Fulgentius became a monk, residing successively in Africa, Sicily, and Rome, then accepted the African bishopric of Ruspe on the Mediterranean coast (507). In 508 the Vandal king Thrasimund, a supporter of Arian beliefs, exiled 60 orthodox African bishops, who settled in Sardinia with Fulgentius as their leader and spokesman. Thrasimund recalled Fulgentius (515), but because of his orthodoxy, he was exiled again (517–523). Thrasimund's successor, Hilderich, allowed Fulgentius to return to Africa.

Eight of the numerous, essentially polemical writings (some speaking against SEMI-PELAGIANISM) ascribed to him elaborating orthodox views are known to be authentic.

FUNCTIONALISM, popular and widespread theory in the social sciences based on the premise that all aspects of society satisfy needs of various kinds and are indispensable for the society's long-term survival. The theory is often used to explain why RELIGIOUS BELIEFS persist: because they fulfill certain indispensable needs (maintenance, integration, equilibrium) in a society or person. Thus, functionalism is often thought of as a causal explanation of religion.

Distinctions have been made within the theory between manifest functions, those consequences are intended and recognized by participants in the system, and latent functions, which are neither intended nor recognized. Functionalism postulates that a social system has a functional unity in which all parts work together with some degree of internal consistency. Any process or set of conditions that does not contribute to the maintenance or development of the system is said to be dysfunctional. Some scholars have argued that functionalism rests on tautological assumptions and is therefore inadequate as a scientific theory.

FUNDAMENTALISM, CHRISTIAN, conservative movement in PROTESTANTISM that arose out of 19th-century MILLENNIALISM in the U.S. It emphasized as fundamental the literal truth of the Bible, the imminent physical SECOND COMING of JESUS, the virgin birth, RESURRECTION, and ATONEMENT. It spread in the 1880s and '90s among Protestants dismayed by labour unrest, Catholic immigration, and biblical criticism. Scholars at Princeton Theological Seminary provided intellectual arguments, published as 12 pamphlets (1910–15). Displeasure over the teaching of evolution, which many believed could not be reconciled with the Bible, and over biblical criticism gave fundamentalism momentum in the 1920s. In the 1930s and '40s, many fundamentalist Bible institutes and colleges were established,

and fundamentalist groups within some BAPTIST and PRESBYTERIAN denominations broke away to form new churches. In the later 20th century, fundamentalists made use of television as a medium for evangelizing and became vocal in politics as the "Christian right." They also advocated the teaching of CREATIONISM, the view that the universe and all forms of life were created by God out of nothing, in schools and textbooks as an alternative to evolution.

FUNDAMENTALISM, ISLAMIC: *see* ISLAMISM.

FUNERARY CUSTOMS \'fyü-nə-rer-ĕ\, ceremonial acts employed at the time of death and burial. Many of the beliefs and attitudes behind these practices are described in the article DEATH AND THE AFTERLIFE.

The disposal of the dead is almost always given special significance. As early as 50,000 BCE Paleolithic peoples, such as the Neanderthals and later groups, not only buried their dead but provided them with food, weapons, and other equipment, thereby implying a belief that the dead still needed such things in the grave. Funerary ritual provides the earliest evidence of religion in human history.

The process of dying and the moment of death have been regarded in many religions as occasions of the most serious crisis. The dying must be specially prepared for the experience. In China, for example, the head of a dying person was shaved, the body washed, and the nails pared. The person was placed in a sitting position to facilitate the exit of the soul. In ROMAN CATHOLICISM the dying person makes a last CONFESSION to a priest, receives absolution, and is anointed with consecrated oil, which is known as "anointing of the sick" (formerly called extreme unction).

Preparation and disposal of the corpse. After death the corpse usually must be prepared for final disposal. Generally this preparation includes its washing and dressing in special garments and sometimes its public exposure. In some religions this preparation is accompanied by rites designed to protect the deceased from supernatural attack. Sometimes the purpose of the rites is to guard the living from the contagion of death or the malice of the dead, as it is often believed that the soul lingers about the body until the body is buried or completely decomposed.

The most elaborate known preparation of the dead took place in ancient Egypt. Because the Egyptians believed that the body was essential for a proper afterlife, a complex process of ritual embalment was established. This process was intended not only to preserve the corpse from physical disintegration but also to reanimate it in the other world.

The form of the disposal of the dead most generally used throughout the world has been burial in the ground. The mode of burial, however, has varied greatly. The body is sometimes placed directly in the ground, with or without clothes. Sometimes the corpse is oriented according to tradition, which may concern the direction in which the land of the dead is thought to lie. The use of COFFINS began in the early 3rd millennium BCE in Sumer and Egypt, and the use of a SARCOPHAGUS became fashionable among the wealthier classes of Greco-Roman society.

In the ancient Near East the construction of stone tombs began in the 3rd millennium BCE and inaugurated a tradition of funerary architecture that produced such monuments as the PYRAMIDS of Egypt and the Taj Mahal. Among many peoples the belief that some part of the deceased remains in the tomb even after the body decays has resulted in the tombs of certain holy persons being made into shrines, which thousands visit, hoping to find miracles of

healing or to earn religious merit. Notable examples are the tombs of ST. PETER in Rome, MUHAMMAD in MEDINA, and, in ancient times, IMHOTEP at Şaqqārah, in Memphis, Egypt.

The funeral consists of conveying the deceased from home to the place of burial or CREMATION. This act of transportation has generally been made into a procession of mourners who lament the deceased, and it has often afforded an opportunity of advertising the person's wealth, status, or achievements. In some Islamic countries friends carry the corpse on an open bier, generally followed by women relatives, lamenting with disheveled hair, and hired mourners. After a service in the mosque the body is interred with its right side toward MECCA. In HINDUISM the funeral procession is made to the place of cremation and is preceded by a man carrying a firebrand kindled at the domestic hearth, and the mourners circumambulate the corpse, which is carried on a bier. Cremation is a ritual act, governed by careful prescriptions. The widow crouches by the pyre, on which in former times she might have died purposely (see SATI). After cremation the remains are gathered and often deposited in sacred rivers.

In JUDAISM the burial service is marked by simplicity, and the interment takes place as soon after death as possible. The body is prepared for the grave by the *hevra' qaddisha'* (the holy society) and is clad in a simple shroud of unadorned white linen, following the sumptuary ruling of the 1st-century-CE Rabbi GAMALIEL I (the Elder). To the shroud may be added the TALIT used by the deceased, but with the fringes removed or cut, because the rules governing their use applies only to the living. In Israel no coffin is used.

Postfunerary rites. Funerary rites do not usually terminate with the disposal of the corpse. Postfunerary ceremonies and customs generally have two not necessarily mutually exclusive motives: to mourn the dead and to purify the mourners. The mourning of the dead, especially by near relatives, has taken many forms. Wearing old or colorless dress, either black or white, shaving the hair or letting it grow long and unkempt, and abstaining from amusements have all been common practice.

In Judaism a mourning period of 30 days is observed, of which the first 7 (*shiv'a*) are the most rigorous. During the 11 months following a death the bereaved recite a synagogal DOXOLOGY (KADDISH) during the public service as an act of memorial. The doxology itself, entirely devoid of any mention of death, is a praise of God and a prayer for the establishment of the coming kingdom. It is also recited annually on the anniversary of the death (YHRZEIT).

In some areas the belief that the spirit remains in this world until the corpse has completely decayed leads to extended periods of mourning, which may last for more than a year. In such cases a second burial rite often signals the end of this period: the remains of the deceased are exhumed from the tomb and deposited elsewhere, often in a community sepulchre. In rural Greece, where such rites are still practiced, it is believed that unusually slow decomposition indicates that the deceased is reluctant to leave this world; this is a dangerous state of affairs, and in such cases relatives may complete the process of decomposition themselves by scraping the remaining flesh from the bones.

A widespread custom is the funeral banquet, which may be held in the presence of the corpse before burial or in the tomb-chapel (in ancient Rome) or on the return of the mourners to the home of the deceased. Originally these meals might have grown out of sacrificial food offerings made to the deceased. In general the banquet celebrates life by bringing the survivors together for a common meal.

The purification of mourners is another powerful post-funerary concern. A corpse straddles the boundary between this world and the next, and as with most such liminal objects it is regarded as simultaneously powerful and polluting. All who come in contact with it therefore are in need of cleansing before they can rejoin normal society. Various forms of purification are prescribed, chiefly bathing and fumigation. PARSIS make a special point of cleansing the room in which the death occurred and all articles that had contact with the dead body (see ZOROASTRIANISM).

Commemorative rites. In Egypt MORTUARY TEMPLES or chapels were built, in which portrait images preserved the memory of the dead and offerings of food and drink were regularly made. In China an elaborate ancestor cult flourished. The ancestral shrine contained tablets, inscribed with the names of ancestors, which were revered and before which offerings were made. When the tablet of a newly deceased member was added to the collection, the oldest tablet was deposited in a chest containing still older ones. In India three generations of deceased ancestors are venerated at the monthly SRADDHA festival, at which mortuary offerings are made.

In early Christianity the bodies of martyrs were entombed in special chapels. The development of cults of martyrs and other saints in the medieval church centered on the veneration of their relics, which were often divided among several churches. The introduction of the doctrine of PURGATORY profoundly affected the postmortem care devoted to the ordinary dead. It was believed that the offering of the sacrifice of the MASS could alleviate the suffering of departed souls in purgatory. Consequently the celebration of masses for the dead proliferated, and wealthy Christians endowed monasteries or chantry chapels where masses were said regularly for the repose of their own souls or those of their relatives.

In many religions the dead are periodically commemorated. Buddhist China kept a Feast of Wandering Souls each year, designed to help unfortunate souls suffering in the next world. The Christian ALL SOULS' DAY, on November 2, which follows directly after ALL SAINTS' DAY, commemorates all the ordinary dead.

Cult of the dead. Among many peoples it is customary to preserve the memory of the dead by placing images of them upon their graves or tombs. This sepulchral ICONOGRAPHY began in Egypt; the portrait statue of King Djoser (c. 2686–c. 2613 BCE), found in the worship chamber of the Step Pyramid, is the oldest known example. The images also provided a locus for the deceased's KA, the spiritual entity that was an essential element of the personality.

FURIES, the Roman goddesses of vengeance, identified with the Greek ERINYES.

FU-SHEN \fū-'shən\, *Pinyin* Fushen, Chinese god of happiness, the deification of a 6th-century mandarin, Yang Ch'eng. The name also denotes the beneficent gods of Chinese myth.

Yang Ch'eng (or Yang Hsi-chi), who served the Liang Wuti emperor (reigned 502–549 CE) as a criminal judge in Hunan Province, was disturbed that the ruler was using dwarfs as servants and court entertainers. Yang admonished the emperor, pointing out that these unfortunate people were subjects, not slaves. The emperor thereupon called a halt to the practice. The grateful dwarfs set up images of their benefactor and offered sacrifice. The cult of Yang as god of happiness gradually spread throughout China.

GABAR \ˈgɑ-bər\, derogatory term used by Muslims in Iran to denote the country's small ZOROASTRIAN minority. The origin of the Persian word *gabar*, or *gabr*, is uncertain; perhaps most plausibly it has been conjectured to be a pre-Islamic borrowing of Arabic *kāfir* ("infidel"). The Zoroastrians who remained in Persia (modern Iran) after the Arab-Muslim conquest (7th century CE) purchased some toleration by paying the *JIZYA* ("poll tax"), which was abolished in 1882; but they were treated as an inferior race, had to wear distinctive garb, and were not allowed to ride horses or bear arms. Living for centuries in villages of central Iran, they have tended more recently to be concentrated in Kerman and Yazd, where Zoroastrians still maintain fire temples, and in Teheran. Long isolated, the Iranian Zoroastrians made contact with the PARSIS, the wealthy Zoroastrians of India, in the 15th century, and exchanged messages concerning religious lore. Since the 19th century the Parsis have taken a lively interest in improving the depressed condition of their Iranian coreligionists, remonstrating with the Iranian government over discrimination against Zoroastrians. Beginning with the reign of Reza Shah (1921–41), Iranian Zoroastrians enjoyed wider religious tolerance, but this was impeded by the Islamic revolution of 1978–79. They currently number a few thousand.

GABIJA \gä-bi-ˈyä\ (Lithuanian), also called *Gabieta* \gä-ˈbē-e-tä\, *Latvian* *Uguns Māte* \ˈü-güns-ˈmä-te\, *Old Prussian* *Panicke*, in *BALTIC RELIGION*, the domestic hearth fire. In pre-Christian times a holy fire (*šventa ugnis*) was kept in tribal sanctuaries on high hills and riverbanks, where priests guarded it constantly, extinguishing and rekindling it once a year at the midsummer festival. Eventually this tradition was moved into the home as the *gabija*. Every evening the mistress of the house carefully tended the fire and prayed to it to ensure the family's good fortune. A new bride was given a fire from her mother's hearth in order that the *gabija* might provide an auspicious beginning for the new family.

GABRIEL \gä-brē-əl\, *Hebrew* *Gavri'el*, *Arabic* *Gibrā'il*, *Jabra'il*, or *Jibril*, in the *BIBLE* and the *QUR'AN*, one of the *ARCHANGELS*. Gabriel was the heavenly messenger sent to Daniel to explain the vision of the ram and the he-goat and to communicate the prediction of the Seventy Weeks. He also announced the birth of JOHN THE BAPTIST to ZEPHARIAH and the birth of JESUS to MARY. It is because he stood in the divine presence that both Jewish and Christian writers generally speak of him as an archangel. Gabriel's feast is kept on September 29. His name and functions were taken over by ISLAM from Judaeo-Christian tradition. He is mentioned in the *Qur'an* only three times, but various epithets in that scripture are widely recognized as referring to him.

GAD \ˈgɑd\, one of the *TWELVE TRIBES OF ISRAEL* that in biblical times composed the people of ISRAEL. The tribe was

named after the elder of two sons born to JACOB and Zilpah, a maidservant of Jacob's first wife, LEAH (Genesis 30:10–11).

After entering the Promised Land, the tribe of Gad settled on land east of the Jordan River (Joshua 13:24–28), gained renown for its military spirit (1 Chronicles 12:8–15), and was one of the 10 northern tribes that formed a separate kingdom in 930 BCE with Jeroboam I as king (1 Kings 11:26ff). Following the Assyrian conquest of 721, the 10 tribes were partially dispersed and eventually assimilated by other peoples (2 Kings 17:5–6; 18:9–12). The tribe of Gad thus became one of the *TEN LOST TRIBES OF ISRAEL*.

GAEA \ˈjē-ə\, also called *Ge* \ˈjē\, Greek goddess of the earth. She was both mother and wife of OURANUS (Heaven), and it was the last child born of that union, CRONUS (a TITAN), who separated her from Ouranus (that is, separated Earth from Heaven). She was also mother of the other Titans, the Gigantes, the ERINYES, and the Cyclopes; hence literature and art sometimes made her the enemy of ZEUS, for the Titans and Gigantes threatened him. Gaea may have been originally a *MOTHER GODDESS* worshiped in Greece before the introduction of the cult of Zeus. Less widely worshiped in historic times, Gaea was described as the giver of dreams and the nourisher of plants and young children.

GAHANBAR \gä-ˈhän-ˈbär, gä-ˈhä-nä-ˈbär\, also spelled *gahambar* ("The Time of Storing [Merit]"), in *ZOROASTRIANISM*, any of six festivals, occurring at irregular intervals throughout the year, which celebrate the seasons as experienced in Iran. Globally, these are aligned with the six stages in the creation of the world: the heavens, water, the earth, the vegetable world, the animal world, and humanity. Each lasting five

days, the Gahanbars are: Maidhyaōizaremaya (midspring), occurring 41 days after the New Year; 60 days later is Maidhyoishema (midsummer); 75 days later, Paitishhahya (harvest-time); 30 days later, Ayāthrima (possibly "Time of Prosperity"); 80 days later, Maidhyāirya (midwinter); and 75 days later, in the last five intercalary, or Gatha, days of the year, Hamaspathmaēdaya (vernal equinox).

PARSIS observe the Gahanbar festivals in two stages. Four liturgical rites are first celebrated: the *Āfringān*, being prayers of love or praise; the *Bāj*, prayers honoring YAZATAS (angels) or FRAVASHIS (guardian spirits); the *Yasna*, the central Zoroastrian rite, which includes the sacrifice of the sacred liquor, *haoma*; and the *Pavi*, prayers honoring God and his spirits, performed jointly by the priest and the faithful. A solemn feast then follows, in which the sacrificial offerings made in the preceding liturgies are consumed in ritual purity.

GALINTHIAS \gə-ˈlin-thē-əs\, in Greek mythology, a friend, or servant, of Alcmena, the mother (by ZEUS) of HERACLES. While Alcmena was in labor, Zeus's jealous wife, HERA, goddess of childbirth, was clasp- ing her hands, thus by

magic preventing delivery (by another variant, Hera sent EILEITHYIA to hold back the birth). To foil this, Galinthis rushed in to Hera and falsely announced that Alcmene had given birth to a son, so causing Hera to relax. Thus the charm was broken, and Alcmene gave birth to Heracles. As punishment, Hera transformed Galinthis into a weasel or (according to Ovid) a lizard. The goddess HECATE, however, took pity on her and took her as an attendant, and Heracles later made a SANCTUARY for her.

GALLERY GRAVE, long chamber grave, a variant of the collective tomb burials that spread into western Europe from the Aegean area during the final stage of the northern Stone Age (c. 2000 BCE). The tombs are often associated with divine ancestors and deities, who are depicted on the rock walls.

GALLI \ˈgɑːlɪ\, *singular* gallus \ˈgɑːləs\, priests, often temple attendants or wandering MENDICANTS, of the ancient Asiatic deity the GREAT MOTHER OF THE GODS, known as CYBELE or AGDISTIS in Greek and Latin literature. The *galli* were eunuchs attired in female garb, with long hair fragrant with ointment. Together with priestesses, they celebrated the Great Mother's rites with wild music and dancing until their frenzy culminated in self-scourging, self-laceration, or exhaustion. Self-emasculation by candidates for the PRIESTHOOD sometimes accompanied this delirium of worship.

The name *galli* may be Phrygian, from the two streams called Gallus, both tributaries of the Sangarius (now Sakarya) River, the waters of which were said to inspire religious frenzy. If the word is actually Phrygian, it may more plausibly descend from the Indo-European root of Greek *kolos*, “docked,” and *kolobos*, “mutilated.”

GAMALIEL I \gə-ˈmā-lē-əl\, *also called* Rabban Gamaliel \rə-ˈbän\ (*rabban*, “teacher”) (fl. 1st century CE), important early rabbinic figure referred to in the Talmudic literature (*see* TALMUD) as Gamaliel ha-Zaqen (“the Elder”). He was the grandson of HILLEL and patriarch of the Jewish community of ISRAEL at the beginning of the 1st century CE. He was a teacher of Simeon of Mizpeh and other leading rabbis; Acts 22:3 states that the Apostle PAUL was his student. Regarding him, Mishnah Sotah 9:15 says: “When Rabban Gamaliel the Elder died, the glory of the TORAH came to an end, and cleanness and separateness perished.”

GAMALIEL II, *also called* Gamaliel of Jabneh \ˈjɑːb-nə\ (fl. 2nd century CE), important RABBI, a grandson of GAMALIEL I. It is to him that the name Gamaliel usually refers when it is used without further qualification. He succeeded JOHANAN BEN ZAKKAI as patriarch of the Jewish community of Israel about 80 CE. He was one of the greatest legal authorities of his generation and is frequently cited in the MISHNAH. Berakhot 27b–28a (Talmud BAVLI) reports that Gamaliel was involved in a disagreement regarding the JEWISH CALENDAR, a dispute that is said to have led to Gamaliel's temporary removal from the office of patriarch.

Gaea, terra-cotta statuette from Tanagra; in the Borély Museum, Marseille, France
Giraudon—Art Resource

GANDAVYŪHA SŪTRA \,gən-də-ˈvyū-hə-ˈsü-trə\, MAHĀYĀNA Buddhist SŪTRA that forms the climax of a larger text, the AVATAMSAKA SŪTRA. The *Avatamsaka Sūtra* was most likely composed in Sanskrit in the 4th century and was first translated into Chinese by the monk Bodhibhadra in the second decade of the 5th century. The *Avatamsaka* describes the universe as it is seen and experienced by enlightened buddhas and BODHISATTVAS, as well as the various stages of a bodhisattva's progression on the path to enlightenment. In addition to its important position within the *Avatamsaka*, scenes from the *Gandavyūha*, along with ones from other Buddhist texts such as the *Divyāvadāna* and LALITAVISTARA, can be found among the bas reliefs of the great Buddhist monument in Java, BOROBUDUR.

In the *Gandavyūha*, a young pilgrim named Sudhana commences a search for supreme enlightenment that takes him on a journey to see more than fifty teachers—people from all walks of life—and even leads him to an intimate, but nonetheless enlightening, encounter with a prostitute named Vasumitrā, who is also a wise bodhisattva. Sudhana experiences a magnificent cosmological vision, the perspective of enlightened buddhas known as *dharmadhātu*. Finally, Sudhana attains a vision of the bodhisattva Samantabhadra and realizes that his own nature, and those of Samantabhadra, all buddhas, and all other existences in the cosmos are, in fact, one and infinitely interpenetrate one another.

GANDHI, MOHANDAS KARAMCHAND \ˈgän-dē\, *byname* Mahātmā (“Great-Souled”) Gandhi \mə-ˈhāt-mə\ (b. Oct. 2, 1869, Porbandar, India—d. Jan. 30, 1948, Delhi), leader of the Indian nationalist movement against British rule, considered to be the father of his country. He is internationally esteemed for his doctrine of nonviolent protest to achieve political and social progress.

Gandhi was reared by a deeply religious mother in a household that practiced VAISNAVISM, and he developed a close, inspiring relationship with a Jain friend, Rajchandra Rajivbhai, whom he called Raychand. He hewed to his mother's vegetarianism when he began law studies in England in 1888. In quest of clerical work he went to South Africa (1893–1914) and was shocked at the racial discrimination there. He became an advocate for his fellow Indians in South Africa and undertook a series of challenges to the government that led to jail. He entered politics in India in 1919 to protest British sedition laws. He emerged as the head of the Indian National Congress and advocated a policy of noncooperation to achieve Indian independence under the general rubric of AHIMSA (“nonviolence”). In 1930 he led a march to the sea to protest the British-imposed tax on salt, and by the following spring the making of salt for personal use was permitted. Imprisoned throughout much of World War II, he negotiated with the British in August 1947 for an autonomous Indian state. In January 1948, however, he was assassinated by a right-wing Hindu fanatic.

The religious dimensions of Gandhi's life and thought are many. Gandhi's religious quest dated back to his childhood

and the influence of his mother and of his homes at Porbandar and Rajkot, but it received a great impetus after his arrival in South Africa. His Quaker friends in Pretoria failed to convert him to Christianity, but they quickened his appetite for religious studies. He was fascinated by Tolstoy's writings on Christianity, read the QUR'ĀN in translation, and delved into Hindu scriptures and philosophy. The study of comparative religion, talks with scholars, and his own reading of theological works brought him to the conclusion that all religions were true and yet every one of them was imperfect because they were "interpreted with poor intellects, sometimes with poor hearts, and more often misinterpreted." Rajchandra, Gandhi's friend and spiritual mentor, convinced him of "the subtlety and profundity" of Hinduism, the religion of Gandhi's birth. And it was the BHAGAVAD GĪTĀ, which Gandhi had first read in London, that became his "spiritual dictionary" and exercised probably the greatest single influence on his life. Two Sanskrit words in the *Gītā* particularly fascinated him. One was *aparigraha* (nonpossession), which implied that man had to jettison the material goods that cramped the life of the spirit and to shake off the bonds of money and property. The other was *samabhava* (equability), which enjoined him to remain unruffled by pain or pleasure, victory or defeat, and to work without hope of success or fear of failure.

His personal devotions also tied him to the *Gītā* and RĀMĀYAṆA. The former presented an obvious challenge to his doctrine of *ahimsā* in KRISHNA's insistence that ARJUNA take up his weapon and fight. Gandhi solved this dilemma allegorically, by interpreting the intransigent yet intimately related enemy army of Arjuna's Kaurava kin as representing the "Satanic impulses" within each person. As he said, "Arjuna and others stand for the Godward impulses. The battlefield is our body." With such a credo he contextualized the struggle against the British Raj in cosmic terms, attempting to befriend the enemy and undermine him at the same time. This overarching strategy he called SATYĀGRAHA ("truth force," or "clinging to the truth"). His regard for truth as an ultimate principle was again a conviction he drew in part from his Hindu background, associating it especially with the phrase from the MAHĀBHĀRATA—*satyannāsti paro dharmah* ["there is no religion [or duty] higher than

truth"). Even Gandhi's devotion to Indian independence had religious overtones, for he understood "self-rule" (*svarāj*) not just politically but in connection with the sort of personal integrity that can only come with self-restraint and nonattachment, as taught in the *Gītā*.

GAṆEŚĀ \gə-'nā-shə\, also spelled Ganesha, or Ganesh, also called Gaṇapati, elephant-headed Hindu god, the son of SHIVA and PĀRVATĪ; also revered by Jains and important in the art, myth, and ritual of Buddhist Asia. Gaṇeśa, considered the remover of obstacles, is the first god invoked at the beginning of worship or of a new enterprise, and he is often positioned near thresholds and gateways. He is a patron of letters and learning, and he is the legendary scribe who wrote down the MAHĀBHĀRATA ("Great Epic of the Bhārata Dynasty") from Vyāsa's dictation. He is also called the chief of the *gaṇas* (attendants of Shiva). Gaṇeśa is usually depicted colored red; he is pot-bellied, has one tusk broken, and has four arms that often hold a noose, a goad or axe, a pot of sweetmeats or jewels, and his broken tusk or a book. Thus, he displays a thoroughgoing mix of forbidding and welcoming traits, as is illustrated by the fact that he is sometimes thought of as creating obstacles and sometimes as removing them. Anomalously, he rides on a rat.

One account of his birth is that Pārvatī formed him from the rubbings of her body so that he might stand guard at the door while she bathed. When Shiva approached (unaware this was Pārvatī's son) he was enraged at being kept away from his wife and set his attendants against Gaṇeśa, whose head was cut off in the battle. To ease Pārvatī's grief, Shiva promised to cut off the head of the first creature that he came across and join it to the body. This was an elephant.

Although technically a subsidiary figure in the Hindu pantheon, Gaṇeśa's importance has advanced markedly during the 20th century. Gaṇeśa-caturthī, the festival celebrating his birth, falling on the fourth day (*caturthī*) of the lunar month Bhādrapada (August–September), was championed by the Indian independence leader Balgangadhar Tilak as a unifying public event. Gaṇeśa's largely nonsectarian identity has made him an appropriate focus for other recent expressions of Hindu life, especially in the Hindu diaspora.

GAṆĀ RIVER \'gəŋ-'gä\, English Ganges River \'gan-'jēz\, great river of the plains of northern India, held sacred by people of the HINDU faith. In the myth told of the Gaṅgā, the river, personified as a goddess, originally flowed only in heaven (the Milky Way) until she was brought down by Bhagīratha to purify the ashes of his ancestors. She came down reluctantly, cascading first on the head of SHIVA, in order to break her fall, which would have otherwise shattered the Earth. Accordingly the Gaṅgā is recognized by many Hindus as one of Shiva's wives. Confluences are particularly holy, and the Gaṅgā's confluence with the JAMUNĀ (and mythical SARASVATĪ) at Allahabad (Hindi: Prayāg) is considered by many to be the most sacred spot in India. Every 12 years it becomes the focus of the KUMBH MELĀ, India's largest religious gathering.

In religious terms, the Gaṅgā river is regarded as the goddess Gaṅgā, a liquid, maternal form of ŚAKTI and one of the most benevolent divinities in the Hindu pantheon. Her mythology and geography tie her firmly to Shiva, both at her source and at Hardwar and VARANASI, but she is sometimes understood as a consort of VISHNU, a tie strengthened by her confluence with the Jamunā, sacred to KRISHNA. She is the archetype of sacred water. Her presence in water of any kind can be ritually invoked, and Gaṅgā water proper is

Mohandas K. Gandhi
Culver Pictures

highly prized in rites of healing and purification. It is sometimes claimed that a drop of Gaṅgā's water is sufficient to purify any sin. Because of her sacred embodiment of the cosmic water cycle, Hindus often desire to immerse the remains of the dead in the Gaṅgā.

GANIODA'YO \gän-yō-'dī-yō\, *English* Handsome Lake (b. c. 1735, Ganawaugus, N.Y.—d. Aug. 10, 1815, Onondaga, N.Y., U.S.), Seneca Indian leader who developed a new religion for the Iroquois (see HANDSOME LAKE MOVEMENT). The cult was so successful that in the 20th century several thousand Indians still adhered to it.

Ganioda'yo became seriously ill in 1799 and, on his recovery, declared that he had been visited by three spirits who had revealed the will of the Great Spirit. From 1800, as an itinerant preacher of the religion that he called Gai'wiio ("Good Message"), he urged his people to refrain from adultery, drunkenness, laziness, and WITCHCRAFT. His combination of traditional beliefs and Christian ethics infused new energy into Iroquois culture at a period of crisis.

GANYMEDE \gä-ni-mēd\, *Greek* Ganymēdēs, in Greek mythology, the son of Tros (or LAOMEDON), king of Troy. Because of his beauty, he was carried off either by the gods or by ZEUS, disguised as an eagle. In compensation, Zeus gave King Tros a stud of immortal horses (or a golden vine).

GAON \gä-'ōn\, *plural* geonim \ge-ō-'nēm\ (Hebrew: "majesty," or "excellence"), title of the Jewish spiritual leaders and scholars who headed Talmudic academies that flourished from the 7th to the 13th century in Babylonia and Palestine. The chief concern of the *geonim* was to interpret and develop Talmudic Law and to safeguard Jewish legal traditions by adjudicating points of legal controversy. Their replies (RESPONSA) were quoted widely. The *geonim* continued a tradition of scholarship begun long before by the *soferim* (teachers and interpreters of biblical law) and kept alive in subsequent centuries by the *tannaim* (see TANNA) and *amoraim* (who, respectively, produced the MISHNAH and GEMARA; see AMORA).

A long-standing rivalry between the Babylonian and Palestinian *geonim* came to a head in the 10th century. SA'ADIA BEN JOSEPH, famous Babylonian *gaon* of the academy at Sura, bested his rival, Aaron ben Meir of Jerusalem, in a controversy involving calendar dates of Jewish festivals. Thereafter, the superiority of the Babylonian *geonim* was rarely questioned. The prestige of the *geonim* gradually declined with the establishment of Talmudic academies elsewhere and the acceptance of local

scholars as competent authorities on Jewish Law. After the gaonic period, the term *gaon* was used as a title of honor.

GARUḌA \gə-rū-də\, in Hindu mythology, the bird and the *vāhana* (mount) of the god VISHNU. In the RG VEDA the sun is compared to a bird in its flight across the sky, and the association of the kitelike Garuḍa with Vishnu is taken by scholars as an indication of Vishnu's early origins as a sun deity. The mythological account of Garuḍa's birth identifies him as the younger brother of Aruṇa, the charioteer of the sun god, SŪRYA. Garuḍa's mother was held in slavery by a co-wife and her sons, who were NĀGAS, to which is attributed the lasting enmity between the eaglelike kite and the serpents.

The *nāgas* agreed to release his mother if he could obtain for them a drink of the elixir of immortality, the *amṛta*.

Garuḍa performed this feat and on his way back from the heavens met Vishnu and agreed to serve him as his vehicle and emblem. Garuḍa is described in one text as emerald in color, with a beak, roundish eyes, golden wings, and four arms and with breast, knees, and legs like those of the kite. He is also depicted anthropomorphically, with wings and hawklike features. Especially in South Indian temples to Vishnu, Garuḍa may often be seen resting atop a pillar that faces the sanctum.

Garuḍa traveled with the spread of HINDUISM to Nepal and to Southeast Asia, where he is frequently depicted on monuments. He is also associated with royalty in several Southeast Asian countries.

GAYĀ, city, south-central Bihār state, northeastern India. Lying along the Phalgu River, a tributary of the GAṄGĀ, it is a major religious and commercial center.

Gayā is visited by about 300,000 Hindu pilgrims annually (see PILGRIMAGE). There are 45 sacred places between Pretsil hill (north) and BODH GAYĀ (south), but most are in Gayā itself. The main shrine is the VISHNU temple built by the Marāṭhā princess Ahalyā Bāi in 1787. Others are the rocky, temple-covered hills of Ramsilla and Brahmajini, the latter identified with the Gayāśiṛṣa hill on which the BUDDHA preached. The village of

Both Gayā is the site of the Buddha's enlightenment. Gayā has several libraries and colleges affiliated with Magadh University.

GAYŌMART \gä-yō-'mart\, *Avestan* Gayō Maretan ("Mortal Life"), in later ZOROASTRIANISM, the first man and the progenitor of mankind. Gayōmart's spirit, along with that of the primeval ox, lived for 3,000 years during the period

Garuḍa carrying Vishnu and Lakṣmī, South Indian bronze image, 18th century; in the Guimet Museum, Paris
Cliche Museses Nationaux, Paris

Geb falling away from intercourse with Nut, detail from the Papyrus of Tameniu

By courtesy of the trustees of the British Museum

in which creation was only spiritual. His existence immobilized AHRIMAN, the evil spirit who wanted to invade creation. Then AHURA MAZDĀ created Gayōmart incarnate and put in him and the primeval ox a seed whose origin was in fire. After 30 years of attacks, Ahriman destroyed Gayōmart. His body became the Earth's metals and minerals. Gold was his seed, and from it sprang the human race.

GEB \ˈgeb\, also called *Keb*, in ancient EGYPTIAN RELIGION, the god of the earth, the physical support of the world. Geb and his sister, NUT, constituted the second generation in the Ennead (group of nine gods) of HELIOPOLIS. In Egyptian art Geb was often depicted lying by the feet of SHU, the air god, with Nut, the goddess of the sky, arched above them. Geb was usually portrayed as a man without any distinguishing characteristics, but at times he was represented with his head surmounted by a goose, the hieroglyph of his name. He was the third divine ruler among the gods; the pharaohs claimed to be descended from him, and therefore the royal throne was referred to as “the throne of Geb.”

GEDALIAH, FAST OF \gə-ˈdāl-yə, ˌge-də-ˈli-ə\, a minor Jewish observance (on Tishri 3 [shortly after the fall equinox]; Zechariah 7:5; 8:19) that mournfully recalls the assassination of Gedaliah, a Jewish governor of JUDAH and an appointee of Nebuchadrezzar, the Babylonian king. When the Jews fled to Egypt after the murder, Jewish self-rule was effectively ended. Liturgically, the fast of Gedaliah follows the ritual of other fast days but adds certain penitential prayers. The festival is postponed one day if Tishri 3 falls on the SABBATH (Rosh Hashanah 18b).

GEFION \ˈge-vē-ōn\, also spelled *Gefjun*, in Nordic mythology, a minor goddess associated with unmarried women.

GEHENNA \gi-ˈhe-nə\ (from Hebrew *Ge Hinnom*, “Valley of Hinnom”), also called *Gehinnom* \gi-ˈhi-nəm\, in Jewish and Christian ESCHATOLOGY, abode of the damned in the afterlife. Named in the NEW TESTAMENT in the word's Greek form (*Geenna*), Gehenna originally was a valley west and south of Jerusalem where children were burned as sacrifices to the AMMONITE god MOLOCH. This practice was carried out during the 10th and the 7th centuries BCE and continued until the BABYLONIAN EXILE in the 6th century BCE. Gehenna later was made into a garbage center to discourage a reintroduction of such sacrifices.

The imagery of the burning of humans supplied the con-

cept of “hellfire” to Jewish and Christian eschatology. Mentioned several times in the New Testament as a place in which fire will destroy the wicked, Gehenna also is noted in the TALMUD as a place of purification, after which one is released from further torture.

GEIGER, ABRAHAM \ˈgī-gər\ (b. May 24, 1810, Frankfurt am Main—d. Oct. 23, 1874, Berlin, Ger.), German-Jewish theologian, author, and the outstanding leader in the early development of REFORM JUDAISM.

In 1832 Geiger went to Wiesbaden as a RABBI. In 1835 he helped to found the *Wissenschaftliche Zeitschrift für jüdische Theologie* (“Scientific Journal of Jewish Theology”), which he then edited. In 1838 he became a rabbi in Breslau (now Wrocław, Pol.), where he remained until 1863. In Breslau Geiger organized the Reform movement, translated into German the works of JUDAH BEN SAMUEL HA-LEVI (1851), and wrote his magnum opus, *Urschrift und Übersetzungen der Bibel in ihrer Abhängigkeit von der innern Entwicklung des Judentums* (1857; “The Original Text and the Translations of the Bible: Their Dependence on the Inner Development of Judaism”). In this work, Geiger illustrated a basic idea of Reform Judaism: that Jewish religious consciousness grows and changes, a development reflected in succeeding editions and translations of the Bible.

GELUKPA: see DGE-LUGS-PA.

GEMARA \gə-mä-ˈrā, gə-ˈmär-ə\, rabbinic commentary on and interpretation of the MISHNAH.

GEMATRIA \gə-ˈmā-trē-ə\, the substitution of numbers for letters of the Hebrew alphabet, a favorite method of EXEGESIS used in QABBALAH to derive mystical insights into or new interpretations of sacred writings. GENESIS 28:12, for example, relates that in a dream JACOB saw a ladder (Hebrew *sullam*) stretching from earth to heaven. The numerical value of the word *sullam*—130—is the same as the numerical value of Sinai, so exegetes concluded that the Law revealed to MOSES ON MOUNT SINAI is man's means of reaching heaven. Of the 22 letters in the Hebrew alphabet, the first 10 are given number values consecutively from 1 to 10, the next 8 from 20 to 90 in intervals of 10, while the final 4 letters equal 100, 200, 300, and 400, respectively.

GEMILUT HESED \gə-ˈmē-lūt-ˈke-sed\ (Hebrew: “bestowing kindness”), in JUDAISM, an attribute of God said to be imitated by those who in any of countless ways show personal kindness toward others. A Jew who does not manifest sensitive concern for others is considered no better than an atheist, regardless of his knowledge of the TORAH.

GENDER AND RELIGION, subject of critical importance to the modern STUDY OF RELIGION in that it concerns both biological sexuality and cultural gender. Serious gender scholarship in the field of religion has tended to focus upon religious constructions of sexuality that transcend the polar circles of male and female, in order to investigate the possibilities of other sexualities (for instance, hermaphrodites) offered in various religions.

The so-called non-Western religions are not necessarily open to more liberal constructions of gender than are the great MONOTHEISMS (JUDAISM, CHRISTIANITY, and ISLAM); some of them are simply open to different constructions. Myths of androgyny—of creatures, human or divine, who are half female, half male—and of transsexuality—the transforming

of a person of one biological sex into one of the other sex—sometimes support and sometimes deconstruct their own cultures' beliefs concerning gender. Myths of the origin of sexual differentiation generally affirm social boundaries; myths of transsexuality may subvert them, but do not always do so.

Gender is relatively easily sloughed off in some texts in which a male is entirely transformed into a female, with a female mentality and memory (aspects of cultural gender rather than sexuality); for instance, King Ila, the founder of the Hindu lunar dynasty, forgets everything about his male existence when he is magically transformed into a female who gives birth to the heir to the throne. Yet other texts seem to reflect a view of gender as astonishingly durable: the male merely assumes the outer form of the female, retaining his male essence, his male memory and mentality; thus the Hindu god VISHNU merely takes on the form of the enchantress Mohini to seduce the DEMONS and steal back the elixir of immortality. The sexual transformation of the body is distinct from the transformation of the mind, memory, and personality; even when physical sexuality changes, the gender of the mind may remain unchanged.

Some religions argue that gender is itself a lie, since it positions as natural and inevitable what is primarily cultural, learned, and transformable; but it is also true, since like any myth it is deeply embedded in our linguistic and narrative assumptions, and thus a powerfully compelling force that cannot be ignored.

GENESIS \ˈje-nə-sis\, Hebrew Bereshit (“In the Beginning”), the first book of the OLD TESTAMENT. Genesis narrates the primeval history of the world (chapters 1–11) and the patriarchal history of the Israelite people (chapters 12–50). The primeval history includes the stories of the creation, the GARDEN OF EDEN, CAIN and ABEL, NOAH and the Flood, and the TOWER OF BABEL. The patriarchal history begins with the divine promise to ABRAHAM that “I will make of you a great nation” (12:2) and tells the stories of Abraham (chapters 12–25) and his descendants: ISAAC and his twin sons JACOB and ESAU (chapters 26–36) and Jacob's family, principally JOSEPH (chapters 37–50), whose story tells how the Israelites came to be in Egypt. Their deliverance is narrated in the following book of EXODUS.

Genesis must thus be seen as a part of a larger unit of material traditionally understood to comprise the first five books of the BIBLE, called the TORAH, or Pentateuch. Scholars have identified three literary traditions in Genesis, as in Deuteronomy, usually identified as the YAHWIST, ELOHIST, and PRIESTLY strains. The Yahwist strain, so called because it used the name YAHWEH (JEHOVAH) for God, is a Judaean rendition of the sacred story, perhaps written as early as 950 BCE. The Elohist strain, which designates God as ELOHIM, is traceable to the northern kingdom of Israel and was written 900–700 BCE. The Priestly strain, so called because of its cultic interests and regulations for priests, is usually dated in the 5th century BCE and is regarded as the law upon which EZRA and NEHEMIAH based their reform. Because each of these strains preserves materials much older than the time of their incorporation into a written work, Genesis contains extremely old oral and written traditions.

GENESIS RABBAH \rā-ˈbā\, systematic EXEGESIS of the book of GENESIS produced by the Judaic sages about 450 CE, which sets forth a coherent and original account of that book. In Genesis Rabbah the entire narrative is formed so as to point toward the sacred history of ISRAEL, meaning the

Jewish people—their slavery and redemption; their coming Temple in Jerusalem; and their exile and salvation at the end of time. The deeds of the founders supply signals for the children about what is to come. So the biographies of ABRAHAM, ISAAC, and JACOB also constitute a protracted account of Israel's later history.

GENIUS, plural *genii*, in classical ROMAN RELIGION, an attendant spirit of a person or place.

In its earliest meaning in private cult, the *genius* of the Roman housefather and the *iuno*, or *juno*, of the house-mother were worshiped. In no early document is there mention of the *genius* or *iuno* of a dead person. The *genius* and *iuno* were probably the male and female forms of the family's, or clan's, power of continuing itself by reproduction, which were in the keeping of the heads of the family for the time being and passed at death to their successors.

Owing to the rise of individualism and also to the prevalence of Greek ideas concerning a guardian spirit, or *daimon*, the *genius* lost its original meaning and came to be a sort of personification of the individual's natural desires and appetites. The *genius* came to be thought of as a sort of guardian angel, a higher self; the poet Horace half-seriously said that only the *genius* knows what makes one person so different from another, adding that he is a god who is born and dies with each one of us. This individual *genius* was worshiped by each individual, especially on his birthday. A few inscriptions even mention the *genius* of a dead person, as Christian epitaphs sometimes speak of his angel.

To show reverence for the genius of another or to swear by it was a mark of deep respect; hence the *genius* of Augustus and of his successors formed objects of popular cult. Thus, to worship the *genius Augusti* avoided affronting the feeling against worshiping any living emperor, which remained fairly strong in Italy.

GENIZAH \gə-nē-ˈzä, -ˈnē-zə\ (Hebrew: “hiding place”), in JUDAISM, a repository for timeworn sacred manuscripts and ritual objects, generally located in the attic or cellar of a SYNAGOGUE. In the Middle Ages most synagogues had a *genizah*, because ceremonial burial (often with the remains of a pious, scholarly Jew) was thought to be the only fitting manner of disposing of sacred documents.

In 1896 Solomon Schechter investigated a *genizah* in the old Ezra synagogue in Cairo. In time, some 90,000 manuscripts were uncovered there, a cache so priceless that biblical scholars subsequently referred to the site simply as “the *genizah*.” This vast collection of liturgical, legal, commercial, and literary documents revolutionized the study of the medieval history of Palestinian and Middle Eastern Judaism. The manuscripts from the Cairo *genizah* are now preserved in many of the great libraries of the world.

GENTILE, one who is not Jewish. See ISRAEL.

GEORGE, SAINT \ˈjɔrj\ (fl. 3rd century CE; d. traditionally Lydda, Palestine [now Lod, Israel]; feast day April 23), early Christian martyr who during the Middle Ages became an ideal of martial valor and selflessness. He is the patron saint of England. The most famous legend told about him is the story of his rescuing a Libyan king's daughter from a dragon and then slaying the monster in return for a promise by the king's subjects to be baptized.

GERD \ˈgerd\, in Norse MYTHOLOGY, the daughter of the GIANT Gymir and the wife of FREY.

GERMANIC RELIGION

Beliefs and rit-

ual practices of the Germanic-speaking peoples before their conversion to CHRISTIANITY are collectively termed Germanic religion. Germanic culture extended, at various times, from the Black Sea to Greenland, and Germanic religion played an important role in shaping European civilization.

THE BEGINNING OF THE WORLD

Two stories of the beginning of the world are told in the three poems of the Elder EDDA, which were synthesized by Icelandic poet Snorri Sturluson in his *Prose Edda*. Snorri added certain details that were probably taken from sources now lost. The first story relates that in the beginning there was nothing but the void, GINNUNGAGAP. ODIN and his two brothers Vili and Vé raised up the earth, presumably from the sea, and when the sun touched the rocks vegetation sprang up. The gods came upon two tree trunks, ASKR AND EMBLA, and they endowed them with breath, reason, hair, and fair countenance, thus creating the first human couple.

In the second story, a primal GIANT, YMIR (Aurgelmir), grew out of drops spurted from the rivers called Élivágar. The giant's two legs gave birth to a six-headed son, and under his arms grew a boy and a girl. A primeval cow Audhumla (Auðumla) was formed from drops of melting rime. Four rivers of milk flowed from her udders, on which the giant Ymir fed. She licked salty stones into the shape of a man; this was Buri (Búri), the grandfather of Odin and his brothers. These three slaughtered Ymir and formed the earth from his body: his bones became rocks, his skull the sky, his blood the sea, his hair the trees, and his brain the clouds.

A central point in the cosmos is the evergreen ash, YGGDRASILL, whose three roots stretch to the worlds of death, frost-giants, and men. When RAGNARÖK (the end of the world) approaches, the tree will shiver and, presumably, fall. Beneath the tree stands a well, the source of Odin's wisdom.

THE GODS

The gods can be divided roughly into two tribes, AESIR and VANIR. At one time there was war between them, but when neither side could score a decisive victory

Snorri Sturluson's Prose Edda, 14th-century Swedish manuscript
Werner Forman—Art Resource

they made peace and exchanged hostages. In this way Njörd (Njörðr), his son FREY, and presumably his daughter, FREYJA, came to dwell among the Aesir in AS-GARD and to be accepted in their hierarchy.

Odin (Óðinn). Literary sources state that Odin was the foremost of the Aesir, but the limited occurrence of Odin's name in place-names seems to indicate that his worship was not widespread. Odin was essentially the sovereign god, whom the Germanic dynasties originally regarded as their divine founder. He was the god of inspired mental activity and poetic inspiration, and he was the one who brought the sacred mead of poetry to the world of the gods.

This beverage was first brewed from the blood of a wise god, KVASIR, who was murdered by dwarfs. It later came into the hands of a giant and was stolen by Odin, who flew from the giant's stronghold in the shape of an eagle, carrying the sacred mead in his crop to regurgitate it in the dwelling of the gods. Therefore, the early skalds designate poetry as "Kvasir's blood," or "Odin's theft."

Odin needs heroes in the otherworld to join him in the final battle against the forces of destruction at the time of Ragnarök. Therefore, fallen warriors on the battlefield are said to go to his castle VALHALLA, the "Hall of the Slain," where they live in bliss, training for the ultimate combat. He is a powerful magician, having hanged himself on the cosmic tree Yggdrasill for nine nights, pierced with a spear, to gain the mastery of the runes and the knowledge of magic SPELLS.

Odin was a shape-changer and was said to make spirit journeys to other worlds like a SHAMAN. As god of the dead he was accompanied by carrion beasts, two wolves and two ravens. These birds kept him informed of what happened in the world, adding to the knowledge he had acquired by relinquishing one eye in the well of Mímir under the tree Yggdrasill.

Thor (þórr). THOR was worshiped widely, especially toward the end of the pre-Christian period. He is essentially the champion of the gods, being constantly involved in struggles with the giants. Peasants worshiped Thor because he brought the rains that ensured good crops, and he seems to have been popular with warriors everywhere. He was well known as Thunor in the Saxon and Jutish areas in England; the Saxons on the mainland venerated him as Thunær.

On account of a shared association with thunder, the Germanic god *þunraz* (Thor) was equated with JUPITER by the Romans; hence, the name of the day, Thursday (German: *Donnerstag*), for *Jovis dies* (Italian: *giovedì*). Thor traveled in a chariot drawn by goats, and later evidence suggested that thunder was thought of as the sound of his chariot.

Balder (Baldr). BALDER, the god named in the west Norse sources as another son of Odin, was a favorite among the gods. Although nearly impervious to harm,

he was killed by the blind god Höd through a scheme of the trickster LOKI. In Danish sources, however, Balder and Höd were rivals for the hand of NANNA. After many adventures, Höd killed Balder with a sword. In order to secure vengeance, Odin raped a princess, Rinda (Rindr), who bore a son, Bous, who avenged Balder's death by killing Höd. Balder's name occurs rarely in place-names, and it does not appear that his worship was widespread.

Loki. Although he was counted among the Aesir, Loki's father was a giant (Fárbauti; "Dangerous Striker"). Loki seems to symbolize impulsive, but malicious, intelligence, and is a trickster figure who can

change sex and shape at will. Thus, he can give birth as well as beget offspring. The eight-legged horse of Odin, SLEIPNIR, was born of Loki in the shape of a mare. He fought with HEIMDALL in the shape of a seal for the possession of Freya's precious Brísingamen necklace, and he sneaked into Freyja's residence in the form of a fly to steal the necklace for Odin. According to an early poem, Odin and Loki had mixed their blood as foster brothers.

Heimdall. The god Heimdall (Heimdall[1]r) is rather enigmatic. His antagonism with Loki, with whom he struggles for the possession of the Brísingamen necklace, results in their killing each other in the Ragnarök, according to Snorri. Heimdall is of mysterious origin: he is the son of nine mothers, said to be sisters, all of whom bear names of giantesses, though they are mostly identified with the storm waves. Heimdall lives in Himinbjörg ("Heavenly Fells"), at the edge of the world of the Aesir. He guards Bifrost, the rainbow bridge to Asgard, the home of the gods, against the giants. Another myth makes Heimdall the father of mankind. He consorted with three women, from whom descend the three classes of men—serf (thrall), freeman (karl), and nobleman (jarl).

Tyr. TYR (Týr, Tír) must have been a major god in early times. He is said to be a son of Odin, but, according to one early poem, he was the son of a giant. In Roman times, he was equated with MARS, and hence *dies Martis* (Mars' day; French: *mardi*) became Tuesday (Icelandic: *Týs dagr*). In the Ragnarök he will face the hellhound Garm (Garmr), and they will kill each other. Tyr's cult is remembered in place-names, particularly those of Denmark.

Frigg. FRIGG is the wife of Odin. In the southern Germanic sources she appears as Friia or Frea, the spouse of Wodan. Snorri depicted her as the weeping mother of Balder, but historian Saxo Grammaticus described her as unchaste and makes her misconduct responsible for the temporary banishment of Odin. In Snorri's "Ynglinga saga," Odin's brothers Vili and Vé share her during his absence in a polyandric relationship. She has been equated with VENUS, and her name survives in Friday (Old English: Frigedæg) from *dies Veneris*, Venus' day.

(Opposite page) One-eyed Odin astride his steed Sleipnir; (left) Thor, armed with his hammer, battles the World Serpent; illustrations from the Poetic Edda, 13th-century Icelandic manuscript
The Granger Collection

The Vanir. The Vanir represent a distinct group of gods associated with wealth, health, and fertility. The best-known Vanir—Njörd, Frey, and probably Freyja—came as hostages to the Aesir. In his *Germania*, Roman historian Tacitus described among this number a goddess, NERTHUS, who was worshiped on an island that was probably in the Baltic Sea. Whatever symbol represented her was kept hidden in a grove and taken around once a year in a covered chariot. During her pageant, there was rejoicing and peace, and all weapons were laid aside. Afterward, she was bathed in a lake and returned to her grove, but those who participated in her LUSTRATION were drowned in the lake as a sacrifice.

Njörd, the father of the god Frey and the goddess Freyja, was essentially a god of the sea. Before coming to the Aesir, he was supposed to have begotten his two children with his (unnamed) sister. Since such incestuous unions were not allowed among the Aesir, Njörd afterward married SKADI (Skaði), daughter of the giant Thjazi. Evidence from place-names shows that Njörd was worshiped widely in Sweden and Norway, and he was one of the gods whom Icelanders invoked when they swore their most sacred OATHS.

Frey. Frey ("Lord") was also called Yngvi or Yngvi-Freyr, and this name suggests that he was the eponymous father of the north Germans whom Tacitus calls Ingvæones (Ingævones). A comparatively late source tells how the idol of Frey was carried in a chariot to bring fertility to the crops in Sweden. In an early saga of Iceland, where crops were little cultivated, Frey still appears as the guardian of the sacred wheatfield. His name often is found as the first element of a place-name, especially in eastern Sweden; the second element often means "wheatfield," or "meadow." The center of his cult was UPPSALA, and he was once said to be king of the Swedes. He was said to be ancestor of the Ynglingar, the Swedish royal family.

Freyja. Frey's sister, Freyja, was the goddess of love, sexuality, wealth, and fertility. She practiced a disreputable kind of magic, called *seiðr*, which she taught Odin. She was known under various names, some obscure such as Mardöll, and others, such as Sýr ("Sow"), referring to her association with animals. Taking half of those who fall in battle, Freyja had some affinity with the deities of death.

This relation of fertility goddesses with the otherworld is already illustrated by the Germanic mother goddesses or matronae, whose cult was widespread along the lower Rhine in Roman imperial times. They are often represented with CHTHONIC (Underworld) symbols such as the dog, the snake, or baskets of fruit. The same applies to the goddess Nehalennia, worshiped near the mouth of the Scheldt River.

Guardian spirits. Medieval writers frequently allude to female guardian spirits called *dísir* and *fylgjur*. Sacrifice to the *dísir* was offered at the beginning of winter, involving a festive meal and apparently a private ceremony, suggesting that the *dísir* belonged to one house, one district, or one family. In an Eddic poem the *dísir* are described as "dead women," and they may have been dead female ancestors, assuring the prosperity of their descendants.

The elves (*álfar*) also stood in fairly close relationship to men. An Icelandic Christian poet of the 11th century described a sacrifice to the elves early in winter among the Swedes. The elves lived in mounds or rocks. An old saga tells how the blood of a bull was smeared on a mound inhabited by elves.

Tyr with the wolf Fenrir, 6th-century bronze plaque from Torsslunds parish, Öland, Sweden; in the Statens Historiska Museet, Stockholm
Werner Forman—Art Resource

A good deal is told of land spirits (*landvoettir*). According to the pre-Christian law of Iceland, no one must approach the land in a ship bearing a dragonhead, lest he frighten the land spirits. An Icelandic poet, cursing the king and queen of Norway, enjoined the *landvoettir* to drive them from the land.

Dwarfs. Dwarfs (*dvergar*) were very wise and expert craftsmen who forged practically all of the treasures of the gods, in particular Thor's hammer. Snorri said that they originated as maggots in the flesh of the slaughtered giant Ymir. Four of them are supporting the sky, made of Ymir's skull. They may have been originally nature spirits or demonic beings, living in mountain caves, but they generally were friendly to man.

WORSHIP

Rites often were conducted in the open or in groves and forests. The HUMAN SACRIFICE to the tribal god of the Semnones, described by Tacitus, took place in a sacred grove; other examples of sacred groves include the one in which Nerthus usually resides. Tacitus does, however, mention temples in Germany, though they were probably few. Old English laws mention fenced places around a stone, tree, or other object of worship. In Scandinavia, sacrifice was brought to groves and waterfalls.

The word *hof*, commonly applied to temples in the literature of Iceland, seems to belong to the later rather than to the earlier period; one temple is described as having two compartments, one of which contained the images of the gods. Temples on the mainland of Scandinavia were probably built of wood, though the famous temple at Uppsala, Sweden, was said to have been covered in gold.

Sacrifice took different forms. A man might sacrifice an ox to a god or smear an elf mound with bull's blood. Roman authors mention the sacrifice of prisoners of war to the gods of victory. All kinds of cattle might be slaughtered, and blood might be sprinkled inside and outside dwellings; the meat was consumed and toasts were drunk to the gods. Every nine years a great festival was held at Uppsala, and sacrifice was conducted in a sacred grove that stood beside the temple. The victims, human and animal, were hung on trees. One of the trees in this grove was holier than all the others and beneath it lay a well into which a living man would be plunged.

ESCHATOLOGY AND DEATH CUSTOMS

No unified conception of the afterlife is known among the Germanic religions. Some may have believed that fallen warriors would go to Valhalla to live happily with Odin until the Ragnarök, but it is unlikely that this belief was widespread. Others seemed to believe that there was no afterlife. The presence of ships or boats in graves, and occasionally of chariots and horses, may suggest that the dead were thought to go on a journey to the otherworld. Some records imply that the dead needed company; a wife, mistress, or servant would be buried with them. Some stories suggest the existence of a belief in rebirth. On the whole, beliefs in afterlife seem rather gloomy: the dead pass, perhaps by slow stages, to a dark, misty world called NIFLHEIM (Niflheimr).

The final struggle. The end of the world is designated Ragnarök ("Fate of the Gods")—in German *Götterdämmerung*, ("twilight of the gods"). Through their own efforts, and especially because of the strength of Thor, the gods have kept the DEMONS of destruction at bay. The wolf monster FENRIR and Loki have been chained, but they will break loose. Giants and other monsters will attack the world of gods and humans. Odin will fight the wolf and lose his life, to be avenged by his son Vidar (Viðarr), who will pierce the beast to the heart. According to another Eddic poem, the wolf will swallow Odin and, in revenge, his son will tear the jaws of the beast asunder. Thor will face the World Serpent, and they will kill each other. The sun will turn black, the stars vanish, and fire will play against the firmament. The earth will sink into the sea but will rise again, purified and renewed. Unsown fields will bear wheat. Balder and his innocent slayer, Höd, will return to inhabit the dwellings of gods. Worthy people will live forever in a shining hall thatched with gold.

GERSHOM BEN JUDAH \ˈger-shəm-ben-ˈjü-də\ (b. c. 960, Metz, Lorraine [now in France]—d. 1028/40, Mainz, Franconia [Germany]), eminent rabbinical scholar who proposed a far-reaching series of legal enactments (*taqqanot*) that profoundly molded the social institutions of medieval European JUDAISM. He was called the light of the exile and also Rabbenu (“Our Teacher”).

As head of the rabbinic academy at Mainz, he was a pioneer in bringing the learning of the Talmudic academies at Babylon and Palestine to western Europe. At synods of community leaders he proposed his *taqqanot*, which included the prohibition of polygamy (permitted by biblical and Talmudic law but already mostly unpracticed), and interdiction of the husband’s right to divorce without the wife’s consent.

He wrote many *RESPONSA* (authoritative answers to questions about Jewish law), worked on a critical text of the TALMUD and the Masora (6th–10th-century annotated texts) and transmitted to his students an extensive oral commentary on the Talmud. All subsequent rabbinic students in western Europe considered themselves, in the words of the renowned medieval French Jewish commentator RASHI (1040–1105), “students of his students.”

GET \ˈget/, also spelled *gett*, Hebrew *geṭ* (“bill of divorce”), plural *gittin* \gē-ˈtēn, ˈgi-tin\, Jewish document of divorce written in Aramaic according to a prescribed formula (day of the week, day of the month, and year reckoned from the creation of the world, city of husband’s birth and its exact location, name of husband, city of husband’s residence and its exact location, name of wife, city of wife’s residence and its exact location, statement freeing wife to remarry whomsoever she chooses, signatures of two witnesses). Orthodox and Conservative Jews recognize it as the only valid instrument for severing a marriage bond. Rabbinic courts outside Israel require a civil divorce before a *get* is issued. Reform Jews disregard Talmudic divorce laws and hence require no *get* but simply accept the ruling of a civil divorce court as sufficient in itself.

A religious divorce becomes effective when the husband, having obtained a *get* from a rabbinic court, drops the document into the cupped hands of his willing wife in the presence of two witnesses and the three members of the court.

Though, strictly speaking, Jewish religious law permits a man to divorce his wife at any time for any reason, the rights of the women are protected by stipulations written into the marriage contract (*KETUBAH*), and, since the 11th century, divorce has not been granted in the ASHKENAZI (German) rite without the wife’s consent. In practice, therefore, the only basic requirement for divorce is the mutual consent of husband and wife.

Under certain special circumstances, such as APOSTASY, impotence, insanity, or refusal to cohabit, Jewish law entitles one party to compel the other to agree to a divorce.

GETHSEMANE \geth-ˈse-mə-nē\, garden across the Kidron Valley on the Mount of Olives (Hebrew *Har ha-Zetim*), a mile-long ridge paralleling the eastern part of Jerusalem, where JESUS is said to have prayed on the night of his arrest before his CRUCIFIXION. The name Gethsemane (Hebrew *gat shemanim*, “oil press”) suggests that the garden was a grove of olive trees in which was located an oil press.

Though the exact location of Gethsemane cannot be determined with certainty, Armenian, Greek, Latin, and Russian churches have accepted an olive grove on the western slope of the Mount of Olives as the site. Another tradition

locates Gethsemane at a place now called the Grotto of the Agony, near a bridge that crosses the valley. At another possible location, south of this site in a garden containing old olive trees, is a Latin church erected by FRANCISCAN monks on the ruins of a 4th-century church.

GHAYBA \ˈgī-bə\ (Arabic: “absence,” or “concealment”), Islamic doctrine, especially among such SHĪʿITE groups as the ITHNĀ ʿASHARIYA, or “Twelvers.” The term refers to the disappearance of the 12th and last IMAM (leader), MUHAMMAD AL-MAHDĪ AL-HUJJAH, in 878.

Ghayba is applied loosely to anyone whom God has withdrawn from the world and kept invisible to the eyes of ordinary men. The life of such a blessed person is thought to be miraculously prolonged by God through many generations. The Shīʿites maintain that their imams, even though invisible, still live and sometimes return to human society to maintain order and to guide their followers along the right path. The *ghayba* of the MAHDĪ (“divinely guided one”) will end when the Mahdī finally appears in the last days of the world.

The Sufis understood *ghayba* to mean the absence in the heart of all thoughts except those of God. It is the *fanā* (“passing away”) of the carnal self, not a goal in itself but rather a stage that leads naturally to *ḥuḍūr* (presence) in God. (See SUFISM.)

GHAZĀLĪ, AL- \,āl-gā-ˈza-lē\, also spelled Al-Ghazzālī, in full Abū Hāmid Muhammad ibn Muhammad al-Ṭūsī al-Ghazālī (b. 1058, Ṭūs, Iran—d. Dec. 18, 1111, Ṭūs), Muslim theologian and mystic whose great work, *Ihyāʾ ʿulūm al-dīn* (“The Revival of the Religious Sciences”), sought to reconcile the mysticism of SUFISM with the SUNNI tradition of Islamic learning.

Al-Ghazālī was educated in his native city, then in Jorjān, and finally at Nishapur, where his teacher was al-Juwaynī. After his teacher’s death in 1085, al-Ghazālī was invited to go to the court of Nizām al-Mulk, the powerful vizier of the Seljuq SULTANS, who in 1091 appointed him chief professor in the Nizāmīyah college in Baghdad. While lecturing, al-Ghazālī was also mastering and criticizing the Neoplatonist philosophies of AL-FĀRĀBĪ and IBN SĪNĀ (Avicenna). He passed through a spiritual crisis, and in November 1095 he abandoned his career and left Baghdad on the pretext of going on PILGRIMAGE to MECCA. He disposed of his wealth and adopted the life of a poor Sufi, or mystic. After spending some time in Damascus and Jerusalem, with a visit to Mecca in November 1096, al-Ghazālī settled in Ṭūs, where Sufi disciples joined him in a virtually monastic communal life. In 1106 he was persuaded to return to teaching at the Nizāmīyah college at Nishapur. A “renewer” of the life of ISLAM was expected at the beginning of each century, and his friends argued that he was the “renewer” for the century beginning in September 1106. He continued lecturing in Nishapur at least until 1110.

More than 400 works are ascribed to al-Ghazālī, but he probably did not write nearly so many. At least 50 genuine works are extant. Al-Ghazālī’s greatest work is *Ihyāʾ ʿulūm al-dīn*. In 40 “books” he explained the doctrines and practices of Islam and showed how these can be made the basis of a profound devotional life, leading to the higher stages of Sufism, or MYSTICISM. The relation of mystical experience to other forms of cognition is discussed in *The Niche for Lights*. Al-Ghazālī’s abandonment of his career and adoption of a mystical, monastic life is defended in the autobiographical work *The Confessions of Al Ghazzālī*.

His philosophical studies began with treatises on logic and culminated in the *Incoherence of the Philosophers*, in which he defended Islam against such philosophers as Ibn Sīnā who sought to demonstrate certain speculative views contrary to accepted Islamic teaching. In preparation for this major treatise, he published an objective account of *Maqāṣid al-falāsifah* ("The Aims of the Philosophers"; *i.e.*, their teachings). This book was influential in Europe and was one of the first to be translated from Arabic to Latin (12th century).

Most of his activity was in the field of jurisprudence and theology. Toward the end of his life he completed a work on general legal principles, *Al-Mustaṣfā* ("The Choice Part," or "Essentials"). His compendium of standard theological doctrine, *Al-Iqtīṣād fī al-ī'tiqād* ("The Just Mean in Belief"), was probably written before he became a mystic, but there is nothing in the authentic writings to show that he rejected these doctrines, even though he came to hold that theology was inferior to mystical experience.

GHOST DANCE, either of two distinct religious movements that represented attempts of Native Americans (*see* NATIVE AMERICAN RELIGIONS) in the western United States to rehabilitate their traditional cultures. Both arose from Northern Paiute prophet-dreamers in western Nevada, who announced the imminent return of the dead (hence "ghost"), the ousting of the whites, and the restoration of Indian lands, food supplies, and way of life. These ends

Buckskin Ghost Dance dress with painted design of birds, turtle, and stars, Arapaho

Museum of the North American Indian, New York—The Bridgeman Art Library

would be hastened by the dances and songs revealed to the prophets in their visits to the spirit world and also by strict observance of a moral code that forbade war against Indians or whites. Many dancers fell into trances and received new songs from the dead they met in visions or were healed by Ghost Dance rituals.

The first Ghost Dance developed in 1869 around the trances of Wodziwob ("Gray Hair") and in 1871–73 spread to California and Oregon tribes; it soon died out or was transformed into other cults. The second derived from WOVOKA ("The Cutter"; c. 1856–1932), whose father, Tāvibō ("White Man"), a Northern Paiute, had assisted Wodziwob. During a solar eclipse in January 1889, Wovoka had a vision of dying, speaking with God in heaven, and being commissioned to teach the new dance and to convey the millennial message that the dead would have a reunion with the living. Subsequently he displayed STIGMATA on hands and feet, which encouraged belief in him as a new MESSIAH, come to the Indians.

The Ghost Dance, a ritual round-dance conducted over four or five consecutive nights, spread to various tribes, including the Arapahoe, Caddo, Cheyenne, and Kiowa. It was also taken up by the Sioux, where its arrival coincided with the Sioux uprising of 1890 that culminated in their massacre by U.S. troops at Wounded Knee, S.D. The Ghost Dance was wrongly blamed for this uprising.

The second Ghost Dance continued in the 20th century in attenuated form among a few tribes. Both religious movements helped to reshape traditional shamanism (a belief system based on the healing and psychic transformation powers of the SHAMAN, or MEDICINE MAN).

GHOUL \ˈɡüɪl\, *Arabic* ghūl, in popular legend, demonic being believed to inhabit burial grounds and other deserted places. In ancient Arabic MYTHOLOGY, *ghūls* belonged to a diabolic class of JINN (spirits) and were said to be the offspring of IBLIS. They were capable of constantly changing form, but their presence was always recognizable by their unalterable sign: ass's hooves.

Considered female by the ancients, the *ghūl* was often confused with the *sīlā*, also female; the *sīlā*, however, was a witchlike species of jinn, immutable in shape. A *ghūl* stalked the desert, often in the guise of an attractive woman, trying to distract travelers, and, when successful, killed and ate them. The sole defense that one had against a *ghūl* was to strike it dead in one blow; a second blow would only bring it back to life again.

The *ghūl*, as a vivid figure in the Bedouin imagination, appeared in pre-Islamic Arabic poetry, notably that of Ta'abbata Sharran. In North Africa it was easily assimilated into an ancient Berber FOLKLORE already rich in DEMONS and fantastic creatures. Modern Arabs use *ghūl* to designate a human or demonic cannibal and frequently employ the word to frighten disobedient children.

Anglicized as "ghoul," the word entered English tradition and was further identified as a grave-robbing creature that feeds on dead bodies and on children. In the West ghouls are thought to assume disguises and to set fires at night to lure travelers away from the main roads.

GHULĀM AḤMAD, MĪRZĀ \ˈɡü-lam-ˈaḥ-mad\ (b. c. 1839, Qādiān, India—d. May 26, 1908, India), Indian Muslim leader who founded an important Muslim sect known as the AḤMADĪYA.

The son of a prosperous family, Ghulām Aḥmad received an education in Persian and Arabic, after which he led a life

of contemplation and religious study. He claimed to hear voices and declared in 1889 that he had had a revelation in which God had entitled him to receive *bay'at* (an oath of allegiance). Soon he gathered a small group of devoted disciples. From this point on his influence and following steadily increased, as did opposition from the orthodox Muslim community.

Ghulām Aḥmad claimed not only that he was the Mahdi and a reappearance (*burūz*) of the Prophet MUHAMMAD but also that he was JESUS CHRIST and the Hindu god KRISHNA returned to earth. A number of his teachings were incorporated into the beliefs of the Aḥmadiya. While he made an attempt to copy the centralized missionary organizations and schools of the Christians, he had little interest in reconciling Christian and Muslim religious doctrine and evidently wanted only to be more effective in his struggle to supplant Western influences. After his death, his devotees formed a community of believers and elected a *khalīfa* (CALIPH) to lead them.

GHULĀT \ˈgū-lāt\ (Arabic, “extremists”), in ISLAM, a designation for sectarian groups holding beliefs not conforming to doctrines held by dominant SUNNI and SHĪʿITE religious authorities. Their views are heterogeneous and include beliefs in God’s human incarnation, ANTHROPOMORPHISM (*tashbīḥ*), the existence of prophets after MUHAMMAD, transmigration of souls (*tanāsukh*), and the disappearance (GHAYBA) and return (*rajʿa*) of messianic leaders.

The beginnings of the *ghulāt* are usually identified with ‘Abd Allāh ibn Sabā al-Ḥimyarī, a 7th-century convert from JUDAISM, who addressed ‘ALĪ as God and maintained that ‘Alī never really died and would return from heaven to initiate a messianic age. Such beliefs appear to have developed in Iraq, where Jewish messianic movements were also proliferating, but were not considered “extreme” until several centuries later. Many *ghulāt* ideas came to be associated with ‘Alī (the fourth CALIPH) and other relatives of Muhammad, forming a doctrinal matrix for Shīʿite tenets. Thus, although Twelver (Imami) Shīʿite doctrine rejected anthropomorphism, divinization of the IMAMS, and transmigration, it embraced belief in the messianic 12th imam, the MAHDI, as an essential principle.

Some strands of SUFISM have been branded as “extreme,” and in the late 20th century the term was also used pejoratively by proponents of the status quo to describe radical movements that were seeking to replace existing governments with new Islamic ones.

GIANT, huge mythical being, usually humanlike in form, often associated with barbarism and disorder. The term derives (through Latin) from the Giants (Gigantes) of Greek MYTHOLOGY, who were savage creatures often depicted with men’s bodies terminating in serpentine legs. According to the Greek poet Hesiod, they were offspring of GAEA and OURANUS, born when Gaea (the Earth) absorbed the blood of Ouranus’ severed genitals. The Gigantomachy was a desperate struggle between the Giants and the Olympians. The gods finally prevailed through the aid of HERACLES, and the Giants were slain. Many of them were believed to lie buried under mountains and to indicate their presence by volcanic fires and earthquakes. The Gigantomachy became a popular artistic theme, interpreted as a symbol of the triumph of Hellenism over barbarism, of good over evil.

Medieval European towns often had tutelary giants whose effigies were carried in PROCESSION. In London the giant figures of Gog and Magog are said to represent two Cor-

nish giants made captive by Brutus, the legendary founder of Britain. The 40-foot effigy of Druon Antigonus at Antwerp and the 22-foot figure of Gayant at Douai, France, preserve similar traditions.

In most European tales, giants appear as cruel and stupid, given to CANNIBALISM, and often one-eyed. Heroes who killed them often did so more by wit than by strength. Although kindly giants occur (e.g., Rūbezah, who lived in the Bohemian forest), most were feared and hated; but marriages between their daughters and the hero were possible.

Hill figures, such as the giant of Cerne cut in the chalk near Cerne Abbas, Dorset, as well as megalithic monuments and long BARROWS, suggested giant builders of the past; and an ancient European tradition held that people had once been taller and stronger in a golden age.

GIDEON \ˈgi-dē-ən\, also spelled Gedeon, also called Jerubbaal \ˌjer-ə-ˈbāl, -ˈbäl, ˈjer-ə-,\, or Jerobaal, a judge and hero-liberator of ISRAEL whose deeds are described in the Book of Judges. The author apparently juxtaposed two traditional accounts from his sources in order to emphasize Israel’s MONOTHEISM and its duty to destroy IDOLATRY. Accordingly, in one account Gideon led his clansmen of the tribe of MANASSEH in slaying the MĪDIANITES (Judges 6:11–7:25); but, influenced by the cult of his adversaries, he fashioned an idolatrous image from the spoils captured from the Midianites and induced Israel into immorality (Judges 8:24–28). In the parallel version he replaced the idol and altar of the local deity BAAL with the worship of YAHWEH, who consequently inspired Gideon and his clan to destroy the Midianites and their chiefs as a sign of Yahweh’s supremacy over Baal (Judges 6:25–32). The story is also important for showing the development of a monarchy in Israel under Gideon’s son Abimelech (Judges 9).

GIKATILLA, JOSEPH \hē-kä-ˈtēl-yä\ (b. 1248, Medinaceli, Castile, Spain—d. c. 1305, Peñafiel), major Spanish Qabbalist whose writings influenced those of MOSES DE LEÓN, presumed author of the SEFER HA-ZOHAR (“Book of Splendor”), an important work of Jewish MYSTICISM. Gikatilla’s early studies of philosophy and the TALMUD were a continuing influence on his attempt to reconcile philosophy with the QABBALAH.

Gikatilla was a pupil of Abraham Abulafia, a profound student of the Qabbalah. Under his influence, the 26-year-old Gikatilla wrote his seminal *Ginnat e’goz* (“Nut Orchard”), taking his title from the Song of Solomon 6:11. In Gikatilla’s lexicon, the nut is an emblem of mysticism itself, while *Ginnat* employs the initial letters of three different names for methods of esoteric EXEGESIS. Gikatilla’s book greatly influenced his contemporary and probable friend, Moses de León. Gikatilla was, in turn, influenced by the *Zohar*, as evidenced by his next major work, *Sha’are’ora* (“Gates of Light”), an account of Qabbalist symbolism.

GILGAMESH \ˈgil-gə-mesh, gil-ˈgä-məsh\, the best known of all ancient heroes of MESOPOTAMIAN RELIGION.

The fullest extant text of the Gilgamesh epic is on 12 incomplete Akkadian-language tablets found at Nineveh in the library of the Assyrian king Ashurbanipal (reigned 668–627 BCE). The gaps that occur in the tablets have been partly filled by fragments found elsewhere. In addition, five short poems in Sumerian are known from tablets that were written during the first half of the 2nd millennium BCE; the poems have been entitled “Gilgamesh and Huwawa,” “Gilgamesh and the Bull of Heaven,” “Gilgamesh and Agga of

Kish," "Gilgamesh, Enkidu, and the Nether World," and "The Death of Gilgamesh."

The Gilgamesh of the poems and of the epic tablets was probably the Gilgamesh who ruled at Uruk in southern Mesopotamia sometime during the first half of the 3rd millennium BCE and who was thus a contemporary of Agga, ruler of Kish. Gilgamesh of Uruk was also mentioned in the Sumerian list of kings as reigning after the flood. There is, however, no historical evidence for the exploits narrated in poems and epic.

The Ninevite version of the epic begins with a prologue in praise of Gilgamesh, part divine and part human, the great builder and warrior, knower of all things on land and sea. In order to curb Gilgamesh's seemingly harsh rule, the god ANU caused the creation of ENKIDU, a wild man who at first lived among animals. Soon, however, Enkidu was initiated into the ways of city life and traveled to Uruk, where Gilgamesh awaited him. Tablet II describes a trial of strength between the two men in which Gilgamesh was the victor; thereafter, Enkidu was the friend and companion (in Sumerian texts, the servant) of Gilgamesh. In Tablets III–V the two men set out together against Huwawa (Humbaba), the divinely appointed guardian of a remote cedar forest, but the rest of the engagement is not recorded in the surviving fragments. In Tablet VI Gilgamesh, who had returned to Uruk, rejected the marriage proposal of ISHTAR, the goddess of love, and then, with Enkidu's aid, killed the divine bull that she had sent to destroy him. Tablet VII begins with Enkidu's account of a dream in which the gods Anu, EA, and SHAMASH decided that he must die for slaying the bull. Enkidu then fell ill and dreamed of the "house of dust" that awaited him. Gilgamesh's lament for his friend and the state funeral of Enkidu are narrated in Tablet VIII. Afterward, Gilgamesh made a dangerous journey (Tablets IX and X) in search of UTNAPISHTIM, the survivor of the Babylonian flood, to learn from him how to escape death. He finally reached Utnapishtim, who told him the story of the flood and showed him where to find a plant that would renew youth (Tablet XI). But after Gilgamesh obtained the plant, it was seized by a serpent, and Gilgamesh unhappily returned to Uruk. An appendage to the epic, Tablet XII, relates the loss of objects called *pukku* and *mikku* (perhaps "drum" and "drumstick") given to Gilgamesh by Ishtar. The epic ends with the return of the spirit of Enkidu, who promised to recover the objects and then gave a grim report on the Underworld.

GINNUNGAGAP \ˈgin-nūŋ-gä-gäp, ˈyin-\, in Norse and Germanic mythology, the void in which the world was created. The story is told, with much variation, in three poems of the *Elder Edda*, and a synthesis of these is given by Snorri Sturluson in his *Prose Edda*.

GIRDLE TIE, also called Blood of Isis, in EGYPTIAN RELIGION, protective AMULET formed like a knot and made of gold, carnelian, or red glazed-ware. Most samples of the girdle tie have been found tied around the necks of mummies; the amulets were intended to protect the dead from all that was harmful in the afterlife.

GIRI \ˈgē-rē\ ("duty," "obligation"), traditional Japanese ideal of social obligation and reciprocity that still informs contemporary social life in Japan. A concept that developed in relation to feudal codes of behavior that defined the relationship between a lord and his subjects (especially the warrior class, or samurai), *giri* was a principle of loyalty and honor that demanded the repayment of social debts before any consideration was given to personal feelings, or *ninjō*. The plays of Chikamatsu Monzaemon (1653–1725) and the films of Ozu Yasujiro (1903–63) are especially illustrative of the moral tensions between *giri* and *ninjō*.

GITA PRESS \ˈgē-tā\, HINDUISM's largest printer, publisher, and distributor of religious literature. Envisaged as the Hindu equivalent of a Christian Bible society, Gita Press was established on April 29, 1923, in the town of Gorakhpur by altruistic businessmen under the direction of Jayadayal Goyandka (1885–1965), who was joined several years later by Hanumanprasad Poddar (1892–1971). This nonprofit organization made nominally priced copies of Hindu sacred texts accessible on an unprecedented scale, with "neutral," simple-to-follow translations, abridgments, and commentaries written in the Hindi vernacular. The Gita Press's religious-text publication program has been the version of the Hindu canon most widely available in India during the past fifty years.

Distributed through Gita Press stores, mobile vans, and public outlets, the press's texts gained an established familiarity as sources of important textual material and as objects to be handled in prescribed, ritualistic ways. By the closing years of the 20th century, the press had published some 48 million copies of the RĀMCHARITMĀNAS; 40 million copies of the BHAGAVAD GĪTĀ; 15 million copies of Hindu classics such as the PURĀṆAS and UPANISHADS; as well as a staggering 147 million scripture-based booklets, pamphlets, and tracts dealing with various topics relating to spiritual growth. These were written mostly by Poddar, Goyandka, and the present head trustee of the press, Swami Ramsukhdas (b. 1912).

The magazine *Kalyān*, founded by Poddar in 1926, is perhaps one of Gita Press's best-known publications. The most widely read religious periodical ever published in India, *Kalyān* currently has over 230,000 subscribers and an estimated pass-on rate of 10 times that figure. As such, the magazine remains at the forefront of populist efforts to proclaim

GĪTAGOVINDA

Hindu solidarity (*saṅgāthan*), pious self-identity, and “normative” cultural values.

GĪTAGOVINDA \ˈgē-tə-gō-ˈvin-də\ (Sanskrit: literally, “Govinda of [*i.e.*, celebrated in] Song”), lyrical poem celebrating the romance of the divine cowherd KRISHNA and his beloved, RĀDHĀ. The poem was written in Sanskrit by JAYADEVA, who was attached to the Bengali court of King Lakṣmaṇa Sena (late 12th century). The name Govinda is a Middle Indo-Aryan descendant of Sanskrit *Gopendra* (“chief cowherd”), an epithet of Krishna.

The highly original form of the poem, which inspired many later imitations, intersperses the recitative stanzas with 24 songs, usually 8 stanzas in length. The religious drama of the worshiper’s yearning for God is expressed through the idiom of Rādhā and Krishna’s courtship and love. Central to the plot is the mutual longing of these two and the efforts of a go-between to reconcile the profligate Krishna with the sulking anger of his favorite lover, Rādhā. Ultimately this is achieved, and the poem concludes with a celebration of her “victory” over him. The *Gītagovinda* thus became a major document for religious communities whose piety focuses on Rādhā as much as on Krishna, such as the one established by CAITANYA, the 15th–16th-century Bengali saint.

The *Gītagovinda* is sung today at *bhajan* and *kīrtan* sessions (gatherings for devotion through song) throughout India. Until recently, it was also performed as temple dance, and its verses continue to inspire dances in various regional styles, especially BHĀRATA NĀṬYA and *Orissi*, wherever Indian culture flourishes. The *Gītagovinda* is one of the most frequently illustrated Indian texts.

GLAUCUS \ˈglō-kəs\ (Greek: “Gleaming”), name of several figures in Greek mythology, the most important of whom were the following:

Glaucus, surnamed Pontius, was a sea divinity. Originally a fisherman and diver of Boeotia, he ate a magical herb and leaped into the sea and was changed into a god and endowed with the gift of PROPHECY. Another version made him spring into the sea for love of the sea god Melicertes, with whom he was often identified. In art he was depicted as a merman covered with shells and seaweed.

Glaucus of Potniae near Thebes was the son of SISYPHUS (king of Corinth) by his wife Merope and father of the hero BELLEROPHON. According to one legend, he fed his mares on human flesh and was torn to pieces by them.

Glaucus, the young son of the Cretan king MINOS and his wife Pasiphaë, fell into a jar of honey and was smothered. The seer Polyeidus discovered the child but on confessing his inability to restore him to life was shut up in a vault with the corpse. There he killed a serpent and, seeing it revived by a companion that laid a certain herb upon it, brought the dead Glaucus back to life with the same herb.

Glaucus, grandson of Bellerophon, was a Lycian prince who assisted PRIAM, king of Troy, in the Trojan War. When he found himself opposed in combat to his friend DIOMEDES, they ceased fighting and exchanged armor. Since the equipment of Glaucus was golden and that of Diomedes bronze, the expression “gold for bronze” (*Iliad*, vi, 236) came to be used proverbially for a bad exchange.

GNOSTICISM \ˈnäs-tə,-si-zəm\, term based on the Greek word *gnosis* (“knowledge”) and first coined in the 17th century by the Protestant Henry More. He understood Gnosticism to be false PROPHECY that seduces Christians to IDOLA-

Rādhā and Krishna in the garden, miniature in the Rajasthani style from a c. 1575 version of the *Gītagovinda*

Scala—Art Resource

TRY, and he used the term to denigrate ROMAN CATHOLICISM by calling it “a spice of the old abhorred Gnosticism”—in short, he used the term as a generic term for ancient Christian HERESY. In the following centuries, church historians associated Gnosticism especially with the groups and teachings denounced by 2nd- and 3rd-century Christian heresy-fighters, notably IRENAEUS, CLEMENT OF ALEXANDRIA, TERTULLIAN, HIPPOLYTUS, EPIPHANIUS, and the Neoplatonist philosopher Plotinus. Reliance on these hostile reports led historians to describe Gnosticism as a radically dualistic, world-denying, and body-hating tradition that emphasized salvation through esoteric revelation and mystical spirituality. The term Gnosticism has also come to be used without much precision in psychology, literary studies, art, politics, and philosophy, to refer to any religion of salvation by mystical knowledge or any extreme form of DUALISM, especially anti-cosmic and ascetic forms of religious expression.

In the late 19th and 20th centuries, new acquaintance with Mandaeans and Manichaean texts, as well as discoveries of Coptic texts from Egypt, especially the Nag Hammadi codices, led to a reconsideration of Gnosticism. Rather than seeing it as a single tradition with one origin and line of development, the new evidence points toward enormous variety, leading to new groupings of texts and traditions, each with different intellectual and sociological histories.

Some of the Coptic texts represent lesser-known varieties of ancient CHRISTIANITY—for example, the *Gospel of Thomas* (a collection of the sayings of Jesus) or the *Gospel of Mary* (which portrays MARY MAGDALENE as a leading apostle). Both of these texts emphasize the importance of Jesus’ teachings for salvation, not his death and RESURRECTION. Another category of texts belongs to groups with ties to the 2nd-century Christian teacher VALENTINUS, including a copy of his own writing *The Gospel of Truth*. Other texts are best considered as belonging to distinct religious traditions, especially Hermeticism, Mandaeism, and MANICHAISM.

The materials with the best claim to the designation “Gnosticism” are the Sethian texts, first grouped together by Hans-Martin Schenke on the basis of intellectual and ritual similarities. Bentley Layton has strengthened the social-historical basis of this category by showing a connection between the Sethian texts and an ancient group known as the *gnostikoi* (“Gnostics”).

Often characterized as “syncretistic,” Sethian myth is a product of ancient urban pluralism. Sethian mythmakers shaped a distinctive view of the world out of the most prestigious religious and intellectual materials available to them. A good example is *The Apocryphon of John*, a grand narrative encompassing the nature of God and the divine world, the origins of the universe and humanity, the nature of evil, and salvation.

The Apocryphon of John envisions the transcendent God and the Divine Realm as an ideal of absolute goodness, truth, and stability. God is the divine source and ruler of everything above. Where Sethian myth departs radically from other ancient myth is in conceiving of a tragic rupture in the outpouring of divine being in creation. According to the story, the youngest of the heavenly beings, Sophia, decided to create alone without the knowledge or consent of the Spirit or her male partner. Sophia’s child, the deficient product of her ignorance and passion, was ignorant, disobedient, and willfully arrogant. He created ARCHONS and ANGELS to serve him and falsely declared himself to be the only true God.

A dramatic retelling of the GENESIS creation story follows in which God appears as a wicked being who sought to dominate humanity unjustly by enslaving them to the passions and mortality of physical existence, withholding moral knowledge and eternal life. God was jealous of the humans because they were superior to him, created in the likeness of the true God above. Sophia had planted the divine spirit within them in order to save them from this unjust domination. Male and female saviors (including Christ) were sent from the world above to overcome the deception of the world rulers and instruct humanity in the knowledge of the true God and humanity’s own divine nature. The saviors worked to protect people from the assaults of the wicked powers who rule the world. In the end, all humanity (except apostates) are destined for salvation. At death, they will leave the prison of the body and the world and return to the divine rule of the transcendent God, their true father.

According to this story, evil is primarily a matter of unjust rule, a rupture caused by disobedience to appropriate authority. The problem addressed by Sethian myth is a strongly perceived gap between the ideals of its age and the realities of lived experience. Sethian myth is the product not of rebellion but of a sense of betrayal. It shows a deep commitment to the values of its age, including an uncompromising belief in the goodness of God and a utopian desire for justice. But embedded in this message of hope for salvation is a sharp social criticism. For *The Apocryphon of John*, practices of spiritual development went hand-in-hand with condemnation of the injustices of the world.

The Sethians’ biting criticism of the world order did not go unnoted. The myth’s portrayal of the flawed nature of the world and its creator offended nearly everyone: Jewish RABBIS, Christian theologians, and Neoplatonic philosophers. In time, some Sethian thinkers (such as Marsanes and Allogenes) would soften their criticism and turn their focus more deeply upon the cultivation of inner spirituality and mystical knowledge. But the ire they aroused would leave them branded as the most exemplary form of heresy the Western world ever produced.

GOBIND SINGH \gō-'bin-də-'siŋ-gə, 'gō-,bind-'siŋ\, *original name* Gobind Rāi (b. 1666, Patna, Bihar, India—d. Oct. 7, 1708, Nānded, Maharashtra), 10th and last Sikh GURŪ (1675–1708), known for his creation of the KHĀLSĀ, a purified and reconstituted Sikh community, and for compiling the ĀDI GRANTH in its canonical form.

Gobind Singh was the son of Gurū TEGH BAHĀDUR and was born during one of his father’s travels through India. He was brought to the Punjab in 1672 and given training in the martial arts. Gobind Singh had to deal with the tragedy of his father’s execution in Delhi when he was nine years old, and as he entered adulthood he was at constant war with the surrounding chiefs in the Anandpur area. Under his leadership, however, the Sikh court at Anandpur flourished; at its height, 52 poets were in residence.

At the turn of the 18th century the Hindu chiefs opposing Gobind Singh sought the help of the Mughal authorities at nearby Sirhind, and in 1704 they forced the Sikhs out of Anandpur. In the melee that followed Gurū Gobind Singh’s two elder sons died fighting, and his mother and two younger sons were captured. The sons were later executed by order of the governor of Sirhind, upon which his mother succumbed, in all likelihood from grief.

From his new base at Talwandi Sabo, now called Damdama, the Gurū wrote a defiant letter in verse, known as the *Zafarnāmā*, to Emperor Aurangzeb, accusing him of betraying proper ethical standards. The emperor invited the Gurū to meet him but died before the meeting could take place. In the battle of succession that ensued, Gurū Gobind Singh supported Prince Mauzam, and, after Mauzam became Emperor Bahādur Shah, Gobind Singh accompanied him on military campaigns to South India. The Gurū had hoped to have Bahādur Shah’s permission to return to Anandpur, but, before that hope was realized, Gobind Singh became the target of an assassination attempt and died at the age of 42.

Through two monumental innovations, Gurū Gobind Singh had a profound impact on Sikh history. First, he established the Khālsā (“pure”), the egalitarian community that was to provide SIKHISM with its central political and religious definition and with the spirit necessary to pursue its military goals. Second, at the time of his death, he discontinued the office of the personal Gurū, decreeing that its authority should thereafter reside with the teachings of the *Ādi Granth*, now the *Srī Gurū Granth Sāhib*. Following his wishes, the community replaced the office of the Gurū with the twin principles of the Gurū Granth and the Gurū Panth (“the community as the Gurū”). The implications of this change were that the decisions (*gurmata*) reached in a representative Sikh gathering (Sarbat Khālsā) meeting in the presence of the Gurū Granth have the sanction of the Gurū and are obligatory for the entire Sikh community.

GOD, common term for a male deity. *See also* DEUS OTIOSUS; GENDER AND RELIGION; MONOTHEISM; POLYTHEISM.

GODDESS, common term for a female deity. *See also* DEUS OTIOSUS; GENDER AND RELIGION; MONOTHEISM; POLYTHEISM.

GOD THE FATHER, superhuman, supernatural, intrinsically masculine being, embodying power and personality and presence. Most, though not all, religions invoke the existence and activity of a god or of gods, sometimes viewed as a person, sometimes as a power, but always as a purposive being and therefore animated by personality. This article describes the depictions and conceptions of God in the three major monotheist religions: JUDAISM, CHRISTIANITY, and ISLAM, for whom God is single and unique, merciful and just, and the image in which humans are created.

In the monotheist religions, God acts in the events (“his-

tory") of nations and persons. Ancient POLYTHEISMS generally identified the activities or embodiments of a god with the striking events in nature, and polytheistic gods were frequently consubstantial with nature. MONOTHEISMS, concomitantly, generally represent God as both above nature and as the creator of nature. The three major monotheisms further maintain that God makes himself known personally, not only as power, but with presence and personality, through self-revelation—through the TORAH revealed by God to MOSES at Sinai for Judaism, through JESUS CHRIST for Christianity, and through the revelation of the QUR'AN to the Prophet MUHAMMAD for Islam.

To the action and will of the powerful being are attributed the activities of nature and the fortunes of human beings. That is the point at which polytheism and monotheism have tended to part company. A religion of numerous gods may find many solutions to one problem, a religion of only one God presents one to many. The former attributes diverse activities to various gods, while the latter appeals to the will of one God to explain the meaning and purpose of all of life. That provokes a problem in the characterization of God on the part of monotheisms, as life can be unfair, rules may not be kept, and things happen at cross-purposes. To explain why, polytheisms adduce multiple causes of CHAOS, a god per anomaly. Diverse gods do various things, so it stands to reason that conflict results. Monotheism by nature explains many things in a single way. One God rules. Life is meant to be fair, and just rules are supposed to describe what is ordinary, all in the name of that one and only God.

So, in monotheism a simple logic governs, which limits ways of making sense of things. But that logic contains its own dialectic. If one true God has done everything, then, since he is God all-powerful and omniscient, all things are credited to, and blamed on, him. In that case he can be either good or bad, just or unjust—but not both. Monotheisms maintain that God is not only God but is also good (see also THEODICY; GOOD AND EVIL). The anomalies of the prosperity of the wicked and the suffering of the righteous then define the theological problematics of monotheisms but not of polytheisms. Christianity, Judaism, and Islam all concur that the conflict between God's will and the exercise of human FREE WILL forms the foundation for SIN and therefore also for suffering. The working system of the monotheisms finds its dynamic in the struggle between God's plan for creation—to create a perfect world of justice—and human will.

That dialectic embodies in a single paradigm the events contained in the sequences: rebellion, sin, punishment, repentance, and atonement; exile and return; or the disruption of world order and the restoration of world order. But at the end of time, all three religions agree, these anomalies will be resolved in a LAST JUDGMENT (see MILLENNIALISM) and in life eternal for those to whom God shows mercy.

GODI \ˈgō-dē\, plural *godar* \ˈgō-där\, pre-Christian priest in Scandinavia. At the time of Iceland's settlement, Norse people worshiped gods whom they called AESIR (Aesir, singular, Áss), and this religion has left behind an extensive mythology in Icelandic literature. It appears that this pre-Christian worship was organized around a distinct class of priest-chieftains, called *godar*, of whom there were about 40 in Iceland. In the absence of royal power in Iceland, the *godar* formed the ruling class in the country.

By the end of the settlement period, a general Icelandic assembly, called Althing, had been established and was

held at midsummer on a site that came to be called Thingvellir. This assembly consisted of a law council (*lögrétta*), in which the *godar* made and amended the laws, and a system of courts of justice, in which householders, nominated by the *godar*, acted as judges. At the local level, three *godar* usually held a joint assembly in late spring, at which a local court operated, again with judges nominated by the *godar*.

By the end of the 10th century the Norwegians were forced by their king, Olaf I Tryggvason, to accept CHRISTIANITY. The king also sent missionaries to Iceland, who according to 12th-century sources were highly successful in converting the Icelanders. In 999 or 1000 the Althing made a peaceful decision that all Icelanders should become Christians. The *godar* retained their political role, however, and many of them probably built their own churches. Some were ordained, and as a group they seem to have closely controlled the organization of the new religion.

GODPARENT, formally sponsor (Latin: "person standing surety," or "one who guarantees another's good faith"), one who stands surety for another in the rite of Christian BAPTISM. In the modern baptism of an infant or child the godparent or godparents make profession of faith for the person being baptized (the godchild) and assume an obligation to serve as proxies for the parents if the parents either are unable or neglect to provide for the religious training of the child, in fulfillment of baptismal promises. In churches mandating a sponsor only one godparent is required; two (in most churches, of different sex) are permitted. Many Protestant denominations permit but do not require a child being baptized to have a sponsor.

The practice of sponsorship originated in the custom requiring that an adult convert who offered himself for the rite should be accompanied by a Christian known to the bishop—a Christian who could vouch for the applicant and undertake his supervision. The Greek word for the person undertaking this function was *anadochos*, to which the Latin *susceptor* is equivalent. The word sponsor in this ecclesiastical sense occurred for the first time in TERTULLIAN'S 2nd-century treatise *De Baptismo*. The anciently allowable practice of parents becoming sponsors for their own children was at last formally prohibited by the Council of Mainz (813 CE).

