religions. Particularly if such offerings are taken as a characteristic form of sacrifice, the first-fruits ceremony may be seen as a category of fundamental importance to the study of religious ritual. (*See also* KWANZAA.)

FIVE CLASSICS, Chinese Wu-ching \ˈwü-ˈjɪŋ\, Pinyin Wujing, five ancient Chinese books, all associated in some way with CONFUCIUS (551–479 BCE), that for 2,000 years have been invoked as authorities on Chinese society, law, government, education, literature, and religion. As such, their influence is without parallel in the long history of China. Chinese students, however, do not generally attempt the Five Classics without having first studied the shorter Confucian texts called *Ssu-shu* (Pinyin: Sishu; “FOUR BOOKS”). The Five Classics consist of the I-CHING (“Classic of Changes”), SHU-CHING (“Classic of History”), *Shih-ching* (“Classic of Poetry”), LI-CHI (“Collection of Rituals”), and CH’UN-CH’IU (“Spring and Autumn [Annals]”).

FIVE PECKS OF RICE

In 136 BCE the Han ruler Wu-ti declared CONFUCIANISM to be the state ideology of China. Positions were thereupon established for the teaching of the Five Classics, and these continued to exist into the 20th century. In 124 BCE the Five Classics were accepted by the national university as its core curriculum. Proficiency in interpreting and expounding the texts became a requirement for all scholars in obtaining posts in the government bureaucracy.

FIVE PECKS OF RICE: see T' IEN-SHI TAO; TAOISM.

FIVE PILLARS OF ISLAM, Arabic *Arkān al-Islām*, the five duties incumbent on every Muslim according to the SHARĪA: SHAHĀDA, the Muslim profession of faith; ṢALĀT, or ritual prayer, performed in a prescribed manner five times each day; ZAKĀT, the alms tax levied to benefit the poor and the needy; ṢAWM, fasting during the month of Ramaḍān; and HAJJ, the major PILGRIMAGE to MECCA. Though individually mentioned in the QUR'AN, the identification of five pillars (or foundations) actually occurs in the Hadith. According to one account, when MUHAMMAD was asked by JIBRĪL to define ISLAM, he answered by equating it with these five duties. Based on the SUNNA of the prophet, they were fully treated in FIQH manuals by the legal schools (*madhhab*s), which placed them in the category of worship (*'ibādāt*).

Although SHĪ'ITE performance of these rituals does not differ greatly from that of the SUNNI, they do not always conceive of the rituals in the same way. Twelvers, for example, class *shahāda* under the theological category of *tawhīd* (doctrine relating to the "oneness" of God), not among *'ibādāt*. Religious war (JIHAD), although not one of the Five Pillars of Islam, is seen as obligatory by Shi'ites, although these wars should only be defensive in nature until the Hidden IMAM returns. Other actions they consider "pillars" of worship are payment of the imam's tax (KHUMS), enjoining good actions, and prohibiting evil. All sects believe that by fulfilling their ritual obligations they will achieve rewards on earth and in the hereafter. See also ṬAHĀRA.

FLAGELLATION, the disciplinary or ritual practice of beating with whips. Ceremonial whippings or beatings are primarily concerned with rites of initiation, purification, and fertility, which often included other forms of physical suffering. Floggings and mutilations might or might not be self-inflicted. Beatings administered by masked impersonators of gods or ancestors are a feature of many North American Indian initiations. Ritual floggings were also known among the Spartans and in Rome.

In the early Christian church, flagellation apparently was used as punishment for disobedient clergy. From the 4th century, self-inflicted flagellation was practiced by both clergy and laity as a means of penance. In the early Middle Ages the laity became especially attracted by this devotional exercise. In the mid-13th century flagellant brotherhoods and PROCESSIONS composed of laymen and women, as well as clergy, began to be organized in Italy, and the practice spread into Germany and the Low Countries.

In the plague epidemic of the mid-14th century, flagellants sought to mitigate the divine judgment that was felt to be at hand. They formed groups and traveled about the country on foot. In two daily public ceremonies men whipped their backs and chests with leather thongs, while women chastised themselves in seclusion. In 1349 Pope Clement VI condemned flagellation, as did the COUNCIL OF CONSTANCE (1414–18). In Germany the flagellants became an organized sect and were a target of the INQUISITION. The

practice gradually subsided, but in the 16th century the JE-SUITS temporarily revived lay interest in self-inflicted flagellation, especially in the southern European countries.

Flagellation is also practiced by some SHĪ'ITE Muslims, who whip themselves on the holiday of 'ĀSHŪRĀ to commemorate the martyrdom of HUSAYN at the Battle of KAR-BALĀ' (680 CE).

FLAMEN \ˈflā-mən\, plural *flamines* \ˈfla-mə-nēz\, in ancient Rome, a priest devoted exclusively to the worship of one deity; the name perhaps meant originally "one who performs sacrifices," though the etymology of the word has been much disputed. Of the 15 *flamines*, the most important were Dialis, Martialis, and Quirinalis, who served JUPITER, MARS, and QUIRINUS, respectively. Chosen from the patrician class and supervised by the PONTIFEX *maximus*, or chief priest, the *flamines* had a distinctive dress, especially the *apex*, a conical cap. They offered daily sacrifices, and their lives were regulated by strict rules and prohibitions. The priests' wives, the *flaminicae*, served as their assistants and were also bound by ritual regulations. In imperial times, *flamines Divorum* ("priests of the Gods") were instituted for the worship of deified emperors both in Rome and in the empire's outlying provinces, where they often served as important representatives of the central government.

FLORA, in ROMAN RELIGION, the goddess of the flowering of plants. Titus Tatius (according to tradition, the Sabine king who ruled with Romulus) is said to have introduced her cult to Rome; her temple stood near the Circus Maximus. Her festival, called the Floralia, was instituted in 238 BCE. A representation of Flora's head, distinguished only by a floral crown, appeared on coins of the republic.