GOG AND MAGOG \ˈgäg . . . ˈmā-gäg\, in the BIBLE, hostile powers that are ruled by SATAN and will manifest themselves immediately before the end of the world (Revelation 20). Gog is joined by Magog in the biblical passage in REVELATION TO JOHN and in other Christian and Jewish apocalyptic literature, but elsewhere (Ezekiel 38; GENESIS 10:2) Magog is apparently the place of Gog's origin.

GOHEI \gō-ˈhā\, in SHINTŌ, paper or cloth offering made to a god, consisting of an upright stick to which is attached a strip of folded paper or cloth. The *gohei* also sometimes operates as a symbol of the KAMI [god, or sacred power] and indicates that the deity is present in the shrine.

GOIBNIU \ˈgōv-nyü\ (Celtic: "Divine Smith"), Welsh Gofannon \gō-ˈvā-nōn\, ancient Celtic smith god. Goibniu figured in Irish tradition as one of a trio of divine craftsmen; the other two were Luchta the wright and Creidhne the metalworker. Goibniu was also the provider of the sacred otherworld feast, the Fled Goibnenn; he allegedly brewed the special ale thought to confer immortality on those who drank it. After the Christianization of Ireland he was meta-

morphosed into a legendary builder of churches as Gobbán Saer (Gobbán the Craftsman); as such he is still remembered in modern Celtic folk tradition. His Welsh equivalent, Gofannon, figured in the MABINOGION (a collection of medieval Welsh tales). It was believed that his help was vital in cleansing the plow at the end of the furrows.

GOLDEN CALF, idol worshiped by the Hebrews during the period of the EXODUS from Egypt in the 13th century BCE and during the age of Jeroboam I, king of Israel, in the 10th century BCE. Mentioned in Exodus 32 and 1 Kings 12 in the OLD TESTAMENT, worship of the golden calf is seen as a supreme act of APOSTASY. The figure is probably a representation of the Egyptian bull god APIS in the earlier period and of the Canaanite god BAAL in the latter.

In Exodus 32 the Hebrews escaping Egypt asked AARON, the brother of MOSES, to fashion a golden calf during the long absence of Moses on Mt. Sinai. Upon returning from the mountain with the tablets of the Law, Moses had the idol melted down, pulverized, and mixed with water. The people were required to drink the mixture, an ordeal to separate the unfaithful (who later died in a plague) from the faithful (who lived). Defending the faith in the God revealed to Moses against the calf worshipers were the LEVITES, who became the priestly caste.

GOLDEN RULE, precept in the NEW TESTAMENT Gospel, Matthew (7:12): "So whatever you wish that men would do to you, do so to them . . ." This rule of conduct is a summary of the Christian's duty to his neighbor and states a fundamental ethical principle. It recalls the command to "love the stranger (sojourner)," as found in Deuteronomy. It is not, however, peculiar to CHRISTIANITY. Its negative form is to be found in Tobit 4:15, in the writings of the two great Jewish scholars HILLEL (1st century BCE) and PHILO JUDAEOUS (1st centuries BCE and CE), and in the *Analects* of CONFUCIUS (6th and 5th centuries BCE). It also appears in one form or another in the writings of Plato, Aristotle, Isocrates, and Seneca.

GOLDEN TEMPLE, also called Darbār Sāhib \dər-'bār-'sā-hib\ (Punjabi: "Honorable Court"), also called Harimandir \hə-ri-'mən-dər\, also spelled Harmandir \hər-'mən-dər\ (Punjabi: "Temple of God"), chief GURDWARĀ, or house of worship, of the Sikhs of India and their most important PILGRIMAGE site; it is located in the city of AMRITSAR, in Punjab state. The Golden Temple was founded by GURŪ RĀMDĀS (1574–81) and completed by his successor, Gurū ARJAN (1581–1606).

When Sikhs under the leadership of Gurū HARGOBIND (1606–44) decided to withdraw to the Shivalik hills, the control of the Golden Temple went into the hands of a rival group—the descendants of Prithī Chand (1558–1618), the elder brother of Gurū Arjan. In the late 1690s, however,

The Golden Temple of Amritsar
G. Reitz—De Wys Inc.

Gurū GOBIND SINGH was able to assert his authority over the Golden Temple. During the mid-18th century the temple served as the symbol of Sikh religio-political autonomy. The forces of Ahmad Shāh Abdālī, the Afghan invader, desecrated the complex in the 1760s, but the Sikhs rebuilt it. During the reign (1801–39) of Maharaja Ranjīt Singh the temple attained the features that have made it famous as a physical structure: its domes covered with gold-plated copper (hence, the "Golden Temple"), and its marble walls inlaid with precious stones.

The complex of buildings surrounding the Golden Temple includes the AKĀL TAKHAT, the Central Sikh Museum, the Sikh Reference Library, and the Teja Singh Samundari Hall, which houses the SHIROMANĪ GURDWARĀ PRABANDHAK COMMITTEE (although that body meets in the Akāl Takhat). In 1984, as a result of the Indian government's confrontation with Sikh separatists headquartered at Amritsar, government troops attacked the complex. The Golden Temple was damaged, and the Akāl Takhat and the Sikh Reference Library were completely destroyed. All have since been rebuilt.

GOLEM \ˈgō-ləm\, in Jewish FOLKLORE, image endowed with life. The term is used in the BIBLE (Psalms 139:16) and in Talmudic literature (SANHEDRIN 65b; GENESIS RABBAH 24:2) to refer to an embryonic or incomplete substance. In the Middle Ages many legends arose of wise men who could bring effigies to life by means of a charm or of a combination of letters forming a sacred word or one of the names of God. The letters, written on paper, were placed in the golem's mouth or affixed to its head. The letters' removal deanimated the golem. In early tales the golem was usually a perfect servant, his only fault being a too literal or mechanical fulfillment of his master's orders. In the 16th century the golem acquired the character of protector

GOLGOTHA

of the Jews in time of persecution but also had a frightening aspect. The most famous tale involves the golem created by the 16th-century rabbi Judah Löw ben Bezulel of Prague. When Bezulel's golem became uncontrollable and posed a threat to human lives it was destroyed, returning it to the dirt from which it was created. The legend was the basis for Gustav Meyrink's novel *Der Golem* (1915) and for a classic of German silent films (1920), which provided many details on the movement and behavior of man-made monsters that were later adopted in the popular American horror films on the Frankenstein theme. In recent years the golem folktale has inspired several books for children, including a Caldecott Medal-winning book, *Golem* (1996), by David Wisniewski.

GOLGOTHA \ˈgɒl-gə-thə, gɒl-ˈgä-thə\ (Aramaic: "Skull"), also called Calvary \ˈkæl-və-rē\ (from Latin: *calva*, "bald head," or "skull"), skull-shaped hill in Jerusalem, the site of Jesus' CRUCIFIXION. It is referred to in all four Gospels. It lay outside the city walls of Jerusalem. Its exact location is uncertain, but most scholars prefer either the spot now covered by the Church of the HOLY SEPULCHRE or a hillock called Gordon's Calvary just north of the Damascus Gate.

GOLIATH \gə-ˈli-əth\ (c. 11th century BCE), in the BIBLE (1 Samuel 17), the Philistine GIANT slain by DAVID. The Philistines had warred against SAUL, and Goliath came forth daily to challenge a warrior to single combat. Only David responded, and armed with a sling and pebbles he overcame Goliath. The Philistines, seeing their champion killed, lost heart and were easily put to flight. The giant's arms were placed in the SANCTUARY, and David took his sword with him in his flight from Saul (1 Samuel 21:1–9).

In another passage it is said that Goliath of Gath was slain by a certain Elhanan of Bethlehem in one of David's conflicts with the Philistines (2 Samuel 21:18–22).

GOOD AND EVIL, principles that are seen to stand in opposition, however they be defined. Good is sometimes taken to mean that which conforms to the moral order of the universe—that which leads to beauty, well-being, and happiness. Its converse, evil, is that which is morally reprehensible, wicked, or sinful and leads to pain and suffering in the world. Definitions of these words are typically circular, however, as contained within the definition is the very object of the definition. In the end, evil is frequently defined as being, or coming from, a self-existent principle antithetical to the principle of good.

Many religious systems have grappled with the problem of the existence of evil in a world thought to have been created by a God that is infinitely good (see THEODICY). In monotheistic religions evil does not originate within the divinity nor in general within a divine world as it does, for instance, in Gnosticism; it arises instead from the improper use of freedom by created beings. In monistic religions, which are based on the opposition between the One and the many, there is a notion of evil as being that which is caused by decay or fragmentation of the One.

GOOD FRIDAY, the Friday before EASTER, the day in HOLY WEEK on which the yearly commemoration of the CRUCIFIXION of JESUS CHRIST is observed. As early as the 2nd century, there are references to fasting and penance on this day by Christians, who, since the time of the early church, had observed every Friday as a fast day in commemoration of the Crucifixion.

In the Roman rite of the ROMAN CATHOLIC church, the liturgical service for Good Friday has been in approximately the same form for centuries. The liturgy, now celebrated after 3:00 PM, consists of three distinct parts: readings and prayers (including the Passion according to St. John), the veneration of the cross, and Holy Communion. Nonliturgical devotions such as the STATIONS OF THE CROSS and the Three Hours Service were introduced after the Protestant REFORMATION and are still observed in some places. The Three Hours Service consists of sermons, HYMNS, and prayers centered on Christ's "seven last words on the Cross." It takes place from 12 noon to 3:00 PM.

In the Eastern Orthodox churches, where Good Friday is known as Great Friday, the Matins service (usually celebrated on Thursday night) includes the reading of the Twelve Passion Gospel Readings taken from the various Passion accounts in the NEW TESTAMENT. No EUCHARIST service is celebrated. At Vespers there is a solemn reenactment of the burial procession of Christ, who is represented by the *epitaphion*, a piece of material bearing an image of the dead Savior.

In Lutheran and other Protestant churches various services are held, including the Three Hours Service and services with Holy Communion. In many areas concelebrated services take place among various denominations as an expression of Christian unity.

GORAKHNĀTH \ˈgɒr-ək-ˈnät\, also spelled Gorakhnātha \ˈgɒr-ək-shə-ˈnä-tə\, also called Gorakṣanātha (fl. 11th century?, India), Hindu master yogi, commonly regarded as the founder of the Nāth or Kānpḥaṭa yogis, an order of ascetics that stresses the physical and spiritual disciplines of HAṬHA YOGA.

The details of his life are obscured by the numerous legends that have grown up around his supposedly miraculous powers. Apparently of a low-caste family, Gorakhnāth either was born in, or spent a good part of his lifetime in, the Punjab, traveling widely. He was said to have met with such other religious teachers as KABĪR and NĀNAK (though this is chronologically impossible) and to have popularized the practice of YOGA throughout India. Gorakhnāth is traditionally regarded as the disciple of MATSYENDRANĀTH, who is in turn understood by Nāth yogis as the first human GURU in their teaching succession. This connection is hagiographical shorthand (historically, Matsyendranāth probably preceded Gorakhnāth by at least three centuries), but it points to an important transition that Gorakhnāth instituted in tantric or SIDDHA practice, diverting its erotic, mystical heritage in the direction of austere Haṭha Yoga. Nonetheless, tantric worship (see TANTRIC HINDUISM) involving the use of sexual fluids is taught in several Sanskrit works attributed to Gorakhnāth, under the title *Gorakh Saṃhitā* ("Collections of Gorakh," 13th century?), alongside alchemy and Haṭha Yoga. Vernacular poetry attributed to Gorakhnāth, equally significant and anthologized under the title *Gorakh Bānī* ("Gorakh's Utterances"), emphasizes Haṭha Yoga.

GORDON, AARON DAVID \ˈgɒr-dən\, Hebrew name Aharon \ä-hä-ˈrön\ (b. June 9/10, 1856, Troyanov, Ukraine—d. Feb. 22, 1922, Deganya, Palestine [now in Israel]), Zionist writer and philosopher who inculcated the idea of a return of Jews to Palestine as agriculturists.

After working as a minor official for the estate of Baron Horace Günzburg, a wealthy Russian Jew, Gordon, an ardent Zionist, emigrated to Palestine in 1904. He settled in

the village of Petaḥ Tiqwa, refusing a job as librarian to work as a farm laborer in the belief that Jews could end the alienation caused by the Diaspora only if they returned to the Palestinian homeland and worked its soil. Gordon inspired other Jewish pioneers to establish Deganya (1909), Israel's first collective community, or kibbutz. At the end of World War I, Gordon went to Deganya, where his own example and ideals continued to influence the Jewish labor movement in Palestine. He became the ideologist of the ha-Po'el ha-Tza'ir ("The Younger Worker"), the first Palestinian Jewish Labor Party, which was later incorporated into the Mapai.

GORGON \ˈgôr-gən\, monster figure in Greek mythology. Homer spoke of a single Gorgon—a monster of the Underworld. The later poet Hesiod increased the number of Gorgons to three—Stheno (the Mighty), Euryale (the Far Springer), and MEDUSA (the Queen)—and made them the daughters of the sea god Phorcys and of his sister-wife Ceto. Attic tradition regarded the Gorgon as a monster produced by GAEA, the Earth, to aid her sons against the gods.

Gorgon's head, carved marble mask, early 6th century BCE; in the Acropolis Museum, Athens
Alinari—Art Resource

In early classical art the Gorgons were portrayed as winged female creatures; their hair consisted of snakes, and they were round-faced and flat-nosed, with tongues lolling out and with large projecting teeth. Medusa was the only one who was mortal; hence, PERSEUS was able to kill her by cutting off her head. From the blood from her neck sprang Chrysaor and PEGASUS, her two offspring by POSEIDON. Medusa's severed head had the power of turning all who looked upon it to stone. Carved masks of the grotesque type of Gorgon's head were used as a protection against evil.

GORYŌ \gō-ryō\, in Japanese religion, vengeful spirits of the dead. In the Heian period (794–857 CE) *goryō* were spirits of nobility who had died as a result of political intrigue and who brought about natural disasters, diseases, and wars. The identities of the *goryō* were determined by DIVINATION or NECROMANCY. Many were appeased by being granted the status of gods (Japanese: *goryō-shin*, "goryō deities"). Later the belief arose that anyone could become a *goryō* by so willing at the moment of death or by meeting with accidental death under unusual circumstances. Various practices developed in the 9th–10th century to ward off the consequences of evil spirits, such as the Buddhist recitation of *nembutsu* (invoking the name of the Buddha Amida) to send angry spirits to Amida's paradise; the exorcising of spirits by SHUGEN-DŌ (mountain ascetic) rites; and the use of *in-yō* magic, derived from SHINTŌ and TAOISM. Belief in the power of *goryō* has survived, particularly among the rural population of Japan, and memorial services continue to be performed to appease victims of untimely death.

GOSPEL, any of four biblical narratives covering the life and death of JESUS CHRIST. Written, according to tradition, respectively by MATTHEW, MARK, LUKE, and JOHN (the four evangelists), they are placed at the beginning of the NEW TESTAMENT and make up about half the total text. The word *gospel* is descended from the Old English compound *gōd-spel*, meaning "good story," a rendering of the Latin *evangelium* and the Greek *euangelion*, meaning "good news" or "good telling." Since the late 18th century the first three have been called the SYNOPTIC GOSPELS, because the texts show a similar treatment of the life and death of Jesus Christ. In the writings of the apostle PAUL, which antedate all four written Gospels, the term *gospel*, sometimes in antithesis to law, refers to the entire Christian message.

GOSPEL MUSIC, American variation of HYMNS and hymn singing, originating in Protestant religious services. The melodies of gospel hymns, beginning in the 19th century, were similar to popular song melodies, with simple rhythms, harmonies, and major-key melodic lines.

Gospel's secondary development took place within urban settings during the post-Civil War Protestant revival movement. The services conducted by evangelist Dwight L. Moody, joined by singer-songwriter Ira D. Sankey, were important in spreading gospel music throughout the United States and Britain. The black gospel song reflected the collective improvisations of the African-American church congregation and the call-and-response rhetorical style of the gospel preacher. Congregational singing became a way of achieving climatic experiences of spiritual transcendence, often called spiritual possession, "shouting," or the "holy dance." Some white gospel groups tried to emulate the rhythmic energy of black gospel music, but country music performing techniques and barbershop quartet harmonies were more influential.

By the 1920s gospel had developed into a distinctive musical form that incorporated some secular elements and was considered by some observers to be the sacred counterpart to the blues. The early, pioneering gospel composers included the Reverend C.A. Tindley (1851–1933), followed by Lucie E. Campbell (1885–1963). Thomas A. Dorsey (1899–1993), often called the "Father of Gospel Music," wrote over one thousand songs. During the late 1920s Dorsey incorporated blues and jazz rhythms, coined the term *gospel song*, and by the mid-1940s had established the influential "Chicago school of gospel," in the city often regarded as the birthplace of the musical form.

In following years the Reverend William Herbert Brewster (1897–1987) attracted the attention of the top performers of gospel's classic era. Mahalia Jackson (1911–72), perhaps the greatest singer in gospel history, recorded Brewster's "Move On Up a Little Higher" in 1947, selling over one million copies. Others who traveled south to Brewster's church and home in Memphis, Tenn., included the Clara Ward (1924–73) Singers, Sam Cooke (1931–64) of the Soul Stirrers, and "Sister" Rosetta Tharpe (1915–73). Back in Chicago, pianist Roberta Martin (1907–69) developed the choral sound that defined the era, with her Roberta Martin Singers serving as a training ground for several legendary artists, including gospel singer James Cleveland (1931–91) and popular vocalist Dinah Washington (1924–63).

While gospel music remained veiled from mainstream popular culture for many years, today its profound influence and widespread popularity is undeniable. As one of the roots of American popular music, gospel's influence

continues to expand around the world. In addition to the considerable success of several individual performers, gospel music “dynasties” such as the Winans and Hawkins families have guided the evolution of the music in recent years, drawing upon rhythm and blues, soul, jazz, and hip-hop, while continuing the sacred traditions rooted in the music’s origins.

GOTRA \ˈgō-trə\, lineage segment within an Indian CASTE that prohibits intermarriage by virtue of the members’ descent from a common mythical ancestor, an important factor in determining possible Hindu marriage alliances. *Gotra* originally referred to the seven lineage segments of the BRAHMINS, who trace their derivation from seven ancient seers: Atri, Bharadvāja, Bhṛgu, Gotama, Kaśyapa, Vasiṣṭha, and Viśvāmītra. An eighth *gotra* was added early on, the Agastya, named after the seer intimately linked with the spread of Vedic HINDUISM in southern India. In later times the number of *gotras* proliferated. KṢATRIYAS and VAIS-YAS also adopted the concept of *gotra* in a fashion, by assuming for their groups the *gotra* of their adjacent Brahmin *gotras* or those of their GURUS, but this innovation was never very influential.

GRACE, Greek *Charis*, plural *Charites*, in GREEK RELIGION, one of a group of goddesses. The number of Graces varied in different legends, but usually there were three: Aglaia (Brightness), Euphrosyne (Joyfulness), and THALIA (Bloom). They are said to be daughters of ZEUS and HERA (or Eury-nome, daughter of OCEANUS) or of HELIOS and Aegle, a daughter of Zeus. Frequently they were taken as goddesses of charm or beauty in general and hence were associated with APHRODITE, her attendant Peitho, and HERMES. In works of art they were represented in early times draped and later as nude female figures. Their chief cult centers were at Orchomenus in Boeotia, Athens, Sparta, and Paphos. The singular *Gratia* or *Charis* is sometimes used to denote the personification of Grace and Beauty.

GRACE, in Christian theology, the spontaneous, unmerited gift of the divine favor in the salvation of sinners, and the divine influence operating in man for his regeneration and sanctification. The English term is the usual translation for the Greek *charis*, which occurs in the NEW TESTAMENT about 150 times (two-thirds of these mentions are in writings attributed to PAUL).

The word *grace* is the central subject of three great theological controversies: (1) that of the nature of human depravity and regeneration, (2) that of the relation between grace and FREE WILL, and (3) that of the “means of grace” between ROMAN CATHOLICISM and PROTESTANTISM—*i.e.*, whether the granting of the divine grace is dependent on good works performed or dependent on the faith of the recipient.

Christian orthodoxy has taught that the initiative in the relationship of grace between God and man is always on the side of God. Once God has granted this “first grace,” however, man does have a responsibility for the continuance of the relationship. Although the ideas of grace and of merit are mutually exclusive, neither AUGUSTINE nor the Protestant defenders of the principle of JUSTIFICATION by “grace alone” could totally avoid the question of reward of merit in the relationship of grace. In fact, some passages of the New Testament seem to use *charis* for “reward.”

Catholics, EASTERN ORTHODOX, and some Protestants agree that grace is conferred through the SACRAMENTS, “the means of grace”; Reformed and Free Church Protestantism, how-

ever, have not bound grace as closely to the sacraments. BAPTISTS speak of ordinances rather than of sacraments and—as do evangelical Christians and those in the Reformed and Free Church traditions generally—insist that participation in grace occurs on the occasion of personal faith and not at all by sacramental observance.

GRAETZ, HEINRICH \ˈgrets\ (b. Oct. 31, 1817, Xions, Prussia—d. Sept. 7, 1891, Munich, Ger.), author of the first standard history of the Jews.

Greatly influenced by his studies with the renowned scholar Rabbi SAMSON RAPHAEL HIRSCH, Graetz became a teacher at the Breslau (now Wrocław, Pol.) seminary in 1854. The seminary taught a CONSERVATIVE JUDAISM compatible with Graetz’s belief that a Jewish theology should attempt to moderate between Orthodox literalism and Reform liberalism. He retained that post until the end of his life and also became an honorary professor at the University of Breslau in 1869.

Graetz’s 11-volume *Geschichte der Juden von den ältesten Zeiten bis auf die Gegenwart* (1853–76; “History of the Jews from Oldest Times to the Present”; a condensed English version was published as *History of the Jews*, 6 vol., 1891–98) presents a picturesque and heroic account of the entire history of the Jewish people, emphasizing Jewish suffering and nationalistic aspirations. The work was widely translated and quickly became a standard work, greatly influencing future historians of JUDAISM.

GRAHAM, BILLY \ˈgram, ˈgrā-am\, byname of William Franklin Graham, Jr. (b. Nov. 7, 1918, Charlotte, N.C., U.S.), American evangelist whose large-scale preaching tours, known as crusades, and friendship with numerous U.S. presidents brought him to international prominence.

The son of a prosperous dairy farmer, Graham attended rural public schools. He professed his “decision for Christ” at a revival meeting at the age of 16 and subsequently attended Bob Jones College (Cleveland, Tenn.) and Florida Bible Institute (near Tampa), both fundamentalist-Christian institutions. He began preaching in 1938 and was ordained as a Southern BAPTIST minister a year later. Following graduation from Florida Bible Institute in 1940, he took a B.A. in anthropology from Wheaton (Illinois) College.

Graham’s reputation as an evangelist grew steadily during and immediately after World War II as a result of his radio broadcasts and tent revivals. By 1950 he was widely regarded as fundamentalism’s chief spokesman. Through the Billy Graham Evangelistic Association he published his sermons and the magazine *Decision* (from 1960) and conducted the widely filmed and televised international revival crusades that became his hallmark.

First invited to the White House by Harry S. Truman in 1949, Graham later became a frequent guest of many succeeding presidents. He was awarded the U.S. Congressional Gold Medal in 1996.

GRĀMADEVATĀ \ˈgrā-mə-ˈdā-və-tā\ (Sanskrit: “village deity”), type of folk deity widely worshipped in rural India. The *grāmadevatās*, often female figures, may have originated as agricultural deities; in South India and elsewhere they are propitiated with animal sacrifices to ward off and remove epidemics, crop failures, and other natural disasters.

The *grāmadevatās* coexist side by side with the Brahminical gods of modern HINDUISM. Many *grāmadevatās* are purely local deities. Spirits of the place (the crossroads, the boundary line), spirits of those who die a violent or untimely

ly death, and tree and serpent spirits may also be treated as *grāmadevatās*. They are worshipped in the form of earthenware icons or shapeless stones, established in simple shrines or on platforms set up under a village tree, and only occasionally in more imposing buildings.

An exceptional male village deity is Aiyānār, who in South India is the village watchman and whose shrine is always separate from those of the female goddesses. A similar male deity, known variously as Dharma-Ṭhakur, Dharma-Rāj, and Dharma-Rāj, is found in Bengali villages.

GREAT AWAKENING, religious revival in the British American colonies mainly between about 1720 and the 1740s. It was a part of the religious ferment that swept western Europe in the latter part of the 17th century and early 18th century, referred to as **PIETISM** and **QUIETISM** in continental Europe among Protestants and Roman Catholics and as Evangelicalism in England under the leadership of JOHN WESLEY (1703–91).

Conditions that prepared the way for the revival included an arid **RATIONALISM** in New England, formalism in liturgical practices, as among the Dutch Reformed in the Middle Colonies, and the neglect of pastoral supervision in the South. The revival took place primarily among the Dutch Reformed, **CONGREGATIONALISTS**, **PRESBYTERIANS**, **BAPTISTS**, and some members of the **ANGLICAN COMMUNION**, most of whom were Calvinists. The Great Awakening may be seen, therefore, as a development toward an evangelical **CALVINISM**.

Revival preachers emphasized the “terrors of the law” to sinners, the unmerited **GRACE** of God, and the “new birth” in **JESUS CHRIST**. One of the great figures of the movement was George Whitefield, an Anglican priest who was influenced by John Wesley but was himself a Calvinist. During 1739–40 he preached up and down the colonies to vast crowds. Although he gained many converts, he was attacked, as were other revival clergy, for stimulating emotional excesses and dangerous religious delusions.

JONATHAN EDWARDS was the great **APOLOGIST** of the Great Awakening. A Congregational pastor at Northampton, Mass., he preached **JUSTIFICATION** by faith alone with remarkable effectiveness. He also attempted to redefine the psychology of **RELIGIOUS EXPERIENCE** and to help those involved in the revival to discern what were true and false works of the Spirit of God.

The revival stimulated the growth of several educational institutions, including Princeton, Brown, and Rutgers universities and Dartmouth College. The increase of dissent from the established churches during this period led to a broader toleration.

A revival known as the Second Great Awakening began in New England in the 1790s. Generally less emotional than the first, the Second Awakening led to the founding of colleges and seminaries and to the organization of **MISSION** societies. Kentucky was also influenced by a revival during this period. The custom of camp-meeting revivals developed out of the Kentucky revival and was an influence on the American frontier during the 19th century.

GREAT MOTHER OF THE GODS, also called Cybele \ˈsi-bə-lē, in Byron’s work si-ˈbē-lē\, Cybebe \ˈsi-bə-bē\, or Agdistis \ag-ˈdis-tis\, ancient Oriental and Greco-Roman deity, known by a variety of local names; the name Cybele or Cybebe predominates in Greek and Roman literature from about the 5th century BCE onward. Her full official Roman name was Mater Deum Magna Idaea (“Great Idaean Mother of the Gods”).

Legends agree in locating the rise of the worship of the Great Mother in the area of Phrygia in Asia Minor (now in west-central Turkey), and in classical times her cult center was at Pessinus, on Mount Dindymus, or Agdistis. The Greeks saw in the Great Mother a resemblance to their goddess **RHEA** and finally identified the two completely.

During Hannibal’s invasion of Italy in 204 BCE, the Romans followed a Sibylline **PROPHECY** that the enemy could be expelled and conquered if the “Idaean Mother” were brought to Rome, together with her sacred symbol, a small stone reputed to have fallen from the heavens. Her identification by the Romans with the goddesses Maia, Ops, Rhea, **TELLUS**, and **CERES** contributed to the establishment of her worship on a firm footing. By the end of the Roman Republic it had attained prominence, and under the empire it became one of the most important cults in the Roman world.

In all of her aspects—Roman, Greek, and Oriental—the Great Mother was characterized by essentially the same qualities, most importantly her universal motherhood. She was the great parent not only of gods but also of human beings and beasts. She was called the Mountain Mother, and special emphasis was placed on her maternity over wild nature. Her mythical attendants, the **Corybantes**, were wild, half-demonic beings. Her priests, the **GALLI**, castrated themselves on entering her service. The self-mutilation was justified by the myth that her lover **ATTIS** had emasculated himself under a pine tree, where he bled to death. At Cybele’s festival (March 15–27), a pine tree was brought to her shrine, where it was honored as a god and adorned with violets considered to have sprung from the blood of Attis. On March 24, the “Day of Blood,” her chief priest, the *archigallus*, drew blood from his arms and offered it to her, while the lower clergy whirled madly and slashed themselves to bespatter the altar and the sacred pine with their blood. On March 27 the silver statue of the goddess was borne in **PROCESSION** and bathed in the Almo, a tributary of the Tiber River.

Roman citizens were at first forbidden to take part in the ceremonies—a ban that was not removed until the time of the empire. Though her cult sometimes existed by itself, in its fully developed state the worship of the Great Mother was accompanied by that of Attis. The Great Mother was especially prominent in the art of the empire. She usually appears with mural crown and veil, seated on a throne or in a chariot, and accompanied by two lions.

GREAT SANHEDRIN \san-ˈhe-drən, sän-; san-ˈhē-\, supreme Jewish legislative and judicial court in Jerusalem under Roman rule.

GREEK RELIGION

he beliefs of the ancient Hellenes about the gods and their relationship with humanity were codified from the time of Homer (c. 8th century BCE) to the reign of the emperor Julian (4th century CE). During this period the influence of ancient Greek religion spread as far west as Spain, east to the Indus River, and throughout the Mediterranean world. Its effect was most marked on ROMAN RELIGION, which identified its deities with the Greek. Under CHRISTIANITY, Greek heroes and even deities survived as saints. The rediscovery of Greek literature during the Renaissance and, above all, the novel perfection of classical sculpture produced a revolution in taste that had far-reaching effects on Christian religious art. The most striking characteristic of Greek religion was the belief in a multiplicity of anthropomorphic deities, coupled with a minimum of dogmatism.

The Greeks had numerous beliefs about their gods, but the sole requirement was to believe that the gods existed and to perform ritual and sacrifice, through which the gods received their due. If a Greek went through the motions of piety, he risked little, since no attempt was made to enforce orthodoxy, a religious concept almost incomprehensible to the Greeks. The Greeks had no word for religion itself, the closest approximations being *eusebeia* ("piety") and *threskeia* ("cult"). The large corpus of myths concerned with gods, heroes, and rituals embodied the worldview of Greek religion and remains its legacy. Most Greeks "believed" in their gods in roughly the modern sense of the term, and they prayed in a time of crisis not merely to the "relevant" deity but to any deity on whose aid they had established a claim by sacrifice. To this end, each Greek polis (city-state) had a series of public festivals throughout the year that were intended to ensure the aid of all the gods who were thus honored. They reminded the gods of services rendered and asked for a quid pro quo. Particularly in times of crisis the Greeks, like the Romans, were often willing to add deities borrowed from other cultures.

HISTORY

Greek religion as it is currently understood probably resulted from the mingling of RELIGIOUS BELIEFS and practices between the incoming Greek-speaking peoples who arrived from the north during the 2nd millennium BCE and the indige-

The first meeting of Zeus and Hera, metope from a Greek temple at Selinus, Sicily, c. 470–460 BCE

The Granger Collection

nous inhabitants whom they called "Pelasgi." The incomers' pantheon was headed by the Indo-European sky god variously known as ZEUS (Greek), Dyaus (Indian), or JUPITER (Roman Dies-pater). Once in Greece, divinities from different pantheons came to be associated with one another; the Olympians were identified with local deities or assigned as consorts to the local god or goddess.

Sometime before the Homeric poems took their present form, the cult of the god DIONYSUS reached Greece, traditionally from Thrace and Phrygia. His devotees, known as *maenads* (literally "mad women"), armed with *thyrsoi* (wands tipped with a pine cone and wreathed with vine or ivy), were reputed to wander in *thiasoi* (revel bands) about mountain slopes, such as Cithaeron or Parnassus; the practice persisted into Roman imperial times. They were also supposed, in their ECSTASY, to practice *sparagmos*, the tearing of living victims to pieces and feasting on their raw flesh (*ōmophagia*).

Festivals were expressive of religion's social aspect and attracted large gatherings (*panēgyreis*). Mainly agrarian in origin, they were seasonal in character, held often at full moon and on the 7th of the month in the case of APOLLO, and always with a sacrifice in view. Some festivals of Athens were performed on behalf of the polis and all its members. Many of these seem to have been originally the cults of individual noble families who came together at the *synoikismos*, the creation of the polis of Athens from its small towns and villages. There were no "priests of the gods," or even priests of an individual god; one became a priest of one god at one temple. Except for these public festivals, anyone might perform a sacrifice at any time. The priest's role was to keep the temple clean; he was usually guaranteed some part of the animal sacrificed.

Popular religion flourished alongside the civic cults. Peasants worshiped the deities of the countryside, such as the Arcadian goat-god PAN, who prospered the flocks, and the NYMPHS (who, like EILEITHYIA, aided women in childbirth) inhabiting caves, springs (NAIADS), trees (Dryads and Hamadryads), and the sea (NEREIDS). They also believed in quasi-divinities such as Satyrs and the equine Sileni and CENTAURS. Among the more popular festivals were the rural Dionysia, which included a phallus pole; the ANTHESTERIA, when new wine was broached and offerings were made to the dead; the Thalysia, a harvest celebration; the THARGELIA, when a SCAPEGOAT (*pharmakos*) assumed the communal guilt; and the Pyanepsia, a bean feast in which boys collected offerings to hang on the *eiresiōne* ("wool pole"). Women celebrated the THESMOPHORIA in honor of DEMETER and commemorated the passing of ADONIS with laments and miniature gardens, while images were swung from trees at the Aiora to get rid of an ancient hanging curse.

BELIEFS, PRACTICES, AND INSTITUTIONS

The gods. The early Greeks personalized every aspect of their world, natural and cultural, and their experiences in it. The earth, the sea, the mountains, the rivers, custom-law (*themis*), and one's share in society and its goods were all seen in personal as well as naturalistic terms. In Hesiod, what could be distinguished as anthropomorphic deities and personalizations of natural or cultural phenomena both beget and are begotten by each other. HERA is of the first type—goddess of marriage but not identified with marriage. Earth is evidently of the second type, as are, in a somewhat different sense, EROS and APHRODITE (god and goddess of sexual desire) and ARES (god of war). These latter are personalized and anthropomorphized, but their worshipers may be "filled" with them. Some deities have epithets that express a particular aspect of their activities; for instance, Zeus is known as Zeus Xenios in his role as guarantor of guests.

In Homer the gods constitute essentially a super-aristocracy. The worshipers of these gods do not believe in reward or punishment after death; one's due must come in this life. Every success shows that the gods are well disposed, for the time being at least; every failure shows that some god is angry, usually as a result of a slight, intended or unintended, rather than from the just or unjust behavior of one mortal to another. The Greeks knew what angered their mortal aristocracy and extrapolated from there. Prayer and sacrifice, however abundant, could not guarantee that the gods would grant success. The gods might prefer peace on

Olympus to helping their worshippers—sacrifice, though necessary, was not sufficient.

In Homer, *hērōs* denotes the greatest of the living warriors. The cults of these mighty men developed later around their tombs. Heroes were worshipped as the most powerful of the dead, who were able, if they wished, to help the inhabitants of the polis in which their bones were buried. Thus, the Spartans brought back the bones of ORESTES from Tegea. Historical characters might be elevated to the status of heroes at their deaths. It is power, not righteousness, that distinguishes the hero. Since they are the mightiest of the dead, heroes receive offerings suitable for CHTHONIC (Underworld) deities.

Cosmogony. Of several competing cosmogonies in archaic Greece, Hesiod's *Theogony* is the only one that has survived in more than fragments. It records the generations of the gods from CHAOS through Zeus and his contemporaries to the gods who had two divine parents (e.g., Apollo and ARTEMIS, born of Zeus and LETO) and the mortals who had one divine parent (e.g., HERACLES, born of Zeus and Alcmene). Hesiod uses the relationships of the deities, by birth, marriage, or treaty, to explain why the world is as it is and why Zeus, the third supreme deity of the Greeks, has succeeded in maintaining his supremacy—thus far—where his predecessors failed. Essentially, Zeus is a better politician and has the balance of power, practical wisdom, and good counsel on his side.

The divine world of the Greeks was bisected by a horizontal line. Above that line were the Olympians, gods of life, daylight, and the bright sky; below it were the chthonic gods of the Underworld and the dead and of the mysterious fertility of the earth. The Olympians kept aloof from the Underworld gods and from those who should be in their realm. Mortals could approach the Underworld figures through prayer or sacrifice, but they did so cautiously, as these were dangerous and frightening powers.

Eschatology. In Homer only the gods were by nature immortal, but ELYSIUM was reserved for their favored sons-in-law, whom they exempted from death. Hercules alone gained a place on Olympus by his own efforts. Ordinarily death was a hateful state, for the dead were regarded as strengthless doubles who had to be revived with drafts of blood, mead, wine, and water in order to enable them to speak. They were conducted, it was believed, to the realm of HADES by Hermes; but the way was barred, according to popular accounts, by the river STYX. Across this, CHARON ferried all who had received at least token burial, and coins were placed in the mouths of corpses to pay the fare. Originally only great wrongdoers like IXION, SISYPHUS, and Tityus, who had offended the gods personally, were punished in Tartarus.

Shrines and temples. In the earliest times deities were worshipped in natural spaces such as groves, caves, or mountain tops. Mycenaean deities shared the king's palace. Fundamental was the precinct (*temenos*) allotted to the deity, containing the altar, temple (if any), and other sacral or natural features, such as the sacred olive in the *temenos* of Pandrosos on the Athenian Acropolis. *Naii* (tem-

ples—literally “dwellings”—that housed the god’s image) were already known in Homeric times and were of wood and simple design. Limestone and marble replaced wood by the end of the 7th century BCE, when temples became larger and were constructed with rows of columns on all sides. The image, crude and wooden at first, was placed in the central chamber (*cella*), which was open at the eastern end. No ritual was associated with the image itself, though it was sometimes paraded. Hero shrines were far less elaborate and had pits for offerings. Miniature shrines also were known.

Most oracular shrines included a subterranean chamber, but no trace of such has been found at DELPHI, though the Pythia was always said to “descend.” The temple of ASCLEPIUS, the god of healing, at Epidaurus was furnished with a hall where the sick were advised in dreams. DIVINATION was also widely practiced in Greece. Augurs interpreted the flight of birds, while dreams, and even sneezes, were regarded as ominous. Seers also divined from the shape of altar smoke and the conformation of victims’ entrails.

Festivals and rites. The precise details of many festivals are obscure. Among the more elaborate was the PANATHENAEA, which was celebrated at high summer, and every fourth year (the Great Panathenaea) on a more splendid scale. Its purpose, besides offering sacrifice, was to provide the ancient wooden image of ATHENA, housed in the “Old Temple,” with a new robe woven by the wives of Athenian citizens. The Great Panathenaea included a PROCESSION, a torch race, athletic contests, mock fights, and bardic recitations. The Great Dionysia was celebrated at Athens in spring. At the end of the ritual the god’s image was escorted to the theater of Dionysus, where it presided over the dramatic contests. It, like its rural counterpart, included phallic features.

Sacrifice was offered to the Olympian deities at dawn at the altar in the *temenos*, which normally stood east of the temple. Representing as it did a gift to the gods, sacrifice constituted the principal proof of piety. The gods were content with the burnt portion of the offering, while the priests and worshipers shared the remainder of the meat. Different animals were sacred to different deities—*e.g.*, heifers to Athena, cows to Hera, pigs to Demeter, bulls to Zeus and Dionysus, dogs to HECATE, game and heifers to Artemis, horses to POSEIDON, and asses to Priapus—though the distinctions were not rigorously observed. Included in the Homeric cult were the practices of ritual washing before sacrifice, sprinkling barley grains, and making token offerings of hair. Victims were required to be free of blemish, or they were likely to offend the deity. Sacrifice also was made to chthonic powers in the evening. Black animals were offered, placed in pits, and the meat was entirely burned. Sacrifice preceded battles, the conclusion of treaties, or similar events. Bloodless sacrifices (*e.g.*, of agricultural goods) were made to some deities and heroes.

Prayers normally began with compliments to the deity, followed by discreet references to the petitioner’s piety, and ended with his special plea. Processions formed part of most gatherings (*panēgyreis*) and festivals. The Panathenaic procession, for example, set out from the Pompeion (sacred storehouse) at dawn, headed by maiden basket-bearers (*kanēphoroi*), who carried the sacred panoply. Elders bore boughs (*thallophoroi*) while youths (*ephēboi*) conducted the victims for sacrifice, and cavalry brought up the rear. Athena’s robe was spread on the mast of a wheeled ship.

MYTHOLOGY

Greek religious myths are concerned with gods or heroes in their more serious aspects or are connected with ritual. They include cosmogonical tales of the genesis of the gods and the world out of Chaos, the successions of divine rulers, and the internecine struggles that culminated in the supremacy of Zeus, the ruling god of Olympus. They also include the long tale of Zeus’s amours with goddesses and mortal women, which usually resulted in the births of younger deities and heroes. The goddess Athena’s unique status is implicit in the story of her motherless birth (she was born directly from Zeus); and the myths of Apollo explain that god’s sacral associations, describe his remarkable victories over monsters and gi-

Heracles taming Cerberus, Attic red-figured amphora, c. 530 BCE

ants, and stress his jealousy and the dangers inherent in immortal alliances.

Some myths are closely associated with rituals, such as the account of the Curetes drowning out the infant Zeus's cries by clashing their weapons, or Hera's annual restoration of her virginity by bathing in the spring Canathus. Some myths about heroes and heroines also had a religious basis. Myths were viewed as embodying divine or timeless truths, whereas legends (or sagas) were quasi-historical. Hence, famous events in epics, such as the Trojan War, were generally regarded as having really happened, and heroes and heroines were believed to have actually lived. Earlier sagas, such as the voyage of the ARGONAUTS, were accepted in a similar fashion. Most Greek legends were embellished with folktales and fiction, but some certainly contain a historical substratum. Such are the tales of the various sacks of Troy, a fact supported by archaeological evidence, and the labors of Heracles, which may suggest Mycenaean feudalism. Again, the legend of the MINOTAUR (a being part human, part bull) could have arisen from exaggerated accounts of bull-leaping in ancient Crete.

In another class of legends, heinous offenses, such as attempting to make love to a goddess against her will, grossly deceiving the gods, or assuming their prerogatives, were punished by everlasting torture in the Underworld. The consequences of social crimes, such as murder or incest, were also described in legend (*e.g.*, the story of OEDIPUS, who killed his father and married his mother), and may have been intended to communicate and reinforce social values. Legends likewise could be employed to justify existing political systems or to bolster territorial claims.

Types of myths in Greek culture. *Myths of origin.* Myths of origin represent an attempt to render the universe comprehensible in human terms. Greek CREATION MYTHS (cosmogonies) and views of the universe (cosmologies) were more systematic and specific than those of other ancient peoples. Yet their very artistry serves as an impediment to interpretation, since the Greeks embellished the myths with folktale and fiction told for its own sake. Thus, though the aim of Hesiod's *Theogony* is to describe the ascendancy of Zeus (and, incidentally, the rise of the other gods), the inclusion of such familiar themes as the hostility between the generations, the enigma of woman (PANDORA), the exploits of the friendly trickster (PROMETHEUS), or struggles against powerful beings or monsters like the TITANS (and, in later tradition, the GIANTS) enhances the interest of an epic account.

According to Hesiod, four primary divine beings first came into existence: the Chaos, GAEA (Earth), Tartarus, and Eros (Sexual Attraction). The creative process began with the forcible separation of Gaea from her consort OURANUS (Heaven) in order to allow her progeny to be born: their son CRONUS cut off Ouranus' genitals with a weapon supplied him by his mother. Thereby Heaven was separated from Earth and life was free to develop between the two.

According to Greek cosmological concepts, the Earth was viewed as a flat disk afloat on the river of Ocean. The Sun (HELIOS) traversed the heavens like a charioteer and sailed around the Earth in a golden bowl at night. Natural fissures were popularly regarded as entrances to the subterranean house of Hades, home of the dead.

Myths of the ages of the world. From a very early period, Greek myths seem open to criticism and alteration on grounds of morality or of misrepresentation of known facts. In the *Works and Days*, Hesiod makes use of a scheme of Four Ages (or Races): Golden, Silver, Bronze, and Iron. These races or ages are separate creations of the gods, the Golden Age belonging to the reign of Cronus, the subsequent races the creation of Zeus. Those of the Golden Age never grew old, were free from toil, and passed their time in jollity and feasting. When they died, they became guardian spirits on Earth.

Why the Golden Age came to an end Hesiod failed to explain, but it was succeeded by the Silver Age. After an inordinately prolonged childhood, the men of the Silver Age began to act presumptuously and neglected the gods. Consequently, Zeus hid them in the Earth, where they became spirits among the dead.

Zeus next created the men of the Bronze Age, men of violence who perished by mutual destruction. At this point the poet intercalates the Age (or Race) of Heroes. Of these heroes the more favored (who were related to the gods) reverted to a kind of restored Golden Age existence under the rule of Cronus (forced into honorable exile by his son Zeus) in the Isles of the Blessed.

The final age, the antithesis of the Golden Age, was the Iron Age, during which the poet himself had the misfortune to live. But even that was not the worst, for he believed that a time would come when infants would be born old, and there would be no recourse left against the universal moral decline.

The presence of evil was explained by Pandora's rash action in opening her fabled box, which in turn was occasioned by Prometheus' theft of fire.

Myths of the gods. Myths about the gods described their births, victories over monsters or rivals, love affairs, special powers, or connections with a cultic site or ritual. As these powers tended to be wide, the myths of many gods were correspondingly complex. Thus, the Homeric hymns to Demeter, a goddess of agriculture, and to the Delian and Pythian Apollo describe how these deities came to be associated with sites at Eleusis, Delos, and Delphi, respectively. Similarly, myths about Athena, the patroness of Athens, tend to em-

(Above) Athena with her attribute, the owl, Greek bronze statuette c. 460 BCE; (right) the birth of Athena from the forehead of Zeus, Greek black-figured vase, 6th century BCE; in the Louvre, Paris

The Granger Collection; Giraudon—Art Resource

phasize the goddess' love of war and her affection for heroes and the city of Athens; and those concerning HERMES (the messenger of the gods), Aphrodite (goddess of love), or Dionysus describe Hermes' proclivities as a god of thieves, Aphrodite's lovemaking, and Dionysus' association with wine, frenzy, miracles, and even ritual death. Poseidon (god of the sea) was unusually atavistic, in that his union with earth and his equine adventures appear to hark back to his pre-marine status as a horse or earthquake god. It is uncertain whether Homer knew of the judgment of PARIS; but he knew the far from trivial consequences for Troy of the favor of Aphrodite and the bitter enmity of Hera and Athena, which the judgment of Paris was composed to explain.

Of folk deities, the nymphs personified the life in water or trees and were said to punish unfaithful lovers. Water nymphs (Naiads) were reputed to drown those with whom they fell in love, such as Hylas, a companion of Heracles. Even the gentle MUSES (goddesses of the arts and sciences) blinded their human rivals, such as the bard THAMYRIS. Satyrs and Sileni (folk deities with bestial features) were the nymphs' male counterparts. Like sea deities, Sileni possessed secret knowledge that they would reveal only under duress. Charon, the grisly ferryman of the dead, was also a popular figure of folktales.

Myths of heroes. Hero myths included elements from tradition, folktale, and fiction. Episodes in the Trojan cycle, such as the departure of the Greek fleet from Aulis or THESEUS' Cretan expedition and death on Scyros, may belong to traditions dating from the Minoan-Mycenaean world. On the other hand, events described in the *Iliad* probably owe far more to Homer's creative ability than to genuine tradition. Even heroes like ACHILLES, HECTOR, or DIOMEDES are largely fictional, though doubtlessly based on legendary prototypes. The *Odyssey* is the prime example of the wholesale importation of folktales into epic. Certain heroes—Heracles, the DIOSCURI (the twins Castor and Pollux), Amphiaraus (one of the Argonauts), or HYACINTHUS (a youth loved by Apollo and accidentally killed)—may be regarded as partly legend and partly religious myth. Thus, whereas Heracles, a man of Tiryns, may originally have been a historical character, the myth of his demise on Oeta and subsequent elevation to full divinity is closely linked with a cult. In time, Heracles' popularity was responsible for connecting his story with the Argonauts, an earlier attack on Troy, and with Theban myth.

Myths of seasonal renewal. Certain myths, in which goddesses or heroes were temporarily incarcerated in the Underworld, were allegories of seasonal renewal. Perhaps the best-known myth of this type is the one telling how Hades, the god of the Underworld, carried PERSEPHONE off to be his wife, causing her mother Demeter, the goddess of grain, to allow the earth to grow barren out of grief. Because of her mother's grief, Zeus permitted Persephone to spend four months of the year in the house of Hades and eight in the light of day. In less benign climates, she was said to spend six months of the year in each. Rarely, however, was the seasonal interpretation the only meaning of the myth; the tradition surrounding Persephone, for instance, was also concerned with the rituals and experiences involved in a girl's marriage and arrival at adult womanhood.

GREGORIAN CHANT, liturgical music of the ROMAN CATHOLIC church, sung in unison and used to accompany the text of the MASS and the canonical hours (also known as the divine office). Gregorian chant is named after ST. GREGORY I the Great, pope from 590 to 604. It was collected and codified during his reign.

The Ordinary of the mass includes those texts that remain the same for each mass. Those sung by the choir are, in the Latin mass, the Kyrie, Gloria, Credo, Sanctus (sometimes divided into Sanctus and Benedictus), and AGNUS DEI. The chant of the Kyrie ranges in style from neumatic (patterns of one to four notes per syllable) to melismatic (unlimited notes per syllable). The Gloria appeared in the 7th century. The psalmodic recitation—*i.e.*, using psalm tones, simple formulas for the intoned reciting of psalms—of early Glorias attests to their ancient origin. Later Gloria chants are neumatic. The melodies of the Credo, accepted into the mass about the 11th century, resemble psalm tones. The Sanctus and Benedictus are probably from apostolic times. The usual Sanctus chants are neumatic. The Agnus Dei was brought from the Eastern church in the 7th century and is basically in neumatic style.

The Proper of the mass is composed of texts that vary for each mass in order to bring out the significance of each feast or season. The Introit is a processional chant that was originally a psalm with a refrain sung between verses. By the 9th century it had received its present form: refrain in a neumatic style—a psalm verse in psalm-tone style—refrain repeated. The Gradual, introduced in the 4th century, also developed from a refrain between psalm verses. Later it became: opening melody (chorus)—psalm verse or verses in an embellished psalmodic structure (soloist)—opening melody (chorus), repeated in whole or in part. The Alleluia is of 4th-century Eastern origin. Its structure is somewhat like that of the Gradual. The Tract replaces the Alleluia in penitential times; it is a descendant of SYNAGOGUE music.

The canonical hours, as observed by monastic communities, consist of eight prayer services: Matins, Lauds, Prime, Terce, Sext, None, Vespers, and Compline.

GREGORIAN REFORM, 11th-century religious reform movement named after its most forceful advocate, Pope GREGORY VII (reigned 1073–85). Although long associated with church-state conflict, the reform's main concerns were the moral integrity and independence of the clergy.

Gregorian Reform began during the papacy of Leo IX (1049–54), who denounced the practices of SIMONY (the buying and selling of church offices) and nicolaitism (clerical marriage or concubinage). He also appointed advisers who strengthened the church's commitment to reform. Subsequent popes confirmed Leo's legislation and introduced measures intended to protect the government of the church from interference by secular powers. Most notably, Nicholas II (1059–61) promulgated a BULL that revised the procedure for electing popes. The most dramatic phase of the reform came during the papacy of Gregory VII, who was involved in a great struggle with the German king Henry IV (1056–1105/06) over the royal appointment of bishops and other clergy. Gregory also insisted that the pope was the highest authority in the church, denounced simony, and promoted a celibate clergy. The movement's reforms were sanctioned at the first two Lateran councils in 1123 and 1139.

GREGORY I, SAINT \ˈgre-gə-rē\, *byname* Gregory the Great (b. c. 540, Rome—d. March 12, 604, Rome; feast day March 12), architect of the medieval PAPACY (reigned 590–

604), a notable theologian who was also an administrative, social, liturgical, and moral reformer.

Gregory's great-grandfather was Pope Felix III (reigned 483–492), and Pope Agapetus I (reigned 535–536) also may have been related to him. About 572 Gregory became *praefectus urbis* (urban prefect; *i.e.*, the administrative president of Rome), a position he relinquished two years later. Having a great interest in MONASTICISM, Gregory converted the palace at Caelian Hill, which he had inherited as part of a large fortune, into St. Andrew's Monastery. He then established six other monasteries in Sicily. Gregory served as papal nuncio to Constantinople from 579 until 584.

After sincere efforts to avoid election to the papacy, Gregory became pope in 590. He devoted himself to alleviating the misery of the populace and of the refugees fleeing the Lombard invasion of Italy. Gregory had grain sent from Sicily and used the revenues from church property to aid those who were starving. His devotion to social concerns was stated in one of his letters (Epistle I:44): "We do not want the treasury of the church defiled by disreputable gain."

His efforts to reform and save the church in Italy, which was endangered spiritually as well as materially, began with an attempt to slowly catholicize the Arian Lombards. He protested against the oppressive fiscal policies of the Byzantine exchequer, which so harshly taxed the people that they sometimes had to sell their children or emigrate into Lombard-controlled areas. The Lombards, in turn, so extorted the pope on their behalf that he called himself the "paymaster of the city." Not until 598 did this conflict even temporarily abate.

In 602 Phocas, a Thracian centurion in the imperial army, managed to get himself elected emperor. He had Emperor Maurice and his entire family executed. Phocas gained the pope's approval of his Lombard policy and was thus able to act with increasing terror, for Gregory's blessing was tantamount to ABSOLUTION for all offenses. Phocas recognized papal primacy of jurisdiction in the church and gave Gregory the impression of subordination. The Roman papacy valued such an attitude and in doing so overlooked other matters, including even the character of those with whom it came to terms.

Gregory clearly recognized the importance of the migrating peoples of the West, who were hardly or not at all Christianized—the future of the church of the West lay with them. He intensified his connections with Theodolinda, the Catholic Bavarian wife of the Lombard king Agilulf, whose son Adaloald became Catholic only in 615, and with Brunhild, the powerful Merovingian queen. In 596, under the protection of Brunhild, he initiated one of the greatest acts of his pontificate, the establishment of MISSIONS in England. He appointed AUGUSTINE (later first archbishop of Canterbury) and a band of 40 monks to begin the work. The English missionary monks St. Willibrord (658–739) and ST. BONIFACE (c. 675–754) were able to conduct their campaigns on the European continent because of Gregory's mission to England.

With the consolidation of the patrimony of Peter (lands controlled by the papacy), Gregory became the founder of the later Papal States and of temporal papal authority. According to his view, the patrimony of Peter ought to be at the immediate disposal of the church and of the poor.

Because of his concern for people, he tried to make their faith more intelligible to them by popularizing miracles and the concept of PURGATORY and by encouraging a reform of the mass—from which came the GREGORIAN CHANT. For his theology, Gregory was deeply indebted to St. Augustine of Hippo.

Gregory's body is buried in St. Peter's Basilica in Rome. He had forbidden veneration of his corpse under penalty of EXCOMMUNICATION.

GREGORY II CYPRIUS \ˈsi-prē-əs\, *original name* George of Cyprus (b. 1241, Cyprus—d. 1290, Constantinople, Byzantine Empire [now Istanbul, Tur.]), Greek Orthodox PATRIARCH of Constantinople (1283–89) who opposed reunion of the EASTERN ORTHODOX and ROMAN CATHOLIC churches.

Early in his career as a cleric in the Byzantine imperial court, Gregory supported the policy of Emperor Michael VIII Palaeologus and the patriarch of Constantinople, John XI Beccus, favoring a union between the two churches. With the accession in 1282 of the antiunionist emperor Andronicus II Palaeologus, Gregory reversed his position and opposed Beccus. When pressure on Beccus forced him to resign, Gregory was named to succeed him as Gregory II.

Gregory's stand against Beccus and Roman Catholic theology led him to refute the Latin position that the HOLY SPIRIT proceeded from God the Son and God the Father. *Tomos pisteos* ("Tome on Faith") was denounced as unorthodox by the patriarchs of Alexandria and Antioch. It and a subsequent work of APOLOGETICS (*Homologia*) antagonized both the enemies and the supporters of reunion. Criticism from the exiled Beccus forced Gregory to resign as patriarch in 1289 and retire to a monastery, where he died.

GREGORY VII, SAINT, *original name* Hildebrand, *Italian* Ildebrando (b. c. 1020, near Soana, Papal States—d. May 25, 1085, Salerno, Principality of Salerno; canonized 1606; feast day May 25), one of the great reform popes of the Middle Ages (reigned 1073–85).

Hildebrand began his education at the Monastery of St. Mary in Rome, where his uncle was ABBOT. When one of his teachers at the Schola Cantorum, Giovanni Graziano, became Pope Gregory VI in 1045, he took Hildebrand into his service. In 1046 Hildebrand accompanied his deposed patron into exile in Germany. Pope Leo IX (reigned 1049–54) called him back to Rome, where he joined the group of reformers that Leo was assembling. Hildebrand became a CARDINAL and archdeacon of Rome.

Elected by acclamation (April 22, 1073) to succeed Alexander II, Gregory made reform and renewal the goal of his reign. He attacked the chief problems of the church: SIMONY (selling or purchasing ecclesiastical offices) and nicolaitism (clerical marriage or concubinage). Because he found it difficult to work through the bishops, he tended to centralize authority in his own office. He used papal legates freely and insisted on their precedence over local bishops.

Gregory is chiefly known for his contest with the German emperor Henry IV (1050–1106) over lay investiture (the right of lay rulers to grant ecclesiastical officials the symbols of their authority). The pope's Roman SYNOD of 1075 began the long conflict that was to continue after his death. At that synod Gregory excommunicated five of Henry's advisers. In late 1075 Henry gave support to the antireform party in Milan and appointed a new bishop in place of the legitimate one.

Although Gregory had written to Henry in December 1075, holding out the possibility of negotiations on the issue, Henry was openly defiant. Gregory excommunicated Henry and declared him deposed. The number of Henry's partisans dwindled, and in Germany plans were begun to elect another king. Henry was to leave the decision of his case to the pope, who was to come to a meeting of the mag-

nates at Augsburg on Feb. 2, 1077. He was expected to repudiate his rebellion against the pope and to urge his advisers who had been excommunicated to seek ABSOLUTION.

Early in 1077 Gregory went north to cross the Alps and heard that Henry was hastening to Italy. The pope withdrew to the castle of Canossa, a stronghold of his supporter, Matilda, countess of Tuscany. Henry was coming not as a foe but as a suppliant. For three cold January days he stood outside the castle pleading for absolution, while the nobles and bishops of Germany were awaiting the pope at Augsburg. The priest in Gregory prevailed over the politician; he relented and absolved Henry from EXCOMMUNICATION.

Henry regarded himself as legitimate king again, and Gregory had to explain his actions to the German magnates. The Germans canceled the Augsburg meeting and called for another gathering. Gregory sent legates who pleaded with the assembled nobles and bishops not to proceed with an election until the pope could be present. The magnates, however, elected Rudolf of Rheinfelden. Gregory tried to mediate between Henry and Rudolf, but by 1080 the pope was convinced that Henry was intransigent. Once again, Gregory excommunicated Henry and declared him deposed. This meant war. Henry had the support of his faction in Germany and that of the Lombard antireform party. Gregory sought the aid of the formidable Robert Guiscard, duke of Apulia and Calabria (c. 1015–85). Henry's German bishops met at Brixen (Italy), declared Gregory deposed, and replaced him with Guibert, archbishop of Ravenna, who took the name Clement III (1080, 1084–1100).

When Rudolf of Rheinfelden was killed at the Battle of the Elster (1080), Henry crossed the Alps and besieged Rome. Gregory held a synod at the Lateran in November 1083 to attempt a settlement, but this failed, and on March 21, 1084, Henry's troops took the city. Gregory sought refuge in the Castel Sant'Angelo, and Guibert of Ravenna was crowned in St. Peter's. Guibert in turn crowned Henry emperor. Robert Guiscard, back from an unsuccessful attempt on the Byzantine Empire, marched on Rome and rescued Gregory, but in the fighting a large part of the city was burned. Gregory, now unpopular with the Romans, left with Guiscard and died in exile.

GREGORY IX, POPE, *original name* Ugo di Segni (b. before 1170—d. Aug. 22, 1241, Rome), pope (1227–41) who founded the INQUISITION.

Prior to his election, Gregory was a strong supporter of ST. FRANCIS and the mendicant orders. He was also a proponent of the CRUSADES and of papal prerogatives against the emperor. In 1227 he excommunicated Frederick II, emperor of Germany and king of Sicily, for delaying on his pledge to lead a Crusade. Gregory ordered an attack on Sicily in the emperor's absence, but his forces were defeated. In 1234 he published the Decretals, a code of canon law that remained fundamental to Catholicism until World War I. He developed procedures for the Inquisition against HERESY in southern France and northern Italy. Frederick's invasion of Sardinia, a papal fief, led Gregory to renew his excommunication (1239); he sought support in northern Italy but died before the struggle was resolved.

GREGORY OF NAZIANZUS, SAINT \ˌnɑ-zē-ˈɑn-zəs\ (b. c. 330, Arianzus, near Nazianzus, in Cappadocia, Asia Minor [now in Turkey]—d. c. 389, Arianzus; Eastern feast day January 25 and 30; Western feast day January 2), CHURCH FATHER, defender of the doctrine of the TRINITY, and one of the greatest opponents of the heresy of ARIANISM.

In 362 Gregory accepted ORDINATION to the PRIESTHOOD to assist his father, though he went to Annesi for further preparation and remained there until the following EASTER. For the next 10 years he worked at Nazianzus supporting Basil—who was first PRESBYTER and from 370 to 379 bishop of Caesarea—in his struggles with personal rivals, with Arians, and with the Arian emperor Valens. Basil was attempting to retain control of the church in at least part of the new province of Cappadocia Secunda, which had been created by Valens to diminish orthodox authority. Gregory, under pressure from Basil to assist him in this conflict, reluctantly accepted consecration (372) to the episcopate for the village of Sasima. He never took possession of the bishopric, however. He briefly administered the church of Nazianzus again after his father's death in 374, but, when a successor was installed in that bishopric, Gregory retired to a monastery in Isauria, in south-central Anatolia.

After the death of Valens in 378 and that of Basil in 379, Gregory became the outstanding spokesman of the Nicene party that accepted the decrees of the COUNCIL OF NICAËA of 325. He was invited to take charge of the Nicene congregation at Constantinople, a city torn by sectarian strife. His Chapel of the Resurrection (Greek: Anastasia) became the scene of the birth of Byzantine Orthodoxy—*i.e.*, the post-Nicene theology and practice of the majority of Eastern Christianity. A religious adventurer, Maximus the Cynic, however, was set up as a rival to Gregory by bishops from Egypt, who broke into the Anastasia at night for a clandestine consecration.

When the new emperor, Theodosius, came east in 380, the Arian bishop of Constantinople, Demophilus, was expelled, and Gregory was able to take over the Great Church (probably the earlier BASILICA on the site of the present-day HAGIA SOPHIA). The council (later recognized as the second ecumenical council) that met at Constantinople in 381 was prepared to acknowledge Gregory as bishop of Constantinople; but, on the arrival of Bishop Timothy of Alexandria, his position was challenged on technical grounds. Weary of intrigues, Gregory withdrew after an eloquent farewell discourse. The council, however, supported his policies and endorsed the Trinitarian doctrine of three equal Persons (Father, Son, and HOLY SPIRIT) as taught by Gregory and expressed in the “creed commonly called the Nicene.”

For the rest of his life Gregory lived quietly on the family property at Arianzus near Nazianzus, except for a brief period as administrator of the Church of Nazianzus during a vacancy. He continued his interest in church affairs through correspondence, including letters against the HERESY of Apollinaris, who denied the existence of a human soul in Christ.

GREGORY OF NYSSA, SAINT
 \ni-sə\, Latin Gregorius Nysse-
 nus (b. c. 335, Caesarea, in Cap-
 padocia, Asia Minor [now Kayseri,
 Tur.]—d. c. 394; feast day
 March 9), philosophical theologian
 and mystic, leader of the orthodox
 party in the 4th-century Christian
 controversies over the doctrine of the
 TRINITY.

Gregory was more deeply influenced by his philosophical training than by the other two Cappadocian Fathers of the Church, his brother BASIL OF CAESAREA and their friend GREGORY OF NAZIANZUS. He began his adult life as a teacher of rhetoric and is usually believed to have been married, although the strictures on marriage in his treatise *On Virginity* seem to imply the contrary. In the 360s he turned to religious studies and Christian devotion, perhaps even to the monastic life, under Basil's inspiration and guidance. As part of Basil's struggle with Bishop Anthimus of Tyana—whose city became the metropolis (civil and therefore ecclesiastical capital) of western Cappadocia in 372—Gregory was consecrated as bishop of Nyssa, a small city in

the new province of Cappadocia Secunda, which Basil wished to retain in his ecclesiastical jurisdiction. In 375, however, Gregory was accused of maladministration by the provincial governor as part of a campaign by the Roman emperor Valens to promote ARIANISM. Gregory was deposed in 376 by a SYNOD of bishops and banished. But on Valens' death in 378 Gregory's congregation welcomed him back to Nyssa enthusiastically.

After his return to his DIOCESE he was active in the settlement of church affairs. In 379 he attended a council at Antioch and was sent on a special MISSION to the churches of Arabia (*i.e.*, Transjordan); his visit to Jerusalem on this occasion left him with a dislike for the increasingly fashionable PILGRIMAGES, an opinion he expressed vigorously in one of his letters. In 381 he took part in the General (second ecumenical) Council at Constantinople and was recognized by the emperor Theodosius as one of the leaders of the orthodox communion in Cappadocia. He had become the leading orthodox theologian in Asia Minor in the struggle against the Arians.

Gregory was primarily a scholar, whose chief contribution lay in his writings. Besides controversial replies to heretics, particularly the Arians—in which he formulated the doctrine of the Trinity (Father, Son, and HOLY SPIRIT) as a clear and cogent answer to Arian questioning—he completed Basil's sermons on the days of the Creation, *Hexaëmeron* (“Six Days”), with *The Creation of Man*; and he produced a classic outline of orthodox theology in his *Great Catechesis*. His brief treatise *On Not Three Gods* relates the Cappadocian Fathers' theology of three Persons in the Godhead (*i.e.*, the Trinity) to Plato's teachings on the

One and the Many. As a Christian Platonist, Gregory shared Origen's conviction that humanity's material nature is a result of the Fall of Man, as well as Origin's hope for ultimate universal salvation.

Platonic and Christian inspiration combine in Gregory's ascetic and mystical writings, which have been influential in the devotional traditions of both the EASTERN ORTHODOX and (indirectly) the Western churches. Gregory's teaching that the spiritual life is not one of static perfection but of constant progress may be seen in his mystical *Life of Moses*, which treats the journey of the Hebrews from Egypt to MOUNT SINAI as a pattern of the progress of the soul through the temptations of the world to a vision of God.

GREGORY, WILTON D., *in full* Wilton Daniel Gregory (b. Dec. 7, 1947, Chicago, Ill., U.S.), American ROMAN CATHOLIC prelate, archbishop of Atlanta, Ga. (from 2005), and the first African-American president of the U.S. Conference of Catholic Bishops (2001–04).

As a student at a Catholic parochial school in Chicago, Gregory decided that he wanted to be a priest even though he was not Catholic. He converted at age 11 and was ordained a priest on May 9, 1973. He was ordained auxiliary bishop of Chicago in 1982 and installed as bishop of Belleville, Ill., in 1994.

As bishop, Gregory wrote on church issues, served on church committees, and was vice president of the U.S. Conference of Catholic Bishops (1998–2001). He was elected president of the conference on Nov. 13, 2001. His greatest challenge as president was the sex-abuse scandal then plaguing the church, a problem he had dealt with successfully as bishop. He also strove to improve the religious life of African-American Catholics. In December 2004 he was appointed archbishop of Atlanta by Pope JOHN PAUL II.

GRHYA SŪTRA 'gri-hyā-'sū-trə\, in HINDUISM, any of the religious manuals that detail the domestic (*grhya*) religious ceremonies that are to be performed by the householder over his own fire. They make up, together with the ŚRAUTA SŪTRAS (which deal with Vedic sacrifices) and the DHARMA SUTRAS (which deal with rules of conduct), the KALPA SŪTRAS. The *Gṛhya Sūtras* describe the ceremonies (SAṂ-SKĀRAS) that mark each stage of life, from the moment of conception to final death rites; the five daily sacrifices (*mahāyajña*); seasonal ceremonies; and those observed on special occasions, such as house building or cattle breeding.

GRIFFIN, *also spelled* griffon, or gryphon, composite mythological creature with a lion's body (winged or wingless) and a bird's head, usually that of an eagle. The griffin was a favorite decorative motif in the ancient Middle Eastern and Mediterranean lands. Probably originating in the Levant in the 2nd millennium BCE, the griffin had spread throughout western Asia and into Greece by the 14th century BCE. The griffin was shown either recumbent or seated on its haunches, often paired with the sphinx; its function may have been protective.

In the Iron Age the griffin was prominent in both Asia and Greece. The griffin was in some sense sacred, appearing in SANCTUARY

and tomb furnishings. Its precise nature or its place in cult and legend remains unknown.

GROLIER CODEX 'gröl-yər-'kō-,deks \: *see* MAYA CODICES.

GUARDIAN SPIRIT, supernatural teacher, frequently depicted in animal form, who guides an individual through advice and songs; the belief in guardian spirits is widely diffused among the North American Indians.

In some traditions the guardian manifests itself in a dream or by other portents. In other traditions the individual sets out to discover his guardian by undertaking a VISION QUEST. Among the South American Indians, possession of a guardian spirit is limited to SHAMANS who have ingested hallucinogenic plants.

GUADALUPE, BASILICA OF, *officially* Basilica of Our Lady of Guadalupe, *Spanish* Basílica de Guadalupe, Basílica de Nuestra Señora de Guadalupe, ROMAN CATHOLIC church that is the chief religious center of Mexico, located in Villa de Guadalupe Hidalgo, a neighborhood of Mexico City.

The church was erected near the spot where two apparitions of the Virgin are said to have appeared to an Indian convert named Juan Diego in December 1531; the apparitions commanded that a church be built. The second apparition resulted in a painted image that became known as the Virgin of Guadalupe, and the entire incident did much to hasten the conversion of the Indians of Mexico to Christianity. In 1754 a papal bull made the Virgin of Guadalupe the patroness of New Spain. In 1810 she became the symbol of the Mexican independence movement when the patriot-priest Miguel Hidalgo y Costilla raised her picture to his banner.

Each year, hundreds of thousands of pilgrims from all over the world come to the church, which was given the status of a basilica by Pope Pius X in 1904. The present church, or Old Basilica, was finished in 1709. When it became dangerous owing to the sinking of its foundations, a

GUHYASAMĀJA TANTRA

structure called the New Basilica was built nearby; the image of the Virgin of Guadalupe is in the New Basilica.

GUHYASAMĀJA TANTRA \ˈgū-hyə-sə-ˈmā-jə-ˈtən-trə\ (Sanskrit: “Treatise on the Sum Total of Mysteries”), also called *Tathāgataguhyaka* \tə-ˈtā-gə-tə-ˈgū-hyə-kə\ (“The Mystery of Tathāgatahood [Buddhahood]”), oldest and one of the most important of all Buddhist TANTRAS. These are the basic texts of the Tantric form of BUDDHISM.

The *Guhyasamāja Tantra* is ascribed by tradition to the sage ASANGA. Much of its symbolism, appearing at the beginning of the VAJRAYĀNA tradition (3rd–6th century CE), exercised a normative influence over that tradition’s development. The first of 18 chapters presents the text’s MANDALA, a visual image used in ritual and meditation and understood as the symbolic embodiment of a Tantric text. Other chapters present sexual and horrific symbolism, spiritual

Symbolic meeting of the first Sikh Gurū, Nānak (d. 1539) with the 10th and last Gurū, Gobind Singh (d. 1708). Painting of the Guler school, c. 1820; in the collection of Mohan Singh, Punjab, India

techniques, the nature of enlightened consciousness, and other central Tantric concerns.

GUṆASTHĀNA \ˈgū-nəs-ˈtā-nə\ (Sanskrit: “level of virtue”), in JAINISM, any of the 14 stages of spiritual development through which a soul passes on its way to MOKṢA (spiritual liberation from SAṂSĀRA, or mundane existence coupled with endless transmigration).

GURDĀS, BHĀĪ \gūr-ˈdās\, in full *Bhāi Gurdās Bhallā* (b. c. 1550–d. 1637), most famous of all Sikh poets and theologians apart from the 10 GURŪS (the founders and early leaders of the Sikh community). *Bhāi* is an honorific title meaning “brother.”

Bhāi Gurdās’ fame rests on being the scribe of the *Kartār-pur Pothī*, the manuscript of Sikh SCRIPTURE prepared during the time of Gurū ARJAN. Gurdās also composed original works of poetry that are highly regarded within SIKHISM. His compositions include 40 (some scholars say 39) *vārs* (ballads) in Punjabi and 556 *kaḥitts* (short poems) in Braj Bhāṣā (a western dialect of Hindi). The *vārs* enjoy semicanonical status and are among the only compositions outside the sacred scriptures that Sikhs are allowed to recite and sing within the confines of the GURDWARĀS, or houses of worship. They also are a significant resource for understanding the early Sikh community.

GURDJIEFF, GEORGE IVANOVITCH \gər-ˈjē-əf, -ˈjēf, -ˈjef\, *original name* George S. Georgiades (b. 1872?, Alexandropol, Armenia, Russian Empire [now Kumayri, Armenia]—d. Oct. 29, 1949, Neuilly, near Paris, France), Greco-Armenian mystic and philosopher who founded an influential quasi-religious movement.

Gurdjieff moved to Moscow about 1913 and began teaching there and in Petrograd (St. Petersburg), returning to the Caucasus at the outbreak of the Russian Revolution in 1917. Gurdjieff taught that human life is similar to sleep; an individual who managed to transcend the sleeping state could reach remarkable levels of vitality and awareness.

Gurdjieff established the Institute for the Harmonious Development of Man in 1919 at Tiflis (now Tbilisi), Georgia; it was reestablished at Fontainebleau, France, in 1922. Its members, many from prominent backgrounds, lived a monastic life, except for occasional banquets, at which Gurdjieff would engage in probing dialogue and at which his writings were read. Ritual exercises and dance were part of the regimen, often accompanied by music composed by Gurdjieff and an associate. Performers from the institute appeared in Paris in 1923 and in four U.S. cities in 1924. A disciple named P.D. Ouspensky introduced Gurdjieff’s teachings to Western readers. The Fontainebleau center was closed in 1933, but Gurdjieff continued teaching in Paris until his death.

GURDWARĀ \gūr-ˈdwā-rā\ (Punjabi: “doorway to the Gurū”), place of worship of the Sikhs.

The key area of a *gurdwārā* is a spacious room housing the *Srī Gurū Granth Sāhib* (also known as the ĀDI GRANTH), the Sikh scripture. The community gathers here to participate in devotional activity that typically includes recitation (*pāth*) of scripture, singing of scripture to musical accompaniment (*kīrtan*), and its exegesis (*kathā*). Toward the closing of the devotional session, a supplication (*ardās*) is made in which the Sikhs remember their history, seek divine blessings in dealing with their current problems, and reaffirm their vision of establishing a state in which Sikhs shall rule (Khālsā Rāj). The service ends with a hymn read

from the *Srī Gurū Granth Sāhib*, which is interpreted to be the divine reply (*hukam*) to the congregation's supplication. The *gurdwārā* also has a community kitchen (*langar*) attached to it, in which meals are prepared and served to the congregation.

Sikhs call the *gurdwārā* gathering *diwān*, a Persian word meaning "court." Having paid respects to the *Srī Gurū Granth Sāhib* and participated in ritual glorification of God, they then discuss day-to-day problems facing the community. Activities at the *gurdwārā* thus become a fair indicator of concerns and tensions within the community at a particular time.

The *gurdwārās* associated with the Sikh Gurūs' lives or their activities serve as centers for Sikh pilgrimage. The leading *gurdwārās* among these are the Golden Temple in Amritsar; the five Takhts located in Amritsar, Anandpur, Damdamā, Patnā, and Nanded; and the birth place of Gurū Nānak at Nankānā, now in Pakistan.

GURU \g'ūr-ū\ (Sanskrit, from the adjective *guru*, meaning "heavy," "weighty," hence, "respected," "venerable"), in HINDUISM, a personal spiritual teacher or guide who has attained spiritual insight. From at least the time of the UPANISHADS, India has stressed the importance of the tutorial method in religious instruction. In the educational system of ancient India, knowledge of the VEDAS was personally transmitted through oral teachings from the guru to his pupil. During this period it was customary for male pupils to live at the home of their gurus and to serve them with obedience and devotion.

Later, with the rise of the BHAKTI movement, which stressed devotion to a personalized deity, the guru became an even more important figure. He could be venerated as the leader or founder of a sect and was also considered to be the living embodiment of the spiritual truth and, thus, identified with the deity. The tradition of willing service and obedience to the guru has continued to the present day. The guru prescribes spiritual disciplines and, at the time of initiation, instructs students in the use of the MANTRA to assist in meditation; often one's guru is treated with the same respect paid the deity during worship.

For centuries at least, women have been sought out as gurus by devotees of both sexes, but until recent times they have infrequently established lineages of their own, owing in part to the fact that patrilineal succession is the norm throughout almost all of India. Another important contemporary development is the transnational circulation of Hindu gurus, not only because they have become magnets for disciples not born Hindu but also because such a claim to international appeal has become one of the most important elements for increasing a guru's prestige in India itself.

GURŪ \g'ūr-ū\ (Punjabi: "Preceptor"), in SIKHISM, within the compositions of NĀNAK (1469–1539), the founder of that tradition, the word Gurū is used to designate God. In the later tradition, however, Nānak, as the bearer of God's revelation, is called the Gurū, and so are his nine successors. As a result, SIKHISM gives special meaning to the general sense of the word GURU in Indian languages: teacher. Sikh belief insists on the unity of Gurūship; the 10 Gurūs are thus seen as representing one light. In Nānak's compositions, God is presented as the Supreme Lord of the Universe. Extending this royal metaphor, the Gurū was seen as responsible for both the spiritual (*dīn*) and the temporal (*duniyā*) concerns of the community. In 1708, GOBIND SINGH, the 10th Gurū, discontinued the office and vested its authority in

the ĀDI GRANTH, thus elevating the Sikh SCRIPTURE to the status of Sri Gurū Granth Sahib.

The 10 Sikh Gurūs and the dates of their reigns were:

1. Nānak (1469–1539).
2. AṄGAD (1539–52), a disciple of Nānak, traditionally given credit for developing Gurmukhi, the script used to write down the Sikh scriptures.
3. AMAR DĀS (1552–74), a disciple of Aᅅgad.
4. RĀMDĀS (1574–81), the son-in-law of Amar Dās and the founder of the city of AMRITSAR.
5. ARJAN (1581–1606), the son of Rāmdās and the builder of the GOLDEN TEMPLE (Darbār Sāhib), the most famous place of PILGRIMAGE for the Sikhs.
6. HARGOBIND (1606–44), the son of Arjan.
7. HARI RĀI (1644–61), the grandson of Hargobind.
8. HARI KISHAN (1661–64), the son of Hari Rāi; he died of smallpox at the age of eight.
9. TEGH BAHĀDUR (1664–75), the son of Hargobind.
10. GOBIND SINGH (1675–1708), the son of Tegh Bahādur.

GUYON, JEANNE-MARIE BOUVIER DE LA MOTTE, MADAME DU CHESNOY \gw'yē-'yō' . . . dē-shen-'wā\, née Bouvier de La Motte, *byname* Madame Guyon (b. April 13, 1648, Montargis, France—d. June 9, 1717, Blois), French mystic, a central figure in the theological debates of 17th-century France through her advocacy of QUIETISM.

At 16 she married Jacques Guyon, lord du Chesnoy, but, at the death of her husband in 1676, she turned toward mystical experiences. Led through a long cycle of personal religious developments by the Barnabite friar François Lacombe, she left her children and began travels with Lacombe to Geneva, Turin, and Grenoble (1681–86). The heterodox nature of her teachings—which tended to exclude the external world and the mechanisms of the church—aroused the suspicions of local bishops, and she was regularly forced to move on. During this period she published the most important of her many writings: the *Moyen court et très facile de faire oraison* (1685; "The Short and Very Easy Method of Prayer"). In 1687 Lacombe was put in prison, where he died, and Guyon was arrested in 1688 but was released after a few months at the intervention of the second wife of Louis XIV.

After her release, Guyon attracted her greatest disciple, the influential Abbé de Fénelon (1651–1715). By 1694 Fénelon's writings, colored by quietism, had generated a great alarm; and, in the midst of complicated political and religious maneuvers, a conference met at Issy (1695), at which Fénelon defended Guyon's teachings. Quietism, however, was officially condemned by the ROMAN CATHOLIC church, and Guyon was imprisoned. After her release from prison (1703), she lived and wrote quietly at Blois.

Her writings were published from 1712 to 1720 (45 vol., reprinted 1767–90).

GWYDION \gwi-dē-ən\, in the Welsh MABINOGION, a son of the goddess DŌN, a master of magic and poetry and a somewhat dubious character. He assisted in raping a virgin servant girl of his uncle, King Math; for his punishment he was made to live as a stag, a sow, and a wolf with the rapist as his counterpart—the two producing children together. Later, however, he was the cunning protector of his sister Aranrhod's unwanted child Lleu Llaw Gyffes, probably the Welsh version of the pan-Celtic deity LUGUS. Aranrhod gave birth to Lleu during a test of her virginity and Gwydion had to trick her into giving him a name and weapons, apparently the duties of a mother.

HABAD \kă-'bäd\, Jewish movement and its doctrine, an offshoot of the religious and social movement known as HASIDISM; its name derives from the initial letters of three Hebrew words: *hokhmah* ("wisdom"), *binah* ("intelligence"), and *da'at* ("knowledge"). Habad follows the common Hasidic themes of DEVEQUT ("attachment"), *hitlahavut* ("enthusiasm"), and *kawwana* ("devotion"), but it elevates the importance of the intellect in spiritual endeavors. Adherence to divine commandments (TORAH) is encouraged, but excessive ASCETICISM is discouraged. The leaders (ZADDIKS, or *tzaddiqim*) of Habad Hasidism tend to be teachers and spiritual guides rather than miracle workers. The strongest opposition to Habad was based on the charge that it leaned toward PANTHEISM. (See also QABBALAH AND JEWISH MYSTICISM.)

The first leader of Habad was Rabbi Shneur Zalman, a prolific writer of 18th-century Lyady, Russia, whose *Liqqute amarim* ("Collections of Sayings")—popularly known as *Tanya* ("There Is a Teaching") from its opening word—contains the theoretical doctrine of the movement and is an interpretation of Qabbalah. His five-volume version of Joseph Karo's legal code, SHULḤAN 'ARUKH, attracted numerous followers and several outstanding leaders.

Shneur's descendants became the spiritual leaders of the Lubavitcher Hasidim, who migrated from Lyubavichi in Russia and set up headquarters in New York City. The group is noted for its support of schools, orphanages, and study groups and for various other activities that foster Jewish religious life in all its manifestations.

HABDALAH \häv-dä-'lä, häv-'dó-lə\ (Hebrew: "Separation" or "Distinction"), ceremony in Jewish homes and in SYNAGOGUES concluding the SABBATH and religious festivals. The main liturgical text for the ASHKENAZI version of the Habdalah is to be found in *Arba'ah Turim* (*The Tur*), Orah Hayyim 296:1. The ceremony consists of BENEDICTIONS that are recited over a cup of wine (and, on the night of the Sabbath, over spices and a braided candle) to praise God, who deigned to sanctify these days and thus "separate" them from routine weekdays. If a festival begins at the closing of the Sabbath, no spices are used, the candle lit for the festival replaces the Sabbath candle, and a special form of the Habdalah is combined with the special benediction (KIDDUSH) that ushers in the festival.

HACHIMAN \hă-'chē-'măn\, one of the most popular SHINTŌ deities of Japan. He is the patron deity of the Minamoto clan and of warriors in general and is often referred to as the god of war. Hachiman is commonly regarded as the deification of Ōjin, the 15th emperor of Japan. Hachiman shrines are most frequently dedicated to three deities: Hachiman as Ōjin, his mother the empress Jingō, and the goddess Hime-gami.

The first shrine to Hachiman, the Usa Hachiman-gū in Ōita prefecture, was established in 725 CE. The deity is im-

mensely popular throughout Japan, and half the registered Shintō shrines are dedicated to him. During the Nara period (710–784) Hachiman was accepted as a Buddhist divinity and came to be known as Hachiman Daibosatsu (Great Buddha-to-be). He was consulted as an oracle before the building of the colossal Buddha image at TŌDAI TEMPLE and, as guardian deity of the temple, has his own shrine within the temple compound.

HADAD \hă-'däd, 'hă-'dad\, also spelled Had, Hadda, or Haddu, in the *Old Testament* Rimmon \ri-mən\, West Semitic god of storms, thunder, and rain. His attributes were identical with those of ADAD of the Assyro-Babylonian pantheon. He was the chief BAAL ("lord") of the West Semites in north Syria, along the Phoenician coast, and along the Euphrates River. As Baal-Hadad he was represented as a bearded deity, often holding a club and thunderbolt and wearing a horned headdress. He was the consort of ATARGATIS in Syria and the bull was his symbolic animal.

HADES \hă-'dēz\, Greek Aïdes ("the Unseen"), also called Ploutos \plü-təs, -täs\, or Pluto \plü-tō\, or Pluton \plü-tän\ ("the Rich" or "The Giver of Wealth"), in GREEK RELIGION, son of the TITANS CRONUS and RHEA, and brother of ZEUS and POSEIDON. After Cronus was killed, the kingdom of the Underworld fell by lot to Hades. There he ruled with his queen, PERSEPHONE, over the infernal powers and over the dead, in what was often called "the House of Hades," or simply Hades. Though he supervised the trial and punishment of the wicked after death, he was not normally one of the judges in the Underworld, nor did he personally torture the guilty, a task assigned to the Furies (ERINYES). Hades was stern and pitiless, unmoved by prayer or sacrifice.

He was usually worshiped under a euphemistic epithet such as Clymenus ("the Illustrious") or Eubuleus ("the Giver of Good Counsel"). His title PLUTO or Pluton may have originated through Hades' partial amalgamation with a god of the earth's fertility, or because he gathered all living things into his treasury at death.

The word Hades is used in the SEPTUAGINT to translate the Hebrew word *sheol*, denoting a dark region of the dead. Tartarus, originally an abyss far below Hades and the place of punishment in the lower world, later lost its distinctness and became almost a synonym for Hades.

HADITH \hă-'dēth\ (Arabic: "speech," "talk," "report," or "account"), the spoken traditions attributed to the Prophet MUHAMMAD, his family, and COMPANIONS OF THE PROPHET, which are revered in ISLAM as a major source of religious law and moral guidance. The development of Hadith was a vital element during the first three centuries of Islamic history.

Hadith embodies the SUNNA (right custom) of the community of Muslims. Every complete Hadith formulation consists of two parts, the text proper and the ISNĀD (chain of transmitters), which precedes it—e.g., "It has been related

to me by Yaḥyā on the authority of Mālik on the authority of Nāfi' on the authority of 'Abd Allāh ibn 'Umar that the Prophet said: 'If someone sells a palm tree which has been fertilized, its fruit belongs to the seller, unless the buyer stipulate it for himself.'"

This literary form came into being early in the 2nd century of the HIJRA (soon after 720 CE). The emergence of such traditions was mainly due to the activity of the so-called traditionists, who tried to base the Islamic way of life not on custom as it had developed in the centers of the Muslim world but on individual precedents going back to the Prophet. This led to a wholesale creation of traditions with ever more elaborate *isnāds*. As a result, most of the early opinions held on the religious law and dogma of Islam as well as on its early history (which provided legal and political precedents), not to mention prophecies expressing political and other expectations, were cast in the form of traditions, which often attempted to conceal their underlying tendencies. Once the Prophet's personal example became established as the universal Muslim norm (*sunna*), however, Muslim scholars attempted to determine forgeries or doubtful reports among the existing body of Hadiths. They were bound in principle to accept any textually reliable Hadith and had to restrict themselves principally to the scrutiny of *isnāds*.

All acceptable Hadiths therefore fall into three general categories: *ṣaḥīḥ* (sound), those with a reliable and uninterrupted chain of transmission and a *matn* (text) that does not contradict orthodox belief; *ḥasan* (good), those with an incomplete *isnād* or with transmitters of questionable authority; and *da'īf* (weak), those whose *matn* or transmitters are subject to serious criticism.

Isnāds are further evaluated according to the completeness of their chains: they may be unbroken and reliable all the way back to Muhammad (*musnad*) yet very short ('*ālī*), implying less likelihood of error; they may lack one authority in the chain of transmitters or may be missing two or more transmitters (*mu'dāl*) or may have an obscure authority, referred to simply as "a man" (*mubham*).

The transmitters themselves, once established in the historical record as reliable men or women, determine further categories; the same tradition may have been handed down concurrently through several different *isnāds* (*mutawātir*), indicating a long and sound history, or a Hadith may have been quoted by three different trustworthy authorities (*mashhūr*) or by only one (*āḥād*).

Many scholars produced collections of Hadith, the earliest compilation being the great *Musnad* of AḤMAD IBN ḤANBAL, arranged by *isnād*. Six large collections, known as *al-kutub al-sitta* ("the six books"), arranged by *matn*—those of AL-BUKHĀRĪ (d. 870), MUSLIM IBN AL-ḤAJJĀJ (d. 875), Abū Dā'ūd (d. 888), AL-TIRMIDHĪ (d. 892), Ibn Māǧā (d. 886), and al-

Hachiman, woodblock print

Nasā'ī (d. 915)—came to be recognized as canonical in SUNNI Islam, though the books of al-Bukhārī and Muslim enjoy a prestige that virtually eclipses the other four. SHĪ'ITES make selective use of these books but esteem the collected sayings (*akhbār*) of the IMAMS most highly. Four of these collections are canonical: al-Kulaynī's (d. 940), Ibn Bāb-ūya's (d. 991), and two by al-Ṭūsī (d. 1068).

In critical scholarship, Hadith constitutes the main source for the study of doctrinal development during the first few centuries of Islam. It has been one of the core subjects studied in religious colleges (MADRASAS) since the Middle Ages, and it was an area of learning in which women scholars were active.

HAFTARAH \,häf-tä-'rä, häf-'tör-ə\, plural *Haftarot* \,häf-tä-'röt\, or *Haftarahs* (Hebrew: "Conclusion"), in JUDAISM, the passage from the Prophets that is read in the SYNAGOGUE to complement the reading from the PENTATEUCH on the SABBATH and on festival and fast days. The practice of declaiming prophetic passages after Pentateuchal ones is well attested from ancient times. Although the Pentateuch is read from start to finish through the liturgical year, the prophetic readings consist of selected sections; only Obadiah, which accompanies Genesis 32:4–36:43, and the book of Jonah, read at the afternoon service on YOM KIPPUR, are declaimed start to finish.

Two criteria are used in choosing the prophetic complement to the Pentateuch. First, the prophetic passage may deal with the same theme as the Pentateuchal one. For instance, the "Song of Deborah," included in Judges 4:4–5:31, serves as the Haftarah for Exodus 13:17–17:16, involving the "Song of Moses." The Haftarah for Numbers 13:1–15:41, which deals with the 12 agents of Moses sent to spy out the land of Israel before the Israelite entry, is matched by Joshua 2:1–24, the account of Joshua's counterpart mission. Second, for about a third of the liturgical occasions, the Haftarah is chosen by the criterion of the special status of a given Sabbath within the year. For example, the advent of the NEW MOON requires a particular prophetic passage. Likewise, over a 10-week period in the summer, a time of mourning (commemorating events such as the destruction of the Temple on the ninth of Av [late July or early August]) and of preparation (for ROSH HASHANAH and Yom Kippur), the Haftarah comprises three readings that focus on prophets' warnings against Israelite SIN and seven selections that contain prophets' messages of consolation on the occasion of national mourning.

The reading of the prophetic portion follows that of the Pentateuchal one and forms a complementary part of the declamation of the TORAH, upon which synagogue worship on Sabbaths, festivals, and fast days is centered. While the Pentateuchal portion is read from a Torah scroll, which lacks vowels and indications of musical intonation, the

Haftarah is read from an ordinary printed book and includes both. The Haftarah is given its own musical system, different from that of the Pentateuch. Any qualified Israelite may be called to recite the Haftarah. It is customary that when a child reaches puberty (age 12 for girls, 13 for boys), she or he is called to the Torah to take a place as a responsible member of the community of Israel and to recite the Haftarah of that occasion.

HAGAR \ˈhā-gär, -gər\, also spelled *Agar* \ˈä-gär\, in the OLD TESTAMENT, Abraham's concubine and the mother of his son Ishmael. Purchased in Egypt, she served as a maid to Abraham's childless wife, SARAH, who gave her to ABRAHAM to conceive an heir (Genesis 16:1–4a). When Hagar became pregnant, she grew arrogant; with Abraham's permission, Sarah treated her so harshly that she fled into the wilderness (Genesis 16:4b–6). There, by a spring of water, she was found by an ANGEL, who told her to return home and promised her that she would have many descendants through a son, Ishmael; he would grow up to be a "wild ass of a man," in constant struggle with all other men. Hagar returned home to bear her child (Genesis 16:7–15).

About 14 years after the birth of Ishmael, ISAAC was born to Sarah (Genesis 21:1–4). One day Sarah saw Isaac and Ishmael playing together and, fearing that Ishmael would also become an heir, sent the son and mother into the desert (Genesis 21:9–14). There God sustained them and was with Ishmael until he grew up (Genesis 21:15–21). The Jews believed that Ishmael was the ancestor of a number of Be-

douin peoples dwelling in southern Palestine (Genesis 25:12–18). There are also legends stating that Ishmael was an ancestor of MUHAMMAD.

HAGGADAH \hä-gä-'dä, hä-'gä-də\ (Hebrew: "Narrative"), in JUDAISM, the text that guides the performance of the ritual acts and prayers at the SEDER celebrating PASSOVER.

Celebrated on the 15th of the lunar month of Nisan, the first full moon after the vernal equinox, the Seder involves eating MATZAH (unleavened bread) and maror (bitter herbs), drinking four cups of wine, and reciting the story of the EXODUS. Songs are usually sung and psalms recited. The Haggadah's narrative explains the foods and practices of the rite. While its contents have evolved over the ages and continue to evolve today, with prayers and rites added in response to contemporary events, the HOLOCAUST and the advent of the State of Israel, for example, the Haggadah of Passover still involves certain fixed elements of the Seder rite.

HAGGADAH, *Aramaic Aggadah*: see HALAKHAH AND HAGGADAH.

HAGIA SOPHIA \hä-gē-ə-sō-'fē-ə, 'ha-; hä-jē-ə-, *Modern Greek* 'ä-gē-ä-sō-'fē-ä\, also called *Church of the Holy Wisdom*, *Turkish* *Ayasofya*, cathedral, one of the world's great monuments, built at Constantinople (now Istanbul) under the direction of the Byzantine emperor JUSTINIAN I. The structure, a domed BASILICA, was built in the amazingly short time of about six years and was completed in 537 CE.

The original church is said to have been built by Constantine in 325 on the foundations of a PAGAN temple. The architects were Anthemius of Tralles and Isidore of Miletus. It was enlarged by the emperor Constans and rebuilt after the fire of 415 by Theodosius II. The church was burned again in the Nika Insurrection of 532 and reconstructed by Justinian. The structure now standing is essentially the 6th-century edifice, although an earthquake tumbled the dome in 559, after which it was rebuilt to a smaller scale and the whole church reinforced from the outside. It was restored again in the mid-14th century. In 1453 it became a mosque with MINARETS, and a great chandelier was added. In 1935 it was made into a museum. The walls are still hung with Muslim calligraphic disks. The beautiful mosaics of the church are considered to be the main source of knowledge about the state of mosaic in the time shortly after the end of the ICONOCLASTIC CONTROVERSY.

HAGIOGRAPHY \hä-gē-'ä-grä-fē, hä-, -jē-\, the body of literature describing the lives and veneration of saints. The literature of hagiography in CHRISTIANITY embraces acts of the martyrs (*i.e.*, accounts of their trials and deaths); biographies of saintly monks, bishops, princes, or virgins; and accounts of miracles connected with saints' tombs, relics, ICONS, or statues.

Hagiographies have been written from the 2nd century CE to instruct and edify readers and glorify the saints. In the Middle Ages it was customary to read aloud biographies of the principal saints on their feast days. Other works of hagiography told the stories of a class of saints, such as EUSEBIUS OF CAESAREA's account of the martyrs of Palestine (4th century CE) and Pope GREGORY I the Great's *Dialogues*, a collection of stories about SAINT BENEDICT OF NURSIA and other 6th-century Latin monks. Perhaps the most important hagiographic collection is the *Legenda aurea* (*Golden Legend*) of JACOBUS DE VORAGINE in the 13th century. Modern criti-

cal hagiography began in 17th-century Flanders with the JESUIT ecclesiastic Jean Bolland and his successors, who became known as Bollandists—it is the Bollandists who are responsible for the great edition of the ACTA SANCTORUM.

The hagiographer has a threefold task: to collect all the material relevant to each particular saint, to edit the documents according to the best methods of textual criticism, and to interpret the evidence by using literary, historical, and any other pertinent criteria.

HAI BEN SHERIRA \hī-ben-shā-'rīr-ä\ (b. 939—d. March 23, 1038), last outstanding Babylonian GAON, or head, of a great Talmudic academy, remembered for the number, range, and profundity of the RESPONSA (authoritative answers to questions concerning interpretation of Jewish law) he wrote.

Hai, whose family traced its origin back to the Davidic dynasty, was fourth in a direct line to occupy the gaonate of Pumbedita (Babylonia), situated in Baghdad from the late 9th century on. He assisted his father, Sherira ben Hanina, in teaching and later as chief of court of the academy. They were both imprisoned briefly (997) on false charges; when they were freed, Hai's father appointed him *gaon* (998).

Close to a thousand *responsa* written by Hai, equaling the number of extant *responsa* written by all other *geonim*, are extant. He couched them in the same languages (Hebrew, Aramaic, or Arabic) in which the questions were

Interior of the Hagia Sophia, reconstructed in 537, Istanbul, Turkey

Spectrum Colour Library/Heritage-Images

written. On occasion, when no Talmudic citation can be found, his answers employ non-Jewish authorities. Hai steered a middle course between rationalism and more esoteric doctrines, allowing the QABBALAH validity insofar as its components are Talmudic but castigating it when it proposes miracle-making formulas by using the names of God. He was eulogized by the Judeo-Spanish poets Solomon ibn Gabirol and SAMUEL HA-NAGID as one who left no children but countless disciples in all countries of the world.

HAIL MARY, *Latin Ave Maria, also called Angelic Salutation*, a principal prayer of the ROMAN CATHOLIC church, comprising three parts addressed to the Virgin MARY. The following are the Latin text and an English translation:

◆ *Ave Maria, gratia plena;
Dominus tecum:
Benedicta tu in mulieribus et benedictus
fructus ventris tui [Jesus].
Sancta Maria, Mater Dei,
Ora pro nobis peccatoribus, nunc et in hora
mortis nostrae.
Amen.*

*Hail Mary, full of grace;
The Lord is with thee:
Blessed art thou among women and blessed is
the fruit of thy womb, Jesus.
Holy Mary, Mother of God,
Pray for us sinners, now and at the hour
of our death.
Amen.* ◆

The first part, the words of the ARCHANGEL GABRIEL (Luke 1:28), appears in liturgies as early as the 6th century. The second part, the words of Elizabeth (Luke 1:42), was added to the first part by about 1000 CE. The closing petition came into general use during the 14th or 15th century and received its official formulation by Pope Pius V in 1568.

The prayer has been set to music many times, most notably by Franz Schubert and also by Charles Gounod (the latter's work is superimposed on Johann Sebastian Bach's *Prelude in C Major*).

HAJJ \háj\, *also spelled hadj*, in ISLAM, the PILGRIMAGE to the holy city of MECCA in Saudi Arabia, which every adult Muslim of either gender must make at least once in his or her lifetime if able to do so. The hajj is the fifth of the required practices and institutions known as the FIVE PILLARS OF ISLAM. The pilgrimage rites begin on the 7th day of Dhū al-Hijja (the last month of the Islamic year) and end on the 12th day.

The hajj is incumbent on every Muslim who is physically and financially able to make the pilgrimage, but only if their absence will not place a hardship on the family. One may perform the hajj by proxy, appointing a relative or friend going on the pilgrimage to "stand in" for one.

The pattern of pilgrimage rites was established by the Prophet MUHAMMAD, but Islamic tradition traced their origins to ADAM, ABRAHAM, and his family (HAGAR and Ishmael). These sacred ancestors were reportedly instructed in the rites by the ANGELS. For Muhammad, the hajj was one of his last public acts of worship before his death in 632.

Pilgrims about 6 miles from Mecca enter the state of holiness and purity known as *ihrām* and don the *ihrām* garments, consisting for men of two white seamless sheets

that are wrapped around the body. The dress requirements for women are less stringent, though still within the bounds of modesty. Pilgrims cut neither their hair or nails until the pilgrimage rite is over. A pilgrim enters Mecca and walks seven times around the sacred shrine called the KA'BA, in the Great Mosque, kisses or touches the Black Stone (*al-hajar al-aswad*) in the Ka'ba, prays twice in the direction of the Station of Abraham (MAQĀM *Ibrāhīm*) and the Ka'ba, and runs seven times between the minor prominences of Mount Safā and Mount Marwa. On the 7th of Dhū al-Ḥijja the pilgrim is reminded of his or her duties. At the second stage of the ritual, which takes place between the 8th and the 12th days of the month, the pilgrim visits the holy places outside Mecca—Jabal ar-Raḥma, Muzdalifa, Minā—and sacrifices an animal in commemoration of Abraham's sacrifice. This sacrifice inaugurates the great Feast of Sacrifice (ʿId al-Aḏḥā), which is observed by Muslims everywhere. The male pilgrim's head is usually shaved then, and, after throwing seven stones at each of the three pillars at Minā on three successive days (the pillars exemplify various devils), the pilgrim returns to Mecca to perform the farewell *ṭawāf*, or circling, of the Ka'ba before leaving the city.

Only a small fraction of the world's Muslims have actually ever completed this ritual obligation. Since the 1980s, about 2,000,000 persons perform the hajj each year, and the modern government of Saudi Arabia has invested substantial resources in refurbishing the holy places and managing the swelling flow of pilgrims. Though Muslims have attributed a variety of meanings to the hajj through the centuries, many today see it as a unifying force in Islam that brings followers of diverse background together in religious celebration. Believers who have made the pilgrimage may add the title *ḥājj* or *ḥājjī* to their names.

HĀKIM, AL- \əl-ˈkɑ-kim\, *in full* al-Ḥākim bi-Amr Allāh (Arabic: "Ruler by God's Command"), *called by Druzes* al-Ḥākim bi-Amriḥ ("Ruler by His Own Command") (b. 985—d. 1021?), sixth ruler of the Egyptian SHI'ITE Fāṭimid dynasty, noted for his eccentricities and cruelty, especially his persecutions of Christians and Jews. He is held by adherents of the DRUZE religion to be a divine incarnation.

Al-Ḥākim was named CALIPH in 996. His policies proved to be arbitrary and harsh. His religious persecutions affected SUNNI Muslims as well as Jews and Christians. At times, however, his administration was tolerant. During famines he distributed food and tried to stabilize prices. He also founded mosques and patronized scholars and poets. In 1017 he began to encourage the teachings of some Ismā'īlī missionaries, who held that he was the incarnation of divinity. The Druze religion developed from these teachings. Al-Ḥākim mysteriously vanished while taking a walk in the hills outside Cairo on the night of Feb. 13, 1021.

HAKUIN \ˈhɑ-kü-ēŋ\, *also called* Hakuin Ekaku \-ˈe-kä-kü\, *original name* Iwajirō (b. Jan. 19, 1686, Hara, Suruga province, Japan—d. Jan. 18, 1769, Hara), priest, writer, and artist who helped revive the RINZAI sect of ZEN Buddhism in Japan.

Hakuin joined the Rinzai Zen sect about 1700. He subsequently became an itinerant monk, during which time he experienced what he considered to be enlightenment. BUDDHISM in Japan had been largely coopted by the Tokugawa shogunate, but while many priests sought personal advancement, Hakuin lived in great poverty among his peasant parishioners. He attracted a large following that became a new foundation for Rinzai Zen in Japan.

Hakuin taught that direct knowledge of the truth is available to all, even the lowliest, and that a moral life must accompany religious practice. He utilized KOANS to aid meditation and invented the well-known paradox of contemplating the sound of one hand clapping. His writings include *Keisō dokozui* ("Poisonous Stamens and Pistils of Thorns"), intended for advanced students of Zen; he also is known as an artist and calligrapher.

HĀL \ˈhal\ (Arabic: "condition"), *plural* aḥwāl, in SUFISM, a spiritual state of mind that comes to the Sufi from time to time during his journey toward God. The *aḥwāl* are graces of God that cannot be acquired or retained through an individual's own efforts. When the soul is purified of its attachments to the material world, it can only wait patiently for those gifts, which, when they come, fill the Sufi with the desire to continue his journey with new energy and higher expectations.

The *aḥwāl* are distinguished by most Sufis from the MAQĀMS (spiritual stages) in two main aspects. First, the *aḥwāl* are usually transitory; second, while *aḥwāl* denote a gratuitous favor of God, *maqāms* are granted solely on merit and efforts.

Though the Sufis spoke of hundreds of *aḥwāl*, the following are among those most often referred to: (1) The *ḥāl* of *muraqaba* ("watching") fills the Sufi with either fear or joy according to the aspect of God revealed to him. (2) The *ḥāl* of *qurb* ("nearness") is a state that enables the Sufi to become unconscious of his own acts and to see God's acts and bounties toward him. (3) The *ḥāl* of *wajd* ("ecstasy") is a state described by the Sufi as a sensation that encounters the heart and produces such varied effects as sorrow or joy, fear or love, contentment or restlessness. (4) In the *ḥāl* of *sukr* ("intoxication") the Sufi, while not totally unaware of the things that surround him, becomes half-dazed because his association with God dims his sight of other things. The overpowering sense of the beloved in this state destroys the mystic's ability to distinguish between physical pain and pleasure. *Ṣahw* ("sobriety") immediately follows *sukr*, but the memories of the previous experience remain vivid and become a source of immense spiritual joy. (5) The *ḥāl* of *wudd* ("intimacy") is characterized by "the removal of nervousness, together with the persistence of awe." The Sufi becomes calm, contented, and reassured, but the overwhelming sense of the divine presence fills his heart with the kind of awe that is free from fear.

The concept of *aḥwāl* is rooted historically in the pre-Islamic religions of the Near Eastern-Mediterranean region. By the 11th century it had become a standard subject of Sufi discourse.

HALAKHAH AND HAGGADAH \,hä-lä-ˈkɑ, hä-ˈlä-kə . . . ,hä-gä-ˈdɑ, hä-ˈgä-də\, in RABBINIC JUDAISM, the systems of thought that have been organized into normative law and lore, respectively. The halakhah, a species of the generic "law," finds its counterpart and complement in the haggadah, "lore"—the two native categories joining to form the Oral TORAH. Norms of behavior defined in the halakhah differ from norms of belief found in the haggadah in the way they are set forth. The former are presented topically and analytically, the latter exegetically or propositionally. The halakhah uses small and particular rules in order to speak to the everyday concerns of ordinary Jews, while the haggadah speaks in general terms to the world at large. The halakhah addresses the internal state of Israel (the people; *i.e.*, the Jews) in relationship with God, whereas the

haggadah treats externalities. Categorically, the haggadah faces outward, correlating and showing the relationship of humanity in general and Israel in particular. The theological system of a just world order answerable to one God that animates the haggadah sets forth the parallel stories of humanity and Israel—each of these stories begins with Eden (which parallels the Land of Israel for the Jewish people), is marked by SIN and punishment (Adam's and Israel's respective acts of rebellion against God, the one through disobedience, the other through violating the Torah), and then features exile for the purpose of bringing about repentance and ATONEMENT (Adam from Eden, Israel from the land).

The classical statements of the halakhah occur in the MISHNAH, TOSEFTA, and two TALMUDS. Scriptural EXEGESIS and narratives are the principal media for thought about theological issues, and these occur in various compilations of the MIDRASH. However, both Talmuds contain ample components of haggadah, and some Midrashic compilations, particularly those devoted to EXODUS, Leviticus, Numbers, and Deuteronomy, attend to halakhic problems.

The halakhah identifies what is implicit in the facts set forth in SCRIPTURE, picking out the indicative traits that open the way to generalization and to identification of the principle embodied by the case. Then the halakhah of the Oral Torah regularizes, orders, systematizes, classifies, and, above all, places the discrete facts into an overall hierarchy, shaped into a single cogent structure. The halakhah shows how the structure sustains a working system. The haggadah, by contrast, focuses upon matters of RELIGIOUS BELIEF and experience, taking up large issues of life.

The haggadah works out the implications of the conviction that the one and only God who created heaven and Earth has established a world order of justice. It wants to know how to explain the way things are in contrast to how they are supposed to be. The halakhah asks how, in the construction of the godly community, justice shapes world order as the Torah requires. It spells out the norms for that holy community, which now and in the world to come, Israel is supposed to embody. Only together, each complementing the other, do the halakhah and the haggadah define JUDAISM.

HALDI \ˈkäl-dē\, the national god of the ancient kingdom of Urartu, which ruled the plateau around Lake Van, now eastern Turkey, from about 900 to about 600 BCE. Haldi was represented as a man, with or without wings, standing on a lion; in the absence of religious texts his attributes are otherwise unknown. A Urartian temple at ancient Muşasir dedicated to Haldi and to the goddess Bagbartu, or Bagmashtu, was captured and plundered by Sargon II of Assyria in 714 BCE; it is shown on a relief from his palace as a gabled building with a colonnade—one of the oldest known buildings to make use of that architectural form.

HALLĀJ, AL- \ˈäl-kä-ˈlāj\, *in full* Abū al-Mughīth al-Ḥusayn ibn Mansūr al-Ḥallāj (b. c. 858, Tūr, Iran—d. March 26, 922, Baghdad), controversial Muslim writer and teacher of SUFISM.

According to tradition, al-Ḥallāj's grandfather was a ZOROASTRIAN and a descendant of Abū Ayyūb, a COMPANION OF THE PROPHET, Muhammad. At an early age al-Ḥallāj went to live in the city of Wāsīt, an important Iraqi center for trade and Arab culture. His father had become a Muslim and may have supported the family by carding wool.

Al-Ḥallāj was attracted to an ascetic way of life at an early age. Not satisfied with merely having learned the QUR'AN

by heart, he was motivated to understand its deeper and inner meanings. During his adolescence, at a time when ISLAMIC MYSTICISM was in its formative period, he began to withdraw from the world and to seek the company of individuals who were able to instruct him in the Sufi way. His teachers were highly respected among the masters of Sufism. Studying first under Sahl at-Tustarī, who lived a solitary life in the city of Tustar in Khuzistan, al-Ḥallāj later became a disciple of 'Amr ibn 'Uthmān al-Makkī of Basra. During this period he married the daughter of the Sufi Abū Ya'qūb al-Aqṭa'. He concluded his instruction in the mystical way under Abū al-Qāsim al-Junayd of Baghdad.

During the next period of his life (c. 895–910), al-Ḥallāj traveled extensively and preached, taught, and wrote. He made a PILGRIMAGE to MECCA, where he followed a strict discipline for a year. In his journeys he attracted many disciples, some of whom accompanied him on a second pilgrimage to Mecca. Afterward, he returned to Baghdad and then set out for a mission to a territory hitherto not penetrated by Islam—India and Turkistan. Following a third pilgrimage to Mecca, he again returned to Baghdad (c. 908).

Al-Ḥallāj's propensity for travel and his willingness to share his mystical experiences with all who would listen were considered breaches of discipline by his Sufi masters. His travel for missionary purposes was suggestive of the subversive activity of the QARMAṬIANS (a SHI'ITE movement), whose acts of terrorism and whose missionaries were undermining the authority of the central government. Through his wife's family, he was suspected of having connections with the Zanj rebellion in southern Mesopotamia that was carried out by oppressed black slaves inspired and led by outside dissidents. The alleged involvement of al-Ḥallāj in an attempt at political and moral reform upon his return to Baghdad was an immediate factor in his arrest.

Al-Ḥallāj has been identified as an "intoxicated" Sufi—*i.e.*, those who, in the moment of ECSTASY, are so overcome by the presence of the divine that they lose awareness of personal identity and merge with ultimate reality. In that exalted state, such Sufis are given to using extravagant language. Not long before his arrest al-Ḥallāj is said to have uttered the statement "Anā al-ḥaqq" ("I am the Truth"—*i.e.*, God), which provided cause for the accusation that he had claimed to be divine. Such a statement was highly inappropriate in the view of most Muslims. There was no consensus about al-Ḥallāj, however. The long, drawn-out trial proceedings were marked by indecision. After a lengthy period of confinement (c. 911–922) in Baghdad, al-Ḥallāj was eventually crucified and tortured to death. A large crowd witnessed his execution. He is remembered to have endured gruesome torture calmly and courageously and to have uttered words of forgiveness for his accusers.

HALLEL \hä-ˈläl\ (Hebrew: "Praise"), in JUDAISM, liturgical designation for Psalms 113–118 ("Egyptian Hallel") as read in SYNAGOGUES on festive occasions. In ancient times Jews recited these hymns on the three PILGRIM FESTIVALS, when they offered their sacrifices in the TEMPLE OF JERUSALEM.

A BENEDICTION usually precedes and follows recitation of the Psalms, but the preceding benediction is omitted on the eve of PASSOVER (Pesah). The TALMUD stipulates that a reading from the Book of Esther should replace the Hallel on PURIM. In time the term Hallel came to mean the "Great Hallel," Psalm 136, which is used in the morning service on the SABBATH, festivals, and during the Passover SEDER. The "half-Hallel" (parts of Psalms 115 and 116 are omitted) is used on the last six days of Passover and on the NEW MOON.

HALLELUJAH

HALLELUJAH \ˌhɑ-lə-ˈlū-yə\, also spelled *alleluia* \ˌɑ-lə-, Hebrew liturgical expression meaning “praise ye Yah” (“praise the Lord”). It appears in the Hebrew BIBLE in several psalms, usually at the beginning or end of the psalm or in both places. In ancient JUDAISM the hallelujah was probably chanted as an antiphon by the LEVITE choir. In the NEW TESTAMENT it appears only in Revelation 19, where it occurs four times. It was translated in the SEPTUAGINT (Jewish Greek version of the Bible made in the pre-Christian period) and became “alleluia” in the VULGATE (4th-century Christian Latin version). The early Christians adopted the expression in their worship services, and it appeared often in EASTERN ORTHODOX, ROMAN CATHOLIC, and ANGLICAN and some other PROTESTANT liturgies and in HYMNS.

HALLOWEEN, also called All Hallows' Eve, holy or hallowed evening observed on October 31, the eve of All Saints' Day.

In ancient Britain and Ireland, the Celtic festival of SAMHAIN Eve was observed at the end of summer; later the date of observance was fixed upon October 31. This date was the eve of the Celtic new year. All fires were extinguished and a new ceremonial fire was kindled from which all hearth fires were relit. The date was connected with the return of herds from pasture, and laws and land tenures were renewed. The souls of the dead were supposed to revisit their homes on this day. In addition, Halloween was thought to be the most favorable time for DIVINATIONS concerning marriage, luck, health, and death.

The pre-Christian observances influenced the Christian festival of All Hallows' Eve, celebrated on the same date. Gradually, Halloween became a secular observance, and many customs and practices developed. In Scotland young people assembled for games to ascertain which of them would marry during the year and in what order the marriages would occur. Many Halloween customs have become games played by children.

Immigrants to the United States, particularly the Irish, introduced secular Halloween customs that became popular in the late 19th century, notably mischief-making by boys and young men. More recently, the occasion has come to be observed mainly by small children, who go from house to house, often in costume, demanding “Trick or treat” (the treat, usually candy, is generally given and the trick rarely played).

A common symbol of Halloween is the jack-o'-lantern (an expression that originally alluded to a lantern-carrying night watchman). It is a hollowed-out pumpkin with openings cut in it to suggest a face and with a lighted candle fixed inside. In Scotland a turnip was used, but the native pumpkin was substituted in the United States.

HALO, also called *nimbus*, in art, radiant circle or disk surrounding the head of a holy person, a representation of spiritual character. In Hellenistic and Roman art the sun god HELIOS and Roman emperors often appear with a crown of

The Angel with the Millstone depicted with a halo, illumination from the *Bamberg Apocalypse*, c. 1007

By courtesy of the Staatsbibliothek Bamberg, Germany

rays. Because of its pagan origin, the form was avoided in EARLY CHRISTIAN ART, but a simple circular nimbus was adopted by Christian emperors for their official portraits. From the middle of the 4th century, Christ was also shown with this imperial attribute, as was his symbol, the Lamb of God, from the end of the 4th century. In the 5th century it was sometimes given to ANGELS, but it was not until the 6th century that it became customary for the Virgin MARY and other SAINTS. For a time in the 5th century, living persons of eminence were depicted with a square nimbus.

The halo was used regularly in representations of Christ, the angels, and the saints throughout the Middle Ages. Often Christ's halo is quartered by the lines of a cross or inscribed with three bands, interpreted to signify his position in the TRINITY. From the 15th century, however, with the growth of naturalism in Renaissance art, the nimbus created problems in representation, and this led to its decline in Italian art in the 16th century and

to its abandonment by Michelangelo and Titian. In Flemish painting of the 15th century, it began to be represented as rays of light, and this form was adopted by Italian artists of the late 16th century, notably Tintoretto, as a realistically rendered light emanating from the holy person's head. This interpretation was the standard one in the Baroque period and in most later religious works.

The halo is also found in Buddhist art of India, appearing from the late 3rd century CE. It is believed that the motif was brought to the East by Greek invaders.

HALTIA \ˈhæl-tē-ə\, Balto-Finnic domestic spirit who oversees the household and protects it from harm.

In Finland the *haltia* was usually the spirit of the first person to lay claim to a site, by lighting a fire on it or by building a house on it or in some cases by being the first person to die there. The *haltia* was believed to resemble such a person in every way, including sex, age, dress, and mannerisms. The dominant idea was that a person, once laying claim to a piece of land, would always remain in charge of it. A *haltia* could even be brought to a new site from the previous one, either with the fire kept alive and transferred or by taking ashes from the old to the new site.

The *haltia* was the prime moral force of the household, who saw to it that norms were observed and expressed his displeasure at fighting, swearing, drinking, and other forms of socially disapproved conduct.

Other buildings on a farmstead also had their tutelary spirits. The barn spirit watched over the animals, the threshing-house spirit saw to it that the fire for drying grain was kept burning, and the mill spirit kept the miller awake to keep the mill running.

The Finnish *haltia* tradition has been influenced more recently by Swedish customs concerning the *tomte*, who appears in Finnish as *tonttu*. He is usually depicted as a bearded old man dressed in gray with a red stocking cap,

with functions quite similar to those of the *haltia*. In some cases it is difficult to distinguish the household spirit from the *maahiset*, which is considered to be the aboriginal guardian of the land before human settlement.

HAMĀS \hā-'mās\, acronym of *Harakat-al-Muqāwama al-Islamiyya*, English Islamic Resistance Movement, militant Palestinian Islamic movement in the West Bank and Gaza Strip, founded in 1987, that is dedicated to the destruction of Israel and the creation of an Islamic state in Palestine. Ḥamās has opposed peace accords between Israel and the Palestine Liberation Organization (PLO).

From the late 1970s Islamic activists connected with the pan-Arab MUSLIM BROTHERHOOD established a network of charities, clinics, and schools in Gaza and were active in many mosques; their activities in the West Bank generally were limited to the universities. The Muslim Brotherhood's activities in the West Bank and Gaza were usually nonviolent, but a number of small groups in the occupied territories began to call for JIHAD, or holy war, against Israel. In December 1987, at the beginning of the Palestinian *intifāda* (uprising) against Israeli occupation, Ḥamās was established by members of the Muslim Brotherhood and religious factions of the PLO, and the new organization quickly acquired a broad following. In its 1988 charter Ḥamās maintained that Palestine is an Islamic homeland that should never be surrendered to non-Muslims and that waging jihad to liberate Palestine is the duty of Palestinians. This position brought it into conflict with the PLO, which in 1988 recognized Israel's right to exist.

Ḥamās' armed wing, the 'Izz al-Dīn al-Qassām Forces, began a campaign of terrorism against Israel. Israel imprisoned the founder of Ḥamās, Sheikh Aḥmad Yāsīn, in 1991 and arrested hundreds of Ḥamās activists. Ḥamās denounced the 1993 peace agreement between Israel and the PLO and, along with the Islamic jihad group, subsequently intensified its terror campaign by the use of suicide bombers. The PLO and Israel responded with harsh security and punitive measures, although PLO chairman Yāsīr 'Arafāt sought to include Ḥamās in the political process, appointing Ḥamās members to leadership positions in the Palestinian Authority.

HAMZA IBN 'ALĪ \hām-zə-'i-bən-'ā-'lē\, in full Ḥamza ibn 'Alī ibn Aḥmad, also called *az-Zūzanī* (b. 985—d. after 1021), one of the founders of the DRUZE religion. After entering Egypt in 1017 he became a spokesman for the religious convictions of AL-ḤĀKIM, the Fāṭimid CALIPH, who was already accorded the position of IMAM, a divinely appointed and authoritative spokesman for ISLAM. Al-Ḥākim then claimed to be the embodiment of the Godhead—a state beyond name and beyond good and evil. Ḥamza in turn assumed the position of imam.

Considerable resistance to these doctrines appeared when they were first preached in 1017, and Ḥamza went into hiding until 1019, when al-Ḥākim was able to move vigorously to support the new religious movement. Near Cairo, Ḥamza began to build a strong missionary organization. Cosmic ranks were given to members of its hierarchy, and a class of missionaries was organized to spread the teachings. Ḥamza claimed to be representing an independent religion that superseded traditional Islam. Al-Ḥākim disappeared in mysterious circumstances in 1021, and, much persecuted, the Druze cult all but ceased to exist in Egypt. Ḥamza from hiding claimed that al-Ḥākim had only withdrawn to test the faith of his followers. Ḥamza's teach-

ings later provided the ideological foundation for many peasant revolts in Syria.

HANAFĪ LEGAL SCHOOL \ha-nə-'fē\, in ISLAM, one of the four SUNNI schools of religious law, incorporating the legal opinions of the ancient Iraqi schools of al-Kūfa and Basra. Ḥanafī legal thought (*madhhab*) developed from the teachings of the theologian IMAM ABŪ ḤANĪFA (c. 700–767) by such disciples as Abū Yūsuf (d. 798) and Muḥammad al-Shaybānī (749/750–805) and became the official system of Islamic legal interpretation of the 'Abbāsids, Seljuqs, and Ottomans. Although the Ḥanafīs acknowledge the QUR'AN and HADITH as primary sources of law, they are noted for the acceptance of personal opinion (*ra'y*) in the absence of precedent. It is the most widespread Muslim legal school; and it currently predominates in Central Asia, India, Pakistan, Turkey, and the countries of the former Ottoman Empire. Even in Muslim countries with secular law codes, the Ḥanafī school prevails in personal status law (marriage, divorce, and inheritance).

ḤANBALĪ LEGAL SCHOOL \han-bə-'lē\, in ISLAM, the most scripturalist of the four SUNNI schools of religious law. Based on the teachings of AḤMAD IBN ḤANBAL (780–855), the Ḥanbalī legal school (*madhhab*) emphasized virtually complete dependence on the divine in the establishment of legal theory and rejected personal opinion (*ra'y*), analogy (QIYĀS), except in special cases, and the Hellenistic dogma of the MU'TAZILA school of theology, on the grounds that human speculation is likely to introduce sinful innovations (BID'A). The school thus relied mainly on a literal reading of the QUR'AN and HADITH in formulating legal decisions. Popular in Iraq and Syria until the 14th century, the traditionalist Ḥanbalī legal approach was revived in the 18th century through the teachings of Ibn Taymīyah (1263–1328) in the Wahhābiya movement of central Arabia. This *madhhab* has since become the official legal school of 20th-century Saudi Arabia.

HANDS, IMPOSITION OF, also called laying on of hands, ritual act in which a priest or other religious functionary places one or both hands palms down on the top of another person's head, usually while saying a prayer or blessing. The imposition of hands was first practiced in JUDAISM and was adopted by CHRISTIANITY. In the Hebrew BIBLE it is associated with three interrelated ideas: consecration (*i.e.*, setting apart for the service of God), transmission of a divine gift, and identification (the means whereby an offerer was linked with his sacrifice).

In the NEW TESTAMENT the same ideas are present; all of these ideas are connected with ORDINATION and BAPTISM, in both of which the imposition of hands is a standard part of the ritual. The New Testament further indicates that the imposition of hands conveyed a blessing and was a means of healing. The early Christian church added two more uses: the imposition of hands for the blessing of CATECHUMENS and for the reconciliation of penitents and heretics. The modern church has preserved its use in the rites of ordination and CONFIRMATION.

HANDSOME LAKE MOVEMENT, also called Longhouse Religion, or Gai'Wiio (Seneca: "Good Message"), longest-established prophet movement in North America. Its founder was Ganioda'yo, a Seneca chief whose name meant "Handsome Lake"; his trance revelations in 1799 transformed the demoralized Seneca. Their Christian beliefs

included a personal creator-ruler, a devil, heaven, hell, and judgment; Jesus was identified with a local mythological figure. Seneca divinities were retained as ruling ANGELS, rituals were reduced to four transformed dance feasts, and the longhouse was modified into a "church." A puritan and modernizing ethic attacked alcohol and WITCHCRAFT, banned further land sales, encouraged the men to practice plow agriculture and animal husbandry, and stressed stability of the nuclear family.

Ganioda'yo's teaching spread among the Iroquois and later became embodied in the "Code of Handsome Lake," which is still recited once in two years by authorized "preachers" in some 10 longhouses providing for about 5,000 adherents on Iroquois reservations in the United States and Canada. The religion serves to maintain Indian identity and has shown some growth in the 20th century.

HANĪF \ha-'nĕf, hä-\", in the QUR'AN, Arabic designation for true monotheists (especially ABRAHAM) who were not Jews, Christians, or idol worshipers. The word appears to have been borrowed from a Syriac word for "heathen," which also designated a Hellenized person of culture. There is no evidence of an organized hanif religion in pre-Islamic Arabia, but there were individuals who repudiated the old gods and prepared the way for ISLAM but embraced neither JUDAISM nor CHRISTIANITY. Some of MUHAMMAD's relatives, contemporaries, and early supporters were called hanifs.

HANIWA \hā-nē-wā\ ("circle of clay"), unglazed terra-cotta cylinders and hollow sculptures that were arranged on and around the mounded tombs (*kofun*) of the Japanese elite in the Tumulus period (c. 250–552 CE). The first and most common *haniwa* were barrel-shaped cylinders used to mark the borders of a burial ground. In the early 4th century, the cylinders were surmounted by sculptural depictions of warriors, attendants, dancers, birds, animals, boats, military equipment, and even houses. It is believed that the symbolic figures served the deceased in the other world.

Haniwa were mass-produced during the 6th century, but with the introduction of BUDDHISM and CREMATION the tomb building declined, as did the production of *haniwa*.

HANNAH \hā-nə\, also spelled Anna (11th century BCE), mother of Samuel, the Jewish judge. Childless in her marriage to Elkanah, Hannah prayed for a son, promising to dedicate him to God. Her prayers were answered, and she brought the child Samuel to SHILOH for religious training. In the TALMUD she is named as one of seven prophetesses, and her prayer is in the ROSH HASHANAH first-day service, exemplifying successful petitions to God.

HANUKKAH \kă-nə-kə, 'hä-; kă-nü-'kă\ (Hebrew: "Dedication"), also called Feast of Dedication, Feast of Lights, or

Lighting the Hanukkah candles

Janice Rubin—Black Star

Feast of the Maccabees, in JUDAISM, festival that begins on Kislev 25 (in December, according to the Gregorian calendar) and is celebrated for eight days. Hanukkah reaffirms the ideals of Judaism and commemorates the rededication of the Second Temple in Jerusalem.

According to I Maccabees, Hanukkah was instituted by Judas Maccabeus in 165 BCE to celebrate his victory over Antiochus IV Epiphanes, the Seleucid king who desecrated the Second Temple. After his victory, Judas ordered the Temple's restoration, and a new altar was dedicated on Kislev 25. Judas proclaimed that the dedication of the restored Temple should be celebrated every year for eight days beginning on that date.

Although not established in the books of the Maccabees,

the tradition of lighting candles at Hanukkah most likely started early. The practice is enshrined in the TALMUD, which describes the miracle of the oil in the Temple. According to the Talmud, when Judas Maccabeus entered the Temple, he found only a small jar of oil that had not been defiled by Antiochus. The jar contained only enough oil to burn for one day, but miraculously the oil burned for eight days until new consecrated oil could be found.

The most important Hanukkah custom is the lighting of the MENORAH, a candelabra with eight branches plus a holder for the *shammash* ("servant") candle, which is used to light the other candles. The candles are inserted in the menorah incrementally each night of the festival from right to left but are lit from left to right. A blessing is offered while the candles are lit. The observance is characterized by the daily reading of Scripture, recitation of some of the Psalms, almsgiving, and singing of a special hymn. Thanks are offered to God for delivering the strong into the hands of the weak and the evil into the hands of the good.

There are also a number of nonreligious customs associated with Hanukkah. Potato pancakes (*latkes*) and other treats fried in oil, which recall the miracle of the oil, are popular. Children play a game with a four-sided top called a dreidel (Hebrew *sevivon*), and they receive presents and gifts of money (Hanukkah gelt), which is sometimes distributed in the form of chocolate coins wrapped in gold foil. In countries where Christmas is observed, echoes of that observance appear in Hanukkah celebrations. Some families exchange gifts or decorate their homes.

HANULLIM \hän-'əl-'lēm\, also called Hanunim ("Sky Lord"), ancient Korean HIGH GOD or Sky Father who was held to be the progenitor of the Korean people. Drawing upon Chinese ideas of SHANG-TI ("Supreme Ruler") and T'IENT ("Heaven"), as well as on Confucian ideals of FILIAL PIETY, Hanullim was seen as a benevolent deity and divine ruler whose son, Tan-gun, gave rise to the human race and the kingly order of society. He was associated with the polestar and worshiped as a tutelary mountain spirit.

HANUMĀN \ˈhə-nū-ˈmān, ˌhə-nū-ˈmān\, in the mythology of HINDUISM, the divine monkey chief, a central figure in the great Hindu epic the RĀMĀYAṆA (“The Acts of Rāma”). Hanumān is the child of a nymph by the wind god; accompanied by a host of monkeys, he aided RĀMA in recovering his wife, SĪTĀ, from the demon RĀVAṆA. He acted as Rāma’s spy in the demon’s kingdom; when he was discovered and his tail set on fire, he burnt down parts of their city, Laṅkā. Hanumān flew to the HIMALAYAS and carried back the mountain of medicinal herbs to restore Rāma’s grievously wounded brother Lakṣmaṇa.

Hanumān is worshiped in the form of a monkey with a red face, who stands erect like a human and often displays an erect tail. Temples in his honor are numerous and ever increasing in influence. Hanumān is able to change size at will and travel to distant realms. His great physical strength makes him the patron saint of wrestlers, but it is the combination of brute strength and faithfulness—both to Rāma and Sītā and to his own devotees—that makes him one of Hinduism’s most important deities.

HAN YŪ \ˈhän-ˈyüē\, *Pinyin* Han Yu, also called Han Wen-kung \ˈhän-ˈwən-ˈgüŋ\ (b. 768, Teng-chou, Honan Province, China—d. 824, Ch’ang-an), T’ang period master of Chinese prose, outstanding poet, and the first proponent of what became known as NEO-CONFUCIANISM.

Han Yü, portrait by an unknown artist

By courtesy of the Collection of the National Palace Museum, Taipei, Taiwan, Republic of China

Hanumān carrying a mountain of healing herbs, detail of a Mughal painting, late 16th century

By courtesy of the Smithsonian Institution, Freer Gallery of Art, Washington, D.C.

Han initially failed his civil service exams but eventually entered the bureaucracy and served in several high government posts. At his death he was granted the title of president of the ministry of rites and the epithet “Prince of Letters.”

Han defended Confucian doctrine at a time when its popularity had greatly declined. He attacked TAOISM and BUDDHISM, which were at the height of their influence. He castigated the emperor for paying respect to the supposed finger bone of the Buddha, an act that almost cost him his life and

because of which he was banished to South China for a year. In defending CONFUCIANISM, Han quoted from the MENCĪUS, the TAHSŪEH (“Great Learning”), the *Chung-yung* (“Doctrine of the Mean”), and the I-CHING (“Classic of Changes”), works that had been neglected. In so doing, he laid the foundations for later Neo-Confucianists who took their basic ideas from these books.

HAOMA \ˈhäu-ˈmä, ˈhäu-mə\, in ZOROASTRIANISM, sacred plant and the drink made from it. The preparation of the drink from the plant by pounding and the drinking of it are central features of Zoroastrian ritual. *Haoma* is also personified as a divinity. It bestows essential vital qualities—health, fertility, husbands for maidens, even immortality. The source of the earthly *haoma* plant is a shining white tree that grows on a paradisiacal mountain. Sprigs of this white *haoma* were brought to earth by divine birds.

Haoma is the Avestan cognate of the Sanskrit SOMA. The near identity of the two in ritual significance is considered by scholars

to point to a salient feature of an Indo-Iranian religion antedating Zoroastrianism.

HAPI \ˈhä-pē\, in ancient EGYPTIAN RELIGION, personification of the annual inundation of the Nile River. Hapi was the most important of all personifications of aspects of natural fertility. Hymns were composed in his honor, but he had no temples or formal cult, except at the narrows of Jabal al-Silsila in the south, where shrines were built and offerings were cast into the river’s waters. Hapi was represented as a fat man, dressed in the belt of a marsh dweller or servant. This form, originally common to many personifications, became identified closely with Hapi.

ḤAQĪQA \hä-ˈkē-kə\ (Arabic: “reality,” “truth”), in the mystical terminology of ISLAM, the knowledge the Sufi acquires when the secrets of the divine essence are revealed to him at the end of his journey toward union with God (see SUFISM). The Sufi must first reach the state of *fanā* (“passing away of the self”), in which he becomes free from attachment to the world and loses himself entirely in God. After he is awakened from that state he attains the state of *baqā* (“subsistence”), and *ḥaqīqa* is revealed to him.

The Sufis called themselves *ahl al-ḥaqīqa* (“the people of truth”) to distinguish themselves from *ahl al-sharʿa* (“the people of religious law”) and to defend themselves against accusations that they deviated from Islamic laws and principles laid down in the QURʿAN and HADITH. Such accusations, the Sufis maintained, were made by Muslims who relied too much on the external meaning of religious texts and did not seek the inner meaning of Islam.

HARAI \hā-'rī\, also spelled *harae*, *barai*, or *barae* (Japanese: “purification”), in Japanese religion, any of numerous SHINTŌ purification ceremonies. *Harai* rites, and similar *misogi* exercises using water, cleanse the individual so that he may approach a deity or sacred power (KAMI). Salt, water, and fire are the principal purificatory agents. Many of the rites are traditionally explained as the method used by Izanagi (the mythical creator of Japan) to rid himself of the polluting effect of seeing the decaying body of his wife and sister, Izanami, in the land of the dead.

The rites are observed before entering a temple, taking part in worship, beginning a festival, or taking out a religious procession. The simpler rites consist of washing the hands or rinsing the mouth or having the priest shake the *harai-gushi*, a wooden wand to which are attached folds of paper. Priests participating in public ceremonies are required to undergo much more extensive purification in which they must regulate the body (bathing, diet, abstinence from stimulants), heart, environment, and soul. Great purification ceremonies called *ō-harai* are held twice a year, on June 30 and December 31, and at times of national disasters to purge the country from SINS and impurities.

HARAM \hār-əm\ (Arabic: “sacred place,” or “sanctuary”), in ISLAM, a sacred place or territory. The principal *harams* are in MECCA, MEDINA, Jerusalem, and, for SHĪTES, KARBALĀ' [Iraq]. At Mecca the *haram* encompasses the territory traversed by pilgrims engaged in the HAJJ (great PILGRIMAGE) and *umra* (lesser pilgrimage), including the KA'BA and AL-ḤARAM Mosque, Ṣafā and Marwā, Minā, and the plain of 'Arafāt. Medina's *haram* contains the Prophet's mosque-tomb. Jerusalem's “noble *haram*” (*al-haram al-sharif*) consists of the area of the Temple Mount where the AL-AQṢĀ MOSQUE and the DOME OF THE ROCK stand. At Karbalā' the mosque-tomb of AL-ḤUSAYN IBN 'ALĪ (d. 680), the third IMAM, is the foremost *haram*. In general any mosque or shrine can be considered to possess a *haram*.

Such sacred places are regarded as focal points of divine blessing, usually mediated by a holy man or woman. According to the HADITH, Mecca's *haram* was consecrated when God created heaven and earth. MUHAMMAD was remembered to have declared that he had sacralized Medina just as ABRAHAM had once sacralized Mecca. *Harams* are “forbidden” areas set apart from the mundane human landscape by codes for ritualized behavior, which include bans on bloodshed, violence, uprooting trees, sexual activity, menstruating women, elimination of bodily wastes, offensive behavior, and, especially in Mecca and Medina, non-Muslims. Unlike in ancient Near Eastern temples and pre-Islamic Arabian sanctuaries, sacrifices are conducted in areas removed from the main centers of worship. In Mecca they are conducted near Minā, in a valley between the AL-ḤARAM Mosque and 'Arafāt. *Haram* visitors are expected to observe rules of ritual purity, remove shoes, cross the threshold with the right foot first, and salute the shrine upon entrance. Hajj rites require the most complex procedures for attaining the holy state known as *ihrām* before entering Mecca's precincts. Because of the holiness of such locations, God is believed to multiply rewards for virtuous acts in them just as he multiplies punishments for transgressions. Moreover, burial in or near a *haram* earns the deceased blessings in the afterlife.

Haram territories are not necessarily enclosed by distinctive architecture. However, core *haram* sites and mosques are usually delimited by monumental features such as enclosure walls, arcades, ceremonial gateways, MINARETS, QIB-

LA niches (*mihrābs*), and domes. There may also be elaborate displays of Qur'anic calligraphy and geometric decorations in stone, stucco, brick, or adobe. In more mundane contexts *haram* has been used to denote the inviolability of a house, a man's wife, and even a secular university. See also SACRED SPACE.

HARE KRISHNA: see ISKCON.

HARGOBIND \,hər-'gō-bin-də, ,här-, -bind\ (b. 1595—d. 1644, Kīratpur, in the Himalayan foothills), in SIKHISM, sixth GURŪ (1606–44). Hargobind took over the leadership of the Sikh community in 1606 after the execution of his father, Gurū ARJAN, at Lahore, under the orders of the Mughal emperor Jahāngīr. At his succession ceremony Hargobind is believed to have defiantly borne two swords, symbolizing his twin authority as temporal (*mīri*) and spiritual (*pīri*) head of the community. A rapprochement was worked out with Jahāngīr whereby for a time Gurū Hargobind was left unperturbed in his regional sphere at AMRITSAR; during this period the Akāl Takhat and a fort (Mukhlispur, later called Lohgarh) were erected at Amritsar. But with the ascent of Shāh Jahān to the Mughal throne in 1628 problems began again, and continued skirmishes with Mughal troops led to the eventual departure of Gurū Hargobind from the Punjab plains to the Siwālik hills. There he established Kīratpur (“Town of Praise”) in the Hindu principality of Hindūr, where he spent the remaining years of his life.

HARIBHADRA \,hə-rē-'bə-drə\, also called Haribhadra Sūri \sū-'rē\ (fl. 8th century), one of the noncanonical Jain authors, known for his works in Sanskrit and Prakrit on Jain doctrine and ethics, and for his commentaries (see JAINISM).

Haribhadra was born into the BRAHMIN CASTE in Cittaur, India, and received a thorough education in the Sanskrit classics. On adopting the Jain faith, he entered a ŚVETĀMBARA order of monks. Haribhadra is best known for his *Ṣaḍ-ḍarśanasamuccaya*, which deals with the six philosophical systems of India. He also wrote on logic and YOGA.

HARIHARA \hə-rē-'hə-rə\, also spelled Hari-Hara, in HINDUISM, a syncretic deity combining the two major gods, VISHNU (Hari) and SHIVA (Hara). This dual form found special favor in Cambodia, where inscriptions and images of the 6th–7th century are known. In images of Harihara, the right half is depicted as Shiva and the left as Vishnu. The visage of the Shiva half is awesome, befitting his function as destroyer, and its hands hold the *triśūla* (“trident”); the Vishnu side is “pacific,” appropriate to the preserver role of that deity. Half the headdress is shown with Shiva's matted locks and half as Vishnu's crown, and half of Shiva's third eye is visible. Many Hindus regard forms such as Harihara and ARDHANĀRĪŚVARA as aids in a process of spiritual growth whereby all representations of the divine are found to be partial and, if taken in isolation, misleading.

HARI KISHAN \hə-rē-'ki-shən\, also spelled Har Krishan (b. 1656, Kīratpur—d. 1664, Delhi), in SIKHISM, eighth GURŪ (1661–64) who was installed at five years of age and reigned for only three years. Before his death from smallpox, he is said to have nominated his granduncle TEGH BAHĀDUR as his successor, a decision that had great significance in Sikh history because of Tegn Bahādur's effectiveness as Gurū.

HARI RĀI \hə-rē-'rā-ē\ (b. 1630, Punjab, India—d. 1661, Punjab), in SIKHISM, seventh GURŪ (1644–61). Hari Rāi was

nominated to be the Gurū by his grandfather Gurū HAR-GOBIND (Gurū from 1606 to 1644), and he provided leadership to the Sikh community during a difficult phase in its history. The Sikhs had been forced out of AMRITSAR, their center in the Punjab plains, in the early 1630s, and were still in the process of settling down in the Siwālik hills. There was also internal strife. Gurū Hari Rāi attempted to avoid confrontation with the Mughal authorities, but was dragged into it when he was accused of supporting Dārā Shikōh, the liberal Mughal prince, who lost the battle of succession to his more orthodox brother, Aurangzeb. Gurū Hari Rāi's lasting achievement came in the form of his travels to the Malwa area, where he brought the local Brār tribes into the Sikh fold. They were the first Sikhs to establish their political supremacy in the middle decades of the 18th century.

HĀRĪTĪ \ˈhā-rē-ˌtē\, *Japanese* Kishi-Mojin \ˈkē-shē-ˈmō-jēn\, in BUDDHIST mythology, a child-devouring ogress who is said to have been converted from her cannibalistic habits by the BUDDHA GOTAMA to become a protectress of children and sometimes of women in childbirth as well. The Buddha hid the youngest of Hārītī's 500 children under his begging bowl, and thus made her realize the sorrow she was causing other parents. Hārītī is usually represented carrying a child, a pomegranate, or a CORNUCOPIA. Her cult traveled from India north into Central Asia, China, and Japan.

HARMONIA \hār-ˈmō-nē-ə\, in Greek mythology, the daughter of ARES and APHRODITE, according to the Theban account; in Samothrace she was the daughter of ZEUS and the Pleiad Electra. She was carried off by CADMUS, and all the gods attended the wedding. Cadmus or one of the gods gave the bride a robe and necklace, the work of HEPHAESTUS. This necklace brought misfortune to all who possessed it; both Harmonia and Cadmus were metamorphosed into snakes. Harmonia is also the name given to the Greek personification of the order of the universe.

HARPY \hār-pē\, in Greek mythology, a fabulous creature, probably a wind spirit. In Homer's *Odyssey* they were winds that carried people away. Elsewhere they were connected with the powers of the Underworld. Homer mentions one Harpy, and Hesiod mentions two. In the legend of JASON and the ARGONAUTS, they were represented as birds with the faces of women, horribly foul and loathsome.

HARRIS, BARBARA CLEMENTINE (b. June 12, 1930, Philadelphia, Pa., U.S.), African American clergywoman and social activist who was the first female bishop in the ANGLICAN COMMUNION.

Harris graduated from the Philadelphia High School for Girls in 1948, attended but did not complete college, and later graduated from Charles Morris Price School of Advertising and Journalism. She joined a public relations firm in 1958 and was hired as a public relations executive by Sun Oil in 1968. In the 1960s she participated in the civil rights movement, joining MARTIN LUTHER KING's Selma march.

Harris supported women's rights and the full involvement of women in the Anglican clergy. She approved of the ordination of 11 women priests in 1974 and soon decided to study for the priesthood. She was ordained a deacon in 1979 and an Episcopal priest in 1980. She then served at a church in Norristown, Pa., and as chaplain of Philadelphia County Prison. From 1984 to 1988 she was executive director of the Episcopal Church Publishing Company. On Feb. 11, 1989, despite the opposition of the archbishop of Canterbury and others, she was consecrated suffragan (assistant) bishop for the diocese of Massachusetts. As bishop, she was an advocate for women and minorities and spoke against those who questioned the value of women priests. Although she retired in 2002 after reaching the mandatory retirement age, she began serving as assisting bishop in the diocese of Washington, D.C., in 2003 (church law allows retired bishops to accept pastoral duties at the request of a diocesan bishop).

HARRIS MOVEMENT \ˈhar-əs\, largest mass movement toward CHRISTIANITY in West Africa, named for the prophet William Wadé Harris (c. 1850–1929), a Grebo of Liberia and a teacher-catechist in the American Episcopal mission.

While in prison for a political offense in 1910, Harris was commissioned in a vision to become a preacher; he then traveled along the coast, reaching Ghana by 1914. The French colonial government of the Ivory Coast deported him to Liberia in 1915. An estimated 120,000 followers

were baptized, adopted the SABBATH, built churches, and waited in anticipation for the white teachers who, as Harris promised, would come to teach them the BIBLE.

In western Ghana the Methodists and Roman Catholics each benefited by some 9,000 converts and CATECHUMENS in 1914–20, and a follower, John Swatson, pioneered Anglican work. British METHODISM sent missionaries to the Ivory Coast in 1924 and had gained 32,000 members by 1926. Other Harris converts developed a wide range of Harris independent churches, such as the Church of the Twelve Apostles in Ghana; the loosely grouped Églises Harristes, which, in the 20th century, had some 100,000 adherents in the Ivory Coast; and other, more syncretic, groups.

HARUSPICES \hə-ˈrəs-pə-ˌsēz\, ancient Etruscan diviners whose art consisted primarily in deducing the will of the

Harpy from a tomb frieze from the acropolis of Xanthus, Asia Minor, c. 500 BCE; in the British Museum

Hirmer Fotoarchiv, Munchen

HĀRŪT AND MĀRŪT

gods from the appearance presented by the entrails of sacrificial animals. They also interpreted all portents or unusual phenomena of nature, especially thunder and lightning, and prescribed the expiatory ceremonies after such events. The art was practiced in Rome by Etruscans, but, although of great importance, especially under the early republic, it never became a part of the state religion. Under the empire there existed a collegium of 60 haruspices who were salaried expert advisers.

HĀRŪT AND MĀRŪT \ha-'rüt . . . ma-'rüt\, in the mythology of ISLAM, two ANGELS who unwittingly became masters of evil. A group of angels, observing the SINS being committed on earth, ridiculed man's weakness. God declared that they would act no better and proposed that angels be sent to earth to see if they could resist IDOLATRY, murder, fornication, and wine. No sooner did Hārūt and Mārūt, the angels chosen, alight on earth than they were seduced by a woman and then killed the witness of their sin. The angels in heaven admitted that God was right. Hārūt and Mārūt chose to be punished on earth rather than in hell and were condemned to hang by their feet in a well in Babylonia until the Day of Judgment. Hārūt and Mārūt are first mentioned in the QUR'AN (2:102) as angels purveying evil in Babylon, and the legend probably appeared to explain how they happened to be in that position.

HASAN \hā-sān, ka-'san\, *in full* Ḥasan ibn 'Alī ibn Abī Ṭalīb (b. 624, Arabia—d. 680, MEDINA), a grandson of MUHAMMAD, the elder son of Muhammad's daughter FĀTIMA. He belongs to the group of the five most holy persons of the SHĪ'ITES, those over whom Muhammad spread his cloak while calling them "The People of the House" (AHL AL-BAYT). After his father, 'Alī, he was considered by many to be the rightful heir to Muhammad's position of leadership.

As a child Ḥasan lived with Muhammad for seven years, and after the latter's death in 632 he was politically inactive until 656, when the murdered CALIPH 'UTHMĀN IBN 'AFĀN was succeeded by 'Alī. In the civil wars that soon broke out Ḥasan was sent to the Iraqi city of Kūfah to secure acceptance of 'Alī's rule and, if possible, obtain military aid. Later he fought in the Battle of Šiffin, which, though not a defeat, did mark the beginning of a steady deterioration in 'Alī's position. After 'Alī was murdered in 661, never having chosen a successor, many of his followers pledged their loyalty to Ḥasan, who stressed his close connections with the Prophet Muhammad.

When Mu'āwiya I, the governor of Syria and the man who had led the rebellion against 'Alī, refused to acknowledge Ḥasan as caliph and began to prepare for war, Ḥasan was able to offer considerable resistance. He dispatched a force to meet Mu'āwiya and then himself headed a larger force. With little money left, Ḥasan, not a warlike person, was plagued by defections from his army. Although some of his followers resented it fiercely, he opened peace negotiations and later, in 661, abdicated the caliphate to Mu'āwiya. Ḥasan ibn 'Alī obtained a generous pension and was allowed to live the rest of his life quietly in Medina.

HĀSAN AL-BAŠRĪ, AL- \āl-'hā-sān-āl-bās-'rē\, *in full* Abū Sa'īd ibn Abī al-Ḥasan Yasār al-Bašrī (b. 642, Medina, Arabia [now in Saudi Arabia]—d. 728, Basra, Iraq), deeply pious and ascetic Muslim who was one of the most important figures in early ISLAM.

As a young man he participated in the expeditions that led to the conquest of eastern Iran. After settling in Basra,

Ḥasan became a central figure in the upheavals brought about by internal conflicts within the Muslim community. The years 684–704 marked the period of his great preaching activity. The few fragments of his sermons, among the best examples of early Arabic prose, indicate that, for Ḥasan, the true Muslim must not only refrain from committing SIN but must live in a state of lasting anxiety, brought about by the certainty of death and the uncertainty of his destiny in the hereafter. Religious self-examination (*muḥāsaba*), which led to avoiding evil and doing good, coupled with a wariness of the world, marked Ḥasan's piety and influenced later ascetic and mystical attitudes in Islam.

The enemy of Islam, for Ḥasan, was not the infidel but the hypocrite (*munāfiq*) who took his religion lightly. In the debate between freedom and determinism, he took the position that humans are responsible for their actions, and he argued for this position in an important letter written to the Umayyad CALIPH 'Abd al-Malik. His letter, the earliest extant theological treatise in Islam, attacks the view that God is the sole creator of man's actions. His political opinions, which were extensions of his religious views, placed him in precarious situations. During the years 705–714 Ḥasan was forced into hiding for criticizing the policies of the powerful governor of Iraq, al-Ḥajjāj.

Al-Ḥasan al-Bašrī was known to his own generation as an eloquent preacher, a paragon of Muslim piety, and an outspoken critic of the Umayyad dynasty. Among later generations he has been remembered for his religious ASCETICISM. Muslim mystics have counted him as one of their spiritual masters. Both the MU'TAZILA (philosophical theologians) and the Ash'arīya (followers of the theologian AL-ASH'ARĪ), the two most important theological schools in early Sunni Islam, consider Ḥasan one of their founders.

HĀSAN-E ŠABBĀḤ \ha-'san-ā-sab-'bāh\ (d. 1124, Daylam, Iran), leader of an Islamic sect, the Nizārī ISMĀ'ĪLIS, and believed to be the founder of the Assassins.

Ḥasan studied theology in the Iranian city of Rayy. At about age 17 he adopted the Ismā'īlī faith, after which he rose in the Ismā'īlī organization. In 1076 he went to Egypt, probably for further religious training. When he returned to Iran he traveled widely, making numerous converts. In 1090, with the aid of converts made within its garrison, he seized the fortress of Alamūt in Daylam, a Seljuq province on the southern shores of the Caspian Sea. After further turmoil, he assumed the leadership of a territorially scattered yet cohesive state. After the last major siege of Alamūt by the Sunni Seljuqs (1118), Ḥasan lived out his life in peace. Claiming to be the *Hujja* (proof), an agent of the hidden IMAM, he led an ascetic existence and imposed a puritanical regime at Alamūt—when one of his sons was accused of murder and the other of drunkenness, he had them executed. He wrote an autobiography and several theological treatises (none of which is extant in its original form), stressing the need for absolute authority in matters of religious faith, a doctrine accepted by contemporary Nizārīs.

HASIDEAN \hā-sē-'dē-ən, ha-\, Hebrew Ḥasid \kā-'sēd; 'kā-sid, 'hā-\, or Chasid ("Pious One"), plural Hasidim \kā-sē-'dēm; kā-'sē-dəm, hā-\, or Chasidim, member of a Jewish sect of uncertain origin, noted for uncompromising observance of Judaic Law. The Hasideans joined the Maccabean revolt against the Hellenistic Seleucids (2nd century BCE) to fight for religious freedom and stem the tide of paganism (1 MACCABEES 2:42). They had no interest in politics as such, and, withdrawing from the Maccabean cause as soon as

they had regained their religious freedom, they fell into disfavor with the Hasmonean rulers.

Tradition pictures them as so devoted to Judaic Law that martyrdom and torture were willingly preferred to the slightest violation of the SABBATH. No one can say for sure whether the Hasidim mentioned in the TALMUD were Hasideans or not. Historians tend to explain the disappearance of the Hasideans as a gradual merging with the PHARISEES. The Hasideans may also have had a doctrinal influence on the ESSENES. In later history two more groups would take the name “pious ones:” Jewish mystics in 12th-century Germany, called the “Hasidei Ashkenaz,” and the modern Hasidic religious movement that began in 18th-century Poland.

HASIDISM \ˈhā-sə-di-zəm, ˈkă-, ˈhɑ-/, Jewish religious movement that originated in Eastern Europe in the mid-18th century and persists to this day in Europe, the United States, and Israel.

A form of JUDAISM in the mystical tradition of the QABBALAH, Hasidism took shape around the figures of holy men, or *ba'ale shem* (“masters of the name”), who were believed to possess a special bond with God and to exercise miraculous powers. The principal figure of Hasidism at the outset, Israel ben Eliezer, also called BA'AL SHEM TOV (“Master of the Good Name”), was one such charismatic leader. In the Hasidic tradition the master, or ZADDIK (“righteous man”), also called a Rebbe, was believed to enjoy a direct connection to God and attracted a circle of disciples, who were called Hasidim (“loyalists”). Each circle of Rebbe and Hasidim established its own traditions of intense prayer and ecstatic religious expression.

Ben Eliezer and his Hasidim, particularly Dov Baer of Mezhirech and JACOB JOSEPH OF POLONNOYE, attracted a considerable following. With ben Eliezer's death about 1760, the movement spread from Volhynia (northwestern Ukraine) southward further into Ukraine and Podolia, northward into Belorussia and Lithuania, westward into Galicia and central Poland, and elsewhere. Early in the movement, Hasidim also traveled to and settled in the Land of Israel, locating itself in Safed and Tiberias. Hasidism continued to spread in its third generation (1773–1815), and its decentralized leadership—combined with a great diversification of the modes of thought and way of life among the various and far-flung Hasidic communities—rendered the movement diverse.

By the 1830s Hasidism predominated among the Jews in Ukraine, Galicia, and Poland and was well represented in Belorussia-Lithuania and Hungary. Opposition to Hasidism in Lithuania was led by Elijah ben Solomon Zalman, GAON of Vilna, who criticized its ecstatic and miraculous emphases. The center of Hasidism remained in Eastern Europe until 1939; masses of Hasidim and most of the Rebbes perished in the HOLOCAUST, but some few escaped to the State of Israel or to the United States, thereby establishing the movement overseas. The single most influential contemporary Hasidic community is called Ḥabad (an acronym formed from the beginning letters of the Hebrew words *hokhmah*, *binah*, and *da'at*—meaning wisdom, understanding, and knowledge). Derived originally from Lubavich, Ḥabad now thrives in Brooklyn, N.Y., and throughout the world.

Traditionally, the Hasidim looked to the zaddik, who not only worked miracles but also served as moral instructor. He would expound his TORAH at his table, surrounded by his followers. The court of the Rebbe formed the center of a

Hasidic Jews—a father and a son—from Williamsburg, Brooklyn, New York City

Eugene Gordon—Photo Researchers

community, and the Hasidim would come to the court on the holy days.

While affirming the theological principles of RABBINIC JUDAISM, the Hasidic masters placed their own distinctive imprint upon them. They taught that it is a religious duty to rejoice and that depression and sorrow should be avoided; they laid heavy emphasis upon song and dance, optimism, joy, and enthusiasm, and they instilled their teachings through PARABLES. Religious duties, they taught, must be carried out in a spirit of love and fear of God; prayer without love and fear cannot reach God. The deed is valuable but requires a spirit of devotion. Prayer serves not to petition or supplicate God but as a ladder by means of which one ascends to a relationship of union with God. There are no barriers between God and man, all is created out of God's essence. Since not everyone can accomplish spiritual goals unaided, the special gifts of the zaddik come into play; he, in particular, realizes the highest goals of the holy way of life.

Hasidism produced about 3,000 works of literature, from the late 18th century, beginning with *Toledot Yaakov Yosef* (1780), by JACOB JOSEPH OF POLONNOYE, and the published teachings of Dov Baer of Mezhirech a year later; in the 19th century anthologies of Hasidic stories were produced and circulated widely. In the 20th century the philosopher MARTIN BUBER presented Hasidism as a religious movement affording direct encounter between man and God. The theology of Abraham J. Heschel also recapitulates Hasidic teachings within the framework of 20th century PHILOSOPHY OF RELIGION.

HASKALAH \ˈhäs-kä-ˈlä\ (Hebrew: “Reason,” or “Intellect”), also called Jewish Enlightenment, late 18th- and 19th-century intellectual movement among the Jews of central and eastern Europe that attempted to acquaint Jews with the European and Hebrew languages and with secular education and culture as supplements to traditional Talmudic studies. Though the Haskalah owed much of its inspiration and values to the European Enlightenment, its roots, character, and development were distinctly Jewish. When the movement began, Jews lived mostly in PALES of settlement and ghettos and followed a form of life that had

evolved after centuries of segregation and discriminatory legislation. A move toward change was initiated by a relatively few “mobile Jews” (mainly merchants) and “court Jews” (agents of various rulers and princes).

The early proponents of Haskalah were convinced that Jews could be brought into the mainstream of European culture through a reform of traditional Jewish education and a breakdown of ghetto life. This meant adding secular subjects to the school curriculum, adopting the language of the larger society in place of Yiddish, abandoning traditional garb, reforming SYNAGOGUE services, and taking up new occupations.

Though basically rationalistic, Haskalah also exhibited such romantic tendencies as a desire to return to nature, a high regard for manual work, and an aspiration to revive a glorious and better past. Haskalah advocated the study of Jewish history and the ancient Hebrew language as a means of reviving a Jewish national consciousness; these values and attitudes later merged with those of the Jewish nationalist movement known as ZIONISM. More immediately, Haskalah’s call to modernize the Jewish religion provided the impetus for the emergence of REFORM JUDAISM in Germany in the early 19th century.

ORTHODOX JUDAISM opposed the Haskalah movement from the start because of its repudiation of the traditional Jewish way of life, which threatened to destroy the tightly knit fabric of Judaism and to undermine religious observance. There was particular distrust of a rationalistic ideology that seemed to challenge rabbinic orthodoxy and the important role of Talmudic studies in Jewish education. Nonetheless, eventually Orthodoxy admitted a minimum of secular studies and the use of local vernaculars. But other fears were justified, for some aspects of the Haskalah did in fact lead to assimilation and a weakening of Jewish identity and historical consciousness.

In Germany Yiddish was rapidly abandoned and assimilation was widespread, but interest in Jewish history revived and gave birth to modern critical historico-philological Jewish studies. In the Austrian Empire a Hebrew Haskalah developed that promoted Jewish scholarship and literature. The adherents of Haskalah fought rabbinic orthodoxy and especially HASIDISM, the mystical and pietistic tendencies of which were attacked bitterly. In Russia some followers of Haskalah hoped to achieve “improvement of the Jews” by collaborating with the government plan for educational reform, but the increasingly reactionary and anti-Semitic policies of the tsarist regime drove some Jews to support the revolutionary movement, others to support nascent Zionism.

As the impossibility of establishing an integral, worldwide Hebrew culture became evident, a rising ANTI-SEMITISM made many of the movement’s expectations appear unrealistic. By the end of the 19th century, some ideals of Haskalah had become permanent features of Jewish life,

while others were abandoned. Overall, Haskalah helped to create a middle class that was loyal to Jewish traditions and yet part of modern Western civilization.

HATĤA YOGA \ˈhə-tə-ˈyō-gə, ˈhā- (Sanskrit: “Discipline of Force”), school of YOGA that stresses mastery of the body as a way of attaining a state of spiritual perfection in which the mind is withdrawn from external objects. Haṭṭha Yoga traces its origins especially to GORAKHNĀTH, the legendary 11th-century founder of the Nāth or Kānpḥaṭa Yogis, but it grew out of yogic traditions dating back at least as far as PATAÑJALI (3rd century BCE?).

Haṭṭha Yoga places great importance on diet, purificatory processes, regulation of breathing (PRĀNĀYĀMA), and the adoption of bodily postures called ĀSANAS, which structure a program of physical exertion. A common āsana is the *padmāsana* (“lotus posture”), in which the crossed feet rest on the opposite thighs. This is the position in which many Hindu and Buddhist gods are often depicted but it is only one of dozens described in Haṭṭha Yoga treatises. The “salute to the sun” is a well-known sequence of 12 āsanas performed in a fluid movement.

Haṭṭha Yoga has grown in popularity in the West as a form of exercise conducing to strength, flexibility, bodily relaxation, and mental concentration. Its true object, however, is to awaken the dormant energy (ŚAKTI) of SHIVA that animates the subtle body but is concealed behind the gross human frame. The subtle anatomy containing it is variously described, usually as a series of lotiform CHAKRAS (“wheels”) rising from the anal/genital area to the top of the head. Through the forceful (*haṭṭha*) suppression of physical and mental activity, the female śakti is enabled to rise along the chakras and unite with the male Shiva in the uppermost chakra, a union indistinguishable from enlightenment and even immortality.

HATHOR \ˈhā-tôr\, also called Athyr \ä-ˈthir\, in ancient EGYPTIAN RELIGION, goddess of the sky, of women, and of fertility and love. Hathor’s worship originated in predynastic times (4th millennium BCE). The name Hathor means “estate of Horus” and may not be her original name. Her principal animal form was that of a cow, and she was strongly associated with motherhood. Hathor was closely connected with the sun god RE of HELIOPOLIS, whose “eye” or daughter she was said to be. In her cult center at Dandarah in Upper Egypt she was worshiped with HORUS.

There were cults of Hathor in many towns in Egypt and abroad, for she was

the patroness of foreign parts and of minerals won from the desert. At Dayr al-Bahri, in the NECROPOLIS of Thebes, she became “Lady of the West.” In the Late Period (1st millennium BCE) women aspired to be assimilated with Hathor in the next world, as men aspired to become OSIRIS. The Greeks identified Hathor with their APHRODITE.

HATTIAN RELIGIONS \ˈhɑ-tē-ən\; *see* ANATOLIA, RELIGIONS OF.

HAUHAU \ˈhɑu-,hɑu\, member of Pai Marire (Maori: "Good and Peaceful Religion"), a religio-military cult among the Maori of New Zealand that arose during the Maori Wars of the 1860s. The movement was founded in 1864 by Te Ua Haumene, who claimed to have been visited by the ANGEL GABRIEL (in 1862) and to have been moved by the experience to sacrifice his child in repentance for the straying of the Maori people.

Combining Jewish, Christian, and Maori religious tenets, the movement held that the Maori were a new chosen people. Their immediate task was to drive the Europeans from New Zealand and to recover their ancestral lands. The adherents of Pai Marire were assured by their leader that shouting the words "Pai Marire, hau, hau!" (or "hapa, hapa!") in battle would protect them from European bullets. In 1864–65, large-scale European confiscation of Maori land drove many Maori into the ranks of armed dissidents, and Hauhau became a common label for these people. Fighting continued until 1872. By then Pai Marire itself had dwindled, but similar patterns of RELIGIOUS BELIEF have continued among the Maori.

HAVDALA: *see* HABDALAH.

HAYASHI RAZAN \hä-'yā-shē-rä-'zän\, *original name* Hayashi Nobukatsu, *Buddhist name* Dōshun \dō-,shün\ (b. August 1583, Kyōto, Japan—d. Feb. 4, 1657, Edo [now Tokyo]), Japanese scholar who established the NEO-CONFUCIANISM of CHU HSI as the official doctrine of the Tokugawa shogunate (ruled 1603–1867). Hayashi also reinterpreted SHINTŌ from the point of view of Chu Hsi's philosophy, laying the foundation for the Confucianized Shintō of later centuries.

Hayashi began as a student of BUDDHISM but became a devoted adherent of Neo-Confucianism. In 1604 he became a pupil of the Confucian scholar Fujiwara Seika and on his recommendation was employed by the shogunate, beginning in 1607. He served the first four Tokugawa shoguns, tutoring them in Neo-Confucianism and history. At the same time he was engaged in scholarly activities and in the drafting of diplomatic documents. Hayashi's philosophy, with its emphasis on loyalty, on a hierarchical social and political order, and on a static conservative point of view, proved to be a powerful support for the newly established government in its relations with the restless feudal lords. In 1630 the third shogun gave Hayashi an estate in the capital city of Edo, where he founded an academy.

Hayashi's third and fourth sons, also employed by the shogunate, collaborated with their father in compiling histories; after his death they assembled the *Hayashi Razan bunshū* ("Collected Works of Hayashi Razan") and the *Razan Sensei shishū* ("Master Razan's Poems"), republished in two volumes in 1918 and 1921. His grandson was given the title *daigaku-nokami* ("head of the state university"), which was then handed down to the subsequent heads of the Hayashi family until the late 19th century.

HEALING CULT, religious group or movement that places major, or even exclusive, emphasis on the treatment or prevention by nonmedical means of physical or spiritual ailments, which are often seen as manifestations of evil. Such cults are generally centered on certain shrines or holy places, certain organizations, or particular persons.

PILGRIMAGE to a sacred place and devotion before a sacred object is a major means of religious healing. From earliest times, healing and healing cults have been associated with springs and other sources of water. As in the spa therapy (bathing in mineral waters) of contemporary health resorts, so thermal and mineral springs were conceived to be curative in ancient times. There is evidence of Neolithic and Bronze Age devotion at the sites of a variety of such springs in western Europe (*e.g.*, Grisy and Saint-Sauveur in France; Forli, Italy; Saint Moritz, Switz.). Every country in which they occur has healing traditions associated with such springs. In ancient Greece the most famous shrines were at Thermopylae and near Aedepses. In ancient Rome, the springs at Tibus and the hot sulfur wells of Aquae Abulae were well known. In the Middle East, Callirrhoe, where Herod attempted to find relief from his fatal illness, was perhaps the best known; in ancient Egypt many of the temples dedicated to the god ASCLEPIUS were near mineral springs.

Elaborate cultic practices surround those sources of water that have been the scenes of epiphanies or in which divinities are believed to dwell. The most famous Western example of this type of shrine is that at LOURDES in France, where the Virgin MARY is believed to have appeared to Marie-Bernarde Soubirous in a series of visions in 1858 and to have indicated a miraculously flowing stream that would heal the ill (*see* BERNADETTE OF LOURDES). A number of other European water shrines are associated with epiphanies of Mary (*e.g.*, the Shrine of the MADONNA of the Baths at Scafati, Italy). Many streams and wells are believed to have healing powers on the feast of the Conception of St. JOHN THE BAPTIST. More frequently, however, it is minor local water spirits (NYMPHS, water serpents, etc.) or wells and streams blessed by saints or other holy men to which devotion is made and from which healing is expected after immersion.

Certain great landmark rivers, the scene of both civic cults and private devotions, are believed to have general therapeutic and apotropaic powers. By immersion in the Euphrates (Iraq), the Pharpar (Damascus, Syria), the Jordan (Israel), the Tiber (Italy), the Nile (Egypt), or the GAṄĀ, Jamunā, or Sarasvatī (all in India), one might be cured of disease, purified from transgression, or protected against future disorders.

Healing may be accomplished by those who derive powers from their office, such as priests and kings. More frequently, however, individuals are believed to cure by means of a special gift or sacred commission. This power may be revealed in a vision, it may be sought after, or it may be accidentally discovered that an individual possesses such abilities.

Almost every religious founder, saint, and prophet has been credited with the ability to heal—either as a demonstration of or as a consequence of his holiness. In every culture there are also specialists (*e.g.*, SHAMANS, medicine men, folk doctors) who have gone through extraordinary initiations that confer curative powers upon them. Some work within an established religious tradition but concentrate their energies primarily upon healing (*e.g.*, Christian faith healers of the 19th and 20th centuries, such as John of Kronshtadt, Leslie Weatherhead, Edgar Cayce, and Oral Roberts). Others have founded their own religious communities that maintain a focus on healing (*e.g.*, Phineas P. Quimby and the NEW THOUGHT movement, MARY BAKER EDDY and CHRISTIAN SCIENCE, and the various independent churches of Africa).

HEART SUTRA \ˈsü-trə\, *Sanskrit* Prajñāpāramitāhṛdaya-sūtra \ˈprəg-,nyä-ˈpä-rə-mē-tä-ˈhri-də-yə-\ (“*Sūtra* on the Heart of the *Prajñāpāramitā*”), extremely brief distillation of the teachings in the PRAJÑĀPĀRAMITĀ (“Perfection of Wisdom”). It has been much reproduced and recited throughout many parts of Asia. In the space of a single page (some versions adding an introductory and a concluding paragraph), in words placed in the mouth of the BODHISATTVA of compassion, AVALOKITEŚVARA, and in a series of terse paradoxes, the *sūtra* asserts the essentials of MAHĀYĀNA Buddhist doctrine from the point of view of the *Prajñāpāramitā* emphasis on “emptiness.”

HEAVEN, the dwelling place of God, gods, or other superhuman beings and the abode or state of being of the saved, the ELECT, or the blessed in the afterlife or in the time after the LAST JUDGMENT. The term also designates the celestial sphere or spheres in contrast to the earth and to the Underworld. As celestial space, heaven also is the place of the sun, moon, planets, and stars, all of which give and symbolize light, a quality of the sacred and the good, as opposed to darkness, the quality of the Underworld and evil.

In the OLD TESTAMENT heaven is regarded as the abode of YAHWEH; because he also is heaven’s creator, he transcends the celestial sphere. Until the 3rd–2nd century BCE, Israelites generally believed that all men (good and evil) slept in Sheol, the Underworld, which was a place of neither pain nor pleasure, punishment nor reward. In later JUDAISM, however, heaven came to be viewed as the postmortem destination of the righteous, who would be resurrected to live with God. Emerging from this matrix, CHRISTIANITY viewed heaven as the destination of the true believers and followers of Christ. Some of the more recent interpretations view heaven symbolically as a state of life with Christ, rather than as a place to which the elect or the saved go after death.

ISLAM, influenced by Judaism and Christianity, views heaven as a place of joy and bliss to which faithful Muslims go, according to the will of ALLĀH (God). In the QUR’AN, there are references to the belief that everyone must go through or pass by hell before reaching heaven.

In the Eastern religions, concepts of heaven vary considerably, some being similar to Western religious views and others being very dissimilar. The Chinese heaven (T’ien) is the guardian of both the moral laws of mankind and the physical laws of nature. T’ien also is synonymous with the divine will. In some MAHĀYĀNA Buddhist sects, such as the PURE LAND sect, heaven is a “Western Paradise” for those who have received the saving GRACE of the savior AMITĀBHA, a buddha who vowed to save all living creatures. In THERAVĀDA Buddhism, MAHĀMĀYĀ, the Buddha Gotama’s mother, ascended into heaven immediately after his birth. In HINDUISM and BUDDHISM there are varied concepts of heaven.

HEBAT \ˈke-,bät\, also spelled Hepa \ˈke-,pä\, or Hepatu \ˈke-ˈpä,tü\, in the religions of Asia Minor, a Hurrian goddess, the consort of the weather god TESHUB.

Hebat was called Queen of Heaven and was assimilated by the Hittites to their national goddess, the sun goddess of the city of Arinna. Teshub and Hebat had cult centers at Kummanni (classical COMANA Cappadociae) and at Aleppo (Ḥalab) and other cities in the region of the Taurus Mountains. Hebat is represented as a matronly figure standing on a lion or seated on a throne. She survived during Hellenistic times as Hipta, a goddess of Lydia and Caria. Her name has been compared to Hebrew Ḥawwa (Eve) and with the Greek HECATE. See also ANATOLIAN RELIGIONS.

The Angel Shows John the Heavenly Jerusalem, from the Apocalypse of St. John, c. 1020
By courtesy of the Staatsbibliothek Bamberg, Germany

HEBE \ˈhē-,bē\ (Greek: *hēbē*, “puberty,” or “adolescence”), daughter of ZEUS and his wife HERA. In Homer she was a divine domestic, appearing most often as cupbearer to the gods. As the goddess of youth she was generally worshiped along with her mother, of whom she may have been regarded as an emanation or specialized form. She was also associated with HERACLES, whose bride she became when he was received into heaven. Her major centers of worship were Phlius and Sicyon, where she was called Ganymeda and Dia.

HEBRAIC LAW, body of ancient Hebrew law codes found in various places in the OLD TESTAMENT. These are similar to earlier law codes of ancient Middle Eastern monarchs, which typically claimed the authority of divine command. Two types of law are noted in the Hebrew codes: (1) casuistic, or case, law, which contains a conditional statement and a type of punishment to be meted out, and (2) apodictic law, which

contains regulations in the form of divine commands (e.g., the TEN COMMANDMENTS).

The Hebraic law codes incorporated in the Old Testament include (1) the Book of the COVENANT, or the Covenant Code, (2) the Deuteronomic Code, and (3) the PRIESTLY CODE. The Book of the Covenant is found in EXODUS 20:22–23:33. The Covenant Code is divided into (1) a prologue, (2) laws on the worship of YAHWEH, (3) laws dealing with persons, (4) property laws, (5) laws concerned with the continuance of the Covenant, and (6) an epilogue, with warnings and promises. The *lex talionis* (the law of retribution)—namely, the “eye for an eye, a tooth for a tooth” law—is found here, though the substitution of financial compensation or a fine for the literal punishment was allowed.

The Deuteronomic Code, found in Deuteronomy, chapters 12–26, is a reinterpretation or revision of Israelite law, based on historical conditions as interpreted by the 7th-century-BCE historians known as the Deuteronomists. Discovered in the Temple at Jerusalem in 621 BCE, the Deuteronomic Code attempted to purify the worship of Yahweh from Canaanite and other influences. The greatest SIN was considered to be APOSTASY, and the rejection of faith, the pen-

alty for which was death. The Deuteronomic Code is divided into (1) statutes and ordinances, especially related to dealings with the Canaanites and worship in the Temple in Jerusalem alone, (2) laws (known as sabbatical laws) concerned with the year of release from obligations, especially financial, (3) regulations for leaders, (4) various civil, cultic, and ethical laws, and (5) an epilogue of blessings and curses.

The Priestly Code, containing a major section known as the Code of Holiness (in Leviticus, chapters 17–26), is found in various parts of Exodus, all of Leviticus, and most of Numbers. Emphasizing ceremonial, institutional, and ritualistic practices, the Priestly Code comes from the post-exilic period (*i.e.*, after 538 BCE). Though most of the laws of the Code of Holiness probably come from the preexilic period, the laws reflect a reinterpretation encouraged by the exile experiences in Babylon. Purity of worship of Yahweh is emphasized.

HEB-SED FESTIVAL \ˈheb-sed\, *also called* Sed festival, one of the oldest feasts of Egypt, celebrated by the king after 30 years of rule and repeated every three years thereafter. It is believed the ceremonies represented a ritual reenactment of the unification of Egypt accomplished by Menes. From numerous wall reliefs and paintings and from the Heb-Sed court in the Step PYRAMID complex of Djoser at Saqqārah, much information has been gleaned about the festival. The king first presented offerings to a series of gods and then was crowned, first with the white crown of Upper Egypt and then with the red crown of Lower Egypt. Finally, dressed in a short kilt with an animal's tail in back, the king ran a ritual course four times and was then carried away in a great PROCESSION to visit the chapels of the gods HORUS and SETH.

HECATE \ˈhe-kə-tē, in the works of Shakespeare and Milton usually ˈhe-kət\, goddess accepted at an early date into GREEK RELIGION but probably derived from the Carians in southwest Asia Minor. In Hesiod she is the daughter of the TITAN Perses and the NYMPH Asteria and has power over heaven, earth, and sea; hence, she bestows wealth and all the blessings of daily life.

Hecate was the chief goddess presiding over magic and SPELLS. She witnessed the abduction of Demeter's daughter PERSEPHONE to the Underworld and, torch in hand, assisted in the search for her. Thus, pillars called Hecataea stood at crossroads and doorways, perhaps to keep away evil spirits. Hecate was represented as single-formed, clad in a long robe, holding burning torches; in later representations she was triple-formed, with three bodies standing back to back, probably so that she could look in all directions at once from the crossroads.

HECTOR \ˈhek-tər\, in Greek legend, the eldest son of the Trojan king PRIAM and his queen HECUBA. He was the husband of ANDROMACHE and the chief warrior of the Trojan army. In Homer's *Iliad* he is represented as an ideal warrior, a good son, a loving husband and father, and a trusty friend. He is an especial favorite of APOLLO, and later poets even described him as son of that god. His chief exploits during the Trojan War were his defense of the wounded SARPEDON, his fight with Ajax, son of Telamon, and the storming of the Greek ramparts. Patroclus, the friend of ACHILLES who came to the help of the Greeks, was slain by Hector with the help of Apollo. Then Achilles, to revenge his friend's death, returned to the war, slew Hector and dragged his body behind his chariot to the camp and afterward round the tomb of

Patroclus. APHRODITE and Apollo preserved it from corruption and mutilation. Priam, guarded by HERMES, went to Achilles and prevailed on him to give back the body, which was buried with great honor. Hector was worshiped as a hero in the Troad (Greek Troias; "Land of Troy," the northwestern projection of Asia Minor into the Aegean Sea) and also at Tanagra, east of Thebes.

HECUBA \ˈhe-kyə-bə\, *Greek* Hekabe, in Greek legend, the principal wife of the Trojan king PRIAM, mother of HECTOR, and daughter, according to some accounts, of the Phrygian king Dymas. When Troy was captured by the Greeks, Hecuba was taken prisoner. Her fate was told in various ways, most of which connected her with the promontory Cynossema (Dog's Monument) on the Hellespont. According to Euripides (in the *Hecuba*), her youngest son, Polydorus, had been placed under the care of Polymestor, king of Thrace. When the Greeks reached the Thracian Chersonese (ancient region comprising the modern Gallipoli Peninsula) on their way home, she discovered that her son had been murdered and in revenge put out the eyes of Polymestor and murdered his two sons. Later she was turned into a dog, and her grave became a mark for ships.

HEGIRA: *see* HIJRA.

HEIDELBERG CATECHISM \ˈhī-dəl-ˌbɜrg\, Reformed confession of faith; it was written in 1562 primarily by Caspar Olevianus, the superintendent of the Palatinate church, and Zacharias Ursinus, a professor of the theological faculty of the University of Heidelberg. It was accepted at the annual SYNOD of the Palatinate church in 1563.

The Heidelberg CATECHISM was prepared as part of a reform program of the Palatinate (now part of Germany). Although the elector of the Palatinate, Frederick III, preferred the Reformed faith, he hoped to conciliate the contending Protestant groups, which included the orthodox Lutheran party and the more moderate Lutheran followers of PHILIPP MELANCHTHON. The authors of the Catechism sought to bring their Reformed statements as near to the moderate Melancthonian-Lutheran position as they could. The controversial doctrine of PREDESTINATION was very mildly stated. The strength and appeal of the catechism was the fact that it was a practical and devotional work, rather than an intellectual, dogmatic, or polemical one.

Although the Heidelberg Catechism failed to conciliate the Protestant groups in Germany, it was widely used. It has been translated into more than 25 languages.

HEIMDALL \ˈhäm-däl\, *Old Norse* Heimdallr \-dä-lər\, in Norse mythology, the watchman of the gods. Called the shining god and whitest-skinned of the gods, Heimdall dwelt at the entry to ASGARD, where he guarded Bifrost, the rainbow bridge. He required less sleep than a bird, could see 100 leagues, and could hear grass growing in the meadows and wool growing on sheep. Heimdall kept the horn, Gjallarhorn, which could be heard throughout heaven, earth, and the lower world; it was believed that he would sound the horn to summon the gods when their enemies, the GIANTS, drew near at the RAGNARÖK, the end of the world of gods and humans. When that time came, Heimdall and his enemy LOKI would slay each other.

HEI TIKI \ˈhā-tē-kē\, small neck pendant in the form of a human fetus, used by the Maori of New Zealand as a fertility symbol. Usually carved of green nephrite or a jadelike

stone called *pounamu* that is found along the western coast of the South Island, *hei tiki*s normally are worn only by women. The object is believed to possess powers that increase as it is passed from generation to generation. According to one idea, the *hei tiki* protects its wearer against the vengeful spirits of stillborn infants, who have been deprived of the chance to live. Another theory holds that the figure represents the Polynesian god Tiki, the creator of life. To the Maori the greatest value of these pendants lies in their possession of magical powers and in the prestige acquired from previous owners.

HEKA \ˈhe-kä\, also spelled *Hike* \ˈhē-kä\, in ancient EGYPTIAN RELIGION, the personification of one of the attributes of the sun god Re; the term is usually translated as “magic,” or “magical power,” though its exact meaning remains obscure. Heka was believed to accompany RE in his solar boat on its daily trip across the heavens; it could also be given to and used by humans. Consequently, the Egyptians believed that Heka could be used to procure the favor of the gods, to acquire what was ordinarily unobtainable, or to prevent the return of the dead to this world.

HEL \ˈhel\, in Norse mythology, originally the name of the world of the dead; it later came to mean the goddess of death. Hel was one of the children of the trickster god LOKI, and her kingdom was said to lie downward and northward. It was called NIFLHEIM, or the World of Darkness, and appears to have been divided into several sections, one of which was NÁSTRÖND, the shore of corpses. There stood a castle facing north; it was filled with the venom of serpents, in which murderers, adulterers, and perjurers suffered torment, while the dragon Nidhogg sucked the blood from their bodies. Mention is made in an early poem of the nine worlds of Niflheim. It was said that those who fell in battle did not go to Hel but to the god ODIN, in VALHALLA, the hall of the slain.

HELEN \ˈhe-lən\, Greek *Helene* \hə-ˈlēn, -ˈlān\, in Greek mythology, the most beautiful woman of Greece and the indirect cause of the Trojan War. She was daughter of ZEUS, either by LEDA or by NEMESIS, and sister of the DIOSCURI. She was also the sister of Clytemnestra, who married AGAMEMNON, and wife of MENELAUS, Agamemnon’s younger brother. Helen eloped with PARIS, son of the Trojan king Priam; the couple fled to Troy. When Paris was slain, she married his brother Deiphobus, whom she betrayed to Menelaus when Troy was subsequently captured. She and Menelaus then returned to Sparta, where they lived until their deaths.

According to a variant of the story, Helen, in widowhood, was driven out by her stepsons and fled to Rhodes, whose queen, Polyxo, hanged her in revenge for the loss of her husband Tlepolemus in the Trojan War.

The poet Stesichorus, however, related in his second version of her story that she and Paris were driven ashore on the coast of Egypt and that Helen was detained there by King Proteus. The Helen carried on to Troy was thus a phantom, and the real one was recovered by her husband from Egypt after the war. This version of the story was used by Euripides in his play *Helen*.

Hei tiki from New Zealand

By courtesy of the trustees of the British Museum

Helen had a festival at Therapnae in Laconia; she also had a temple at Rhodes, where she was worshiped as Dendritis (the tree goddess). Like her brothers, the Dioscuri, she was a patron deity of sailors.

HELENA, SAINT \ˈhe-lə-nə\, also called Helen (b. c. 248, Drepanon?, Bithynia, Asia Minor—d. c. 328, Nicomedia; Western feast day August 18; Eastern feast day [with CONSTANTINE] May 21), Roman empress who was the reputed discoverer of the TRUE CROSS upon which JESUS CHRIST was crucified.

Helena was married to the Roman emperor Constantius I Chlorus, who renounced her for political reasons. When her son Constantine I the Great became emperor, he made her empress dowager, and under his influence she later became a Christian. She was devoted to her eldest grandson, Crispus Caesar, whom Constantine made titular ruler of Gaul, but a mysterious embroilment in the imperial family culminated with the execution of Crispus and Fausta, Constantine’s second wife and Crispus’ stepmother. Immediately afterward Helena made a PILGRIMAGE to the Holy Land. She caused churches to be built on the reputed sites of the Nativity and of the ASCENSION.

Before 337 it was claimed in Jerusalem that the cross of Jesus Christ had been found during the building of Constantine’s church on GOLGOTHA. Later in the century Helena was credited with the discovery. Many subsequent legends developed, and the story of the “invention,” or the finding of the cross, enhanced by romances and confusions with other Helens, became a favorite throughout Christendom.

HELENUS \ˈhe-lə-nəs\, in Greek mythology, son of King PRIAM of Troy and his wife HECUBA, brother of HECTOR and twin of the prophetess CASSANDRA. According to Homer he was a seer and warrior. After the death of PARIS in the Trojan War, Helenus paid suit to HELEN but was rejected and withdrew in indignation to Mt. Ida, where he was captured by the Greeks. Other accounts, however, relate that ODYSSEUS captured him, or he surrendered voluntarily in disgust at the treacherous murder of ACHILLES. He told the Greeks that in order to capture Troy they must do three things: gain possession of the Trojans’ image of Pallas ATHENA (the PALLADIUM), obtain the bow of HERACLES, and have the help of Achilles’ son NEOPTOLEMUS. Helenus and ANDROMACHE, his brother Hector’s widow, were later taken by Neoptolemus to Epirus. After Neoptolemus’ death, Helenus married Andromache and became ruler of the country.

HELIOPOLIS \,hē-lē-ˈä-pə-lis\ (Greek), Egyptian Iunu \ˈyü-nü\, or Onu \ˈō-nü\ (“Pillar City”), biblical On \ˈon, ˈän\, one of the most ancient Egyptian cities and the seat of worship of the sun god, RE. Its great TEMPLE of Re was second in size only to that of AMON at Thebes, and its PRIESTHOOD wielded great influence, particularly during the 5th dynasty, when the worship of Re became the state cult. In the New Kingdom the temple of Re-Horakhte became the repository of royal records.

HELIOS \ˈhē-lē-əs, -ˈōs\, in GREEK RELIGION, the sun god. He drove a chariot daily across the sky and sailed around the

northerly stream of Ocean each night in a huge cup. In classical Greece, Helios was especially worshiped in Rhodes, where from at least the early 5th century BCE he was regarded as the chief god, to whom the island belonged. His worship spread as he became increasingly identified with other deities, often under Eastern influence. From the 5th century BCE APOLLO was more and more interpreted as the sun god in Greece.

HELL, the abode or state of existence of beings that are damned to postmortem punishment. The word *hell*, like cognate words in other Germanic languages, is descended from a Common Germanic name for the abode of the dead that was transferred to Christian concepts of a place reserved for the souls of the damned.

The concept of a state of being or place that separates the good from the evil or the living from the dead is found in most religions of the world. The dwelling place of the dead as the destiny of the soul might be a gloomy subterranean realm or a distant island (e.g., the Greek HADES); a deep abyss in the lower world in which the souls of persons are punished (e.g., the Greek Tartarus); a dark region in the lower world in which both good and evil souls continue to exist as shades in constant thirst (e.g., the ancient Israelite Sheol); an Underworld of cold and darkness (e.g., the Norse NIFLHEIM, also called HEL); a celestial dwelling place in which the souls of the departed reside (as with the Pueblo Indians, who upon death become clouds); or a nebulous existence in which the soul might eventually fade into non-existence (as with the Native American hunting tribes).

The view that hell is the final dwelling place of the damned after a LAST JUDGMENT is held by ZOROASTRIANISM, JUDAISM, CHRISTIANITY, and ISLAM. In Zoroastrianism, the soul at death waits three nights to be judged and on the fourth day goes to the Bridge of the Requirer, where its deeds in life are weighed. If the good outweighs the evil, the soul crosses the bridge, which becomes broad, and goes to heaven; if the evil deeds are greater, the bridge becomes too narrow to cross and the soul falls into a freezing and malodorous hell to suffer torment and chastisement until the RESURRECTION. For those whose good and evil deeds are equal is reserved *hamēstagān* ("the place of the mixed"), wherein such souls suffer from both heat and cold.

Judaism, as it developed from Hellenistic times, viewed hell in terms of GEHENNA, an infernal region of punishment for the wicked. The Christian view of hell, based on Jewish concepts, regarded hell as the fiery domain of the DEVIL and his evil angels, a place of eternal damnation for those who have lived a life of SIN and who thereby deny God. Some early Christian thinkers, such as ORIGEN of Alexandria and GREGORY OF NYSSA, questioned the eternity of hell and the literalistic view that hell was a place of a fiery afterlife. The majority of Christian thinkers, however, taught that hell is a state of punishment for those who die unrepentant of their sins. Some modern theologians have again questioned the literalistic view but still hold that hell is, at least, a state of separation of the wicked from the good.

Islam, basing its concepts of hell, *Jahannam*, on Zoroastrianism, Judaism, and Christianity, describes it as a huge crater of fire beneath a narrow bridge that all souls must pass over to go to paradise. The damned fall from the bridge and suffer torments, unless God wills otherwise.

In HINDUISM, hell is only one stage in a career of the soul. Because all actions have consequences and because of REINCARNATION, the time spent in one or more of the 21 hells beneath the netherworld is not eternal. Eventually, the soul

Helios in his chariot, relief sculpture from Troy

By courtesy of the Staatliche Museen zu Berlin

will return to the World (or Ultimate) Soul, even though it takes many life periods to do so. The JAINA hell (*bhumis*) is a place where DEMONS torture sinners until any evil accumulated during their lives has been exhausted. In BUDDHISM, multiple hells correspond to *karmavacara*, the cosmic realm in which the five senses may be experienced in a variety of bodies and perceptions.

HELLEN \ˈhe-lən\, in Greek mythology, king of Phthia (at the northern end of the Gulf of Euboea) and grandson of the god Prometheus; he was the eponymous ancestor of all true Greeks (Hellenes). The Hellenes consisted of the Aeolians, Dorians, Ionians, and Achaeans, traditionally descended from and named for Hellen's sons, Aeolus and Dorus, and grandsons, Ion and Achaeus.

HELLENISTIC RELIGION, any of various systems of beliefs and practices of eastern Mediterranean peoples from the period of the Greco-Macedonian conqueror Alexander the Great (356–323 BCE) to the period of CONSTANTINE, the first Christian Roman emperor (d. 337 CE).

The empire that Alexander established constituted most of Europe, the Mediterranean, the Middle East, Africa, Persia, and the borderlands of India. The political and economic unification of such a vast territory opened the way for religious interchange between East and West. Almost every so-called Hellenistic religion occurred in both its homeland and in diasporic centers—the foreign cities in which its adherents lived in minority groups. For example, ISIS (Egypt), BAAL (Syria), the GREAT MOTHER (Phrygia), YAHWEH (Palestine), and MITHRA (Kurdistan) were worshiped in their native lands as well as in Rome and other centers.

In many cases the imposition of Greco-Roman political and cultural forms in disparate regions prompted a conscious revival of ancient religious practices, which became linked to nationalistic or messianic movements seeking to overthrow the foreign oppressors (e.g., the Maccabean rebellion against Jewish hellenizing parties and the Syrian overlords in 167–165 BCE). Among the dispersed groups, however, ties to the homeland tended to weaken with successive generations, and religion shifted its focus from national prosperity to individual salvation. In terms of transmission, the diasporic groups may be seen as shifting from "birthright" to "convinced" religion (*i.e.*, from a religion

into which one is born to a religion which one chooses to follow).

The archaic religions of the Mediterranean world had been primarily religions of etiquette, in which the interrelationships among people, between the people and the gods, between individuals and the state, and between the living and the dead were all seen to mirror the divine order of the cosmos, which in turn was discernible through ASTROLOGY, DIVINATION, oracles, and other occult practices. In the Hellenistic period such an emphasis on conformity no longer spoke to the needs of displaced and subjugated peoples. The formerly revered law and order of the cosmos came to be viewed as an evil, perverse, and confining structure from which the believer sought to be liberated. Most Hellenistic religions offered a highly dualistic COSMOLOGY in which the earthly realm in all its aspects—from despotic rulers to one's own body—constituted the imprisoning power of evil over the soul. Liberation was attainable through cultic activity, secret knowledge (*gnōsis*), and divine intervention (see GNOSTICISM).

The esotericism to which these changes led, emphasizing radical reinterpretation of the sacred texts and rigid codification of dogma, creeds, and means of admission, was met with deep suspicion by the Greco-Roman authorities. Attempts were made to expel foreigners or suppress foreign worship, and the emperor Augustus, among others, sought to revive traditional Roman religious practices. Externally, the heightened tension between Greco-Roman authority and the "new" Eastern religions expressed itself in wars, riots, and persecutions. The emergence of "emperor worship" with the deification of Augustus in 14 CE further escalated the animosity.

The dominant feature of the decline of Hellenistic influence was the rapid spread of CHRISTIANITY throughout the Roman Empire, culminating in the conversion of the emperor Constantine in 313. In this period the various Hellenistic cults were persecuted and eventually extinguished, although their influence continued even within Christianity. Hellenistic philosophy (Stoicism, Cynicism, Neo-Aristotelianism, Neo-Pythagoreanism, and Neoplatonism) provided key formulations for Jewish, Christian, and Muslim thought through the 18th century. Hellenistic magic, therapy, astrology, and alchemy remained influential until modern times in both East and West. And many formal aspects of Hellenistic religion—from art and architecture to modes of worship to forms of literature—persist in the Jewish and Christian traditions today. (See also GREEK RELIGION.)