FOLKLORE, the sum total of traditionally derived and orally or imitatively transmitted literature, material culture, and custom of subcultures within predominantly literate and technologically advanced societies. In popular usage, the term folklore is sometimes restricted to the oral literature tradition.

Folklore studies began in the early 19th century. The first folklorists concentrated exclusively upon rural peasants, preferably uneducated, and a few other groups relatively untouched by modern ways (e.g., Gypsies). Their aim was to trace preserved archaic customs and beliefs to their remote origins in order to trace the mental history of mankind. In Germany, Jacob Grimm used folklore to illuminate GERMANIC RELIGION of the Middle Ages. In Britain, Sir Edward Tylor, Andrew Lang, and others combined data from anthropology and folklore to "reconstruct" the beliefs and rituals of prehistoric man. The best-known work of this type is SIR JAMES FRAZER'S *The Golden Bough* (1890).

Large collections of material were amassed in the course of these efforts. Inspired by the Grimm Brothers, whose first collection of fairy tales appeared in 1812, scholars all over Europe began recording and publishing oral literature of many genres: fairy tales and other types of folktales, ballads and other songs, oral epics, folk plays, riddles, and proverbs. Similar work was undertaken for music, dance, and traditional arts and crafts; many archives and museums were founded. Often the underlying impulse was nationalistic; since the folklore of a group reinforced its sense of ethnic identity, it figured prominently in many struggles for political independence and national unity.

As the scholarship of folklore developed, an important advance was the classification of material for comparative

An illustration by Walter Crane of the folktale "Little Red Riding Hood"

Art Resource

analysis. Standards of identification were devised, notably for ballads (by F.J. Child) and for the plots and component motifs of folktales and myths (by Antti Aarne and Stith Thompson). Using these, Finnish scholars, led by Kaarle Krohn, developed the "historical-geographical" method of research, in which every known variant of a particular tale, ballad, riddle, or other item was classified as to place and date of collection in order to study distribution patterns and reconstruct "original" forms.

After World War II interest was no longer confined to rural communities, since it was recognized that cities too contained definable groups whose characteristic arts, customs, and values marked their identity; any group that expressed its inner cohesion by maintaining shared traditions qualified as a "folk," whether the linking factor be occupation, language, place of residence, age, religion, or ethnic origin. Emphasis also shifted from the past to the present, from the search for origins to the investigation of present meaning and function. In the view of "contextual" and "performance" analysis in the late 20th century, a particular story, song, drama, or custom is regarded as an event arising from the interaction between an individual and his or her social group, which fulfills some function and satisfies some need for both performer and audience.

FOMOIRE \ˈfō-vō-rʹə\, also spelled Fomhoire, in Irish myth, a race of demonic beings who posed a threat to the inhabitants of Ireland until they were defeated by the god-race, the TUATHA DÉ DANANN. The name Fomoiré may mean

"demons from below (the sea)," and their leader BALOR had one huge deadly eye. The most important of the gods, Lugh (see LUGUS), is the offspring of the marriage of a god, Cian, and the daughter of the monstrous Balor, and it is stated that originally the gods and the Fomoiré were allies.

FOOLS, FEAST OF, popular festival during the Middle Ages, held on or about January 1, particularly in France, in which a mock bishop or pope was elected, ecclesiastical ritual was parodied, and low and high officials changed places. Such festivals were probably a Christian adaptation of the pre-Christian festivities of the Saturnalia (see SATURN). By the 13th century these feasts had become a burlesque of Christian morality and worship. In spite of repeated prohibitions and penalties imposed by the Council of Basel in 1431, the feasts did not die out until the 16th century.

FORMSTECHEER, SOLOMON \ˈförm-,stē-kər\ (b. July 28, 1808, Offenbach, Hesse [Germany]—d. April 24, 1889, Offenbach), Jewish idealist philosopher who was RABBI at Offenbach from 1842. *Die Religion des Geistes* (1841; "The Religion of the Spirit") is a thorough systematization of JUDAISM. He argued there were only two basic religions: the religion of nature (paganism) and the religion of spirit (Judaism), the essence of which was ethical. Its ethics, adulterated by myth and art, were also disseminated by CHRISTIANITY and ISLAM but existed in purest form in Judaism.

FORTUNA \fōr-ˈtü-nə, -ˈtyü-\, in ROMAN RELIGION, goddess of chance or lot who became identified with the Greek Tyche; the original Italian deity was probably regarded as the bearer of prosperity and increase. She was associated with the bounty of the soil and the fruitfulness of women. Frequently she was consulted in various ways regarding the future. Fortuna was worshiped extensively in Italy from the earliest times. At Praeneste her shrine was a well-known oracular seat, as was her shrine at Antium (see ORACLE). Fortuna is often represented bearing a CORNUCOPIA as the giver of abundance and a rudder as controller of destinies, or standing on a ball to indicate the uncertainty of fortune.

FOUR BOOKS, Chinese *Ssu-shu*, Pinyin *Sishu*, Confucian texts that were used as official subject matter for civil service examinations in China from 1313 to 1905. They serve to introduce students to Confucian literature. Students later turn to the more extensive *Wu-ching* (FIVE CLASSICS).

The publication of these four texts as a unit in 1190 with commentaries by CHU HSI, a great Neo-Confucian philosopher, helped to revitalize CONFUCIANISM in China. From 1415 onward knowledge of Chu's (and like-minded) commentaries was as indispensable to success in civil service examinations as knowledge of the texts themselves.