HELLER, YOM ṬOV LIPMANN BEN NATHAN HALEVI \ˈhe-lər\ (b. 1579, Wallerstein, Bavaria [Germany]—d. Sept. 7, 1654, Kraków, Pol.), Bohemian Jewish RABBI and scholar who is best known for his commentary on the MISHNAH. He also had extensive knowledge of mathematics, the sciences, and other secular subjects.

Heller studied at the YESHIVA of Judah Loew ben Bezalel and was appointed a *dayan* (judge) in Prague at the age of 18. He served as a rabbi to communities in Moravia and Vienna, but he was recalled to Prague in 1627 to the office of the chief rabbinate. At this time, the Holy Roman emperor Ferdinand II had imposed heavy taxes on the Jews of Bohemia. The chief rabbi was responsible for overseeing the collection of the tax, a task that aroused bitter opposition within the Jewish community and made Heller the object of false accusations, for which he was heavily fined and briefly imprisoned; he was also forbidden to serve the rabbinate anywhere within the empire.

Later, while serving as a rabbi in Vladimir, Volhynia, Pol., Heller fought for the renewal of a decree preventing the purchase of rabbinical offices, SIMONY being a practice at that time. This aroused the anger of some of the wealthier Jews, who succeeded in obtaining a decree from the governor ordering Heller's expulsion. Although the decree was eventually rescinded, in 1643 Heller accepted an appointment to the chief rabbinate in Kraków, where he lived the remainder of his life.

Among Heller's many written works are an autobiography, *Megillat eyva* ("Scroll of Hate"; first published in 1818), which documented the various communities in which he had lived and included accounts of massacres of Jews in Prague (1618) and the Ukraine (1643). The most famous of his many religious works is his commentary on the Mishnah, *Tosafot Yom Ṭov* (1614–17, 2nd ed. 1643–44; "The Additions of Yom Ṭov"). In Heller's work on Obadiah of Bertinoro's commentary on the Mishnah, Heller explicated Bertinoro's sources, even as he criticized his conclusions regarding HALAKHAH.

HELWYS, THOMAS \ˈhel-wis\ (b. c. 1550—d. c. 1616), English Puritan leader, member of a Separatist group that emigrated to Amsterdam (1608), where he helped organize the first BAPTIST church.

Returning to England (1611/12) to witness to his belief in adult BAPTISM and greater individual moral responsibility (against extreme Calvinist PREDESTINATION), Helwys established the first General Baptist congregation in London. He was imprisoned for advocating universal religious tolerance and the independence of the church from state control.

HEMACANDRA \hā-mə-ˈchən-drə\, also called Hemacandra Sūri \-ˈsü-rē\, original name Cangadeva (b. 1088, Dhandhuka, Gujarāt, India—d. 1172, Gujarāt), Jain sage and Indian author who gained privileges for his religion from Siddharāja Jayasimha, one of the greatest kings of Gujarāt. With his eloquence and vast erudition, Hemacandra succeeded in converting the successor king Kumārapāla, thus firmly entrenching JAINISM in Gujarāt.

As with the birth accounts of many Indian pundits, Hemacandra's birth is said to have been attended by OMENS and supernatural occurrences. His mother had dreams foretelling the birth of a wondrous son; when the child was taken to a Jain temple, the priest Devacandra noticed he had numerous auspicious signs on his person and convinced the parents to let him teach the boy.

Cangadeva was ordained in 1110, changing his name to Somaçandra. In 1125 he became an adviser to King Kumārapāla. A prodigious writer, he produced Sanskrit and Prākṛit grammars, textbooks on practically every branch of Indian philosophy and science, and several poems, including the *Triṣaṣṭīśalā-kāpuruṣa-carita* ("Lives of the 63 Great Personages"), an epic in Sanskrit. His works became classics, setting new and higher standards for Sanskrit learning.

The thread of Jain doctrine weaves itself through all his writings. When he had at last attained the rank of *ācārya* (teacher), he changed his name to Hemacandra. At the end of his life, in accordance with Jain tradition, he fasted to death (a rite known as *sallekhanā*).

HEPHAESTUS \hi-ˈfes-təs\, also spelled Hephaistos, in GREEK RELIGION, the god of fire. Originally a deity of Asia Minor and the adjoining islands (in particular Lemnos), he had an important place of worship at the Lycian Olympus. Born lame or crippled at an early age, Hephaestus was cast from

heaven in disgust by his mother, HERA, and again by his father, ZEUS, after a family quarrel. His consort was APHRODITE or Charis, the personification of grace.

As god of fire, Hephaestus became the divine smith and patron of craftsmen; the natural volcanic or gaseous fires already connected with him were often considered to be his workshops. His cult reached Athens not later than about 600 BCE and arrived in Campania not long afterward. In art Hephaestus was generally represented as a middle-aged, bearded man.

HERA \ˈhɪr-ə, ˈher-ə\, in GREEK RELIGION, a daughter of the TITANS CRONUS and RHEA, sister-wife of ZEUS, and queen of the Olympian gods. Hera was worshiped throughout the Greek world and played an important part in Greek literature, appearing most frequently as the jealous and rancorous wife of Zeus and pursuing with vindictive hatred the heroines who were beloved by him. From early times Hera was believed to be the sole lawful wife of Zeus; she superseded DIONE (a female form of the name Zeus), who shared with him his ancient oracle at DODONA in Epirus.

In general, Hera was worshiped in two main capacities: as consort of Zeus and queen of heaven and as goddess of marriage and of the life of women. The second sphere naturally made her the protectress of women in childbirth, and at Athens and Argos she bore the title of EILEITHYIA, normally the name of the goddess of birth. She was patron of the cities Argos and Samos, which gave her a position corresponding to that of ATHENA at Athens. Although her Argive ritual was markedly agricultural, she also had a celebration there called the Shield, and there was an armed PROCESSION in her honor at Samos. The animal sacred to Hera was the cow. Her sacred bird was first the cuckoo, later the peacock. She was represented as a majestic and severe, though youthful, matron.

HERACLEON \hə-ˈrɑ-klē-ən\ (fl. 2nd century CE), leader of an Italian gnostic school. Diverging from his contemporaries VALENTINUS and Ptolemaeus, Heracleon sought a conservative expression of GNOSTICISM divested of radical oriental theories; accordingly, in the first known exegetical commentary on the Gospel According to St. John, he expounded with allegorical emphasis his central doctrine of the three levels of being: JESUS CHRIST as the incarnate form of a fallen spirit or DEMIURGE representing the "psychic" level that is intermediate between the superior or "pneumatic" category (Greek: "spirit," comprising the "plenitude" of the Father) and the base level of the material world formed by the demigod of evil.

HERACLES \ˈher-ə-,klēz\, Greek Herakles, Roman Hercules \ˈhər-kyə-,lɛz\, most famous Greco-Roman legendary hero.

Traditionally, Heracles was said to be the son of ZEUS and Alcmena, granddaughter of PERSEUS. Zeus swore that the next son born of the Perseid house should become ruler of Greece, but by a trick of Zeus's jealous wife, HERA, another child, the sickly Eurystheus, was born first and became king; when Heracles grew up, he had to serve him and also suffer the vengeful persecution of Hera. His first exploit was the strangling of two serpents that she had sent to kill him in his cradle.

Later, Heracles waged a victorious war against the kingdom of Orchomenus in Boeotia and married Megara, one of the royal princesses. But he killed her and their children in a fit of madness sent by Hera and, consequently, was obliged to become the servant of Eurystheus. It was Eurystheus who imposed upon Heracles the famous Labors, later arranged in a cycle of 12, usually as follows: (1) the slaying of the Nemean lion, whose skin he thereafter wore; (2) the slaying of the nine-headed HYDRA of Lerna; (3) the capture of the elusive hind (or stag) of Arcadia; (4) the capture of the wild boar of Mt. Erymanthus; (5) the cleansing, in a single day, of the cattle stables of King AUGEAUS of Elis; (6) the shooting of the man-eating birds of the Stymphalian marshes; (7) the capture of the bull that terrorized the island of Crete; (8) the capture of the man-eating mares of King Diomedes of the Bistones; (9) the taking of the girdle of Hippolyte, queen of the AMAZONS; (10) the seizing of the cattle of the three-bodied GIANT Geryon, who ruled the island Erytheia in the far west; (11) the bringing back of the golden apples kept at the world's end by the Hesperides; and (12) the fetching up from the lower world of the triple-headed dog Cerberus, guardian of its gates.

Having completed the Labors, Heracles undertook further enterprises, including warlike campaigns. He also successfully fought the river god Achelous for the hand of Deianeira. As he was taking her home, the CENTAUR Nessus tried to abduct her, and Heracles shot him with one of his poisoned arrows. The Centaur, dying, told Deianeira to preserve the blood from his wound, for anyone wearing a garment rubbed with it would love her forever. Several years later Heracles fell in love with Iole, daughter of Eurytus, king of Oechalia. Deianeira, realizing that Iole was a dangerous rival, sent Heracles a garment smeared with the blood of Nessus. The blood proved to be a powerful poison instead, and Heracles in agony ascended a pyre on Mt. Oeta (modern Greek Oiti) and set it alight; his mortal part was consumed and his divine part ascended to heaven. There he was reconciled to Hera and married HEBE.

Heracles and his exploits have remained a popular subject to the present, even to their depiction in motion pictures and television series. Traditionally Heracles was represented as an enormously strong man, a huge eater and drinker, very amorous, and generally kindly but with occasional outbursts of brutal rage. His characteristic weapon

was the bow but frequently also the club. In Italy he was worshiped as a god of merchants and traders, although others also prayed to him for his gifts of good luck or rescue from danger.

HERAEUM \hi-'rē-əm\, in ancient Greece, a TEMPLE or SANCTUARY dedicated to the goddess HERA. The most important of these was the Argive Heraeum, five miles northeast of Argos, where Hera's cult was established at an early date. A number of successive temples occupied that site, the last and best known of which was a limestone structure in the Doric order designed by the architect Eupolemos (423 BCE). It housed a famous gold and ivory statue of the goddess by Polyclitus the Elder. Other major *heraea* were at OLYMPIA and Samos in Greece, and at Lacinium, near Crotona, in southern Italy. Only ruins of any of these survive.

HERESY, doctrine or system rejected as false by religious authority. The term heresy is found frequently in the history of CHRISTIANITY. It also has been used among JEWS, although they have not been as intense as Christians in their punishment of heretics. The concept and combating of heresy is also important in ISLAM, BUDDHISM, and HINDUISM.

Heresy differs from schism in that the schismatic may be doctrinally orthodox but severs himself from the church. The Greek word *hairesis* (from which heresy is derived) was originally a neutral term that signified the holding of a particular set of philosophical opinions. Once appropriated by Christianity, however, the term heresy began to convey disapproval as the church regarded itself as the custodian of a divinely imparted revelation. Thus, any interpretation that differed from the official one was necessarily "heretical" in a pejorative sense.

This attitude of hostility to heresy is evident in the NEW TESTAMENT itself. Christian writers of the 2nd century appealed to the prophets and APOSTLES as sources of authoritative doctrine, and IRENAEUS and TERTULLIAN laid great stress on "the rule of faith," which was a loose summary of essential Christian beliefs handed down from apostolic times.

Later, the church council became the instrument for defining orthodoxy and condemning heresy. Eventually, in the Western church, the doctrinal decision of a council had to be ratified by the POPE to be accepted.

Historically, the major means that the church had of combating heretics was to excommunicate them. In the 12th and 13th centuries, however, the INQUISITION was established to combat heresy; heretics who refused to recant after being tried by the church were handed over to the civil authorities for punishment, usually execution.

A new situation came about in the 16th century with the REFORMATION and the consequent breakup of Western Christendom's doctrinal unity. The ROMAN CATHOLIC church, satisfied that it is the true church armed with an infallible authority, occasionally denounces doctrines or opinions that it considers heretical. With the gradual growth of toleration and the 20th-century ecumenical movement, most Protestant churches have drastically revised the notion of heresy; it is not now thought inconsistent for a person to maintain the doctrines of his or her own communion while not regarding as heretics those who hold different views. The Roman Catholic church, too, draws a distinction between those who willfully and persistently adhere to doctrinal error and those who embrace it through no fault of their own, e.g., as a result of upbringing in another tradition.

HERM \'hərm\, Greek *herma* \'hər-mə\, in GREEK RELIGION, sacred object of stone connected with the cult of HERMES. According to some scholars, Hermes' name may be derived from the Greek word *herma* (used in Homer with the meaning "prop, support" [as for a ship drawn up onto the shore], though perhaps with the original sense "stone, rock"), but the cult of Hermes is considerably older than the earliest known references to herms. These objects came to be replaced either by statues or by pillars that were generally square and tapering toward the bottom so as to suggest the human figure. These were usually surmounted by the head of Hermes and had an erect phallus. They were used not only as cult objects but also for a variety of other purposes, for example, as milestones or boundary marks. They were regarded with respect, if not actually worshiped. In 415 BCE, shortly before an important military expedition to Sicily by the Athenians, most of the herms in Athens were emasculated during the night. The SACRILEGE was supposed by many to have been committed by the Athenian general Alcibiades. Alcibiades was sentenced to death in absentia, but fled to Sparta. The charge of corrupting the youth of Athens that was leveled against Alcibiades' teacher Socrates may have been based in part upon this incident.

Herms also occur in Roman sculpture and may have heads of the forest god SILVANUS or the chief god, JUPITER Terminus. In later times, all manner of fanciful herms were used as ornaments; both single and double herms existed, and the heads were not always those of gods.

HERMAPHRODITUS \hər-mə-frə-'dī-təs\, in Greek mythology, a being partly male, partly female. The idea of such a being originated in the East; in the Greek area it appeared in Cyprus, and, although it was a favorite subject in later Greek art, it was of no importance as a Greek cult. A legend of the Hellenistic period made Hermaphroditus a beautiful youth, the son of HERMES and APHRODITE. The NYMPH of the fountain of Salmacis in Caria became enamored of him and entreated the gods that she might be forever united with him. The result was the formation of a being half man, half woman.

HERMENEUTICS \ˈhər-mə-ˈnü-tiks, -ˈnyü-\, the study of the general principles of biblical interpretation. For both Jews and Christians throughout their histories the primary purpose of hermeneutics, and of the exegetical methods employed in interpretation, has been to discover the truths and values of the BIBLE.

The sacred status of the Bible in JUDAISM and CHRISTIANITY rests upon the conviction that it is a receptacle of divine revelation. This understanding of the Bible as the word of God, however, has not generated one uniform hermeneutical principle for its interpretation. Some persons have argued that the interpretation of the Bible must always be literal because the word of God is explicit and complete; others have insisted that the biblical words must always have a deeper "spiritual" meaning because God's message and truth are self-evidently profound. Still others have maintained that some parts of the Bible must be treated literally and some figuratively. In the history of biblical interpretation, four major types of hermeneutics have emerged: the literal, moral, allegorical, and anagogical.

Literal interpretation asserts that a biblical text is to be interpreted according to the "plain meaning" conveyed by its grammatical construction and historical context. The literal meaning is held to correspond to the intention of the authors. This type of hermeneutics is often, but not necessarily, associated with belief in the verbal inspiration of the Bible, according to which the individual words of the divine message were divinely chosen. Extreme forms of this view are criticized on the ground that they do not account adequately for the evident individuality of style and vocabulary found in the various biblical authors. JEROME, an influential 4th-century biblical scholar, championed the literal interpretation of the Bible in opposition to what he regarded as the excesses of allegorical interpretation. The primacy of the literal sense was later advocated by such diverse figures as THOMAS AQUINAS, Nicholas of Lyra, John Colet, MARTIN LUTHER, and JOHN CALVIN.

Moral interpretation seeks to establish exegetical principles by which ethical lessons may be drawn from the various parts of the Bible. Allegorization was often employed in this endeavor. The *Letter of Barnabas* (c. 100 CE), for example, interprets the dietary laws prescribed in the Book of Leviticus as forbidding not the flesh of certain animals but rather the vices imaginatively associated with those animals.

Allegorical interpretation interprets the biblical narratives as having a second level of reference beyond those persons, things, and events explicitly mentioned in the text. A particular form of allegorical interpretation is the typological, according to which the key figures, main events, and principal institutions of the OLD TESTAMENT are seen as "types" or foreshadowings of persons, events, and objects in the NEW TESTAMENT. In this theory, interpretations such as that of Noah's ARK as a "type" of the Christian church have been intended by God from the beginning.

Anagogical, or mystical, interpretation seeks to explain biblical events as they relate to or prefigure the life to come. Such an approach to the Bible is exemplified by the Jewish QABBALAH, which sought to disclose the mystical significance of the numerical values of Hebrew letters and words. A chief example of such mystical interpretation in Judaism is the medieval *Zohar*. In Christianity, many of the interpretations associated with MARIOLOGY fall into the anagogical category.

Shifts in hermeneutical emphases reflected broader academic and philosophical trends: historical-critical, existen-

tial, and structural interpretation have figured prominently during the 20th century. On the nonacademic level, the interpretation of prophetic and apocalyptic biblical material in terms of present-day events remains a vigorous pursuit in some circles. *See also* INTERPRETATION.

HERMES \ˈhər-mēz\, Greek god, son of ZEUS and Maia; often identified with the Roman MERCURY. The earliest center of his cult was probably Arcadia, where Mount Cyllene was reputed to be his birthplace. There he was especially worshiped as the god of fertility, and his images were ithyphallic.

Both in literature and cult Hermes was constantly associated with the protection of cattle and sheep, and he was often closely connected with deities of vegetation, especially PAN and the NYMPHS. In the *Odyssey*, however, he appears mainly as the messenger of the gods and the conductor of the dead to HADES. Hermes was also a dream god, and the Greeks offered to him the last LIBATION before sleep. As a messenger he may also have become the god of roads and doorways, and he was the protector of travelers (and hence both merchants and thieves). Treasure casually found was his gift, and any stroke of good luck was attributed to him. In many respects he was APOLLO's counterpart; like him, Hermes was a patron of music and was credited with the invention of the kithara and sometimes of music itself. He was also god of eloquence and presided over some kinds of popular DIVINATION.

The sacred number of Hermes was four, and the fourth day of the month was his birthday. In archaic art he was portrayed as a full-grown and bearded man, clothed in a long tunic and often wearing a cap and winged boots. Sometimes he was represented in his pastoral character, bearing a sheep on his shoulders; at other times he appeared as the messenger of the gods with the *kērykeion*, or herald's staff, which was his most frequent attribute. From the latter part of the 5th century BCE he was portrayed as a nude and beardless youth, a young athlete.

HERMETIC WRITINGS \hər-ˈme-tik\, *also called* *Hermetica*, works of revelation on occult, theological, and philosophical subjects ascribed to the Egyptian god THOTH (Greek Hermes Trismegistos [Hermes the Thrice-Greatest]), who was believed to be the inventor of writing and the patron of all the arts dependent on writing. The collection, written in Greek and Latin, probably dates from the middle of the 1st to the end of the 3rd century CE. It was written in the form of dialogues and falls into two main classes: "popular" Hermetism, which deals with ASTROLOGY and the other occult sciences; and "learned" Hermetism, which is concerned with theology and philosophy.

From the Renaissance until the end of the 19th century, popular Hermetic literature received little scholarly attention. More recent study, however, has shown that its development preceded that of learned Hermetism and that it reflects ideas and beliefs that were widely held in the early Roman Empire and are therefore significant for the religious and intellectual history of the time.

In the Hellenistic age there was a growing distrust of traditional Greek RATIONALISM and a breaking down of the distinction between SCIENCE AND RELIGION. In this period the works ascribed to Hermes Trismegistos were primarily on astrology; to these were later added treatises on medicine, alchemy (*Tabula Smaragdina* ["Emerald Tablet"], a favorite source for medieval alchemists), and magic. The underlying concept of astrology—that the cosmos constituted a unity

HERMIT

and that all parts of it were interdependent—was basic also to the other occult sciences. To make this principle effective in practice (and Hermetic “science” was intensely utilitarian), it was necessary to know the laws of sympathy and antipathy by which the parts of the universe were related. The aim of Hermeticism was the deification or rebirth of man through the knowledge (*gnosis*) of the one transcendent God, the world, and men.

The theological writings are represented chiefly by the 17 treatises of the *Corpus Hermeticum*, by extensive fragments in the writings of Stobaeus, and by a Latin translation of the *Asclepius*, preserved among the works of Apuleius. Though the setting of these is Egyptian, the philosophy is Greek. The Hermetic writings, in fact, present a fusion of Eastern religious elements with Platonic, Stoic, and Neo-Pythagorean philosophies. It is unlikely, however, that there was any well-defined Hermetic community, or “church.”

Hermeticism was extensively cultivated by the Arabs, and through them it reached and influenced the West. There are frequent allusions to Hermes Trismegistos in late medieval and in Renaissance literature. The “closed” nature of some of the writings led to the word “hermetic” being used in Renaissance literature for something that is perfectly sealed, a meaning that is retained in modern science.

HERMIT, also called *eremite* \er-ə-ˈmīt\ (from Greek: *erēmitēs*, “living in the desert”), one who retires from society, primarily for religious reasons, and lives in solitude. In CHRISTIANITY the word hermit is used interchangeably with anchorite, although the two were originally distinct: an anchorite selected a cell attached to a church or near a populous center, while a hermit retired to the wilderness.

The first Christian hermits appeared by the end of the 3rd century in Egypt in reaction to the persecution of Christians by the Roman emperor Decius, fleeing into the desert and leading a life of prayer and penance. Paul of Thebes, who fled to the desert about 250, has been considered the first hermit.

The austerities and other extremes of the early hermits' lives were tempered by the establishment of cenobite (common life) communities. The foundation was thus laid in the 4th century for the institution of MONASTICISM. The eremitic life eventually died out in Western Christianity, but it has continued in Eastern Christianity. See also IDIORHYTHMIC MONASTICISM.

HERO AND LEANDER \ˈhɪr-ō . . . lē-ˈan-dər, ˈhē-rō\, two lovers celebrated in Greek legend. Hero, virgin priestess of APHRODITE at Sestos, was seen at a festival by Leander of Abydos; they fell in love, and he swam the Hellespont at night to visit her, guided by a light from her tower. One stormy night the light was extinguished, and Leander was drowned; Hero, seeing his body, drowned herself.

HERZL, THEODOR (b. May 2, 1860, Budapest, Hungary, Austrian Empire [now in Hungary]—d. July 3, 1904, Edlach, Austria), founder of the political form of ZIONISM, a movement to establish a Jewish homeland.

Herzl received his license to practice law in 1884 but chose to devote himself to literature. For a number of years he was a journalist and playwright. A profound change began in Herzl's life when he was appointed Paris correspondent for the Viennese *Neue Freie Presse*. He arrived in Paris with his wife in the fall of 1891 and was shocked to find in the homeland of the French Revolution the same ANTI-

SEMITISM with which he had become so familiar in Austria.

The Dreyfus affair in France crystallized Herzl's belief that assimilation was of no use for Jews. In the Dreyfus case, French military documents had been given to German agents, and a Jewish officer named Alfred Dreyfus had been falsely charged with the crime. The ensuing political controversy produced an outburst of anti-Semitism among the French public. Herzl said in later years that it was the Dreyfus affair that had made a Zionist out of him. So long as anti-Semitism existed, assimilation would be impossible, and the only solution for the majority of Jews would be organized emigration to a state of their own.

Herzl went to London in an effort to organize the Jews there in support of his program. Despite his personal magnetism, he found that his efforts to influence Jewish leaders in England were of little avail and therefore decided to organize a world congress of Zionists in the hope of winning support from the masses of Jews in all countries. The congress was held in Basel at the end of August 1897 and was attended by about 200 delegates, mostly from central and eastern Europe and Russia along with a few from western Europe and the United States.

The seven remaining years of his life were devoted to the furtherance of the Zionist cause. He established a Zionist newspaper, *Die Welt*, published as a German-language weekly in Vienna. He negotiated unsuccessfully with the Sultan of Turkey for the grant of a charter that would allow Jewish mass settlement in Palestine on an autonomous basis. He then turned to Great Britain, which seemed favorable to the establishment of a Jewish settlement in British territory in the Sinai Peninsula. When this project failed, the British proposed Uganda in East Africa. This offer, which he and some other Zionists were willing to accept, aroused violent opposition at the Zionist congress of 1903, particularly among the Russians. Herzl was unable to resolve the conflict. He died of a heart ailment at Edlach, near Vienna. He was buried in Vienna, but, in accordance with his wish, his remains were removed to Jerusalem in 1949 after the creation of the Jewish state and entombed on a hill west of the city now known as Mt. Herzl.

HESCHEL, ABRAHAM JOSHUA \he-shəl\ (b. 1907, Warsaw, Pol., Russian Empire [now in Poland]—d. Dec. 23, 1972, New York, N.Y., U.S.), Jewish theologian and philosopher, noted for his presentation of the prophetic and mystical aspects of JUDAISM from which he attempted to construct a modern PHILOSOPHY OF RELIGION.

After a traditional Jewish education Heschel went on to higher studies at the University of Berlin and the Hochschule für die Wissenschaft des Judentums in Berlin. He taught at the latter school; at the Jüdisches Lehrhaus at Frankfurt am Main, Ger.; at the Institute of Jewish Studies in Warsaw (after being deported from Nazi Germany in 1938); at the Institute for Jewish Learning in London; at Hebrew Union College in Cincinnati, Ohio, U.S.; and at the Jewish Theological Seminary of America in New York City.

Heschel sought to evoke the inner depth of devotion and spontaneous response that he discerned in traditional Jewish piety. He also emphasized social action as an expression of pious ethical concerns and was at the forefront of protests and demonstrations in the 1960s and '70s intended to secure equal rights for African-Americans and to end the U.S. military intervention in Vietnam.

Among his works are *The Earth Is the Lord's* (1950); *Man Is Not Alone: A Philosophy of Religion* (1951); *The Sabbath: Its Meaning to Modern Man* (1951); *Man's Quest for*

God: Studies in Prayer and Symbolism (1954); *God in Search of Man: A Philosophy of Judaism* (1956); and *The Prophets* (1962; originally published in German in 1936).

HESPERIDES \he-'sper-ə, -dēz\, *singular* Hesperis \hes-'pə-ris\, in Greek mythology, maidens who guarded the tree bearing golden apples that GAEA gave to HERA at her marriage to ZEUS. Their name is a derivative of Greek *hesperos*, "evening, the evening star," or *hespera*, "evening, west." They were usually three in number, Aegle, Erytheia, and Hesperie (or Hesperethusa), but by some accounts were as many as seven. They were said to live among the HYPERBOREANS. HERACLES later stole the apples or had Atlas get them for him. The golden apples that APHRODITE gave to Hippomenes before his race with ATALANTA were from the garden of the Hesperides.

HESPERUS \hes-'pə-rəs\, *Greek* Hesperos, also called Vesper \ves-'pər\, in Greco-Roman mythology, the evening star, son or brother of ATLAS. He was later identified with the morning star, Phosphorus (Latin: Lucifer), the bringer of light. Hesperus is variously described as the father of the HESPERIDES or of their mother, Hesperis.

HESTIA \hes-'tē-ə, -chə\, in GREEK RELIGION, goddess of the hearth, daughter of CRONUS and RHEA, and one of the 12 Olympian deities. When the gods APOLLO and POSEIDON became suitors for her hand she swore to remain a maiden forever, whereupon ZEUS, the king of the gods, bestowed upon her the honor of presiding over all sacrifices.

She was worshiped chiefly as goddess of the family hearth; but she had also, at least in some states, a public cult at the civic hearth in the *prytaneion*, or town hall. Hestia was closely connected with Zeus, god of the family in its external relation of hospitality and its internal unity. She was also associated with HERMES, the two representing domestic life on the one hand, and business and outdoor life on the other. In later philosophy Hestia became the hearth goddess of the universe.

HESYCHASM \he-'sē-,ka-zəm\, in Eastern CHRISTIANITY, type of monastic life in which practitioners seek divine quietness (Greek: *hēsychia*) through the contemplation of God in uninterrupted prayer. Such prayer, involving the entire human being—soul, mind, and body—is often called "pure," or "intellectual," prayer or the Jesus prayer. In the late 13th century, St. Nicephorus the Hesychast produced a "method of prayer," advising novices to fix their eyes during prayer on the "middle of the body," in order to achieve a more total attention, and to "attach the prayer to their breathing." This practice was violently attacked in the first half of the 14th century by Barlaam the Calabrian, who called the Hesychasts *omphalopsychoi*, or people having their souls in their navels.

ST. GREGORY PALAMAS (1296–1359), a monk of Mt. Athos and later archbishop of Thessalonica, defended the Hesychast monks. In his view the human body, sanctified by the SACRAMENTS of the church, is able to participate in the prayer. The teachings of Palamas were confirmed by the Orthodox church in a series of councils held in Constanti-

nople (1341, 1347, 1351). Hesychast spirituality is still practiced by Eastern Christians and once had wide popularity in Russia through the publication of a collection of Hesychast writings, known as the PHILOKALIA, in 1782.

HEVAJRA \hā-'vəj-rə\, *Tibetan* Kye-rdo-rje \k'ä-dör-jä\, *Mongolian* Kevajra, in northern BUDDHISM, a fierce protective deity, the *yab-yum* (in union with his female consort, Vajrayoginī) form of the fierce protective deity Heruka. Hevajra is a popular guardian deity in Tibet. His worship is the subject of the *Hevajra* TANTRA, a SCRIPTURE that helped bring about the conversion of the Mongol emperor Kublai Khan (1215–94).

Hevajra is represented in art as blue, with a headdress of skull crowns topped by a figure of the buddha AKṢOBHYA. He is characteristically shown with 8 heads, 4 legs, and 16 arms. The arms on the left hold skull cups containing various divinities, the ones on the right their steeds.

HEX SIGN, emblem painted on a barn, especially in the regions of southeastern Pennsylvania settled by German immigrants. Usually round, with colorful, simple floral and geometric motifs, they are said to protect farm animals from misfortunes resulting from witches' SPELLS and especially from the EVIL EYE.

HEZEKIAH \he-zə-'kī-ə\, *Hebrew* Hizqiyya \kēz-'kē-yä\, *Greek* Ezekias \ä-zä-'kē-äs\ (fl. late 8th and early 7th centuries BCE), son of AHAZ, and the 13th successor of DAVID as king of JUDAH at Jerusalem (2 Kings 18:1–2; 2 Chronicles 29:1). The dates of his reign are often given as about 715 to about 686 BCE, but inconsistencies in biblical and Assyrian cuneiform records have yielded a wide range of possible dates.

Hezekiah reigned at a time when the Assyrian empire was consolidating its control of Palestine and Syria. His father had placed Judah under Assyrian suzerainty in 735 BCE (2 Kings 16:10ff.). Hezekiah may have taken part in a rebellion, which the Assyrians apparently crushed in the year 710. He may have been the leader of a further rebellion in Palestine, which gained the support of Egypt (2 Kings 18:8, 21). In preparing for the inevitable Assyrian campaign to retake Palestine, Hezekiah strengthened the defenses of his capital, Jerusalem (2

Chronicles 32:5), and dug out the famous Siloam tunnel (2 Kings 20:20, 2 Chronicles 32:30), bringing the water of the Gihon springs to a reservoir inside the city wall.

The rebellion was finally put down in 701 BCE, Judah was overrun, 46 of its walled cities fell, and much conquered Judaeon territory was placed under the control of neighboring states (2 Kings 18:13). While the city of Lachish was under siege, Hezekiah sought to spare Jerusalem itself from capture by paying a heavy tribute of gold and silver to the

Hezekiah with a water clock, illustration from a French Bible, 13th century
The Granger Collection

Assyrian king, who nevertheless demanded the city's unconditional surrender (2 Kings 18:19–35; 19:8–13; 2 Chronicles 32:9–19; Isaiah 36). At this point Jerusalem was unexpectedly spared, according to some traditions, by a plague that decimated the Assyrian army (according to the SCRIPTURE, an ANGEL saved Jerusalem; 2 Kings 19:35; 2 Chronicles 32:21). This event gave rise to the belief in Judah that Jerusalem was inviolable, a belief that lasted until the city fell to the Babylonians a century later.

HICKS, ELIAS \ˈhɪks\ (b. March 19, 1748, Hempstead Township, Long Island, N.Y., U.S.—d. Feb. 27, 1830, Jericho, Long Island, N.Y.), early advocate of the abolition of slavery in the United States and a liberal QUAKER preacher whose followers were one of two factions created by the schism of 1827–28 in American Quakerism.

After assisting in ridding the SOCIETY OF FRIENDS (Quakers) of slavery, Hicks worked for general abolition. He urged a boycott of the products of slave labor, advocated establishment of an area in the Southwest as a home for freed slaves, and helped secure legislation that brought an end to slavery in New York state. In 1811 the first of several editions of his *Observations on the Slavery of the Africans and Their Descendants* was published.

One of the first to preach progressive revelation, which allowed for continuing revision and renewal of doctrinal beliefs, Hicks in 1817 successfully opposed the adoption of a set creed by the Society of Friends at the Baltimore Yearly Meeting. He was subsequently called a heretic for his opposition to Evangelicalism, which stressed established beliefs, and he was held responsible by some for the Quaker schism of 1827–28. After this separation Hicks's followers called themselves the Liberal branch of the Society of Friends, but orthodox Quakers labeled them Hicksites. The Hicksites became increasingly isolated from other Quakers until the 20th century, when mutual cooperation began to prevail.

HIEI, MOUNT \ˈhē-ā\, *Japanese* Hiei-zan \ˈhē-ā-zān\, mountain [2,782 feet [845 meters] high] near Kyōto, the location of the Enryaku Temple, a Tendai Buddhist monastery complex built by the monk SAICHŌ (767–822). When Sannō (Japanese: “Mountain King”; the mountain's KAMI, or SHINTŌ deity) became identified with the Buddha Śākyamuni (Japanese: Shaka; the principal figure of Tendai BUDDHISM), the Sannō Shintō school emerged, based on the Tendai belief in Buddhist unity. Thus, Shaka was identical to Dainichi Nyorai (the Buddha VAIROCANA), and Sannō to AMATERASU (the Shintō sun goddess). Imperial patronage made the Hiei monastery one of the most powerful centers of Buddhist learning in Japan. HŌNEN and many other famous monks who later established their own schools came there for training.

HIEROPHANT \ˈhī-ə-rə-fant, hī-ˈer-ə-fənt\, *Greek* hierophantēs (“displayer of holy things”), chief of the Eleusinian cult, the best known of the MYSTERY RELIGIONS of ancient Greece. His principal job was to display the sacred objects during the celebration of the mysteries and to explain their secret symbolic meaning to the initiates. At the opening of the ceremonies he proclaimed that all unclean persons must stay away, a rule that he had the right to enforce.

Usually an old, celibate man with a forceful voice, he was selected from the Eumolpids, one of the original clans of the ancient Greek city of Eleusis, to serve for life. Upon taking office he symbolically cast his former name into the sea and was thereafter called only *hierophantēs*. During the

ceremonies he wore a headband and a long, richly embroidered purple robe.

HIEROS GAMOS \ˈhē-ə-ròs-gā-mòs\ (*Greek*: “sacred marriage”), sexual relations of fertility deities in myths and rituals, characteristic of societies based on cereal agriculture, especially in the Middle East. At least once a year humans representing the deities engaged in sexual intercourse, which guaranteed the fertility of the land, the prosperity of the community, and the continuation of the cosmos.

As ritually expressed, there were three main forms of the *hieros gamos*: between god and goddess (most usually symbolized by statues); between goddess and priest-king (who assumed the role of the god); and between god and priestess (who assumed the role of the goddess). In all three forms there was a relatively fixed form to the ritual: a PROCESSION that conveyed the divine actors to the marriage celebration; an exchange of gifts; a purification of the pair; a wedding feast; a preparation of the wedding chamber and bed; and the secret nocturnal act of intercourse. In some traditions this appears to have been an actual physical act between sacred functionaries who impersonated the deities; in other traditions it appears to have been a symbolic union. On the following day the marriage and its consequences for the community were celebrated.

Some scholars have applied the term *hieros gamos* to all myths of a divine pair (*e.g.*, heaven–earth) whose sexual intercourse is creative. The term, however, should probably be restricted only to those agricultural cultures that ritually reenact the marriage and that relate the marriage to agriculture, as in Mesopotamia, Phoenicia, CANAAN, Israel (the Song of SOLOMON has been suggested to be a hierogamitic text), Greece, and India.

HIGH GOD, *also called* Sky God, a type of supreme deity found among many indigenous peoples of North and South America, Africa, northern Asia, and Australia. A High God is conceived as being utterly transcendent, living in or identified with the sky and removed from the world that he created. Among North American Indians and central and southern Africans, thunder is thought to be his voice, and in Siberia the sun and moon are considered his eyes. He is connected with food and heaven among American Indians.

The High God sometimes is conceived as masculine or sexless, although in a number of traditions, especially in Meso-America, he is a balanced combination of male and female powers and identity. He is the sole creator of heaven and earth. Although he is omnipotent and omniscient, he is thought to have withdrawn from his creation and therefore to be inaccessible to prayer or sacrifice. If he is invoked, it is only in times of extreme distress, but there is no guarantee that he will hear or respond. His name often is revealed only to initiates, and to speak it aloud is thought to invite disaster or death; his most frequent title is Father. In some traditions he is a transcendent principle of divine order; in others he is senile or impotent and is replaced by a set of more active deities.

Some scholars consider the conception of the High God to be very old, preceding the creation of particular pantheons, while some see him as a recent development stimulated by monotheistic missionaries of CHRISTIANITY. In recent times the figure of the High God has been revived among some African messianic groups.

HIGH PLACE, *Hebrew* bamah, or bama \ˈbā-mā, bā-ˈmā\, Israelite or Canaanite open-air shrine usually erected on an

elevated site. Prior to the conquest of CANAAN (Palestine) by the Israelites in the 12th–11th century BCE, the high places served as shrines of Canaanite deities, the BAALS (Lords) and the Asherot (Semitic goddesses). In addition to an altar, *maššebot* (stone pillars representing the presence of the divine, see MAŠŠEBA) and *asherim* (upright wooden poles symbolizing the female deities) often were erected on the high places, which sometimes were located under a tree or grove of trees. Other accoutrements sometimes associated with the *bamah* were *hammanim*, small incense altars. The high place at Megiddo in Israel is one of the oldest known high places, dating from about 2500 BCE.

Because the Israelites had associated the divine presence with elevated places (e.g., MOUNT SINAI), they used Canaanite high places to worship YAHWEH. Canaanite agricultural fertility rites and practices were adopted by the previously nomadic Israelites, often in a syncretic fashion with Yahweh replacing Baal. A strong reaction to the adoption of such rites led to protests by Israelite judges and prophets from the 12th to the late 7th century BCE, when the DEUTERONOMIC REFORM of 621 led to the extirpation of the many local high places as sites of worship. The TEMPLE OF JERUSALEM on Mount ZION thus became the only legitimate high place in the Israelite religion, and the name *bamah* became a term of reproach and contempt.

HIGH PRIEST, *Hebrew* kohen gadol, in JUDAISM, the chief religious functionary in the TEMPLE OF JERUSALEM, whose unique privilege was to enter the HOLY OF HOLIES (inner sanctum) once a year on YOM KIPPUR in order to burn incense and sprinkle sacrificial animal blood, thereby expiating his own SINS and those of the people of Israel (Leviticus 16). The high priest had overall charge of Temple finances and administration, and in the early period of the Second Temple he collected taxes and maintained order as the recognized political head of the nation (e.g., 1 Maccabees 10:20; 14:41; 16:23–24). The high priest could not mourn the dead, had to avoid defilement incurred by proximity to the dead, and could marry only a virgin (Leviticus 21:10–15). The office was normally hereditary and for life. In the 2nd century

BCE, however, bribery led to several reappointments, and the last of the high priests were appointed by government officials or chosen by lot. According to tradition, 18 high priests served in Solomon's Temple (c. 960–586 BCE) and 60 in the Second Temple (516 BCE–70 CE). Since that time, there has been no Jewish high priest, for national sacrifice was permanently interrupted with the destruction of the Second Temple.

HIJĀB \hi-'jab\ (Arabic: “cover,” or “barrier”), in ISLAM a term that has three distinct meanings. The first meaning of *hijāb* refers to the garment worn by Muslim women in conformity to Islamic dress code. (See PURDAH.)

Another meaning of *hijāb* refers to an amulet designed to deter evil or enhance good fortune. Among Muslims it usually consists of a miniature Qur'an, selected Qur'anic verses; or the names of God, the Prophet Muhammad, angels, or other supernatural beings. Some consist of magic squares containing numerical formulas. Usually these *hijāb* are placed in a case and worn on the body or attached to some piece of property.

The meaning for *hijāb* within Sufi terminology refers to the veiling of the divine face. (See MUSHĀHADA.)

HIJIRI \hē-'jē-rē\ (Japanese: “sage”), in Japanese religions, a man of great personal magnetism and spiritual power. *Hijiri* has been used to refer to sages of various traditions: the SHAMAN, the SHINTŌ mountain ascetic, the Taoist magician, the Buddhist reciter, or, most characteristically, the wandering priest who operates outside the orthodox Buddhist tradition to meet the religious needs of the common people.

HIJRA \hij-rə\, *English* Hegira \hi-'jī-rə, 'he-jə-rə\, or Hejira, (Arabic: “Emigration”), the Prophet Muhammad's migration (622 CE) from MECCA to MEDINA in order to escape persecution and establish an organized community under his leadership. The date represents the starting point of the Muslim era. MUHAMMAD himself dated his correspondence, treaties, and proclamations after other events of his life. It

was 'Umar I, the second CALIPH, who in the year 639 CE (AH 17) introduced the Hijra era (now denoted by the initials AH, for Latin Anno Hegirae, “in the year of the Hijra”). 'Umar started the first year AH with the first day of the lunar month of Muḥarram, which corresponded to July 16, 622. In 1677–78 (AH 1088) the Ottoman government, still keeping the Hijra era, began to use the solar year of the Julian calendar, eventually creating two different Hijra era dates.

The term *hijra* has also been applied to the emigrations of the faithful to Ethiopia and of Muhammad's followers to Medina before the capture of Mecca. Muslims who later quitted lands under Christian rule were also called *muhā-jirūn* (“emigrants”). The most honored *muhājirūn*, considered among the COMPANIONS OF THE PROPHET, are those who emi-

Muslim women from Indonesia wearing the traditional head covering, or hijāb

grated with Muhammad to Medina. Muhammad praised them highly for having forsaken their native city to follow him and promised that God would favor them. They remained a separate and greatly esteemed group in the Muslim community, both in Mecca and in Medina, and assumed leadership of the Muslim state, through the caliphate, after Muhammad's death.

As a result of the Hijra, another distinct body of Muslims came into being, the *anṣār* ("helpers"); these were Medinese who aided Muhammad and the *muhājirūn*. The *anṣār* were members of the two major Medinese tribes, the feuding al-Khazraj and al-Aws, whom Muhammad had been asked to reconcile when he was still a rising figure in Mecca. They came to be his devoted supporters, constituting three-fourths of the Muslim army at the BATTLE OF BADR (624). When no one of their number was chosen to the caliphate to succeed Muhammad, they declined in influence.

Hijra subsequently received attention as a topic in Islamic jurisprudence (FIQH). The legal schools allowed that should Muslims find themselves ruled by non-Muslims they can, if able, combat them in jihad or emigrate to Muslim territory, the DĀR AL-ISLAM. Thus Muslims emigrated to North Africa from Spain during the Christian Reconquista, and from India to Pakistan after partition (1947). The modern state of Saudi Arabia grew out of fortress communities in central Arabia called *hijras* from which Saudi-Wahhābi forces launched attacks against neighboring tribes and settlements. In SUFISM, however, *hijra* was used to describe the journey from the world of sensual distractions inward to the spiritual world of the heart.

HILARIA \hi-'lar-ē-ə, -'ler-\, in Roman and HELLENISTIC RELIGION, day of merriment and rejoicing in the Cybele-Attis cult and in the Isis-Osiris cult, March 25 and November 3, respectively. It was one of several days in the festival of CYBELE that honored ATTIS, her son and lover: March 15, his finding by Cybele among the reeds on the bank of the River Gallus; March 22, his self-mutilation; March 24, fasting and mourning at his death; and March 25, the Hilaria, rejoicing at his RESURRECTION. The Hilaria of the Isis-Osiris cult marked the resurrection of OSIRIS, husband of ISIS.

HILDEGARD, SAINT \hil-də-gärd\, *byname* Sibyl of the Rhine (b. 1098, Böckelheim, West Franconia—d. Sept. 17, 1179, Rupertsberg, near Bingen; traditional feast day September 17), German ABBESS and visionary mystic.

Hildegard was of noble birth and was educated at the BENEDICTINE cloister of Disibodenberg, where she became prioress in 1136. Having experienced visions since she was a child, at the age of 43 she consulted her confessor, who in turn reported the matter to the archbishop of Mainz. A committee of theologians subsequently confirmed the authenticity of Hildegard's visions, and a monk was appointed to help her record them in writing. The finished work, *Scivias* (1141–52), consisted of 26 visions, prophetic and apocalyptic in form, treating the church, the relationship between God and humankind, and redemption. About 1147 she left Disibodenberg with several of her nuns to found a new CONVENT at Rupertsberg, where she continued to issue prophecies and to record her visions in writing.

Her other writings include lives of saints, two treatises on medicine and natural history, and extensive correspondence, containing further prophecies and allegorical treatises. Though her earliest biographer proclaimed her a saint and miracles were reported during her life and at her tomb, she has not been formally canonized. She is, however, list-

ed as a saint in the Roman Martyrology and is honored on her feast day in certain German DIOCESES.

HILLEL \hi-'lel, -'lāl, -'ləl; hē-'lel\, *also known as* Hillel the Elder, legal scholar and founder of a school in Jerusalem during the time of Herod the Great (late 1st century BCE); he is recognized by later JUDAISM as one of the chief architects of RABBINIC JUDAISM. Born in Babylonia, Hillel is said to have gone to Israel to further his studies. In addition to his legal statements, he is credited with developing a system of biblical interpretation represented by seven fixed hermeneutical principles. The meaning of these principles, their actual association with Hillel, and their relationship to the 13 hermeneutical principles ascribed to the later authority ISHMAEL BEN ELISHA are all subjects of speculation.

While a large corpus of Talmudic material purports to depict Hillel's teaching and personality, a chronological survey of these sources suggests the extent to which they are the creations of a mature rabbinism interested in fleshing out the story of an early and important forebear. Thus, while the earliest rabbinic texts, the MISHNAH and TOSEFTA, report only a few legal statements in Hillel's name, later Talmudic sources provide numerous accounts depicting his life story and personality.

Four areas of Hillel's legal concern appear in the earliest layers of rabbinic law and so may be authentic to him. First, he argues that, once a woman finds that she is menstruating, she is to be deemed unclean retroactively, back to the last point at which she was known to be clean. Second, he disputes with Shammai the quantity of dough one may make without incurring liability to the separation of dough-offering. Third, in one of his best-known legal debates, Hillel argues that the PASCHAL LAMB may be sacrificed on the SABBATH (in Talmudic sources, Hillel's treatment of this issue is said to have led to his appointment as PATRIARCH). Fourth, ruling on economic matters, Hillel asserts that the buyer of a home within a walled city may not hide from the seller so as to avoid the right of repurchase mandated by Leviticus 25:29; he stands behind a method of circumventing Scripture's Sabbatical remission of debts; and he proscribes trading in futures, which he deems to involve earning forbidden interest.

Mishnah Abot 1:12 records one of Hillel's best-known statements, his enjoinder to all Jews to "Be disciples of AARON, loving peace and pursuing peace, loving people and drawing them near to the Torah."

Two contradictory stories survive to explain Hillel's move from Babylonia to Palestine. One holds that he went as a learned man in order to answer certain questions of law (Y. Pesahim 6:1). The other reports that he did not study at all until he arrived in the land of Israel at 40 years of age (GENESIS RABBAH 100:24). Subsequently, he studied for 40 years and served as patriarch for 40 years, like MOSES dying at the age of 120. Thus, the RABBIS see in Hillel the perfect paradigm of scholar and communal leader, a model for all future generations.

HILLEL BEN SAMUEL \ben-'sam-yü-wəl\, *also called* El-Al ben Shachar \el-'al-ben-'shā-kär\ (b. c. 1220—d. c. 1295), physician, scholar of the TALMUD, and philosopher who defended the ideas of MAIMONIDES during the "years of controversy" (1289–90), when his work was attacked; Hillel ben Samuel denounced in turn the adherents of IBN RUSHD (Averroës), asserting that they precipitated the controversy through their denial of the immortality of the individual human soul.

Reputed to have lived in Verona, Naples, and Capua, and later in Barcelona, Hillel ben Samuel wrote his major work, *Tagmule ha-nefesh* (1288–91; “The Rewards of the Soul”), to rebut Ibn Rushd’s theory of the soul. In it, he holds that the soul is composed of “formal substance” that derives from the universal soul and that both are immortal.

HILLĪ, AL- \əl-ki-‘lē\, *in full* Jamāl al-Dīn Ḥasan ibn Yūsuf ibn ‘Alī ibn Muḥahhar al-Hillī (b. Dec. 15, 1250, Ḥilla, Iraq—d. Dec. 18, 1325), Muslim theologian and expounder of SHĪ’ITE doctrines.

Al-Hillī studied law, theology, and the *uṣūl*, or principles of the faith, in the city of Ḥilla, an important center for Shī’ite learning in the SUNNI territory of the ‘Abbāsīd caliphate (the second Arab dynasty). A scion of a family of Shī’ite theologians, he became known as the “wise man of Ḥilla.” He also studied philosophy with Naṣīr al-Dīn al-Ṭūsī (d. 1274), a noted philosopher of his time.

Among al-Hillī’s more than 500 scholarly works on the Islamic faith are the *Treatise on the Principles of Shī’ite Theology* (1928) and the *Sharḥ tajrīd al-ītiqād*. These are standard references on Twelver Shī’ite beliefs and are still used as textbooks in Iran.

Attracted by the religious freedom of the Mongol Il-Khanid dynasty (the descendants of Hülegü, who sacked Baghdad in 1258), al-Hillī emigrated to Iran in 1305. There he was responsible for converting Öljeitü, the eighth Il-Khanid of Iran, from Sunnism to Shī’ism. In 1305 Shī’ism was proclaimed the state religion of Iran. Al-Hillī was buried in MASHHAD (Meshed), Persia.

HIMALAYAS \hi-mə-‘lā-əz, hi-‘mā-lə-yəz\, *Sanskrit* Himālaya, great mountain system of Asia forming a barrier between the Tibetan Plateau to the north and the alluvial plains of the Indian subcontinent to the south. Hindu mythology states that the Himalayas are the foothills of MOUNT MERU, the golden abode of the gods.

The Himalayan ranges contain 30 mountains rising to heights greater than 24,000 feet above sea level, including Mount Everest, the world’s highest peak, which reaches an elevation of 29,028 feet. The mountains extend from Jammu and Kashmir eastward to Namcha Barwa peak in Tibet, near its southern border with India. Between these western and eastern extremities lie several Indian states and the Himalayan kingdoms of Nepal and Bhutan.

The Himalayas are the site of many of the most important shrines of HINDUISM and BUDDHISM. In Kashmir, SHIVA is worshiped in the Amarnāth cave in the form of a linga that is a stalagmite of ice. Thousands of pilgrims come yearly to this place, where the god is thought to have imparted the secret of immortality. Shiva and his divine consort are said to dwell on Mount Kailāsa. Other Himalayan holy sites include Badrīnāth, an uninhabited village and shrine situated along a headstream of the Gaṅgā (Ganges) River which is the site of a temple that contains a shrine of Badrīnāth, or VISHNU, that has been a well-known PILGRIMAGE center for

Mount Everest viewed from Nepal

more than 2,000 years; Krimchi, a group of four Shiva temples situated six miles north of the town of Udampur, itself the home of the important shrine of Vaiṣṇo Devī, and Gurkha, a town of central Nepal known for its shrine of GORAKHNĀTH, the patron saint of the region, as well as a temple to the Hindu goddess Bhavānī (DEVĪ).

HIMORAGI \hē-mò-‘rā-gē\ (“offerings to the gods”), in Japanese Shintō tradition, sacred areas or ritual precincts marked off by rocks, tree branches, and hemp ropes. This kind of special cordoned-off natural space serves as a temporary SANCTUARY for KAMI spirits and is the predecessor for all forms of Shintō shrines.

HĪNAYĀNA \hē-nə-‘yā-nə\ (*Sanskrit*: “Lesser Vehicle”), in BUDDHISM, more orthodox, conservative school; the name Hīnayāna is pejorative and was applied by the followers of the MAHĀYĀNA (meaning “Greater Vehicle”) Buddhist tradition in ancient India. The name reflected the Mahāyānists’ evaluation of their own tradition as a superior method, but the name was not accepted by the conservative schools as referring to a common tradition.

Most of the major Hīnayāna schools (traditionally 18 in number) predate the emergence of the Mahāyāna. After the rise of the Mahāyāna in about the 1st century CE, the Hīnayāna schools continued to prosper. However, the Theravādins are the only Hīnayāna-type school that maintained a strong position after the collapse of Indian Buddhism in the 13th century. See THERAVĀDA.

HINDU CALENDAR, dating system used in India from about 1000 BCE and still used to establish dates of the Hindu religious year. It is based on a year of 12 lunar months; *i.e.*, 12 full cycles of phases of the Moon. The discrepancy between this year of about 354 days and the solar year of about 365 days is partially resolved by intercalation of an extra month every 30 months.

HINDUISM

he beliefs and practices of Hindus are expressed in a series of characteristic doctrinal, ritual, social, narrative, and poetic forms.

INTRODUCTION

The term Hinduism. The English term *Hinduism* was coined by British writers in the first decades of the 19th century and became familiar as a designator of religious ideas and practices distinctive to India with the publication of such books as Sir Monier-Williams' *Hinduism* (1877). Initially it was an outsiders' word, building on centuries-old usages of the word Hindu. Early travelers to the Indus Valley, beginning with the Greeks, spoke of its inhabitants as "Hindu" (Greek: *'indoi*), and in the 16th century residents of India themselves began very slowly to employ the term to distinguish themselves from the "Turks"—*i.e.*, descendants of people who came to India from Central Asia. Gradually the distinction became primarily religious, as opposed to ethnic, geographic, or cultural.

Since the late 19th century, Hindus have reacted to the term Hinduism in several ways. Some have rejected it in favor of indigenous formulations. Those preferring the terms VEDA or VEDIC RELIGION want to embrace an ancient textual core and the tradition of BRAHMIN learning that preserved and interpreted it. Those preferring the term SANATANA DHARMA ("eternal law," or as Philip Lutgendorf has playfully suggested "old-time religion") emphasize a more catholic tradition of belief and practice (such as worship through images, dietary codes, and the veneration of the cow) not necessarily mediated by Brahmins. Still others, perhaps the majority, have simply accepted the term Hinduism or its analogues in various Indic languages, especially *hindū dharma*.

From the early 20th century onward, textbooks on Hinduism were written by Hindus themselves, often under the rubric of *sanatana dharma*. These efforts at self-explanation were and are intended to set Hinduism parallel with other religious traditions and to teach it systematically to Hindu youths. They add a new layer to an elaborate tradition of ĀGAMAS and *śāstras* expositing practice and doctrine that dates back well into the 1st millennium CE. The roots of this tradition can be traced back much farther—textually, to the schools of commentary and debate preserved in epic and Vedic writings dating to the 2nd millennium BCE; and visually, through YAKṢAS (luminous spirits associated with specific locales and

natural phenomena) and NĀGAS (snakelike divinities) worshiped about 400 BCE–400 CE to veneration of goddesses, as seems to be implied by the female terra-cotta figurines found ubiquitously in excavations of INDUS VALLEY CIVILIZATION (3rd–2nd millennia BCE) sites. In recognition of these ancient sources, present-day Hindus often assert that Hinduism is the world’s oldest religion.

General nature of Hinduism. More strikingly than any other major religious community, Hindus accept and indeed celebrate the complex, organic, multi-leveled, and sometimes internally inconsistent nature of their tradition. This expansiveness is made possible by the widely shared Hindu view that truth or reality cannot be encapsulated in any creedal formulation. As many Hindus affirm through the prayer “May good thoughts come to us from all sides,” truth is of such a nature that it must be multiply sought, not dogmatically claimed.

Anyone’s view of the truth—even that of a GURU regarded as possessing superior authority—is fundamentally conditioned by the specifics of time, age, gender, state of consciousness, social and geographic location, and stage of attainment. These perspectives enhance a broad view of religious truth rather than diminish it; hence there is a strong tendency for contemporary Hindus to affirm that tolerance is the foremost religious virtue. On the other hand, even cosmopolitan Hindus living in a global environment recognize and prize the fact that their religion has developed in the specific geographic, social, historical, and ritual climates of the Indian subcontinent. Religious practices and ideological formulations that emphasize this fact—from benign PILGRIMAGES to the violent edge of Hindu nationalism—affirm a strong connection to the Hindu homeland. Such a tension between universalist and particularist impulses has long animated the Hindu tradition. When Hindus speak of their religious identity as *sanātana dharma*, a formulation made popular late in the 19th century, they emphasize its continuous, seemingly eternal (*sanātana*) existence and the fact that it describes a web of customs, obligations, traditions, and ideals (DHARMA) that far exceeds the recent Christian and Western secularist tendency to think of religion primarily as a system of beliefs. A common way in which English-speaking Hindus often distance themselves from that is to insist that Hinduism is not a religion but a way of life.

Five tensile strands. Across the sweep of Indian religious history over the past two millennia, at least five elements have given shape to the Hindu religious tradition: doctrine, practice, society, story, and devotion. None of these is univocal; no Hindu would claim that they correspond to the FIVE PILLARS OF ISLAM. Rather, to adopt a typical Hindu metaphor, they relate to one another as strands in an elaborate braid. Moreover, each strand develops out of a history of conversation, elaboration, and challenge. Hence, in looking for what makes the tradition coherent, it is sometimes better to locate major points of tension than to expect clear agreements on Hindu thought and practice.

Doctrine. The first of the five strands that weave together to make Hinduism is doctrine, as enunciated and debated in a vast textual tradition anchored to the Veda (“Knowledge”), the oldest core of Hindu religious utterance, and organized through the centuries primarily by members of the learned Brahmin CASTE. Here several characteristic tensions appear. One concerns the status of the One in relation to the Many—issues of POLYTHEISM, MONOTHEISM, and monism—or of supernal truth in relation to its embodied, phenomenal counterpart. Another tension concerns the disparity between the world-preserving ideal of dharma (proper behavior defined in relation to the gods and society) and that of MOKṢA (release from an inherently flawed world). A third tension exists between one’s individual destiny, as shaped by KARMA (action in this and other lives), and any person’s deep bond to family, society, and the divinities associated with them.

Practice. The second strand in the fabric of Hinduism is practice. Many Hindus, in fact, would place this first. Despite India’s enormous diversity, a common grammar of ritual behavior connects various places, strata, and periods of Hindu life. While it is true that various elements of Vedic ritual survive in modern practice, especially in life-cycle rites (see SAMSKĀRA), and serve a unifying function, much more influential commonalities appear in the ritual vocabulary of the worship of God in the form of an ICON, or image (PRATIMĀ, *mūrti*, etc.).

Broadly, this is called PŪJĀ (“praising [the deity]”). It echoes conventions of hospitality that might be performed for an honored guest, and the giving and sharing of food is central. Such food is called PRASĀDA (in Hindi, *prasād*: “grace”), reflecting the recognition that when human beings make offerings to deities, the initiative is not really theirs. They are actually responding to the generosity that bore them into a world fecund with life and auspicious possibility. The divine personality installed as a home or temple image receives *prasāda*, tasting it (Hindus differ as to whether this is a real or symbolic act, gross or subtle) and offering the remains to worshipers. Consuming these leftovers, worshipers accept their creaturely status as beings inferior to and dependent upon the divine. An element of tension arises because the logic of *pūjā* and *prasāda* would seem to accord all humans an equally ancillary status with respect to God, yet exclusionary rules have often been sanctified rather than challenged by *prasāda*-based ritual. Specifically, lower-caste people and those perceived as outsiders or carriers of pollution have historically been forbidden to enter certain Hindu temples, a practice that continues in some instances even today.

Society. The third aspect that has served to organize Hindu life is society. Since the scholar al-Bīrūnī traveled to India in the early 11th century, visitors have been struck by an unusually well stratified (if locally variant) system of social relations that has come to be called familiarly the caste system. While it is true that there is a vast slippage between the ancient vision of society as divided into four ideal classifications (VARNAS) and the thousands of endogamous birth-groups (JĀTIS, literally “births”) that constitute Indian society in reality, few would dispute that Indian society is notably plural and hierarchical in its organization. This has to do with an understanding of truth or reality as being similarly plural and multilayered, whether one understands the direction of influence to proceed from social fact to religious doctrine or vice versa. Seeking its own answer to this conundrum, a well-known Vedic hymn (ṚG VEDA 10.90) describes how in the beginning of time a primordial person underwent a process of sacrifice that produced a four-part cosmos and its human counterpart, a four-part social order.

Vishnu on the serpent Śeṣa, c. 500 CE, Deogarh, Madhya Pradesh, India

Borromeo—Art Resource

As in the realms of doctrine and religious practice, so also in this social domain there is a characteristic tension. Ideally, we have the humble, even-handed view that each person or group approaches truth in a way that is necessarily distinct, reflecting its own perspective. Only by allowing each to speak and act in such terms can a society constitute itself as a proper representation of truth or reality. Yet this pluriform, context-sensitive habit of thought can too easily be used to legitimate a social-system that enshrines privilege and prejudice. If it is believed that no standards apply universally, one group can too easily justify its dominance over another. Historically, therefore, certain Hindus have been able to espouse tolerance at the level of doctrine but practice intolerance in the social realm: caste discrimination. Responding to such oppression, especially when justified by allegedly Hindu norms, lower-caste groups have sometimes insisted, "We are not Hindus!" Yet their own communities may enact similar inequalities, and their religious practices and beliefs often continue to tie them to the greater Hindu fold.

Story. Another dimension drawing Hindus into a single community of discourse is narrative. For at least two millennia, people in almost all corners of India—and now well beyond—have responded to certain prominent stories of divine play and of interactions between gods and humans. These concern major figures in the Hindu pantheon: KRISHNA and his lover RĀDHĀ, RĀMA and his wife SĪTĀ and brother Lakṣmaṇa, SHIVA and his consort PĀRVATĪ (or, in a different birth, SATĪ), and the Great Goddess DURGĀ, or DEVĪ as a slayer of the buffalo demon Maḥiṣāsura. Often such narratives illustrate the interpenetration of the divine and human spheres, with deities such as Krishna and Rāma entering entirely into the human drama. Many tales focus in different degrees on dharmic exemplariness, genealogies of human experience, forms of love, and the struggle between order and chaos or duty and play. In performing and listening to these stories, Hindus have often experienced themselves as members of a single imagined family.

Yet simultaneously these narratives serve as an arena for articulating tensions. Women performers sometimes tell the RĀMĀYAṆA as the story of Sītā's travails at the hands of Rāma rather than as a testament of Rāma's righteous victories. The virtues of Rāma's enemy RĀVAṆA, even supplanting those of Rāma himself, may be emphasized in South Indian performances. And lower-caste musicians of North India present epics such as ĀLĀ or ḌHOLĀ, enacting their own experience of the world rather than playing out the upper-caste milieu of the MAHĀBHĀRATA, which these epics nonetheless echo. To the broadly known pan-Hindu, male-centered narrative traditions, these variants provide both resonance and challenge.

Devotion. Finally, there is a fifth strand that contributes to the complex unity of Hindu experience through time: BHAKTI ("sharing," or "devotion"), a broad tradition of loving God that is especially associated with the lives and words of vernacular poet-saints throughout India. Devotional poems attributed to these figures, who represent both sexes and all social classes, have elaborated a store of images to which access can be had in a score of languages. Individual poems are sometimes strikingly similar from one language or century to another, without there being any trace of mediation through the pan-Indian, distinctly upper-caste language Sanskrit. Often, individual motifs in the lives of *bhakti* poet-saints also bear strong family resemblances. Because *bhakti* verse first appeared in Tamil (c. 6th century), in South India, *bhakti* is sometimes attributed to a muse or goddess who spent her youth there, aging and revivifying as she moved northward into other regions with different languages. With its central affirmation that religious enthusiasm is more fundamental than rigidities of practice or doctrine, *bhakti* provides a common challenge to other aspects of Hindu life. At the same time, it contributes to a common Hindu heritage—in part, a common heritage of protest.

CENTRAL CONCEPTIONS

In the following sections, we will take up various aspects of this complex whole, proceeding in a fashion that allows us to develop a measure of historical perspective on the development of the Hindu tradition. This approach has its costs, for it may seem to give priority to aspects of the tradition that appear in its earliest extant texts. These owe their preservation primarily to the labors of up-

Sāivite sadhu

Earl Scott—Photo Researchers

per-caste men, especially Brahmins, and often tell us far too little about the perspectives of others. Particularly early on, readers must therefore read both with and against the grain, noting silences and imagining rebuttals to skewed visions of the experiences of women, regional communities, and people regarded by Brahmins as being of low status—all of whom nowadays call themselves Hindus or identify with groups that can sensibly be placed within the broad Hindu span.

Veda, Brahmins, and issues of religious authority. For members of the upper castes, a principal characteristic of Hinduism has traditionally been a recognition of the Veda, the most ancient body of Indian religious literature, as an absolute authority revealing fundamental and unassailable truth. The Veda is also regarded as the basis of all the later śāstric texts used in Hindu doctrine and practice, including, for example, the medical corpus known as AYURVEDA. Parts of the Veda are quoted in essential Hindu rituals (*e.g.*, weddings), and it is the source of many enduring patterns of Hindu thought, yet its contents are practically unknown to most Hindus, and it is seldom drawn upon for literal information or advice. Still, it is venerated from a distance by most Hindus, and groups who reject its authority outright (as in BUDDHISM and JAINISM) are regarded by Hindus as unfaithful to their common tradition.

Another characteristic of much Hindu thought is its special regard for Brahmins as a priestly class possessing spiritual supremacy by birth. As special manifestations of religious power and as bearers and teachers of the Veda, Brahmins have often been considered to represent an ideal of ritual purity and social prestige. Yet this has also been challenged, either because of competing claims to religious authority—especially by kings and rulers—or because Brahminhood is regarded as a status attained by depth of learning, not birth. Evidence of both these challenges can be found in Vedic literature itself, especially the UPANISHADS, and *bhakti* literature is full of vignettes in which the small-mindedness of Brahmins inversely mirrors the true depth of RELIGIOUS EXPERIENCE.

Doctrine of ātman-Brahman. Hindus believe in an uncreated, eternal, infinite, transcendent principle that, “comprising in itself being and non-being,” is the sole reality, the ultimate cause and foundation, source, and goal of all existence. This ultimate reality may be called BRAHMAN. As the All, Brahman either causes the universe and all beings to emanate from itself, transforms itself into the universe, or assumes the appearance of the universe. Brahman is in all things and is the self (ĀTMAN) of all living beings. Brahman is the creator, preserver, or transformer and reabsorber of everything. Hindus differ, however, as to whether this ultimate reality is best conceived as lacking attributes and qualities—the impersonal Brahman—or as a personal God, especially VISHNU, Shiva, or the Goddess (these being the preferences of adherents called Vaiṣṇavas, Śaivas, and Śāktas, respectively). The conviction of the importance of a search for a One that is the All has been embedded in India’s spiritual life for more than 3,000 years.

The pantheon. Hindus typically focus their worship of the One on a favorite divinity (*iṣṭadevatā*); they do not, however, insist that there is anything exclusive in that choice. Although a range of deities may be so worshiped, many Hindus worship Vishnu and Shiva. Vishnu is often regarded as a special manifestation of the preservative aspect of Supreme Reality, while Shiva is regarded as the manifestation of the destructive aspect. Another deity, BRAHMĀ, whose name is a masculine inflection of the noun Brahman, is the creator and remains in the background as a DEMIURGE. These three great figures (Brahmā, Vishnu, and Shiva) constitute the so-called Hindu trinity (TRIMŪRTI). This conception was an early attempt to harmonize the conviction that the Supreme Power is singular with the plurality of gods addressed in daily worship. The *trimūrti* is still seen in Hindu theological writing, but it is virtually absent in practice, since Brahmā is rarely worshiped. Much closer to lived religion is another attempt to make sense of the pantheon, in which the Great Goddess (known variously as Devī, Durgā, or ŚAKTI) replaces Brahmā as the third element in a trinity (*see* DEVĪ MĀHĀTMYA; ŚĀKTISM).

Karma, saṃsāra, and mokṣa. Hindus generally accept the doctrine of transmigration and rebirth and the complementary belief in karma (“action”), the idea that prior acts condition a being in subsequent forms of life. The whole process of

rebirths is called *SAMSĀRA*, a cyclic process with no clear beginning or end that encompasses lives of perpetual, serial attachments. Actions (*karma*), if generated by desire and an appetite for results, propel the system forward and bind one's spirit (*jīva*) to an endless series of births and deaths unless a person is able to control the root cause of interested action, desire. Desire motivates any social interaction (particularly when involving sex or food), resulting in the mutual exchange of good and bad *karma*. In one prevalent view, the very meaning of salvation is one's final emancipation (*mokṣa*) from this morass, an escape from the impermanence that is an inescapable feature of mundane existence. In this view the only goal is the one permanent and eternal principle: the One, God, Brahman, which is totally opposite to phenomenal existence. People who have not fully realized that their being is identical with Brahman are thus seen as deluded. Fortunately, the very structure of human experience teaches the ultimate identity between Brahman and the kernel of human personality, the selfhood called *ātman*. One may learn this lesson by different means: by realizing one's essential sameness with all living beings, by responding in love to a personal expression of the divine, or by coming to appreciate that the competing attentions and moods of one's waking consciousness are grounded in a transcendental unity. We have a taste of this unity in our daily experience of deep, dreamless sleep.

Dharma and the three paths. Hindus disagree about the best way (*MĀRGA*) to attain such release and concede that no "one size fits all." Three paths to salvation are presented in an extremely influential religious text, the *BHAGAVAD GĪTĀ* ("Song of God"; c. 100 CE). These three are (1) the *karma-mārga* ("path of duties"), the disinterested discharge of ritual and social obligations, (2) the *jñāna-mārga* ("path of knowledge"), the use of meditative concentration preceded by a long and systematic ethical and contemplative training (*YOGA*) to gain a supraintellectual insight into one's identity with Brahman, and (3) the *bhakti-mārga* ("path of devotion"), love for a personal God. These ways are regarded as suited to various types of people, but they are interactive and potentially available to all.

Although the pursuit of *mokṣa* is institutionalized in Hindu life through ascetic practice and the ideal of withdrawing from the world at the conclusion of one's life, such practices of withdrawal are explicitly denigrated in the *Bhagavad Gītā* itself. Because action is inescapable, these three disciplines are better thought of as simultaneously achieving the goals of world maintenance (*dharma*, doing one's duty) and world release (*mokṣa*). Through the suspension of desire and ambition and through a taste for the fruits (*phala*) of one's actions, one is enabled to float free of life while engaging it fully. This matches the goals of most Hindus, these being: to execute properly one's social and ritual duties; to support one's caste, family, and profession; and to do one's part to achieve a broader stability in the cosmos, nature, and society. The designation of Hinduism as *sanātana dharma* emphasizes this goal of maintaining personal and universal equilibrium, while at the same time calling attention to the role played by the performance of traditional (*sanātana*) religious practices in achieving that goal. Such tradition is understood to be inherently pluriform, since no one person can occupy all the social, occupational, and age-defined roles that are requisite to maintaining the health of the life-organism as a whole. Hence universal maxims (e.g., *AHIMŚĀ*, the desire not to harm) are qualified by the more particular dharmas that are appropriate to each of the four major *varṇas*, or classes of society: Brahmins (priests), *KṢĀTRIYAS* (warriors and kings), *VAIŚYAS* (the common people), and *SŪDRAS* (servants). These four rather abstract categories are further superseded by the more practically applicable dharmas appropriate to each of the thousands of particular castes (*jātis*). And these, in turn, are cross-referenced to obligations appropriate to one's gender and stage of life (*āśrama*). In principle, then, Hindu ethics are exquisitely context-sensitive, and Hindus expect and celebrate a wide variety of individual behavior.

Āśramas: the four stages of life. In the West, the so-called life-negating aspects of Hinduism—rigorous disciplines of Yoga, for example—have often been overemphasized. The polarity of ASCETICISM and sensuality, which assumes the form of a conflict between the aspiration for liberation and the heartfelt desire to have descendants and continue earthly life, manifests itself in Hindu social life as

the tension between the different goals and stages of life. For many centuries, the relative value of an active life and the performance of meritorious works (*pravṛtti*) as opposed to the renunciation of all worldly interests and activity (*nivṛtti*) has been a debated issue. While philosophical works such as the Upanishads placed emphasis on renunciation, the dharma texts argued that the householder who maintains his sacred fire, begets children, and performs his ritual duties well also earns religious merit. Nearly 2,000 years ago these texts elaborated the social doctrine of the four *āśramas* (see ASHRAM; stages of life). It held that a male member of the three higher classes should first become a chaste student (*brahmacārī*); then become a married householder (*gṛhastha*), discharging his debts to his ancestors by begetting sons and to the gods by sacrificing; then retire to the forest to devote himself to spiritual contemplation; and finally, but not mandatorily, become a homeless wandering ascetic (SANNYĀSĪ). The situation of the forest dweller was often omitted or rejected in practical life.

Although the status of a householder was often extolled and some authorities, regarding studentship a mere preparation for this next *āśrama*, went so far as to brand all other stages inferior, there were always people who became wandering ascetics immediately after studentship. Theorists were inclined to reconcile the divergent views and practices by allowing the ascetic way of life to those who are, owing to the effects of restrained conduct in former lives, entirely free from worldly desire, even if they had not gone through the prior stages.

The texts describing such life stages were written by men for men; they paid scant attention to paradigms for women. The MANU-SMṚTI (200 BCE–300 CE; “Laws of Manu”), for example, was content to regard marriage as the female equivalent to initiation in the life of a student, thereby effectively denying that the student stage in life is appropriate for girls. Furthermore, in the householder stage a woman’s purpose was summarized as service to her husband. What we know of actual practice, however, challenges the idea that these patriarchal norms were ever perfectly enacted or that women entirely accepted them. While some women became ascetics (*sannyāsinīs*), many more focused their religious lives on realizing a state of blessedness (*kalyāṇa*) that is understood to be at once this-worldly and expressive of a larger, cosmic well-being. Women have often directed the cultivation of the auspicious (*śrī*) life-giving force (*śakti*) they possess to the benefit of their husbands and families, but as an ideal it has independent status.

SACRED TEXTS

Vedas. *Importance and components of the Veda.* The Veda (“Knowledge”) is a collective term for the sacred SCRIPTURES of the Hindus. Since about the 5th century BCE, the Veda has been considered the creation of neither human nor god; rather, it is regarded as the eternal truth that was in ancient times directly re-

Shrine to Vishnu in a Hindu temple in New York City

Katrina Thomas—Photo Researchers

vealed to or “heard” by gifted and inspired seers (*ṛṣis*) who uttered it in the most perfect human language, Sanskrit. Although most of the religion of the Vedic texts, which revolves around rituals of fire sacrifice, has been eclipsed by other aspects of Hindu doctrine and practice, parts of the Veda are still memorized and recited as a religious act of great merit.

The Veda is the product of early inhabitants of the Indian subcontinent who referred to themselves as ARYAN (*ārya*, “noble”). It represents the particular interests of the two classes of Aryan society—the priests (Brahmins) and the warrior-kings (Kṣatriyas)—who ruled over the far more numerous peasants (Vaiśyas). Because it is the literature of a ruling class, it probably does not represent all the myths and cults of the early Indo-Aryans, let alone those of non-Aryans.

Vedic literature ranges from the Ṛg Veda (composed c. 1200 BCE) to the Upanishads (composed c. 700 BCE–100 CE). The most important texts are the four collections (Samhitās) known as the Veda or Vedas (*i.e.*, “Book[s] of Knowledge”): the Ṛg Veda (“Wisdom of the Verses”), the YAJUR VEDA (“Wisdom of the Sacrificial Formulas”), the SĀMA VEDA (“Wisdom of the Chants”), and the ATHARVA VEDA (“Wisdom of the Atharvan Priests”). Of these, the Ṛg Veda is the oldest. In the Vedic texts that succeeded these earliest compilations, the BRĀHMAṆAS (discussions of Vedic ritual), *Āraṇyakas* (books studied in the forest), and Upanishads (secret teachings concerning cosmic correlations), the interest in the early Ṛg Vedic gods wanes, and these gods become little more than accessories to Vedic ritual. Polytheism begins to be replaced by a sacrificial PANTHEISM of PRAJĀPATI (“Lord of Creatures”), who is the All. In the Upanishads Prajāpati merges with the concept of Brahman, the supreme reality and substance of the universe, replacing any specific personification, thus transforming the mythology into abstract philosophy.

Together, the components of each of the four Vedas—the Samhitās, *Brāhmaṇas*, *Āraṇyakas*, and Upanishads—constitute the revealed scripture of Hinduism, or ŚRUTI (“heard”). All other works—in which the actual doctrines and practices of Hindus are encoded—are recognized as having been composed by human authors and are thus classed as *smṛti* (“remembered”). The categorization of Veda, however, is capable of elasticity. First, *śruti* is not exactly closed; Upanishads, for example, have been composed until recent times. Second, the texts categorized as *smṛti* inevitably claim to be in accord with the authoritative *śruti* and, thus, worthy of the same respect and sacredness. In all this, the important thing to grasp is that the category of Veda functions as a symbol of authority and hallowed tradition.

The Ṛg Veda. The religion reflected in the Ṛg Veda is a polytheism mainly concerned with the propitiation of divinities associated with the sky and the atmosphere. The old Indo-European sky father Dyaus was little regarded by the time the hymns of the Ṛg Veda were composed. More important were such gods as INDRA, VARUṆA (the guardian of the cosmic order), AGNI (the sacrificial fire), and SŪRYA (the sun).

The main ritual activity referred to in the Ṛg Veda is the SOMA sacrifice. Scholars disagree as to whether the *soma* beverage was a hallucinogen derived from the fly agaric mushroom native to mountain climates or (perhaps more likely) a stimulant squeezed from ephedra, a desert shrub. The Ṛg Veda contains a few clear references to animal sacrifice, which probably became more widespread later. There is doubt whether the priests formed a separate class at the beginning of the Ṛg Vedic period. If they did, the prevailing loose class boundaries made it possible for a man of nonpriestly parentage to become a priest. By the end of the period, however, they had become a separate class of specialists, the Brahmins (*brāhmaṇas*), who claimed superiority over all the other social classes, including the Rājanyas (later Kṣatriyas), the warrior-kings.

The Upanishads. The phase of Indian religious life roughly between 700 and 500 BCE was the period of the beginnings of philosophy

Krishna, from Orissa, India, c. 1800; ivory with traces of polychrome

and mysticism marked by the early Upanishads (“Connection,” or “Correspondence”). With the Upanishads, the earlier emphasis on ritual was challenged by a new emphasis on knowledge alone—primarily, knowledge of the interconnectedness and ultimate identity of all phenomena, which merely appear to be separate. Historically, the most important of the Upanishads are the two oldest, the *Bṛhadāraṇyaka* (“Great Forest Text”) and the *Chāndogya* (pertaining to the Chandogas, a class of priests who intone hymns at sacrifices), both of which are compilations that record the traditions of sages of the period, notably YĀJÑAVALKYA.

A primary motive of the Upanishads is a desire for mystical knowledge that would ensure freedom from *punarmṛtyu* (“re-death”). Throughout the later Vedic period, the idea that the world of heaven was not the end—and that even in heaven death was inevitable—had been growing. For Vedic thinkers, apprehension about the impermanence of religious merit and its loss in the hereafter, as well as the anticipation of the transience of any form of existence after death, culminating in the much-feared prospect of repeated death, assumed the character of an obsession. The *Brāhmaṇas* laid out a largely ritual program for escaping and conquering death and achieving a full, integrated life. The *Bṛhadāraṇyaka*, however, placed more emphasis on the knowledge of the cosmic connection that formed the underpinnings of ritual. When the doctrine of the identity of *ātman* (the self) and Brahman was established in the Upanishads, the true knowledge of the self and the realization of this identity were (by those sages who were inclined to meditative thought) set above the ritual method.

In the following centuries the main theories connected with the divine essence underlying the world were harmonized and combined, and the tendency was to extol one god as the supreme Lord and Originator (ĪŚVARA), who is at the same time Puruṣa, Prajāpati, Brahman, and the inner self (*ātman*) of all beings. For those who worshiped him, he became the goal of identificatory meditation, which leads to complete cessation of phenomenal existence and becomes the refuge of those who seek eternal peace. The philosopher ŚAṂKARA (c. 800 CE) exercised enormous influence on subsequent Hindu thinking through his elegant synthesis of the nontheistic and theistic aspects of Upanishadic teaching. In his commentaries on several of the Upanishads, he distinguished between NIRGUṆA (without attributes) and SA GUṆA (with attributes) aspects of Brahman, that ultimate reality whose relation to the phenomenal world can best be described as nondual (ADVAITA). This “nonrelationship” states the world’s deepest truth.

The origin and the development of the belief in the transmigration of souls are very obscure. A few passages suggest that this doctrine was known even in the days of the R̥g Veda, but it was first clearly propounded in the *Bṛhadāraṇyaka*. There it is stated that normally the soul returns to earth and is reborn in human or animal form. This doctrine of *saṃsāra* (REINCARNATION) is attributed to the sage Uddālaka Āruṇi, who is said to have learned it from a Kṣatriya chief. In the same text, the doctrine of karma (actions), according to which the soul achieves a happy or unhappy rebirth according to its works in the previous life, also occurs for the first time, attributed to the teacher and sage Yājñavalkya. Both doctrines appear to have been new and strange ones, circulating among small groups of ascetics who were disinclined to make them public, but they must have spread rapidly, for in the later Upanishads and in the earliest Buddhist and Jain scriptures they are common knowledge.

Sūtras, śāstras, and smṛtis. Among the texts inspired by the Veda are the DHARMA SUTRAS, or manuals on dharma, which contain rules of conduct and rites as they were practiced in a number of branches of the Vedic schools. Their principal contents address duties at various stages of life, or *āśramas* (studenthood, householdership, retirement, and asceticism); dietary regulations; offenses and expiations; and the rights and duties of kings. They also discuss purification rites, funerary ceremonies, forms of hospitality, and daily oblations. Finally, they mention juridical matters. The more important of these texts are the *sūtras* of the BUDDHA GOTAMA, Baudhāyana, and Āpastamba. Although the relationship is not clear, the contents of these works were further elaborated in the more systematic DHARMA ŚĀSTRAS, which in turn became the basis of Hindu law.

Hanumān, chief among monkeys, goes to Laṅkā, episode in the Bhāgavata Purāṇa, 17th-century Indian miniature from Malwa

Borromeo—Art Resource

First among them stands the *Dharma Śāstra* of Manu, also known as the MANU-SMṚTI (“Tradition [or Laws] of Manu”), with 2,694 stanzas divided into 12 chapters. It deals with various topics such as COSMOGONY, definition of dharma, the SACRAMENTS, initiation and Vedic study, the 8 forms of marriage, hospitality and funerary rites, dietary laws, pollution and purification, rules for women and wives, royal law, 18 categories of juridical matters, and religious matters, including donations, rites of reparation, the doctrine of karma, the soul, and punishment in hell. Law in the juridical sense is thus completely embedded in religious practice. The framework is provided by the model of the four-*varṇa* society. The influence of the *Dharma Śāstra* of Manu as a statement of ideal norms has been very great, but there is no evidence that it was ever employed as a working legal code in ancient India. Second only to Manu is the *Dharma Śāstra* of Yājñavalkya; its 1,013 stanzas are distributed under the three headings of good conduct, law, and expiation.

The *śāstras* are a part of the SMṚTI (“remembered,” or traditional) literature, which, like the *sūtra* literature that preceded it, stresses the religious merit of gifts to Brahmins. Because kings often transferred the revenues of villages or groups of villages to Brahmins, either singly or in corporate groups, the status and wealth of the priestly class rose steadily. In *agrahāras*, as the settlements of Brahmins were called, Brahmins were encouraged to devote themselves to the study of the Vedas and to the subsidiary studies associated with them; but many Brahmins also developed the sciences of the period, such as mathematics, astronomy, and medicine, while others cultivated literature.

Epics and Purāṇas. During the centuries immediately preceding and following the beginning of the Christian Era, the recension of the two great Sanskrit epics, the *Mahābhārata* and the *Rāmāyaṇa*, took shape out of existing material, such as heroic epic stories, mythology, philosophy, and above all the discussion of the problem of dharma. Much of the material of which the epics were composed dates back into the Vedic period; the rest continued to be added until well after 1000 CE. The actual composition of the Sanskrit texts, however, dates to the period from 500 BCE to 400 CE for the *Mahābhārata* and to the period from 200 BCE to 200 CE for the *Rāmāyaṇa*.

The Mahābhārata. The *Mahābhārata* (“Great Epic of the Bhārata Dynasty”), a text of some 100,000 verses attributed to the sage Vyāsa, was preserved both orally and in manuscript form for centuries. The central plot concerns a great bat-

tle between the five sons of Pāṇḍu (called the PĀṆḌAVAS) and the sons of Pāṇḍu's brother Dhṛtarāṣṭra. Pāṇḍu had been placed under a curse: to have intercourse with any of his wives would cause his death. One wife, however, Kuntī, had a boon that permitted her to conceive through use of a MANTRA. Thus, Kuntī invoked the gods to allow her to conceive the Pāṇḍavas: the five brothers are ARJUNA, conceived of Indra; Yudhiṣṭhira, conceived of Dharma; Bhīma, conceived of Vāyu; and the twins, Nakula and Sahadeva, conceived of the Aśvins. The battle eventually leads to the destruction of the entire race, save one survivor who continues the dynasty. The epic is deeply infused with religious implications, and the battle itself is sometimes understood as a great sacrifice. There are, moreover, many passages in which dharma is systematically treated, so that Hindus regard the *Mahābhārata* as one of the *Dharma Śāstras*. Religious practice takes the form of Vedic ritual (on official occasions), pilgrimage, and, to some extent, adoration of gods. Apart from the *Bhagavad Gītā* (part of book 6 of the *Mahābhārata*) much of the didactic material is found in the Book of the Forest (book 3), in which sages teach the exiled heroes, and in the Book of Peace (book 12), in which the wise Bhīṣma expounds on religious and moral matters.

In the *Mahābhārata* the Vedic gods have lessened in importance, surviving principally as figures of FOLKLORE. Prajāpati of the Upanishads is popularly personified as the god Brahmā, who creates all classes of beings and dispenses boons. Of far greater importance in the *Mahābhārata* is Krishna. In the epic he is primarily a hero, a leader of his people, and an active helper of his friends, yet at a grander, subtler level it is he who superintends the battle-sacrifice as a whole. Krishna's biography appears primarily elsewhere—in the *Harivaṃśa* (1st–3rd centuries CE?) and various PURĀṆAS—and there his divinity shows through more obviously than in the epic. Although he is occasionally identified with Vishnu in the *Mahābhārata*, he is mostly a chieftain, a counsellor, and an ally of the Pāṇḍavas, the heroes of the epic. He helps the Pāṇḍava brothers to settle in their kingdom and, when the kingdom is taken from them, to regain it. In the process he emerges as a great teacher who reveals the *Bhagavad Gītā*, arguably the most important religious text in Hinduism today. In the further development of Krishna worship, this dharmic aspect somewhat recedes, making way for the idyllic story of Krishna's boyhood, when he played with and loved young cowherd women (*gopīs*) in the village while hiding from an uncle who threatened to kill him. The influence of this theme on art has been profound. But even in the *Mahābhārata*, where it is often said that Krishna becomes incarnate in order to sustain dharma when it wanes and in order to combat *adharmā* (forces contrary to dharma), he commits a number of deeds in direct violation of the warrior ethic and is indirectly responsible for the destruction of his entire family. This adharmic shadow is also cast in the Purāṇic idyll because the *gopīs* he woos are the wives of other men. In both cases, Krishna's actions illuminate levels of truth that go deeper than any conventional dharma—either a subtle dharma inscrutable to players immersed in the *Mahābhārata*'s epic battle or a quality of divine playfulness that characterizes the deepest rhythms of the cosmos itself.

Far remoter than Krishna in the *Mahābhārata* is Shiva, who also is hailed as the supreme god in several myths recounted of him, notably the Story of the Five Indras, Arjuna's battle with Shiva, and Shiva's destruction of the sacrifice of Dakṣa. The epic is rich in information about sacred places, and it is clear that making pilgrimages and bathing in sacred rivers constituted an important part of religious life. Occasionally these sacred places are associated with sanctuaries of gods. More frequent are accounts of mythical events concerning a particular place and enriching its sanctity. Numerous descriptions of pilgrimages (*tīrthayātrās*) give the authors opportunities to detail local myths and legends. In addition to these, countless edifying stories shed light on the religious and moral concerns of the age. Almost divine are the towering ascetics capable of fantastic feats, whose benevolence is sought and whose curses are feared.

The Rāmāyaṇa. The classical narrative of Rāma is recounted in the Sanskrit epic *Rāmāyaṇa*, whose authorship is attributed to the sage Vālmīki. Rāma is deprived of the kingdom to which he is heir and is exiled to the forest; his wife Sītā

Vishnu sleeping between two periods of cosmic evolution—i.e., between the destruction of this world and the creation of the new universe; c. 17th century, from Rajasthan, India

Werner Forman—Art Resource

and his brother Lakṣmaṇa accompany him. While there, Sītā is abducted by Rāvaṇa, the demon king of Laṅkā. In their search for Sītā, the brothers ally themselves with Sugrīva, a monkey king whose chief, HANUMĀN (an important deity in modern Hinduism), finds Sītā in Laṅkā. In a cosmic battle, Rāvaṇa is defeated and Sītā rescued. When Rāma is restored to his kingdom, the populace casts doubt on Sītā's chastity during her captivity. Rāma banishes Sītā to a hermitage, where she bears him two sons and eventually dies by reentering the earth from which she had been born. Rāma's reign becomes the prototype of the harmonious and just kingdom to which all kings should aspire; Rāma and Sītā set the ideal of conjugal love; Rāma's relationship to his father is the ideal of filial love; and Rāma and Lakṣmaṇa represent perfect fraternal love. Everything in the myth is designed to show harmony, which after being disrupted is at last regained—or so, at least, Vālmīki would have it. This accords with the fact that in all

but its oldest form (before c. 1st century CE), the *Rāmāyaṇa* identifies Rāma with Vishnu.

Yet there are deep fissures: Rāma's killing of Vālī in violation of all rules of combat and his banishment of the innocent Sītā are troublesome to subsequent tradition. The problems of the "subtlety" of dharma and the inevitability of its violation, central themes in both the *Rāmāyaṇa* and the *Mahābhārata*, have remained the locus of argument throughout Indian history, both at the level of abstract philosophy and in local performance traditions. In Kerala, for instance, men of the low-ranked artisan caste worship Vālī through rites of dance-possession that implicitly protest their ancestors' deaths as soldiers conscripted by high-caste leaders such as Rāma. And throughout India women performers have shifted the thrust of various episodes, emphasizing Sītā's story—her

foundling infancy, her abduction by Rāvaṇa, her trial by fire, her childbirth in exile—thereby openly challenging Rāma. In the words of a Bengali women's song translated by Nabaneeta Dev Sen, "Five months pregnant, Sītā was in the royal palace, and a heartless Rāma sent her off to the forest!"

The *Mahābhārata* and the *Rāmāyaṇa* have also made an impact in Southeast Asia, where their stories have been continually retold in vernacular, oral, and visual versions. As for India, even today the epic stories and tales are part of the early education of almost all Hindus; a continuous reading of the *Rāmāyaṇa*—whether in Sanskrit or in a vernacular version such as that of TULSĪDĀS (16th century)—is an act of great merit, and the enacting of Tulsīdās' version of the *Rāmāyaṇa*, called the RĀMĀRĪTĀMĀNAS, is an annual event across the northern part of the subcontinent. The *Rāmāyaṇa*'s influence is expressed in a dazzling variety of local and regional performance traditions—story, dance, drama, art—and extends to the spawning of explicit "counter epics," such as those published by the Tamil separatist E.V. Ramasami beginning in 1930.

The Bhagavad Gītā. The *Bhagavad Gītā* ("Song of God") is perhaps the most influential of any single Indian religious text, although it is not strictly classed as *śruti*, or revelation. It is a brief text, 700 verses divided into 18 chapters, in quasi-dialogue form. When the opposing parties in the *Mahābhārata* war stand ready to begin battle, Arjuna, the hero of the favored party, despairs at the thought of hav-

ing to kill his kinsmen and lays down his arms. Krishna, his charioteer, friend, and adviser, thereupon argues against Arjuna's failure to do his duty as a noble. The argument soon becomes elevated into a general discourse on religious and philosophical matters, at the climax of which Krishna reveals his infinite, supernatural form as Time itself. The text is typical of Hinduism in that it is able to reconcile different viewpoints, however incompatible they seem to be, and yet emerge with an undeniable character of its own. In its way, it does constitute ŚRUTI ("what is heard"), since Arjuna receives its teachings from the divine Krishna.

The Purānas. The Gupta Period (c. 320–540) saw the first of the series (traditionally 18) of often-voluminous texts that treat in encyclopedic manner the myths, legends, and genealogies of gods, heroes, and saints. Along with the epics, to which they are closely linked in origin, the *Purānas* became the scriptures of the common people; they were available to everybody, including women and members of the lowest order of society (Śūdras), and were not, like the Vedas, supposedly restricted to initiated men of the three higher orders. The origin of much of their contents may be non-Brahminical, but they were also accepted by Brahmins, who thus brought new elements into Vedic religion. For example, goddesses are rarely discussed in the Veda, yet they rose steadily in recognition in Purānic mythology. The *Devī Māhātmya* ("Glorification of the Goddess"), which belongs to the genre, dates to the 5th or 6th century CE, and the DEVĪ BHĀGAVATA PURĀNA is sometimes regarded as being almost as old.

In other *Purānas* Vishnu and Shiva establish their primacy. Both are known in the Vedas, though they play only minor roles: Vishnu is the god who, with his three strides, established the three worlds (heaven, atmosphere, and earth) and thus is present in all three orders; and Rudra-Shiva is a mysterious god who must be propitiated. Purānic literature reveals various stages in which these two gods progressively attract to themselves the identities of other popular gods and heroes: Vishnu assumes the powers of gods who protect the world and its order, Shiva the powers that are outside and beyond Vishnu's range. To these two is often added Brahmā, although still a cosmic figure, Brahmā appears in the *Purānas* primarily to appease over-powerful sages and demons by granting them boons.

Myths of time and eternity. Purānic myths develop around the notion of YUGA (world age). The four *yugas*, Kṛta, Tretā, Dvāpara, and Kali—they are named after the four throws, from best to worst, in a dice game—constitute a *mahāyuga* ("large *yuga*") and are periods of increasing deterioration. Time itself deteriorates, for the ages are successively shorter. Each *yuga* is preceded by an intermediate "dawn" and "dusk." The Kṛta *yuga* lasts 4,000 god-years, with a dawn and dusk of 400 god-years each, or a total of 4,800 god-years; Tretā a total of 3,600 god-years; Dvāpara 2,400 god-years; and Kali (the current *yuga*) 1,200 god-years. A *mahāyuga* thus lasts 12,000 god-years and observes the usual coefficient of 12, derived from the 12-month year, the unit of creation. Since each god-year lasts 360 human years, a *mahāyuga* is 4,320,000 years long in human time. Two thousand *mahāyugas* form one *kalpa* (eon), which is itself but one day in the life of Brahmā, whose full life lasts 100 years; the present is the midpoint of his life. Each *kalpa* is followed by an equally long period of abeyance (*pralaya*), in which the universe is asleep. Seemingly the universe will come to an end at the end of Brahmā's life, but Brahmās too are innumerable, and a new universe is reborn with each new Brahmā.

MAJOR TRADITIONS OF AFFILIATION

Vaiṣṇavism. VAIṢṆAVISM is the worship of Vishnu and his various incarnations. During a long and complex development from Vedic times, there arose many Vaiṣṇava groups with differing beliefs and aims. Some of the major Vaiṣṇava groups include the Śrī Vaiṣṇavas and Dvaitins ("[Theological] Dualists") of South India, the followers of the teachings of the philosopher VALLABHA in western India, and several Vaiṣṇava groups in Bengal in eastern India, who follow teachings derived from those of the saint CAITANYA. The majority of Vaiṣṇava believers, however, take what they like from the various traditions and blend it with various local practices.

In the Veda, Vishnu is the god who penetrates and traverses the triple spaces of the universe to make their existence possible. All beings are said to dwell in his three strides or footsteps (*tri-vikrama*); his highest step, or abode, is beyond mortal ken in the realm of heaven. Vishnu is the god who serves as the pillar of the universe and is identified with sacrifice, which attempts by ritual means to open channels between the several levels of the universe. Vishnu imparts his all-pervading power to the sacrificer, who imitates his strides and so identifies himself with the god, thus conquering the universe and attaining “the goal, the safe foundation, the highest light” (*Śatapatha Brāhmaṇa*).