Even with its commentaries, the *Ssu-shu* is a modest volume, the four parts of which have no consistent order. The first, TA-HSÜEH, or Great Learning, is a short ethico-political treatise linking humane government with the personal integrity of rulers. The second, CHUNG-YUNG, or Doctrine of the Mean, is somewhat longer and more abstract than the other three books. It speaks of such things as the Way of Heaven, motion, spiritual beings, and religious sacrifices. For each of these two books (both direct excerpts from LI-CHI, one of the Five Classics), Chu Hsi wrote an individual preface. The third book, LUN-YÜ, or Analects, reputedly contains direct quotations from CONFUCIUS as recorded by his disciples, especially TSENG-TZU. It is considered the most reliable source of the Master's teachings. MENCIUS, the fourth

FOUR NOBLE TRUTHS

and longest of the *Ssu-shu*, contains the teachings of Mencius, the most revered of all Confucian scholars.

FOUR NOBLE TRUTHS, *Pāli* Cattāri-Ariya-Saccāni, *Sanskrit* Catvāri-Ārya-Satyāni, a brief formulation of Buddhist religious doctrine, expounded by BUDDHA GOTAMA in his first sermon at the deer park near Banares (VARANASI), India.

The four truths are (1) that existence is suffering (DUK-KHA); (2) that this suffering has a cause (*samudaya*); (3) that it can be suppressed (*nirodha*); and (4) that there is a way (*magga*) to accomplish this, the noble EIGHTFOLD PATH. Though differently interpreted, these four truths are recognized by virtually all Buddhist schools.

FOUR-SEVEN DEBATE, debate between the Korean Confucian Yi T'oegeye (1501–70) and his disciple Ki Taesung (1527–72) via an exchange of letters. The debate concerned the relationship between MENCIUS' four basic human feelings (commiseration, shame, modesty, and right and wrong) and seven derived emotions (anger, joy, sorrow, pleasure, love, hatred, and desire) and raised the level of dialogue in CONFUCIANISM to a new height of intellectual and moral sophistication.

FOX, GEORGE \ˈfäks\ (b. July 1624, Drayton-in-the-Clay, Leicestershire, Eng.—d. Jan. 13, 1691, London), English preacher and founder of the SOCIETY OF FRIENDS (or Quakers).

Fox was the son of a weaver in an English village. Probably apprenticed for a while to a cobbler, he may also have tended sheep, but there is little evidence of any adult business occupation or of much formal education. At the age of 18 he left home in search of religious counsel or experience and later reported in his *Journal* various personal RELIGIOUS EXPERIENCES or direct revelations, which he called "openings," that corrected, he believed, the traditional concepts of faith and practice in English religious life.

His religious background was apparently Puritan rather than strict Anglican, but he himself reacted even further than the Puritans from the formalism and traditionalism of the ESTABLISHED CHURCH. He placed the God-given inward light (inspiration) above creeds and SCRIPTURE and regarded personal experience as the true source of authority. His negative attitude to ecclesiastical customs was matched by a similar attitude toward some political and economic conventions (*e.g.*, OATHS, titles, and military service).

He began preaching to individuals or groups as he traveled on foot. In the northern counties of England, groups of Seekers (a 17th-century Puritan sect) welcomed him and his message. Local congregations were established, gathered both by Fox and by other itinerant preachers, who were called Publishers of Truth. Thus in the last years of the British Commonwealth (1649–60) the Society of Friends came into being (though it was called that only much later; its members were nicknamed Quakers).

Fox and his associates suffered public hostility and official constraint. Their contradiction of the ministers in the churches and their refusal to honor officials, to take oaths, or to pay TITHES caused Fox and his associates to be arrested and imprisoned with some frequency. Fox, in fact, suffered eight imprisonments between 1649 and 1673.

The restoration of the monarchy in 1660 led to special legislation against the Quakers and a widespread action against them. To meet this and other needs, George Fox encouraged local Quaker groups to organize into regular monthly and quarterly business meetings, which, with some central national meetings, became a permanent pat-

tern of their church government. The continuing pressure was only intermittently eased until the Toleration Act of 1689, shortly before Fox's death, gave relief to the Quakers.

In 1669 Fox made a missionary visit to Ireland, and on his return he married one of his early converts, Margaret Fell. In the years 1671 to 1673 he traveled to the British colonies in the Caribbean and the North American mainland, strengthening and organizing the existing Quaker communities, especially in Maryland and Rhode Island. Shorter journeys in 1677 and 1684 took him to the Netherlands and a few other parts of northern Europe. About 1675 he dictated a running summary of his life that, with supplementary material, was posthumously edited and published as his *Journal*, the fullest account of the rise of Quakerism, as well as of Fox himself.

FRANCISCAN \fran-'sis-kən\, member of a Christian religious order founded in the early 13th century by ST. FRANCIS OF ASSISI. The Franciscans actually consist of three orders. The First Order comprises priests and lay brothers who have sworn to lead a life of prayer, preaching, and penance. This First Order is divided into three independent branches: the Friars Minor (O.F.M.), the Friars Minor Conventual (O.F.M. Conv.), and the Friars Minor Capuchin (O.F.M. Cap.). The Second Order consists of cloistered nuns who belong to the Order of St. Clare (O.S.C.) and are known as POOR CLARES (P.C.). The Third Order consists of religious and laymen and laywomen who try to emulate Saint Francis' spirit in teaching, CHARITY, and social service. Strictly speaking, the latter order consists of the Third Order Secular, whose lay members live in the world without vows; and the Third Order Regular, whose members live in religious communities under vow. The Franciscans are the largest religious order in the ROMAN CATHOLIC church.

It was probably in 1207 that Francis felt the call to a life of preaching, penance, and total poverty. He was soon joined by his first followers, to whom he gave a short and simple rule of life. In 1209 he and 11 of his followers journeyed to Rome, where Francis received approval of his rule from POPE INNOCENT III. Under this rule, Franciscan friars could own no possessions of any kind, either individually or communally (*i.e.*, as the property of the order as a whole). The friars wandered and preached among the people, helping the poor and the sick. They supported themselves by working and by begging food, but they were forbidden to accept money either as payment for work or as alms. The impact of these street preachers and especially of their founder was immense, so that within 10 years they numbered 5,000. Affiliated with them were the Franciscan nuns, whose order was founded at Assisi in 1212 by St. Clare, who was under the guidance of St. Francis.

During the first years of the Franciscans, the example of Francis provided their real rule of life, but, as the order grew, it became clear that a revised rule was necessary. After preparing a rule in 1221 that was found too strict, Francis, with the help of several legal scholars, unwillingly composed the more restrained final rule in 1223. This rule was approved by Pope Honorius III.

Even before the death of Francis in 1226, conflicts had developed within the order over the observance of the vow of complete poverty. The rapid expansion of the order's membership had created a need for settled monastic houses, but it was impossible to justify these if Francis' rule of complete poverty was followed strictly. Three parties gradually appeared: the Zealots, who insisted on a literal observance of the primitive rule of poverty; the Laxists, who fa-

vored many mitigations; and the Moderates, or the Community, who wanted some form of communal possessions. Something of an equilibrium was reached while St. BONAVENTURE was minister general (1257–74). Sometimes called the second founder of the order, he provided a moderate interpretation of the rule. During this period the friars spread throughout Europe, while missionaries penetrated Syria and Africa. Simultaneously, the friars' houses in university towns such as Paris and Oxford were transformed into schools of theology that rapidly became among the most celebrated in Europe.

With the death of Bonaventure, the internal dissensions of the order flared up anew. The Zealots, who now became known as the Spirituals, demanded absolute poverty. Papal decisions favored the Community, or the Conventuals, and the Spirituals ceased to be a faction of importance in the order after 1325.

The latter part of the 14th century saw a great decline in the religious life of the friars. But throughout that century a series of reformers initiated groups of friars, known as Observants, living an austere life apart from the main body of Conventuals. Under the leadership of St. Bernardino of Siena and St. John of Capistrano, the Observants spread across Europe. Though several attempts were made to reconcile them with the Conventuals, the outcome was in fact a complete separation in 1517, when all the reform communities were united in one order with the name Friars Minor of the Observance, and this order was granted a completely independent and autonomous existence.

Death of St. Clare, founder of the Poor Clares order of Franciscan nuns, panel by the Master of Heiligenkreuz
Laurie Platt Winfrey

The union of the Observants was short-lived as several stricter groups arose. One of these reform groups, the Capuchins, founded in 1525, was separated as the third branch of the Franciscan Order in 1619. The other groups were finally reunited to the Observants by POPE LEO XIII in 1897, with new constitutions and the official title Order of Friars Minor. All three branches suffered in the French Revolution, but they revived during the 19th century.

St. Francis de Sales, detail from an oil painting by an unknown artist, 1618
BBC, Hulton Picture Library

FRANCIS DE SALES, SAINT \ˈfrɑn-səs . . . ˈsælz, ˈsəl\, *French* Saint François de Sales (b. Aug. 21, 1567, Thorens-Glières, Savoy—d. Dec. 28, 1622, Lyon; canonized 1665; feast day January 24), ROMAN CATHOLIC bishop of Geneva who was active in the struggle against CALVINISM and cofounded the order of Visitation Nuns.

He was educated at the JESUIT college of Clermont in Paris (1580–88) and at Padua, Italy, where he received a doctorate in law (1591). After briefly practicing law he turned to religion and was ordained in 1593. Francis began intense missionary work in Chablais and rewrote the bulk of the people of Chablais to Catholicism. He was consecrated bishop of Geneva on Dec. 8, 1602. In 1610, with St. Jane Frances de Chantal, he founded the Visitation of Holy Mary (the Visitation Nuns), which became principally a teaching order. He wrote the devotional classic *Introduction to a Devout Life* (3rd definitive edition, 1609), which emphasized that spiritual perfection is possible for people busy with the affairs of the world and not only for those who withdraw from society. Francis was the first to receive a solemn BEATIFICATION at St. Peter's, Rome (1661). In 1923 Pope Pius XI named him patron saint of writers.

FRANCIS OF ASSISI, SAINT \ˈfrɑn-səs . . . ə-ˈsi-sē, ä-ˈsē-zē\, *Italian* San Francesco d'Assisi (b. 1181/82, Assisi, Duchy of Spoleto—d. Oct. 3, 1226, Assisi; canonized July 15, 1228; feast day October 4), founder of the FRANCISCAN orders of men and women and leader of the church reform movements of the early 13th century.

In his youth Francis learned Latin at the school near the church of San Giorgio. In 1202 he took part in a war between Assisi and Perugia, was held prisoner for almost a year, and on his release fell seriously ill. After his recovery, tradition states that he had a vision that bade him return to Assisi and await a call to a new kind of knighthood.

It is related that at the ruined chapel of San Damiano outside the gate of Assisi, he heard the crucifix above the altar command him: "Go, Francis, and repair my house which, as you see, is well-nigh in ruins." Taking this literally, he sold his horse and much of the cloth from his father's shop and tried to give the money to the priest at San Damiano. Angered, his father called him before the bishop. At this hearing Francis renounced material goods and family ties to embrace a life of poverty. He spent his time restoring the now-famous little chapel of St. Mary of the An-

gels (Santa Maria degli Angeli), the Porziuncola, near Assisi. There, on the feast of St. Matthias, Feb. 24, 1208, he heard the Gospel account of the mission of Christ to the Apostles: "Take no gold, nor silver, nor copper in your belts, no bag for your journey, nor two tunics, nor sandals, nor a staff, for the laborer deserves his food. And whatever town or village you enter, find out who is worthy in it, and stay with him until you depart" (Matthew 10:9–11).