In the centuries preceding the beginning of the Common Era, Vishnu became the *Īśvara* (immanent deity) of his special worshipers, fusing with the *Puruṣa-Prajāpati* figure; with *Nārāyaṇa*, whose cult discloses a prominent influence of ascetics; with Krishna, who in the *Bhagavad Gītā* revealed a form of dharma-affirming devotional religion, in principle accessible to everyone; and with *VĀSUDEVA*, adored by a group known as the *PĀNCARĀTRAS*.

The extensive mythology attached to Vishnu consists largely of his incarnations (*AVATARS*, literally “descents” into this world). Although the notion of incarnation is found elsewhere in Hinduism, it is basic to Vaiṣṇavism. The concept is particularly geared to the social role of Vishnu; whenever dharma is in danger, Vishnu departs from his heaven, *Vaikuṅṭha*, and incarnates himself in an earthly form to restore the proper order. Each incarnation has a particular mythology.

The classical number of these incarnations is 10, ascending from theriomorphic (animal form) to fully anthropomorphic manifestations. In their most familiar version, these are fish (*Matsya*), tortoise (*Kūrma*), boar (*VARĀHA*), man-lion (*NARASIMHA*), dwarf (*VĀ-MANA*), Rāma with the ax (*PARAŚURĀMA*), King Rāma, Krishna, the Buddha Gotama, and the future incarnation, *KALKĪ*.

A god thus active for the good of society and the individual inspires love. Vishnu has indeed been the object of devotional religion (*bhakti*) to a marked degree, but he is especially worshiped in his incarnations as Krishna and Rāma. The god rewards devotion with his grace, through which the votary may be lifted from transmigration to release or, more crucially, into Vishnu’s intimate presence. Like most other gods, Vishnu has his especial entourage: his wife is *LAKṢMĪ*, or *Śrī*, the lotus goddess, granter of beauty, wealth, and good luck. She came forth from the primordial *MILK-OCEAN* when gods and demons churned it to recover from its depths the ambrosia or elixir of immortality, *amṛta*. At *DĪVĀLĪ*, or *Dīpāvalī*, the festival many Hindus regard as beginning the commercial year, special worship is paid to her for success in personal affairs. Vishnu’s mount is the bird *GARUDA*, archenemy of snakes, and his emblems—which he carries in his four hands—are the lotus, club, discus (as a weapon), and conch shell.

Whatever justification the different Vaiṣṇava groups offer for their philosophical position, all Vaiṣṇavas believe in God as a person with distinctively high qualities and worship him through his manifestations and representations. Vaiṣṇava faith is essentially monotheistic, whether the object of adoration be Vishnu-*Nārāyaṇa* or one of his avatars, such as Rāma or Krishna. Preference for any one of these manifestations is largely a matter of tradition. Thus,

most South Indian Śrī Vaiṣṇavas prefer Vishnu or Śrī; North Indian groups tend to worship Krishna and his consort Rādhā or Rāma and his consort Sītā. While most Hindus would acknowledge the overarching avatar framework as a way of organizing the Vaiṣṇava side of the pantheon, more encompassing commitments to Rāma or Krishna are also possible, as in the *Bhāgavata Purāṇa*'s frequently quoted dictum "Krishna himself is God."

A pronounced feature of Vaiṣṇavism is the strong tendency to devotion (*bhakti*), a passionate love and adoration of God, a complete surrender. The widespread *bhakti* movement seems a natural corollary of the Vaiṣṇava ideal of a loving personal God and aversion to a conception of salvation that puts an end to all consciousness or individuality. The belief expressed in the *Bhāgavad Gītā*—that those who seek refuge in God with all their being will, by his benevolence and grace (*prasāda*), win peace supreme, the eternal abode—was generally accepted: *bhakti* will result in divine intercession with regard to the consequences of one's deeds. A more radical position was embraced by certain followers of the 11th–12th-century theologian RĀMĀNUJA. They held that the efficaciousness of human action is limited to self-surrender (PRAPATTI); all the rest is Vishnu's grace. Equally radical—even paradoxical—forms of *bhakti* thrive in Śaiva and Śākta soil.

Śaivism. The character and position of the Vedic god Rudra—called Shiva, "the Mild or Auspicious One," when the gentler side of his ambivalent nature is emphasized—remain clearly perceptible in some of the important features of the great god Shiva, who together with Vishnu and the Great Goddess (Devī, Durgā, or Śakti) came to dominate Hinduism. During a development from ancient, possibly pre-Vedic times, many different groups within ŚAIVISM arose. Major groups such as the Kashmir Śaivas and the Śaiva Siddhāntins and VĪRĀŚAIVAS of southern India contributed the theological principles of Śaivism, and Śaiva worship became an amalgam of pan-Indian Śaiva philosophy and local forms of worship.

In the minds of ancient Indians, Shiva seems to have been especially associated with the uncultivated, dangerous, and much-to-be-feared aspects of nature. Shiva's character lent itself to being split into partial manifestations—each said to represent only one aspect of him—as well as to assimilating divine or demonic powers of a similar nature from other deities. Already in the Ṛg Veda, appeals to him for help in case of disaster—of which he might be the originator—were combined with the confirmation of his great power. In the course of the Vedic period, Shiva—originally a ritual and conceptual outsider yet a mighty god whose benevolent aspects were emphasized—gradually gained access to the circle of respectable gods who preside over various spheres of human interest. Many characteristics of the Vedic Prajāpati (the creator), of Indra with his sexual potency, and of Agni (the great Vedic god of fire) have been integrated into the figure of Shiva.

In those circles that produced the Śvetāśvatara Upanishad (c. 200 BCE), Shiva rose to the highest rank. In its description of Shiva, he is the ultimate foundation of all existence and the source and ruler of all life, who, while emanating and withdrawing the universe, is the goal of that identificatory meditation that leads to a state of complete separation from phenomenal existence. While Vishnu came to be seen as an ally and advocate of humankind, Rudra-Shiva developed into an ambivalent and many-sided lord and master. As Paśupati ("Lord of Cattle"), he took over the fetters of the Vedic Varuṇa; as Aghora ("To Whom Nothing Is Horrible"), he showed the uncanny traits of his nature (evil, death, punishment) and also their opposites. Shiva might be the sole principle above change and variation, yet he did not sever his connections with innumerable local deities, some of them quite fearsome. Whereas Vishnu champions the cause of the gods, Shiva sometimes sides with the demons.

Shiva exemplifies the idea that the Highest Being encompasses semantically opposite though complementary aspects: the terrible and the mild, creation and reabsorption, eternal rest and ceaseless activity. These seeming contradictions make Shiva a paradoxical figure, transcending humanity and assuming a mysterious sublimity of his own. Although Brahmin philosophers like to emphasize his ascetic aspects and TANTRIC HINDUS his sexuality, the seemingly opposite strands of his nature are generally accepted as two sides of one character.

Shiva interrupts his austerity and asceticism (TAPAS), which is sometimes described as continuous, to marry Pārvatī—he is even said to perform ascetic acts in order to win her love—and he combines the roles of lover and ascetic to such a degree that his wife must be an ascetic (Yogi) when he devotes himself to austerities and a lustful mistress when he is in his erotic mode. Various Śaiva myths show that both chastity and the loss of chastity are necessary for fertility and the intermittent process of regeneration in nature, and ascetics who act erotically are a familiar feature of Hindu lore. By their very chastity, ascetics accumulate (sexual) power that can be discharged suddenly and completely so as to produce remarkable results, such as the fecundation of the soil. Krishna's irrepressible sexuality often has a certain idyllic cast, as represented through the metaphor of love beyond the bonds of marriage, whereas Shiva's complex sexuality plays itself out within the various facets of his marriage to Pārvatī. That marriage becomes a model of conjugal love, sanctifying the forces that carry on the human race.

Many of Shiva's poses express positive aspects of his nature: as a dancer, he is the originator of the eternal rhythm of the universe; he catches the waters of the heavenly GĀṄĀ (Ganges) River, which destroy all sin; and he wears in his headdress the crescent moon, which drips the nectar of everlasting life. Yet he is unpredictable. He is the hunter who slays and skins his prey and dances a wild dance while covered with the bloody hide. Far from society and the ordered world, he sits on the inaccessible Himalayan plateau of Mount Kailāsa, an austere ascetic averse to love who burns KĀMA, the god of love, to ashes with a glance from the third eye—the eye of insight beyond duality—in the middle of his forehead. Snakes seek his company and twine themselves around his body. He wears a necklace of skulls. He sits in meditation, with his hair braided like a hermit's, his body smeared white with ashes. These ashes recall the burning pyres on which the *sannyāsīs* (renouncers) take leave of the social order of the world and set out on a lonely course toward release, carrying with them a human skull. And, at the end of the eon, he will dance the universe to destruction. Nevertheless, he is invoked as Shiva, Śambhu, Śamkara ("the Auspicious One," or "the Peaceful One"), for the god that can strike down can also spare.

The form in which Shiva is most frequently worshiped is the among the sturdiest, plainest imaginable: an upright rounded post called a LĪṄGA ("sign"), usually made of stone. Commentators often observe that its erect male sexuality is counterbalanced by the horizontal plane (YONI)—bespeaking female sexuality—in which it is often set. Yet the sexual dimension is not primary for most devotees, for whom the *liṅga's* aniconic form simply marks Shiva's inscrutable stability.

Śāktism. The term ŚĀKTISM stands alongside Vaiṣṇavism or Śaivism as a way of designating a third aspect of Hindu religion that is indisputably ancient and influential: the worship of goddesses, especially when they are understood as expressions or aspects of a single Goddess (Devī) or Great Goddess (Mahādevī). This Goddess personifies a power, or energy (Śakti), present throughout the universe and challenges any notion of the feminine as passive or quiescent. She can be related to a widely dispersed tradition that associates forceful female deities, many inhabiting particular locales, with the offering of animal sacrifices. Such deities are summarized in the legendry of the *śākta pīṭhās* ("seats of power") that are said to have been established when various parts of the dismembered goddess Satī, consort of Shiva, fell there. The texts often consider that there are 108 of these PĪṬHAS, extending throughout all of India and commemorated by a network of temples.

The power and variousness of the Great Goddess is expressed in her primary myth of origin, as recorded in the *Devī Māhātmya*. The text explains that the gods found themselves powerless in the face of opposing forces, especially a primordial buffalo demon (Mahiṣāsura), and pooled their angry energies to create a force capable of triumphing over such unruly, evil powers. The Great Goddess, summarizing and concentrating their various energies, emitted a menacing laugh, drank wine, refused the buffalo's overtures of marriage, and vanquished him utterly from atop her lion mount, piercing his chest with her trident and decapitating him with her discus. Devī's victory is memorialized in a series of sculptures

that began to appear in the Gupta and Pallava periods (4th–8th centuries), contemporary with the *Devī Māhātmya*.

In a fashion loosely comparable to the process of gathering disparate divine energies that is so prominent in Devī's myth of origins, regional and local goddesses from all over South Asia have for centuries been found to exemplify the person and mythology of an overarching Goddess who offers maternal nurturance to the earth (one of her personas) and her devotees but is death to threatening outsiders. Yet these goddesses retain their local power as mothers guarding particular places and lineages. A key concept in enunciating the nature of this connection is *śakti*—power personified as female. *Śakti* may be associated with males, as in Devī's origination myth or in the depiction of goddesses as consorts, but in its essence it eludes the categories constructed by men. Thought to possess both natural and ritual force and to be embodied in human women, *śakti* as a description of divinity expresses (among other things) a recognition that women are far more powerful than their social position usually indicates. Hence texts such as the *Devī Bhāgavata Purāṇa* effectively feminize the older, all-male *trimūrti* by placing the Goddess, not Brahmā, alongside and indeed above Vishnu and Shiva.

Like any category that attempts to name broad traditions of belief and practice, Śāktism (like Vaiṣṇavism and Śaivism) is imprecise. With Śāktism, however, this is especially so, since the ancient āgamic traditions of ritual and theological practice solidified primarily around male deities—Vishnu and Shiva. Nonetheless, several motifs are particularly salient in contributing to a Śākta religious orientation. One is the close parallel between Purāṇic tales of the Great Goddess eagerly shedding and drinking blood and the ritual motif of blood sacrifice, an exchange of Śakti that has apparently been a singular feature of goddess worship throughout India from earliest times. Another is the enduring association between various forms of the Goddess and pots, especially those seen to be overflowing with vegetation, and the great tendency of widely disparate goddesses to express themselves by possessing their devotees. All of these display the organic energy of *śakti*. Yet the roles Śakti assumes as the enabling power of all beings remain various, and especially in early texts, are depicted as both horrific and benign.

The Great Goddess's role is different in the various systems. She may be seen as the central figure in a philosophically established doctrine, the dynamic aspect of Brahman, producing the universe through her *MĀYĀ*, or mysterious power of illusion; a capricious demoniac ruler of nature in its destructive aspects; a benign mother goddess; or the queen of a celestial court. There is a comprehensive Śāktism that identifies the goddess (usually Durgā) with Brahman and worships her as the ruler of the universe by virtue of whom even Shiva exists. As Mahāyoginī ("Great Mistress of Yoga"), she produces, maintains, and reabsorbs the world. In Bengal's devotion to the goddess KĀLĪ, she demands bloody sacrifices from her worshipers lest her creative potency fail her. Kālī worshipers believe that birth and death are inseparable, that joy and grief spring from the same source, and that the frightening manifestations of the divine should be faced calmly.

A yoga chart showing the kundalini serpent coiled asleep in the human body, Indian drawing, c. 18th–19th century

The Granger Collection

The Great Goddess also manifests herself as the divine consort. As ARDHANĀRĪŚVARA ("the Lord Who Is Half Female"), Shiva shares ultimate reality with her and presides over procreation. Accordingly, Śāktas—often closely associated with Śaivism—hold that creation is the result of the eternal lust of the divine couple. Thus a man who is blissfully embraced by a beloved woman who is Pārvatī's counterpart assumes Shiva's personality and, liberated, participates in the joy of Shiva's amorous sport. Similarly, in all his incarnations Vishnu is united with his consort, Lakṣmī. The sacred tales of his relations with her manifestations cause his worshipers to view human devotion as parallel to the divine love and hence as universal, eternal, and sanctified. In his supreme state, Vishnu and his *śakti* are indissolubly associated with one another, forming a dual divinity called Lakṣmī-Nārāyaṇa. Thus in art Lakṣmī often rests on Vishnu's bosom.

MODES OF RELIGIOUS PRACTICE

Tantrism. There is a close connection between Śākta persuasions and Tantrism, but they are not the same thing. Tantrism is the search for spiritual power and ultimate release by means of the repetition of sacred syllables and phrases (mantras), symbolic drawings (MANDALAS), and other secret rites elaborated in the texts known as TANTRAS ("looms"). Based especially on convictions about divine creative energy (*śakti*) as experienced in the body, Tantrism is a method of conquering transcendent powers and realizing oneness with the divine by yogic and ritual means. It appears in both Buddhism and Hinduism from the 5th century CE onward, coloring many religious trends and movements.

Tantrics take for granted that all factors in both the macrocosm and the microcosm are closely connected. The adept (*sādhaka*) is almost always understood as a man, who performs the relevant rites on his own body, transforming its normally chaotic state into a "cosmos." The macrocosm is conceived as a complex system of powers that by means of ritual-psychological techniques can be activated and organized within the individual body of the adept.

According to Tantrism, concentration is intended to evoke an internal image of the deity and to resuscitate the powers inherent in it so that the symbol changes into mental experience. This "symbolic ambiguity" is also much in evidence in the esoteric interpretation of ritual acts performed in connection with images, flowers, and other cult objects and is intended to bring about a transfiguration in the mind of the adept. Mantras (sacred utterances, such as *hūṃ*, *hrīṃ*, and *klām*) are also an indispensable means of entering into contact with the power they bear and of transcending normal mundane existence. Most potent are the monosyllabic, fundamental, so-called *bīja* ("seed") mantras, which constitute the main element of longer formulas and embody the essence of divine power as the eternal, indestructible prototypes from which everything phenomenal derives its existence. The cosmos itself owes its very structure and harmony to them. Also important is the introduction of spiritual qualities or divine power into the body by placing a finger on the spot relevant to each (accompanied by a mantra).

Tantrics are often classified as being of two types: "right handed" or "left handed." The former confine to the sphere of metaphor and visualization what the latter enact literally. Tantrics who follow the right-hand path value Yoga and *bhakti* and aspire to union with the Supreme by emotional-dynamic means, their Yoga being a self-abnegation in order to reach a state of ecstatic bliss in which the passive soul is lifted up by divine grace. They also adopt a Tantric Mantra Yoga, as described above, and a HAṬHA YOGA ("Discipline of Force"). Haṭha Yoga incorporates normal yogic practices—abstinences, observances, bodily postures, breath control that requires intensive training, withdrawal of the mind from external objects, and concentration, contemplation, and identification that are technically helped by MUDRĀS (*i.e.*, ritual intertwining of fingers, or gestures expressing the metaphysical aspects of ceremonies or of the transformation effected by mantras). Haṭha Yoga goes on to involve vigorous muscular contractions, internal purifications (*e.g.*, washing out stomach and bowels), shaking the abdomen, and certain forms of strict self-discipline. The whole process is intended to control the "gross body" in order to free the "subtle body."

The left-hand Tantric practice (*vāmācāra*) consciously violates all the TABOOS of conventional Hinduism, both for the purpose of helping the adepts to understand their provisional nature and to work from the base of strength provided by the sensory capabilities inherent in bodily existence. For the traditional five elements (*tattvas*) of the Hindu cosmos, these Tantrics substitute the five “m”s: *māṃsa* (flesh, meat), *matsya* (fish), *madya* (fermented grapes, wine), *mudrā* (frumentum, cereal, parched grain, or gestures), and *maithuna* (fornication). This latter element is made particularly antinomian through the involvement of forbidden women, such as one’s sister, mother, the wife of another man, or a low-caste woman, who is identified with the Goddess. Menstrual blood, strictly taboo in conventional Hinduism, is also used at times. Such rituals, which are described in Tantric texts and in tracts against Tantrics, have made *tantra* notorious among many Hindus. It is likely, however, that such rituals have never been regularly performed except by a relatively small group of highly trained adepts; the usual (right-handed) Tantric ceremony is purely symbolic and even more fastidious than the *pūjās* in Hindu temples.

All forms of *tantra* seek to realize the unity of flesh and spirit, the interconnection of the human and the divine, and the experience of transcending time and space. The goal of surpassing the phenomenal duality of spirit and matter and recovering the primeval unity is often conceived as the realization of the identity of God and his Śakti—the core mystery of Śāktism. Ritual practice is varied. Extreme Śākta communities perform the secret nocturnal rites of the *śrīcakra* (“wheel of radiance”; described in the *Kulārṇava Tantra*), in which they avail themselves of the natural and esoteric symbolic properties of colors, sounds, and perfumes to intensify their sexual experiences. Or, in experiencing “the delectation of the deity,” the male adept worships the mighty power of the Divine Mother by making a human woman the object of sexual worship, invoking the Goddess into her and cohabiting with her until his mind is free from impurity. The texts reiterate how dangerous these rites are for those who are not initiated, and most Śākta Tantrics probably do not exemplify this left-handed type.

As if to make this point clear, Tantric practice in general has sometimes been described as comprising not two contrasting types—left and right—but three. According to this taxonomy a Tantric may be either *paśu* (bestial), *vīra* (heroic), or *divya* (divine). Of these, only the *vīra* type is left-handed, consuming the five substances as literally enjoined in the texts. *Paśus*, by contrast, use physical substitutes—*e.g.*, they imbibe coconut milk rather than wine and surrender to the feet of the Goddess (or another deity) rather than submitting to ritual intercourse. Sometimes they are classed in the right-handed group, but sometimes their *bhakti* approach is felt to exempt them from the left/right dichotomy altogether. Finally, there are the *divya* adepts, right-handed Tantrics who use not physical but mental substitutes. Instead of drinking wine, they taste the nectar that flows down from the body’s uppermost “center,” the *sahasrāra cakra*, when its snake-like physical energy (KUNḌALINĪ) has risen from its anal base to its cranial apex, in the process being refined into a subtle, spiritual form. This then is interpreted as the true love-juice from the play of Shiva and Śakti in union, which *divya* adepts experience not through ritualized intercourse but through meditation.

As in most religious communities, such oscillations between visible expression and inner meaning form a major dimension of Hindu life. The Tantric tradition exploits this dynamic exquisitely, yet few would doubt that it is exceptional. Publicly enacted rituals such as temple ceremonies, processions, pilgrimage, and home worship—each, admittedly, with possibilities for interpretation that are all its own—form the backbone of Hindu practice. To these we now turn, beginning with a set of rituals that many Hindus regard as the most important of all.

Domestic rites. The fire rituals that served as the core of Vedic religion have long since been supplanted in most Hindu practice by image worship, whether in home or temple settings, and by various forms of devotionism. Yet in the arena of domestic (*gr̥hya*) ritual one can still see formulas and sequences that survive from the Vedic period. The domestic rituals include five obligatory daily offerings: (1) offerings to the gods (food taken from the meal), (2) a cursory offering

(*bali*) made to "all beings," (3) a libation of water and sesame, offered to the spirits of the deceased, (4) hospitality, and (5) recitation of the Veda. Although some traditions prescribe a definite ritual in which these five "sacrifices" are performed, in most cases the five daily offerings are merely a way of speaking about one's religious obligations in general.

The morning and evening adorations (*sandhyā*), a very important duty of the traditional householder, are mainly Vedic in character, but they have, by the addition of Purāṇic and Tantric elements, become lengthy rituals. If not shortened, the morning ceremonies consist of self-purification, bathing, prayers, and recitation of mantras, especially the *gāyatrī mantra* (Ṛg Veda 3.62.10), a prayer for spiritual stimulation addressed to the sun. The accompanying ritual comprises (1) the application of marks (TILAKS) on the forehead, characterizing the adherents of a particular religious community, (2) the presentation of offerings (water and flowers) to the Sun, and (3) meditative concentration. There are Śaiva and Vaiṣṇava variants, and some elements are optional. The observance of the daily obligations, including the care of bodily purity and professional duties, leads to mundane reward and helps to preserve the state of sanctity required to enter into contact with the divine.

A second major aspect of domestic rites comprises life-cycle rituals. These sacraments (*saṃskāra*) of refinement and transition are intended to make a person fit for a certain purpose or for the next stage in life by removing taints (sins) or by generating fresh qualities. In antiquity there was a great divergence of opinion about the number of RITES OF PASSAGE, but in later times 16 came to be regarded as the most important. Many of the traditional *saṃskāras* cluster in childhood, extending even before birth to conception itself. The impregnation rite, consecrating the supposed time of conception, consists of a ritual meal of pounded rice (mixed "with various other things according to whether the married man desires a fair, brown, or dark son; a learned son; or a learned daughter"), an offering of rice boiled in milk, the sprinkling of the woman, and intercourse; all acts are also accompanied by mantras. In the third month of pregnancy, the rite called *pūṃsavana* (begetting of a son) follows. The birth is itself the subject of elaborate ceremonies, the main features of which are an oblation of *ghī* (clarified butter) cast into the fire; the introduction of a pellet of honey and *ghī* into the newborn child's mouth, which according to many authorities is an act intended to produce mental and bodily strength; the murmuring of mantras for the sake of a long life; and rites to counteract inauspicious influences. Opinions vary as to when the name-giving ceremony should take place; in addition to the personal name, there is often another one that should be kept secret for fear of sinister designs against the child. However that may be, the defining moment comes when the father utters the child's name into its ear.

A hallmark of these childhood *saṃskāras*, as one can see, is a general male bias and the conscripting of natural processes into a person evoked by cultural means and defined primarily by male actors. In the birth ritual (*jātakarma*) the manuals direct the father to breathe upon his child's head, in a transparent ritual co-opting of the role that biology gives the mother. In practice, however, the mother may join in this breathing ritual, thereby complicating the simple nature-to-culture logic laid out in the texts.

Going still further against the patriarchal grain, there exists an array of life-cycle rites that focus specifically upon the lives of girls and women. In South India, for instance, one finds an initiation rite (*viḷakkiṭu kalyāṇam*) that corresponds roughly to the male initiation called *upanayana*, and that gives girls the authority to light oil lamps and thereby become full participants in proper domestic worship. There are also rites celebrating first MENSTRUATION and marking various moments surrounding childbirth. Typically women themselves act as officiants.

In modern times many of the textually mandated *saṃskāras* (with the exceptions of impregnation, initiation, and marriage) have fallen into disuse or are performed in an abridged or simplified form without Vedic mantras or a priest. For example, the important *upanayana* initiation should by rights be held when an upper-caste boy is between the ages of 8 and 12, to mark his entry into the ritual

community defined by access to Vedic learning. In this rite he becomes a “twice-born one,” or *DVIJA*, and is invested with the sacred thread (*upavīta*; see *UPANAYANA*). Traditionally, this was the beginning of a long period of Vedic study and education in the house and under the guidance of a teacher (*guru*). In modern practice, however, the haircutting ceremony—formerly performed in a boy’s third year—and the initiation are often performed on the same day, and the homecoming ceremony at the end of the period of Vedic study often becomes little more than a formality, if it is observed at all. More extreme still, the *upanayana* might also be ignored until it is inserted as a prelude to marriage.

Wedding ceremonies, the most important of all *saṃskāras*, have not only remained elaborate (and often very expensive) but have also incorporated various elements—among others, propitiations and expiations—that are not indicated in the oldest sources. In ancient times there already existed great divergences in accordance with local customs or family or caste traditions. However, the following practices are usually considered essential. The date is fixed after careful astrological calculation; the bridegroom is conducted to the home of his future parents-in-law, who receive him as an honored guest; there are offerings of roasted grain into the fire; the bridegroom has to take hold of the bride’s hand; he conducts her around the sacrificial fire; seven steps are taken by bride and bridegroom to solemnize the irrevocability of the unity; both are, in procession, conducted to their new home, which the bride enters without touching the threshold.

Of eight forms of marriage recognized by the ancient authorities, two have remained in vogue: the simple gift of a girl and the legalization of the alliance by means of a marriage gift paid to the bride’s family. Yet it is noteworthy that the payment of a dowry—often very large—to the groom has become far more typical. In the Vedic period, girls do not seem to have married before they reached maturity, but that too changed over time. By the 19th century child marriage and customary upper-caste bars to the remarriage of widows (often a pressing issue if young girls were married to much older men) had become urgent social concerns in certain parts of India. These practices have abated since the mid-19th century, but laws against child marriage have been required, and they are sometimes flouted even today.

The traditional funeral method is *CREMATION* (which involves the active participation of members of the family of the deceased), but burial or immersion is more appropriate for those who have not been so tainted by life in this world that they require the purifying fire (*i.e.*, children) and those who no longer need the ritual fire to be conveyed to the hereafter, such as ascetics who have renounced all earthly concerns. An important and meritorious complement of the funeral offices is the *śrāddha* ceremony, in which food is offered to Brahmins for the benefit of the deceased. Many people are solicitous to perform this rite at least once a year even when they no longer engage in any of the five obligatory daily offerings.

Temple worship. Image worship takes place both in small household shrines and in the temple. Many Hindu authorities claim that regular temple worship to one of the deities of the devotional cults procures the same results for the worshiper as did the performance of

Hindu wedding ceremony in Suriname

the great Vedic sacrifices, and one who provides the patronage for the construction of a temple is called a "sacrificer" (*yajamāna*). More to the point, once they have been enlivened by a mantric process of ritual inauguration, the images (*mūrti*) installed in temples, shrines, and homes are regarded as participating in the actual substance of the deities they represent. Some are even said to be self-manifest (*svayambhū*). Hence to encounter them with the proper sentiment (*bhāva*) is to make actual contact with the divine. This happens through paradigmatic acts such as *darśan*, the reciprocal act of both "seeing" and being seen by the deity; *ĀRATĪ*, the illumination of the image and the receiving of that light by worshippers; and *prasāda*, food offerings which, after being partially or symbolically consumed by the deity, return to the worshippers as blessings from the divine repast.

The erection of a temple is a meritorious deed recommended to anyone desirous of heavenly reward. The choice of a site, which should be serene and lovely, is determined by ASTROLOGY and DIVINATION as well as by its location with respect to human dwellings; for example, a SANCTUARY of a benevolent deity should face the village. Temples vary greatly in size and artistic value, ranging from small village shrines with simple statuettes to the great temple-cities of South India whose boundary walls, pierced by monumental gates (*gopura*), enclose various buildings, courtyards, pools for ceremonial bathing, and sometimes even schools, hospitals, and monasteries. From the point of view of construction, there is no striking difference between Śaiva and Vaiṣṇava sanctuaries, but they are easily distinguishable by their central objects of worship (e.g., *mūrti*, *liṅga*), the images on their walls, the symbol fixed on their finials (crowning ornaments), and the presence of Shiva's bull, *NANDĪ*, or Vishnu's bird, *Garuḍa* (the theriomorphic duplicate manifestations of each god's nature), in front of the entrance.

Worship in Hindu temples takes place on a spectrum that runs from ceremonies characterized by fully orchestrated congregational participation to rituals focused almost entirely on the priests who act as the deities' ritual servants to episodic acts of prayer and offering initiated by families or individual worshippers. Sometimes worshippers assemble to meditate, to take part in singing and chanting, or to listen to an exposition of doctrine. The *pūjā* (worship) performed in public "for the well-being of the world" is, though sometimes more elaborate, largely identical with that executed for personal interest. It consists essentially of an invocation, a reception, and the entertainment of God as a royal guest. Paradigmatically, it involves 16 "attendances" (*upacāras*): an invocation by which the omnipresent God is invited to direct his/her attention to the particular worship; the offering of a seat, water (for washing the feet and hands and for rinsing the mouth), a bath, a garment, a sacred thread, perfumes, flowers, incense, a lamp, food, homage, and a circumambulation of the image and dismissal by the deity. *Darśan*, *āratī*, and *prasāda* emerge as significant features of these "attendances," whether experienced at specific times of day (such as the eight "watches" that are observed in many Krishna temples) or according to a freer, perhaps sparser schedule. In front of certain temples, ritual possession sometimes also occurs.

Sacred times and places. *Festivals.* Hindu festivals are combinations of religious ceremonies, semiritual spectacles, worship, prayer, lustrations, processions (to set something sacred in motion and to extend its power throughout a certain region), music, dances, eating, drinking, lovemaking, licentiousness, feeding the poor, and other activities of a religious or traditional character. The functions of these activities are clear from both literary sources and anthropological observation: they are intended to purify, avert malicious influences, renew society, bridge over critical moments, and stimulate, celebrate, and resuscitate the vital powers of nature (and hence the term *utsava*, which means both the generation of power and a festival).

Calendrical festivals refresh the mood of the participants, further the consciousness of the participants' power, help to compensate for any sensations of fear or inferiority in relation to the great forces of nature, and generally enable participants as individuals and communities to align their own hopes with the rhythms of the cosmos. Hindu festivals are anchored in a lunar calendar that is brought into conformity with the solar calendar every three years by the addition

of an intercalary month, the anomalous status of which renders it a particular focus of ritual attention. There are also innumerable festivities in honor of specific gods, celebrated by individual temples, villages, and religious communities.

Hindu festival calendars are so varied from region to region that it is difficult to describe them briefly. Merely as example, we introduce two festivals that function roughly as New Year's rites throughout much of northern and central India. The first is HOLĪ, a saturnalia connected with the spring equinox and, in western India, with the wheat harvest. The mythical tradition of the festival describes how young Prahāda, in spite of his demonic father's opposition, persisted in worshipping Vishnu and was carried into the fire by the female demon Holikā, who believed herself to be immune to the ravages of fire. Through Vishnu's intervention, however, Prahāda emerged unharmed, while Holikā was burned to ashes. The bonfires are intended to commemorate this event or rather to reiterate the triumph of virtue and religion over evil and sacrilege. This explains why objects representing the sickness and impurities of the past year (many people calculate the new year as beginning immediately after Holī) are thrown into the bonfire, and it is considered inauspicious not to look at it. Moreover, people pay or forgive debts, and try to rid themselves of the evils, conflicts, and impurities that have accumulated during the prior months, translating the conception of the festival into a justification for dealing anew with continuing situations in their lives. Various enactments of chaos (*e.g.*, the throwing of colored water), reversal (a ritualized battle in which women wield clubs and men defend themselves with shields), and extremity (FIRE WALKING through the Holī bonfire) constitute the "body" of Holī. These contrast vividly with the decorous reaffirmations of social relations that ensue when they are done: people bathe, don clean clothing, and visit family and gurus. There are local variants on Holī; for example, among the MARĀTHĀS, heroes who died on the battlefield are "danced" by their descendants, sword in hand, until the descendants become possessed by the spirits of the heroes. In Bengal and Braj, swings are made for Krishna.

An even more widely celebrated New Year festival called DĪVĀLĪ, or Dīpāvalī, occurs on the

Temple dedicated to the sun god Sūrya, showing a wheel of his sky-chariot, c. 1238–58, Konārak, Orissa, India

new moon of the month of Kārttika in mid-autumn. It involves ceremonial lights welcoming Lakṣmī, the goddess of wealth and good fortune; fireworks said to chase away the spirits of wandering ghosts; and gambling, an old ritual custom intended to secure luck for the coming year. Like Holī, it concludes with an affirmation of ritual, social, and calendrical order; special attention is given to honoring cattle and to celebrating and sampling the fall harvest.

Pilgrimages. Like processions, pilgrimages (*tīrthayātrā*) to holy rivers, mountains, forests, and cities were already known in Vedic and epic times and remain today one of the most remarkable aspects of Indian religious life. It is often said that pilgrimage is a layperson's renunciation (*sannyāsa*): it is physically difficult, it means leaving behind the array of duties and pleasures associated with home and family, and it has for centuries been a major aspect of the lives of many ascetics. Various sections of the *Purānas* eulogize temples and the sacredness of places situated in beautiful scenery or wild solitude (especially the HIMALAYAS). The whole of India is considered holy ground that offers everyone the opportunity to attain religious fulfillment, but certain sites have for many centuries been regarded as possessing exceptional holiness. The Sanskrit *Purānas* often mention Ayodhya, Mathura, Hardwar, VARANASI (Banaras), Kanchipuram, Ujjain, and Dvaraka, but at the same time strong regional traditions create very different lists. The reason for the sanctity of such places derives from their location on the bank of a holy river (especially the Gaṅgā), from their connection with figures of antiquity who are said to have lived there, or from the local legend of a manifestation of a god. Many places are sacred to a specific divinity; the district of Mathura, for example, encompasses many places of pilgrimage connected with Krishna, especially VRINDĀBAD (Vṛndāvana) and Mount Govardhan. Pilgrimages to Gaya, Hardwar, and Varanasi are often undertaken for the sake of the welfare of deceased ancestors. In most cases, however, devotees hope for increased well-being for themselves and their families in this life (often in response to the fulfillment of a vow),

for deliverance from sin or pollution, or for emancipation from the world altogether (*mokṣa*). The last prospect is held out to those who, when death is near, travel to Varanasi to die near the Gaṅgā.

On special occasions, be they auspicious or, like a solar eclipse, inauspicious, the devout crowds increase enormously. The most impressive of these is the KUMBH MELA, the world's most massive religious gathering (10 million pilgrims at Hardwar in 1998). The Kumbh Mela is largest when held at the confluence of the Gaṅgā and JAMUNĀ rivers at Prayāg (Allahabad) every 12 years. These and other pilgrimages have contributed much to the spread of religious ideas and the cultural unification of India.

The geography of Hindu pilgrimage is in a process of constant evolution. The mountain deities Vaiṣṇo Devī (in the Himalayas) and Aiyappan (in the Nilgiri Hills) attracted vastly increased numbers of pilgrims toward the end of the 20th century, as did gurus such as SATHYA SAI BABA at his centers in Andhra state and near Bangalore. Yet traditional Vaiṣṇava shrines such as Puri and TIRUPATI and Śaiva sites such as Amarnāth have kept pace. Given their typically fluid sense of the boundaries between Hinduism and other faiths, Hindus also flock to Muslim, Jain, and Christian places of pilgrimage; sacred and secular tourism (to destinations such as the Taj Mahal) are often combined.

REGIONAL EXPRESSIONS OF HINDUISM

Many of the most important magnets for Hindu pilgrimage are regional in focus—e.g., Śrīrangam for Tamil Nadu, PANDHARPUR for Maharashtra, or Gaṅgāsāgar for Bengal. Similarly, Hindu life is expressed in a variety of “mother tongue” languages that contrast vividly to pan-Indian Sanskrit. The localized sacred literatures are related in complex ways to Sanskrit texts and, crucially, each other.

Of the four primary Dravidian literatures—Tamil, Telugu, Kannada, and Malayalam—the oldest and best known is Tamil. The earliest preserved Tamil literature, the so-called *Caṅkam*, or *Saṅgam*, poetry anthologies, dates from the 1st century BCE. These poems are classified by theme into *akam* (“interior,” primarily love poetry) and *puṇam* (“exterior,” primarily about war, the poverty of poets, and the deaths of kings). The *bhakti* movement has been traced to Tamil poetry, beginning with the poems of the devotees of Shiva (Nāyaṇārs) and the devotees of Vishnu (Ālvārs). The Nāyaṇārs, who date from about 500–750 CE, composed hymns addressed to the local manifestations of Shiva in which they “dance, weep, worship him, sing his feet.” The most famous Nāyaṇār lyricists are Appar (whose words were just quoted, from Indira Peterson’s translation), Campantar, and Cuntarar; their hymns are collected in the *Tevāram* (c. 11th century).

More or less contemporary were their Vaiṣṇava counterparts, the Ālvārs, including the poetess ĀṅṅĀL, the untouchable-caste poet TIRUPPAN, and the farmer-caste Nammālvār, who is held to be the greatest. Whether Śaiva or Vaiṣṇava, their devotion exemplifies the *bhakti* movement, which values direct contact between human beings and God (especially as expressed in song), challenges rigidities of caste and ritual, and celebrates the experience of divine grace. These saints became the inspiration for major theological systems: the Śaivas for the Śaiva Siddhānta, the Vaiṣṇavas for VIŚIṢṬĀDVAITA. In Kannada the same movement was exemplified by poet-saints such as BASAVA and MAHĀDEVĪ, whose utterances achieved great popularity. Their religion, Viraśaivism, was perhaps the most “protestant” version of *bhakti* religion.

New Dravidian genres continued to evolve into the 17th and 18th centuries, when the Tamil Cittars (from the Sanskrit SIDDHA, “perfected one”), who were eclectic mystics, composed poems noted for the power of their naturalistic diction. The Tamil sense and style of these poems belied the Sanskrit-derived title of their authors, a phenomenon that could stand as a symbol of the complex relationship between Dravidian and Sanskrit religious texts.

From middle India northward one encounters Indo-Aryan vernaculars related to Sanskrit, including Bengali, Hindi (the most important literary dialects of which are Brajbhāṣā and Avadhī and which bleeds into Urdu, with its increased Perso-Arabic content), Punjabi, Gujarati, Marathi, Oriya, Kashmiri, Sindhi, Assamese,

Nepali, Rajasthani, and Sinhalese. Most of these languages began to develop literary traditions around 1000 CE.

Marathi was the first to develop a substantial corpus of *bhakti* poetry and HAGIOGRAPHY, starting with the 13th–14th-century Vaiṣṇava saints JĀNEŚVAR and NĀMDEV, both of whom especially praised the deity Viṭṭhal (Viṭhobā) of Pandharpur, as did Jāneśvar’s sister Muktabāī and the untouchable saint COKHĀMELĀ (14th century). TUKĀRĀM (17th century), with his searchingly autobiographical poems, was to become the most famous of these Vārkarī (literally, “Pilgrim”) poets.

Religious poetry of enduring significance in Hindi starts with a collection of antinomian, Haṭha Yoga *bānī* (utterances) attributed to GORAKHNĀTH in perhaps the 14th century and continues with the interior-oriented, iconoclastic poet-saint Kabīr (15th century). The earliest dated manuscripts for Hindi *bhakti* emerge toward the end of the 16th century, placing Kabīr alongside NĀNAK (the founder of SIKHISM) in one collection and alongside SŪRDĀS (16th-century Krishna lyricist) in another. The earliest hagiographies (c. 1600), written by Anantadās and Nābhādās, tend to firm up this distinction between *sants* like Nānak or Kabīr and Vaiṣṇavas like Sūrdās or MĪRĀBĀI, though not absolutely. Sūrdās with his *Sūrsāgar* (“Sūr’s Ocean”) and Tulsīdās (16th–17th century) with his *Rāmcaritmānas* (“Sacred Lake of the Acts of Rāma”) vie for the honor of being Hindi’s greatest poets. Mīrābāī is equally well known, though the corpus of romantic Krishna poetry attributed to her is almost completely unattested before the 19th century and shows evidence of complex patterns of oral transmission in Gujarati, Rajasthani, and Brajbhāṣā. Hindi poets such as Sūrdās and the low-caste leatherworker Ravidās mention the Marathi poet Nāmdev, showing the importance of cross-regional affiliations, and Nāmdev has an independent corpus of poetry in Hindi and Punjabi.

Although the earliest Hindu text in Bengali is a mid-15th-century poem about Rādhā and Krishna, medieval texts in praise of gods and goddesses, known as MAṄGAL-KĀVYAS, must have existed in oral versions long before that. In later Bengal Vaiṣṇavism, the emphasis shifts from service and surrender to mutual attachment and attraction between God (*i.e.*, Krishna) and humankind: God is said to yearn for the worshiper’s identification with himself, which is his gift to the wholly purified devotee. Thus, the highest fruition of *bhakti* is admission to the eternal sport of Krishna and his beloved Rādhā, which is sometimes glossed as the mutual love of God and the human soul. The best-known poets in this vein are the Bengali Caṇḍīdās (c. 1400) and the Maithili poet Vidyāpati (c. 1400). The greatest single influence was Caitanya, who in the 16th century renewed Krishnism with his emphasis on community chanting and celebration (*saṃkīrtan*) and his dedication to what he saw as the renaissance of Vaiṣṇava culture in Braj, where Krishna is thought to have spent his youth. Caitanya left next to no writings of his own, but he inspired many hagiographies, among the more important of which is the *Caitanya Caritāmṛta* (“Nectar of Caitanya’s Life”) by Krishna Dās (born 1517). Almost equally influential, in a very different way, were the songs of RĀMPRASĀD SEN (1718–75), which honor Śakti as mother of the universe and are still in wide devotional use. The Śākta heritage was continued in the poetry of Kamalākānta Bhaṭṭācārya (c. 1769–1821) and eventually culminated in the ecstatic RĀMAKRISHNA PARAMAHAMSA (1836–86), whose inspiration caused VIVEKANANDA to establish the Rāmākṛishna Maṭh in India and the VEDĀNTA Society in the West.

Numerous important works of Hindu literature are omitted from this brief survey, not only in the five regional languages we have mentioned but even more so in Gujarati, Telugu, Malayalam, and a host of others. We have focused primarily on *bhakti* lyrics, but these are complemented by a range of vernacular epics, such as the Tamil, Telugu, and Bengali *Rāmāyaṇas* of Kampan, Buddharāja, and Kṛtibāsa (11th–14th centuries), respectively, and the highly individual *Mahābhārata* of the 16th-century Kannada poet Gadugu. The Tamils composed their own epics, notably Iṅṅkō Aṭikal’s CILAPPATIKĀRAM (“The Lay of the Anklet”) and its sequel, *Maṇimekhalai* (“The Jeweled Girdle”). In Telugu there is the great Palnāḍu Epic; Rajasthani has an entire epic cycle about the hero Pabuji; and Hindi has its *Ālhā* and *Dholā*, the latter with a lower-caste base and focusing on the goddess Śakti.

This only begins to scratch the surface of a massive “literature” of oral performance that includes dance and theatre. Almost all of it is ritually circumscribed in some way, and some is actually performed in temple contexts, but that is not to underestimate the importance of a poem of Sūrdās or Kabīr that gets sung by a blind singer moving from car to car on a local train on the vast plains of North India. Nor is it meant to understate the influence of cassette recordings of devotional songs in a host of regional languages or the evident power of nationally televised Hindi versions of the *Mahābhārata*, *Rāmāyaṇa*, and *Bhāgavata Purāṇa*. Rāmānand Sāgar’s *Rāmāyaṇa* (1987–88), which claimed a heritage including versions of the epic in a dozen languages but drew mainly from Tulsīdās’ *Rāmcaritmānas*, was easily the most-watched program ever aired on Indian television. The vast majority of India’s population is reported to have seen at least one weekly episode, and many people were loath to miss a single one.

SOCIAL CORRELATES OF RELIGION

Caste. The origin of the so-called caste system is not known with certainty. Hindus attribute the proliferation of the castes (*jātis*) to the subdivision of the four classes, or *varṇas*, due to intermarriage (which is prohibited in Hindu works on dharma). Modern theorists, however, tend to assume that castes arose from differences in family ritual practices, racial distinctions, and occupational differentiation and specialization. Many modern scholars doubt whether the simple *varṇa* system was ever more than a theoretical socioreligious ideal and have emphasized that the highly complex division of Hindu society into nearly 3,000 castes and subcastes was probably in place even in ancient times.

In general, a caste is an endogamous hereditary group of families bearing a common name, often claiming a common descent, as a rule professing to follow the same hereditary calling, and maintaining the same customs. Moreover, tribes, guilds, or religious communities characterized by particular customs—for example, the Vīraśaivas—could easily be regarded as castes. The status of castes varies in different localities, and especially in urban settings social mobility is possible.

Traditional Hindus are inclined to emphasize that the ritual impurity and “untouchability” inherent in these groups does not essentially differ from that temporarily proper for mourners or menstruating women. This, and the fact that some exterior group or other might rise in estimation and become an interior one or that individual outcastes might be well-to-do, does not alter the fact that the spirit of exclusiveness was in the course of time carried to extremes. The lower, or scheduled, castes were subjected to various socioreligious disabilities before mitigating tendencies helped bring about reform. After India’s independence, social discrimination was prohibited, the practice of untouchability was made a punishable offense, and various programs of social amelioration were instituted, including the reservation of a certain percentage of places in educational institutions and government jobs for lower-caste applicants. Before that time, however, scheduled castes were often openly barred from the use of temples and other religious institutions and from public schools, and these groups faced many oppressive restrictions in their relations with individuals of higher caste. Hindu texts such as the *Manu-smṛiti* were seen to justify low social status, explaining it as the inevitable result of sins in a former life.

Social protest. For many centuries India has known religious communities dedicated in whole or in part to the elimination of caste discrimination. Many have been guided by *bhakti* sentiments, including the Vīraśaivas, Sikhs, Kabīr Panthīs, Satnāmīs, and Rāmnamīs, all of whom bear

Sadā Shiva with Nandī and the flowing Gaṅgā, Bikaner school, mid-17th century; Guimet Museum, Paris

Giraudon—Art Resource

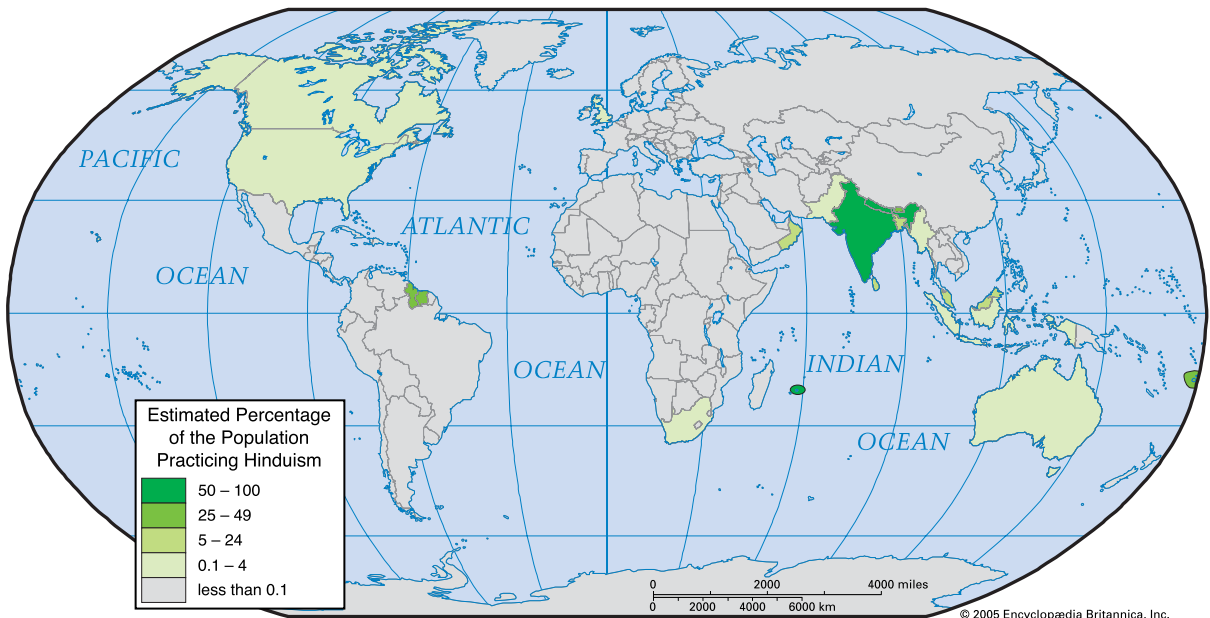

a complicated relation to the greater Hindu fold. A major theme in *bhakti* poetry throughout India has been the ridicule of caste and the etiquette of ritual purity that relates to it, although this element is stronger on the *nirguṇa* side of the *bhakti* spectrum than the *sagūṇa*.

Other religions have provided members of low-ranked castes with a further hope for escaping social hierarchies associated with Hindu practice. Sikhism has already been mentioned. ISLAM played this role in Kerala from the 8th century onward and elsewhere in India since the 12th century, although certain convert groups have retained their original caste organization even after embracing Islam. CHRISTIANITY has exercised a similar force, serving for centuries as a magnet for disadvantaged Hindus. And in 1956 B.R. Ambedkar, the principal framer of the Indian constitution and a member of the scheduled MAHAR caste, abandoned Hinduism for Buddhism, eventually to be followed by millions of his lower-caste followers. Yet many Ambedkarite DALITS (“the Oppressed”) continue to venerate saints such as Kabīr, Cokhāmēlā, and Ravidās who figure in the general lore of Hindu *bhakti*. Other Dalits, especially members of the CAMĀR caste (traditionally leatherworkers), have gone further, identifying themselves explicitly as Ravidāsīs, creating a scripture that features his poetry, and building temples that house his image. Still other Dalit communities have claimed since the early 20th century that they represent India’s original religion (*ādi dharma*), rejecting caste-coded Vedic beliefs and practices as perversions introduced by Aryan invaders in the 2nd millennium BCE.

Renunciants and the rejection of social order. Another means of rejecting the social order that forms the background for significant portions of Hindu belief and practice is the institution of renunciation. The rituals of *sannyāsa*, which serve archetypally as gateway to a life of religious discipline, often mimic death rituals, signifying the renouncer’s understanding that she or, more typically, he no longer occupies a place in family or society. Other rituals serve a complementary function, inducting the initiate into a new family—the alternative family provided by a celibate religious order, usually focused on a guru. In principle this family should not be structured along the lines of caste, and the initiate should pledge to renounce commensal dietary restrictions. In practice, however, some dietary restrictions remain in India’s most influential renunciant communities (though not in all), and certain renunciant orders are closely paired with specific communities

World distribution of Hinduism

of householders. This crystallizes a pattern that is loosely present everywhere. Householders and renunciants offer each other mutual benefits, with the former dispensing material substance to the theoretically propertyless renunciants while the latter dispense religious merit and spiritual guidance in return. Such an enactment of the values of dharma and *mokṣa* is symbiotic, to be sure, but that does not serve to domesticate renunciants entirely. Their existence questions the ultimacy of anything tied to caste, hierarchy, and bodily well-being.

HINDUISM AND THE WORLD BEYOND

Hinduism and religions of Indian origin. Hinduism, Buddhism, and JAINISM originated out of the same milieu: the circles of world renunciants of the 6th century BCE. Although all share certain non-Vedic practices (such as renunciation itself and various yogic meditational techniques) and doctrines (such as the belief in rebirth and the goal of liberation from perpetual transmigration), Buddhists and Jains do not accept the authority of the Vedic tradition and therefore are regarded as less than orthodox by Hindus. Especially in the 6th–11th centuries there was strong and sometimes bloody competition for royal patronage among the three communities—with Brahmins representing Hindu values—as well as between Vaiṣṇavas and Śaivas. In general the Brahmin groups prevailed. In a typically absorptive gesture, Hinduism in time recognized the Buddha as an incarnation of Vishnu—usually the ninth—but this was often qualified by the caveat that Vishnu assumed this form to mislead and destroy the enemies of the Veda. Hence, the Buddha avatar is rarely worshiped by Hindus, though often highly respected. At an institutional level, certain Buddhist shrines, such as the one marking the Buddha's Enlightenment at BODH GAYĀ, have remained partly under the supervision of Hindu ascetics and are visited by Hindu pilgrims.

After the rise of Buddhological studies in the West combined with the archaeological discoveries and restorations that began at the end of the 19th century, thus clarifying the ecumenical achievements of the Buddhist emperor AŚOKA, the Republic of India adopted the lion capital of the pillar found at Sarnath, which marked the place of the Buddha's first teaching, as its national emblem. Hinduism has so much in common with Jainism, which until recently remained an Indian religion, especially in social institutions and ritual life, that nowadays many Hindus tend to consider it a Hindu sect. The points of difference—*e.g.*, a stricter practice of *ahimsā* and the absence of sacrifices for the deceased in Jainism—do not give offense to orthodox Hindus. Moreover, many Jain laypeople worship images as Hindus do, though with a different rationale. There are even places outside India where Hindus and Jains have joined to build a single temple, sharing the worship space.

Hinduism and Islam. Hindu relations with Islam and Christianity are in some ways quite different from the ties and tensions that bind together religions of Indian origin. Hindus live with a legacy of domination by Muslim and Christian rulers that stretches back many centuries—in North India, to the Delhi Sultanate established at the beginning of the 13th century. It is hardly the case that Muslim rule was generally loathsome to Hindus. Direct and indirect patronage from the Mughal emperors AKBAR (1542–1605) and Jahāngīr (1569–1627), whose chief generals were Hindu Rājapūts, laid the basis for the great burst of Krishnaite temple and institution building that transformed the Braj region beginning in the 16th century. Yet there were periods when the political ambitions of Islamic rulers took strength from iconoclastic aspects of Muslim teaching and led to the devastation of many major Hindu temple complexes, from Mathura and Varanasi in the north to Chidambaram and MADURAI in the far south; other temples were converted to mosques. Episodically, since the 14th century, this history has provided rhetorical fuel for Hindu warriors eager to assert themselves against Muslim rivals. The bloody partition of the South Asian subcontinent into India and Pakistan in 1947 added a new dimension. Mobilizing Hindu sensibilities about the sacredness of the land as a whole, extremists have sometimes depicted the creation of Pakistan as a rape of the body of India, in the process demonizing Muslims who remain within the political boundaries of India.

These strands converged at the end of the 20th century in a campaign to destroy the mosque built in 1528 by a lieutenant of the Mughal emperor Bābar in Ayodhya, a city that has since the 2nd century been identified with the place so named in the *Rāmāyaṇa*, where Rāma was born and ruled. In 1992 Hindu militants from all over India, who had been organized by the Vishwa Hindu Parishad (VHP: "World Hindu Council"), the Rashtriya Swayamsevak Sangh (RSS: "National Volunteer Alliance"), and the BHARATIYA JANATA PARTY (BJP: "Indian People's Party"), destroyed the mosque in an effort to "liberate" Rāma and establish a huge "Rāma's Birthplace Temple" on the spot. In the aftermath, several thousand people—mostly Muslims—were killed in riots that spread across North India.

The conflict in Ayodhya illustrated some of the complexities of Hindu-Hindu and Hindu-Muslim relations. The local police force, having been largely purged of its Muslim members shortly after partition and independence, was largely inactive. Certain leaders from Ayodhya's several communities of Hindu ascetics joined the militants, while others regarded the militants' actions as an outsiders' takeover that was injurious to their own standing and integrity. Local Muslims, who had for centuries lived at peace with Hindu neighbors, reflected bitterly on the fact that Hindu mobs also attacked an outlying shrine to a Muslim *pīr* (holy man) whose annual festival (*urs*) typically attracted even more Hindu worshipers than Muslims. A Delhi-based artists' collective, echoing a lament that was voiced by millions of Hindus, mounted an exhibition called "We Are All Ayodhya," which documented the city's vividly multireligious history and traveled both in India and abroad.

Hinduism and Christianity. Relations between Hinduism and Christianity have also been shaped by unequal balances of political power and cultural influence. Although communities of Christians have lived in South India since the middle of the 1st millennium, the great expansion of Indian Christianity followed the efforts of missionaries working under the protection of British colonial rule. Their denigration of selected features of Hindu practice—most notably, image worship, *satī*, and child marriage (the first two had also been criticized by Muslims)—was shared by certain Hindus. Beginning in the 19th century and continuing to the present, a movement that might be called neo-Vedānta has emphasized the monism of certain Upanishads, decried "popular" Hindu "degenerations" such as the worship of idols, acted as an agent of social reform, and championed dialogue between other religious communities.

Relations between Hindus and Christians are complicated. Many Hindus are ready to accept the ethical teachings of the Gospels, particularly the SERMON ON THE MOUNT (whose influence on GANDHI is well-known), but reject the theological superstructure. They are apt to regard Christian conceptions about love and its social consequences as a kind of *bhakti* and to venerate Jesus as a saint, yet many resent the organization and the exclusiveness of Islam and Christianity, considering these as obstacles to harmonious cooperation. They subscribe to Gandhi's opinion that missionaries should confine their activities to humanitarian service and look askance at conversion, finding also in Hinduism what might be attractive in Christianity. Such sentiments took an unusually extreme form at the end of the 20th century when Hindu activists attacked Dalit Christians and their churches in various parts of India, especially Orissa and Gujarat. A far more typical sentiment is expressed in the eagerness of Hindus of all social stations, especially the middle class, to send their children to high-quality (often English-language) schools established and maintained by Christian organizations.

Diasporic Hinduism. Since the appearance of Swami Vivekananda at the World's Parliament of Religions in Chicago in 1893 and the subsequent establishment of the Vedānta Society in various American and British cities, Hinduism has had a growing missionary profile outside the Indian subcontinent. Conversion as understood by Christians or Muslims is usually not the aim. As seen in the Vedānta Society, Hindu perspectives are held to be sufficiently capacious that they do not require new adherents to abandon traditions of worship with which they are familiar, merely to see them as part of a greater whole. The Vedic formula "Truth is one, but scholars speak of it in many ways" (*ekam sat vipra bahudhā*

vadanti) is much quoted. Many transnational Hindu communities, including Radhasoami, TRANSCENDENTAL MEDITATION, Siddha Yoga, the SELF-REALIZATION FELLOWSHIP, the Sathya Sai Baba Satsang, and the International Society for Krishna Consciousness (ISKCON, popularly called Hare Krishna), have tended to focus on specific gurus, particularly in their stages of most rapid growth. They frequently emphasize techniques of spiritual discipline more than doctrine. Of the groups just mentioned, only ISKCON has a deeply exclusivist cast—which makes it, in fact, generally more doctrinaire than the Gauḍīya Vaiṣṇava lineages out of which its founding guru, A.C. Bhaktivedanta, emerged.

At least as important as these guru-centered communities in the increasingly international texture of Hindu life are communities of Hindus who have emigrated from South Asia to other parts of the world. Their character differs markedly according to region, class, and the time at which emigration occurred. Tamils in Malaysia celebrate a festival to the god Murukan (Thaipusam) that accommodates body-piercing vows long outlawed in India itself. Formerly indentured laborers who settled in the Caribbean island Trinidad in the mid-19th century have tended to consolidate doctrine and practice from various locales in Gangetic India, with the result that Rāma and Sitā have a heightened profile. Many migrants from rural western India, especially Gujarat, became urbanized in East Africa in the late 19th century and have now resettled in Britain. Like those Gujaratis who came directly to the United States from India since the liberalization of U.S. immigration laws in 1965, once abroad they are more apt to embrace the reformist guru-centered SWĀMĪNĀRĀYAṆ faith than they would be in their native Gujarat, though this is by no means universal.

Professional-class emigrants from South India have spearheaded the construction of a series of impressive Śrī Vaiṣṇava-style temples throughout the United States, sometimes taking advantage of financial and technical assistance from the great Vaiṣṇava temple institutions at Tirupati. The siting of some of these temples, such as the Penn Hills temple near Pittsburgh, Pennsylvania, reveals an explicit desire to bring forth resonances of Tirupati's natural environment on American soil. Similarly, Telugu-speaking priests from the Tirupati region have been imported to serve at temples such as the historically important GAṆEŚA temple, constructed from a preexisting church in Queens, New York City, in 1975–77. Yet the population who worship at these temples tends to be far more mixed than one would find in India. This produces sectarian and regional eclecticism on the one hand—images and shrines that appeal to a wide variety of devotional tastes—and on the other hand a vigorous attempt to establish doctrinal common ground. As Vasudha Narayanan has observed, educational materials produced at such temples typically hold that Hinduism is not a religion but a way of life, that it insists in principle on religious tolerance, that its Godhead is functionally trinitarian (the male *trimūrti* of Brahmā, Vishnu, and Shiva is meant, although temple worship is often very active at goddesses' shrines), and that Hindu rituals have inner meanings consonant with scientific principles and conducive to good health.

Pacific and ecumenical as this sounds, members of such temples are also important contributors to the VHP, whose efforts since 1964 to find common ground among disparate Hindu groups have sometimes also contributed to displays of Hindu nationalism such as were seen at Ayodhya in 1992. As the 21st century opens, there is a vivid struggle between “left” and “right” within the Hindu fold, with diasporic groups playing a more important role than ever before. Because of their wealth and education, because globalizing processes lend them prestige and enable them to communicate constantly with Hindus living in South Asia, and because their experience as minorities tends to set them apart from their families in India itself, their contribution to the evolution of Hinduism is sure to be a very interesting one. As we have seen, “Hinduism” was originally an outsider's word, and it designates a multitude of realities defined by period, time, sect, class, and caste. Yet the veins and bones that hold this complex organism together are not just chimeras of external perception. Hindus themselves—particularly diasporic Hindus—affirm them, accelerating a process of self-definition that has been going on for millennia.

HINDU MAHĀSABHĀ \ˈhin-dü-mə-ˌhā-ˈsə-bə, -mə-ˈhā-sə-ˈbā\ (Hindi: “Great Assembly of Hindus”), organization founded in 1915 as a confederation of a number of previously existing groups that had arisen in Bengal and the Punjab to lobby for what they perceived as Hindu political interests.

Established in a period when Muslim nationalism had a considerable impact on South Asia (the All India Muslim League was founded in 1906), the Mahāsabhā envisioned an Indian nation responsive to the customs and ideals of its Hindu majority. Yet its leaders differed on how this could best be achieved. One early leader, Lajpat Rai, proposed a partition of the subcontinent between Hindus and Muslims, while another pillar, Madan Mohan Malaviya, the founder of Banaras Hindu University, continued active in the more inclusive and secular Congress Party led by Jawaharlal Nehru and MOHANDAS GANDHI.

In the 1930s and ’40s the Mahāsabhā came under the influence of Vinayak Damodar Savarkar (1883–1966), one of the most important ideologues of Hindu religious nationalism. In addition to his stand on other political issues (the protection of cows, CASTE reforms, and the adoption of Hindi as the national language), Savarkar argued that from among all of India’s diverse religious groups “only the Hindus are a nation because they are bound by a common culture, common language (Sanskrit) and common religion.” He further claimed that India was a “Hindu holyland” and those who did not accept it as such should be considered mere “guests” in that nation upon independence.

In 1931 Savarkar merged the youth wing of his Mahāsabhā with the militant Hindu nationalist group, the Rashtriya Swayamsevak Sangh, or RSS, a group to which the Mahāsabhā maintained close ties and one that survives to this day. When Gandhi was assassinated by a member of the Mahāsabhā in 1949, the group was banned and soon thereafter became for all intents and purposes defunct.

HINDUTVA \hin-ˈdüt-və\ (Sanskrit and Hindi: “Hinduness”), concept of Indian cultural, national, and religious identity first articulated in a book written by the Hindu nationalist leader Vinayak Damodar SAVARKAR while he was in prison for sedition in 1922. It has subsequently become the centerpiece of the Hindu nationalist movement in all its forms.

Savarkar defined a Hindu as “a person who regards the land of Bharat Varsha [India], from the Indus to the Seas, as his Father-Land as well as his Holy-Land,” and *hindutva* embodied that identity. The term thus conflates a geographically based religious, cultural, and national identity: a true “Indian” is one who partakes of this “Hindu-ness.”

Some Indians insist, however, that *hindutva* is primarily

a cultural term to refer to the traditional and indigenous heritage of the Indian nation-state, and they compare the relationship between *hindutva* and India to that of ZIONISM and Israel. According to this view, even those who are not religiously Hindu but whose religions originated in India—Jains, Buddhists, Sikhs, and others—share in this historical, cultural, and national essence. Those whose religions were imported to India, meaning primarily the country’s Muslim and Christian communities, may fall within the boundaries of *hindutva* only if they subsume themselves into the majority culture.

Hindutva has become the rallying cry of the Hindu nationalist movement, which achieved a large measure of political success in the 1980s and ’90s. Its meaning and ramifications are controversial and disputed, especially by many Muslims living in India and by the advocates of an Indian nationalism based on secular principles.

HIPPOLYTUS \hi-ˈpā-lə-təs\, minor divinity in GREEK RELIGION. At Athens he was associated with APHRODITE, the goddess of love; at Troezen,

girls dedicated a lock of their hair to him prior to marrying. To the Greeks his name suggested that he was destroyed by horses.

In Euripides’ tragedy *Hippolytus* he was son of THESEUS, king of Athens, and the AMAZON Hippolyte. Theseus’ queen, Phaedra, fell in love with Hippolytus. He reacted to her advances with such revulsion that she killed herself, leaving a note accusing Hippolytus of having attacked her. Theseus, refusing to believe Hippolytus’ protestations of innocence, banished him and called down upon him one of the three curses the sea god POSEIDON had given to him. Poseidon sent a sea

monster that frightened Hippolytus’ horses until he could no longer control them. They smashed the chariot and dragged their master to death.

HIRATA ATSUTANE \hē-ˈrā-tā-ä-tsu-ˈtä-nā\ (b. Sept. 25, 1776, Akita, Japan—d. Oct. 4, 1843, Akita), thinker and leader of the Japanese Restoration SHINTŌ (also known as Fukko Shintō) school. His thought, stressing the divine nature of the emperor, exerted a powerful influence on royalists who fought for the restoration of imperial rule during the second half of the 19th century.

At the age of 20, Hirata moved to Edo (modern Tokyo). He studied NEO-CONFUCIANISM but turned to Shintō, becoming a disciple of MOTOORI NORINAGA, one of the pioneers of the National Learning (KOKUGAKU) movement. Hirata attempted to develop a Shintō theological system that would provide normative principles for social and political action. In his later years he became increasingly critical of the Tokugawa shogunate’s reduction of the emperor to a powerless symbol; as a result Hirata was confined to his birthplace for the rest of his life.

Hippolytus in his chariot, detail from a Greek vase
By courtesy of the trustees of the British Museum

Hirata preached Japan's natural superiority as the land of the gods, who transmit the "True Way" to Japan through the imperial line. Despite his nationalism and xenophobia, he accepted certain features of Western science he learned through Chinese translations, even drawing on theology written by JESUIT missionaries in China.

HIRSCH, SAMSON RAPHAEL \ˈhɪrsh, ˈhərsh\ (b. June 20, 1808, Hamburg [Ger.]—d. Dec. 31, 1888, Frankfurt am Main, Ger.), major Jewish religious thinker and founder of Trennungsorthodoxie (Separatist Orthodoxy), or Neo-Orthodoxy, a theological system that helped make ORTHODOX JUDAISM viable in Germany.

Hirsch was a RABBI successively in Oldenburg, Emden, Nikolsburg, and Frankfurt am Main. While still chief rabbi at Oldenburg, he published *Neunzehn Briefe über Judentum* (1836; *Nineteen Letters of Ben Uziel*), in which he expounded Neo-Orthodoxy. This system required two chief courses of action: (1) an educational program that combined strict training in the TORAH with a modern secular education—so that Orthodox could withstand the challenge of REFORM JUDAISM; and (2) a separation of Orthodox congregations from the larger Jewish community when the latter deviated from a strict adherence to Jewish tradition. In 1876 Hirsch was a prime mover in getting the Prussian parliament to pass a law permitting Jews to secede from the state-recognized Jewish religious community (which Hirsch considered unfaithful to the Torah) and to establish separate congregations. Among his many works are *Horeb, Versuche über Jisroëls Pflichten in der Zerstreuung* (1837; "Essays on the Duties of the Jewish People in the Diaspora"), an Orthodox textbook on JUDAISM, and commentaries on the PENTATEUCH (1867–78). He founded (1855) and edited the monthly *Jeshurun* (the poetic name for Israel). Six volumes of his essays were published in 1902–12.

HIRSCH, SAMUEL \ˈhɪrsh, ˈhərsh\ (b. June 8, 1815, Thal-fang, near Trier, Prussia [now Germany]—d. May 14, 1889, Chicago, Ill., U.S.), religious philosopher, RABBI, and a leading advocate of radical REFORM JUDAISM. He was among the first to propose holding Jewish services on Sunday.

Educated at the universities of Bonn, Berlin, and Leipzig, Hirsch became rabbi at Dessau in 1838 but was forced to resign (1841) because of his views. From 1843 to 1866 he served as chief rabbi of the Grand Duchy of Luxembourg. Called to Philadelphia in 1866 to succeed David Einhorn as head of the Reform Congregation Keneseth Israel, he remained in that position for 22 years. He was elected president of the rabbinical conference held in Philadelphia in 1869 and in that capacity helped formulate the principles of Reform Judaism. The conference proclaimed that the dispersal of the Jews was part of a divine plan to lead all nations of the world to the true knowledge and worship of God. For Hirsch, Judaism was not law but doctrine, which was expressed in symbolic ceremonies that should change as needs require. His most ambitious work was *Religions-philosophie der Juden*, 2 vol. (1842).

HISBA \ˈhɪs-bə\, in the law and custom of ISLAM, the practice of overseeing public morality and, especially, fair trading in the marketplace. This custom became especially developed during the time of the 'Abbāsīd dynasty when the responsibility for the practice of *hisba* was bestowed upon the *muhtasib*. The *muhtasib* was charged with regulating daily affairs and was the officer that the small craftsman or merchant turned to first. He was responsible for bringing

wrongdoers to justice and for punishing drunkards and the unchaste with flogging. He also had the duty to amputate the hands of thieves caught in the act. *Hisba* is a practice thus designed to promote Islamic morals in the Muslim community.

HISTORICAL RELIGION, religion that entails history and linear time as an essential element in its concept of community, salvation, and truth. The 19th-century Pan-Babylonian school used the concept to draw a distinction between biblical and Hellenistic religious concepts of historical and cyclical time, and the distinction made by the school—"Jerusalem/Athens"—remains popular to this day. Historical religion is usually identified with JUDAISM and CHRISTIANITY in contrast to cyclical/mythical religions such as HINDUISM, BUDDHISM, and TAOISM. The concept was often used to draw a distinction between what was seen as the truth of historical religions as opposed to mythical religions of non-Western cultures. It is no longer in use in contemporary studies of religion.

HISTORICISM \hɪ-ˈstɔr-ə,-sɪ-zəm, -ˈstär-, view that the law of existence is change. Historicism emerged in the 19th century as an alternative to Enlightenment thinking concerning the universal nature of reason and morality in human existence. Historicism posited that as reason and morality were in themselves products of history, they too were subject to change. Historicism also opposed any transcendental norms or metaphysical principles. Values, religion, morality, and reason itself were subject to historical contexts and thus explained by contextual description. This objective and autonomous view of history gave rise to the establishment of history as an independent academic discipline separate from philosophy and theology. The rise of historiography had an important impact on the STUDY OF RELIGION as an academic inquiry. The historical-contextual method became the framework for biblical studies and what eventually became known as the history of religions, which attempted a value-free, or objective, approach to the study of religion.

The notion that all human events are historically constituted contained the seed of historical RELATIVISM and the inevitable conclusion that given the historicist law of change there could be no such thing as value-free historical analysis. To posit such a principle contradicted the law of existence as change. The late 20th-century emergence of a "new historicism," or "neo-historicism," emphasizes the radical notion that all knowledge is relative to the standpoint of the author. Thus, theory is introduced once again as crucial to the study of other social and cultural histories and the history of everyday life. *See also* INTERPRETATION.

HISTORY OF RELIGIONS: *see* RELIGIONSGESCHICHTLICHE SCHULE.

HITOGAMI \hē,-tō-ˈgä-mē\ (Japanese: "man-god"), category of Japanese RELIGIOUS BELIEF and practice that depends on the close relationship between a deity and his transmitter, such as a seer or a SHAMAN. As a religious system, *hitogami* is based on personal faith and contrasts with the UJIGAMI ("guardian deity") system, which is dependent on family or geographic origin. The *hitogami* type of belief is evident in the deification of heroes such as HACHIMAN and Tenjin, god of calligraphy; in the ecstatic singing and dancing of Japanese festival processions; and in the charismatic leadership of some of the new religions of Japan.

HITO-NO-MICHI \hē-'tō-nō-'mē-chē\ (Japanese: “Way of Man”), Japanese religious sect founded by Miki Tokuharu (1871–1938); it was revived in a modified form after World War II as PL KYŌDAN (from the English words “perfect liberty” and a Japanese term for “religious body”). Hito-nomichi was a development of an earlier religious movement, Tokumitsu-kyō, named after its founder, Kanada Tokumitsu (1863–1919), who taught that the sufferings of his followers could be transferred to him by divine mediation and that he would vicariously endure their troubles.

Hito-no-michi was compelled by the government to affiliate itself with one of the SECT SHINTŌ denominations, Fusōkyō; but its unorthodox teachings and growing strength (in 1934 it claimed a membership of 600,000) aroused the disfavor of the government. In 1937 the sect was ordered disbanded, and Miki Tokuharu and his son Miki Tokuchika were jailed. Tokuchika was released from prison in 1945 and shortly afterward established PL Kyōdan.

HITTITE RELIGIONS \hi-'tīt\ : see ANATOLIA, RELIGIONS OF.

HOLDHEIM, SAMUEL \hōlt-'hīm\ (b. 1806, Kempen, Prussia [now Kępno, Poland]—d. Aug. 22, 1860, Berlin), German RABBI, founder and leader of radical REFORM JUDAISM.

From 1836 to 1840 Holdheim officiated as a rabbi at Frankfurt an der Oder. In 1840 he went as *Landesrabbiner* (rabbi of a whole province) to Mecklenburg-Schwerin. Three years later he published *Ueber die Autonomie der Rabbinen* (“The Autonomy of the Rabbis”), in which he concluded that Jewish marriage and divorce laws were obsolete because they represented the national aspect of JUDAISM (no longer valid) as against its enduring religious aspect. Such laws, he held, should be superseded by the laws of the state, for Judaism is a religion only, whose essence is in biblical ethics and doctrine. During the rabbinical conferences of 1844–46, which elaborated the ideology of Reform Judaism, Holdheim played a dominant role.

In 1847 he became rabbi of the Jüdische Reformgenossenschaft (“Congregation of the Jewish Reform Alliance”) in Berlin, where, for Reform Jews, he established Sunday as the day of worship and, except for Rosh Hashanah, abolished the keeping of the second day of holidays. Holdheim’s writings form part of the classical literature of Reform Judaism.

HOL HA-MO’ED \kōl-'hä-mō-'äd\ (from Hebrew *hol*, “weekday,” and *ha-mo’ed*, “[of] the festival”), also spelled *hol hamoed*, or *chol hamoed*, in JUDAISM, the lesser festive days or semiholidays that occur between the initial and final days of the PASSOVER (Pesah) and SUKKOT religious holidays. The number of *hol ha-mo’ed* days is regulated by the locale. The principal ceremonies (such as the eating of MATZAHs) are observed during *hol ha-mo’ed*, but not all work is forbidden. Marriages are postponed until after the festival, lest the one occasion interfere with the other.

HOLĪ \hō-lē\, Hindu spring festival celebrated throughout North India on the full-moon day of Phālguna (February–March). The festival has many characteristics of a saturnalia, like CARNIVAL in certain Christian countries. Participants throw colored waters and powders on one another, and, on this one day only, license is given for the usual rankings of CASTE, gender, status, and age to be reversed. In the streets the celebrations are often marked by ribald language and behavior, but at its conclusion, when everyone bathes, dons clean white clothes, and visits friends, teach-

ers, and relatives, the ordered patterns of society are reasserted and renewed.

The festival is particularly enjoyed by worshipers of KRISHNA. Its general frivolity is considered to be in imitation of Krishna’s play with the *gopīs* (wives and daughters of cowherds), and in Braj (also spelled Braja or Vraja), rituals of reversal culminate in a battle in which the women of RĀDHĀ’s natal village pummel the men of Krishna’s village with staves; the men defend themselves with shields. A major expression of Holī’s mood of relaxation is the Dolay-ātrā (“swing festival”), in which images of the gods are placed on specially decorated platforms and are swung to the accompaniment of cycles of songs sung only in this spring season. But the most memorable rite in many locales is the kindling of an early-morning bonfire, which represents the burning of the demoness Holikā (or Holī), sister of Hiraṇyakaśipu, who had enlisted her in his attempt to kill his son Prahlaḍa. It was Prahlaḍa’s unshakable devotion to VISHNU that had alienated him from his family. The burning of Holikā prompts worshipers to remember how Vishnu (in the form of a lion-man) attacked and killed Hiraṇyakaśipu, showing that faith prevails.

HOLIDAY (from “holy day”), originally, a day of dedication to religious observance; in modern times, a day of either religious or secular commemoration. Many holidays of the major WORLD RELIGIONS tend to occur at the approximate dates of more ancient festivals. In the case of CHRISTIANITY, this is sometimes owing to the policy of the early church of scheduling Christian observances at dates when they would eclipse pre-Christian ones—a practice that proved more efficacious than merely prohibiting the earlier celebrations. In other cases, the similarity of the date is due to the tendency to celebrate turning points of the seasons or to a combination of the two factors.

HOLINESS MOVEMENT, fundamentalist religious movement that arose in the 19th century among Protestant churches in the United States, characterized by a doctrine of sanctification centering on a postconversion experience. The numerous Holiness churches that arose during this period range from quasi-Methodist sects to groups that are similar to Pentecostal churches.

The movement traces back to JOHN WESLEY, the founder of METHODISM, who issued a call to Christian “perfection.” Perfection was to be the goal of all who desired to be *altogether* Christian; it implied that the God who is good enough to forgive SIN (justify) is great enough to transform the sinner into a saint (sanctify), thus enabling him to be free from outward sin as well as from “evil thoughts and tempers,” in short, to attain to a measure of holiness.

From the outset, the motto of colonial American Methodism was “to spread Christian holiness over these lands.” But, in practice, the doctrines of holiness and perfectionism were largely ignored by American Methodists during the early decades of the 19th century. In 1843 about two dozen Holiness ministers withdrew from the Methodist Episcopal Church to found the Wesleyan Methodist Church of America, as sizable numbers of Protestants from the rural areas of the Midwest and South were joining the Holiness movement. These people had a penchant for Puritan-like codes of dress and behavior. Most of them had little sympathy for Christians preoccupied with wealth, social prestige, and religious formalism.

Between 1880 and World War I a number of new Holiness groups emerged. Some, such as the Church of God (Ander-

son, Ind.), were established to protest against bureaucratic denominationalism. Others, such as the Christian and Missionary Alliance and the CHURCH OF THE NAZARENE, were organized to serve the spiritual and social needs of the urban poor, who quite frequently were ignored by the middle-class congregations representing the mainstream of PROTESTANTISM. Almost all of these Holiness bodies arose in order to facilitate the proclamation of a second-blessing experience of sanctification with its concomitants—a life of separation and practical holiness.

Several of these Holiness groups demonstrated a capacity for sustained growth. Among these are the “older” denominations—the Wesleyan Methodist Church and the Free Methodist Church of North America (founded 1860)—as well as the newer ones: the Church of God (Anderson, Ind.), the Christian and Missionary Alliance, the SALVATION ARMY, and the Church of the Nazarene. The Church of the Nazarene, which claims nearly a third of the total membership of the Holiness movement, is generally recognized as being its most influential representative.

Contemporary Holiness churches tend to stand closer, doctrinally speaking, to fundamentalism than to their Methodist antecedents. Their tenets include such conservative evangelical beliefs as “plenary inspiration” (verbal inspiration of the whole BIBLE), “Christ’s ATONEMENT for the entire human race,” and “the personal SECOND COMING of Christ.” Although the doctrinal statements of a few churches—Church of the Nazarene and Christian and Missionary Alliance—contain brief allusions to divine healing and Pentecostal experience, they should be distinguished from the Pentecostal movement.

HOLOCAUST \ˈhā-lə-,kōst, ˈhō-, \, Hebrew Sho’Ah, or Ḥurban, the 12 years (1933–45) of Nazi persecution of Jews and other minorities; it climaxed in the “final solution” (*die Endlösung*), the attempted extermination of European Jewry.

This near destruction of European Jewry during World War II has raised fundamental theological issues for the Jewish people and others. Not least, it has forced a reconsideration of the basic theological premises of JUDAISM. Given the Jewish belief that history and events can be seen as the revelation of God’s plan, especially for the Jewish people, an event of such horror as the Holocaust has called into question other core beliefs, such as the belief in an omnipotent and loving God and the existence of a specific, caring relationship between God and Israel, usually expressed through the notion of COVENANT.

Owing to the complexity of the theological and metaphysical issues relating to the Holocaust, and the differing premises that individual thinkers and communities bring to these matters, it is not surprising that many different, often incompatible “answers” and “explanations” to the conundrum have been offered. So, for example, more radical scholars of theology such as Richard Rubinstein and Arthur A. Cohen and Irving Greenberg have argued that the Holocaust requires theological revisions within Judaism and changes in the HALAKHAH (Jewish law). An example of a proposed change to *halakhah* would be changing the criteria for who is or is not Jewish. By halakhic standards only one born to a Jewish mother is considered Jewish, but many individuals in Nazi Germany who were identified as Jews and killed had Jewish fathers and GENTILE mothers. Some scholars have proposed to change *halakhah* to define a Jew as someone with one Jewish parent, whether father or mother, allowing those who were murdered for Jewishness to be counted as Jewish.

Theological conservatives such as Eliezer Berkovits, Jacob Neusner, and the Lubavitcher Rebbe (that is, the Rabbi Menachem Mendel Schneerson; 1902–94), however, have argued that no such changes are necessary. Neusner, Schneerson, and Berkovits have all held that within Judaism there already exist paradigms that answer the problem (for instance, the story of Job may be seen as a way to understand the PROBLEM OF EVIL in instances where the innocent suffer).

Inmates of the Buchenwald concentration camp, near Weimar, Ger., 1945. During the Holocaust thousands of slave laborers died at Buchenwald from overwork, disease, and malnutrition.

Culver Pictures

The actual situation, however, if judged on the grounds of philosophical and theological arguments produced by both sides of the debate, is that neither has made a compelling case for its claims. Neither Rubinstein's endorsement of the "death of God," Cohen's call for a diminished idea of a God who cannot interfere in human affairs, Greenberg's declaration that "the covenant has been broken," Berkovitch's recycling of the "Free-Will Defense," nor the Lubavitcher Rebbe's conservative qabbalistic pronouncements on the Holocaust as a *tikkun* (an act that creates the possibility of worldly and cosmic "repair") flow necessarily from the event itself. All of these and other denominational expositions are extrinsic to the reality of the death camps.

One issue in particular has become important to the theological conversation: the uniqueness of the Holocaust. Those who would make theologic and halakhic changes feel that because the Holocaust is a unique historical event the response to it must be novel and innovative as well. Alternatively, those who oppose change tend to view the Holocaust as just another case of anti-Semitism, if on a larger scale, or as another instance of the more general condition of "man's inhumanity to man." However, any theological position, given the present state of the theological dialogue, is compatible with the singularity of Sho'Ah. Religious conservatives who intuitively reject the uniqueness of the Holocaust on the usually implicit grounds that such an unequivocal conclusion would necessarily entail ominous alterations in the inherited halakhic tradition are simply mistaken. One can adopt without self-contradiction an unexceptional conservative theological posture while accepting the contention that the destruction of European Jewry was an event unparalleled in history. Conversely, the theological radicals who hold that the singularity of the Holocaust necessarily entails theologic transformations and Halakhic changes have not shown this to be the case. They have merely assumed it. It may be that one of these alternative positions is true, but so far neither side has made a convincing case.

In analyzing the concept of "uniqueness" one needs to specify more precise conditions of what this concept means, *i.e.*, to show that the Holocaust is unique in respect of conditions *a*, *b*, *c*, etc. In applying this approach many scholars argue that the Holocaust is unique by virtue of the fact that never before has a state set out, as a matter of not just intentional principle but of actualized policy, to annihilate every man, woman, and child identified as belonging to a specific people. It is this that defines the uniqueness of the Holocaust.

Given this definition of uniqueness two conclusions follow. First, historical study would confirm that the Holocaust is without real precedent. Second, crucially, the basis of this uniqueness—the Nazi's intention to murder every Jewish man, woman, and child without exception—does not necessarily require theological transformations within Judaism, because what makes the Holocaust distinctive does not carry any particular status within Judaism. To return to the example already given, the Third Reich, according to the Nuremberg Laws, defined a person as Jewish if he or she had one Jewish parent (and, unlike in Judaism, whether father or mother), and indeed relationships less close caused one to be considered Jewish by the Third Reich. But, this has no relevance to the internal Jewish discussion based on traditional Jewish principles and values of "who is a Jew." It may be that there are significant, even compelling grounds, for altering the classical definition of "who is a Jew" in our time, but one such ground, at least in

Jewish theology, cannot be Nazi racial theory and its various corollaries.

Finally, given the value system of Judaism, it must be recognized that, if the Holocaust is counted as negative theological evidence, then the creation of the state of Israel three years later should be counted as positive evidence. That is, the larger history of the Jewish people, of which the Holocaust is only a segment, must be appropriately accounted for as part of any broad theological judgment. How to do this is a complicated issue, for it is not a simple matter—it may even be impossible—to assign evidentiary value to specific historical events. This fact among others shows how very difficult it actually is to think through the theological implications of the Holocaust. *See also* JUDAISM; 20TH-CENTURY JUDAISMS BEYOND THE RABBINIC FRAMEWORK and JUDAISM: AMERICAN JUDAISM OF HOLOCAUST AND REDEMPTION.

HOLY, *also called* sacred, term often used to define the unique characteristics of religion as an experience or as a distinct phenomenon. It is frequently used in opposition to the profane. The classic theological treatise on the holy remains Rudolf Otto's *The Idea of the Holy* (1923). Otto thought of the holy in Kantian terms—that is, as a religious *a priori* (a self-evident truth). He described the history of religions as ideograms, or symbolic representations, of a numinous, transcendental reality called the holy in all of its mysterious, fascinating, awesome, and repellent aspects. MIRCEA ELIADE developed the concept of the holy as having a paradoxical ontological relation with the profane in *The Sacred and the Profane* (1959).

EMILE DURKHEIM's *The Elementary Forms of the Religious Life* (1915) remains the classical theoretical statement of the opposition between the sacred and the profane as representations of social life. The sacred marks an absolute division from the profane that is both cognitive and moral in its representations of the social life. Many scholars have pointed out that the distinction between the sacred and the profane cannot be applied across all religions. Moreover, they have challenged the theoretical adequacy of the concepts as useful for the STUDY OF RELIGION.

HOLY LANCE, RELIC discovered in June 1098 during the First Crusade by Christian Crusaders at Antioch, in Syria. It was said to be the lance that pierced the side of JESUS CHRIST at the CRUCIFIXION. The recovery of the relic inspired the crusaders to take the offensive against the Muslims, routing them in battle and securing Christian possession of Antioch. Disputes about the authenticity of the lance, however, caused dissension among the Crusaders, and its discoverer, Peter Bartholomew, was eventually discredited.

HOLY OF HOLIES, *Hebrew* Qodesh ha-Qodashim, *also called* Devir, innermost and most sacred area of the ancient TEMPLE OF JERUSALEM, accessible only to the Israelite HIGH PRIEST. Once a year on YOM KIPPUR he was permitted to enter the square, windowless enclosure to burn incense and sprinkle sacrificial animal blood. By this act, the most solemn of the religious year, the high priest atoned for his own SINS and those of the PRIESTHOOD.

The Holy of Holies was located at the west end of the Temple, and in Solomon's Temple it enshrined the ARK OF THE COVENANT, a symbol of Israel's special relationship with God. At the entrance to the Holy of Holies stood a small cedar altar overlaid with gold. After his conquest of Jerusalem in 63 BCE Pompey desecrated the Temple by daring to enter the Holy of Holies.

The Holy Spirit, represented as a dove, descends on the disciples at Pentecost; woodcut by Albrecht Dürer, 1511

HOLY SEPULCHRE, tomb in which JESUS CHRIST was buried and name of the church built on the traditional site of his CRUCIFIXION and burial. According to the BIBLE, the tomb was close to the place of Crucifixion (John 19:41–42), and so the church was planned to enclose the site of both.

The Church of the Holy Sepulchre lies in the northwest quarter of the Old City of Jerusalem. CONSTANTINE the Great first built a church on the site. It was dedicated about 336 CE, burned by the Persians in 614, restored by Modestus (ABBOT of the monastery of Theodosius, 616–626), destroyed by the caliph al-Hakim bi-Amr Allah (*see* HAKIM, AL-) about 1009, and restored by the Byzantine emperor Constantine Monomachus. In the 12th century the Crusaders carried out a general rebuilding of the church. Since that time, frequent repair, restoration, and remodeling have been necessary. The present church dates mainly from 1810. Various Christian groups, including the Greek, Roman, Armenian, and Coptic churches, control parts of the present church and conduct services regularly.

This site has been continuously recognized since the 4th century as the place where Jesus died, was buried, and rose from the dead. Whether it is the actual place, however, has been hotly debated. It cannot be determined that Christians during the first three centuries could or did preserve an authentic tradition as to where these events occurred. Another question involves the course of the second north wall of ancient Jerusalem. Some archaeological remains on

the east and south sides of the Church of the Holy Sepulchre are widely interpreted to mark the course of the second wall. If so, the site of the church lay just outside the city wall in the time of Jesus, and this could be the actual place of his Crucifixion and burial. No rival site is supported by any real evidence.

HOLY SPIRIT, also called Paraclete, or Holy Ghost (from Old English: *gast*, “spirit”), in Christian belief, third Person of the TRINITY. The GOSPELS record a descent of the Holy Spirit on JESUS CHRIST at his BAPTISM, and numerous outpourings of the Spirit are mentioned in THE ACTS OF THE APOSTLES, in which healing, PROPHECY, the expelling of DEMONS (EXORCISM), and speaking in tongues (glossolalia) are particularly associated with the activity of the Spirit.

Christian writers have seen in various references to the Spirit of YAHWEH in the OLD TESTAMENT an anticipation of the doctrine of the Holy Spirit. The Hebrew word *ruah* (usually translated “spirit”) is often found in texts referring to the free and unhindered activity of God, either in creating or in revitalizing creation, especially in connection with the prophetic word or messianic expectation. There was, however, no explicit belief in a separate divine person in biblical Judaism; in fact, the NEW TESTAMENT itself is not entirely clear in this regard. One suggestion of such belief is the promise of another helper, or intercessor (paraclete), that is found in the Gospel According to John.

The definition that the Holy Spirit was a distinct divine Person equal in substance to the Father and the Son and not subordinate to them came at the COUNCIL OF CONSTANTINOPLE in 381 CE, following challenges to its divinity. The Western church has since viewed the Holy Spirit as the bond, the fellowship, or the mutual CHARITY between Father and Son; they are absolutely united in the Spirit. The relationship of the Holy Spirit to the other Persons of the Trinity has been described in the West as proceeding from both the Father and the Son, whereas in the East it has been held that the procession is from the Father through the Son.

From apostolic times, the formula for baptism has been Trinitarian. CONFIRMATION (in the Eastern ORTHODOX CHURCH, chrismation), although not accepted by most Protestants as a SACRAMENT, has been closely allied with the role of the Holy Spirit in the church. The Eastern Orthodox church has stressed the role of the descent of the Spirit upon the worshiping congregation and upon the eucharistic bread and wine in the prayer known as the EPICLESIS.

HOLY WAR, any war fought by divine command or for a religious purpose. The concept of holy war is found in the BIBLE (*e.g.*, the Book of Joshua) and has played a role in many religions. *See also* JIHAD.

HOLY WATER, in the Eastern Christian and ROMAN CATHOLIC churches, water that has been blessed and is used to convey a blessing to churches, homes, persons, and objects.

In the early Christian community the “living” water of rivers and streams was preferred for BAPTISM and apparently received no special blessing. By the time of the 4th century the still waters of the baptismal font or pool were exorcised and blessed with the sign of the cross. Other water was blessed for the use of the faithful as a means of warding off the unclean spirit and as a safeguard against sickness and disease. In the course of time this blessed, or holy, water was used as a reminder of baptism by the faithful on entering the church and by the celebrant in sprinkling the congregation before the Sunday MASS.

HOLY WEEK, in the Christian church, week between PALM SUNDAY and EASTER, a time of devotion to the passion of JESUS CHRIST. In the Greek and Roman liturgical books it is called the Great Week because great deeds were done by God during this week. The name Holy Week was used in the 4th century by ATHANASIUS, bishop of Alexandria, and Epiphanius, bishop of Constantia. Originally only Friday and Saturday were observed as holy days; later Wednesday was added as the day on which Judas plotted to betray Jesus, and by the beginning of the 3rd century the other days of the week had been added. The pre-Nicene church celebrated one great feast, the Christian PASSOVER, on the night between Saturday and Easter Sunday morning. By the later 4th century the various events were separated and commemorated on the days of the week on which they occurred: Judas' betrayal and the institution of the EUCHARIST on MAUNDY THURSDAY; the passion and death of Christ on GOOD FRIDAY; his burial on Saturday; and his RESURRECTION on Easter Sunday.

The Holy Week observances in the Roman missal were revised according to the decree *Maxima Redemptoris* (Nov. 16, 1955) to restore the services to the time of day corresponding to that of the events discussed in SCRIPTURE.

HOMOIOUSIAN \hō-mō-'ü-sē-ən, hä-, -'ü-zē-\, in CHRISTIANITY, adherent of the doctrine formulated at the COUNCIL OF NICAËA (325) that God the Son and God the Father are of the same substance. The council, presided over by the emperor CONSTANTINE, intended the condemnation of ARIANISM, which taught that Christ was more than human but not truly divine. The use of *homoiousios* (Greek: "of the same substance," or "of one essence") in the Creed of Nicaea was meant to put an end to the controversy, but Arianism revived within the church, and it was not until 381 at the second ecumenical council (first COUNCIL OF CONSTANTINOPLE) that a creed (also containing the word *homoiousios*, and eventually called the NICENE CREED) was accepted as a definitive statement of orthodox belief.

HÖNEN \hō-nen\, *original name* Seishimaru, later Genkū, also called Hōnen Shōnin, Enkō Daishi, or Ganso (b. May 13, 1133, Inaoka, Mimasaka province [now Kume, Okayama prefecture], Japan—d. Feb. 29, 1212, Kyōto), Buddhist priest, founder of the PURE LAND (Jōdo) Buddhist sect of Japan. He was instrumental in establishing Pure Land pietism as one of the central forms of BUDDHISM in Japan.

At the age of 15 Hōnen was sent to MOUNT HIEI, the monastic center of the Tendai (Chinese: T'EN-T'AI) sect of Buddhism. The center prospered externally in wealth and prestige but suffered internally from the power struggles of ambitious ABBOTS and the moral and spiritual corruption of the priests. Along with other serious-minded young priests, Hōnen came under the influence of the Pure Land doctrine, which taught salvation by the mercy of Amida (Sanskrit: AMITĀBHA) Buddha. Hōnen was greatly inspired by the *Ōjōyōshū* ("Essentials of Salvation"), written by a 10th–11th-century Japanese Buddhist, Genshin, and the *Kuan-ching-su* ("Commentary on the Meditation Sutra"), by a 7th-century Chinese Pure Land master, Shan-tao (Japanese: Zendō). In 1175 Hōnen proclaimed his message that the one and only thing needed for salvation is *nembutsu* (calling the name of Amida).

In Hōnen's main work, the *Senchaku hongan nembutsu-shū* ("Collection on the Choice of the *Nembutsu* of the Original Vow") written in 1198, he classified all the teachings of Buddhism under two headings: Shōdō ("Sacred

Way") and Jōdo ("Pure Land"). According to Hōnen, Buddha, confident of man's inner character, had shown men the Sacred Way to Enlightenment, which enables them to be emancipated from this world of lust and delusion and to attain the other world of ultimate peace. Hōnen, convinced of his own "sinful and avaricious" nature, however, came to the conclusion that, although it was theoretically possible, it was practically impossible for him and others like him to follow the Sacred Way. Thus, Hōnen felt that the only alternative was to trust in the Original Vow (*hongan*) of Amida Buddha, the lord of the Sukhāvātī (Sanskrit: "Pure Land"), who is said to assure salvation to the believer who calls upon Amida's holy name.