Although he was a layman, Francis began to preach to the townspeople. Disciples were attracted to him, and he composed a simple rule of life for them. In 1209 they went to Rome and received the approval of POPE INNOCENT III for their rule of life. This event, which according to tradition occurred on April 16, marked the official founding of the Franciscan order. The early Franciscan rule of life, which has not survived, set as the aim of the new life, "To follow the teachings of our Lord JESUS CHRIST and to walk in his footsteps." This imitation of the life of Christ is the key to the character and spirit of St. Francis. To neglect it leaves an unbalanced portrait of the saint as a lover of nature, a social worker, an itinerant preacher, and a lover of poverty.

In 1212 Francis began a second order for women that became known as the POOR CLARES. For those who could not leave their families and homes he eventually (c. 1221) formed the Third Order of Brothers and Sisters of Penance, a lay fraternity that, without withdrawing from the world or taking religious vows, would carry out the principles of Franciscan life.

Probably in the late spring of 1212, Francis had set out for the Holy Land but was shipwrecked on the east coast of the Adriatic Sea and had to return. He went to Egypt, where the Crusaders were besieging Damietta, in 1219. News of disturbances among the friars in Italy forced Francis to return. There were now some 5,000 members of the men's order, yet it had little more than Francis' example and his brief rule of life to guide its increasing numbers. To handle the order's practical affairs, Francis appointed Peter Catanii as his vicar; after Peter's early death in 1221 he chose Elias

of Cortona. Francis set about amplifying and revising the rule, which was approved by Honorius III in final form on Nov. 29, 1223. At this point Francis tended increasingly to withdraw from external affairs.

In the summer of 1224 Francis went to the mountain retreat of La Verna (Alvernia). There he prayed to know how best to please God, opening the Gospels for the answer, three times he came upon references to the Passion of Christ. Soon after, he is said to have had a vision of a SERAPH on a cross. Tradition is that the vision left not only a greater ardor of love in the inner man but marked him outwardly with the STIGMATA of Christ.

At his death Francis was buried temporarily in the church of San Giorgio, at Assisi. In 1230 his body was transferred to the lower church of the BASILICA in Assisi that was being erected in his memory by Elias.

FRANK, JACOB \ˈfrʌŋk\, *original name* Jacob Leibowicz (b. 1726, in Berezanka or Korolowka, Galicia, Pol. [now in Ukraine]—d. Dec. 10, 1791, Offenbach, Hessen [Germany]), Jewish false MESSIAH who claimed to be the reincarnation of SHABBETAI TZEVI (1626–76). The most notorious of the false messiahs, he was the founder of the antirabbinical Frankist, or Zoharist, sect.

An uneducated visionary, Frank appealed to many who awaited the resurrection of Shabbetai. About 1751 he proclaimed himself the messiah, and four years later, in Poland, he formed a sect that held that certain elect persons are exempt from the moral law. This sect abandoned JUDAISM for a "higher Torah" based on the SEFER HA-ZOHAR, the most important work in the QABBALAH. Hence its members also called themselves Zoharists. Their practices, including orgiastic rites, led the Jewish community to ban them as heretics in 1756. Protected by ROMAN CATHOLIC authorities, who saw in them a means of converting the Jews, the Frankists debated the rabbinate and claimed that the TALMUD should be discarded as blasphemous.

In the meantime, to preserve his following, Frank publicly committed his supporters to mass BAPTISM and was himself baptized in Warsaw, with Augustus III, king of Poland, acting as his godfather. The Frankists, however, continued their sectarian ways. As a result, the INQUISITION imprisoned Frank in the fortress of Częstochowa (1760). Freed by the conquering Russians in 1773, he eventually settled in Offenbach, dubbing himself baron. His followers supported him in a manner befitting nobility. Upon his death, he was succeeded by his daughter Eve, but the sect deteriorated rapidly, and descendants of those who were baptized merged with the Roman Catholic population.

FRANKEL, ZACHARIAS \ˈfrʌŋ-kəl\ (b. Sept. 30, 1801, Prague [now in Czech Republic]—d. Feb. 13, 1875, Breslau, Ger. [now Wrocław, Pol.]), RABBI and theologian, a founder of what became CONSERVATIVE JUDAISM.

After graduation from the University of Budapest in 1831, Frankel served as rabbi in several German communities, becoming chief rabbi of Dresden in 1836. During this period he developed a theology that he called positive-historical JUDAISM. It differed from Orthodoxy in its acceptance of scientific and historical research and in its willingness to make some liturgical changes. It differed from REFORM JUDAISM in that it sought to maintain traditional customs and adhere to the national aspects of Judaism.

In 1854 Frankel was chosen president of the newly organized Jewish theological seminary at Breslau. Through the faculty and students of Breslau seminary, Frankel's viewpoint became highly influential in central Europe. In the 20th century it took root in the United States, where, under the name of Conservative Judaism, it attained its greatest growth. Frankel's first major work, *Die Eidesleistung der Juden* (1840; "Oath-Taking by Jews"), attacked discrimination against Jews who testified in courts in Saxony. Frankel also published the classic *Vorstudien zur Septuaginta* (1841; "Preliminary Studies in the Septuagint"), in which he, the only major 19th-century Jewish scholar who wrote on the SEPTUAGINT, sought to show the necessary connection between Talmudic and Septuagintic EXEGESIS. Two works in Hebrew, *Darke ha-Mishnah* (1859; "Introduction

St. Francis of Assisi, detail of a fresco by Cimabue, late 13th century; in the lower church of San Francesco, Assisi, Italy

Alinari—Anderson from Art Resource

to the Mishnah") and *Mebo ha-Yerushalmi* (1870; "Introduction to the Palestinian Talmud"; see YERUSHALMI), were major contributions to Jewish religious thought.

FRAVASHI \fra-va-'shē, frə-'vā-shē\, in ZOROASTRIANISM, the preexisting external higher soul or essence of a person (according to some sources, also of gods and ANGELS). Associated with AHURA MAZDĀ since the first creation, they participate in his nature. By free choice they descend into the world to suffer and combat the forces of evil, knowing their inevitable RESURRECTION at the final glory. Each person's *fravashi*, distinct from the incarnate soul, subtly guides toward the realization of that person's higher nature. The purified soul is united after death with its *fravashi*. Cosmically, the *fravashis* are divided into three groups—the living, the dead, and the yet unborn. They are the force upon which Ahura Mazdā depends to maintain the cosmos against the DEMON host. Protecting the empyrean (sacred fire), they keep darkness imprisoned in the world.

In the PARSİ festival Fravartigan, comprising the last 10 days of the year and culminating in its final night, each family honors the *fravashis* of its dead with prayers, fire, and incense.

FRAZER, SIR JAMES GEORGE (b. Jan. 1, 1854, Glasgow, Scot.—d. May 7, 1941, Cambridge, Cambridgeshire, Eng.), British anthropologist, folklorist, and classical scholar, best remembered as the author of *The Golden Bough*.

Frazer entered Trinity College, Cambridge (1874), and became a fellow (1879). In 1907 he was appointed professor of social anthropology at Liverpool, but he returned to Cambridge soon after and remained there for the rest of his life.

His outstanding position among anthropologists was established by the publication in 1890 of *The Golden Bough: A Study in Comparative Religion* (enlarged to 12 vol., 1911–15; abridged edition in 1 vol., 1922; supplementary vol. *Aftermath*, 1936). The underlying theme of the work is Frazer's theory of a general development of modes of thought from the magical to the religious and, finally, to the scientific. Although the evolutionary sequence of magical, religious, and scientific thought is no longer accepted and Frazer's broad general psychological theory has proved unsatisfactory, his work enabled him to synthesize and compare a wider range of information about religious and magical practices than has been achieved subsequently by any other single anthropologist. His other works include *Totemism and Exogamy* (1910) and *Folk-Lore in the Old Testament* (1918).

FREEMASONRY \frē-'mā-sən-rē, -,mā-\, teachings and practices of the secret fraternal order of Free and Accepted Masons, the largest worldwide secret society. Spread by the advance of the British Empire, FREEMASONRY remains most popular in Britain and in other countries originally within the empire.

Freemasonry evolved from the guilds of stonemasons and cathedral builders of the Middle Ages. With the decline of cathedral building, some lodges of operative (working) masons began to accept honorary members to bolster their declining membership. From a few of these lodges developed modern symbolic or speculative Freemasonry, which particularly in the 17th and 18th centuries, adopted the rites and trappings of ancient religious orders and of chivalric brotherhoods. In 1717 the first Grand Lodge, an association of lodges, was founded in England.

Freemasonry contains many of the elements of a religion;

its teachings enjoin morality, CHARITY, and obedience to the law of the land. For admission the applicant is required to be an adult male believing in the existence of a Supreme Being and in the immortality of the soul. In practice, some lodges have been charged with prejudice against Jews, CATHOLICS, and nonwhites. Generally, Freemasonry in Latin countries has attracted freethinkers and anticlericals, whereas in the Anglo-Saxon countries, the membership is drawn largely from among white Protestants.

FREE WILL, the power or capacity within people to choose among alternatives or to act in certain situations independently of natural, social, or divine restraints. Free will is denied by those who espouse any of various forms of determinism. Arguments for free will are based on the subjective experience of freedom, on sentiments of guilt, on revealed religion, and on the universal supposition of responsibility for personal actions that underlies the concepts of law, reward, punishment, and incentive. In theology, the existence of free will must be reconciled with God's omniscience and goodness (in allowing humans to choose badly), and with divine GRACE, which is held to be necessary for any meritorious act.

FREUD, SIGMUND \frōid, German 'frōüt\ (b. May 6, 1856, Freiberg, Moravia, Austrian Empire [now Příbor, Czech Republic]—d. Sept. 23, 1939, London, Eng.), Austrian neurologist, founder of psychoanalysis.

Freud entered the University of Vienna in 1873 as a medical student and the General Hospital of Vienna in 1882. In 1885 he went to Paris to study with the neurologist Jean-Martin Charcot. Charcot's work with patients classified as hysterics introduced Freud to the possibility that mental disorders might be caused by purely psychological factors rather than by organic brain disease.

Upon his return to Vienna, Freud entered into a fruitful partnership with the physician Josef Breuer. They collaborated on *Studien über Hysterie* (1895; *Studies in Hysteria*), which contains a presentation of Freud's pioneering psychoanalytic method of free association. Via this method he developed theories concerning deeper layers of the mind, the unconscious. In 1899 he published *Die Traumdeutung* (*The Interpretation of Dreams*), in which he analyzed the highly complex symbolic processes underlying dream formation. Freud contended that dreams play a fundamental role in the psychic economy. The mind's energy—which Freud called libido and identified principally, but not exclusively, with the sexual drive—needed to be discharged to ensure pleasure and prevent pain and sought whatever outlet it might find. If denied the gratification provided by direct motor action, libidinal energy could seek its release through mental channels: that is, a wish can be satisfied by an imaginary wish fulfillment. All dreams, Freud claimed, are the disguised expression of wish fulfillments. Like neurotic symptoms, they are the effects of compromises in the psyche between desires and prohibitions in conflict with their realization.

In 1905 Freud's controversial study *Drei Abhandlungen zur Sexualtheorie* (*Three Essays on the Theory of Sexuality*) presented his discoveries concerning infantile sexuality and delineated the stages of psychosexual development, including the formation of the OEDIPUS complex, named for an element of the plot of Sophocles' *Oedipus Rex*. The universal applicability of the plot, Freud conjectured, lies in the desire of every male child to sleep with his mother and remove the obstacle to the realization of that wish, his father.