Hōnen established his headquarters in the midst of the secular city of Kyōto, away from ecclesiastical establishments, and gathered together devoted disciples, including SHINRAN, who was to become the founder of the True Pure Land (Jōdo Shin) sect. Hōnen and his followers accepted the legendary periodization of Buddhist history, according to which the first 1,000 years following the demise of the Buddha is the period of the "perfect law" (*shōbō*), in which the true teaching prospers; the second 1,000 years is the period of the "copied law" (*zōbō*), in which piety continues but true teaching declines; and the last 1,000 years is the period of the "end of law" (MAPPŌ), in which Buddhism declines and the world is destined to be overwhelmed by vice and strife. It is to be noted that, according to the accepted calculation of Japanese Buddhists, the last period began in 1051 CE. As though to substantiate this view of history, Japanese society during the 12th century suffered from political instability and social disintegration that resulted in the establishment of feudal government under the leadership of the warrior class. Understandably, Hōnen's simple teaching found eager followers among the various levels of Japanese society of that time.

Although he insisted on faith in Amida and the recitation of the name as the best way to salvation, Hōnen, an intransigent but nonaggressive person, was markedly tolerant and nonpolemical, urging his followers to respect the other Buddhas and other Buddhist ways of faith and practice. (Hōnen was also especially careful to warn against the temptation of accompanying the *nembutsu* with an immoral life or of believing that its recitation removes the stain of violations of the Buddhist life-discipline or other immoral acts.) Still, the popularity of the faith in the Pure Land of Amida Buddha aroused jealousy from the established schools of Buddhism and led to Hōnen's banishment. With his immediate disciples, he was forced to leave the capital in 1207 (and some of his disciples were beheaded). Compelled to use a nonclerical name, he called himself Fujii Motohiko and proved to be an effective evangelist even during his exile to the island of SHIKOKU. He was permitted to leave Shikoku at the end of the year but not to return to Kyōto until 1211, when he received a warm popular welcome. He died in Kyōto the following year.

Hōnen combined the cultured heritage of the established Buddhism with the pioneering spirit of the new Buddhism of the 13th century. The movement he founded continues to be one of the most influential schools of Japanese Buddhism, and the far more numerous Jōdo Shin founded by his disciple Shinran adds still more to the Pure Land influence that he initiated.

HONJI-SUIJAKU \hōn-jē-'sü-ē-jä-kū\ (Japanese: "original substance, manifest traces"), Chinese Buddhist idea that was transmitted to Japan, greatly influencing the SHINTŌ

understanding of deity, or *KAMI*. As developed in the medieval period, the theory reinterpreted Japanese *kami* as the “manifest traces” of the “original substance” of BUDDHAS or BODHISATTVAS. Ryōbu (“Dual Aspect”) Shintō is particularly expressive of this principle, and the Yui-itsu school of Shintō chauvinistically reversed the formula to make Japanese *kami* the “original substance.” This principle generally allowed for the pervasive blending of Shintō and Buddhist divinities and practices, a characteristic of Japanese religious life that continues in contemporary Japan.

HONOS \ˈhō-nās\, ancient Roman deified abstraction of honor, and particularly of honor perceived as military virtue. The earliest shrine of this deity in Rome was perhaps built not earlier than the 3rd century BCE and was located just outside the Colline Gate. A double TEMPLE of Honos and Virtus stood outside the Porta Capena, and another, built by Marius (d. 86 BCE), was probably located on the Capitoline Hill.

HOOKEER, RICHARD \ˈhū-kər\ (b. March 1554?, Heavitree, Exeter, Devon, Eng.—d. Nov. 2, 1600, Bishopsbourne, near Canterbury, Kent), theologian who created a distinctive ANGLICAN theology. In 1568 he entered Corpus Christi College at Oxford, where he was trained in the traditions of Geneva PROTESTANTISM. Leading scholars at Oxford were, however, loyal to the Anglican *Book of Common Prayer* and used the vestments demanded by ecclesiastical law. Hooker looked beyond CALVINISM and read widely in scriptural interpretation, the early CHURCH FATHERS, and Renaissance THOMISM (the philosophical school influenced by the thought of ST. THOMAS AQUINAS).

Hooker became a scholar of Corpus Christi College in 1573 and took his M.A. in 1577. In the same year he became a fellow of his college. In 1585 he was elected master of the Temple. With the defeat of the Spanish Armada in 1588, the Church of England passed beyond the crisis of the threat of ROMAN CATHOLICISM. Now the threat was that of Calvinism, not only in doctrine but in ecclesiastical organization as well. The reformers’ hold on general sympathy was so strong that even the bishops were lukewarm about suppressing them and allowed their growth to increase unchecked. In June 1572 radical religious reformers had issued *An Admonition to the Parliament*, which, though Queen Elizabeth I forbade its consideration by Parliament, became the platform of the PURITANS. The leading bishops were alarmed by the influence of the *Admonition*, and the Archbishop of Canterbury turned to John Whitgift, vice chancellor of the University of Cambridge, to reply to it. Whitgift was answered in turn by Thomas Cartwright, professor at Cambridge and the leading Puritan clergyman. The controversy was continued in a whole series of books. Hooker set himself the task of replying to the *Admonition*. After he ceased to be master of the Temple in 1591, he took up residence at his father-in-law’s house and wrote his masterpiece, *Of the lawes of ecclesiasticall polittie*. The *Polittie* was to be a work of eight books, but the fifth book (1597) was the last one to appear in Hooker’s lifetime.

In the *Polittie*, Hooker defended the Elizabethan church against Roman Catholics and Puritans alike. He upheld the threefold authority of the Anglican tradition—BIBLE, church, and reason. Roman Catholics put Bible and tradition on a parity as the authorities for belief, while Puritans looked to SCRIPTURE as sole authority. Hooker avoided both extremes, allowing to Scripture absolute authority when it spoke plainly and unequivocally; where it was silent or am-

Richard Hooker; engraving by E. Finden after a print by W. Hollar

biguous, wisdom would consult the tradition of the church; but he insisted that a third element lay in human reason, which should be obeyed whenever both Scripture and tradition needed clarification or failed to cover some new circumstance. In his view, the Puritans adopted an impossible position; they claimed to be loyal to the Queen while repudiating the Queen’s church.

According to tradition Hooker served the churches at Drayton Beauchamp and Boscombe following his term as master of the Temple, but more probably he received his salary as a VICAR but allowed a lesser clergyman to perform the duties that the PARISH required. In 1595 he accepted an appointment as vicar of Bishopsbourne, near Canterbury.

HORA \ˈhōr-ə, ˈhōr-\, plural *Horae* \ˈhōr-ē, ˈhōr-, -ī\, in Greek mythology, any of the personifications of the seasons and goddesses of natural order; in the *Iliad* they were the custodians of the gates of Olympus. According to Hesiod, the Horae were the children of ZEUS and THEMIS, and their names (Eunomia, Dike, Eirene—*i.e.*, Good Order, Justice, Peace) indicate the extension of their functions from nature to the events of human life. At Athens they were apparently two in number: Thallo and Carpo, the goddesses of the flowers of spring and of the fruits of summer. Their yearly festival was the Horaea. In later mythology the Horae became the four seasons, daughters of the sun god, HELIOS, and the moon goddess, SELENE, each represented with the conventional attributes. Subsequently, when the day was divided into 12 equal parts, each of them took the name Hora.

HOROSCOPE, in **ASTROLOGY**, chart of the heavens, showing the relative positions of the Sun, the Moon, the planets, and the ascendant and midheaven signs of the zodiac at a specific moment in time. A horoscope is used to provide information about the present and to predict events to come.

An individual's horoscope usually plots the positions at the moment of birth and is used by astrologers to analyze character, as well as—in conjunction with other astrological data—to predict the future. This is in accordance with the belief that each celestial body has its own mythological character, modified according to its geometric relationship with the other celestial bodies at a given moment. Everything in the universe being interrelated, these bodies exert an influence, particularly on the newborn. In casting a horoscope, the heavens are commonly represented by a circle divided into 12 sections, called houses. Each of these houses is assigned several aspects of human life, such as wealth or marriage. The planet that falls within a particular house is said to influence matters pertaining to that house.

HORUS \ˈhɔr-əs, ˈhɔr-, Egyptian Hor \ˈhɔr, ˈhɔr\, or Har \ˈhär\, in ancient **EGYPTIAN RELIGION**, god in the form of a falcon whose eyes were the sun and the moon. Falcon cults were widespread in Egypt. At Nekhen (Greek: Hierakonpolis), however, the conception arose that the reigning king was a manifestation of Horus and, after Egypt had been united by the kings from Nekhen, this conception became a generally accepted dogma. The first of the Egyptian king's five names was the Horus name—*i.e.*, the name that identified him with Horus.

From the 1st dynasty (c. 2525–2775 BCE), Horus and the god **SETH** were perpetual antagonists who were reconciled in the harmony of Upper and Lower Egypt. In the myth of **OSIRIS**, who became prominent about 2350 BCE, Horus was the son of Osiris. He was also the opponent of Seth, who murdered Osiris and contested Horus' heritage, the royal throne of Egypt. Horus finally defeated Seth, thus avenging his father and assuming the rule. In the fight his left eye (*i.e.*, the moon) was damaged and was healed by the god **THOTH**. The figure of the restored eye (the *wedjat* eye) became a powerful **AMULET**.

Horus appeared as a local god in many places and under different names and epithets: for instance, as Harmakhis (Har-em-akhet, "Horus in the Horizon"); Harpocrates (Har-pe-khrad, "Horus the Child"); Harsiesis (Har-si-Ese, "Horus, Son of Isis"); Harakhty ("Horus of the Horizon," closely associated with the sun god **RE**); and, at Kawm Umbū (Kom Ombō), as Haroeris (Harwer, "Horus the Elder"). Ho-

Horus offering a libation, bronze statue, 22nd dynasty (c. 800 BCE); in the Louvre, Paris Giraudon—Art Resource

rus was later identified by the Greeks with **APOLLO**, and Edfu was called Apollinopolis ("Apollo's Town") in the Greco-Roman period.

In the Ptolemaic period the vanquishing of Seth became a symbol of Egypt triumphing over its occupiers. At Edfu, where rebellions frequently interrupted work on the temple, a ritual drama depicting Horus as pharaoh spearing Seth in the guise of a hippopotamus was enacted.

HOSEA \hō-'zā-ə, -'zē-, also spelled Osee, Assyrian Ausi, in the **OLD TESTAMENT** (2 Kings 15:30; 17:1–6), son of Elah and last king of Israel (c. 732–724 BCE). He became king through a conspiracy in which his predecessor, Pekah, was killed. The Assyrian king Tiglath-pileser III claimed that he made Hosea king, and Hosea paid an annual tribute to him. After Tiglath-pileser died (727), Hosea revolted against the new Assyrian king, Shalmaneser, who then invaded Israel, took Hosea prisoner, and besieged Samaria. When the city fell three years later, many of Israel's citizens were deported to Assyria, and the Assyrians ruled in Israel.

HŌTOKU \ˈhō-tō-kū\ (Japanese: "requital of a kindness"), semireligious movement among Japanese peasants initiated in the 19th century by Ninomiya Sontoku (1787–1856). He combined a nonsectarian ethic of cooperation with practical economic measures such as crop rotation and famine relief. Hōtoku emphasized the debt owed to gods, nature, ancestors, emperor, and parents. This debt could be repaid only through frugality and conformity with the cosmic order, which was equated with moral sincerity. Ninomiya Sontoku's teachings were disseminated by his followers and played an important part in shaping 19th- and 20th-century Japanese popular morality.

HOU-CHI \ˈhō-'jē-, Pinyin Hou Ji, in Chinese mythology, Lord of Millet Grains, who was worshiped for the harvests that he provided. Conceived when his childless mother stepped on the toeprint of a god, he was reared in a forest by birds and animals and served as minister of agriculture in prehistoric times. Sacrifices in his honor were offered by rulers of the Hsia dynasty (22nd–18th/19th century BCE) and of the later Chou dynasty (600–255 BCE), which claimed him as their ancestor.

HRUNGNIR \ˈhrūŋ-nir\, in Norse mythology, **GIANT** who fought a single combat with **THOR**. Hrungrnir was made of stone, and his weapons were a shield and a whetstone. Thor's helper Thjalfi tricked Hrungrnir into lowering his shield by telling him that Thor would attack from underneath. Thus Hrungrnir was standing on his shield and was unprotected when Thor threw his hammer. Hrungrnir threw his whetstone, but Thor's hammer shattered the whetstone and killed the giant. The dead giant's leg pinned Thor to the ground, and a piece of whetstone was lodged in his head. Only Magni ("Strength"), a son of Thor, was able to move the leg of the giant off Thor. This duel, which is said to be the first fought between Thor and a giant, is seen as a mythic prototypical duel, which was an important institution in the Viking age.

HSIAO \ˈshyäu-, Pinyin xiao, Japanese kō \ˈkō\ (Chinese: "filial piety"), in **CONFUCIANISM**, the attitude of obedience, devotion, and care toward one's parents and elder family members that is the basis of individual moral conduct and social harmony. *Hsiao* consists in putting the needs of parents and family elders over self, spouse, and children, defer-

ring to parents' judgment, and observing toward them the prescribed behavioral proprieties (Li).

Hsiao was originally rooted in the hierarchical ideology of Chinese feudalism, but CONFUCIUS raised it to a moral precept by citing it as the basis of JEN ("humanity"), the cultivated love of other people that was the Confucian moral ideal. He delineated the importance of *hsiao* for both family harmony and sociopolitical stability and facilitated its practice by reemphasizing the rites and behaviors associated with it.

The concept, rendered *kō*, was adopted in Japan during the 17th century, when Confucianism became the official doctrine of the Tokugawa shogunate.

HSIEN \ʃhyen\, *Pinyin* xian (Chinese: "immortal being"), in Chinese TAOISM, practitioner who has achieved immortality. Early Taoist sages referred to immortal beings with magical powers, perhaps allegorically; some followers interpreted these references literally and devoted themselves to discovering the "drug of immortality" and prolonging their lives through breath control, yogalike exercises, and abstention from grains. Adepts in these practices, though appearing to die, were believed to achieve physical immortality and admission to heavenly realms inaccessible to the spirits of mere mortals. The pursuit of this state fostered Taoist alchemical and other esoteric techniques and lore.

HSIN-HSÜEH \ʃshin-'shwe\, *Pinyin* Xinxue (Chinese: "Mind-Heart Teaching," or "School of Mind"), Chinese NEO-CONFUCIAN movement associated with LU HSIANG-SHAN (Lu Chiu-yüan; 1139–93) and WANG YANG-MING (1472–1529). In contrast with Chu Hsi's (1130–1200) School of Principle, this school taught that the awareness and activation of the ruling principle of life is attained by mental introspection and not through the examination of external reality. Wang Yang-ming's subjectivist development of the school especially reveals the influence of Buddhist ideals of meditative insight, the centrality of the moral ideal of "extending the good," and an emphasis on the basic unity of mind and body, thought and action.

HSI-WANG-MU \ʃshē-'wāj-'mü\, *Pinyin* Xiwangmu (Chinese: "Queen Mother of the West"), in the folk mythology of TAOISM in China, queen of the immortals in charge of female spirits who dwell in a fairyland called Hsi-hua ("West Flower"). The queen was a former mountain spirit transformed into a beautiful woman. Her garden was filled with rare flowers, extraordinary birds, and the flat peach (*p'an-t'ao*) of immortality. These stories were based on an earlier Han period mythology in which she was the goddess of the sacred mountain K'un-lun.

According to myth, Hsi-wang-mu's birthday is celebrated by the PA-HSIEN ("Eight Immortals") with a grand banquet during which Hsi-wang-mu serves special delicacies: bear paws, monkey lips, and dragon liver. *P'an-t'ao* are offered as the last course. A Taoist romance relates that during a visit to Wu-ti, emperor of the Han dynasty, Hsi-wang-mu gave him the famous peach of immortality. He was anxious to bury the stone, but she discouraged him, saying that Chinese soil was not suitable and, in any case, the tree bloomed only once in 3,000 years.

HSI-YU CHI \ʃshē-'yō-'jē\, *Pinyin* Xiyouji ("Record of a Journey to the West"), foremost Chinese comic novel, written by the long-anonymous Wu Ch'eng-en (1500–c. 1582).

Based on the actual 7th-century PILGRIMAGE of the Buddhist monk HSÜAN-TSANG (602–664) to India in search of sacred texts, the story was already a part of Chinese folk and literary tradition in the form of colloquial stories, a poetic novelette, and a six-part drama when Wu Ch'eng-en formed it into his novel. The novel is composed of 100 chapters. The first seven deal with the birth of a monkey from a stone egg and his acquisition of magic powers; five relate the story of Hsüan-tsang, known as Tripitaka, and the origin of his mission to the Western Paradise; while the bulk of the novel recounts the adventures that befell Tripitaka and his entourage of three animal spirits—the magically gifted Monkey, the slow-witted and clumsy Pigsy, and the fish spirit Sandy—on their journey to India, culminating in their attainment of the sacred scrolls. This novel has many levels of religious and philosophical interpretation from the perspectives of BUDDHISM, TAOISM, and NEO-CONFUCIANISM. Besides the overt Buddhist theme, the novel also displays Taoist and Neo-Confucian ideas of self-cultivation.

HSÜ \ʃshē\, *Pinyin* xu (Chinese: "emptiness"), in TAOISM, a state of being that is characterized by total tranquility and transcendence of self, through which individual consciousness becomes one with the Tao; the TAO can be understood only through individual experience of *hsü*.

CONTEMPLATIVE Taoists attain *hsü* by stilling their thought processes and emotions, which they regard as corruptions of the Tao. Many schools of Taoism have made use of breath-control techniques in order to quiet the mind; the more elaborate systems, requiring years of practice, were condemned by some as being contrary to the Tao, which is beyond human striving.

HSÜAN \ʃshwän\, *Pinyin* xuan (Chinese: "dark," or "mysterious"), common term in most forms of Chinese religion and philosophy that connotes a hidden or occult dimension to some aspect of experience or reality. First used metaphorically in the TAO-TE CHING, it is an idea that is given mystical significance in many aspects of later Taoist and Buddhist tradition. See also HSÜAN-HSÜEH.

HSÜAN-HSÜEH \ʃshwän-'shwe\, *Pinyin* Xuanxue ("Dark Learning"), intellectual movement among Chinese scholars that arose in the 3rd and 4th centuries CE during a period of widespread disenchantment with contemporary CONFUCIANISM. The movement found its scriptural support in drastically reinterpreted Confucian sources as well as in texts of TAOISM. Wang Pi (226–249 CE) is regarded as the school's founder.

The movement was grounded in the assumption that all temporally and spatially limited phenomena—anything "nameable"; all movement, change, and diversity; in short, all "being"—is produced from and sustained by one impersonal principle, which is unlimited, unnameable, unmoving, unchanging, and undiversified. Hsüan-hsüeh concentrated on the question of whether this ultimate reality was Being (*yu*) or Not-Being (*wu*) and whether the principle (Li) underlying a thing was universal or particular. The school came to reign supreme in cultural circles and represented the more abstract, unworldly, and idealistic tendency in early medieval Chinese thought.

The proponents of Hsüan-hsüeh regarded themselves as true Confucians and interpreted CONFUCIUS as an enlightened sage who had inwardly recognized the ultimate reality but had kept silent about it in his worldly teachings, knowing that these mysteries could not be expressed in words.

Hence, his doctrine was supposed to be a mere set of ad hoc rules intended to answer the practical needs of the times. This concept of "hidden saintliness" and the expedient character of the canonical teachings came to play a very important role in upper-class BUDDHISM. Under the influence of Hsüan-hsüeh, likewise, early Chinese Buddhist philosophers directed their attention chiefly to Being and Non-being. The question of universality and particularity, or of one and many, led to the development of truly Chinese Buddhist schools, whose concern was the relationship between principle, which combines all things as one, and facts, which differentiate things into the many.

HSÜAN-TSANG \ʼshwän-ʼdzän\, *Pinyin* Xuanzang, *original name* Ch'en I, *honorary epithet* San-tsang, *also called* Much'a T'i-p'o, *Sanskrit* Mokṣadeva (b. 602, Ch'en-lu, China—d. 664, China), Buddhist monk and Chinese pilgrim to India who founded the Wei-shih ("Ideation Only") school.

Born into a family of scholars, Hsüan-tsang received a classical Confucian education in his youth but became interested in the Buddhist SCRIPTURES and soon converted to BUDDHISM. He traveled to Ssu-ch'uan (modern Szechwan) and began studying Buddhist philosophy. He was soon troubled by numerous discrepancies and contradictions in the texts. Not finding any solution from his Chinese masters, he decided to go to India to study at the fountainhead of Buddhism. Being unable to obtain a travel permit, he left Ssu-ch'uan by stealth in 629. On his journey he traveled north, passing through such oasis centers as Tashkent and Samarkand, then beyond the Iron Gates into Bactria, across the Hindu Kush, and into Kashmir in northwest India. From there he sailed down the GĀNGĀ (Ganges) River to Mathura, then on to the holy land of Buddhism in the eastern reaches of the Gaṅgā, where he arrived in 633.

In India, Hsüan-tsang visited all the sacred sites connected with the life of the BUDDHA GOTAMA, and he journeyed along the coasts of the subcontinent. The major portion of his time, however, was spent at the Nālandā monastery, the great Buddhist center of learning, where he perfected his knowledge of Sanskrit, Buddhist philosophy, and Indian thought. Hsüan-tsang's reputation as a scholar was such that the king in northern India wanted to meet him. Owing to that king's patronage, Hsüan-tsang's return trip to China, begun in 643, was greatly facilitated.

Hsüan-tsang returned to Ch'ang-an, the T'ang capital, in 645, after an absence of 16 years. He was accorded a tumultuous welcome at the capital. Hsüan-tsang spent the remainder of his life translating the Buddhist scriptures, which numbered 657 items packed in 520 cases, that he had brought back from India. He was able to translate only a small portion of these, but his translations included some of the most important MAHĀYĀNA scriptures.

Hsüan-tsang's main interest was the philosophy of the YOGĀCĀRA (Vijñānavāda) school, and he and his disciple K'uei-chi (632–682) began the Wei-shih school in China. Its doctrine was set forth in Hsüan-tsang's *Ch'eng-wei-shih lun* ("Treatise on the Establishment of the Doctrine of Consciousness Only"), a translation of the essential Yogācāra writings, and in K'uei-chi's commentary. The main thesis of this school is that the whole world is but a representation of the mind. While Hsüan-tsang and K'uei-chi lived, the school achieved some degree of eminence, but with the passing of the two masters the school rapidly declined. A Japanese monk, Dōshō, arrived in China in 653 to study under Hsüan-tsang. He later introduced the doctrines of Wei-shih into Japan. During the 7th and 8th centuries, this

school, called Hossō by the Japanese, became the most influential of all the Buddhist schools in Japan.

In addition to his translations, Hsüan-tsang composed the *Ta-T'ang Hsi-yü-chi* ("Records of the Western Regions of the Great T'ang Dynasty"), the great record of the various countries he passed through during his journey. Hsüan-tsang's travels were later dramatized in a folk tradition that culminated in the 16th century in Wu Ch'eng-en's great novel *The Journey to the West*.

HSÜN-TZU \ʼshüēn-ʼdzə\, *Pinyin* Xunzi, *original name* Hsün K'uang \-kwāŋ\, *honorary name* Hsün Ch'ing \-chiŋ\ (b. c. 300 BCE, Chao Kingdom, China—d. c. 230 BCE, Lanling, Ch'u Kingdom, China), philosopher who was one of the three great philosophers of the Classical period of CONFUCIANISM in China. He elaborated and systematized the work undertaken by CONFUCIUS and MENCIUS, and the strength he thereby gave to that philosophy has been largely responsible for its continuance as a living tradition for over 2,000 years. Little is known of his life save that he belonged for some years to the Chi-hsia academy of philosophers maintained in Ch'i by the ruler of that eastern state, and that, later, because of slander, he moved south to the state of Ch'u, where he became magistrate of a small district in 255 BCE and later died in retirement.

Hsün-tzu's major work, known today as the *Hsün-tzu*, is a milestone in the development of Chinese philosophy. In his book he introduced a rigorous writing style that emphasized topical development, sustained reasoning, detail, and clarity.

Hsün-tzu's most famous dictum is that "the nature of man is evil; his goodness is only acquired training." Human nature at birth, he maintained, consists of instinctual drives which, left to themselves, are selfish, anarchic, and antisocial. Society as a whole, however, exerts a civilizing influence upon the individual, gradually training and molding him until he becomes a disciplined and morally conscious human being. Of prime importance in this process are the LI (ceremonies and ritual practices, rules of social behavior, traditional mores) and music (which he regarded as having a profound moral significance).

Hsün-tzu's view of human nature was radically opposed to that of Mencius, who had optimistically proclaimed the innate goodness of man. Both thinkers agreed that all men are potentially capable of becoming sages, but for Hsün-tzu this meant that every man can learn from society how to overcome his initially antisocial impulses. Thus began what became one of the major controversies in Confucian thought, and in later centuries Mencius' growing prominence led to a neglect of Hsün-tzu's work.

During this time, a period of great change and instability, the historical *li* (ritual practices) were being abandoned by an increasingly agnostic intelligentsia. Hsün-tzu believed that these ritual practices were too important to be lost because they were a culturally binding force for a people whose existence depended on cooperative economic efforts. Further, those practices were important to the individual because they provided an aesthetic and spiritual dimension to one's life. By his insistence on the necessity of cultural continuity for both a person's physical and psychological well-being, Hsün-tzu provided an ethical and aesthetic philosophical basis for these ritual practices as their religious foundation was weakening.

The *li* are accordingly the basic stuff out of which he builds the ideal society as described in his book, and the scholar-officials who are to govern that society have as

their primary function the preservation and transmission of these ritual practices. Like all early Confucians, Hsün-tzu was opposed to hereditary privilege, advocating literacy and moral worth as the determinants of leadership positions; and these determinants were to have as their foundation a demonstrated knowledge of the high cultural tradition—the *li*. The *li* were to be employed by scholars to ensure that everyone was in a place, and officials were to employ the *li* to ensure that there was a place for everyone.

Hsün-tzu engaged in polemic with rival schools, and he bitterly lamented the lack of a centralized political authority that could impose ideological unity from above. Indeed, he was an authoritarian who formed a logical link between Confucianism and the totalitarian Legalists; among his students were two of the most famous Legalists, the theoretician Han Fei-tzu (c. 280–233 BCE) and the statesman Li Ssu (c. 280–208 BCE). Both of these men earned the enmity of later Confucian historians, and their reputations have also negatively affected the evaluation of their teacher. For several centuries after Hsün-tzu's death, his influence remained greater than that of Mencius. Only with the rise of NEO-CONFUCIANISM in the 10th century CE did his influence begin to wane, and not until the 12th century was the triumph of Mencius formalized by the inclusion of the *Mencius* among the Confucian classics. Hsün-tzu was declared heterodox. Only recently have his works emerged from this period of neglect.

HU, SIA, AND HEH \ˈhü-ˈsē-ə...ˈheh\, Heh also called Neheh, in EGYPTIAN RELIGION, deified abstractions personifying, respectively, “creative command” (or “authoritative utterance”), “perception” (or “intelligence”), and “eternity.” They were all essential forces in the creation and continuance of the cosmos. Hu and Sia served as crew members in the solar bark of the sun god RE. They were represented in an undistinctive form as bearded men and also served as bearers of the eye of the god HORUS. In the text known as the “Memphite Theology” they personified the tongue and the heart of the god PTAH. They were also regarded as two of the divine attributes of every king. Heh was the personification of infinite space and was portrayed as a squatting man with a sun disk on his head, bearing the symbols of many years of life and of happiness.

HUACA \ˈwä-kä\, also spelled wak'a (Quechua: “sacredness,” or “holiness”), ancient INCA and modern Quechua and Aymara religious concept that refers to gods, sacred ritual, the state of being after death, or any sacred object. *Huaca* means “burial place,” spirits that either inhabit or actually are physical phenomena such as waterfalls, mountains, or man-made shrines. These shrines, which are found throughout the Inca territory from Ecuador to Chile, range from stones piled in a field (*apachitas*) to stepped PYRAMIDS that were once topped with canopies and carved images.

HUAI-NAN-TZU \ˈhwī-ˈnän-ˈdzə\, *Pinyin* Huainanzi (Chinese: “Master Huai-nan”), Chinese Taoist classic written c. 139 BCE under the patronage of the nobleman Huai-nan-tzu (Liu An). The writing is an important statement of the Han period (HUANG-LAO) TAOISM concerned with COSMOLOGY, astronomy, and statecraft. The *Huai-nan-tzu* states that the TAO originated from vacuity, and vacuity produced the universe, which in turn produced the material forces. The material forces combined to form yin and yang, which in turn give rise to the myriad things. In its broad outline, this COSMOGONY and cosmology have been retained as orthodox doctrine by Taoist philosophers and also by later Confucianists. The *Huai-nan-tzu* introduces such ideas as immortality on earth and the physical techniques, such as breathing, used to achieve it [see HSIEN].

HUANG-LAO \ˈhwäj-ˈläu\, *Pinyin* Huanglao, political ideology drawing on the art of rulership attributed to the legendary Yellow Emperor (HUANG-TI) and the founder of TAOISM, LAO-TZU. This method of governance, which stressed the principles of reconciliation and noninterference, overtook Legalism as the dominant ideology of the imperial court in the early years of the Western Han (206 BCE–25 CE).

The Huang-Lao masters venerated Lao-tzu as a sage whose instructions, contained in his cryptic book TAO-TE CHING, describe the perfect art of government. Huang-ti was depicted as a ruler of the Golden Age who achieved his success because he applied his teachers' precepts to government. From the court of the king of Ch'i (in present-day Shantung province), where they were already expounding the *Tao-te ching* in the 3rd century BCE, the teachings of the Huang-Lao masters soon spread throughout learned and official circles in the capital. Many early Han statesmen became disciples and attempted to practice government by inaction (WU-WEI); among them were also scholars who cultivated esoteric arts. Although their doctrine lost its direct political relevance during the reign of the emperor Wu-ti (141/140–87/86 BCE), their teachings concerning both ideal government and practices for prolonging life continued to evoke considerable interest and constituted perhaps the earliest truly Taoist movement of which there is clear historical evidence.

HUANG-TI \ˈhwäj-ˈdē\, *Pinyin* Huangdi (Chinese: “Yellow Emperor”), third of ancient China's mythological emperors, culture hero and patron saint of TAOISM, associated with the HUANG-LAO Taoism of the Han period.

Huang-ti is reputed to have been born about 2704 BCE and to have begun his rule as emperor in 2697. Tradition states that his reign saw the introduction of wooden houses, carts, boats, the bow and arrow, and writing. Huang-ti himself defeated “barbarians” in a great battle somewhere in what is now Shan-si—the victory winning him the leadership of tribes throughout the Huang Ho (Yellow River) plain. Some also credit him with the in-

Huang-ti, illustration from Li-tai ku-jen hsiang-tsan (1498 edition)

By courtesy of the University of Hong Kong

roduction of governmental institutions and the use of coined money. Huang-ti's wife was reputed to have taught women how to breed silkworms and weave fabrics of silk.

Huang-ti is held up in some ancient sources as a paragon of wisdom whose reign was a golden age. In accordance with a dream, he sought to institute an ideal kingdom whose tranquil inhabitants would live in harmonious accord with the natural law and possess virtues remarkably like those espoused by early Taoism. Upon his death he became an immortal.

HUA-YEN \ˈhwā-ˈyən\ (Chinese: "Flower Ornament"), *Japanese* Kegon, philosophical tradition of BUDDHISM. The school was founded in China in the late 6th–7th century by Fa-shun and further systematized in the 7th–8th century by Fa-tsang. It continued in China until the 10th century, after which it began to decline. The doctrine first reached Japan from China about 740, carried by two of Fa-tsang's pupils, Chen-hsiang (Japanese: Shinshō) and Tao-hsüan (Japanese: Dōsen), and by a southern Indian, Bodhisena.

The name Hua-yen is a translation of the Sanskrit *avatamsaka* ("garland," or "wreath"), after the school's chief text, the *Avatamsaka Sūtra*. This text, preserved in both Tibetan and Chinese versions, deals with the Buddha VAIROcana. The school held that no element of the universe has a separate and independent existence apart from the whole but rather that each reflects all the others and that Vairocana is at the center of the universe.

The totalistic principle of the Kegon school caught the attention of the reigning Japanese emperor, Shōmu, who is credited with founding TŌDAI TEMPLE, which was the largest and most powerful monastery in Japan during the Nara period (710–784). In 752 Shōmu dedicated the Daibutsu, the colossal bronze image of Vairocana, the "Great Sun Buddha," at Tōdai Temple, and many of the ritual objects used in the consecration ceremony are preserved in the monastery treasury, the Shōsō-in.

HUBRIS \ˈhyū-bris\, also spelled *hybris* \ˈhī-bris\, in classical Greek ethical and religious thought, violent behavior suggesting impious disregard of the limits governing human action in an orderly universe. It is the SIN to which the great and gifted are most susceptible, and in Greek tragedy it is usually the hero's downfall.

HUDŪD \hü-ˈdüd\ (Arabic: "the boundaries," or "prohibitions"), singular *ḥadd* \ˈhäd\, in Islamic law, a class of penal laws set forth in the QUR'AN and the SUNNA, and elaborated by the Sunni and Shi'ite legal schools. It includes theft, adultery, defamation, highway robbery, consumption of alcohol, APOSTASY, and rebellion. Corporal punishment ranging from flogging (for more minor offenses) and amputation (for theft) to death (for adultery, apostasy, and rebellion) are imposed against those found legally guilty of these offenses. Imposition of these punishments must be by qualified legal authorities and are subject to strict rules of evidence.

The *ḥudūd* have not been consistently applied in Muslim societies, where customary laws often apply instead. In many modern Muslim nations such offenses are regulated by civil law adopted from the west. The *ḥudūd* punishments, however, have been applied unevenly during the 20th century by the governments of Saudi Arabia, Pakistan, Sudan and Iran. Islamists who call for the establishment of theocratic government usually include imposition of the *ḥudūd* as a primary objective. The *ḥudūd* are also at the center of human-rights debates in many Muslim countries.

In the DRUZE religion, *ḥudūd* represents the five cosmic principles that are emanations from God, the One. AL-ḤĀKIM, the 11th-century Fāṭimid CALIPH of Egypt, stands at the center of the universe as the embodiment of the One. ḤAMZA IBN 'ALĪ, a contemporary of al-Ḥākim, systematized the Druze religion and presented himself as the direct human link to the One; he then established a hierarchy of universal principles, or *al-ḥudūd*, that would span the distance between the One and the mass of Druze believers.

Each principle had a human counterpart from among al-Ḥākim's contemporaries. Ḥamza himself became the first principle, or *ḥadd*, Universal Intelligence (al-'Aql); al-'Aql generated the Universal Soul (al-Nafs), embodied in Ismā'īl ibn Muhammad al-Tamīmī. The Word (al-Kalima) emanates from al-Nafs and is manifest in the person of Muhammad ibn Wahb al-Qurashī. The fourth successive principle is the Preceder (al-Sābiq, or Right Wing [al-Janāh al-Ayman]), embodied in Salāma ibn 'Abd al-Wahhāb al-Sāmīrī; and the fifth is the Succeder (al-Tālī, or Left Wing [al-Janāh al-Aysar]), personified by al-Muqtanā Bahā' al-Dīn. Each of these principles, the true *ḥudūd*, also had false counterparts, in turn embodied by various contemporaries of al-Ḥākim. The tension between the two sets of *ḥudūd* represented the conflict of GOOD AND EVIL in the world, to be resolved by al-Ḥākim's eventual support of the true *ḥudūd*.

HUI-NENG \ˈhwā-ˈnəŋ\, *Pinyin* Huineng (b. 638, southwest Kwangtung, China—d. 713, Kwangtung), sixth great patriarch of ZEN (Ch'an in Chinese) BUDDHISM and founder of the Southern school, which became the dominant school of Zen, both in China and in Japan.

As a young and illiterate peddler of firewood, Hui-neng heard the DIAMOND SUTRA and traveled 500 miles to North China where the fifth Ch'an patriarch, Hung-jen (601–674), was expounding this text. According to legend, in a dramatic poetry contest in 661 the senior monk, Shen-hsiu (605–706), wrote, "The mind is the stand of a bright mirror. . . / Do not allow it to become dusty," but Hui-neng wrote, "Buddha-nature is forever clear and pure, / Where is there any dust?" Thereupon the fifth patriarch transmitted the law to Hui-neng.

Hui-neng returned to South China and in 676 reached Canton, where he was ordained PRIEST. In a sermon that has been recorded as the *Liu-Tsu t'an-ch'ing* ("Platform Scripture of the Sixth Patriarch"), he declared that all people possess the buddha-nature and that one's nature is originally pure. Instead of reading scriptures, building temples, making offerings, reciting the name of the BUDDHA GOTAMA, and praying for rebirth in paradise, one should simply seek to discover one's own nature, in which all buddhas and Buddhist doctrines are immanent. The traditional method of sitting in meditation is useless for discovering this nature, for tranquillity is not motionlessness but is the state of having an unperturbed inner nature and an absence of erroneous thought. If one sees one's own nature, enlightenment will follow—suddenly, without external help.

In pronouncing this radical doctrine of sudden enlightenment, Hui-neng rejected traditional Buddhist concepts and created a wide schism between his Southern school and the Northern school led by Shen-hsiu, who advocated gradual enlightenment.

HUITZILOPOCHTLI \,wēt-sē-lō-ˈpōcht-lē\, also spelled *Uitzilopochtli* (from Nahuatl *huitzilin*, "hummingbird," and *opochtli*, "left side," or "left hand"), Aztec sun and war god. His other names included Xiuhpilli ("Turquoise

Prince") and Totec ("Our Lord"). His *nahual*, or animal disguise, was the eagle.

Traditionally, Huitzilopochtli was thought to have been born on the Coatepec, Serpent Mountain, near the city of Tula. His mother, COATLICUE, an earth goddess, conceived him after having kept in her bosom a ball of fine feathers (*i.e.*, the soul of a warrior) that fell from the sky. His brothers, the Centzon Huitznáua ("Four Hundred Southerners"), stars of the southern sky, and his sister Coyolxauhqui, a moon goddess, decided to kill Coatlicue. When the siblings attacked Serpent Mountain, she gave birth to the adult warrior Huitzilopochtli who exterminated them with his weapon, the *xiuhcōatl* ("turquoise snake").

priests also burned a huge bark-paper serpent symbolizing the god's primary weapon.

The Aztecs also believed that the sun god needed human blood and hearts as daily nourishment. Some sacrificial hearts were offered to the sun *quauhitlehuanitl* ("eagle who rises") and burned in the *quauhxicalli* ("the eagle's vase"). Warriors who died in battle or in sacrifice were believed to form part of the sun's retinue; then, after four years, they went to live forever in the bodies of hummingbirds.

Huitzilopochtli's high priest, the Quetzalcōatl Totec Tlamacazqui ("Feathered Serpent, Priest of Our Lord"), was, with the god TLALOC'S high priest, one of the two heads of the Aztec clergy.

Huitzilopochtli supporting the southern quarter of the heavens, illustration in the *Codex Borgia*, 14th–16th century

Biblioteca Apostolica Vaticana

Other myths presented Huitzilopochtli as the divine leader of the tribe during the long migration that brought the Aztecs from Aztlan, their traditional home, to the Valley of Mexico. His image, in the form of a hummingbird, was carried upon the shoulders of the priests, and at night his voice was heard giving orders. The god's first shrine in the valley of Mexico was built on a spot where priests found an eagle poised upon a rock.

Representations of Huitzilopochtli usually showed him as a warrior with a headdress of parrot and quetzal feathers and a hummingbird device on his back. His legs, arms, and the lower part of his face were blue; the upper half of his face was black. He wore earplugs of cotinga feathers and brandished a round shield and a turquoise snake staff.

The fifteenth month of the ceremonial year, Panquetzalitzli ("Feast of the Raising of Banners"), was dedicated to Huitzilopochtli. During the month, warriors and maidens and pleasure girls danced by night on the plaza in front of the god's temple. War prisoners or slaves were bathed in a sacred spring at Huitzilopochco (modern Churubusco, in Mexico City) and were then sacrificed at a place called "the god's ball court" (Teotlachco) and at other locations. The

HUMAN SACRIFICE, offering of the life of a human being to a deity. The occurrence of human sacrifice can usually be related to the recognition of blood as the sacred life-force in humans. Bloodless forms of killing, however, such as strangulation and drowning, have been used in some cultures. The killing of a human being, or the substitution of an animal for a person, has often been part of an attempt to effect communion with a god and thus to participate in his divine life. The offering of human life, as the most valuable material for sacrifice, has also occurred in attempts at expiation. There are two primary types of human sacrifice: the offering of a human being to a god, and the entombment or slaughter of servants or slaves intended to accompany the deceased into the afterlife.

The latter practice is the more common. In various

places in Africa, where human sacrifice was connected with ANCESTOR WORSHIP, some of the slaves of the deceased were buried alive with him, or they were killed and laid beneath him in his grave. The Dahomey made especially elaborate sacrifices at the death of a king. Excavations in Egypt and elsewhere in the Middle East have revealed that numerous servants were at times interred with the rest of the funerary equipment of a member of the royal family in order to provide that person with a retinue in the next life. The Chinese practice of burying the emperor's retinue with him continued intermittently until the 17th century.

The sacrificial offering of human beings to a god has been well attested only in a few cultures. In what is now Mexico the belief that the sun needed human nourishment led to the sacrifice of thousands of victims annually in the Aztec and Nahuatl calendrical corn ritual. The INCAS confined such wholesale sacrifices to the accession of a ruler. The burning of children seems to have occurred in Assyrian and Canaanite religions and at various times among the Israelites. Among the African Ashanti, the victims sacrificed as first-fruit offerings during the Festival of New Yams were usually criminals, though slaves also were killed.

Accusations of human sacrifice in ancient and modern times have been far more widespread than the ritual practice ever was. The ancient Greeks told many myths that involved human sacrifice, which has led some researchers to posit that rites among the Greeks and Romans that involved the killing of animals may have originally involved human victims; to date, however, archaeological evidence does not support this claim. Some early Christians were falsely accused of CANNIBALISM, consuming sacrificial victims at nocturnal feasts, a misunderstanding probably due to the secrecy surrounding the Eucharistic rite and the use of the words “body” and “blood.” From the Middle Ages until quite recently, Jews were often maliciously accused of having sacrificed Christian children at the PASSOVER, an accusation which has been termed the blood libel.

HUNAYN IBN ISHĀQ \ˈkū-nīn-i-bən-i-ˈshāk\, *Latin name* Johannitius \jō-hə-ˈnī-shē-əs, -shəs\ (b. 808, al-Hira, near Baghdad, Iraq—d. 873, Baghdad), Arab scholar whose translations of Plato, Aristotle, Galen, Hippocrates, and the Neoplatonists made accessible to Arab philosophers and scientists the most significant sources of Greek thought and culture.

Hunayn was a NESTORIAN Christian who studied medicine in Baghdad and became well versed in ancient Greek. He was appointed by CALIPH al-Mutawakkil to the post of chief physician to the court, a position that he held for the rest of his life. He traveled to Syria, Palestine, and Egypt to gather ancient Greek manuscripts, and, from his translators' school in Baghdad, he and his students transmitted Arabic and (more frequently) Syriac versions of the classical Greek texts throughout the Islamic world. Especially important are his translations of Galen, most of the original Greek manuscripts of which are lost.

HUNG HSIU-CH'ÜAN \ˈhūn-ˈshyō-ˈchwän\, *Pinyin* Hong Xiuchuan (b. Jan. 1, 1814, Fu-yüan shui, Kwangtung, China—d. June 1, 1864, Nanking), Chinese religious prophet and leader of the TAIPING REBELLION (1850–64).

Though from an early age Hung showed signs of great intelligence, he failed the Confucian civil service examination several times. After failing for the third time, in 1837, he suffered an emotional collapse. During a delirium that lasted several days he imagined himself to be in the presence of a venerable old man with a golden beard. The old man complained that the world was overrun by evil DEMONS, and he gave Hung a sword and seal to use in eradicating the bad spirits. Hung also believed himself to have encountered a middle-aged man who aided and instructed him in the extermination of demons.

When Hung recovered he returned to his occupation as a village schoolteacher. In 1843 he took the examination for the fourth and last time and again failed. Shortly after this, Hung reexamined a work entitled *Ch'üan-shih liang-yen* (“Good Words for Exhorting the Age”), which had been given him on his visit to Canton in 1837. The work explained the basic elements of CHRISTIANITY, and in it Hung discovered the explanation for his visions. He realized that during his illness he had been transported to heaven. The old man he had spoken with was God, and the middle-aged man was JESUS CHRIST. Hung further understood that he was the second son of God, sent to save China. He baptized himself, prayed to God, and from then on considered himself a Christian.

Hung began to propagate the new doctrine among his friends and relatives. One of his most important converts

was his schoolmate Feng Yün-shan. In 1844 Hung lost his job because he had destroyed the tablets to CONFUCIUS in the village school where he was teaching, and Feng accompanied him on a preaching trip to neighboring Kwangsi Province. Hung returned from Kwangsi after a few months, but Feng remained, establishing the Pai Shang-ti hui (God Worshipers' Society), devoted to Hung's new doctrines. From his narrow understanding of Christianity, Hung stressed a wrathful OLD TESTAMENT God, one who was to be worshiped and obeyed. He demanded the abolition of evil practices such as opium smoking, gambling, and prostitution and promised an ultimate reward to those who followed the teachings of the Lord.

Shortly thereafter Hung joined Feng and the God Worshipers and was immediately accepted as the new leader of the group. Conditions in the countryside were deplorable, and sentiment ran high against the foreign Manchu rulers of China. As a result, Hung and Feng began to plot the rebellion that finally began in July 1850. On Jan. 1, 1851, Hung's 37th birthday, he proclaimed his new dynasty, the T'ai-p'ing t'ien-kuo (Heavenly Kingdom of Great Peace) and assumed the title of T'ien-wang, or Heavenly King. As the Taipings pressed north through the Yangtze River Valley, they grew from a ragged band of a few thousand to a fanatical but highly disciplined army of more than a million, divided into separate divisions of men and women soldiers. Men and women were considered equal by the Taipings but were allowed no contact with one another—even married couples were forbidden sexual intercourse.

Hung's army captured Nanking on March 10, 1853, and he decided to make the city his permanent capital, renaming it T'ien-ching (Heavenly Capital). Meanwhile, Feng had died en route to Nanking, and Hung had placed much power in the hands of his minister of state, Yang Hsiu-ch'ing. Eventually Yang began to usurp Hung's prerogatives as supreme leader. To legitimize his authority, Yang occasionally lapsed into trances in which his voice supposedly became that of the Lord's. In one of his trances, Yang claimed that the Lord demanded Hung be whipped for kicking one of his concubines. On Sept. 2, 1856, Hung had Yang murdered by Wei Ch'ang-hui, another Taiping general, who in turn was killed at Hung's behest.

After this, Hung withdrew from all government matters and entrusted affairs of state to his incompetent elder brothers. By 1862, when Hung's generals were telling him that he ought to abandon Nanking, he refused, stating that he trusted in divine guidance. On June 1, 1864, Hung, despairing after a lingering illness, committed suicide. His young son succeeded him on the throne. The city finally fell on July 19, 1864, and government troops initiated a terrible slaughter in which more than 100,000 people were said to have been killed. Sporadic Taiping resistance continued in other parts of the country until 1866.

HUN-TUN \ˈhūn-ˈdūn\, *Pinyin* hundun (Chinese: “chaos,” or “primal lump”), ancient term that alludes to the spontaneous creation of the world from a primordial CHAOS, imagined sometimes as a kind of primal wonton, a lumpy sac of cosmic stuff, or a primal gourd. The theme was important in early Taoist texts like the TAO-TE CHING and the CHUANG-TZU and refers to the ideal of the sage who attempts through physiological and mental methods to reverse the process of creation and return to the original condition of chaotic wholeness—*hun-tun*, or *p'u*, the “uncarved block.” In later sectarian TAOISM the theme of *hun-tun* had both positive and negative connotations and was incorporated

Jewish wedding with bride (left) and groom under a *huppah*, detail from an illustrated German manuscript, c. 1272

The Granger Collection

into elaborate new mythologies (often influenced by BUDDHISM), liturgical practices of community renewal, and routines of introspective meditation by Taoist priests and alchemical adepts.

HUPPAH \kū-'pä, 'kū-pə\, also spelled *chuppah*, plural *huppot* \kū-'pöt\, or *huppahs*, in a Jewish wedding, the portable canopy beneath which the couple stands while the ceremony is performed. Depending on the local custom and the preference of the bride and groom, the *huppah* may be a simple Jewish prayer shawl (TALLIT) suspended from four poles, a richly embroidered cloth of silk or velvet, or a flower-covered trellis. In ancient times *huppah* signified the bridal chamber, but the canopy now symbolizes the home to be established by the newlyweds. In popular usage the term *huppah* may also refer to the wedding ceremony itself.

HURRIAN RELIGIONS \hür-ē-ən\: see ANATOLIA, RELIGIONS OF.

HUS, JAN \həs, 'hüs\, also spelled *Huss* (b. c. 1370, Husinec, Bohemia [now in Czech Republic]—d. July 6, 1415, Konstanz [Germany]), the most important 15th-century Czech religious Reformer, whose work anticipated the Lutheran REFORMATION by a full century.

About 1390 Hus enrolled in the University of Prague, and two years after his graduation in 1394 he received his master's degree and began teaching at the university. He became dean of the philosophical faculty there in 1401.

In that same year JOHN WYCLIFFE'S works and theological writings became available in Prague, and Hus was particularly impressed by Wycliffe's proposals for reform of the ROMAN CATHOLIC clergy. The clerical estate owned about one-half of all the land in Bohemia, and the wealth and simoniacal practices of the higher clergy aroused jealousy and resentment among the poor priests. The peasantry, too, re-

sented the church as one of the heaviest land taxers. There was thus a basis of potential support for any movement to reform the church. Attempts at reform had been made by the Bohemian king Charles IV, and Wycliffe's works were the chosen weapon of the national reform movement founded by Jan Milíč of Kroměříž (d. 1374).

In 1391 Milíč's pupils founded the Bethlehem Chapel in Prague, where public sermons were preached in Czech (rather than in Latin) in the spirit of Milíč's teaching. From 1402 Hus was in charge of the chapel, which had become the center of the growing national reform movement. He became increasingly absorbed in public preaching and eventually emerged as the popular leader of the movement. Despite his extensive duties at the Bethlehem Chapel, Hus contin-

ued to teach in the university faculty of arts and became a candidate for the doctor's degree in theology.

In 1403 a German university master, Johann Hübner, drew up a list of 45 articles from Wycliffe and had them condemned as heretical; the articles were henceforth regarded as a test of orthodoxy. The principal charge against Wycliffe's teaching was his tenet of remanence—*i.e.*, that the bread and wine in the EUCHARIST retain their material substance. Wycliffe also declared the SCRIPTURES to be the sole source of Christian doctrine. Hus did not share all of Wycliffe's views, but several members of the reform party did, among them Hus's teacher, Stanislav of Znojmo, and his fellow student, Štěpán Páleč.

Since 1378 the Roman Catholic church had been split by the Great SCHISM, during which the papal jurisdiction was divided between two popes. The Council of Pisa (1409) was called to dethrone the rival popes and to reform the church. The archbishop of Prague, Zbyněk Zajíc, opposed the Council and in so doing had the support of the German masters of the University of Prague, while Hus and the Czech masters supported the Council. The German masters had a voting majority in university affairs until King Wenceslas in January 1409 gave a predominance of votes to the Czech masters, and the resulting exodus of Germans to several German universities left Hus as rector of the now Czech-dominated university.

The final break between Archbishop Zbyněk and Hus occurred when the Council of Pisa ineffectually deposed both Pope Gregory XII and the ANTIPOPE Benedict XIII and in their place elected Alexander V. The archbishop and the higher clergy in Bohemia remained faithful to Gregory, whereas Hus and the reform party acknowledged the new pope. The archbishop, through a large bribe, induced Alexander to prohibit preaching in private chapels. Hus refused to obey the pope's order, whereupon Zbyněk excommunicated him, though Hus continued to preach at the Bethlehem Chapel and to teach at the University of Prague.

Jan Hus at the stake in 1415, colored Bohemian woodcut, 1563
The Granger Collection

In 1412 the case of Hus's HERESY was revived owing to a new dispute over the sale of INDULGENCES that had been issued by Alexander's successor, John XXIII, to finance his campaign against Gregory XII. Their sale in Bohemia had been approved by King Wenceslas, who shared in the proceeds. Hus publicly denounced these indulgences and by so doing lost the support of Wenceslas. Hus's enemies then renewed his trial at the Curia, where he was declared under major EXCOMMUNICATION for refusing to appear. Hus left Prague in October 1412 and found refuge mostly in southern Bohemia in the castles of his friends. His enemies wrote a large number of polemical treatises against him, which he answered in an equally vigorous manner. He also wrote a large number of treatises in Czech and a collection of sermons entitled *Postilla*.

Invited to the COUNCIL OF CONSTANCE to explain his views and promised safe-conduct, Hus was arrested shortly after his arrival there. He was tried before the Council of Constance as a Wycliffite heretic, and in three public hearings he was allowed to defend himself and succeeded in refuting some of the charges against him. The council urged Hus to recant in order to save his life, but when he refused he was sentenced and burned at the stake.

HUSAYN IBN 'ALĪ, AL- \kū-'sīn-i-bən-ä-'lĕ\ (b. January 626, Medina, Arabia [now in Saudi Arabia]—d. Oct. 10, 680,

Karbala', Iraq), SHĪ'ITE Muslim hero and martyr, grandson of the Prophet MUHAMMAD and son of 'ALĪ (the fourth Islamic CALIPH) and FĀTIMA, daughter of Muhammad. He is revered by Shi'ite Muslims as the third IMAM (after 'ALĪ and Husayn's older brother, HASAN).

After the assassination of their father, Hasan and Husayn acquiesced to the rule of the first Umayyad caliph, Mu'āwiya, from whom they received pensions. Husayn, however, refused to recognize the legitimacy of Mu'āwiya's son and successor, Yazīd (April 680). Husayn was then invited by the townsmen of Kūfa, a city with a Shi'ite majority, to revolt against the Umayyads. Husayn set out for Kūfa with a small band of relatives and followers. The governor of Iraq, on behalf of the caliph, sent 4,000 men to arrest Husayn and his band. They trapped Husayn near the banks of the Euphrates River (October 680) at KARBALĀ'. When Husayn refused to surrender, he and his escort were slain, and Husayn's head was sent to Yazīd in Damascus.

In remembrance of the martyrdom of Husayn, Shi'ite Muslims observe the 10th day of Muḥarram (the date of the battle according to the Islamic calendar) as the culmination of the 10-day observance of tazia (*ta'ziyah*), which coincides with 'ĀSHŪRĀ'. Revenge for Husayn's death was turned into a rallying cry that helped undermine the Umayyad caliphate and gave impetus to the rise of a powerful Shi'ite movement.

The details of Husayn's life are obscured by the legends that grew up surrounding his martyrdom, but his final acts appear to have been intended to found a regime that would reinstate a "true" Islamic polity as opposed to what he considered the unjust rule of the Umayyads. His shrine in Karbalā' became one of the leading Shi'ite PILGRIMAGE centers, aside from MECCA and MEDINA. Many SUNNIS venerate him at his shrine in Cairo. Devotees hold that Husayn possesses extraordinary powers of intercession and healing. During the 20th century he was regarded by Sunnis and Shi'ites alike as a revolutionary hero.

HUSSITE \hə-'sīt, 'hū-, any of the followers of the Bohemian religious reformer JAN HUS, who was condemned by the COUNCIL OF CONSTANCE (1414–18) and burned at the stake. After his death in 1415 many Bohemian knights and nobles published a formal protest and offered protection to those who were persecuted for their faith. The movement's chief supporters were Jakoubek of Stříbro (died 1429), Hus's successor at the Bethlehem Chapel in Prague; Václav Koranda, leader of the Taborites (extreme Hussites named for the city of Tábor, their stronghold some 50 miles south of Prague); and Jan Želivský, who organized the extreme reform party in Prague.

The Hussites broke with Rome over two key issues: the use of a Czech liturgy and the administration of the EUCHARIST to the laity under the forms of both bread and wine.

(The doctrine supporting this was called Utraquism [from the Latin *utraque*, “each of two”] and the more moderate Hussites were called UTRAQUISTS.)

Under King Wenceslas (Václav) IV of Bohemia, the movement spread widely. In 1419, however, he died and was succeeded by his half brother Sigismund, king of the Romans and of Hungary. The Hussites would have acknowledged Sigismund had he accepted the Four Articles of Prague that Jakoubek had formulated: (1) freedom of preaching; (2) communion in both kinds; (3) poverty of the clergy and expropriation of church property; (4) punishment of notorious sinners. In 1420, however, Sigismund, who had failed to get possession of Prague, published a bull of Pope Martin V proclaiming a crusade against the Hussites. The Hussite union, which included the municipalities of Prague and other cities and the chief military power of Bohemia, deposed Sigismund and repelled two crusading attacks against Prague. Various crusades and battles against the Hussites failed for the next several years. In 1427 the Hussites, led by Prokop Holý, began a more revolutionary, rather than defensive, political program. Pope Martin V organized another crusade against them but did not live to see it decisively beaten by the Hussites in 1431.

Peace negotiations began in 1431, when the Council of Basel of the ROMAN CATHOLIC church agreed to negotiate with the Hussites on an equal basis, which Pope Martin V had refused to do. A Hussite delegation spent three months in Basel in 1433 discussing the Four Articles of Prague. The Council then sent a mission to Prague, which granted communion in both kinds to the Hussites. This grant split the Hussites, since the Utraquists were willing to make peace on these terms, but the more radical Taborites were not. Utraquists and Catholics then joined forces to defeat the Taborites in a battle at Lipany in 1434, which ended the Taborites' influence.

The Utraquist Hussites then resumed peace negotiations, and in July 1436 they obtained a peace treaty (the Compact of Iglau) that ensured all the principal gains of the war: communion in both kinds, the expropriation of church lands (which broke the economic power of the Roman Catholic church in Bohemia), and an independent Bohemian Catholic church under Jan Rokycana as its elected archbishop. Although association with the Roman Catholic church continued, the church of the Utraquist Hussites survived SCHISMS and periodic persecutions until c. 1620, when it was finally absorbed by the Roman Catholics.

In the mid-15th century the UNITAS FRATRUM (Unity of Brethren) movement began in Bohemia among some of the Hussites, and it established its own independent organization in 1467. During the REFORMATION, the Unitas Fratrum was in contact with Lutheran and Reformed Protestants. Eventually, however, Bohemian and Moravian PROTESTANTISM was suppressed, and the Roman Catholic COUNTER-REFORMATION was victorious after 1620, when the Protestant barons were defeated at the Battle of the White Mountain during the Thirty Years' War.

Remnants of the Unitas Fratrum remained, however, and in 1722 a group of them fled Moravia and settled on the estate of Count Nikolaus Ludwig von Zinzendorf in Saxony. A number of exiles from Moravia and Bohemia followed, and they formed the community of Herrnhut, where they were organized as the MORAVIAN CHURCH. There is also some continuity with 20th-century Czech Protestantism.

HUTTERITE \ˈhə-tə-rit, ˈhü-, member of the Hutterian Brethren, an ANABAPTIST sect that found refuge from perse-

cution in Moravia and the Tirol; it stressed community of goods on the model of the primitive church in Jerusalem. The community, which acquired the name of its charismatic Austrian leader, Jakob Hutter (who was tortured and burned as a heretic in 1536), still survives, mostly in the western sections of the United States and Canada, with a population of about 20,000. In colonies of 60 to 150 persons, they operate collective farms (*Bruderhof*) and, not unlike the Old Order AMISH, remain aloof from outside society, taking no part in politics. Children are educated inside the colony until age 14 or until a minimum age decreed by state or province.

Persecutions drove the Hutterites to Hungary, the Ukraine, and in the 1870s to South Dakota; during World War I, when persecuted because of their pacifism, they migrated to Canada. After the war, many returned to the United States. Their high annual birth rate (45.9 per 1,000) has necessitated new colonies, sometimes to the displeasure of neighbors who distrust their communal life, object to their pacifism, and generally misunderstand their way of life. Some areas have passed legislation to hinder the growth of Hutterite colonies.

HUYNH PHU SO \ˈhü-yən-ˈpü-ˈsō-, Huynh also spelled Huyen, also called Dao Khung \ˈdaü-ˈkūŋ-, or Phat Song \ˈpät-ˈsōŋ- (b. 1919, Hoa Hao, Cochinchina [now in Vietnam]—d. 1947, Long Xuyen), Vietnamese philosopher, Buddhist reformer, and political activist, founder (1939) of the religion Phat Giao Hoa Hao, more simply known as Hoa Hao.

Sickly in his youth, Huynh Phu So was educated by a Buddhist monk and at the age of 20 was apparently miraculously cured. He then set about preaching the reform of BUDDHISM, advocating a return to THERAVĀDA Buddhism from the MAHĀYĀNA form prevalent in Vietnam, and stressing austerity, simple worship, and personal salvation. Hoa Hao is an amalgam of Buddhism, ANCESTOR WORSHIP, animistic rites, elements of CONFUCIANISM, and indigenous Vietnamese practices. Its adherents have their own flag and their own special holidays.

Huynh Phu So traveled throughout Vietnam practicing herbal healing and acupuncture, becoming known as Dao Khung (“Mad Monk”). He predicted with accuracy the fall of France in World War II, the Japanese invasion of Indochina, and the intervention of the United States at a later date. His success as a prophet led his followers to call him the Phat Song (“Living Buddha”).

As his fame and his adherents increased, his inflammatory speeches brought him to the attention of the French colonial authorities. Exiled from one Vietnamese province after another, he continued to draw disciples. Finally he was committed to a mental institution, where he converted his doctor to his philosophy. The French tried to exile him to Laos, but he was kidnapped by Japanese agents in 1942 and held prisoner in Saigon (now Ho Chi Minh City).

After the war, disagreement, first with the French and then with the communist Viet Minh, made the Hoa Hao sect an aggressive religio-political-military cult. Huynh Phu So was abducted and executed after a trial in Long Xuyen. Many of the Hoa Hao faithful, refusing to believe that he died, predict his return in a time of crisis.

HVARENAH \ˈkvär-ə-näh-, also spelled khvarenah, in ZOROASTRIANISM, attribute of kingly glory. *Hvarenah* is thought of as a shining HALO that descends upon a leader and renders him sacred. The king thus proclaims himself divine

and is authorized to rule with absolute power in the name of God. The *hwarenah* is the precursor of the nimbus of the Roman emperors and hence of the crown worn by European kings.

HWARANGDO \ˈhwä-ˈräng-ˈdō\ (Korean: “Way of the Flower of Young Men”), unique military and philosophical code developed in the ancient Korean state of Silla around the 6th century CE. The Hwarangdo provided the basis for training of the elite society of youths known as the *hwarang*; this training placed almost equal emphasis on academic and martial skills.

The *hwarang* warriors played an instrumental role in Silla’s conquest of the rest of the Korean peninsula and in the establishment of the Unified Silla dynasty (668–935). Each *hwarang* was composed of young Silla men of aristocratic birth, sometimes numbering in the thousands, who grouped themselves under a single leader. The *Hwarang’s* members prayed for the welfare of the state by visiting beautiful mountains and rivers and engaging in ritual songs and dances. They also chanted the *hyangga*, a special Silla poem that had a religious flavor. The *sesok o-kye* (“five commandments”), apparently derived from the teachings of CONFUCIANISM and BUDDHISM, taught the values of loyal service to the king, FILIAL PIETY, faithfulness to friends, courage in battle, and the evil of indiscriminate killing. The Hwarangdo began to decline with the disintegration of Silla rule, and the *hwarang* were officially disbanded during the Yi dynasty (1392–1910). Interest in the Hwarangdo was renewed in the second half of the 20th century with one style of modern Korean martial arts that is known as *hwarangdo*.

HYACINTHUS \ˌhī-ə-ˈsɪn-thəs\, in Greek mythology, young man of Amyclae in Laconia. His great beauty attracted the love of APOLLO, who killed him accidentally while teaching him to throw the discus; in other versions of the myth Zephyrus (or BOREAS) out of jealousy deflected the discus so that it hit Hyacinthus on the head and killed him. Out of his blood there grew the flower called *hyacinthos* (not the

modern hyacinth), the petals of which were marked with the mournful exclamation AI, AI (“Alas”).

The death of Hyacinthus was celebrated at Amyclae by the second most important of Spartan festivals, the Hyacinthia, in the Spartan month Hyacinthius. It was probably an early summer festival; it lasted three days, and the tone of the rites gradually passed from mourning for Hyacinthus to rejoicing in the majesty of Apollo.

HYADES \ˈhī-ə-ˌdēz\, in Greek mythology, five (or more) sisters of the PLEIADES who nursed the infant DIONYSUS and

as a reward were made the five stars in the head of the constellation Taurus, the bull. According to another version, they so bitterly lamented the death of their brother Hyas that ZEUS, out of compassion, changed them into stars. Their name means the Rainers, since they rose in October and set in April and were thus prominent in the sky during the rainy season.

HYDRA \ˈhī-drə\, in Greek mythology, offspring of TYPHON and ECHIDNA, a gigantic monster with nine heads (the number varies), the center one immortal. Its haunt was the marshes of Lerna near Argos. The destruction of Hydra was one of the 12 Labors of HERACLES, which he accomplished with the assistance of IOLAUS. As one head was cut off, two grew in its place; therefore, they finally burned out the roots with firebrands and at last severed the immortal head from the body. The arrows dipped by Heracles in the poisonous blood inflicted fatal wounds.

HYGIEIA \hī-ˈjē-ə\, in GREEK RELIGION, goddess of health. The oldest traces of her cult are at Titane, west of Corinth, where

she was worshiped together with ASCLEPIUS, the god of medicine. At first no special relationship existed between her and Asclepius, but gradually she came to be regarded as his daughter; later literature, however, makes her his wife. The cult of Hygieia spread concurrently with his and was introduced at Rome from Epidaurus in 293 BCE, when she was gradually identified with SALUS. In later times Hygieia and Asclepius became protecting deities. Hygieia’s animal was

Hygieia, classical bas-relief
By courtesy of the trustees of the British Museum

a serpent, sometimes shown drinking from a saucer held in her hand.

HYMEN \ˈhi-mən\, *also called* Hymenaeus \,hi-mə-ˈnē-əs\, in GREEK RELIGION, the god of marriage, whose name derives from a word in the refrain of an ancient marriage song; some scholars believe it was originally the same word as *hymēn* (“hymenal membrane”), and formed part of a mock lament for the loss of the bride’s virginity. The god Hymen was usually held to be a son of APOLLO by a MUSE, perhaps Calliope; other accounts made him the son of DIONYSUS and APHRODITE. In Attic legend he was a beautiful youth who rescued a group of women, including the girl he loved, from a band of pirates. As a reward he obtained the girl in marriage, and their happy life caused him ever afterward to be invoked in marriage songs.

HYMIR \ˈhi-mir, ˈhü-\, *also spelled* Hymer, in Norse mythology, GIANT who was the father of the god TYR. Hymir owned a large kettle and it was to get this that Tyr and THOR paid a visit to him. During that visit Thor went fishing with Hymir and caught the monstrous World Serpent. According to one version Thor killed the monster, but according to another Hymir cut his line just when the two mighty enemies were looking at each other. This scene is one of the most popular in Viking-age art and is often referred to in poetry.

HYMN (Greek: *hymnos*, “song of praise,” in honor of gods, heroes, or famous men), strictly, a song used in Christian worship, usually sung by the congregation and characteristically having a metrical, strophic (stanzaic), non-biblical text. Similar songs, also generally termed hymns, exist in all civilizations.

Christian hymnody derives from the singing of psalms in the Hebrew Temple. The earliest fully preserved text (c. 200 CE or earlier) is the Greek “Phos hilarion” (“Go, Glad-some Light”). Hymnody flourished earliest in Syria, where the practice was possibly taken over from the singing by Gnostics and Manichaeans of hymns imitating the psalms. The Byzantine church adopted the practice; in its liturgy, hymns maintain a much more prominent place than in the Latin liturgy; and Byzantine hymnody developed complex types such as the *kanōn* and *kontakion*. Saint Ephraem—a 4th-century Mesopotamian deacon, poet, and hymnist—has been called the “father of Christian hymnody.”

In the West, St. Hilary of Poitiers composed a book of hymn texts in about 360. Not much later ST. AMBROSE of Milan instituted the congregational singing of psalms and hymns, partly as a counter to the hymns of the Arians, who were in doctrinal conflict with orthodox CHRISTIANITY. In poetic form (iambic octosyllables in four-line stanzas), these early hymns—apparently sung to simple melodies—derive from Christian Latin poetry of the period. By the late Middle Ages trained choirs had supplanted the congregation in the singing of hymns. Although new, often more ornate melodies were composed and many earlier melodies were elaborated, one syllable of text per note was usual. Some polyphonic hymn settings were used, usually in alternation with plainchants, and were particularly important in organ music.

Congregational singing in the liturgy was reestablished only during the REFORMATION, by the Lutheran church in Germany. The early chorale, or German hymn melody, was unharmonized and sung unaccompanied, although harmonized versions, used by varying combinations of choir, or-

gan, and congregation, appeared later. Some were newly composed, but many drew upon plainsong, vernacular devotional song, and secular song. The pattern of secular lyrics also influenced the hymn texts of MARTIN LUTHER and his contemporaries. PIETISM brought a new lyrical and subjective note into German hymnody in the 17th and 18th centuries, among both Lutherans and other groups, such as the MORAVIAN CHURCH. Swiss, and later, French, English, and Scottish CALVINISM promoted the singing of metrical translations of the psalter, austere set for unaccompanied unison singing.

European hymnody has been largely influenced by Lutheran models, although in Italy the Waldensian church cultivates congregational hymnody influenced by local folksong and operatic styles. The COUNTER-REFORMATION in the mid-16th century stimulated the composition of many fine ROMAN CATHOLIC hymns, and a renewal of interest in the late 19th century eventually led, in England, to the *Westminster Hymnal* (1940). The reintroduction of congregational singing during MASS in the late 1960s also proved a stimulus to the composition of new hymns and led to the adoption of many hymns from non-Catholic sources.

HYPERBOREAN \,hi-pər-ˈbōr-ē-ən, -ˈbōr-, -bō-ˈrē-ən\, in GREEK RELIGION, one of a mythical people intimately connected with the worship of APOLLO at DELPHI and of ARTEMIS at Delos. The name *Hyperboreoi* was conventionally taken by the Greeks as alluding to BOREAS, the north wind, and their home was placed in a paradisaic region beyond the north wind. They lived for 1,000 years; if any desired to shorten that period, he decked himself with garlands and threw himself from a rock into the sea. According to Herodotus, several Hyperborean maidens had been sent with offerings to Delos, but, the offerings having been delivered, the maidens died. Thereafter the Hyperboreans wrapped their offerings in wheat straw and requested their neighbors to hand them on, from nation to nation, until they finally reached Delos.

HYPNOS \ˈhip-nəs, -nōs\, Greek god of sleep. Hypnos was the son of NYX (Night) and the brother of Thanatos (Death). He is variously described as living in the Underworld, in the land of the Cimmerians, or in a dark, misty cave on the island of Lemnos. The waters of LETHE, the river of forgetfulness and oblivion, flowed through this chamber. Hypnos lay on his soft couch, surrounded by his many sons, who were the bringers of dreams. Chief among them were MORPHEUS, who brought dreams of men; Icelus, who brought dreams of animals; and Phantasus, who brought dreams of inanimate things.

In Homer’s *Iliad*, Hypnos is enlisted by HERA to lull ZEUS to sleep so that she can aid the Greeks in their war against Troy. As a reward for his services, Hypnos is given Pasithea, one of the GRACES, to wed.

HYSTASPES \hi-ˈstas-pēz\, *also called* Gushtasp, or Vish-tāspa (fl. 7th and 6th centuries BCE), protector and follower of the Iranian prophet ZOROASTER. Son of Aurvataspa (Lohrasp) of the Naotara family, Hystaspes was a local ruler (*kavi*) in a country called in the AVESTA Aryana Vaejah, which may have been a Greater Chorasmian state abolished by the Achaemenid king Cyrus II the Great in the mid-6th century BCE. Hystaspes’ son, known by his Greek name Darius, became king of the Persian Empire. There is some uncertainty as to whether this Hystaspes is the same as the Vishtāspa of the Zoroastrian texts.

IACCHUS \i-'a-kəs\, also spelled *Iakchos*, minor deity associated with the ELEUSINIAN MYSTERIES, the best known of the ancient Greek MYSTERY RELIGIONS. On the day preceding the commencement of the mysteries, Iacchus' name was invoked with the names of the earth goddess DEMETER and her daughter Kore (PERSEPHONE) during the PROCESSION from Athens to Eleusis. Probably originally a personification of the ritual invocation (*Iakch' ō Iakche*), Iacchus was variously identified. According to some sources he was synonymous with Bacchus (DIONYSUS), whose name was similar to his. Iacchus was also regarded as the son of ZEUS and Demeter (or sometimes as her consort) and differentiated from the Theban Bacchus (Dionysus), who was the son of Zeus and SEMELE. Still other traditions identified Iacchus as the son of Kore or of Dionysus. In art Iacchus was portrayed holding a torch and leading the celebrants.

I AM MOVEMENT, religious movement in the United States that taught that the Mighty I Am is the source of power and of all necessary things. It was begun in the 1930s by Guy Ballard (1878–1939), a mining engineer, and his wife, Edna (1886–1971). The name of the movement came from the Bible verse (Exodus 3:14) in which God replies to MOSES, "I am who I am."

The Ballards taught that the power of the Mighty I Am was available to individuals through many Ascended Masters, the principal ones being JESUS and St. Germain. The Ascended Masters spoke through their special representatives on earth, the Accredited Messengers, who were Edna and Guy Ballard and their son, Donald.

Guy Ballard's professed first meeting with St. Germain, said to have taken place in 1930 at Mount Shasta in northern California, was recounted in his book, *Unveiled Mysteries* (1934). St. Germain was said to have lived on earth and been reincarnated several times as persons such as Samuel in the Old Testament and Francis Bacon of England. According to Ballard, St. Germain took him backward in time and revealed many of Ballard's previous lives (he had been George Washington). Ballard was introduced to many mysteries, and it was revealed to him how the Ascended Masters would work through the Accredited Messengers on earth.

In 1934 the Ballards began holding classes in Chicago and other cities in which messages were given through the Ballards from the Ascended Masters. In the early part of the movement the Ballards' religious presentations and lifestyle were quite simple, but as the movement gained followers and financial success, more elaborate meetings were developed. During the most successful period, in 1938, the movement was estimated to have from one to three million members. Local organizations were formed to carry on the movement, and a monthly periodical, *The Voice of the I Am*, was published.

The Ballards were increasingly criticized by the press and were accused of fraud. In 1939 Guy Ballard announced that

he had been instructed by St. Germain to suspend all public meetings. When Guy Ballard died on Dec. 29, 1939, Mrs. Ballard had his body cremated and on Jan. 1, 1940, announced that Ballard was now an Ascended Master. News of his death, however, led many followers to leave the movement, since the Ballards had taught that the ascension, the liberation forever from the physical body and from reincarnation, would come without the experience of physical death. Edna Ballard carried on as leader of the movement and often reported messages from her late husband.

In 1940 Edna, Donald, and other leaders in the movement were indicted for fraud. Edna and Donald were convicted on several counts, but the U.S. Supreme Court in 1946 set aside the indictment on a technicality. The movement initially declined, but, after some rebuilding, there are some 300 I Am centers worldwide.

IASION \i-'ā-zē-ən\, also called *Iasios* \i-'ā-zē-əs\, in Greek mythology, Cretan youth loved by DEMETER, who lay with him in a fallow field that had been thrice plowed. Their son was Plutus. According to another version, Iasion attempted to rape the goddess and was struck by lightning hurled by ZEUS.

IBLĪS \i-'blēs\, in ISLAM, the personal name of the devil, probably derived from the Greek *diabolos*. Iblīs is also referred to as 'adūw *Allāh* (enemy of God), 'adūw (enemy), or, when he is portrayed as a tempter, *al-Shayṭān* (DEMON).

At the creation of humans, God ordered all his ANGELS to bow down in obedience before Adam. Iblīs refused, claiming he was a nobler being since he was created of fire, while man came only of clay. For this exhibition of pride and disobedience, God threw Iblīs out of heaven. His punishment, how-

ever, was postponed until the Judgment Day, when he and his host will have to face the eternal fires of hell; until that time he is allowed to tempt all but true believers to evil. Iblīs entered the GARDEN OF EDEN and tempted Eve to eat of the tree of immortality, causing both ADAM AND EVE to forfeit paradise. Disguised as the *hātīf*, the mysterious voice of Arab mythology, Iblīs tempted ABRAHAM when he was about to sacrifice his own son, and also tempted 'ALĪ, Muhammad's son-in-law, unsuccessfully trying to keep him from performing the ritual washing of the Prophet's dead body.

Iblīs has long been a figure of speculation among Muslim scholars, who have been trying to explain the ambiguous identification of Iblīs in the QUR'AN as either angel or *jinnī*, a contradiction in terms, as angels are created of light (*nūr*) and are incapable of SIN, while *JINN* are created of fire (*nār*) and can sin. Traditional explanations include the claim that Iblīs was simply a *jinnī* who inappropriately found himself among the angels in heaven, that he was an angel sent to earth to do battle with the rebellious *jinn* who inhabited the earth before man was created, and that he was himself one of the terrestrial *jinn* captured by the angels during their attack and brought to heaven.

Many Sufis (*see* SUFISM) regarded Iblis as a figure of disobedience, but some saw him as a model for the perfect monotheist and lover of God because of his refusal to bow down to Adam and because of his separation from his beloved. Aḥmad AL-GHAZĀLĪ (d. 1126) reportedly said, "Who does not learn TAWḤĪD [proclaiming God's oneness] from SATAN is an infidel."

IBN 'ABBĀD \,i-bən-ab-'bād\, *in full* Abū 'abd Allāh Muḥammad ibn Abī Ishāq Ibrāhīmī al-Nafzī al-Himyarī al-Rundī (b. 1333, Ronda, Spain—d. 1390, buried Bāb al-Futūḥ, Morocco), Islamic theologian who became the leading mystical thinker of North Africa in the 14th century.

Ibn 'Abbād immigrated to Morocco at an early age to attend the famous MADRASAS (religious colleges), where he abandoned legal studies in a quest for mystical knowledge. In 1359 he settled in the town of Salé and became an adherent of the SHĀDHILĪYA order of mystics, which emphasized a personal commitment to SUFISM and institutionalized spiritual ASCETICISM. The order's spread and popularity in North Africa owed much to Ibn 'Abbād's teachings and writings. Because the order and Ibn 'Abbād represented moderate mystical tendencies, there was no conflict between them and the traditional SUNNI religious authorities of Morocco, and in 1375 he was appointed an IMAM (leader of public prayers) by the ruler of Morocco. As a scholar, Ibn 'Abbād was especially noted for two collections of his correspondence, which contain spiritual directions and instructions to his followers.

IBN 'ABD AL-WAHHĀB, MUHAMMAD \,i-bən-'āb-dūl-wa-'hāb\ (b. 1703, 'Uyaynah, Arabia [now in Saudi Arabia]—d. 1792, Al-Dir'īya), theologian and founder of the Wahhābī movement, which attempted a return to the true principles of ISLAM.

Having completed his formal education in MEDINA, in Arabia, 'Abd al-Wahhāb taught for four years in Basra, Iraq, and in Baghdad married an affluent woman whose property he inherited when she died. In 1736, in Iran, he began to teach against what he considered to be the extreme ideas of various exponents of the doctrines of SUFISM. On returning to his native city, he wrote the *Kitāb al-tawḥīd* ("Book of Unity"), the main text for Wahhābī doctrines. His followers call themselves MUWAḤḤIDŪN, or "Unitarians"; the term Wahhābī is generally used by non-Muslims and opponents.

'Abd al-Wahhāb's teachings have been characterized as puritanical and traditional, representing an attempt to reconstruct the early era of the Islamic religion. He made a clear stand against all innovations (BID'Ā) in Islamic faith because he believed them to be reprehensible, insisting that the original grandeur of Islam could be regained if the Islamic community would return to the principles enunciated by the Prophet MUHAMMAD. Wahhābī doctrines, therefore, do not allow for an intermediary between the faithful and Allāh and condemn any such practice as POLYTHEISM. The decoration of mosques, the popular cult of saints, SHĪ'ITE devotion to the IMAMS, and even the smoking of tobacco were condemned.

When the preaching of these doctrines led to controversy, 'Abd al-Wahhāb was expelled from 'Uyayna in 1744. He then settled in Al-Dir'īya, the provincial capital of Ibn Sa'ūd, the ruler of the Najd region (now in Saudi Arabia). The spread of Wahhābism originated from the alliance between 'Abd al-Wahhāb and Ibn Sa'ūd, who, by initiating a campaign of conquest that was continued by his heirs, made Wahhābism the dominant force in Arabia from 1800.

IBN AL-'ARABĪ \,ib-nūl-'ār-ā-'bē\, *in full* Muḥyi al-Dīn Abū 'Abd Allāh Muḥammad ibn 'Alī ibn Muḥammad ibn al-'Arabī al-Hātimī al-Tāī ibn al-'Arabī, *also called* al-Shaykh al-Akbar \āl-'shīkh-āl-ak-'bār\ (b. July 28, 1165, Murcia, Valencia—d. Nov. 16, 1240, Damascus), celebrated Muslim mystic-philosopher who gave the esoteric, mystical dimension of Islamic thought its first full-fledged philosophic expression.

Ibn al-'Arabī was educated in Seville, then an outstanding center of Islamic culture and learning. He stayed there for 30 years, studying traditional Islamic sciences. During those years he traveled a great deal in Spain and North Africa in search of masters of the Sufi (mystical) Path (*see* SUFISM) who had achieved great spiritual progress. During one of these trips he had a dramatic encounter with the great Aristotelian philosopher IBN RUSHD (Averroës, 1126–98) in the city of Córdoba. After the early exchange of only a few words, it is said, the mystical depth of the boy so overwhelmed the old philosopher that he began trembling.

In 1198, while in Murcia, he had a vision in which he was ordered to leave Spain and set out for the East. The first notable place he visited on this journey was MECCA (1201), where he "received a divine commandment" to begin his major work *al-Futūḥāt al-Makkīya* ("The Meccan Revelations"), which was to be completed much later in Damascus. In 560 chapters, it is a personal encyclopedia extending over all the esoteric sciences in ISLAM as Ibn al-'Arabī understood and had experienced them, together with valuable information about his own inner life.

It was also in Mecca that he became acquainted with a young girl of great beauty who, as a living embodiment of the eternal *sophia* (wisdom), was to play in his life a role much like that which Beatrice played for Dante. Her memory was eternalized by Ibn al-'Arabī in a collection of love poems (*Tarjumān al-ashwāq*; "The Interpreter of Desires"), upon which he himself composed a mystical commentary. His pantheistic expressions drew down on him the wrath of Muslim authorities, some of whom prohibited the reading of his works at the same time that others were elevating him to the rank of the prophets and saints.

After Mecca, he visited Egypt (also in 1201) and then Anatolia, where, in Qunya, he met Ṣadr al-Dīn al-Qūnawī, who was to become his most important follower and successor in the East. From Qunya he went on to Baghdad and Aleppo. By the time his long PILGRIMAGE had come to an end at Damascus (1223), his fame had spread all over the Islamic world. Venerated as the greatest spiritual master, he spent the rest of his life in Damascus in contemplation, teaching, and writing. During his Damascus days he composed (1229) one of the most important works in mystical philosophy in Islam, *Fuṣūṣ al-ḥikam* ("The Bezels of Wisdom"). Its importance as an expression of his mystical thought in its most mature form cannot be overemphasized. Starting in the 14th century his ideas flourished among Sufis in India and later in Indonesia.

IBN AL-FĀRID \,ib-nāl-'fār-id\, *in full* Sharaf al-Dīn Abū Ḥafṣ 'Umar ibn al-Fārid (b. March 22, 1181 or March 11, 1182, Cairo—d. Jan. 23, 1235, Cairo), Arab poet whose expression of Sufi MYSTICISM is regarded as the finest in the Arabic language.

Son of a Syrian-born inheritance-law functionary, Ibn al-Fārid studied for a legal career but abandoned law for a solitary religious life in the Muqāṭṭam hills near Cairo. He spent some years in or near MECCA, where he met the renowned Sufi Abū Ḥafṣ 'Umar AL-SUHRAWARDĪ of Baghdad (d.

1234). Venerated as a saint during his lifetime, Ibn al-Fāriḍ was buried in the Muqaṭṭam hills, where his tomb is still visited. In later times his verse became the subject of controversy. Some religious authorities accused him of favoring pantheistic ideas, similar to those of IBN AL-‘ARABĪ, which were held to undermine the SHARĪ‘A and to be conducive to infidelity. In the end, his saintly status was redeemed with the assistance of the Mamlūk sultan Qā’it Bāy (d. 1496).

Many of Ibn al-Fāriḍ’s poems are *qaṣīdas* (“odes”) on the lover’s longing for reunion with his beloved. He expresses through this convention his yearning for a return to Mecca and, at a deeper level, a desire to be assimilated into the spirit of MUHAMMAD, first projection of the Godhead. He developed this theme at length in *Naẓm al-sulūk* (Eng. trans. by A.J. Arberry, *The Poem of the Way*, 1952). Almost equally famous is his “Khamriya” (“Wine Ode”; Eng. trans., with other poems, in Reynold Alleyne Nicholson’s *Studies in Islamic Mysticism* [1921] and in *The Mystical Poems of Ibn al-Fāriḍ*, translated by A.J. Arberry [1956]), which describes the effects of the wine of divine love. See also SUFISM.

IBN AL-JAWZĪ \,ib-nūl-jaū-‘zē\, in full ‘Abd al-Raḥmān ibn ‘Alī ibn Muhammad Abū al-Farash ibn al-Jawzī (b. 1126, Baghdad—d. 1200, Baghdad), jurist, theologian, historian, preacher, and teacher who became an important figure in the Baghdad establishment and a leading spokesman of traditionalist Sunni ISLAM (see SUNNA).

Ibn al-Jawzī received a traditional religious education and chose a teaching career, becoming by 1161 the master of two religious colleges. A fervent adherent of Ḥanbalī doctrine (one of the four schools of Islamic law), he was a noted preacher whose sermons were conservative in viewpoint and supported the religious policies of the Baghdad ruling establishment. In return he was favored by the CALIPHS, and by 1178/79 he had become the master of five colleges and the leading Ḥanbalī spokesman of Baghdad.

In the decade 1170–80 he attained the height of his power. Becoming a semiofficial inquisitor, he constantly searched for doctrinal heresies. He was particularly critical of Sufis (Muslim mystics; see SUFISM) and of SHĪ‘ITE scholars. His zeal antagonized many liberal religious scholars. The arrest in 1194 of Ibn Yūnus, his old friend and patron, marked the end of Ibn al-Jawzī’s career and his close links with governmental circles. In that year he was arrested and exiled to the city of Wāsiṭ. He was partially rehabilitated on the eve of his death and allowed to return to Baghdad.

Ibn al-Jawzī’s scholarly works reflected his adherence to Ḥanbalī doctrine. Much of his work was of a hagiographical and polemical nature. Of particular interest was his *Ṣifat al-Ṣafwah* (“Attributes of Mysticism”), an extensive history of MYSTICISM, which argued that the true mystics were those who modeled their lives on the COMPANIONS OF THE PROPHET. See also ḤANBALĪ LEGAL SCHOOL.

IBN ‘AQĪL \,i-bən-a-‘kēl\, in full Abū al-Wafā’ ‘Alī ibn ‘Aqīl ibn Muhammad ibn ‘Aqīl ibn Aḥmad al-Baghdādī az-Zafarī (b. 1040, Baghdad—d. 1119), Islamic theologian and scholar of the Ḥanbalī school, the most traditional of the schools of Islamic law. His thoughts and teachings represent an attempt to give a somewhat more liberal direction to Ḥanbalism.

In 1055–66 Ibn ‘Aqīl received instruction in Islamic law according to the tenets of the Ḥanbalī school. During these years, however, he also became interested in liberal theo-

logical ideas that were regarded as reprehensible by his traditionalist Ḥanbalī teachers. These ideas represented two diverse trends within Islamic thought—that of the Mu‘tazilites, those who sought to understand and interpret religious doctrine according to the canons of logical inquiry and reason, and that of the teachings of the mystic AL-HALLĀJ, especially his concept of unity of phenomena (*waḥdat al-shuhūd*), a doctrine that attempted to accommodate the idea of unity (TAWḤĪD) of SUFISM and the scripturalist theologians’ concern with the revealed law (*shar’*).

Ibn ‘Aqīl’s attraction to these ideas weakened his standing in the conservative Ḥanbalī community of Baghdad. He aroused further animosity when in 1066 he attained a professorship at the important mosque of al-Manṣūr. The professional jealousy of those theologians who had been passed over, coupled with his espousal of innovative and controversial doctrines, led to Ibn ‘Aqīl’s persecution. After the death of his influential patron, Abū Manṣūr ibn Yūsuf, in 1067 or 1068, he was forced to retire from his teaching position. Until 1072 he lived in partial retirement under the protection of Abū Manṣūr’s son-in-law, a wealthy Ḥanbalī merchant. The controversy over his ideas came to an end in September 1072, when he was forced to retract his beliefs publicly before a group of scripturalist theologians. This retraction may have been based on expediency and was in keeping with the recognized practice of TAQĪYA (precautionary dissimulation).

Ibn ‘Aqīl spent the rest of his life in the pursuit of scholarship. His most famous work was the *Kitāb al-funūn* (“Book of Sciences”), an encyclopedia covering a large variety of subjects. This work was said to have included between 200 and 800 volumes, all but one of which have been lost. See also ḤANBALĪ LEGAL SCHOOL.

IBN BĀBĀWAYH \,i-bən-‘bā-bāu-wī\, also spelled Ibn Babūyā, in full Abū Ja‘far Muhammad ibn Abū al-Ḥasan ‘Alī ibn Ḥusayn ibn Mūsā al-Qummī, also called al-Ṣadūq Ḳāṣa-ḍūk \ (b. c. 923, Khorāsān province, Iran—d. 991, Rayy), Islamic religious scholar, author of one of the “Four Books” that are the basic authorities for the doctrine of Twelver SHĪ‘ITES (ITHNĀ ‘ASHARĪYA).

According to legend Ibn Bābawayh was born as the result of special prayers to the MAḤDĪ (the SHĪ‘ITE deliverer). In 966 he left Khorāsān for Baghdad, possibly attracted by the SHĪ‘ITE inclination of the Būyid dynasty that ruled there. Within a short time he was recognized as the spokesman and leading intellectual figure of Twelver SHĪ‘ITES.

More than 200 separate works have been attributed to Ibn Bābawayh, although only a few are now extant. His *Risālat al-i’tiqādāt* (*Shi‘ite Creed*, 1942) is important for the study of the doctrinal development of SHĪ‘ISM. His works are still widely used wherever Twelver SHĪ‘ITES are found.

IBN BĀJJA \,i-bən-‘bā-jə\, also called Avempace \,ä-vəm-‘pä-sä\, in full Abū Bakr Muhammad ibn Yahyā ibn al-Sāyigh al-Tujībī al-Andalusī al-Saraqustī (b. c. 1095, Zaragoza, Spain—d. 1138/39, Fès, Morocco), earliest known representative in Spain of the Arabic Aristotelian-Neoplatonic philosophical tradition and a forerunner of the scholar IBN ṬUFAYL and of the philosopher IBN RUSHD (Averroës).

Ibn Bājja’s chief philosophical tenets seem to have included belief in the possibility that the human soul could become united with the Divine. This union was conceived as the final stage in an intellectual ascent beginning with the impressions of sense objects that consist of form and

matter and rising through a hierarchy of spiritual forms (*i.e.*, forms containing less and less matter) to the Active Intellect, which is an emanation of the deity. Many Muslim biographers consider Ibn Bājja to have been an atheist.

Ibn Bājja's most important philosophical work is *Tabḥīr al-mutawahhīd* ("The Regime of the Solitary"), incomplete at his death. He also wrote a number of songs and poems and a treatise on botany; he is known to have studied astronomy, medicine, and mathematics.

Unlike his predecessor AL-FĀRĀBĪ, Ibn Bājja is silent about the philosopher's duty to partake of the life of the city. He appears to argue that the aim of philosophy is attainable independently from the philosopher's concern with the best city and is to be achieved in solitude or, at most, in comradeship with philosophic souls. Unlike IBN SĪNĀ (Avicenna), who prepared the way for him by clearly distinguishing between theoretical and practical science, Ibn Bājja is concerned with practical science only insofar as it is relevant to the life of the philosopher. He is contemptuous of allegories and imaginative representations of philosophic knowledge and silent about theology, and he shows no concern with improving the multitude's opinions and way of life.

IBN DAUD, ABRAHAM BEN DAVID HALEVI \i-bən-'da-ud\, also called Rabad I \rā-'bād, 'ra-bad\ (b. c. 1110, Toledo, Castile—d. c. 1180, Toledo), physician and historian who was the first Jewish philosopher to draw on Aristotle's writings in a systematic fashion.

Ibn Daud wrote his history *Sefer ha-kabbala* ("Book of Tradition") in answer to an attack on rabbinic authority by the Karaites, a Jewish sect that considered only SCRIPTURE as authoritative, not the Jewish oral law as embodied in the TALMUD. Thus, he attempted to demonstrate an unbroken chain of rabbinic tradition from MOSES, providing much valuable information about contemporary Spanish Jewry, their SYNAGOGUES, and their religious practices.

Deriving his Aristotelianism from the 11th-century physician and philosopher IBN SĪNĀ (Avicenna) and other Islamic writers, Ibn Daud intended his major philosophic work, *Sefer ha-emuna ha-rama* ("Book of Sublime Faith") as a solution to the problem of FREE WILL. Divided into three sections dealing with physics and metaphysics, religion, and ethics, the *Emuna ha-rama* was eclipsed by the more precise Aristotelian writings of the 12th-century rabbi MOSES MAIMONIDES.

IBN EZRA, ABRAHAM BEN MEIR \i-bən-'ez-rə\ (b. 1092/93, Tudela, Emirate of Saragossa—d. 1167, Calahorra, Spain), poet, grammarian, traveler, Neoplatonic philosopher, and astronomer, best known as a biblical exegete whose commentaries contributed to the Golden Age of Spanish JUDAISM.

As a young man he lived in Muslim Spain. He was on friendly terms with the eminent poet and philosopher JUDAH HA-LEVI, and he traveled to North Africa and possibly to Egypt. Primarily known as a scholar and poet up to that point, about 1140 Ibn Ezra began a lifelong series of wanderings throughout Europe, in the course of which he produced distinguished works of biblical EXEGESIS and disseminated biblical lore.

His biblical commentaries include expositions of the BOOK OF JOB, the Book of Daniel, Psalms, and, most important, a work produced in his old age, a commentary on the PENTATEUCH. Although his exegeses are basically philological, he inserted enough philosophical remarks to reveal himself to be a Neoplatonic pantheist. At the same time,

he believed that God gave form to uncreated, eternal matter, a concept somewhat at odds with Neoplatonic doctrine. His commentary on the Pentateuch is sometimes ranked with the classic 11th-century commentaries by RASHI on the TALMUD.

Ibn Ezra translated the Hispano-Hebrew grammarians from Arabic and wrote grammatical treatises. He also had a good knowledge of astronomy and cast HOROSCOPES, and he believed in numerological MYSTICISM as well.

IBN FALAQUERA \i-bən-'fā-lā-'kā-rā\, in full Shemtob ben Joseph ibn Falaquera, Falaquera also spelled Palquera \pāl-'kā-rā\ (b. c. 1225—d. c. 1295), Spanish-born Jewish philosopher and translator who propagated a reconciliation between Jewish Orthodoxy and philosophy and defended MAIMONIDES against the attacks of traditionalists. His works include *Dialogue Between a Philosopher and a Man of Piety*; an ethical treatise known as *The Balm of Sorrow*; an introduction to the study of the sciences entitled *Reshit ḥokhma* ("The Beginning of Wisdom"); *Sefer ha-ma'alot* ("Book of Degrees"), which advocates the Neoplatonic ideal of the CONTEMPLATIVE life; a commentary on Maimonides' *Guide of the Perplexed* under the title *More ha-more* ("Guide of the Guide"); and an abstract of Ibn Gabirol's influential *Fons vitae* in Hebrew.

IBN HANBAL, AHMAD \i-bən-'kän-bəl\ (b. 780, Baghdad—d. 855, Baghdad), Muslim theologian, jurist, and martyr. He was the compiler of the traditions (HADITH) of the Prophet MUHAMMAD and formulator of the Ḥanbali, the most strictly scripturalist of the four Sunni Islamic schools of law.

When Ibn Hanbal was 15 he began to study the Hadith of the Prophet Muhammad, supplementing his study with travels to the cities of Kufa and Basra in Iraq and MECCA, HAJAZ, and MEDINA in Arabia. He also traveled to Yemen and Syria. He made five PILGRIMAGES to Mecca, three times on foot. Ibn Hanbal led a life of ASCETICISM and self-denial, winning many disciples. Two of his children were well known and closely associated with his intellectual work: Šāliḥ (d. 880) and 'Abd Allāh (d. 903).