Freud also applied his psychoanalytic insights to mythological, anthropological, cultural, and religious phenomena. Among his most noted works in this vein are *Totem und Tabu* (1913; *Totem and Taboo*), *Das Unbehagen in der Kultur* (1930; *Civilization and Its Discontents*), and *Die Zukunft einer Illusion* (1927; *The Future of an Illusion*). In *Totem*, drawing on SIR JAMES FRAZER'S explorations of the Australian Aboriginals, he interpreted the mixture of fear and reverence for the totemic animal in terms of the child's attitude toward the parent of the same sex. The Aboriginals' insistence on exogamy was a complicated defense against the strong incestuous desires felt by the child for the parent of the opposite sex. Their religion was thus a phylogenetic anticipation of the ontogenetic Oedipal drama played out in modern man's psychic development. But whereas the latter was purely an intrapsychic phenomenon based on fantasies and fears, the former, Freud boldly suggested, was based on actual historical events. Freud speculated that the rebellion of sons against fathers for control of women had culminated in actual parricide. Ultimately producing remorse, this violent act led to ATONEMENT through incest taboos and the prohibitions against harming the father-substitute, the totemic object or animal. When the fraternal clan replaced the patriarchal horde, true society emerged. The totemic ancestor then could evolve into the more impersonal God of the great religions.

When Hitler invaded Austria in 1938, Freud was forced to flee to England. He died only a few weeks after World War II broke out, at a time when his worst fears about the irrationality lurking behind the facade of civilization were being realized. Freud's books were among the first to be burned, as the fruits of a "Jewish science," when the Nazis took over Germany.

FREY \frā\, also spelled Freyr (Old Norse: "Lord"), in GERMANIC RELIGION, one of the group of fertility deities called VANIR, who was brother and male counterpart of his sister FREYJA ("Lady") and son of the god Njörd. He was associated with peace and good crops. With his sister and father he was incorporated into the god-race called AESIR. The most famous story about him tells of his love and lust for the giantess GERD, who is wooed and won for him by his servant. He was worshiped most extensively in Sweden, where he was considered the progenitor of the royal line under the name Yngvi. His worship was believed to bring good weather and great wealth. Frey's sacred animal was the boar, and he rides one with golden bristles.

FREYJA \'frā-yə\ (Old Norse: "Lady"), in GERMANIC RELIGION, the most important goddess and one of the group of fertility deities called collectively VANIR. She was both sister and female counterpart of her brother FREY ("Lord"), and their father was the god of the wealth of the sea, Njörd. She

Freud, 1921

Mary Evans—Sigmund Freud Copyrights (courtesy of W.E. Freud)

was called Sow and was connected with boars, as was her brother. She was also described as riding in a chariot drawn by cats. Her sexual promiscuity, natural in a fertility goddess, was alluded to often. It was told that half the slain belong to her and go to her dwelling, Folkvangr; the other half go to ODIN in VALHALLA. It is said that she taught a powerful magic, probably involving sexuality, to Odin and the AESIR. She wept tears of gold and owned a famous golden necklace (a sexual symbol) called Brisingamen, which was stolen by the trickster LOKI and recovered by HEIMDALL, the watchman of the gods.

Recently Freyja has been seen as the great goddess of the Scandinavian peoples rather than merely a fertility goddess.

FRIAR, one belonging to a ROMAN CATHOLIC religious order of MENDICANTS. The 10 mendicant orders are the DOMINICANS, FRANCISCANS, AUGUSTINIANS (Augustinian HERMITS), CARMELITES, Trinitarians, Mercedarians, Servites, Minims, Hospitallers of St. John of God, and the Teutonic Order (the Austrian branch).

FRIENDS, SOCIETY OF, byname Quakers, Christian group that arose in mid-17th-century England, dedicated to living in accordance with the "Inward Light," or direct inward apprehension of God, without creeds, clergy, or other ecclesiastical forms.

There were meetings of the kind later associated with the Quakers before there was a group by that name. Small groups of Seekers gathered during the Puritan Revolution against Charles I to wait upon the Lord because they despaired of spiritual help from either the established Anglican Church or the existing Puritan bodies—Presbyterians, Congregationalists, and Baptists—through which most of them had already passed. To these Seekers came a band of preachers, mostly from the north of England, proclaiming the powers of direct contact with God. GEORGE FOX and James Nayler were perhaps the most eminent of these. Within a decade perhaps 20,000 to 60,000 had been converted from all social classes except the aristocracy and totally unskilled laborers.

The Puritan clergy were fierce in their opposition to the movement. The Restoration of Charles II in 1660 was only a change of persecutors for the Quakers. From the time of the Quaker Act of 1662 until the de facto toleration of James II in 1686, Friends were hounded by penal laws for not swearing OATHS, for not going to the services of the Church of England, for going to Quaker meetings, and for refusing to TITHE.

At the same time Quakers were converting and peopling America. In 1656 Quaker women preachers began work in Maryland and in the Massachusetts Bay Colony. The magistrates of Boston savagely persecuted the visitors and in 1659 and 1661 put four of them to death. Despite this, Quakerism took root in Massachusetts and flourished in

Rhode Island, where Friends for a long time were in the majority. The most famous Quaker colony was Pennsylvania, for which Charles II issued a charter to William Penn in 1681. Penn's "Holy Experiment" tested how far a state could be governed consistently with Friends' principles, especially pacifism and religious toleration.