The inquisition, known as *al-miḥna*, was inaugurated in 833, when the CALIPH al-Ma'mūn made obligatory upon all Muslims the belief that the QUR'AN was created, a doctrine espoused by the Mu'tazilites (a rationalist school that argued that reason was equal to revelation as a means to religious truth).

Ibn Hanbal refused to subscribe to the Mu'tazili doctrine and was imprisoned. In 833 Ibn Hanbal was tried before the caliph al-Mu'taṣim for three days, and upon his continued refusal to recant he was flogged until fears of popular protest brought the torture to an end. After his release Ibn Hanbal did not resume his lectures until the inquisition was publicly proclaimed at an end.

The inquisition continued under the next caliph, al-Wāthiq, but Ibn Hanbal was no longer molested, in spite of attempts on the part of his opponents to persuade the caliph to persecute him. The new caliph, like his predecessor, was most likely influenced by the threat of a popular uprising should he lay hands on a man popularly held to be a saint. The momentum of the inquisition carried it two years into the reign of al-Mutawakkil, who finally put an end to it in 848.

The most important of Ibn Hanbal's works is his collection of the Hadith of the Prophet Muhammad and his Companions. This collection, the *Musnad*, was once believed to

have been compiled by the author's son ('Abd Allāh), but there is now evidence that the work was compiled and arranged by Ibn Ḥanbal himself. These traditions were considered by Ibn Ḥanbal as a sound basis for argument in law and religion.

Historical scholarship regarding Ibn Ḥanbal and his school has suffered from a lack of sufficient documentation, among other things. Too much stress has been laid on the influence of the teachings of Shāfi'ī, the founder of the SHĀFI'Ī LEGAL SCHOOL, whom Ibn Ḥanbal apparently met only once. He had a high respect for Shāfi'ī but also for the other great jurists who belonged to other schools of law, without, for that matter, relinquishing his own independent opinions. He was against codification of the law, maintaining that canonists had to be free to derive the solutions for questions of law from scriptural sources, namely the Qu'ran and the SUNNA (the body of Islamic custom and practice based on Muhammad's words and deeds). It was to this end that he compiled his great *Musnad*, wherein he registered all the traditions considered in his day acceptable as bases for the solution of questions, along with the Qu'ran itself.

The fact that the Ḥanbalī school was organized at all was due to the impact of Ibn Ḥanbal on his time. The other Sunni schools were already prospering in Baghdad when the Ḥanbalī school sprang up in their midst, drawing its membership from theirs. The lateness of the hour accounts for the relatively small membership attained by the Ḥanbalī school compared with the older schools. Size notwithstanding, in the Middle Ages the school acted as a spearhead of traditionalist Sunnism in its struggle against RATIONALISM. One of Ibn Ḥanbal's greatest followers, IBN TAYMĪYA (1263–1328), was claimed by both the Wahhābiya, a reform movement founded in the Arabian peninsula during the 18th century, and the modern Salafiya movement, which arose in Egypt and advocated the continued supremacy of Islamic law but with fresh interpretations to meet the community's changing needs. Ibn Ḥanbal himself is among the fathers of ISLAM whose names have constantly been invoked against rationalist movements down through the ages. *See also* ḤANBALI LEGAL SCHOOL.

IBN ḤAZM \i-bən-ē-'kă-zəm\, *in full* Abū Muhammad 'Alī ibn Aḥmad ibn Sa'īd ibn Ḥazm (b. Nov. 7, 994, Córdoba, Caliphate of Córdoba—d. Aug. 15, 1064, Manta Lisham, near Seville), Muslim historian, jurist, and theologian of Islamic Spain, famed for his literary productivity, breadth of learning, and mastery of the Arabic language.

Ibn Ḥazm was born into a notable family that claimed descent from a Persian client of Yazīd, the brother of Mu'āwiya, the first of the Umayyad dynasty rulers in Syria; scholars, however, tend to favor evidence that he was of Iberian Christian background. Ḥazm, his great-grandfather, probably converted to ISLAM, and his grandfather Sa'īd moved to Córdoba, the capital of the caliphate. Aḥ-mad, his father, held a high position under al-Manṣūr and his successor, al-Muzaffar, who ruled in the name of the CALIPH Hishām II.

Upon the death of al-Muzaffar in 1008 CE a bloody civil war erupted and continued until 1031, when the caliphate was abolished and replaced by a large number of petty states. The family was uprooted, and Aḥmad died in 1012; Ibn Ḥazm continued to support Umayyad claimants to the office of caliph, for which he was frequently imprisoned.

By 1031 he began to express his convictions and activist inclinations through literary activity, becoming a very

controversial figure. According to one of his sons, he produced some 80,000 pages of writing, making up about 400 works. Fewer than 40 of these works are still extant. The varied character of his literary activity covers an impressive range of jurisprudence, logic, history, ethics, COMPARATIVE RELIGION, and theology. Probably best known for his work in jurisprudence and theology, for which the basic qualification was a thorough knowledge of the QUR'AN and HADĪTH, he became one of the leading exponents of the Zāhirī (literalist) school of jurisprudence (*see* ZĀHIRĪYA). Though his legal theories never won him many followers, he creatively extended the Zāhirī principle to the field of theology. He made a comparative study on the religious pluralism of his day, which is among the earliest of such studies and is highly regarded for its careful compilation of historical detail.

An activist by nature with a deep sense of the reality of God, Ibn Ḥazm lived very much in the political and intellectual world of his times; however, he was very much a nonconformist. He conversed and debated with the leading contemporaries of his area, to whom he exhibited a thirst for knowledge as well as uncompromising convictions. Most observant, careful in analysis, meticulous in detail, and devoted to the clarity of his positions, he demanded the same of others. In his writings he attacked deceit, distortion, and inconsistency; but at the same time Ibn Ḥazm exhibited a sensitive spirit and expressed profound insights about the dimensions of human relationships.

He was shunned and defamed for his political and theological views. When some of his writings were burned in public, he said that no such act could deprive him of their content. Although attacks against his thought continued after his death, various influential defenders appeared. He was frequently and effectively quoted, so much so that the phrase "Ibn Ḥazm said" became proverbial. *See also* FIQH; KALĀM.

IBN ISHĀQ \i-bən-ē-'shāk\, *in full* Muhammad ibn Ishāq ibn Yasār ibn Khiyār (b. c. 704, MEDINA, Arabia—d. 767, Baghdad), Arab biographer of the Prophet MUHAMMAD whose book, in a recension by Ibn Hishām, is one of the most important sources on the Prophet's life.

Ibn Ishāq was the grandson of an Arab prisoner captured by Muslim troops in Iraq and brought to Medina, where he was freed after accepting ISLAM. Ibn Ishāq's father and two uncles collected and transmitted information about Muhammad in Medina, and Ibn Ishāq soon became an authority on the Prophet's campaigns.

He studied in Alexandria and subsequently moved to Iraq, where he lived in the Jazīra and Ḥīra regions and finally in Baghdad. Informants met on these travels furnished him with much of the information for his *Sīra*, or life, of Muhammad (later revised by Ibn Hishām). This extensive biography covers Muhammad's genealogy and birth, the beginning of his mission and of the revelation of the QUR'AN, and his migration to Medina and campaigns of conquest, and it concludes with his death. Citations from the *Sīra* also appear in the works of Arabic historians such as AL-ṬABARĪ.

Ibn Ishāq was criticized by some Muslim scholars, including the jurist MĀLIK IBN ANAS. AḤMAD IBN ḤANBAL, however, did accept Ibn Ishāq as an authority for the campaigns. But, on the grounds that Ibn Ishāq was not always exact enough in naming his authorities, Ibn Ḥanbal was not willing to accept the *Sīra* in regards to traditions about the Prophet having legal force.

IBN KATHĪR \i-bən-ka-'thir\, *in full* 'Imād al-Dīn Ismā'īl ibn 'Umar ibn Kathīr (b. c. 1300, Bursa, Byzantine Empire—d. February 1373, Damascus), Muslim theologian and historian who became one of the leading intellectual figures of 14th-century Syria.

Ibn Kathīr was educated in Damascus and obtained his first official appointment in 1341, when he joined an inquisitorial commission formed to determine certain questions of HERESY. Thereafter he received various semiofficial appointments, culminating in June/July 1366 with a professorial position at the Great Mosque of Damascus.

As a scholar, Ibn Kathīr is best remembered for his 14-volume history of ISLAM, *al-Bidāya wa'l-nihāya* ("The Beginning and the End"), a work that formed the basis of a number of writings by later historians. Ibn Kathīr was also a noted student of HADITH; his *Kitāb al-jāmi'* is an alphabetical listing of the COMPANIONS OF THE PROPHET and the sayings that each transmitted and is thus a reconstruction of the chain of authority for each Hadith.

IBN KHALDŪN \i-bən-kal-'dūn\, *in full* Walī al-Dīn 'Abd al-Rahmān ibn Muḥammad ibn Muḥammad ibn Abī Bakr Muḥammad ibn al-Ḥasan ibn Khaldūn (b. May 27, 1332, Tunis—d. March 17, 1406, Cairo), great Arab historian, who developed one of the earliest nonreligious philosophies of history, contained in his masterpiece, the *Muqaddima* ("Introduction to History").

After completing his formal education Ibn Khaldūn was, at the age of 20, given a post at the court of Tunis, followed three years later by a secretaryship to the SULTAN of Morocco. After two years of service, however, he was suspected of participation in a rebellion and was imprisoned. After his release he again fell into disfavor and decided to leave Morocco for Granada, whose prime minister, the brilliant writer Ibn al-Khatīb, was a friend. But, according to Ibn Khaldūn, "enemies and intriguers" turned Ibn al-Khatīb against him; it can be conjectured that the task of these enemies must have been greatly facilitated by the apparent jealousy between the two most brilliant Arab intellectuals of the age. Ibn Khaldūn found it necessary to leave, and he returned to Africa. (Later he would return to Granada to make an unsuccessful effort to save Ibn al-Khatīb from being killed by order of its ruler.)

The following 10 years saw him change employment frequently. During this period he served as prime minister and in other administrative capacities, led a punitive expedition, and spent some time "studying and teaching." This extreme mobility is partly explained by the instability of the times, as the Almohad Empire, which had embraced the whole of North Africa and Muslim Spain, had broken down in the middle of the 13th century. But in Ibn Khaldūn's case a certain restlessness and a capacity to make enemies might also be suspected.

In 1375 Ibn Khaldūn sought refuge with the tribe of Awlād 'Arīf, who lodged him and his family in the safety of a castle in Algeria. There he spent four years, writing his massive masterpiece, the *Muqaddima*. His original intention, which he subsequently achieved, was to write a universal history of the Arabs and Berbers, but before doing so he judged it necessary to discuss historical method, with the aim of providing the criteria necessary for distinguishing historical truth from error. This led him to formulate what the 20th-century English historian Arnold Toynbee has described as "a philosophy of history which is undoubtedly the greatest work of its kind that has ever yet been created by any mind in any time or place."

But Ibn Khaldūn went even further. His study of the nature of society and social change led him to evolve what he clearly saw was a new science, which he called *'ilm al-'um-rān* ("the science of culture"). Many would claim that Book I of the *Muqaddima* sketches a general sociology; Books II and III a sociology of politics; Book IV, a sociology of urban life; Book V, a sociology of economics; and Book VI, a sociology of knowledge. The work is held together by the central concept of *'asabiyya*, or "tribal cohesion." It is this form of social cohesion, which arises spontaneously in tribes and other small KINSHIP groups, but which can be intensified and enforced by a religious ideology, that provides the motive force that carries ruling groups to power.

During his stay in Algeria, Ibn Khaldūn not only completed the first draft of the *Muqaddima* but also wrote part of his massive history, *Kitāb al-'ibar*, the best single source on the history of Muslim North Africa. He then returned to Tunis. Once more he aroused both the jealousy of a prominent scholar and the suspicion of the ruler, and he left for Egypt, ostensibly for the purpose of performing the PILGRIMAGE to MECCA. A few days after his arrival in Cairo he started teaching at al-Azhar, the famous Islamic university. Shortly afterward, the new Mamlūk ruler of Egypt, Barqūq, with whom he was to remain on fairly good terms, appointed him to a professorship of jurisprudence, and later he made him a judge. Barqūq also successfully interceded with the ruler of Tunis to allow Ibn Khaldūn's family to rejoin him, but the ship carrying them foundered in the port of Alexandria, drowning all on board.

Ibn Khaldūn took his judicial duties quite seriously and attempted to reform the numerous abuses that had developed in the administration of justice. Once again, trouble ensued and he was dismissed. But he was given another professorship and spent his time teaching, writing, and revising his *Muqaddima*. He was also able to perform the pilgrimage to Mecca.

When the Tatars, led by Timur, invaded Syria in 1400, the new sultan of Egypt, Faraj, went out to meet them, taking Ibn Khaldūn and other notables with him. Shortly thereafter, the Mamlūk army returned to Egypt, leaving Ibn Khaldūn in besieged Damascus. The historian used all his accumulated worldly wisdom to secure from Timur a safe-conduct for the civilian employees left in Damascus and permission for himself to return to Egypt, where he remained until his death in 1406.

IBN RUSHD \i-bən-'rūshd\, *also called* Averroës, *medieval Latin* Averroës, *Arabic in full* Abū al-Walīd Muḥammad ibn Aḥmad ibn Muḥammad ibn Rushd (b. 1126, Córdoba—d. 1198, Marrakech, Almohad Empire), Islamic religious philosopher who integrated Islamic traditions and Greek thought in a series of summaries and commentaries on most of Aristotle's works (1162–95) and on Plato's *Republic*, which exerted considerable influence for centuries. He wrote the *Decisive Treatise on the Agreement Between Religious Law and Philosophy (Faṣl)*; *Examination of the Methods of Proof Concerning the Doctrines of Religion (Manāḥij)*; and *The Incoherence of the Incoherence (Tahāfut al-tahāfut)*, all in defense of the philosophical STUDY OF RELIGION (1179–80).

Ibn Rushd was born into a distinguished family of jurists. Thoroughly versed in the traditional Muslim sciences (especially EXEGESIS of the QUR'AN and HADITH, and FIQH, or Law), trained in medicine, and accomplished in philosophy, he rose to be chief *qāḍī* (judge) of Córdoba. After the death of the philosopher IBN ṬUFAYL, Ibn Rushd succeeded him as

personal physician to the CALIPHs Abū Ya'qūb Yūsuf in 1182 and his son Abū Yūsuf Ya'qūb in 1184. In 1169 Ibn Ṭufayl had introduced Ibn Rushd to Abū Ya'qūb, who requested that he provide a badly needed new interpretation of Aristotle's philosophy, a task to which he devoted many years of his life.

Between 1169 and 1195 Ibn Rushd wrote a series of commentaries on most of Aristotle's works (e.g., the *Organon*, *De anima*, *Physica*, *Metaphysica*, *De partibus animalium*, *Parva naturalia*, *Meteorologica*, *Rhetorica*, *Poetica*, and the *Nicomachean Ethics*). Aristotle's *Politica* was inaccessible; therefore he wrote a commentary on Plato's *Republic*. Ibn Rushd's commentaries exerted considerable influence on Jews and Christians in the following centuries. He was able to present competently Aristotle's thought and to add considerably to its understanding. He ably and critically drew upon the ideas of the classical commentators Themistius and Alexander of Aphrodisias and the *falāsifa* (Muslim philosophers) AL-FĀRĀBĪ, IBN SĪNĀ (Avicenna), and his own countryman IBN BĀJJA (Avempace).

His own first work, *General Medicine* (*Kulliyāt*, Latin *Colliget*), was written between 1162 and 1169. Only a few of his legal writings and none of his theological writings are preserved. Undoubtedly his most important writings are three closely connected religious-philosophical polemical treatises, composed in the years 1179 and 1180: the *Faṣl*; its *Appendix: Manāhij*; and *Tahāfut al-tahāfut*. In the first two Ibn Rushd stakes a bold claim: Only the metaphysician employing certain proof (syllogism) is capable and competent (as well as obliged) to interpret the doctrines contained in the prophetically revealed law (Shar' or SHARĪ'A), and not the Muslim *mutakallimūn* (dialectic theologians), who rely on dialectical arguments. To establish the true, inner meaning of RELIGIOUS BELIEFS and convictions is the aim of philosophy in its quest for truth. This inner meaning must not be divulged to the masses, who must accept the plain, external meaning of SCRIPTURE contained in stories, similes, and metaphors. The third work is devoted to a defense of philosophy against his predecessor AL-GHAZĀLĪ'S telling attack.

Ibn Rushd pursued his philosophical quest in the face of strong opposition from the *mutakallimūn*, who, together with the jurists, occupied a position of great influence. This may explain why Abū Yūsuf—on the occasion of a JIHAD against a coalition of Christians—dismissed him from high office and banished him to Lucena in 1195. But his disgrace

Ibn Rushd (Averroës), depicted on a Spanish postage stamp

Culver Pictures

was short-lived—though long enough to cause him acute suffering—since the caliph recalled him after his return to Marrakesh.

There is only one truth for Ibn Rushd, that of the religious law, which is the same truth that the metaphysician is seeking. Ibn Rushd stated explicitly and unequivocally that religion is for all three classes; that the contents of the Sharī'a are the whole and only truth for all believers; and that religion's teachings about reward and punishment and the hereafter must be accepted in their plain meaning by the elite no less than by the masses. Accepting Aristotle's division of philosophy into theoretical (physics and metaphysics) and practical (ethics and politics), he finds that the Sharī'a teaches both to perfection: abstract knowledge commanded as the perception of God, and practice—the ethical virtues the law enjoins (*Commentary on Plato's Republic*). As a Muslim, Ibn Rushd insists on the attainment of happiness in this and the next life by all believers. As a philosopher he distinguishes between degrees of happiness and assigns every believer the happiness that corresponds to his intellectual capacity. Everyone is entit-

led to his share of happiness. The Sharī'a of ISLAM demands that the believer should know God. This knowledge is accessible to the naive believer in metaphors, the inner meaning of which is intelligible only to the metaphysician with the help of demonstration.

IBN SHEM TOV, JOSEPH BEN SHEM TOV \i-bən-'shem-'tōb, -'tōv\ (b. c. 1400—d. c. 1480), Jewish philosopher and Castilian court physician who attempted to reconcile Aristotelian ethical philosophy with Jewish religious thought, best exemplified by his influential *Kevod Elohim* (written 1442; "The Glory of God"). Here he argued that answers sought through philosophical inquiry can be valuable in one's quest for religious knowledge and that even religious principles should be subjected to such inquiry. Although as a philosopher he advocated intellectual pursuits, Joseph maintained that the immortality of the soul was assured not by intellectual development but by conscientious religious observance. He also upheld the value of MYSTICISM and intuition in the understanding of religious precepts.

IBN SĪNĀ \i-bən-'sē-nā\, also called Avicenna \a-və-'se-nə\, Arabic in full Abū 'Alī al-Ḥusayn ibn 'Abd Allāh ibn Sīnā (b. 980, Bukhara, Iran—d. 1037, Hamadan), Iranian

physician, the most famous and influential of the philosopher-scientists of ISLAM. He was particularly noted for his contributions in the fields of Aristotelian philosophy and medicine. He composed the *Kitāb al-shifā* ("Book of Healing"), a vast philosophical and scientific encyclopedia, and the *Canon of Medicine*, which is among the most famous books in the history of medicine.

Ibn Sīnā received his earliest education in Bukhara under the direction of his father. Since his father's house was a meeting place for learned men, from his earliest childhood Ibn Sīnā was able to profit from the company of the outstanding masters of his day. By the age of 10 he had memorized the QUR'AN and much Arabic poetry. Thereafter, he studied logic and metaphysics. He read avidly and mastered Islamic law, then medicine, and finally metaphysics. Particularly helpful in his intellectual development was his access to the rich royal library of the Sāmānids—the first great native dynasty that arose in Iran after the Arab conquest—as the result of his successful cure of the Sāmānid prince, Nūḥ ibn Maṣṣūr. By the time he was 21 he was accomplished in all branches of formal learning and had already gained a reputation as an outstanding physician. His services were also sought as an administrator, and for a while he even entered government service as a clerk.

This was one of the tumultuous periods of Iranian history, when new Turkish elements were replacing Iranian domination in Central Asia, and local Iranian dynasties were trying to gain political independence from the 'Ab-

bāsīd caliphate in Baghdad (in modern Iraq). Fleeing political upheaval, Ibn Sīnā left for central Iran, then continued further to Hamadan in west-central Iran, where Shams al-Dawla was ruling. This journey marked the beginning of a new phase in Ibn Sīnā's life. He became court physician and enjoyed the favor of the ruler to the extent that twice he was appointed vizier. As was the order of the day, he also suffered political reactions and intrigues against him and was forced into hiding for some time; at one time he was even imprisoned.

This was the period when he began his two most famous works. *Kitāb al-shifā* examines logic, the natural sciences, including psychology, the *quadrivium* (geometry, astronomy, arithmetic, and music), and metaphysics. His thought in this work owes a great deal to Greek influences, especially Aristotle, and to NEOPLATONISM. His system rests on the conception of God as the necessary existent: in God alone essence—what he is—and existence—that he is—coincide. There is a gradual multiplication of beings through a timeless emanation from God as a result of his self-knowledge. *The Canon of Medicine* (*Al-Qānūn fī al-ṭibb*) is a systematic encyclopedia based on the achievements of Greek physicians of the Roman imperial age and on other Arabic works and, to a lesser extent, on his own experience. Occupied during the day with his duties at court as both physician and administrator, Ibn Sīnā spent almost every night with his students composing these and other works and carrying out general philosophical and scientific discussions related to them. Even in hiding and in prison he continued to write.

In 1022 Shams al-Dawla died, and Ibn Sīnā, after a period of difficulty that included imprisonment, fled to Iṣfahān

Ibn Sīnā (Avicenna), postage stamp from Qatar, 1971
The Granger Collection

(about 250 miles south of Tehran), where he spent the last 14 years of his life in relative peace. He was highly esteemed by 'Alā' al-Dawla, the ruler, and by his court. Here he finished the two major works he began in Hamadan and wrote most of his nearly 200 treatises; he also composed the first work on Aristotelian philosophy in the Persian language and the masterly summary of his "Book of Healing" called *Kitāb al-naĵāt* ("Book of Salvation"). During this time he composed his last major philosophical opus and the most "personal" testament of his thought, *Kitāb al-ishārāt wa'l-tanbīhāt* ("Book of Directives and Remarks"). In this work he described the mystic's spiritual journey from the beginnings of faith to the final stage of direct and uninterrupted vision of God. When an authority on Arabic philology criticized him for his lack of mastery in the subject, he spent three years studying it and composed a vast work called *Lisān al-'arab* ("The Arabic Language"), which remained in rough draft until his death. Accompanying 'Alā' al-Dawlah on a military campaign, Ibn Sīnā fell ill and, despite his attempts to treat himself, died from colic and exhaustion.

In the Western world, Ibn Sīnā's "Book of Healing" was translated partially into Latin in the 12th century, and the complete *Canon* appeared in the same century. His thought, blended with that of AUGUSTINE, was a basic component of the thought of many of the medieval SCHOLASTICS, especially in the FRANCISCAN schools. In medicine the *Canon* became the medical authority for several centuries, and Ibn Sīnā enjoyed an undisputed place of honor equaled only by the early Greek physicians Hippocrates and Galen. In the East his dominating influence in medicine, philosophy, and theology is still alive within the circles of Islamic thought.

IBN TAYMĪYA \i-bən-tī-'mē-ä\, in full Taqī al-Dīn Abū al-'Abbās Aḥmad ibn 'Abd as-Salām ibn 'Abd Allāh ibn Muhammad ibn Taymīya (b. 1263, Harran, Mesopotamia—d. Sept. 26, 1328, Cairo), one of Islam's most forceful religious thinkers who, as a member of the Pietist school founded by IBN ḤANBAL, sought the return of ISLAM to its sources, the QUR'AN and the SUNNA. He is also the source of the Wāḥḥābīya, a mid-18th-century traditionalist movement of Islam in Arabia.

Ibn Taymīya was born in Mesopotamia. Educated in Damascus, where he had been taken in 1268 as a refugee from the Mongol invasion, he later steeped himself in the teachings of the Pietist school. Though he remained faithful throughout his life to that school, he also acquired an extensive knowledge of contemporary Islamic sources and disciplines: the Qur'an, the HADITH, jurisprudence (FIQH), dogmatic theology (KALĀM), philosophy, and Sufi theology. As early as 1293 Ibn Taymīya came into conflict with local authorities for protesting a sentence, pronounced under religious law, against a Christian accused of having insulted the Prophet. In 1298 he was accused of ANTHROPOMORPHISM and of criticizing the legitimacy of dogmatic theology.

During the great Mongol crisis of the years 1299 to 1303, and especially during the occupation of Damascus, he led the resistance party and denounced the suspect faith of the invaders and their accomplices. During the ensuing years Ibn Taymīya was engaged in intensive polemic activity: either against the Kasrawān SHĪ'ITES in Lebanon; the Rifā'īya, a Sufi (see SUFISM) religious brotherhood; or the *ittihādīya* school, which taught that the Creator and the created become one, a school that grew out of the teaching of IBN AL-'ARABĪ (d. 1240).

In 1306 he was summoned to explain his beliefs to the governor's council, which, although it did not condemn him, sent him to Cairo; there he appeared before a new council on the charge of anthropomorphism and was imprisoned in the citadel for 18 months. Soon after gaining his freedom, he was confined again in 1308 for several months in the prison of the QĀDĪS (Muslim judges who exercise both civil and religious functions) for having denounced the worship of saints as being against religious law (SHAR'Ā).

He was sent to Alexandria under house arrest in 1309, the day after the abdication of the SULTAN Muhammad ibn Qalāwūn and the advent of Baybars II al-Jāshnikīr, whom he regarded as a usurper and whose imminent end he predicted. Seven months later, on Ibn Qalāwūn's return, he was able to return to Cairo. But in 1313 he left Cairo once more with the sultan, on a campaign to recover Damascus, which was again being threatened by the Mongols.

Ibn Taymīya spent his last 15 years in Damascus. Promoted to the rank of schoolmaster, he gathered around him a circle of disciples from every social class, the most famous of whom was Ibn Qayyim al-Jawziya (d. 1350). Accused of supporting a doctrine that would curtail the ease with which a Muslim could traditionally repudiate a wife, Ibn Taymīya was incarcerated on orders from Cairo in the citadel of Damascus from August 1320 to February 1321. In July 1326 Cairo again ordered him confined to the citadel for having continued his condemnation of saint worship, in spite of the prohibition forbidding him to do so. He died in prison and was buried in the Sufi cemetery amid a great public gathering. His tomb still exists and is widely venerated.

Ibn Taymīya left a considerable body of work—often republished in Syria, Egypt, Arabia, and India—that extended and justified his religious and political involvements and was characterized by its rich documentation, sober style, and brilliant polemic. In addition to innumerable *fatwās* (legal opinions based on religious law) and several professions of faith, two works particularly meriting attention are his *Al-Siyāsa al-shar'īya* ("Treatise on Juridical Politics") and *Minhāj al-sunna* ("The Way of Tradition"), the richest work of comparative theology surviving from medieval Islam.

Ibn Taymīya desired a return to the sources of the Muslim religion, which he felt had been altered too often, to one extent or another, by the different religious sects or schools. The İJMĀ', or community consensus, had no value in itself, he insisted, unless it rested on the Qur'an and the sunna. His traditionalism, however, did not prevent Ibn Taymīya from allowing analogical reasoning (QIYĀS) and the argument of utility (*maṣlaḥa*) a large place in his thought, on the condition that both rested on the objective givens of revelation and tradition. Only such a return to sources, he felt, would permit the divided and disunited Muslim community to regain its unity.

Concerning practices, Ibn Taymīya believed that one could only require, in worship, those practices inaugurated by God and his Prophet and that one could only forbid, in social relations, those things forbidden by the Qur'an and the sunna. Thus, on the one hand, he favored a revision of the system of religious obligations and a brushing aside of condemnable innovations (*bid'a*), and, on the other, he constructed an economic ethic that was more flexible on many points than that espoused by the contemporary schools.

Ibn Taymīya is the source of the Wāḥḥābīya, a strictly traditionalist movement founded by MUHAMMAD IBN 'ABD AL-

WAHHĀB (d. 1792). Ibn Taymīya also influenced various reform movements that have posed the problem of reformulating traditional ideologies by a return to sources. *See also* HANBALĪ LEGAL SCHOOL.

IBN TIBBON, JUDAH BEN SAUL \,i-bən-'ti-bən\ (b. 1120, Granada, Spain—d. c. 1190, Marseille, France), Jewish physician and translator of Jewish Arabic-language works into Hebrew. He was also the progenitor of several generations of important translators.

Persecution of the Jews forced Judah to flee Granada in 1150, and he settled in Lunel, in southern France, where he practiced medicine. In his Hebrew versions, which became standard, Judah made accessible various classic philosophical works by Arabic-speaking Jews who had utilized the concepts of both Muslim and Greek philosophers. Thus, Judah's translations served to disseminate Arabic and Greek culture in Europe. In addition he often coined Hebrew terms to accommodate the ideas of the authors he was translating.

Among his outstanding renditions from Arabic into Hebrew are *Amanat wa-ī'tiqadat* of SA'ADIA BEN JOSEPH (882–942), a Jewish philosophical classic discussing the relationship between reason and divine revelation, translated as *Sefer ha-emunot we-ha-de'ot* (1186; *Beliefs and Opinions*, 1948); *Al-Hidayah ilā farā'id al-qulūb* by the rabbinic judge BAHYA BEN JOSEPH IBN PAKUDA, a widely read classic of Jewish devotional literature which examines the ethics of a man's acts and the intentions that give the acts meaning, translated as *Hovot ha-levavot* (*Duties of the Heart*, 1925–47); and *Sefer ha-Kuzari* ("Book of the Khazar") by the Spanish Hebrew poet JUDAH HA-LEVI (c. 1085–c. 1141), which recounts in dialogue form the arguments presented before the king of the Khazars by a rabbi, a Christian, a Muslim scholar, and an Aristotelian philosopher, with the subsequent conversion of the king to JUDAISM.

Judah ben Saul ibn Tibbon also translated the grammar of Abū al-Walīd Marwān ibn Janāh (c. 990–c. 1050), which became a basis for the work of future Hebrew grammarians. In addition, he wrote a well-known ethical will, *Musar Ab* (c. 1190; "A Father's Admonition"), to his son SAMUEL BEN JUDAH IBN TIBBON, who subsequently also became a noteworthy translator.

IBN TIBBON, MOSES BEN SAMUEL (b. Marseille, France, fl. 1240–83), Jewish physician, who like his father, SAMUEL BEN JUDAH IBN TIBBON, and his paternal grandfather, JUDAH BEN SAUL IBN TIBBON, was an important translator of works from the Arabic language into Hebrew. His translations helped to disseminate Greek and Arab culture throughout Europe. Besides his original works, which included commentaries with an allegorical bias on the PENTATEUCH, the Song of Songs, and Haggadic passages (those not dealing with Jewish law; *see* HALAKHAH AND HAGGADAH) in the TALMUD, he also translated Arabic-language works by Jews and Arabs dealing with philosophy, mathematics, astronomy, and medicine.

Following the family tradition, he translated from the Arabic a number of works by the medieval Jewish philosopher MOSES MAIMONIDES (1135–1204), notably portions of Maimonides' commentary on the MISHNAH and his *Sefer hamitzvot*, an analysis of the 613 commandments of the Pentateuch.

Among the Arabic writings, Moses translated the commentaries on Aristotle by IBN RUSHD (Averroës); a medical digest by the Persian philosopher and physician IBN SĪNĀ

(Avicenna); and a philosophical work (known in English as the "Book of Principles") by the Muslim philosopher and Aristotelian disciple AL-FĀRĀBĪ (878–950). Moses also translated Euclid's *Elements*.

IBN TIBBON, SAMUEL BEN JUDAH (b. c. 1150, Lunel, France—d. c. 1230, Marseille), Jewish translator and physician whose most significant achievement was an accurate and faithful rendition from the Arabic into Hebrew of MAIMONIDES' classic *Dalālat al-hā'irīn* (Hebrew *More nevuḥim*; English *The Guide of the Perplexed*).

From his father, JUDAH BEN SAUL IBN TIBBON, Samuel received a thorough grounding in medicine, Jewish law and lore, and Arabic. Like his father, Samuel earned his living as a physician; he also traveled extensively in France, Spain, and Egypt.

After corresponding with Maimonides to elucidate difficult passages in the *Guide*, in about 1190 Samuel published his translation. This work, which interprets SCRIPTURE and rabbinic theology in the light of Aristotelian philosophy, has had an influence on both Jewish and Christian theologians. In the translating process, Samuel enriched the Hebrew language through the borrowing of Arabic words and the adoption of the Arabic practice of forming verbs from substantives.

He also translated Maimonides' treatise on resurrection and his commentary on *Pirque avot* ("Sayings of the Fathers"), which appears in the TALMUD; in addition, he translated the works of several Arabic commentators on the writings of Aristotle and Galen.

IBN TUFAYL \,i-bən-tū-'fīl\, *in full* Abū Bakr Muhammad ibn 'Abd Al-Malik ibn Muhammad ibn Muhammad ibn Tufayl al-Qaysī (b. 1109/10, Guádix, Spain—d. 1185/86, Marrakech, Morocco), Andalusian philosopher and physician who is known for his *Ḥayy ibn Yaqzān* (c. 1175; "Living Son of the Wakeful One"), a romance in which he describes the self-education and gradual philosophical development of a man who passes the first 50 years of his life in complete isolation on an uninhabited island. Its moral was that a philosopher must educate himself in the ways of nonphilosophers and understand the incompatibility between philosophical life and the life of the multitude, which must be governed by religion and divine laws. Otherwise, his ignorance will lead him to actions dangerous to the well-being of both the community and philosophy. In addition to his works on philosophy Ibn Tufayl wrote a number of medical treatises in Arabic and he served as the court physician and general adviser to the ALMOHAD ruler Abū Ya'qūb Yūsuf from 1163 to 1184.

IBN TŪMART \,i-bən-'tū-märt\, *in full* Abū 'Abd Allāh Muhammad ibn Tūmart (b. c. 1080, Anti-Atlas Mountains, Morocco—d. August 1130), Berber religious reformer and military leader who founded the al-Muwahḥidūn confederation in North Africa (*see* ALMOHADS), which led to an Islamic empire that extended from North Africa into Spain and persisted until 1269. After visiting Córdoba (1106) Ibn Tūmart traveled eastward to MECCA and Baghdad, where he reportedly had an encounter with the famed scholar and mystic AL-GHAZĀLĪ. After returning to the Maghrib in 1120, he proclaimed himself to be the MAHDI and led a successful revolt against the Almoravid dynasty. The doctrine he taught combined a strict conception of the unity of God with a program of juridical and puritanical moral reform, based on a study of the QUR'AN and of tradition.

The Fall of Icarus, engraving by Bernard Picart, 1731
The Granger Collection

ICARUS \i-kə-rəs\, in Greek mythology, son of the great inventor DAEDALUS. Daedalus fashioned wings for Icarus of feathers and wax so that he could fly, and he cautioned his son not to fly too close to the sun or to the ocean. Icarus disregarded his advice and perished when he soared too high and the heat of the sun melted the wax that held the wings together, plunging him into the ocean.

I-CHING \i-ˈjɪŋ\, *Pinyin* Yijing, also spelled Yi Ching (Chinese: “Classic of Changes,” or “Book of Changes”), ancient Chinese text, one of the FIVE CLASSICS (*Wu-ching*) of CONFUCIANISM. The main body of the work has traditionally been attributed to Wen-wang (fl. 12th century BCE), sage and father of the founder of the Chou dynasty, and contains a discussion of the divinatory system used by the Chou dynasty wizards. A supplementary section of “commentaries” is believed to be the work of authors of the Warring States period (475–221 BCE) and represents an attempt to explain the world and its ethical principles, applying a largely dialectic method. Han dynasty Confucianists (c. 2nd century BCE), influenced by the Taoist quest (see TAOISM) for immortality, justified their use of *I-ching* by attributing certain of its commentaries to CONFUCIUS, preparing the way for its inclusion among the Five Classics of antiquity.

Though the book was originally used for DIVINATION, its influence on Chinese thought and its universal popularity are due to a system of COSMOLOGY that involves humans and nature in a single system. The uniqueness of the *I-ching* consists in its presentation of 64 symbolic hexagrams that, properly understood and interpreted, are said to contain profound meanings applicable to daily life. The hexagrams

are formed by joining in pairs, one above the other, eight basic trigrams (*pa-kua*). Each trigram has a name, a root meaning, and a symbolic meaning. The legendary emperor FU HSI (24th century BCE) is said to have discovered these trigrams on the back of a tortoise. Wen-wang is generally credited with having formed the hexagrams.

In practice, one creates a hexagram by casting lots in one of several ways. The hexagram is built up from the bottom, line by line, by successive lots. Solid lines have the number nine, broken lines have the number six. Solid lines represent yang (the male cosmic principle), while broken lines represent yin (the female cosmic principle). The *I-ching* text first explains each line separately, then gives an overall interpretation of the unit. The text is often expressed in cryptic, thought-provoking language, thus allowing the user great leeway in interpreting its significance.

ICON, in EASTERN ORTHODOX tradition, a representation of sacred personages or events in mural painting, mosaic, or wood. After the legitimizing of the use of icons by the COUNCIL OF NICAEEA (787) following a lengthy struggle with the Iconoclasts, and a renewed ICONOCLASTIC CONTROVERSY in the 8th–9th century, which disputed the religious function and meaning of icons, the Eastern church formulated the doctrinal basis for their veneration: since God had assumed material form in the person of JESUS CHRIST, he also could be represented in pictures. Icons are considered an essential part of the church and are given special liturgical veneration. They also serve as mediums of instruction for the uneducated faithful through the ICONOSTASIS, a screen shielding the altar, covered with icons depicting scenes from the NEW TESTAMENT, church feasts, and popular saints. In the classical Byzantine and Orthodox tradition, iconography’s function is to express symbolically in line and color the theological teaching of the church. Icon production was important in Constantinople, Mount Athos in Greece, in Crete, and in many areas of Russia, Ukraine, and the Balkans. Icons continue to form an important part of the artistic tradition of these areas. See also ART AND RELIGION.

ICONOCLASM \i-ˈkə-nə-ˌkla-zəm\, destruction of religious images. Usually stemming from a monotheistic theological standpoint which rejects the validity of idols or other religious images, iconoclasm has played an important role in the history of CHRISTIANITY, particularly with regard to the relations between the Eastern and Western churches (see ICONOCLASTIC CONTROVERSY). In modern times, iconoclasm has played a role in the conflicts between Muslims and Hindus in India. See also ICON.

ICONOCLASTIC CONTROVERSY \i-ˈkə-nə-ˌklas-tik\, a dispute over the use of religious images (ICONS) in the Byzantine Empire in the 8th and 9th centuries. The Iconoclasts (those who rejected images) objected to icon worship for several reasons, including the OLD TESTAMENT prohibition against images (EXODUS 20:4) and the possibility of IDOLATRY. The defenders of icon worship insisted on the symbolic nature of images and on the dignity of created matter.

In the early church, the making and veneration of portraits of Christ and the saints were opposed. The use of icons, nevertheless, steadily gained in popularity, especially in the eastern provinces of the Roman Empire. Toward the end of the 6th century and in the 7th, icons became the object of an officially encouraged cult. Opposition to such practices became particularly strong in Asia Minor. In 726 the Byzantine emperor Leo III took a public stand against

icons; in 730 their use was prohibited. This opened a persecution of icon worshipers that was severe in the reign of Leo's successor, Constantine V (741–775).

In 787, however, the empress Irene convoked the seventh ecumenical council at Nicaea (*see* NICAËA, COUNCIL OF) at which ICONOCLASM was condemned and the use of images was reestablished. The Iconoclasts regained power in 814 after Leo V's accession, and the use of icons was again forbidden at a council (815). The second Iconoclast period ended with the death of the emperor Theophilus in 842. In 843 his widow, Theodora, finally restored icon veneration, an event still celebrated in the EASTERN ORTHODOX church as the Feast of Orthodoxy.

ICONOGRAPHY \,i-kə-'nä-grə-fē\, the science of identification, description, classification, and interpretation of symbols, themes, and subject matter in the visual arts. The term can also refer to the artist's use of this imagery in a particular work. The earliest iconographical studies, published in the 16th century, were catalogs of emblems and symbols collected from antique literature and translated into pictorial terms for the use of artists. The most famous of these works is Cesare Ripa's *Iconologia* (1593). Extensive iconographical study did not begin in Europe until the 18th century, however, when it consisted of the classification of subjects and motifs in ancient monuments.

In the 19th century, iconography became divorced from archaeology and was concerned primarily with the incidence and significance of religious symbolism in Christian art. In the 20th century, investigation of Christian iconography has continued, but the secular and classical iconography of European art has also been explored, as have the iconographic aspects of Eastern religious art.

ICONOSTASIS \,i-kə-'nä-stə-sis, i-'kä-nə-,sta-sis\, in Eastern Christian churches of Byzantine tradition, a solid screen of stone, wood, or metal, usually separating the SANCTUARY from the nave. The iconostasis had originally been some sort of simple partition between the altar and the congregation; it then became a row of columns, and the spaces between them were eventually filled with ICONS. In later churches it extends the width of the sanctuary and is covered with panel icons. The iconostasis is pierced by a large, or royal, door and curtain in the center, in front of the altar, and two smaller doors on either side. It always includes the icon of the INCARNATION (MARY with JESUS CHRIST as a child) on the left side of the royal door and the SECOND COMING of Christ the Pantocrator (Christ in majesty) on the right. Icons of the four Evangelists (*see* MATTHEW; MARK; LUKE; JOHN), the ANNUNCIATION, and the LAST SUPPER cover the royal doors themselves. Representations of the ARCHANGELS GAB-

The eight kua, trigrams from the I-ching
The Granger Collection

RIEL and Michael, the Twelve Apostles, the feasts of the church, and the prophets of the OLD TESTAMENT are arranged on the iconostasis in complicated patterns, with all figures facing the royal doors.

In various parts of the modern Orthodox world, there is a tendency to restore the communal character of the EUCHARIST, which was partially broken by the development of the iconostasis, by either suppressing the iconostasis or giving it a lighter form.

ĪD \ēd\ (Arabic), *Syriac* 'Īda ("Festival, Holiday"), *Turkish* Bayram, *also spelled* Eid, either of the two canonical festivals of ISLAM distinguished by the performance of communal prayer (SALĀT) at daybreak on the first day. The first of these celebrations, according to the calendar, is the Īd al-Fiṭr (al-Īd al-Ṣaghīr; Küçük Bayram; "Festival of Breaking Fast," or "Minor Festival"), which immediately follows the fasting month of RAMADĀN and occupies the first three days of the 10th month, Shawwāl. It is a time of official receptions and private visits, when friends congratulate one another, and people exchange presents, wear new clothes, and visit the graves of relatives.

The second festival, the Īd al-Aḏḥā (al-Īd al-Kabīr; Kur-

IDEOLOGY

ban Bayram, “Sacrificial Feast,” or “Major Festival”), falls on the 10th and the following three days of the last month of the year, Dhū al-Hijja. Throughout the Muslim world, all who can afford it sacrifice at this time a legal animal (sheep, goat, camel, or cow) and then divide the flesh equally among themselves, the poor, and friends and neighbors. This commemorates the ransom with a ram of Ibrāhīm’s (ABRAHAM’S) son Ismā’īl (Ishmael)—rather than ISAAC, in Judeo-Christian tradition. It marks the culmination of the HAJJ rites.

IDEOLOGY, term with a variety of meanings, often identified with religion, RELIGIOUS LANGUAGE, values, beliefs, and ideas represented in the arts. Ideology is often viewed as the criterion for what is true and good in a society, the col-

lective mentality of a society concerning its values and attitudes toward life, death, work, and happiness. This loose sense of ideology is often tightened to refer to the dominant intellectual set of ideas or conceptual forms of a culture or religion. Thus, ever since Karl Marx and Friedrich Engels, ideology marks the ideas belonging to the ruling elite: “The ideas of the ruling class are in every epoch the ruling ideas, *i.e.*, the class which is the ruling material force of society, is at the same time its ruling intellectual force.” Ideology is, therefore, related to power in its various political and economical forms. Religion (culture) has its origins and its persistence in the elite of a society. Many scholars in the cultural sciences, however, have demonstrated that the notion of a dominant ideology is false. It is often the case that the ideology of a dominant class is not practiced by other classes in the same society. The term is also used in a broader sense, as elucidated by French sociologist ÉMILE DURKHEIM, signifying the conceptual representations of a social system. In either usage it is usually related to functionalist theories of culture that view ideology as functioning to maintain and provide coherence in the life of a society. Ideology is always a more encompassing term than religion since it usually includes such cultural phenomena as humanism, SECULARISM, Nazism, CIVIL RELIGION, and even Marxism as instances of ideological forms of social life.

IDIORRHYTHMIC MONASTICISM \,i-dē-ō-
‘rith-mik\, also called eremitic monasticism
\,er-ə-‘mi-tik\ (from Greek: *erēmitēs*, “living
in the desert”), the original form of monastic
life in CHRISTIANITY, as exemplified by ST. AN-
THONY OF EGYPT (c. 250–355). It consisted of a
total withdrawal from society, normally into
the desert, and the constant practice of men-
tal prayer. The CONTEMPLATIVE and mystical
trend of eremitic MONASTICISM is also known
as HESYCHASM. In the Christian East the “idior-
rhythmic” system (from Greek: *idios*, “partic-
ular”; *rhythmos*, “manner”) always coex-
isted with CENOBITIC MONASTICISM. It is still
practiced on modern Mount Athos, Greece.
See also HERMIT.

IDOL, image or statue of a deity fashioned
to be an object of worship. Within some reli-
gions—most prominently ISLAM, JUDAISM, and
CHRISTIANITY—the worship of idols is reject-
ed, and hence the term is pejoratively ap-
plied to the cultic images of other reli-
gious traditions. Idols, however, are a
widespread feature of the world’s reli-
gions, past and present. The veneration
of images has taken a wide variety of
forms, from the treatment of the image
as if it were the god himself (*i.e.*, ancient
Mesopotamia and Greece) to the belief
that the image is properly treated merely
as an object of meditation and does not

Eye idols from the temple area at Tall Birāk, in Syria, late 4th millennium BCE
By courtesy of the trustees of the British Museum

share in the substance of the deity itself (as in some sects within JAINISM).

Veneration of idols plays a central role in the religions of South Asia, including Jainism, BUDDHISM, and HINDUISM. Hinduism includes worship or service to an image or representation of the deity; known as PŪJĀ, the worship consists of a ritual in which the deity is invoked into an image that is established in either the home or temple, is honored, and is then dismissed out of the idol. The main purpose of the *pūjā* ritual is communion with the deity, which is meant to lead to a more permanent and closer relationship between the worshiper and God.

IDOLATRY, in JUDAISM, CHRISTIANITY, and ISLAM, the worship of someone or something other than God as though it were God. A reflection of the strength of the prohibition of this practice in monotheism is its listing as the first of the biblical TEN COMMANDMENTS: "You shall have no other gods before me."

Several forms of idolatry have been distinguished. Gross, or overt, idolatry consists of explicit acts of reverence addressed to a person or an object—the sun, the king, an animal, a statue. A person commits a more subtle idolatry, however, when, although overt acts of adoration are avoided, he or she attaches to a creature the confidence, loyalty, and devotion that properly belong only to the Creator.

In Judaism, the prophetic denunciation of idolatry as the "worship of sticks and stones," as Judaism characterized prayer to an object people have made with their own hands, obscured what is at stake in the graven image (the representation of divinity in concrete ways) but defined Judaism's dealings with the world. Judaism rejected all images and forms of god and defined all those outside the Jewish faith as idolators. In RABBINIC JUDAISM an extensive corpus of law regulated Israelite dealings with idolators on their festivals and forbade Israelites from deriving any benefit whatsoever from commerce with GENTILES on their festival days; the remainder of a bottle of wine opened and used for a LIBATION could not be consumed by Israelites; Gentiles, defined as idolators, could not touch wine intended for Israelite use, lest they make a libation of a few drops from it.

At the same time, certain schools of Christian thought have insisted upon the principle of mediation and have rejected the charge that attachment to a mediating agency is automatically idolatrous. Christians are not in agreement about the agents of mediation—*e.g.*, about the role of the Virgin MARY and of the other saints. But where such mediation is acknowledged to be present, it is also generally acknowledged that reverence shown toward it applies not to the agent himself but to the one for whom the agent stands. A special instance is the human nature of JESUS CHRIST (which is worthy of divine worship because of its inseparable union with the Second Person of the Holy TRINITY) and the consecrated Host in the EUCHARIST (which, by Roman CATHOLIC doctrine, may properly be adored because it has been changed into the very body of Christ).

In Islam, idolatry is generally conceived to be in contradiction to the command to worship only one god. As such, it is an expression of POLYTHEISM (SHIRK, literally, "attributing partners to God") and disbelief (KUFR, literally, "ingratitude"), in opposition to what Muslims construe to be true religion. The QUR'AN recognizes ABRAHAM as the ancestral opponent of idolatry, and it uses the term pejoratively in attacking the beliefs of Prophet MUHAMMAD's opponents. Indeed, one of Muhammad's first acts after winning control of Mecca in 630 CE was reported to have been the destruc-

tion of hundreds of idols housed in the KA'BA. Idol plundering and smashing thereafter became a recurrent theme in historical accounts of Islamic conquests.

As in Christianity, Muslim religious authorities employed the term to disparage the beliefs and practices of other Muslims. SUNNIS accused SHĪ'ITES of idolatry for their devotion to the IMAMS, and SUFISM came under suspicion because of the authority claimed by the SHAYKHS and the widespread veneration of Sufi holy men and women. Sufi writers, particularly in the Persian tradition, turned the tables on their accusers by using metaphors of idolatry favorably to express their absorption in God, for they saw in all created forms, including idols, signs of God's unity and love. Modern Islamic reform movements, however, draw upon the negative associations of the term to condemn materialism and any humanistic ideology that fails to recognize God's unity and sovereignty.

In the 18th and 19th centuries, the term "idolatry" was used in European scholarship to classify any non-Western, non-monotheistic religion. The term is no longer used this way in the humanities and social sciences.

IDOMENEUS \i-'dä-mə-'nūs, i-də-mə-'nē-əs\, in Greek legend, son of DEUCALION, grandson of MINOS and Pasiphaë, and king of Crete. He courted HELEN and took a distinguished part in the Trojan War. According to the *Odyssey*, he returned home safely, but a later tradition relates that he was overtaken by a violent storm and vowed to sacrifice to POSEIDON the first living thing that met him when he reached home. The first to greet him was his son, whom he thus slew; as a result, a plague developed, and Idomeneus was driven out. He fled to the district of Sallentum in Calabria and subsequently to Colophon in Asia Minor, where he settled near the Temple of the Clarian APOLLO.

IDRĪS \i-'drēs\, an immortal figure in Islamic legend, mentioned in the QUR'AN as a prophet. According to early Islamic stories, Idrīs appeared sometime between ADAM and NOAH and transmitted divine revelation through several books. He did not die but was taken bodily to paradise to spend eternity with God. Popular legend also credits him with the invention of writing and sewing and of several forms of DIVINATION. He is regarded as the patron saint of craftsmen and Muslim knights.

The name Idrīs has been variously identified by scholars as derived from the biblical EZRA, the Christian Apostle ANDREW, and Alexander the Great's cook Andreas. Later Muslim legend associated him with the biblical ELIJAH or Muslim AL-KHIDR. Parallels have also been drawn between the biblical Enoch and Idrīs, on the basis of several striking similarities: both are pious men taken physically to paradise, and both live a reputed 365 years. Idrīs (and Enoch) has also been woven into the Islamic mythology surrounding the Greco-Egyptian god Hermes Trismegistos as the first incarnation of the tripartite Hermes.

IDUN \ē-'thūn, Angl -'dūn\, also spelled Idunn, or Iduna \ē-'thū-nə, Angl 'ē-'dū-nə, i-'dū-\, in Norse mythology, the wife of Bragi, the god of poetry. She was the keeper of the magic apples of immortality, which the gods must eat to preserve their youth. When, through the cunning of LOKI, the trickster god, she and her apples were seized by the GIANT Thias-si and taken to the realm of the giants, the gods quickly began to grow old. They then forced Loki to rescue Idun, which he did by taking the form of a falcon, changing Idun into a nut, and flying off with her in his talons.

IFA \ˈē-fä\, among the Yoruba of Africa, orally transmitted system of DIVINATION. In this system the Ifa priests throw beans onto a board. The beans fall in a series of complex patterns that the diviners key to folktales, whose contents are then applied to the particular situation at hand.

IFRIT \ˈi,-frēt, ə-ˈfrēt\, also spelled afreet, afrit, afrite \ˈa,-frēt, ə-ˈ\, or efreet \ˈe,-frēt, ə-ˈ\, Arabic (male) ʾifrīt, or (female) ʾif-rīta, in Islamic mythology, a class of infernal JINN (spirits below the level of ANGELS and devils) noted for their strength and cunning. An *ifrit* is an enormous winged creature of smoke, either male or female, who lives underground and frequents ruins. *Ifrits* live in a society structured along ancient Arab tribal lines, complete with kings, tribes, and clans. They generally marry one another, but they can also marry humans. While ordinary weapons and forces have no power over them, they are susceptible to magic, which humans can use to kill them or to capture and enslave them. As with the jinn, an *ifrit* may be either a believer or an unbeliever, good or evil, but he is most often depicted as a wicked and ruthless being.

The rare appearance of the term *ifrit* in the QUR'AN and in HADITH is always in the phrase "the *ifrit* of the jinn" and probably means "rebellious." The word subsequently came to refer to an entire class of formidable, rebellious beings, but, in the confused world of Underworld spirits, it was difficult to differentiate one from another. The *ifrit* thus became virtually indistinguishable from the *mārid*, also a type of wicked and rebellious DEMON.

IGLESIA NI KRISTO \ē-ˈglā-syā-nē-ˈkrēs-tō\ (Tagalog: "Church of Christ"), *Kristo* also spelled *Cristo*, the largest entirely indigenous Christian church in the Philippines. Its members assert that the early Christian church was restored in God's chosen people, the Filipinos, when Felix Manalo launched this church in 1914. Rapid growth after 1945 produced some 600,000 members by the late 20th century and a wealthy centralized organization. Strong discipline from the leaders dictates a literal interpretation of the BIBLE and suggests individual contributions and the casting of votes, making the church a substantial political power. Unitarian in theology and Philippine in its languages, liturgy, and music, the church represents a popular Filipino nationalist movement for spiritual independence. (See also NEW RELIGIOUS MOVEMENTS.)

IGUVINE TABLES \ˈi-gyə-vīn, -vīn\, a set of seven inscribed bronze tables found in 1444 at Iguvium (modern Gubbio, Italy), an Umbrian town. The tables are written in the Umbrian language, four and part of a fifth using the Umbrian script, the rest Latin characters. The earliest appear to date from the 3rd or 2nd century BCE, the latest from the early part of the 1st century BCE. These tables give the liturgy of the *Fratres Atiedii*, a brotherhood of priests, and are of great value for the study of ancient Italic language and religion.

The first table contains regulations for the purification of the sacred mount or citadel of Iguvium and for the LUSTRATION (purification) of the people. Tables six and seven contain essentially the same material as the first, but in greatly

A wand used in the Ifa divination cult among the Yoruba of Nigeria. The wand is tapped against the Ifa board to summon the required orisha, or deity

Werner Forman Archive—Private Collection

expanded form and in somewhat later language. The second, third, and fourth tables describe several different sacrifices, many of the details of which are quite obscure. The fifth table deals with administrative details of the brotherhood and ends with a statement of mutual obligations between the *Fratres Atiedii* and 2 of the (originally) 10 divisions of the Iguvine people.

IJMĀʿ \ij-'ma \ (Arabic: "agreeing upon," or "consensus"), the universal and infallible agreement of the Muslim community, especially of Muslim scholars, on any Islamic principle, at any time. The consensus—based on the HADITH that states, "My people will never agree in an error"—constitutes the third of the four sources of Islamic jurisprudence, the *uṣūl al-fiqh*, as first systematized by ABŪ 'ABD AL-LĀH AL-SHĀFI'Ī (d. 820). In effect, *ijmāʿ* has been the most important factor in defining the meaning of the other *uṣūl* and thus in formulating the doctrine and practice of the Muslim community. Twelver SHI'ITE jurisprudence, however, maintains that *ijmā* must admit the opinion of the hidden IMAM before having validity.

In Muslim history *ijmāʿ* has always had reference to consensus reached in the past, near or remote, and never to contemporaneous agreement. It is thus a part of traditional authority and has from an early date represented the Muslim community's acknowledgment of the authority of the beliefs and practices of MUHAMMAD'S city of MEDINA.

Ijmāʿ also has come to operate as a principle of toleration of different traditions within ISLAM. It thus allows the four Sunni legal schools (*madhabs*) equal authority and has probably validated many non-Muslim practices taken into Islam by converts.

In modern Muslim usage, *ijmāʿ* has lost its association with traditional authority and appears as a democratic institution and an instrument of reform. See also IJTIHĀD; MUHAMMAD AL-MAHDI.

IJTIHĀD \ij-tē-'had \ (Arabic: "effort," or "application, diligence"), in Islamic law, the independent or original interpretation of problems not precisely covered by the QUR'AN, HADITH, and IJMĀʿ (scholarly consensus). In the early Muslim community every adequately qualified jurist had the right to exercise such original thinking, mainly *ra'y* (personal judgment) and QIYĀS (analogical reasoning), and those who did so were termed *mujtahids*. But with the crystallization of legal schools (*madhabs*) and codification of law under the 'Abbāsids (reigned 750–1258), SUNNI authorities concurred at the beginning of the 10th century CE that the principal legal issues had been settled, though the "gates of *ijtihād*" were never actually closed as has been maintained by some Sunni Muslim and many Western scholars. The SHI'ITES attribute even greater significance to *ijtihād* and still recognize their leading jurists as *mujtahids*. In Shi'ite Iran, the *mujtahids* act as guardians of the official doctrine, and in committee they may veto any law that infringes on Islamic ordinances. Indeed, since the revolution of 1978–79 religious and political affairs in Iran have been governed largely by Shi'ite *mujtahids*, the foremost having been Ayā-tollāh KHOMEINI, who inspired the overthrow of Mohammad Reza Shah Pahlavi.

Several prominent Sunni scholars, such as IBN TAYMĪYA (1263–1328) and Jalāl al-Dīn al-Suyūṭī (1445–1505), declared themselves *mujtahids*. In the 19th and 20th centuries Sunni reformist movements clamored for the reinstatement of *ijtihād* as a means of freeing ISLAM from harmful innovations (BID'AS) accrued through the centuries and as a

tool capable of adapting Islam to the requirements of life in a modern world.

IKHTILĀF \ik-tē-'laf \ (Arabic: "disagreement"), in ISLAM, differences of opinion on religious matters. Such diversity is permissible as long as the basic principles of Islam are not affected. *Ikhtilāf* is thus the opposite of IJMĀʿ (consensus). *Ikhtilāf* permits a Muslim to choose the interpretation of religious teachings that best suits his own circumstances and causes the least harm. Two famous sayings from HADITH in favor of *ikhtilāf* were attributed to the Prophet MUHAMMAD: "Difference of opinion in the Muslim community is a sign of divine favor"; and "It is a mercy of God that the theologians differ in opinion."

Ikhtilāf thus allowed Islam to develop four equally orthodox legal schools: the MĀLIKĪ, the HANAFĪ, the SHĀFI'Ī, and the HANBALĪ, within each of which there have been diverse interpretations of the same religious texts. Among Twelver SHI'ITE jurists, diverse legal interpretations are also considered to be valid pending the return of the hidden IMAM, who alone has the authority to finally settle the question of conflicting opinions.

IKHWĀN \ik-'wān \ (Arabic: "Brethren"), in Arabia, members of a religious and military brotherhood that figured prominently in the unification of the Arabian Peninsula under Ibn Sa'ūd (1912–30); in modern Saudi Arabia they constitute the National Guard.

Ibn Sa'ūd began organizing the Ikhwān in 1912 with hopes of making them a reliable and stable source of an elite army corps. In order to break their traditional tribal allegiances and feuds, the Ikhwān were settled in colonies known as HIJRA. These settlements, established around desert oases, further forced the Bedouin to abandon their nomadic way of life. Their populations ranged from 10 to 10,000 and which offered tribesmen living quarters, mosques, schools, agricultural equipment and instruction, and arms and ammunition. Most important, religious teachers were brought in to instruct the Bedouin in the essential precepts of ISLAM as taught by the religious reformer IBN 'ABD AL-WAHHĀB in the 18th century. Consequently, the Ikhwān became arch-traditionalists.

Beginning in 1919, the Ikhwān were responsible for numerous military victories in Arabia and Iraq. In 1924, when SHARĪF Ḥusayn was proclaimed CALIPH in MECCA, the Ikhwān labeled the act heretical and accused Ḥusayn of obstructing their performance of the PILGRIMAGE to Mecca. They then moved against Transjordan, Iraq, and the Hijaz simultaneously, besieged al-Tā'if outside Mecca, and massacred several hundred of its inhabitants. Mecca fell to the Ikhwān, and, with the subsequent surrenders (1925) of Jidda and MEDINA, they won all of the Hijaz for Ibn Sa'ūd. The Ikhwān were also instrumental in securing the provinces of Asir, just south of the Hijaz on the coast (1920), and Ḥā'il, in the north of the peninsula, along the borders of Transjordan and Iraq (1921).

By 1926 the Ikhwān were becoming uncontrollable, attacking Ibn Sa'ūd for such technological innovations as telephones and automobiles. Rising in open rebellion, they were eventually forced to surrender in January 1930 and their leaders were imprisoned.

Not all of the Ikhwān revolted. Those who had remained loyal to Ibn Sa'ūd stayed on the *hijras*, continuing to receive government support, and were still an influential religious force. They were eventually absorbed into the Saudi Arabian National Guard. See also MUSLIM BROTHERHOOD.

IKHWĀN AL-ŞAFĀ' \ik-'wān-āl-sa-'fa\ (Arabic: "Brethren of Purity"), secret Arab confraternity, founded at Basra, Iraq, that produced a philosophical and religious encyclopedia, *Rasā'il ikhwān al-şafā' wa-khillān al-wafā'* ("Epistles of the Brethren of Purity and Loyal Friends"), sometime in the second half of the 10th century CE.

Neither the identity nor the period of the Ikhwān al-Şafā' have been definitively established, but the various authors of the *Rasā'il* do seem to reflect the doctrinal position of the ISMĀ'ĪLĪS, a radical SHĪ'ITE Muslim sect influenced by MANICHAISM and NEOPLATONISM, which preached an esoteric interpretation of the QUR'AN open only to initiates. The Ikhwān al-Şafā', like all other Islamic philosophers, attempted to naturalize Greek philosophy by following a fairly orthodox Neoplatonic position and admitting Hermetic, Gnostic, astrological, and occult sciences on a large scale. They believed that their absorption of ancient wisdom enabled them to fathom the esoteric meaning of revelation.

According to the Ikhwān al-Şafā', individual human souls emanate from the universal soul and rejoin it after death; the universal soul in its turn will be united with God on the day of the LAST JUDGMENT. The *Rasā'il* are thus intended to purify the soul of misconceptions and lead it to a clear view of the essence of reality, which in turn will provide for happiness in the next life. To accomplish this enlightenment, the *Rasā'il* are structured theoretically to lead the soul from concrete to abstract knowledge. There is also an important summary of the whole encyclopedia, *al-Risāla al-jāmi'a*. See also GNOSTICISM; NEOPLATONISM.

IK OANKĀR \ik-'ōŋ-kār\, also spelled Ek Omkār (Punjabi: "God is One"), expression or invocation that opens the ĀDI GRANTH, the primary SCRIPTURE of SIKHISM. The expression is a compound of the numeral 1 and the letter that represents the sound "o" in Gurmukhī, the writing system developed by the Sikhs for their sacred literature. Referring to the Sikh understanding of the absolute monotheistic unity of God, the expression is the central symbol of Sikhism.

Oankār corresponds to the Sanskrit term OM, which in the Hindu tradition is regarded as a sacred, mystical syllable that encapsulates all other MANTRAS, or sacred formulas, and represents the totality of the universe. GURŪ NĀNAK, the founder of the Sikh tradition, wrote a long composition entitled *Oankār*, in which he attributed the origin and sense of speech to the Divinity, who is thus the "Om-maker." Some Sikhs object to any suggestion that *Oankār* is the same as *Om* and rather view *Oankār* as pointing to the distinctively Sikh theological emphasis on the ineffable quality of God, who is described as "the Person beyond time," "the Eternal One," or "the One without form."

Recently, *Ik Oankār* has become an emblem of Sikh identity. Sikh men and women wear jewelry that features the *Ik Oankār* and have it inscribed on their cars or on the main entrance of their homes.

ILLUMINATO (Italian: "Enlightened"), plural Illuminati, Spanish Alumbrado, a follower of a mystical movement in Spain during the 16th and 17th centuries. Its adherents claimed that the human soul, having attained a certain degree of perfection, was permitted a vision of the divine and entered into direct communication with the Holy Spirit. From this state the soul could neither advance nor regress. Consequently, participation in the liturgy, good works, and observance of the exterior forms of religious life were unnecessary for those who had received the "light." The Illuminati came primarily from among the reformed

FRANCISCANS and the JESUITS, but their doctrines seem to have had an influence on all classes of people. The extravagant claims made for their visions and revelations caused them to be relentlessly persecuted. The Inquisition issued edicts against them on three occasions (1568, 1574, and 1623).

'ILM AL-ĤADĪTH \ilm-āl-hā-'dēth\ see HADITH.

ILMARINEN \el-mä-rē-nen\, in Finnish mythology, creator-smith credited in the KALEVALA with forging the "lids of heaven" when the world was created and with fashioning the mythical SAMPO. Ilmarinen forged the *sampo* for Louhi, the goddess of the Underworld, but then stole it back; when Louhi pursued, the *sampo* was destroyed. In another source Ilmarinen is described as the god of wind and good weather.

ILOS \i-ləs\, in Greek mythology, the founder of Ilion (Troy). Ilos (or Zacynthus, a Cretan name) has been identified either as the brother of Erichthonius or as the son of Tros and grandson of Erichthonius. The King of Phrygia gave Ilos a spotted cow as a wrestling prize, with the advice that he should found a city wherever the cow first lay down. The animal chose the hill of ATE, where Ilos marked out the boundaries of Ilion. After praying for a sign from ZEUS, Ilos was sent the PALLADIUM, a statue of Pallas ATHENA, for which he built a temple. Ilos' son LAOMEDON succeeded him as ruler of the city, and his grandson PRIAM was the last king of Ilion.

ILUMQUH \i-lüm-kü\ (Arabic: "God Is Power"), also called Wadd, 'Amm, and Sin, Arabian god who was associated with the moon and was greater than the two other principal astral deities of South Arabia, the goddess Shams and the god 'Athtar, who were associated with the sun and the planet VENUS, respectively. Ilumquh, protector of cities and the patron god of South Arabia's capital cities, was linked to various temples and was called father in reference to 'Athtar Venus and to each of the peoples of South Arabia. Ilumquh had many names and epithets, sometimes more than one in a single district. He was, for example, called Wadd ("Love") in Ma'in, 'Amm ("Uncle") in Qatabān, and Sin (a name also used in Babylonia) in Ḥaḍramawt.

There were PILGRIMAGES to his temples where ABLUTIONS and offerings were made and certain rules of abstinence and purity were followed. Divine guidance from the three gods was sought and later acknowledged in writing, and undertakings were determined by the response of the oracles. Sometimes documents were deposited in the temples for safekeeping.

IMAM \i-'mäm\, Arabic imām ("leader," or "exemplar"), head of the Muslim community. The title is used in the QUR'AN several times to refer to leaders and to ABRAHAM. The origin and basis of the office of imam was conceived differently by various sections of the ISLAMIC community, this difference providing part of the political and religious basis for the split into SUNNI and SHĪ'ITE Islam. Among Sunnis, imam was synonymous with CALIPH (*khalīfa*), designating the successor of MUHAMMAD, who assumed his administrative and political, but not religious, functions. He was appointed by men and, although liable to error, was to be obeyed even though he personally sinned, provided he maintained the ordinances of Islam.

After the death (661) of 'ALI, the fourth caliph and Mu-

hammad's son-in-law, political disagreement over succession to his office propelled the Shi'ite imam along a separate course of development, as partisans of 'Alī attempted to preserve leadership of the entire Muslim community among the descendants of 'Alī. In Shi'ite Islam, the imam became a figure of absolute spiritual authority and fundamental importance. 'Alī and the successive imams, who are believed by Shi'ism to be the sole possessors of secret insights into the QUR'AN given them by Muhammad, became viewed under Neoplatonic influences of the 9th–10th centuries CE as men illumined by the Primeval Light, God, and as divinely appointed and preserved from SIN. They alone, and not the general consensus of the community (IJMĀ') essential to Sunni Islam, determined matters of doctrinal importance and interpreted revelation. With the historical disappearance (GHAYBA) of the last imam there arose a belief in the hidden imam, who is identified with the MAHDI.

Imam has also been used as an honorary title, applied to such figures as the theologians ABŪ ḤANĪFA, AL-SHĀFI'Ī, MĀLIK IBN ANAS, AḤMAD IBN ḤANBAL, AL-GHAZĀLĪ, and MUHAMMAD 'ABDUH. The title also is given to Muslims who lead prayers in mosques.

IMAN \,ē-'man\ (Arabic: "belief" or "faith"), in ISLAM, the internal belief in God and his prophet, MUHAMMAD; this is expressed in the SHAHĀDA: "There is no god but God; Muhammad is the prophet of God." In addition to these tenets, *iman* comprises belief in God's ANGELS, in the QUR'AN as holy utterance, in the prophets, and in the doctrine that GOOD AND EVIL are predestined. *Iman* is held to come from God, as no man can have faith except by the will of Allāh. ABŪ ḤANĪFA, the great Muslim jurist and theologian, said of *iman*: it is "confessing with the tongue, believing with the mind, and knowing with the heart."

IMBOLC \im-'bōlg, -bō-ləg\, also called Oimelc \ō-'m'elg, -m'e-ləg\ (Middle Irish, probably literally, "milking"), ancient Celtic religious festival, celebrated on February 1 to mark the beginning of spring. The festival apparently was a feast of purification for farmers and has been compared to the Roman LUSTRATIONS. Imbolc was associated with the goddess Brigid, and after the Christianization of Europe the day of the festival became the feast day of ST. BRIGIT.

IMHOTEP \im-'hō-,tep\, Greek Imouthes \i-'mü-,thēz\ (fl. 27th century BCE, Memphis, Egypt), vizier, sage, architect,

astrologer, and chief minister to Djoser (reigned 2630–2611 BCE), the second king of Egypt's third dynasty, who was later worshiped as the god of medicine in Egypt and in Greece, where he was identified with the Greek god ASCLEPIUS. Considered the designer of the first temple of Edfu, on the upper Nile, he is credited with initiating the Old Kingdom (c. 2575–c. 2130 BCE) as the architect of the step PYRAMID built at the NECROPOLIS of Şaqqārah in the city of Memphis. The oldest extant monument of hewn stone known to the world, the pyramid consists of six steps and attains a height of 200 feet (61 m).

Although no contemporary account has been found that refers to Imhotep as a practicing physician, Imhotep's reputation as the reigning genius of the time, his position in the court, and his training as a scribe, and his becoming known as a medical DEMIGOD only 100 years after his death are strong indications that he must have been a physician of considerable skill. Not until the Persian conquest of Egypt in 525 BCE was Imhotep elevated to the position of a full deity. He replaced Nefertum in the great triad of Memphis, which he shared with his mythological parent—his father, PTAH, the creator of the universe, and his mother, SEKHMET, the goddess of war and pestilence. Imhotep's cult reached its zenith during Greco-Roman times, when his temples in Memphis and on the island of Philae (Arabic: Jazirat Filah) in the Nile were often crowded with sufferers who prayed and slept there so that the god might reveal remedies to them in their dreams.

IMITATION OF CHRIST, Latin *Imitatio Christi*, a Christian devotional book written between 1390 and 1440. Although its authorship is a matter of contro-

versy, the book is linked to THOMAS À KEMPIS. Whatever the identity of the author, he was a representative of the DEVOTIO MODERNA and its two offshoots, the BRETHERN OF THE COMMON LIFE and the Congregation of Windseim.

The *Imitation of Christ* in part I gives "exhortations useful for spiritual living," while part II admonishes the reader to be concerned with the spiritual side of life rather than with the materialistic, and part III affirms the comfort that results from being centered in Christ. Finally, it shows in part IV how an individual's faith has to be strengthened through the EUCHARIST, or Holy Communion. The simplicity of the book's language and the direct appeal to the religious sensitivity of the individual are perhaps the primary reasons why this book has been so deeply influential.

IMMACULATE CONCEPTION

IMMACULATE CONCEPTION, ROMAN CATHOLIC dogma asserting that MARY, the mother of JESUS CHRIST, was preserved free from the effects of the SIN of ADAM (usually referred to as "original sin") from the first instant of her conception. The doctrine seems to have arisen from a general acceptance in the early church of Mary's holiness. Especially after Mary had been solemnly declared to be the mother of God at the Council of Ephesus in 431, most theologians doubted that one who had been so close to God could have actually committed sinful acts.

The view that Mary had been spared also from the disposition to evil inherent in ORIGINAL SIN was not clearly articulated until the 12th century, when considerable debate was centered on an English celebration of Mary's conception. The discussion was clouded by medieval views of the biological aspects of conception and by a concern that the belief in the universal redemption effected by Jesus should not be threatened. The latter concern was countered not long after by the FRANCISCAN theologian JOHN DUNS SCOTUS, who argued that Christ's redemptive GRACE was applied to Mary to prevent sin from reaching her soul. Mary's privilege, thus, was the result of God's grace and not of any intrinsic merit on her part. It was not, however, until Dec. 8, 1854, that PIUS IX declared in the bull *Ineffabilis Deus* that the doctrine was revealed by God and hence was to be firmly believed as such by all Catholics. The feast of the Immaculate Conception is celebrated on December 8.

IMMORTALITY, the continuity of existence after the death of the body, or, the state of not being subject to death. See DEATH AND AFTERLIFE.

IMPRIMATUR \im-prə-'mä-tür\ (Latin: "let it be printed"), in the ROMAN CATHOLIC church, a permission, required by contemporary CANON LAW and granted by a bishop, for the publication of any work on SCRIPTURE or, in general, any writing containing something of peculiar significance to religion, theology, or morality. Strictly speaking, the imprimatur is nothing more than the permission. But because its concession must be preceded by the favorable judgment of a censor (*nihil obstat*: "nothing hinders [it from being printed]"), the term has come to imply ecclesiastical approval of the publication itself. Nevertheless, the imprimatur is not an episcopal endorsement of the content, nor is it a guarantee of doctrinal integrity. It does, however, indicate that nothing offensive to faith or morals has been discovered in the work.

IMRAM \'ēm-rəv\ (Old Irish Gaelic: "rowing about," or "voyaging"), plural *imramha* \-rə-və\, in early Irish literature, a story about an adventurous voyage. Stories of this type include

Inari, wood figurine, Tokugawa period (1603–1867)

By courtesy of the Guimet Museum, Paris

tales of Irish saints traveling to Iceland or Greenland, as well as fabulous tales of PAGAN heroes journeying to the otherworld (*echtrae*). An outstanding example of an *imram* is *Imram Brain*, or *The Voyage of Brán*, which describes a trip to the enchanted Land of Women. After what seems to be a year, BRÁN and his colleagues return home to discover that their voyage had lasted longer than any memories and was recorded only in ancient sources.

INANNA: see ISHTAR.

INARI \ē-'nä-rē\, in Japanese mythology, god who protects rice cultivation and furthers prosperity. The patron deity of swordsmiths, Inari is worshiped particularly by merchants and tradesmen and is also associated with brothels and with entertainers.

In SHINTŌ legends Inari is identified with Uka no Mitama no Kami ("August Spirit of Food"), son of the storm god, SUSANOO, but in some Shintō shrines is associated with the goddess of food, UKEMOCHI NO KAMI. Inari's depictions vary from a bearded man riding a white fox to a woman with long hair, carrying sheaves of rice.

The fox is sometimes identified with the messenger of Inari, and statues of foxes are found in great numbers both inside and outside shrines dedicated to the rice god. Other characteristics of Inari shrines are their deep red buildings, long rows of votive TORII (gateways), and the *hōshu-notama* (a pear-shaped emblem surmounted by flamelike symbols).

INCA: see PRE-COLUMBIAN SOUTH AMERICAN RELIGIONS.

INCARNATION, central Christian doctrine that God assumed a human nature and became a man in the form of JESUS CHRIST, the Son of God and the second Person of the TRINITY. The doctrine maintains that the divine and human natures of Jesus do not exist beside one another in an unconnected way but rather are joined in a personal unity that has traditionally been referred to as the hypostatic union. The union of the two natures has not resulted in their diminution or mixture; rather, the identity of each is believed to have been fully preserved.

The word Incarnation (from the Latin *caro*, "flesh") may be most closely related to the claim in the prologue of the Gospel According to John that the Word became flesh, that is, assumed human nature. The essence of the doctrine of the Incarnation is that the preexistent Word has been embodied in the man Jesus of Nazareth, who is presented in John as being in close personal union with God, whose words Jesus is speaking when he preaches the gospel.

Belief in the preexistence of Christ is indicated in various letters of the NEW TESTAMENT but particularly in the Letter of Paul to the Philippians in which the Incarnation is presented as the emptying of Christ Jesus, who was by

nature God and equal to God (*i.e.*, the Father) but who took on the nature of a slave and was later glorified by God.

The development of a more refined theology of the Incarnation resulted from the response of the early church to various divergent interpretations of the divinity of Jesus and the relationship of the divine and human natures of Jesus. The COUNCIL OF NICAËA (325 CE) pronounced that Christ was “begotten, not made” and that he was therefore not creature but Creator. The basis for this claim was the doctrine that he was “of the same substance as the Father.” The doctrine was further defined by the COUNCIL OF CHALCEDON (451 CE), at which it was declared that Jesus was perfect in deity and in humanity and that the identity of each nature was preserved in the person of Jesus Christ.

Subsequent theology has worked out the implications of this definition, although there have been various tendencies emphasizing either the divinity or the humanity of Jesus. It has commonly been accepted that the union of the human nature of Christ with his divine nature had significant consequences for his human nature. The union of the two natures has been viewed by theologians as a gift for other humans, both in terms of its benefit for their redemption from SIN and in terms of the appreciation of the potential goodness inherent in human activity.

INCUBUS, DEMON in male form that seeks to have sexual intercourse with sleeping women. The corresponding spirit in female form is called a SUCCUBUS. The Latin nouns *incubus* and *incubo* (“demon” or “nightmare”) are derivatives of the verb *incubare* (“to lie upon,” “to weigh upon,” “to keep a jealous watch over”), and usages of the words in classical and post-classical Latin played upon these various senses. The earliest explicit use of *incubus* to refer to a dream with sexual content is in the writing of ST. AUGUSTINE. Medieval writers narrowed the meaning of *incubus* to a demon seeking intercourse with sleeping women. Union with such a being was supposed by some to result in the birth of witches, demons, and deformed human offspring. Parallels exist in many cultures.

INDEX OF FORBIDDEN BOOKS (Latin: *Index Librorum Prohibitorum*), list of books once forbidden by ROMAN CATHOLIC church authority as dangerous to the faith or morals of Catholics. Its publication ceased in 1966.

Compiled by official censors, the *Index* attempted to prevent the contamination of the faith or the corruption of morals through the reading of theologically erroneous or immoral books. It was not, therefore, equivalent to the total legislation of the church regulating reading by Roman Catholics; nor was it ever a complete catalog of forbidden reading. Until 1966, CANON LAW prescribed two main forms of control over literature: the censorship of books by Roman Catholics in advance of publication, in regard to matters of faith and morals (a practice still followed); and the condemnation of published books judged to be harmful.

The origin of the church's legislation concerning the censorship of books is unclear. The decree of Pope Gelasius I about 496, which contained lists of recommended as well as banned books, has been described as the first Roman Index. The first catalog of forbidden books to include in its title the word *index*, however, was published in 1559 by the Sacred Congregation of the Roman INQUISITION. The list was suppressed in June 1966.

INDIAN SHAKER CHURCH, Christianized movement among Northwest American Indians; it is not connected

with the SHAKER communities developed from the teachings of ANN LEE. In 1881 near Olympia, Wash., John Slocum, a Roman Catholic Squaxon logger, reported that he had visited heaven while in a coma and was commissioned to preach a new way of life. The following year his wife, Mary, experienced a shaking paroxysm that was interpreted as the Spirit of God curing John of a further illness. The Shaker Church they founded attempted to replace traditional Indian cures with spiritual healing through shaking and dancing rituals. *See* NATIVE AMERICAN RELIGIONS.

Christian elements of the Indian Shaker Church include belief in the TRINITY and Sunday worship in plain churches furnished with a prayer table, handbells, and many crosses. Direct revelations replace the BIBLE, but a secession group cooperating with white evangelicals accepts the Bible and the preaching of sermons. Earlier persecutions ceased after the church was incorporated in Oregon (1907), Washington (1910), and California (1932). A loose organization in the late 20th century united more than 20 congregations having some 2,000 adherents.

INDRA \ˈin-drə\, chief of the Vedic gods of India and patron of warriors.

Indra's weapons are lightning and the thunderbolt, and he is strengthened for his feats by drinks of the elixir SOMA, a major offering of Vedic sacrifice. Among his allies are the Maruts, sons of RUDRA, who ride the clouds and direct storms; the Aśvins, twin horsemen; and VISHNU, who later evolved into one of the principal gods of HINDUISM. In a struggle of cosmic proportions to which the VEDAS often refer, Indra wields his thunderbolt to defeat the demonic Vṛtra (“Obstacle”), releasing the waters and cattle it holds captive and thus establishing the conditions requisite for order and prosperity. In later Hinduism, Indra plays a much reduced role—as god of rain, regent of the heavens, guardian of the east and, perhaps most important, as a symbol of cosmologies and religious sensibilities now superseded. Indra also plays a subservient role in BUDDHISM and is defeated by KRISHNA in a battle at Mount Govardhana. In both cases, Indra's subordination signifies that propitiatory rites directed to deities conceived as external beings are passé. These are replaced by a redemptive order that focuses instead on the immediate realm of human experience. In the mythology of JAINISM, Indra assumes a similarly peripheral position, receiving into his hands the hair of the Jain prophet MAHĀVĪRA when he cut it off to signify his renunciation of the world.

Indra is father to ARJUNA, hero of the MAHĀBHĀRATA war. He is sometimes referred to as “the thousand-eyed,” because of the thousand marks on his body resembling eyes (actually YONIS, or symbols of the female sexual organ), a result of a curse placed by a sage whose wife Indra seduced. In painting and sculpture he is often depicted riding on his white elephant Airāvata.

INDULGENCE, in ROMAN CATHOLICISM, a partial remission of temporal punishment due for a SIN after the sin has been forgiven through the SACRAMENT of penance. The theology of indulgences is based upon the concept that, even though the crime of sin and its eternal punishment are forgiven in the sacrament of penance, divine CHARITY and justice demand that the sinner pay for his crime either in this life or in PURGATORY.

The history of indulgences is intimately bound up with the penitential discipline of the early Christian church. The sacrament of penance (*see* CONFESSION) was frequently

referred to as a second and more laborious BAPTISM in which the penitent endeavored to free themselves not only of the guilt of sin but of the temporal punishment as well. To this end fixed penances (canonical) were assigned to compensate the debt of punishment contracted by sin. Later, in the early Middle Ages, there developed procedures to commute the protracted canonical penance by substituting periods of fasting (usually of 40 days, a quarantine), special private prayers, almsgiving, and payments of money that was to be used for religious purposes. The first to grant a plenary, or absolute, indulgence was Pope Urban II on the occasion of the First Crusade (1095); the indulgence decree reads: "Whosoever out of pure devotion and not for the sake of gaining honor or money, shall go to Jerusalem to liberate the Church of God, may count that journey in lieu of all penance."

After the 12th century, references to indulgences became more frequent. Innocent II granted a 40-day indulgence for visiting and contributing to the adornment of the great church at Cluny (1132), and soon every church of any importance had its own indulgence to further the work of construction. The evident lack of proportion between the small sums of money contributed and the debt of punishment remitted posed a problem for the great speculative theologians of the age. Their solution was that money contributions and other pious works were not to be considered as substitutes for the canonical penance but rather as conditions for gaining the indulgence. The debt of punishment was paid from the church's treasury of merits.

The practice of demanding an offering as a necessary condition for certain indulgences inevitably prepared the way for serious abuses. Not a little of the money collected found its way into the pockets of greedy ecclesiastics and professional collectors (*quaestores*). And it is at least possible that preachers went beyond the limits of the doctrine, misleading the more credulous into believing that the indulgence was a substitute for true sorrow and confession. It would appear also that the frequently used expression *ab omni culpa et poena*—"from all guilt and punishment"—contributed to the misconception.

Martin Luther's NINETY-FIVE THESES (1517) were in part a protest against the wayward employment of indulgences and helped spark the Indulgence Controversy. Not until the COUNCIL OF TRENT (1562), however, was an end put to abuses connected with the practice of indulgences. The name and office of *quaestor* was abolished along with its privileges. Five years later, Pius V revoked all indulgences for which money payments or alms were prescribed and ordered the bishops to destroy all briefs in which such indulgences were granted. The Roman Catholic church nevertheless still held to its doctrine that the debt of punishment could be paid from the church's treasury of merits.

In current Roman Catholic doctrine and practice, in order to gain an indulgence the person must be in the state of GRACE (*i.e.*, he must have no unabsolved mortal sin upon his conscience), he must have the intention of gaining the indulgence, and he must personally fulfill the prescribed good work. Indulgences may be applied to the souls of the dead. In such cases, however, the church cannot grant directly; indulgences can be offered for the dead only *per modum suffragii* (*i.e.*, in supplication), not *per modum absolutiois* (*i.e.*, as a grant).

INDUS VALLEY CIVILIZATION \ˈin-dəs\, also called Harappan civilization \hə-ˈrɑ-pən\, earliest known urban culture of the Indian subcontinent, first identified in 1921

at Harappā in the Punjab and then in 1922 at Mohenjo-daro, near the Indus River in the Sindh, now both in Pakistan. Subsequently, vestiges of the civilization were found as far apart as Sutkāgen Dor, near the shore of the Arabian Sea, 300 miles west of Karachi, and Rupar at the foot of the Shimla Hills, 1,000 miles to the northeast. Later exploration established its existence southward down the west coast as far as the Gulf of Cambay, 500 miles southeast of Karachi and as far east as the JAMUNĀ Basin, 30 miles north of Delhi.

The civilization is known to have comprised two large cities, Harappā and Mohenjo-daro, and over 100 towns and villages, often of relatively small size. The two cities were each over 3 miles in circuit, and their outstanding magnitude, coupled with a standard system of weights, as well as a common script over the entire culture, suggests to some scholars a single great empire or some form of centralized control. Other scholars see a system of independent city-states as a more likely form of polity in this period. Other comparably large cities have been found since the initial discovery of Harappā and Mohenjo-daro. The civilization was literate, and its script, with some 250 to 500 characters, has yet to be deciphered, despite a plethora of claims. Decipherment attempts have primarily focused on Dravidian and Indo-Aryan (and to a lesser extent Munda) languages from the subcontinent, as well as other languages outside South Asia such as Sumerian. No two decipherment attempts have been consistent, and we remain unsure of the linguistic affiliation of the Indus Valley inhabitants. The nuclear dates of the civilization appear to be about 2500–1700 BCE, though southern sites may have lasted later in the 2nd millennium BCE. The Indus Valley civilization maintained active trade contacts extending into Iran, Afghanistan, and the Gulf of Oman.

Perhaps the best-known artifacts of the Indus civilization are a number of small seals, generally made of steatite, which are distinctive in kind and unique in quality, depicting a wide variety of animals, both real—such as elephants, tigers, rhinoceroses, and antelopes—and fantastic, often composite, creatures. Sometimes human forms are included. A few small examples of Indus stone sculpture have been found, as well as large numbers of small terra-cotta figures of animals and humans. Among these, female figurines are particularly ubiquitous, causing some scholars to speculate that the worship of goddesses was a main feature of Indus religion.

Certain figures and scenes depicted on the Indus seals have led to speculation about many other connections to Hindu religion as it later developed. In one seal, for example, a figure emerging from a *pīpal* tree—sacred to Hindu—appears to be under worship. In another, a figure seated cross-legged seems to be venerated by two ancillary figures whose backs and heads are shielded by great snakes, after the manner of NĀGAS. In still another, a similarly seated figure rests hands on knees as if in the lotus position (*padmāsana*) familiar to yogic practice, and some observers have seen him to be an early version of SHIVA, the great ascetic who is exemplary in his ability both to store and restrain male erotic power.

The exact relation between Indus and Indo-Aryan religious cultures is still unsolved. The consensus among most Western and some Indian scholars, based primarily on philological and linguistic evidence, is that the ARYANS entered the subcontinent sometime after the decline of the Mature Harappan phase, or after 2000 BCE. A growing number of primarily South Asian archaeologists and scholars, howev-

er, consider that the Indus Valley may have been an Indo-Aryan civilization, or at least in co-existence with the Vedic culture. The issue is likely to remain contested until the Indus script is deciphered.

INNER LIGHT, also called *Inward Light*, the distinctive theme of the SOCIETY OF FRIENDS (Quakers), the direct awareness of God that allows a person to know God's will for him. It was expressed in the 17th century in the teachings of GEORGE FOX, founder of the Friends, who had failed to find spiritual truth in the English churches and who finally experienced a voice saying, "There is one, even Christ Jesus, that can speak to thy condition." A phrase used by Fox, "that of God in every man," is often used to describe the Inner Light. ROBERT BARCLAY, Scottish author of the influential systematic statement of the doctrines of the Friends, *An Apology for the True Christian Divinity* (1678), stated that "the Inner Light is never separated from God nor Christ; but wherever it is, God and Christ are as wrapped up therein." Most Friends believe that the Inner Light is not simply a mystical experience but should result in a person's working for the good of others.

INNOCENT III \i-'nə-sənt\, *original name* Lothair of Segni, *Italian* Lotario di Segni (b. 1160/61, Gavignano Castle, Campagna di Roma, Papal States—d. July 16, 1216, Perugia), pope from 1198 to 1216, under whom the medieval PAPACY reached the height of its prestige and power.

Lothair studied theology in Paris and CANON LAW in Bologna. In 1190 Pope Clement III (1187–91) raised him from subdeacon to CARDINAL deacon, but he played no prominent part in the government of the church during the pontificate of Celestine III (1191–98). On the day of Celestine's death, Jan. 8, 1198, Lothair was unanimously elected pope after only two ballots; he was ordained priest on February 21 and on the next day was consecrated as bishop of Rome.

At the time of his accession, Rome was practically independent of papal government, but Innocent soon succeeded in reasserting papal rights there. Within a few years he had pacified the rival aristocratic factions and won over most of the people. Moreover, he had been very successful in restoring papal government to the Papal States and had added to them the Duchy of Spoleto and the March of Ancona.

When the princes of the Holy Roman Empire split over the election of a new German king, one party electing the brother of the deceased emperor, Philip of Hohenstaufen, duke of Swabia, the other electing the duke of Brunswick, who was to be known as Otto IV, Innocent favored Otto because he distrusted the policies of Philip's family. Additionally, Innocent had no desire to see Frederick as emperor as that would reunite the empire with Sicily. Philip, however, was so successful against Otto that Innocent after a few years found it necessary to resume negotiations with him. But Philip was murdered in 1208, and Otto IV was then crowned emperor by Innocent III.

In a short time, Otto managed to alienate the Pope by his pursuit of plans and actions hostile to papal sovereignty in the Papal States and aiming at the reunion of the empire and Sicily. Innocent excommunicated him after he had embarked on the conquest of the Sicilian kingdom and turned to the young Frederick of Sicily. He gave his support to the German election of 1212, and in 1216 Frederick II, as king of Germany, promised to transfer full rule over Sicily to his infant son Henry.

Meanwhile, Frederick, with the help of King Philip II Augustus of France, had triumphed over Otto IV and over Ot-

to's uncle and ally, King John of England, at the Battle of Bouvines (1214). John had been excommunicated by Innocent for his refusal to recognize as archbishop of Canterbury Cardinal Stephen Langton, who had been elected by the monks of the cathedral in accordance with the Pope's wishes. In order to forestall French invasion of England, John declared England a fief of the Holy See (1213). When John was forced to sign Magna Carta and then complained to the Pope as to his feudal overlord, Innocent annulled the charter as having been extorted. Innocent considered Magna Carta an attempt at feudal insurrection against rightful royal authority.

Innocent presided over the Fourth Crusade of 1202–04, and when it was diverted to Constantinople, chiefly to suit Venetian interests and against the will of the Pope, he nevertheless accepted the fait accompli because he mistakenly believed that the establishment of the Latin Empire and patriarchate of Constantinople would bring about a lasting reunion between the Eastern and Western churches. The other crusade of his reign was launched, with his approval, against the ALBIGENSES, who denied the SACRAMENTS and the authority of the ecclesiastical hierarchy. The Pope's decision opened an unhappy chapter in the history of the church by placing under supreme ecclesiastical leadership the repression of HERESY by force. Although he never demanded the death sentence against heretics, he had little success in limiting the bloodshed and devastation.

Innocent encouraged the desire to live in apostolic poverty wherever he found it among the ROMAN CATHOLIC clergy and laity. In granting lay and clerical communities—such as the DOMINICANS and the first community of ST. FRANCIS OF ASSISI—permission to preach and teach, Innocent went far beyond what the popes of the 12th century had thought possible, inaugurating the MENDICANT orders.

He presided over the fourth LATERAN COUNCIL (1215), which promulgated the dogma of TRANSUBSTANTIATION, bound every Catholic to CONFESSION at least once a year and communion at EASTER time, and enacted important reforms of clergy and laity. A far-reaching centralization of church government is particularly reflected by Innocent's unlimited claim to fill all vacancies of ecclesiastical offices.

INOUE ENRYŌ \ē-'nō-ū-e-'en-'ryō\ (b. March 18, 1858, Echigo Province, Japan—d. June 6, 1919, Dairen, Manchuria), Japanese philosopher and educator who attempted to reinterpret Buddhist concepts so that they would be accessible to Western philosophers.

After attending the school for priests at the Higashihon-gan-ji, the main temple of the Jōdo-Shinshū (True PURE LAND sect) in Japan, Inoue enrolled in Tokyo Imperial University, where he graduated from the department of philosophy in 1885. Critical of what he considered the excessive Westernization of Japan, especially the conversion of many governmental leaders to CHRISTIANITY, he founded (1887) the Tetsugaku kan (Philosophical Institute) to promote the study of BUDDHISM. Inoue's belief that Buddhism epitomized Oriental philosophy gained many adherents, and with their aid he began to publish the highly nationalistic magazine *Nihonjin* ("The Japanese") and embarked on a series of lecture tours throughout Japan and Europe.

In his later life Inoue conducted an educational campaign to overcome superstitions inspired by folkloric interpretations of Japanese mythology. For this purpose he established the Ghost Lore Institute in Tokyo and gained the sobriquet "Doctor Obake," or "Doctor Ghost." He died while on a speaking tour in Manchuria.

INQUISITION, in ROMAN CATHOLICISM, a papal judicial institution that combated HERESY as well as alchemy, WITCHCRAFT, and SORCERY and wielded much power in medieval and early modern times. The name is derived from the Latin verb *inquirō* ("investigate, inquire into").

After the Roman church had consolidated its power in the early Middle Ages, heretics came to be looked upon as enemies of society. With the appearance of large-scale heresies in the 11th and 12th centuries—notably among the CATHARI and WALDENSES—Pope Gregory IX in 1231 instituted the papal Inquisition for the arrest and trial of heretics.

The inquisitorial procedure gave a person suspected of heresy time to confess and absolve himself; failing this, the accused was brought before the inquisitor and interrogated and tried, with the testimony of witnesses. The use of torture to obtain confessions and the names of other heretics was authorized in 1252 by Innocent IV. On admission or conviction of guilt, a person could be sentenced to any of a wide variety of penalties, ranging from simple prayer and fasting to confiscation of property and imprisonment, even for life. Condemned heretics who refused to recant, as well

as those who relapsed after condemnation and repentance, were turned over to the secular arm, which alone could impose the death penalty.

The medieval Inquisition functioned only in a limited way in northern Europe; it was most employed in northern Italy and southern France. During the Reconquista in Spain, the Catholic powers used it only occasionally; but, after the Muslims had been driven out, the Catholic monarchs of Aragon and Castile requested a special institution to combat apostate former Jews and Muslims as well as such heretics as the Alumbrados. Thus in 1478 Pope Sixtus IV authorized the Spanish Inquisition.

The first Spanish inquisitors, operating in Seville, proved so severe that Sixtus IV had to interfere. But the Spanish crown now had in its possession a powerful weapon, and the efforts of the Pope to limit the powers of the Inquisition were without avail. In 1483 he was induced to authorize the naming by the Spanish government of a grand inquisitor for Castile, and during the same year Aragon, Valencia, and Catalonia were placed under the power of the Inquisition. The first grand inquisitor was the DOMINICAN Tomás de Torquemada, who has become the symbol of the inquisitor who uses torture and confiscation to terrorize his victims. The number of burnings at the stake during his tenure has been exaggerated, but it was probably about 2,000.