The achievement of religious toleration in the 1690s coincided with a quietist phase in Quakerism that lasted until the 19th century. QUIETISM is endemic within Quakerism and emerges whenever trust in the Inward Light is stressed to the exclusion of everything else. The "public testimonies" of Friends from the very beginning included the plain speech and dress and refusal of tithes, oaths, and worldly courtesies. To these was added in a few years an explicit renunciation of participation in war; within the next century bankruptcy, marriage out of meeting, smuggling, and dealing in or owning slaves also became practices for which an unrepentant Friend would be disowned.

English Friends were active in the campaign to end the slave trade, and American Friends, urged on by John Woolman and others, emancipated their own slaves between 1758 and 1800. From the time of the American Revolution Quakers have been active in ministering to refugees and victims of famine—so much so that the entire Society of Friends is sometimes taken for a philanthropic organization. (This work was recognized in 1947 by the award of the Nobel Peace Prize to the AMERICAN FRIENDS SERVICE COMMITTEE and the (British) Friends Service Council.)

In the United States, as new yearly meetings were formed, ties with the London Yearly Meeting, the "mother" meeting, became weaker, and no American yearly meeting had a predominant position. The Philadelphia Yearly Meeting was sympathetic to evangelicalism, but many Friends, influenced by ELIAS HICKS (1748–1830), placed extreme emphasis on the Inward Light. The Hicksite separation spread to other yearly meetings that had to decide to which portion of the Philadelphia Yearly Meeting to write. A pastoral visit to the United States (1837–40) by the leading English evangelical Friend, Joseph John Gurney (one of the few systematic theologians ever produced in the Society of Friends), led to a further separation when the evangelical or "Gurneyite" New England Yearly Meeting disowned John Wilbur, an orthodox quietist Friend.

By 1900, Friends were divided into three groups. Yearly meetings of evangelical, or "orthodox," Friends were in fellowship with one another and with the London and Dublin yearly meetings. In the United States these Gurneyite meetings in 1902 formed the Five Years' Meeting (now the Friends United Meeting). The "conservative" American yearly meetings, in fellowship with one another, maintained traditional Quaker customs and mode of worship. The Hicksite yearly meetings, which formed the Friends General Conference in 1902, remained the most open to modern thought. During the century these divisions have been much softened.

Trust in the Inward Light is the dis-

inctive theme of Quakerism. The Light is not to be confused with conscience or reason; it is rather that of God in everyone, which allows human beings an immediate sense of God's presence and will for them. It thus informs conscience and redirects reason. Meetings to worship God and await his word are essential to Quaker faith and practice, for it is in the pregnant silence of the meeting of true waiters and worshipers that the Spirit speaks. When someone has reached a new understanding that demands to be proclaimed, he or she speaks and thus ministers to the meeting, which weighs this "testimony" by its own experiences of God. Friends historically have rejected a formal or salaried clergy as a "hireling ministry."

But though Friends have no ORDINATION, they have always given a special place to Recorded Ministers (or Public Friends). Recorded Ministers are those whose testimony in local meetings has been officially recognized; they are free to "travel in the ministry" by visiting other meetings, should they be led to do so. Pastoral meetings maintain their Recorded Ministers, who also do much of the work of seeing to the relief of the poor, care of properties, and discipline of erring members.

FRIGG \ˈfrɪɡ\, also called *Friia* \ˈfrē-ə\, or *Frea* \ˈfrā-ə\, in GERMANIC RELIGION, the wife of ODIN and mother of BALDER. She was a promoter of marriage and of fertility. In Icelandic stories, she tried to save her son's life but failed. Some myths depict her as the weeping and loving mother, while others stress her loose morals. Frigg was known also to other Germanic peoples, as *Frija* (in German) and *Frea*; her name survives in English in the word Friday.

FU HSI \ˈfū-ˈshē\, *Pinyin* Fu Xi, formally (*Wade-Giles romanization*) T'ai Hao \ˈtāi-ˈhau\, also called *Pao Hsi*, or *Mi Hsi*, first of China's mythical emperors, said to have lived in the 29th century BCE. He was a divine being with a serpent's body, though in some representations he is a leaf-wreathed head growing out of a mountain or a man clothed with animal skins. A cultural hero, Fu Hsi is said to have discovered the trigrams used in DIVINATION and thus to have contributed to the development of writing. He domesticated animals, instituted marriage, offered the first open-air sacrifice to heaven, and taught his people to cook, to fish with nets, and to hunt with weapons made of iron. NŪ KUA, a frequent companion, was either his wife or sister.

FUJI, MOUNT \ˈfū-jē\, *Japanese* *Fuji-san* \ˈfū-jē-ˈsän\, also called *Fujiyama* \ˈfū-jē-ˈyā-mā\, or *Fuji no Yama* \ˈfū-jē-nō-ˈyā-mā\, highest mountain in Japan, rising to 12,388 feet near the Pacific coast in Yamana-shi and Shizuoka *ken* (prefectures), central Honshu, about 60 miles west of Tokyo. It is a volcano that has been dormant since its last eruption in 1707 but is still generally classified as active by geologists. Mount Fuji, with its graceful conical form, has become famous throughout the world and is considered the sacred symbol of Japan.

FULGENTIUS OF RUSPE, SAINT

Among the Japanese there is a sense of personal identification with the mountain.

Because it is considered a sacred mountain (one sect accords it virtually a soul), Mount Fuji is surrounded by temples and shrines; there are shrines even at the edge and the bottom of the crater. Climbing the mountain has long been a religious act, and tens of thousands of Japanese do so every year during the climbing season from July 1 to August 26. The ascent in early times was usually made in the white robes of a pilgrim, and until the Meiji Restoration women were not allowed to climb the mountain.

FULGENTIUS OF RUSPE, SAINT \fŭl-'jĕn-chĕ-əs, -chəs...ras-pĕ\ (b. c. 467, Telepte, North Africa—d. Jan. 1, 533, Ruspe; feast day January 1), African bishop of Ruspe and theological writer who defended orthodoxy in 6th-century Africa against ARIANISM.