The Spanish Inquisition was introduced into Sicily in 1517, but efforts to set it up in Naples and Milan failed. The emperor Charles V in 1522 introduced it into the

Netherlands, where its efforts to wipe out PROTESTANTISM were unsuccessful. The Inquisition in Spain was suppressed by Joseph Bonaparte in 1808, restored by Ferdinand VII in 1814, suppressed in 1820, restored in 1823, and finally suppressed in 1834.

A third variety of the Inquisition was the Roman Inquisition, established in 1542 by Pope Paul III to combat Protestantism in Italy. It was governed by a commission of six CARDINALS, the Congregation of the Inquisition, which was thoroughly independent and much freer from episcopal control than the medieval Inquisition had been. Under Paul III (1534–49) and Julius III (1550–55), the action of the Roman Inquisition was not rigorous, and the moderation of these popes was imitated by their successors with the exceptions of Paul IV (1555–59) and Pius V (1566–72). Under Paul IV the Inquisition alienated nearly all parties. Although Pius V (a Dominican and himself formerly grand inquisitor) avoided some of the worst excesses of Paul IV, he nevertheless declared that questions of faith took precedence over all other business and made it clear that his first care would be to see that heresy, false doctrine, and error were suppressed.

After Protestantism had been eliminated as a serious danger to Italian religious unity, the Roman Inquisition became more and more an ordinary organ of papal government concerned with maintaining good order as well as purity of faith among Catholics. In his reorganization of the ROMAN CURIA in 1908, PIUS X dropped the word Inquisition, and the congregation charged with maintaining purity of faith came to be known officially as the Holy Office. In 1965 Pope Paul VI reorganized the congregation along more democratic lines and renamed it the Congregation for the Doctrine of the Faith.

INSTITUTES OF THE CHRISTIAN RELIGION, *Latin* Christianae Religionis Institutio, *French* Institution de la Religion Chrétienne, John Calvin's masterpiece, a summary of biblical theology that became the normative statement of the Reformed faith. It was first published in 1536 and was revised and enlarged by Calvin in several editions before the definitive edition was published in 1559.

The first edition, written in Latin and published in Basel, where Calvin was in exile, included a dedication to the French king Francis I. Calvin intended his work to be a statement of French Protestant beliefs that would refute the king, who was persecuting French Protestants and incorrectly calling them ANABAPTISTS (radical Reformers who wished to separate the church from the state). It consisted of six chapters that discussed the TEN COMMANDMENTS, the APOSTLES' CREED, the LORD'S PRAYER, the SACRAMENTS OF BAPTISM and the Lord's Supper (EUCCHARIST), disputed sacraments, and Christian liberty. Most of the themes of Calvin's mature thought were in the first edition.

The first French edition, prepared by Calvin and published in Basel in 1541, was the first great work in argumentative French prose. The final edition, in Latin and published in Geneva in 1559, was more than four times longer than the first edition. It was organized into FOUR BOOKS concerning Creator, Redeemer, Spirit, and church. The dominating themes dealt with God's sovereignty, his GRACE, and his redemption of undeserving sinners. This edition was published in French (1560), in English (1561), and eventually in many other languages.

INTI \in-tē\, also called Apu-Punchau, in Inca religion, the sun god, head of the state cult, and the ancestor of the In-

cas. He was usually represented in human form, his face a gold disk from which rays and flames extended. Inti's sister and consort was the moon, Mama-Kilya (or Mama-Quilla), portrayed as a silver disk with human features.

Inti-raymi, a festival in honor of Inti held in June (after the Spanish conquest, in May or June to coincide with the FEAST OF CORPUS CHRISTI), was celebrated with animal sacrifices and ritual dances. See also PRE-COLUMBIAN SOUTH AMERICAN RELIGIONS.

INVESTITURE CONTROVERSY \in-'ves-tə-,chūr, -chər, -tyūr\, power struggle between the PAPACY and the Holy Roman Empire during the late 11th and early 12th centuries. It began with a dispute about the lay investiture of bishops and ABBOTS. Such PRELATES held land and often exercised secular as well as ecclesiastical functions; for this reason, lay overlords had an interest in their appointment and frequently invested (formally presented) them with the symbols of their various offices.

Because POPE GREGORY VII eventually condemned (1077) lay investiture during his dispute with the German king and Holy Roman emperor Henry IV (reigned 1056–1106), historians have given to the quarrel and its aftermath the name Investiture Controversy; but the real conflict between Gregory and Henry, the main disputants, concerned the issue of whether the pope or the emperor should dominate the church. The political results of their struggle were far-reaching. In Germany the power of the aristocracy was permanently enhanced at the expense of the monarchy, while in northern Italy the rise of the Lombard communes with papal support weakened imperial authority there. Gradually, the extreme papalists widened their opposition to any lay control over the episcopate. In 1106 Henry I of England renounced the practice of investing prelates with the symbols of their office, and in return the church conceded that homage to the king should precede episcopal consecration. A similar compromise was effected by the so-called CONCORDAT OF WORMS (1122) between the emperor Henry V and Pope Calixtus II; and in Germany (but not in Burgundy or Italy) the emperor also acquired the right to have elections conducted in his presence.

IO \i-ō\, in Greek mythology, daughter of Inachus, the river god of Argos. Under the name of Callithyia, Io was regarded as the first priestess of HERA, the wife of ZEUS. Zeus fell in love with her and, to protect her from the wrath of Hera, changed her into a white heifer. Hera persuaded Zeus to give her the heifer and sent ARGUS PANOPTES ("the All-Seeing") to watch her. Zeus thereupon sent the god HERMES, who lulled Argus to sleep and killed him. Hera then sent a gadfly to bother Io, who therefore wandered all over the Earth, crossed the Ionian Sea, swam the strait that was thereafter known as the Bosphorus (meaning Ox-Ford), and at last reached Egypt, where she was restored to her original form and became the mother of Epaphus.

Io was thus identified with the Egyptian goddess ISIS, and Epaphus with APIS, the sacred bull. Epaphus was said to have been carried off by order of Hera to Byblos in Syria, where he was found again by Io. This part of the legend connects Io with the Syrian goddess ASTARTE. Both the Egyptian and the Syrian parts reflect interchange with the East and the identification of foreign with Greek gods.

IOLAUS \i-ə-'lā-əs\, ancient Greek hero, the nephew, charioteer, and assistant of HERACLES. He was the son of Iphicles, himself half brother of Heracles by the same mother. Iolaus

The sacrifice of Iphigeneia, fresco from the House of the Tragic Poet, Pompeii, c. 30 CE; in the National Archaeological Museum, Naples, Italy

The Bridgeman Art Library International

aided Heracles in his second labor, the slaying of the HYDRA and its ally the crab. He also went with him to the west to capture the cattle of the GIANT Geryon. Hence he was associated with various places in Sicily and, later, in Sardinia. Iolaus had a hero cult at Thebes, but elsewhere he was worshiped only in conjunction with Heracles.

IPHIGENEIA \i-fə-jə-'nī-ə\, in Greek mythology, eldest daughter of AGAMEMNON and his wife Clytemnestra. Her father had to sacrifice her to the goddess ARTEMIS in order that the Achaean fleet might be delivered from the calm (or contrary winds) by which Artemis was detaining it at Aulis and proceed on its way to the siege of Troy.

Iphigeneia served as a key figure in certain Greek tragedies: in the *Agamemnon* of Aeschylus, in the *Electra* of Sophocles, in Euripides' unfinished *Iphigeneia in Aulis*, and in his earlier play *Iphigeneia in Tauris*, in which she was saved by Artemis, who substituted a hind. Variants of her story are found in later authors. In some localities she was identified with Artemis, and some ancient writers claimed that Iphigeneia was originally the goddess HECATE.

IQBĀL, MUHAMMAD \'ik-bāl\ (b. Nov. 9, 1877, Siālkot, Punjab, India [Pakistan]—d. April 21, 1938, Lahore, Punjab), Indian poet and philosopher, known for his influential efforts toward the establishment of a separate Muslim state.

Early life and career. Iqbāl was educated at Government College, Lahore. In Europe from 1905 to 1908 he earned his degree in philosophy from the University of Cambridge, qualified as a barrister in London, and received a doctorate from the University of Munich. His thesis, *The Development of Metaphysics in Persia*, revealed some aspects of Islamic MYSTICISM formerly unknown in Europe.

On his return from Europe, he gained his livelihood by the practice of law, but his fame came from his Persian- and

Urdu-language poetry, which was written in the classical style for public recitation. Through poetic symposia and in a milieu in which memorizing verse was customary, his poetry became widely known, even among the illiterate. Almost all the cultured Indian and Pakistani Muslims of his and later generations have had the habit of quoting Iqbāl.

The recurrent themes of Iqbāl's poetry are a memory of the vanished glories of ISLAM, a complaint about its present decadence, and a call to unity and reform. Reform can be achieved by strengthening the individual through three successive stages: obedience to the law of Islam, self-control, and acceptance of the idea that everyone is potentially a vicegerent of God (*nā'ib*, or *mu'min*). Furthermore, the life of action is to be preferred to ascetic resignation.

Notoriety came in 1915 with the publication of his long Persian poem *The Secrets of the Self*. In this work he presents a strong condemnation of the self-negating QUIETISM (i.e., the belief that perfection and spiritual peace are attained by passive absorption in contemplation of God and divine things) of classical Islamic mysticism; his criticism shocked many and excited controversy. Iqbāl and his admirers steadily maintained that creative self-affirmation is a fundamental Muslim virtue.

The dialectical quality of his thinking was expressed by the next long Persian poem, *The Mysteries of Selflessness* (1918). The Muslim community, as Iqbāl conceived it, ought to teach and encourage generous service to the ideals of brotherhood and justice. The mystery of selflessness was the hidden strength of Islam. Ultimately, the only satisfactory mode of active self-realization was the sacrifice of the self in the service of causes greater than the self. The paradigm was the life of the Prophet MUHAMMAD and the devoted service of the first believers. In 1922 he was knighted by the British Crown in recognition of his achievements.

Later, he published three more Persian volumes. *Payāme Mashriq* (1923; "Message of the East") affirmed the universal validity of Islam. In 1927 *Zabūr-e 'Ajām* ("Persian Psalms") appeared. *Jāvid-nāmeḥ* (1932; "The Song of Eternity") is considered Iqbāl's masterpiece. Its theme is the ascent of the poet, guided by the great 13th-century Persian mystic Jalāl al-Dīn al-Rūmī, through all the realms of thought and experience to the final encounter.

Iqbāl's later publications in Urdu were *Bāl-e Jibrīl* (1935; "Gabriel's Wing"), *Zarb-e kalim* (1937; "The Blow of Moses"), and the posthumous *Armaghān-e Hijāz* (1938; "Gift of the Hejaz"), which contained verses in both Urdu and Persian. He is considered the greatest poet in Urdu of the 20th century.

Philosophical position and influence. His philosophical position was articulated in *The Reconstruction of Religious Thought in Islam* (1934), a volume based on six lectures delivered at Madras, Hyderabad, and Aligarh in 1928–29. He argued that a rightly focused man should unceasingly generate vitality through interaction with the purposes of the living God. The Muslim community ought, through the exercise of IṬTIHĀD—the principle of legal advancement—to devise new social and political institutions. He also advocated a theory of IṢMĀ'—consensus. Iqbāl tended to be progressive in adumbrating general principles of change but conservative in initiating actual change.

During the time that he was delivering these lectures, Iqbāl began working with the Muslim League. At the annual session of the league at Allahābād, in 1930, he gave the presidential address, in which he made a famous statement that the Muslims of northwestern India should demand status as a separate state.

After a long period of ill health, Iqbāl died in April 1938 and was buried in front of the great Bādshāhī Mosque in Lahore. Two years later, the Muslim League voted for the idea of Pakistan. He has been acclaimed as the father of that country, and every year Iqbāl Day is celebrated by Pakistanis.

IRANIAN RELIGIONS, ANCIENT, diverse beliefs and practices of a culturally and linguistically related group of peoples who inhabited the Iranian Plateau and its borderlands, as well as areas of Central Asia from the Black Sea to Khotan (modern Ho-t'ien, China). The northern Iranians (referred to generally as Scythians [Saka] in classical sources), who occupied the steppes, differed significantly from the southern Iranians. In religion and culture both the northern and southern Iranians had much in common with the ancient Indo-Aryans, although there was much borrowing from Mesopotamia as well, especially in western Iran.

One prominent feature of ancient Iranian religion was the notable influence of the **MAGI**, members of a priestly tribe originating in Media in northwestern Iran. The Magi's origin is unclear, but according to classical sources they presided at all religious ceremonies, where they chanted "theogonies," accounts of the origin and descent of the gods. They eventually became the official **PRIESTHOOD** of the Persian empire and were probably responsible for articulating a thoroughly dualist ideology and contributing to **ZOROASTRIANISM** its preoccupation with ritual purity.

Major deities. The early forms of the Iranian pantheon embraced two major groups of deities, the *daivas* ("heavenly ones") and the *ahuras*. Among many Iranians and in Zoroastrianism the *daivas* were regarded as **DEMONS**, but this belief was not pan-Iranian. The *ahuras* ("lords") were certain lofty sovereign deities, in contradistinction to the other deities called *bagha* ("the one who distributes") and *YAZATA* ("the one to be worshiped").

AHURA MAZDĀ ("Wise Lord") was probably the chief god of the pre-Zoroastrian pantheon. In both the religion of **ZOROASTER** and that of the Persian emperors Darius and Xerxes he is the creator of the universe and the one who establishes and maintains the cosmic and social order. As his name implies, he seems to have been sought by his worshippers for wisdom and insight, and may have been the object of a personal devotion that was lacking with other deities.

MITHRA is the next most important deity and may even have occupied a position of near equality with Ahura Mazda. He was associated with the Sun, and in time the name Mithra became a common word for "Sun." Mithra functioned preeminently in the ethical sphere; he was the god of the covenant, who oversaw all solemn agreements that people made among themselves. As a sovereign deity, Mithra bore the epithet *varu-gavyūti* ("one who [presides over] wide pasture lands")—i.e., one who keeps under his protection the territories of those who worship him and abide by their covenants. In later times Mithra gave his name to **MITHRAISM**, a **MYSTERY RELIGION**.

There was a powerful goddess whose full name was Ardvi Sūrā Anāhitā, literally "the damp, strong, untainted." She appears to have been a combination of two originally distinct divinities. First, Ardvi Sūrā is the Iranian name of a river goddess who flows from Mount Hukarya and brings fresh water to the earth. Second, **ANĀHITI** (probably "untaintedness, purity") was a goddess with martial traits, the patroness of Iranian heroes and legendary rulers, whose cult seems to have been popular originally in northeastern Iran. In addition, she was important for fertility.

The war deity Vrthraghna was equated in post-Achaemenian times with **HERACLES** and was a favorite deity of monarchs, some of whom took his name, which means "the smashing of resistance or obstruction"; he bore the epithet *bara-khvarnah*, "bearing the glory." Among all the deities, Vrthraghna preeminently possessed the power to undergo various transformations. 10 different forms have been recorded: the Wind (the god Vāyu), bull, stallion, rutting camel, wild boar, a 15-year-old man (15 was considered to be the ideal age), falcon, ram, goat, and hero.

RASHNU was an ethical deity, the divine judge who ultimately presided over legal disputes among men. He was invoked as the one who "best smite(s), who best destroy(s) the thief and the bandit at this trial." In particular, he appears to have been the god of **OATHS** and ordeals administered during trials.

Astral deities figured prominently in ancient Iranian religion, and the most important seem to have been **TISHTRYA** and **TIRI**. Tishtrya was identified with the star Sirius, and his principal myth involves a battle with a demonic star named **APAUSHA** ("Nonprosperity") over rainfall and water. In a combat that was reenacted in a yearly equestrian ritual, Tishtrya and Apausha, assuming the forms of a white stallion and a horse of horrible description, respectively, battle along the seashore. Initially Apausha is victorious, but after receiving worship Tishtrya conquers him and drives him away. Tishtrya then causes the cosmic sea to surge and boil, and a star, Satavaisa (Fomalhaut), rises with the mists that are blown by the wind in the form of "rain and clouds and hail to the dwelling and the settlements (and) to the seven continents." As one of the stars "who contains the seeds of waters" (i.e., who causes rain), Tishtrya was also intimately connected with agriculture. He battled and defeated the shooting stars (identified as witches), especially one called "Bad Crop" (Duzhyāryā). In Zoroastrianism, Tishtrya was identified with the western Iranian astral deity, **TIRI** (Mercury in Sāsānian astronomy); a very important agricultural festival, the **TIRAGĀN**, as well as the 4th month and the 13th day of the Zoroastrian calendar, bears his name.

Cultic practices, worship, and festivals. The Iranians did not make images of their deities, nor did they build temples to house them, preferring to worship in the open. Worship was performed primarily in the context of a central ritual called *yazna*, which is still performed by Zoroastrians. The *yazna* was a festive meal, the sacrificer being the host and the deity the guest. As such it followed the established rules of hospitality: the guest was sent an invitation; on his arrival he was greeted, shown to a seat, given meat and a drink, and entertained with song extolling his great deeds and virtues. Finally, the guest was expected to return the hospitality in the form of a gift. It is likely that from a very early period a priest, the *zautar* (Vedic *hotar*), was required to carry out the *yazna* properly.

In ancient Iran, fire was at once a highly sacred element and a manifestation of the deity. Since burned offerings were not made, the role of **Ātar** (Fire) was principally that of intermediary between heaven and earth (*compare* **AGNI**). Fire was always treated with utmost care as a sacred element. Whether in the household hearth or, at a later period, in fire temples, the sacred fire had to be maintained with proper fuel, kept free from polluting agents, and above all never permitted to go out or be extinguished.

More important than the meat offering of an animal victim was the preparation of the divine drink *hauma* (*compare* **SOMA**), which was regarded both as a sacred drink and

IRENÆUS, SAINT

as a powerful deity. Probably the greatest part of the *yazna* was devoted to the pressing of the *hauma*. The juice, described as yellow, was filtered and mixed with milk, and perhaps with water too, to cut the bitter taste. The resulting drink was a mind-altering drug believed to inspire the drinker with insight into truth. Also, *hauma*, invoked for victory, was taken as a stimulant by warriors going into battle, and various heroes of Iranian myth and legend are remembered as primary practitioners of its cult.

IRENÆUS, SAINT \i-rə-'nē-əs, -'nā-\ (b. c. 120/140, Asia Minor—d. c. 200/203, probably Lyon; Western feast day June 28; Eastern feast day August 23), bishop of Lugdunum (Lyon) and leading Christian theologian of the 2nd century.

Irenaeus was born of Greek parents in Asia Minor. As a child he heard and saw Polycarp, the last known living connection with the APOSTLES. After persecutions in Gaul in 177 Irenaeus succeeded the martyred Pothinus as bishop of Lugdunum. According to EUSEBIUS OF CAESAREA, Irenaeus, prior to his becoming bishop, had served as a missionary to southern Gaul and as a peacemaker among the churches of Asia Minor that had been disturbed by HERESY.

The era in which Irenaeus lived was a time of expansion and inner tensions in the church. In many cases Irenaeus acted as mediator between factions. The churches of Asia Minor continued to celebrate EASTER on the Jewish PASS-OVER, whereas the Roman church maintained that Easter should always be celebrated on a Sunday (the day of the RESURRECTION of Christ). Mediating between the parties, Irenaeus stated that differences in external factors, such as dates of festivals, need not destroy church unity.

In spite of these conciliatory policies, Irenaeus adopted a totally negative and unresponsive attitude toward Marcion (see MARCIONITE), a schismatic leader in Rome, and toward GNOSTICISM. Because Gnosticism was overcome through the efforts of the early CHURCH FATHERS, among them CLEMENT OF ALEXANDRIA and Irenaeus, Gnostic writings were largely obliterated. In reconstructing Gnostic doctrines, therefore, modern scholars have relied to a great extent on the writings of Irenaeus, who summarized the Gnostic views before attacking them. The discovery of the Gnostic library near Naj' Hammādī (in Egypt) in the 1940s proved him to have been extremely precise and quite fair in his report of the doctrines he rejected.

All his known writings are devoted to the conflict with the Gnostics. His principal work consists of five books in a work entitled *Adversus haereses*. Originally written in Greek about 180, "Against Heresies" is now known in its entirety only in a Latin translation. A shorter work, *Demonstration of the Apostolic Preaching*, also written in Greek, is extant only in an Armenian translation.

Irenaeus asserted the validity of the Hebrew BIBLE (the OLD TESTAMENT), which the Gnostics denied, claiming that it upheld the laws of the Creator God of wrath. Though Irenaeus did not actually refer to two testaments, one old and one new, he prepared the way for this terminology. He asserted the validity of the two testaments at a time when concern for the unity and the difference between the two parts of the Bible was developing. Many works claiming scriptural authority, which included a large number by Gnostics, flourished in the 2nd century; by his attacks on the Gnostics, Irenaeus helped to establish a canon of SCRIPTURES.

The development of the APOSTLES' CREED and the office of bishop also can be traced to his conflicts with the Gnostics. Because the Gnostics denied that the God revealed in the NEW TESTAMENT was the Creator, the first article of the creed

was for polemical reasons directly connected with GENESIS ("In the beginning God created the heavens and the earth"). Irenaeus refers to the creed as a "Rule of Truth" used to combat heresy.

IRIS \i-rəs\ (Greek: "Rainbow"), in Greek mythology, the personification of the rainbow and a messenger of the gods. According to the poet Hesiod, she was the daughter of Thaumatas and the ocean NYMPH Electra, and had the duty of carrying water from the River STYX in a ewer whenever the gods had to take a solemn OATH. The water would render unconscious for one year any god or goddess who lied. In art, Iris was normally portrayed with wings, and her attributes were the herald's staff and a vase.

ISAAC \i-zək\, Hebrew Yitzḥaq, Arabic Ishāq, in the OLD TESTAMENT, second of the patriarchs of ISRAEL, the only son of ABRAHAM and SARAH, and father of ESAU and JACOB (GENESIS 21:1–28:9; 35:27–29). Although Sarah was past the age of childbearing, God promised Abraham and Sarah that they would have a son, and Isaac was born (Genesis 18:1–21; 21:1–7). Later, to test Abraham's obedience, God commanded Abraham to sacrifice the boy (Genesis 22:1–2). Abraham made all the preparations for the ritual sacrifice, but God spared Isaac at the last moment and substituted a ram in his place (Genesis 22:3–14). The story of Abraham's acqui-

The sacrifice of Isaac, from the Psalter of Ingeburg of Denmark, 1210; in the Condé Museum, Chantilly, France
Giraudon—Art Resource

escence to God's command to sacrifice Isaac was used in the early Christian church as an example of faith (Hebrews 11:17) and of obedience (James 2:21). In later Jewish tradition the sacrifice of Isaac was cited in appeals for the mercy of God.

In later Jewish tradition, Abraham asked God to recall his mercy at the binding of Isaac (or AKEDAH) when Isaac's descendants became inclined to transgressions and evil deeds (LEVITICUS RABBAH 29:9). One source says that Isaac was born on the PASSOVER, and through his birth many barren women became fertile (Rosh Hashanah 11a). According to another tradition, God commanded Abraham to sacrifice Isaac in response to Satan's accusation that Abraham made no sacrifice at Isaac's birth. In a similar version, it was Isaac who suggested his own sacrifice to counter Ishmael's boast that he was more virtuous because he had volunteered for CIRCUMCISION at age 13, when he could have resisted, whereas Isaac had been circumcised in infancy (Sanhedrin 89b; GENESIS RABBAH 55:4).

In the Christian NEW TESTAMENT, Paul uses Isaac to prefigure both JESUS CHRIST (Galatians 3:16) and his followers (Galatians 4:22–31), who are children of the "free woman" (Sarah, as opposed to the slave, HAGAR). The epistle to the Hebrews interprets the binding of Isaac as an example of Abraham's faith and as a prefigure to Christ's death and RESURRECTION (Hebrews 11:17–19).

In ISLAM, Ibrahim (Abraham), Ishāq (Isaac) and Ya'qūb (Jacob) are prophets and Godly men (QUR'AN, surah 29:27). The story of Ishāq's binding does not specifically mention his name (37:99–110), giving rise to a fierce controversy among later Islamic scholars as to whether it was Ismā'īl (Ishmael) or Ishāq who was offered. Many Muslims trace their ancestry to Ibrahim through Ismā'īl, but some (the Persians) through Ishāq.

ISAIAH ʾī-'zā-ə, -'zī-, *Hebrew* Yesha'yahu ("God Is Salvation") (fl. 8th century BCE, Jerusalem), prophet after whom the biblical Book of Isaiah is named (only some of the first 39 chapters are attributed to him), a significant contributor to both Jewish and Christian traditions.

Of Isaiah's origins it is known only that his father's name was Amoz. Whatever his family circumstances may have been, in his youth he came to know the face of poverty, the debauchery of the rich, and the other inequities and evils of human society. He was thoroughly schooled in the forms and language of prophetic speech and was particularly well acquainted with the prophetic tradition known to his slightly older contemporary, AMOS.

The earliest recorded event in his life is his call to PROPHECY as now found in the sixth chapter of the Book of Isaiah; this occurred about 742 BCE. The vision (probably in the JERUSALEM TEMPLE) that made him a prophet commissioned him to condemn his own people and watch the nation crumble and perish. As he tells it, he was only too aware that, coming with such a message, he would experience bitter opposition, willful disbelief, and ridicule—in order to withstand this he would have to be inwardly fortified.

Theologically, Isaiah leans heavily on Israelite tradition and shows his acquaintance with the thoughts of Amos. Isaiah also believed that a special bond united ISRAEL and its God. Since patriarchal times there had been a solemn COVENANT between them: Israel was to be God's people and he their God. Isaiah honored this ancient tradition; but, more significantly, he shared the conviction of Amos that this arrangement was contingent on the people's conduct. Misbehavior could cancel that Covenant, and had in fact done so.

As Isaiah knew him, Israel's God was more concerned about people than about proper ritual performance. Isaiah's theology included the sometimes comforting view that God shapes history, traditionally entering the human scene to rescue his people from national peril. But God could intervene quite as properly to chastise his own aberrant nation, and he could employ a human agent (*e.g.*, a conquering foe) to that end. Isaiah's call to prophecy roughly coincides with the beginning of the westward expansion of the Assyrian empire under the victorious generalship of Tiglath-pileser III (reigned 745–727 BCE). Isaiah could clearly see in Assyria the instrument of God's wrath.

If chapter 6 of the Book of Isaiah marks the beginning of his career as prophet, the judgment oracle about the conquest of Jerusalem in chapter 22 probably brings his grim story to a close. Quite unexpectedly the Assyrians have lifted the siege and departed, and the amazed defenders of Jerusalem, flushed and jubilant, give way to celebration; Isaiah cannot share the holiday spirit since for him there has been only a postponement. Nothing has changed, and in his "valley of vision" he sees the day of rout and confusion that God yet has in store for ZION.

The historical allusions in the scattered chapters of Isaiah's work agree with the title verse, according to which he was a contemporary of the Judaeans kings UZZIAH, Jotham, AHAZ, and HEZEKIAH. At least a part of chapter 7 refers to the event of the year 734 when EPHRAIM and Syria jointly threatened King Ahaz of JUDAH. In 732 Tiglath-pileser conquered Damascus, and in 722 Samaria, the capital of Ephraim, fell to King Sargon of Assyria. By the end of the century (701) Sennacherib had laid siege to Jerusalem—and had subsequently withdrawn. Chapters 1:4–8; 10:27–34; 28:14–22; 30:1–7; and 31:1–4 point to those difficult days when Jerusalem was beleaguered and King Hezekiah feverishly sought help from Egypt. Isaiah, by contrast, looked neither to allies nor to armaments for security. If it is God who decides the destiny of nations, security is for God to grant and for men to deserve.

Although Isaiah was far from popular in his day, he does appear to have attracted some followers; these may have been the circle that kept alive the nucleus of what was to become, through a developing tradition, the biblical Book of Isaiah. The Greek translation of Isaiah by Jewish scholars (the SEPTUAGINT), accomplished before the Christian Era, reflects a developing tradition of interpretation; it renders the Hebrew *'alma* ("young woman") as *parthenos* ("virgin") in the verse (7:14) about Immanuel, thus drawing Isaiah further into the messianic ring. Now it is a virgin who "shall conceive and bear a son." The Christian Gospels lean more heavily on the Book of Isaiah than on any other prophetic text. Beyond any denominational differences is the utopian dream, the "swords-into-plowshares" passage in Isaiah 2.

ISE, GRAND SHRINE OF ʼē-se, *Angl* 'ē-sā, or Ise-daijingu ʼ-ḍi-'jēn-gū, or Ise-jingū, or Ise-no-jingū, or Ise Shrine, most important SHINTŌ temple in Japan, located in Ise in southern Honshu. It is the main center of the worship of AMATERASU, the sun goddess and traditional progenitor of the Japanese imperial family. Traditionally it was founded in 4 BCE by Himiko, the first known ruler of Japan.

The Grand Shrine consists of an Inner and an Outer shrine, about 4 miles apart. The Sacred Mirror, one of the Three Sacred Treasures of Japan (Sanshu no Jingū), is preserved in the Inner shrine. The Outer Shrine (Gekū), founded in the late 5th century, is dedicated to Toyuke (Toyouke)

Ōkami, the god of food, clothing, and housing. The supreme priestess, *saishu* ("chief of the religious ceremonies") ranks above the supreme priest, the *dai-guji*; formerly this office was filled by an unmarried princess of the imperial family. At both shrines the main building is a thatched hut built with unpainted Japanese cypress (*hinoki*). From the 7th century to the early 17th century the buildings were reconstructed every 20 years; since then they have been rebuilt every 21 years. PILGRIMAGES to the shrines are popular.

ISE SHINTŌ \ˈē-se-ˈshēn-tō, Angl ˈē-sā-ˈshin-tō\, also called Watarai Shintō \wā-tā-ˈrī-\, school of SHINTŌ established by priests of the Watarai family who served at the Outer Shrine of the ISE SHRINE (Ise-jingū) associated with the imperial tradition. Ise Shintō establishes purity and honesty as the highest virtues, realizable through RELIGIOUS EXPERIENCE.

The school began in the Kamakura period (1192–1333) as an attempt to emancipate Shintō from the domination of Buddhist thought; it declared that the Buddhas and BODHISATTVAS were manifestations of Shintō KAMI. Later, Confucian elements were added. The theology of Ise Shintō was summarized in a five-volume apologia, the *Shintō gobusho*, which appeared in the 13th century.

ISHBOSHETH \ish-ˈbō-shəth, -shət\, also spelled Isboseth, also called Ishbaal \ish-ˈbāl, -bäl\, or Eshbaal (fl. 11th century BCE), in the OLD TESTAMENT (2 Samuel 2:8–4:12), fourth son of King SAUL and the last representative of his family to be king over ISRAEL (the northern kingdom, as opposed to the southern kingdom of JUDAH). His name was originally Ishbaal (Eshbaal; 1 Chronicles 8:33; 9:39), meaning "man of BAAL." *Baal*, which could mean "master," was a title of dignity. Because the name came to be increasingly associated with Canaanite gods, Hebrew editors later substituted *bosheth*, meaning "shame," for *baal*.

Ishbosheth was proclaimed king of Israel by Abner, Saul's cousin and commander in chief, who then became the real power behind the throne. The House of Judah, however, followed DAVID, and war broke out between the two kingdoms. When Abner took Rizpah, one of Saul's concubines, Ishbosheth objected, because Abner's action was a symbolic usurpation of power. Abner then defected to David, leaving the northern tribes without effective leadership, and Ishbosheth was soon murdered by two of his captains.

Scholars believe that Ishbosheth was quite young when he became king and that his reign equaled that of David at Hebron, about seven and a half years.

ISHKUR \ˈish-kūr\, in MESOPOTAMIAN RELIGION, Sumerian god of the rain and thunderstorms of spring. He was the city god of Bit Khakhuru (perhaps to be identified with modern al-Jidr) in the central grasslands region.

Ishkur closely resembled NINHAR (Ningubla) and was imagined in the form of a great bull and the son of NANNA (Akkadian Sin), the moon god. When he is portrayed in human shape, he often holds his symbol, the lightning fork. Ishkur's wife was the goddess Shala. In his role as god of rain and thunder, Ishkur corresponded to the other Sumerian deities ASALLUHE and NINURTA. He was identified by the Akkadians with their god of thunderstorms, ADAD.

ISHMAEL BEN ELISHA \ˈish-mā-əl-ben-i-ˈlī-shə, ˈish-mē-əl\, one of the most important early rabbinic authorities, active at the beginning of the 2nd century CE. He is generally referred to simply as Ishmael, without the patronymic. In the

MISHNAH, he often is portrayed in dispute with AKIBA BEN JOSEPH. Ishmael is known for 13 hermeneutical principles cited in his name, and his school is held to stand behind the midrashic compilations *Mekhilta de-Rabbi Ishmael* (on EXODUS), SIFRE TO NUMBERS, and part of SIFRE TO DEUTERONOMY. His actual association with these documents remains a matter of conjecture.

Ishmael is said to have been born to a wealthy priestly family and, as a youth, having been taken captive by the Romans, to have been ransomed by Joshua ben Hananiah, who recognized his scholarly potential and sent him back to Israel to study TORAH. Rabbinic texts depict him as exceedingly honest, charitable, and kindly. He reportedly said, "Be quick [in service] to a superior, kindly to the young, and receive everybody with joy" (Mishnah Abot 3:12). Later sources picture him in priestly service in the Second Temple, where he experienced the presence of God (Bavli Berakhot 7a):

One time I went in to offer incense on the innermost altar, and I saw the Crown of the Lord, enthroned on the highest throne, and he said to me, "Ishmael, my son, bless me." I said to him, "May it be your will that your mercy overcome your anger and that your mercy prevail over your attributes, so that you treat your children in accord with the trait of mercy and in their regard go beyond the strict measure of the law." And he nodded his head to me. And from that story we learn that the blessing of a common person should not be negligible in your view.

Similarly, B. Berakhot 51a reports several folk traditions Ishmael is said to have been taught by the ANGEL Suriel, "the prince of the divine presence."

In biblical HERMENEUTICS, Ishmael is associated with the view that SCRIPTURE speaks in everyday language. He thus is said to have focused on the plain sense of the text, a position that stood in contrast to Akiba's interpretation of seemingly redundant words, of individual syllables of words, and even of single letters (B. Sanhedrin 51b).

ISHTAR \ˈish-tär\ (Akkadian), Sumerian Inanna \ē-ˈnān-nā\, in MESOPOTAMIAN RELIGION, goddess of war and sexual love. Ishtar is the Akkadian counterpart of the West Semitic goddess ASTARTE. INANNA, an important goddess in the Sumerian pantheon, came to be identified with Ishtar, but it is uncertain whether Inanna is also of Semitic origin or whether, as is more likely, her similarity to Ishtar caused the two to be identified. In the figure of Inanna several traditions seem to have been combined: she is sometimes the daughter of the sky god An, sometimes his wife; in other myths she is the daughter of NANNA, god of the moon, or of the wind, ENLIL. In her earliest manifestations she was associated with the storehouse and thus personified as the goddess of dates, wool, meat, and grain; the storehouse gates were her emblem. She was also the goddess of rain and thunderstorms—leading to her association with An, the sky god—and was often pictured with the lion, whose roar resembled thunder. The power attributed to her in war may have arisen from her connection with storms. Inanna was also a fertility figure, and, as goddess of the storehouse and the bride of the god DUMUZI-AMAUSHUMGALANA, who represented the growth and fecundity of the date palm, she was characterized as young, beautiful, and impulsive—never as helpmate or mother.

From a fertility figure Ishtar evolved into a more complex character, a goddess of opposing forces: fire and fire-quenching, rejoicing and tears, fair play and enmity. The Akkadian Ishtar is also associated with the planet VENUS. In this manifestation her symbol is a star with 6, 8, or 16 rays within a circle. Delighting in bodily love, Ishtar was the protectress of prostitutes and the patroness of the alehouse. Part of her cult worship probably included temple prostitution, and her cult center, Erech, was a city filled with courtesans and prostitutes. Her popularity was universal in the ancient Middle East, and in many centers of worship she probably subsumed local goddesses. In later myth she was known as Queen of the Universe, taking on the powers of An, Enlil, and Enki.

ISIS \ˈi-səs\, *Egyptian* Aset \ˈä-set\, or Eset \ˈe-set\, one of the most important goddesses of ancient Egypt. Her name is the Greek form of an ancient Egyptian word that is perhaps associated with a word for “throne.”

Little is known of Isis' early cult. In the PYRAMID TEXTS (c. 2350–c. 2100 BCE), she is the mourner for her murdered husband, the god OSIRIS. In her role as the wife of Osiris, she discovered and reunited the pieces of her dead husband's body, was the chief mourner at his funeral, and brought him back to life.

Isis hid her son, HORUS, from SETH, the murderer of Osiris, until Horus was fully grown and could avenge his father. She defended the child against many attacks from snakes and scorpions. But because Isis was also Seth's sister, she wavered during the eventual battle between Horus and Seth, and in one episode Isis pitied Seth and was beheaded by Horus during their struggle. The shelter she afforded her child gave her the character of a goddess of protection. But her chief aspect was that of a great magician, whose power transcended that of all other deities. Several narratives tell of her magical prowess, with which she could even outwit the creator god ATUM. She was invoked on behalf of the sick, and, with the goddesses Nephthys, NEITH, and SELKET, she protected the dead. She became associated with various other goddesses who had similar functions, and thus her nature became increasingly diverse. In particular, the goddess HATHOR and Isis became similar in many respects.

Isis was represented as a woman with the hieroglyphic sign of the throne on

Isis with Horus, bronze figurine of the Late Period; in the Egyptian Museum, Berlin

By courtesy of the Staatliche Museen Preussischer Kulturbesitz, Berlin

her head, either sitting on a throne, alone or holding the child Horus, or kneeling before a COFFIN. Occasionally she was shown with a cow's head. As mourner, she was a principal deity in all rites connected with the dead; as magician, she cured the sick and brought the dead to life; and, as mother, she was herself a life-giver.

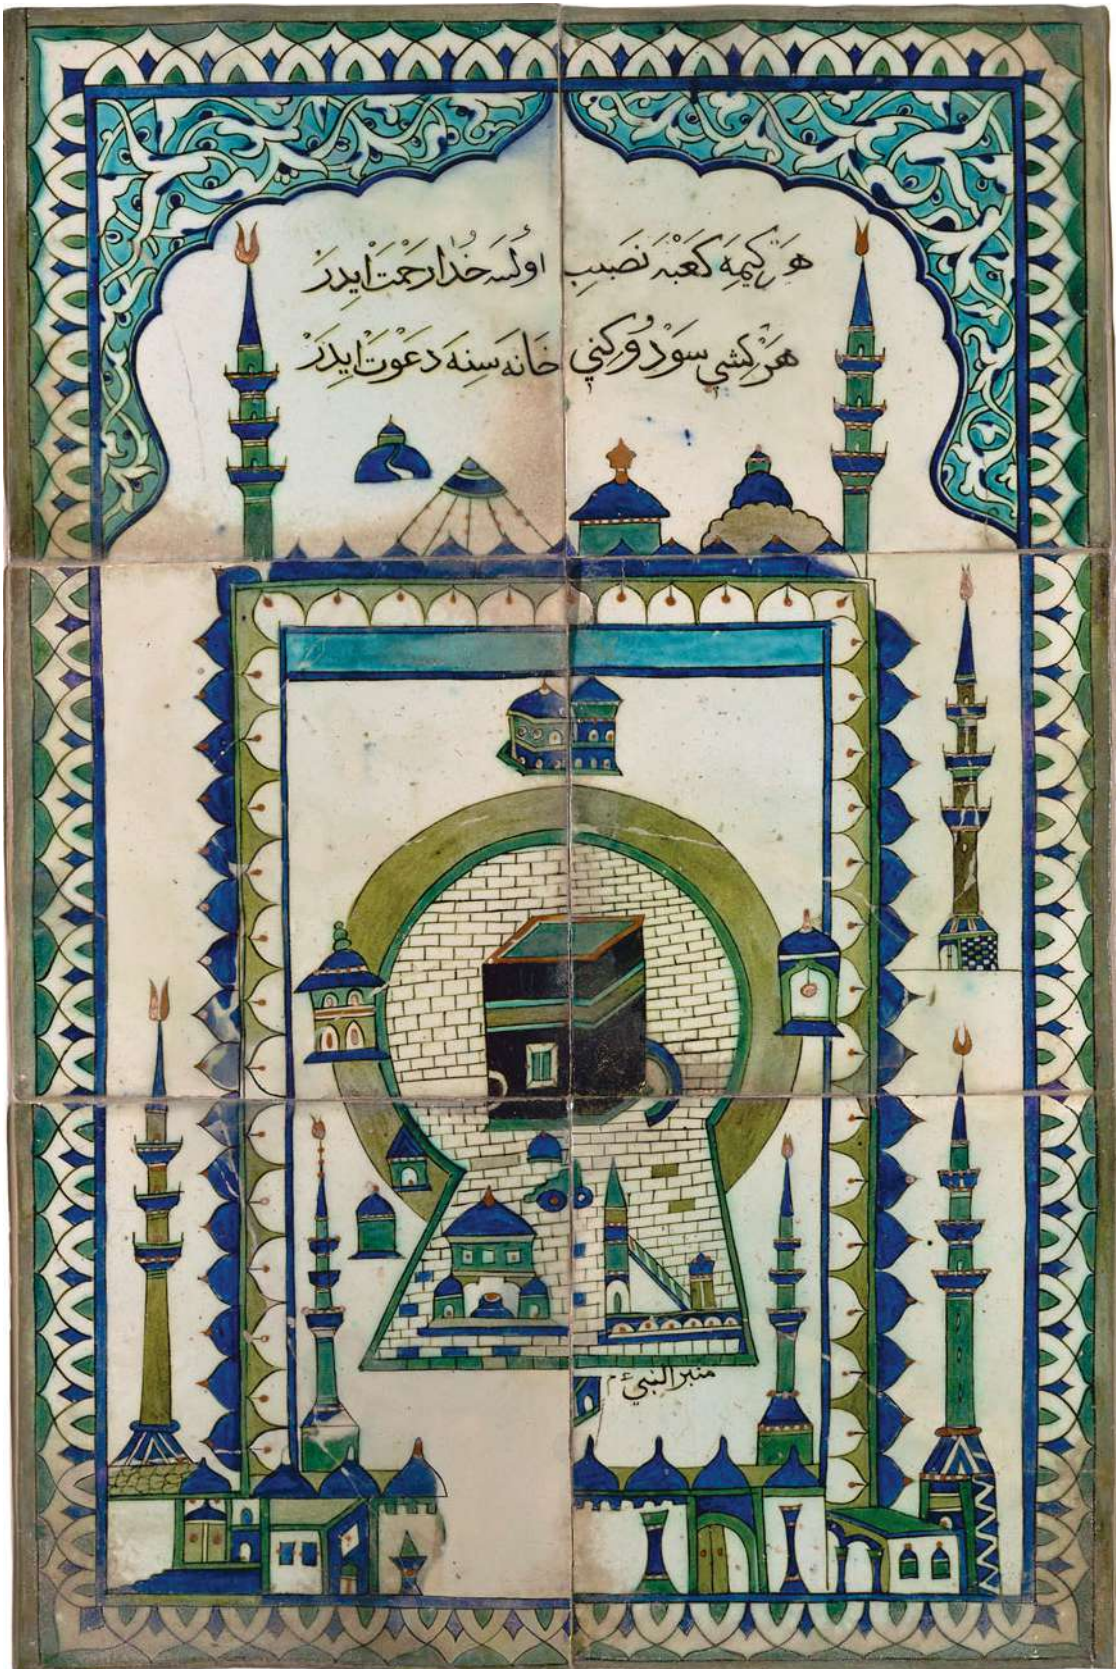

The cult of Isis spread throughout Egypt. In Akhmim she received special attention as the “mother” of the fertility god MIN. She had important temples throughout Egypt and Nubia. By Greco-Roman times she was dominant among Egyptian goddesses. Her cult reached much of the Roman world as a MYSTERY RELIGION. With Isis went Osiris and Horus the child, but Isis was the dominant figure. Many Egyptian monuments were imported to Rome to provide a setting for the principal Isis temple in the 1st century CE. The cult of Isis was probably influential on another level. The myth of Osiris shows some analogies with the Gospel story and, in the figure of Isis, with the role of the Virgin MARY. The ICONOGRAPHY of the Virgin and Child has evident affinities with that of Isis and the infant Horus. Thus, one aspect of Egyptian religion may have contributed to the background of early CHRISTIANITY.

ISKCON \ˈis-kän\, *popularly called* Hare Krishna \ˈhär-ē-ˈkrish-nə, ˈhar-\, the International Society for KRISHNA Consciousness, a religious movement founded in the United States by A.C. BHAKTIVEDANTA Swami (Prabhupāda; 1896–1977) in 1966. The movement claims a lineage of spiritual masters dating to CAITANYA (1485–1533), whom it regards as an incarnation of the deity Krishna and his consort RĀDHĀ, and whose championing of religious enthusiasm it embraces. Its initial appeal was largely to “counterculture” Western youths, who could frequently be seen on city streets, their heads shaved and dressed in Hindu garments, chanting in the Caitanyite style and soliciting contributions from passersby. ISKCON adapts the Hindu ideology of CASTE by arguing (as certain ancient texts do) that the BRAHMIN status is determined by aptitude, rather than birth.

Humans are regarded as souls composed of Krishna's highest energy, with bodies of *māyā*, his lowest, material, and illusory energy. In order to achieve peace and happiness, believers are urged to return to their original relationship with Krishna (called Krishna Consciousness, after Caitanya's full name, Kṛṣṇa-Caitanya) through *bhakti-yoga*. This involves recognizing Krishna as the highest personality of godhead, whose servants perform his works with no thought of reward, and surrendering to Krishna and his representative, the spiritual master on earth. It also entails TABOOS against gambling, using intoxicants, eating meat, and engaging in illicit sex.

Hare Krishna temples are communes in which unmarried men and women live separately, with married couples having other quarters. Each temple has its own officers and supports itself by members' contributions, soliciting funds, and selling publications of the Bhaktivedanta Trust. Since the death of the founding GURU, temples obey an international governing commission. Of the governors, some are empowered as spiritual masters to initiate new members and oversee spiritual life in the temples.

In temple life Hare Krishna members assume Hindu customs and dress, but in the outer world they often pursue secular vocations. ISKCON has endured various schisms, notably its separation from the “City of God” founded as New Vṛndāvana in West Virginia. At the end of the 20th century its most active “mission fields” are the countries of the former Soviet Union, Africa, and India itself.

ISLAM

Islam is a major world religion that originated in the Middle East after JUDAISM and CHRISTIANITY; it was promulgated by the Prophet MUHAMMAD in Arabia in the 7th century CE. The Arabic term *islām*, “surrender,” illuminates the fundamental religious idea of Islam—that the believer (called a Muslim, from the active participle of *islām*) accepts “surrender to the will of ALLĀH.” Allāh (Arabic: “God”) is viewed as the sole God—the creator, sustainer, and restorer of the world. The will of Allāh, to which humankind must submit, is made known through the sacred SCRIPTURES, the QUR’AN (Koran), which Allāh revealed to his messenger, Muhammad. In Islam Muhammad is considered the last of a series of prophets (including ADAM, ABRAHAM, MOSES, JESUS CHRIST, and others), and his message simultaneously consummates and abrogates the revelations attributed to earlier prophets.

Retaining its emphasis on an uncompromising MONOTHEISM and a strict adherence to certain essential religious practices, the religion, which was first taught by Muhammad to a small group of followers, spread rapidly through the Middle East to Africa, Europe, the Indian subcontinent, the Malay Peninsula, and China. Although Islam encompasses many different ethnicities and many sectarian movements have arisen within it, all Muslims are ideally bound by a common faith and a sense of belonging to a single community.

THE LEGACY OF MUHAMMAD

From the very beginning of Islam, Muhammad inculcated a sense of communal identity and a bond of faith among his followers that was intensified by their experiences of persecution as a nascent community in Mecca. The conspicuous socioeconomic content of Islamic religious practices cemented this bond of faith. In 622 CE, when the Prophet migrated to MEDINA, his preaching was soon accepted, and the community-state of Islam emerged. During this early period, Islam acquired its characteristic ethos as a religion uniting in itself both the spiritual and temporal aspects of life and seeking to regulate not only an individual’s relationship to God (through that individual’s conscience) but human relationships in a social setting as well. Thus, there is not only an Islamic religious institution but also an Islamic law, state, and other institutions governing society. Not until the

20th century were the religious (private) and the secular (public) distinguished by some Muslim thinkers and separated formally, as in Turkey.

This dual religious and social character of Islam, expressing itself as a religious community commissioned by God to bring its own value system to the world through the *JIHAD* ("holy war" or "holy struggle"), explains much of the astonishing success of the early generations of Muslims. Within a century after the Prophet's death in 632 CE they had brought a large part of the globe—from Spain across Central Asia to India—under a new Arab Muslim empire.

The period of Islamic conquests and empire building marks the first phase of the expansion of Islam as a religion. Islam's essential egalitarianism within the community of the faithful and its official discrimination against the followers of other religions won rapid converts. Jews and Christians were assigned a special status as communities possessing scriptures and called the "people of the Book" (*AHL AL-KITĀB*) and, therefore, were allowed religious autonomy. They were, however, required to pay a per capita tax called *JIZYA*. Members of other faiths were required either to accept Islam or to die. The same status of the people of the Book was later extended to Zoroastrians and Hindus, but many people of the Book eventually joined Islam in order to escape the disability of the *jizya*. A much more massive expansion of Islam after the 12th century was inaugurated by the Sufis (Muslim mystics), who contributed significantly to the spread of Islam in India, Central Asia, Turkey, and sub-Saharan Africa.

Besides the jihad and Sufi missionary activity another factor in the spread of Islam was the far-ranging influence of Muslim traders, who not only introduced Islam quite early to the Indian east coast and South India but who proved as well to be the main catalytic agents (besides the Sufis) in converting people to Islam in Indonesia, Malaya, and China. Islam was introduced to Indonesia in the 14th century, hardly having time to consolidate itself there politically before coming under Dutch colonial domination.

The vast variety of cultures embraced by Islam (estimated to total some 1,300,000,000 persons worldwide) has produced important internal differences. All segments of Muslim society, however, are bound by a common faith and a sense of belonging to a single religious community. Despite the loss of political power during the period of Western colonialism in the 19th and 20th centuries, the concept of the Islamic community (*umma*) became stronger. Islam inspired various Muslim peoples in their struggles to gain political freedom in the mid-20th century, and the idealized unity of the community contributed to later attempts at political solidarity.

SOURCES OF ISLAMIC DOCTRINAL AND SOCIAL VIEWS

Islamic doctrine, law, and thinking in general are based on four sources, or fundamental principles (*uṣūl*): (1) the Qur'an, (2) the SUNNA (traditions), (3) IJMĀ' (consensus), and (4) IJTIHĀD (individual thought).

The Qur'an ("Reading," or "Recitation") is regarded as the Word, or Speech, of God delivered to Muhammad by the angel GABRIEL. Divided into 114 SŪRAS (chapters) of unequal length, it is the fundamental source of Islamic teaching. The *sūras* revealed at Mecca during the earliest part of Muhammad's career are concerned with ethical and spiritual teachings and the Day of Judgment. The *sūras* revealed to the Prophet at Medina at a later period are concerned with social legislation, worship, and the politico-moral principles for constituting and ordering the community. The word sunna ("a well-trodden path") was used by pre-Islamic Arabs to denote their tribal or common law; in Islam it came to mean the example of the Prophet; *i.e.*, his words and deeds as recorded in compilations known as HADITH.

Hadith (a "Report," or collection, of sayings attributed to the Prophet and members of the early Muslim community) provides written documentation of the words and deeds of the Prophet and his followers. Six Hadith collections, compiled in the 9th century CE, or the 3rd century AH (*Anno Hegirae*, meaning "in the year of the HĪJRA"; see below Sacred places and days: Holy days), came to be regarded as especially authoritative by the largest branch of Islam, the SUNNI. Another large branch, the SHI'ITE, has its own Hadith collections, in which, in addition to the Prophet, the IMAMS are of central importance.

The doctrine of *ijmā'*, or consensus, was introduced in the 2nd century AH (8th century CE) in order to standardize legal theory and practice and to overcome individual and regional differences of opinion. Though conceived as a "consensus of scholars," in actual practice *ijmā'* was a more fundamental operative factor. From the 3rd century AH points on which consensus was reached in practice were considered closed and further substantial questioning of them prohibited. Accepted interpretations of the Qur'an and of the actual content of the sunna (*i.e.*, Hadith and theology) all rest finally on the *ijmā'*.

Ijtihād, meaning "to endeavor," or "to exert effort," was required to find the legal or doctrinal solution to a new problem. In the early period of Islam, because *ijtihād* took the form of individual opinion (*ra'y*), there was an abundance of conflicting and chaotic opinions. In the 2nd century AH *ijtihād* was replaced by QIYĀS (reasoning by strict analogy), a formal procedure of deduction based on the texts of the Qur'an and the Hadith. The transformation of *ijmā'* into a conservative mechanism and the acceptance of a definitive body of Hadith virtually closed the "gate of *ijtihād*" in the Sunni tradition. Nevertheless, certain outstanding Sunni thinkers (*e.g.*, AL-GHAZĀLĪ, d. 1111 CE) and many Shi'ite jurists continued to claim the right of new *ijtihād* for themselves, and reformers of the 18th and 19th centuries, because of modern influences, have caused this principle once more to receive wider acceptance.

DOCTRINES OF THE QUR'AN

God. The doctrine concerning God within the Qur'an is rigorously monotheistic: God is one and unique; he has no partner and no equal. Muslims believe that there are no intermediaries between God and the creation that he brought into being by his sheer command: "Be." Although his presence is believed to be everywhere, he does not inhere in anything. He is the sole creator and the sole sustainer of the universe, wherein every creature bears witness to his unity and lordship. But he is also just and merciful: his justice ensures order in his creation, in which nothing is believed to be out of place, and his mercy is unbounded and encompasses everything. His creation and ordering of the universe is viewed as the act of prime mercy for which all things sing his glories. The God of the Qur'an, while described as majestic and sovereign, is also a personal God; whenever a person in need or distress calls to him, he responds. Above all, he is the God of guidance and shows everything, particularly human beings, the right way, "the straight path."

The arrival of the Prophet, Persian miniature, in the Free Library of Philadelphia

Scala—Art Resource

This picture of God—wherein the attributes of power, justice, and mercy interpenetrate—is related to Judaism and Christianity, whence it is derived with certain modifications, and also to the concepts of pre-Islamic Arabia, to which it provided an effective answer. One traditional Arabic RELIGIOUS BELIEF had been in a blind and inexorable fate over which human beings had no control. For this powerful but insensible fate the Qur'an substituted a provident and merciful God

while rejecting IDOLATRY and all divinities that the Arabs worshiped in their sanctuaries (HARAMS), the most prominent of which was the KA'BA in Mecca itself.

The universe. In order to prove the unity of God, the Qur'an lays frequent stress on the design and order in the universe. There are no gaps or dislocations in nature. Order is explained by the fact that every created thing is endowed with a definite and defined nature whereby it falls into a pattern. This nature, though it allows every created thing to function as part of a whole, sets limits; and this idea of the limitedness of everything is one of the most fixed points in both the COSMOLOGY and theology of the Qur'an. The universe is viewed as autonomous, in the sense that everything has its own inherent laws of behavior, but not as autocratic, because the patterns of behavior have been endowed by God and are strictly limited. Thus, every creature is limited and "measured out" and hence depends on God, who alone reigns unchallenged in the heavens and the earth, is unlimited, independent, and self-sufficient.

The human condition. According to the Qur'an, God created two apparently parallel species of creatures, humans and JINN, the one from clay and the other from fire. About the *jinn*, however, the Qur'an says little, though it is implied that the *jinn* are endowed with reason and responsibility but are more prone to evil than humans. It is with the human being that the Qur'an, which describes itself as a guide for the human race, is centrally concerned (e.g., Q 2:185). The Jewish and Christian

story of the Fall of Adam (the first man) is accepted, but the Qur'an states that God forgave Adam his act of disobedience, which is not viewed in the Qur'an as ORIGINAL SIN (Q. 20:122–123).

In the story of human creation, angels, who protested to God against such creation, lost in a competition of knowledge against Adam (Q 2:30–34). The Qur'an, therefore, declares humans to be the noblest creatures of all creation—those who bore the trust (of responsibility) that the rest of God's creation refused to accept. The Qur'an thus reiterates that all nature has been made subservient to humans: nothing in all creation has been made without a purpose, and people themselves have not been created "in sport," their purpose being service and obedience to God's will.

Despite this lofty station, however, human nature is frail and faltering. Whereas everything in the universe has a limited nature, and every creature recognizes its limitation and insufficiency, humans are viewed as rebellious and full of pride, arrogating to themselves the attributes of self-sufficiency. Pride is thus viewed as the cardinal sin of humankind, because by not recognizing in itself essential creaturely limitations humankind becomes guilty of ascribing to itself partnership

with God (a form of *SHIRK*, or associating a creature with the Creator) and of violating the unity of God. True faith (*īmān*) thus consists in belief in the immaculate Divine Unity, and Islam in submission to the Divine Will.

Satan, sin, and repentance. The being who became SATAN (Shayṭān, or IBLĪS) had previously occupied a high station but fell from divine grace by his act of disobedience in refusing to honor Adam when he, along with other angels, was ordered to do so; his act of disobedience is construed by the Qur'an as the sin of pride (Q 2:34). Since then, his work has been to beguile humans into error and sin. Satan's machinations will cease only on the Last Day.

The whole universe is replete with signs of God; the human soul itself is viewed as a witness to the unity and grace of God. The messengers and prophets of God have, throughout history, been calling humankind back to God. Yet very few have accepted the truth; most have rejected it and have become disbelievers (*kāfir*, plural *kuffār*: "ungrateful"—*i.e.*, to God), and when a person becomes so obdurate, his or her heart is sealed by God. Nevertheless, it is always possible for a sinner to repent (*tawba*) and to achieve redemption by a genuine conversion to the truth. Genuine repentance has the effect of removing all sins and restoring people to the state of sinlessness in which they started their lives.

Prophecy. Prophets are specially elected by God to be his messengers. The Qur'an requires recognition of all prophets as such without discrimination, yet they are not all equal, some of them being particularly outstanding in qualities of steadfastness and patience under trial. Abraham, NOAH, Moses, and Jesus were such great prophets. As vindication of the truth of their mission, God often vested them with miracles: Abraham was saved from fire, Noah from the deluge, and Moses from the Pharaoh. Not only was Jesus born from the Virgin MARY but, in Islamic belief, God also saved him from CRUCIFIXION at the hands of the Jews.

All prophets are human and never part of divinity (except in Islamic THEOSOPHY and PANTHEISM); they are simply recipients of revelation from God. God never speaks directly to a human: he sends an angel messenger to him, makes him hear a voice, or inspires him. Muhammad is accepted as the last prophet in the series and its greatest member, for in him all the messages of earlier prophets were consummated. He had no miracles except the Qur'an, the like of which no human can produce. (Soon after the Prophet's death, however, a plethora of miracles was attributed to him by Muslims.) The angel Gabriel brought the Qur'an down to the Prophet's heart. Gabriel is represented by the Qur'an as a spirit, but the Prophet could sometimes see and hear him. According to early traditions, the Prophet's revelations occurred in a state of trance, when his normal consciousness was in abeyance. This phenomenon at the same time was accompanied by an unshakable conviction that the message was from God, and the Qur'an describes itself as the transcript of a heavenly "Mother Book" (Q 43:3–4) written on a "Preserved Tablet" (Q 85:21–22).

Eschatology. Because not all requital is meted out in this life, a final judgment is necessary to bring it to completion. On the Last Day, when the world will come to an end, the dead will be resurrected, and a judgment will be pronounced on every person in accordance with his deeds. Although the Qur'an in the main speaks of a personal judgment, there are several verses that speak of the RESURRECTION of distinct communities that will be judged according to "their own book" (Q 45:27–29). The actual evaluation, however, will be for every individual, whatever the terms of reference of his performance. Those condemned will burn in hellfire, and those who are saved will enjoy the abiding pleasures of paradise. Besides suffering in physical fire, the damned will also experience fire "in their hearts"; similarly, the blessed, besides physical enjoyment, will experience the greatest happiness of divine pleasure.

Social service. Because the purpose of human existence, as for every other creature, is submission to the divine will, God's role is that of the commander. Whereas the rest of nature obeys God automatically, humans alone possess the choice to obey or disobey. With the deep-seated belief in Satan's existence, the human's fundamental role becomes one of moral struggle, which constitutes the essence of human endeavor. Recognition of the unity of God does not simply rest in

the intellect but also entails consequences in terms of the moral struggle, which consists primarily in freeing oneself of narrowness of mind and smallness of heart. One must go outside of oneself and expend one's best possessions for the sake of others.

The doctrine of social service, in terms of alleviating suffering and helping the needy, constitutes an integral part of the Islamic teaching. Praying to God and other religious acts are deemed to be a mere facade in the absence of active welfare service to the needy. It is Satan who whispers into people's ears that by spending for others they will become poor. God, on the contrary, promises prosperity in exchange for such expenditure, which constitutes a credit with God and grows much more than money that is invested in usury. Hoarding of wealth without recognizing the rights of the poor invites the most dire punishment in the hereafter and is declared to be one of the main causes of the decay of societies in this world. The practice of usury is forbidden.

With this socioeconomic doctrine cementing the bond of faith, the idea of a closely knit community of the faithful who are declared to be "brothers unto each other" emerges (Q 49:10). Muslims are described as "the middle community bearing witness on mankind" (Q 2:143), "the best community produced for mankind," whose function it is "to enjoin good and forbid evil" (Q 3:110). Cooperation and "good advice" within the community are emphasized, and opponents from within the community are to be fought and reduced with armed force if issues cannot be settled by persuasion and arbitration.

Because the mission of the community is to "enjoin good and forbid evil" so that "there is no mischief and corruption" on earth, the doctrine of jihad is the logical outcome. For the early community it was a basic religious concept. The object of jihad is not the forced conversion of individuals to Islam but rather the gaining of political control over the collective affairs of societies to run them in accordance with the principles of Islam. Individual conversions occur as a by-product of this process when the power structure passes into the hands of the Muslim community. In fact, according to strict Muslim doctrine, conversions "by force" are forbidden, and it is also strictly prohibited to wage wars for the sake of acquiring worldly glory, power, and rule. With the establishment of the Muslim empire, however, the doctrine of the jihad was modified by the leaders of the community. Their main concern became the consolidation of the empire and its administration, and thus they interpreted the teaching in a defensive rather than in an expansive sense. The KHĀRIJITES, who held that "decision belongs to God alone," insisted on continuous and relentless jihad, but they were virtually destroyed during internecine wars in the 8th century.

Distinction and privileges based on tribal rank or race were repudiated in the Qur'an and in the celebrated "Farewell Pilgrimage Address" of the Prophet shortly before his death. All men are therein declared to be "equal children of Adam," and the only distinction recognized in the sight of God is said to be based on piety and good acts. The age-old Arab institution of intertribal revenge (*tha'r*)—whereby it was not necessarily the killer who was executed but a person equal in rank to the slain person—was rejected. The pre-Islamic ethical ideal of manliness was modified and replaced by a more humane ideal of moral virtue and piety.

FUNDAMENTAL PRACTICES AND INSTITUTIONS OF ISLAM

The five pillars. During the earliest decades after the death of the Prophet, certain basic features of the religio-social organization of Islam were singled out to serve as anchoring points for the community's life. They were formulated as the "Pillars of Islam" (for a fuller exposition *see* ISLAM, PILLARS OF; SHAHĀDA; ṢĀLĀT; ZAKĀT; ṢĀWM; HAJJ).

The shahāda, or profession of faith. The first pillar is the profession of faith: "There is no god but God; Muhammad is the prophet of God," upon which depends the membership in the community. The profession of faith must be recited at least once in one's lifetime, aloud, correctly, and purposively, with an understanding of its meaning and with an assent from the heart. From this fundamental belief are derived beliefs in (1) ANGELS (particularly Gabriel, the Angel of Revela-

tion), (2) the revealed books (the Qur'an and the sacred books of Jewish and Christian revelation described in the Qur'an), (3) a series of prophets (among whom figures of the Jewish and Christian tradition are particularly eminent—although it is believed that God has sent messengers to every nation), and (4) the Last Day (Day of Judgment).

Prayer. The second pillar consists of five daily prayers, *ṣalāt*, performed facing toward the Ka'ba in Mecca. These prayers may be offered individually if one is unable to go to the mosque. The first prayer is performed before sunrise, the second just after noon, the third later in the afternoon, the fourth immediately after sunset, and the fifth before retiring to bed. Before a prayer, ABLUTIONS, including the washing of hands, face, and feet, are performed. The noon prayer on Fridays is the chief congregational prayer.

The zakāt. The third pillar is the obligatory tax called *zakāt* ("purification," indicating that such a payment makes the rest of one's wealth religiously and legally pure). This is the only permanent tax levied by the Qur'an and is payable annually on food grains, cattle, and cash after one year's possession. *Zakāt* is collectable by the state and is to be used primarily for the poor, but the Qur'an mentions other purposes: ransoming Muslim war captives, redeeming chronic debts, paying tax collectors' fees, jihad (and, by extension, education and health), and creating facilities for travelers.

Fasting. The obligation to fast (*ṣawm*) during the month of RAMAḌĀN, laid down in the Qur'an (2:183–185), is the fourth pillar of the faith. Fasting begins at daybreak and ends at sunset, and during the day eating, drinking, and smoking are forbidden. The elderly and the incurably sick are exempted through the daily feeding of one poor person.

The hajj. The fifth pillar is participation in the annual pilgrimage (hajj) to Mecca prescribed for every Muslim once in a lifetime—"provided one can afford it" and provided there are enough provisions for the family in the pilgrim's absence. A special service is held in the Sacred Mosque on the 7th of the month of Dhū al-Hijja (last in the Muslim year). Pilgrimage activities begin by the 8th and conclude on the 12th or 13th. The principal activities consist of walking seven times around the Ka'ba, a shrine within the mosque; kissing and touching the Black Stone (al-Ḥajar al-Aswad); and ascending and running between Mt. Ṣafā and Mt. Marwa (which are now, however, mere elevations) seven times. At the second stage of the ritual pilgrims proceed from Mecca to Minā, a few miles away; from there they go to 'Arafāt, where they must hear a sermon and spend one afternoon. The last rites consist of spending the night at Muzdalifa (between 'Arafāt and Minā) and offering sacrifice on the last day of *iḥrām*, which is the 'ĪD ("festival") of sacrifice.

By the early 21st century the number of visitors to Mecca on the occasion was estimated to be about 2,000,000, approximately half of them from non-Arab countries. All Muslim countries send official delegations, a fact that is being increasingly exploited for organizing religio-political congresses. At other times in the year it is considered meritorious to perform the lesser pilgrimage ('UMRA), which is not, however, a substitute for the hajj pilgrimage.

Sacred places and days. The most sacred place for Muslims is the Sacred Mosque at Mecca, which contains the Ka'ba, the object of the annual pilgrimage and the site toward which Muslims direct their daily prayers. It is much more than a mosque; it is believed to be "God's Sacred House," where heavenly bliss and power touch the earth directly. The Prophet's mosque in Medina, where Muhammad and the first CALIPHS are buried, is the next in sanctity. Jerusalem follows in third place as the first QIBLA (*i.e.*, direction in which the Muslims faced to offer prayers, before the *qibla* was changed to the Ka'ba) and as the place from where

Muhammad, according to tradition, made his ascent (MI'RĀJ) to heaven. For the Shi'ites, KARBALĀ' in Iraq (the place of martyrdom of 'Alī's son, Ḥusayn) and MASHHAD in Iran (where Imam 'ALĪ AL-RIDĀ is buried) constitute places of special veneration where the Shi'ites make pilgrimages.

Shrines of Sufi saints. For Muslims in general, shrines of Sufi saints are particular objects of reverence and even veneration. In Baghdad the tomb of the most venerated Sufi saint, 'ABD AL-QĀDIR AL-JĪLĀNĪ, is visited every year by large numbers of pilgrims from all over the Muslim world. The shrine of Mu'in al-Dīn Chisti in Ajmer (northern India) draws thousands of pilgrims annually, including Hindus and Christians as well as Muslims.

The mosque. General religious life is centered around the mosque, and in the days of the Prophet and early caliphs the mosque was the center of all community life. Small mosques are usually supervised by the imam (one who administers the prayer service) himself, though sometimes also a MUEZZIN (prayer-time announcer) is appointed. In larger mosques, where Friday prayers are offered, a *khaṭ-īb* (one who gives the *khuṭba*, or sermon) is appointed for Friday service. Many large mosques also function as religious schools and colleges.

Holy days. The Muslim calendar (based on the lunar year) dates from the emigration (hijra) of the Prophet from Mecca to Medina in 622 CE. Subsequent dates

are designated AH, *Anno Hegirae*. The two feast days in the year are the *ʿīds*, *ʿĪd al-Fiṭr* (the feast of breaking the fast), celebrating the end of the month of Ramaḍān, and *ʿĪd al-Aḍḥā* (the feast of sacrifice), marking the end of the pilgrimage. Other sacred times include the “night of determination” (*Laylat al-Qadr*, believed to be the night in which God makes decisions about the destiny of individuals and the world as a whole) and the night of the ascension of the Prophet to heaven (*Laylat al-Isrāʾ waʾl-Miʿrāj*). The Shiʿites observe the 10th of Muḥarram (the first month of the Muslim year) to mark the day of the martyrdom of Ḥusayn. Muslims also celebrate the birth/death anniversaries of various saints in a festival called *mūlid* (“birthday”), or *ʿurs* (“nuptial ceremony”). The saints are believed to reach the zenith of their spiritual life on this occasion.

ISLAMIC THOUGHT

Islamic theology (*KALĀM*) and philosophy (*falsafa*) are two traditions of learning developed by Muslim thinkers who were engaged, on the one hand, in the rational clarification and defense of the principles of the Islamic religion (*mutakal-limūn*) and, on the other, in the pursuit of the ancient (Greco-Roman) sciences (*falāsifa*). These thinkers took a position that was intermediate between the traditionalists, who remained attached to the literal expressions of the primary

sources of Islamic doctrines (the Qurʾan and the Hadith) and who abhorred reasoning, and those whose reasoning led them to abandon the Islamic community altogether. The status of the believer in Islam remained in practice a juridical question, not a matter for theologians or philosophers to decide. Except in regard to the fundamental questions of the existence of God, Islamic revelation, and future reward and punishment, the juridical conditions for declaring someone an unbeliever or beyond the pale of Islam were so demanding as to make it almost impossible to make a valid declaration of this sort about a professing Muslim. In the course of Islamic history representatives of certain theological movements, who happened to be jurists and who succeeded in converting rulers to their cause, made those rulers declare in favor of their movements and even encouraged them to persecute their opponents. Thus there arose in some localities and periods a semblance of an official, or orthodox, doctrine.

Origins, nature, and significance of Islamic theology. The beginnings of theology in the Islamic tradition in the second half of the 7th century are not easily distinguishable from the beginnings of a number of other disciplines—Arabic philology, Qurʾanic interpretation, the collection of the sayings and deeds of the prophet Muhammad, jurisprudence, and historiography. During the first half of the 8th century a number of questions centering on God’s unity, justice, and other attributes and relevant to man’s freedom, actions, and fate in the hereafter formed the core of a more specialized discipline, which was called *kalām* (“speech”). The term *kalām* has come to include all matters directly or indirectly relevant to the establishment

and definition of religious beliefs. Despite various efforts by later thinkers to fuse the problems of *kalām* with those of philosophy (and MYSTICISM), theology preserved its relative independence from philosophy and other nonreligious sciences. It remained true to its original traditional and religious point of view, confined itself within the limits of the Islamic revelation, and assumed that these limits as it understood them were identical with the limits of truth.

The pre-Islamic and non-Islamic legacy with which early Islamic theology came into contact included almost all the religious thought that had survived and was being defended or disputed in Egypt, Syria, Iran, and India. It was transmitted by learned representatives of various Christian, Jewish, Manichaean, Zoroastrian, Indian (Hindu and Buddhist, primarily), and Šābian communities and by early converts to Islam conversant with the teachings, sacred writings, and doctrinal history of the religions of these areas.

By the 9th century Islamic theology had coined a vast number of technical terms, and theologians (*e.g.*, al-Jāhīz, d. c. 868) had forged Arabic into a versatile language of science; Arabic philology had matured; and the religious sciences (jurisprudence, the study of the Qur'an, Hadith, criticism, and history) had developed complex techniques of textual study and interpretation. The 9th-century translators availed themselves of these advances to meet the needs of patrons. Apart from demands for medical and mathematical works, the translation of Greek learning was fostered by the early 'Abbāsid caliphs (8th–9th century) and their viziers as additional weapons (the primary weapon was theology itself) against perceived threats from Manichaeanism and other ideas that went under the name *zandaqa* ("heresy" or "atheism").

Theology and dissent. Despite the notion of a unified and consolidated community, serious differences arose within the Muslim community immediately after the Prophet's death. According to the sunnis, or traditionalist faction—who today constitute the majority of Islam—the Prophet had designated no successor. Thus, the Muslims at Medina decided to elect their own chief. Because he would not have been accepted by the QURAYSH tribe of Mecca, the Prophet's own tribe, the *umma*, or Muslim community, would have disintegrated. Therefore, two of Muhammad's fathers-in-law, who were highly respected early converts as well as trusted lieutenants, prevailed upon the Medinans to join the rest of the Muslim community in electing a single leader, and the choice fell upon Abū Bakr, father

of the Prophet's favored wife, 'Ā'isha. All of this occurred before the Prophet's burial (under the floor of 'Ā'isha's hut, alongside the courtyard of the mosque).

According to the Shi'ites, or "Partisans," of 'Alī, the Prophet had designated as his successor his cousin and son-in-law, 'Alī ibn Abī Ṭālib, husband of his daughter FĀṬĪMA and father of his only surviving grandsons, ḤASAN and ḤUSAYN. His preference was general knowledge; yet, while 'Alī and the Prophet's closest kinsmen were preparing the body for burial, Abū Bakr, 'Umar, and Abū 'Ubayda from Muhammad's Companions in the Quraysh tribe met with the leaders of the Medinans and agreed to elect the aging Abū Bakr as the successor (*khalīfa*, hence "caliph") of the Prophet. 'Alī and his kinsmen were dismayed but agreed for the sake of unity and because 'Alī was still young to accept the *fait accompli*.

After the murder of 'Uthmān, the third caliph, 'Alī was invited by the Muslims at Medina to accept the caliphate. Thus 'Alī became the fourth caliph (reigned 656–661), but the disagreement over his right of succession brought about a major SCHISM in Islam, between the Shi'ites—those loyal to 'Alī—and the Sunnis, or traditionalists. Although their differences were in the first instance primarily political, arising out of the question of leadership, significant theological differences developed over time.

During the reign of the third caliph, 'Uthmān, certain rebellious groups had accused the caliph of nepotism and misrule, and the resulting discontent had led to his assassination. The rebels then recognized 'Alī as ruler, but they later deserted him and fought against him, accusing him of having committed a grave sin in submitting his claim to the caliphate to arbitration. The word *khāraju*, from which *khārijī* is derived, means "to withdraw"; thus the rebels, who believed in active secession from or dissent against a state of affairs they considered to be gravely impious, became known as the Khārijites.

The basic doctrine of the Khārijites was that a person or a group who committed a grave error or sin and did not sincerely repent ceased to be Muslim. Mere profession of the faith—"there is no god but God; Muhammad is the prophet of God"—did not make a person a Muslim unless this faith was accompanied by righteous deeds. In other words, good works were an integral part of faith and not extraneous to it. The second principle that flowed from their aggressive idealism was militancy, or jihad, which the Khārijites considered to be among the cardinal principles, or pillars, of Islam.

Because the Khārijites believed that the basis of rule was righteous character and piety alone, any Muslim, irrespective of race, color, or sex, could, in their view, become ruler—provided he or she satisfied the conditions of piety. This was in contrast to the claims of the Shi'ite sect (the party of 'Alī) that the ruler must belong to the family of the Prophet and follow the sunna (the Prophet's way) and that the head of state must belong to the Prophet's tribe, *i.e.*, the Quraysh.

As a consequence of translations of Greek philosophical and scientific works into Arabic during the 8th and 9th centuries and the controversies of Muslims with thinkers from GNOSTICISM, MANICHAËNISM, BUDDHISM, and Christianity, a more powerful movement of rational theology emerged; its representatives are called the MU'TAZILA ("those who stand apart," a reference to the fact that they dissociated themselves from extreme views of faith and infidelity). On the question of the relationship of faith to works, the Mu'tazila—who called themselves "champions of God's unity and justice"—taught, like the Khārijites, that works were an essential part of faith but that a person guilty of a grave sin, unless he repented, was neither a Muslim nor yet a non-Muslim but occupied a "middle ground." They further defended the position, as a central part of their doctrine, that humans were free to choose and act and were, therefore, responsible for their actions. They claimed that human reason, independent of revelation, was capable of discovering what is good and what is evil, although revelation corroborated the findings of reason. Revelation had to be interpreted, therefore, in conformity with the dictates of rational ethics.

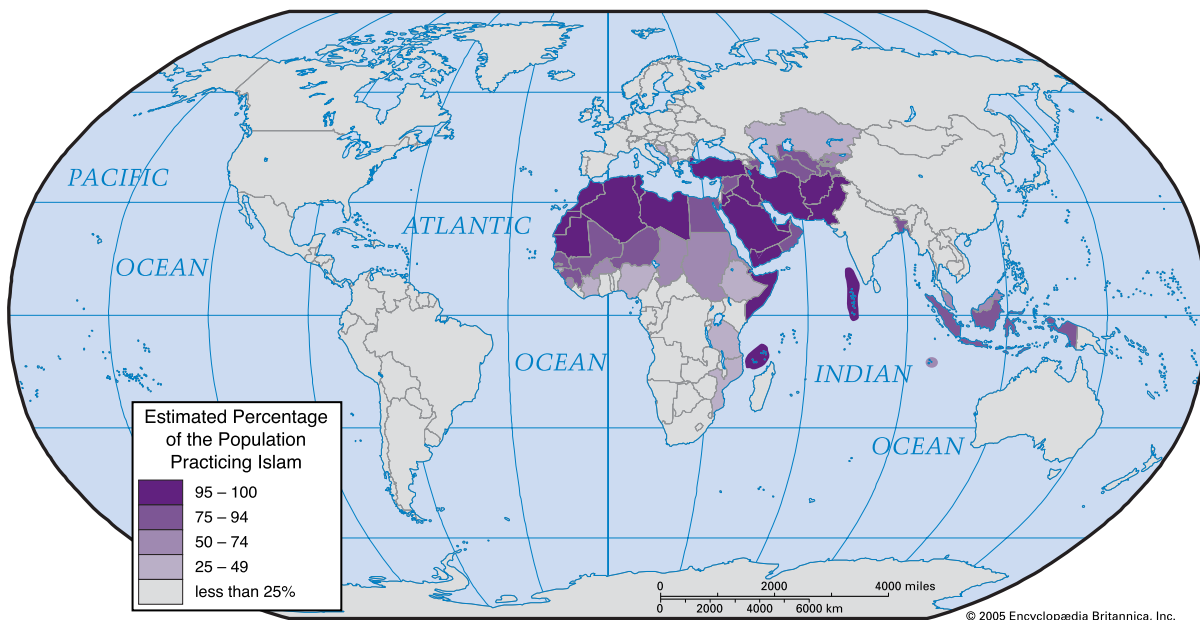

In the 10th century a reaction began against the Mu'tazila that culminated in the formulation and subsequent general acceptance of another set of theological propositions that became Sunni, or orthodox, theology. The concept of the com-

munity so vigorously pronounced by the earliest doctrine of the Qur'an gained both a new emphasis and a fresh context with the rise of Sunnism. An abundance of tradition (Hadith) came to be attributed to the Prophet to the effect that Muslims must follow the majority's way, that minority groups are all doomed to hell, and that God's protective hand is always on (the majority of) the community, which can never be in error. Under the impact of the new Hadith, the community, which had been charged by the Qur'an with a mission and commanded to accept a challenge, now became transformed into a privileged one that was endowed with infallibility. The dominant Sunni theological school, the Ash'ariya (named after ABŪ AL-HASAN AL-ASH'ARĪ, d. c. 935/936) displaced the Mu'tazila and successfully refuted key points of their theology. As a result Sunni theology became identified with the views that Muslim sinners remain Muslims, that GOOD AND EVIL alike are from God but that humans nevertheless acquire responsibility for their actions, that the Qur'an is the uncreated word of God, and that the qualities ascribed to God and the hereafter by the Qur'an are real—*i.e.*, they cannot be reasoned away as the Mu'tazila argued.

At the same time, while condemning schisms and branding dissent as heretical, Sunnism also developed the opposite trend of accommodation, catholicity, and synthesis. A putative tradition of the Prophet that says "differences of opinion among my community are a blessing" was given wide currency. This principle of toleration ultimately made it possible for diverse sects and schools of thought—notwithstanding a wide range of differences in belief and practice—to recognize and coexist with each other.

Besides the Sunni, the Shi'ite sect is the only important surviving sect in Islam. As noted above, initially it was a movement of protest against Umayyad hegemony. Gradually, however, Shi'ism developed a theological content for its political stand. Probably under Gnostic (esoteric, dualistic, and speculative) and old Iranian (dualistic) influences, the figure of the political ruler, the imam (exemplary "leader"), was transformed into a metaphysical being, a manifestation of God and the primordial light that sustains the universe and bestows true knowledge on man. Through the imam alone the hidden and true meaning of the Qur'anic revelation could be known, because the imam alone was infallible. The Shi'ites thus developed a doctrine of esoteric knowledge that was adopted also, in a modified form, by the Sufis, or Islamic mystics (*see* SUFISM). The predominant Shi'ite com-

munity, the Ithna ‘Asharīya (Twelvers), recognizes 12 such imams, the last (Muhammad al-Mahdī al-Ḥujja) having disappeared in the 9th century. Since that time, the *mujtahids* (i.e., the Shi‘ite jurists) have been able to interpret law and doctrine under the putative guidance of the imam, who will return near the end of time to fill the world with truth and justice.

On the basis of their doctrine of imamology, the Shi‘ites emphasize their idealism and transcendentalism in conscious contrast with Sunni pragmatism. Thus, whereas the Sunnis believe in the *ijmā‘* (consensus) of the community as the source of decision making and workable knowledge, the Shi‘ites believe that knowledge derived from fallible sources is useless and that sure and true knowledge can come only through contact with the infallible imam.

Besides the main body of Twelver Shi‘ites, Shi‘ism has produced a variety of other sects, the most important of them being the ISMĀ‘ĪLĪS. Instead of recognizing Mūsā as the seventh imam, as did the main body of the Shi‘ites, the Ismā‘īlīs upheld the claims of his elder brother Ismā‘īl. One group of Ismā‘īlīs, called Sevener (Sab‘īya), considered Ismā‘īl the seventh and last of the imams. The majority of Ismā‘īlīs, however, believed that the imamate continued in the line of Ismā‘īl’s descendants.

In Ismā‘īlite theology, the universe is viewed as a cyclic process, and the unfolding of each cycle is marked by the advent of seven “speakers”—messengers of God with scriptures—each of whom is succeeded by seven “silents”—messengers without revealed scriptures; the last speaker (the Prophet Muhammad) is followed by seven imams who interpret the will of God to man and are, in a sense, higher than the Prophet because they draw their knowledge directly from God and not from the Angel of Revelation. During the 10th century certain Ismā‘īlī intellectuals formed a secret society called the Brethren of Purity, which issued a philosophical encyclopedia, *The Epistles of the Brethren of Purity*, aiming at the liquidation of the particular religions in favor of a universalist spirituality.

Islamic mysticism, or Sufism, emerged out of early ascetic reactions on the part of certain religiously sensitive personalities against the general worldliness that had overtaken the Muslim community and the purely “externalist” expressions of Islam in law and theology. These persons stressed the Muslim qualities of moral motivation, contrition against excessive worldliness, and “the state of the heart” as opposed to the legalist formulations of Islam. For a complete exposition of Sufi history, beliefs, and practices, see SUFISM.

For religions based on Islam or Islamic in nature, see *also* DRUZE; YAZĪDĪ; BĀBISM; BAHĀ’Ī FAITH; AḤMADĪYA; ISLAM, NATION OF; QARMATIANS.

Islamic philosophy. The origin and inspiration of philosophy in Islam are quite different from those of Islamic theology. Philosophy developed out of and around the nonreligious practical and theoretical sciences; it recognized no theoretical limits other than those of human reason itself; and it assumed that the truth found by unaided reason does not disagree with the truth of Islam when both are properly understood. Islamic philosophy was not a handmaid of theology. The two disciplines were related, because both followed the path of rational inquiry and distinguished themselves both from traditional religious disciplines and from mysticism, which sought knowledge through practical, spiritual purification.

The first Muslim philosopher, AL-KINDĪ, who flourished in the first half of the 9th century, was a diligent student of Greek and Hellenistic authors in philosophy, and his conscious, open, and unashamed acknowledgment of earlier contributions to scientific inquiry was foreign to the spirit, method, and purpose of the theologians of the time. Devoting most of his writings to questions of natural philosophy and mathematics, al-Kindī was particularly concerned with the relation between corporeal things—which are changeable, in constant flux, and as such unknowable—on the one hand and the permanent world of forms (spiritual or secondary substances)—which are not subject to flux yet to which man has no access except through things of the senses—on the other. He insisted that a purely human knowledge of all things is possible through the use of various scientific devices, the study of mathematics and logic, and the assimilation of the contribu-

Muslim men in the upper gallery of the main mosque in Delhi, India, at prayer for the holiday of 'Īd al-Fiṭr

Reuters—Corbis—Bettmann

tions of earlier thinkers. The existence of a supernatural way to this knowledge in which all these requirements can be dispensed with was acknowledged by al-Kindī: God may choose to impart it to his prophets by cleansing and illuminating their souls and by giving them his aid, right guidance, and inspiration; and they, in turn, communicate it to ordinary men in an admirably clear, concise, and comprehensible style. This is the prophets' "divine" knowledge, characterized by a special mode of access and style of exposition. In principle, however, this very same knowledge is accessible to human beings without divine aid, even though "human" knowledge may lack the completeness and consummate logic of the prophets' divine message.

Reflection on the two kinds of knowledge—the human knowledge bequeathed by the ancients and the revealed knowledge expressed in the Qur'an—led al-Kindī to pose a number of themes that became central in Islamic philosophy: the rational-metaphorical EXEGESIS of the Qur'an and the Hadith; the identification of God with the first being and the first cause; creation as the giving of being and as a kind of causation distinct from natural causation and Neoplatonic emanation; and the immortality of the individual soul.

The philosopher whose principal concerns, method, and opposition to authority were inspired by the extreme Mu'tazila was the physician Abū Bakr al-Rāzī (9th–10th century). He was intent on developing a rationally defensible theory of creation that would not require any change in God or attribute to him responsibility for the imperfection and evil prevalent in the created world. To this end, he expounded the view that there are five eternal principles—God; Soul; prime matter; infinite, or absolute, space; and unlimited, or absolute, time—and explained creation as the result of the unexpected and sudden turn of events (*falta*). *Falta* occurred when Soul, in her ignorance, desired matter and the good God eased her misery by allowing her to satisfy her desire and to experience the suffering of the

material world, then giving her reason to make her realize her mistake and to deliver her from her union with matter, the cause of her suffering and of all evil.

AL-FĀRĀBĪ (9th–10th century) saw that theology and the juridical study of the law were derivative phenomena that function within a framework set by the prophet as lawgiver and founder of a human community. In this community, revelation defines the opinions that the members of the community must hold and the actions that they must perform if they are to attain the earthly happiness of this world and the supreme happiness of the other world. Philosophy could not understand this framework of religion as long as it concerned itself almost exclusively with its truth content and confined the study of practical science to individualistic ethics and personal salvation.

In contrast to al-Kindī and al-Rāzī, al-Fārābī recast philosophy in a new framework analogous to that of the Islamic religion. The sciences were organized within this philosophical framework so that logic, physics, mathematics, and metaphysics culminated in a political science whose subject matter was the investigation of happiness and how it could be realized in cities and nations. Philosophical cosmology, psychology, and politics were blended by al-Fārābī into a political theology whose aim was to clarify the foundations of the Islamic community and to defend its reform in a direction that would promote scientific inquiry and encourage philosophers to play an active role in practical affairs.

In al-Fārābī's lifetime the fate of the Islamic world was in the balance. The Sunni caliphate's power extended hardly beyond Baghdad, and it appeared quite likely that the various Shi'ite sects, especially the Ismā'īlīs, would finally overpower it and establish a new political order. Of all the movements in Islamic theology, Ismā'īlī theology was the one that was most clearly and extensively penetrated by philosophy. Yet its Neoplatonic cosmology, revolutionary background, ANTINOMINISM (antilegalism), and general expectation that divine laws were about to become superfluous with the appearance of the *qā'im* (the imam of the "resurrection") all militated against the development of a coherent political theory to meet the practical demands of political life and present a viable alternative to the Sunni caliphate. Al-Fārābī's theologico-political writings helped point out this basic defect of Ismā'īlī theology. Under the Fāṭimids in Egypt (969–1171), Ismā'īlī theology modified its cosmology in the direction suggested by al-Fārābī, returned to the view that the community must continue to live under the divine law, and postponed the prospect of the abolition of divine laws and the appearance of the *qā'im* to an indefinite point in the future.

One indicator of al-Fārābī's success is the fact that his writings helped produce a philosopher of the stature of IBN SĪNĀ (also spelled Avicenna; d. 1037), whose versatility, imagination, inventiveness, and prudence shaped philosophy into a powerful force that gradually penetrated Islamic theology and mysticism and Persian poetry in eastern Islam. Following al-Fārābī's lead, Ibn Sīnā initiated a full-fledged inquiry into the question of being, in which he distinguished between essence and existence. He argued that the fact of existence cannot be inferred from or accounted for by the essence of existing things and that form and matter by themselves cannot interact and originate the movement of the universe or the progressive actualization of existing things. Existence must, therefore, be due to an agent-cause that necessitates, imparts, gives, or adds existence to essence. To do so, the cause must be an existing thing and must coexist with its effect. The universe consists of a chain of actual beings, each giving existence to the one below it and responsible for the existence of the rest of the chain below it. Because an actual infinite is deemed impossible by Ibn Sīnā, this chain as a whole must terminate in a being that is wholly simple and one, whose essence is its very existence, and who is therefore self-sufficient and not in need of something else to give it existence.

By the 12th century the writings of al-Fārābī, Ibn Sīnā, and al-Ghazālī, a Sufi theologian who offered a critical account of the theories of Ibn Sīnā and other Muslim philosophers, had found their way to the West. A philosophical tradition emerged, based primarily on the study of al-Fārābī. It was critical of Ibn Sīnā's philosophical innovations and not convinced that al-Ghazālī's critique of Ibn Sīnā

touched philosophy as such, and it refused to acknowledge the position assigned by both to mysticism. The survival of Islamic philosophy in the West required extreme prudence, emphasis on its scientific character, abstention from meddling in political or religious matters, and abandonment of the hope of effecting extensive doctrinal or institutional reform.

IBN BĀJJA (Avepace; d. 1138/39) initiated this tradition with a radical interpretation of al-Fārābī's political philosophy that emphasized the virtues of the perfect but nonexistent city and the vices prevalent in all existing cities. He concluded that the philosopher must order his own life as a solitary individual, shun the company of nonphilosophers, reject their opinions and ways of life, and concentrate on reaching his own final goal by pursuing the theoretical sciences and achieving intuitive knowledge through contact with the Active Intelligence. The multitude lives in a dark cave and sees only dim shadows. The philosopher's duty is to seek the light of the sun (the intellect). To do so, he must leave the cave, see all colors as they truly are and see light itself, and finally become transformed into that light. Philosophy, he claimed, is the only way to the truly blessed state, which can be achieved only by going through theoretical science, even though it is higher than theoretical science.

To IBN RUSHD (Averroës; d. 1198) belongs the distinction of presenting a solution to the problem of the relation between philosophy and the Islamic community in the West. The intention of the divine law, he argued, is to assure the happiness of all members of the community. This requires everyone to profess belief in the basic principles of religion as enunciated in the Qur'an, the Hadith, and the *ijmā'* (consensus) of the learned and to perform all obligatory acts of worship. Beyond this, the only just requirement is to demand that each pursue knowledge as far as his natural capacity and makeup permit. The divine law directly authorizes philosophers to pursue its interpretation according to the best—*i.e.*, demonstrative or scientific—method, and theologians have no authority to interfere with the conduct of this activity or to judge its conclusions. Thus, theology must remain under the constant control of philosophy and the supervision of the divine law, so as not to drift into taking positions that cannot be demonstrated philosophically or that are contrary to the intention of the divine law.

See also IBN TUFAYL.

These philosophical developments were in time met with a resurgent traditionalism, which found effective defenders in men such as IBN TAYMĪYA (13th–14th century), who employed a massive battery of philosophical, theological, and legal arguments against every shade of innovation and called for a return to the beliefs and practices of the pious ancestors. These attacks, however, did not deal a decisive blow to philosophy as such. Philosophy was rather driven underground for a period, only to re-emerge in a new garb. Contributing to this development was the renewed vitality and success of the program formulated by al-Ghazālī for the integration of theology, philosophy, and mysticism into a new kind of philosophy called wisdom (*ḥikma*). It consisted of a critical review of the philosophy of Ibn Sīnā, preserving its main external features (its logical, physical, and, in part, metaphysical structure, and its terminology) and introducing principles of explanation for the universe and its relation to God based on personal experience and direct vision.

The critique of Aristotle that had begun in Mu'tazilī circles and had found a prominent champion in Abū Bakr al-Rāzī was provided with a far more solid foundation in the 10th and 11th centuries by the Christian theologians and philosophers of Baghdad, who translated the writings of the Hellenistic critics of Aristotle (*e.g.*, John Philoponus) and made use of their arguments both in commenting on Aristotle and in independent theological and philosophical works. In the 12th century their theologically based anti-Aristotelianism spread among Jewish and Muslim students of philosophy, such as Abū al-Barakāt al-Baghdādī (d. c. 1175) and Fakhr ad-Dīn al-Rāzī. These theologians continued and intensified al-Ghazālī's attacks on Ibn Sīnā and Aristotle. They suggested that a thorough examination of Aristotle had revealed to them, on philosophical grounds, that the fundamental disagreements between Aristotle and the theologies based on the revealed

religions represented open options and that Aristotle's view of the universe was in need of explanatory principles that could be readily supplied by theology. This critique provided the framework for the integration of philosophy into theology from the 13th century onward.

Although it made use of such theological criticisms of philosophy, the new wisdom took the position that theology did not offer a positive substitute for and was incapable of solving the difficulties of Aristotelian philosophy. It did not question the need to have recourse to the Qur'an and the Hadith to find the right answers; it did, however, insist (on the authority of a long-standing mystical tradition) that theology concerns itself only with the external expressions of this divine source of knowledge. The inner core was reserved for the adepts of the mystic path, whose journey leads to the experience of the highest reality in dreams and visions. Only the mystical adepts are in possession of the one true wisdom, the ground of both the external expressions of the divine law and the phenomenal world of human experience and thought.

AL-SUHRAWARDĪ (12th century), the first master of the new wisdom, called it the "Wisdom of Illumination." He concentrated on the concepts of being and nonbeing, which he called light and darkness, and explained the gradation of beings according to the strength, or perfection, of their light. This gradation forms a single continuum that culminates in pure light, self-luminosity, self-awareness, self-manifestation, or self-knowledge, which is God, the light of lights, the true One. The stability and eternity of this single continuum result from every higher light overpowering and subjugating the lower, and movement and change along the continuum result from each of the lower lights desiring and loving the higher.

Al-Suhrawardī's doctrine claims to be the inner truth behind the exoteric (external) teachings of both Islam and Zoroastrianism, as well as the wisdom of all ancient sages, especially Iranians and Greeks, and of the revealed religions as well. This neutral yet positive attitude toward the diversity of religions was to become one of the hallmarks of the new wisdom. Different religions were seen as different manifestations of the same truth, their essential agreement was emphasized, and various attempts were made to combine them into a single harmonious religion meant for all humankind.

The account of the doctrines of IBN AL-'ARABĪ (12th–13th century) belongs properly to the history of Islamic mysticism. Yet al-'Arabī's impact on the subsequent development of the new wisdom was in many ways far greater than that of al-Suhrawardī. This is true especially of his central doctrine of the "unity of being" and his distinction between the absolute One, which is undefinable truth (*haqq*), and his self-manifestation (*zuhūr*), or creation (*khalq*), which is ever new (*jadīd*) and in perpetual movement, a movement that unites the whole of creation in constant renewal. At the very core of this dynamic edifice stands nature, the "dark cloud" (*'amā*) or "mist" (*bukhār*), as the ultimate principle of things and forms: intelligence, heavenly bodies, and elements and their mixtures that culminate in the perfect man. This primordial nature is the "breath" of the merciful God in his aspect as Lord. It flows throughout the universe and manifests truth in all its parts. It is the first mother through which truth manifests itself to itself and generates the universe. And it is the universal natural body that gives birth to

The Scribe, detail of a miniature in an Arabic manuscript, 13th century, Baghdad

the translucent bodies of the spheres, to the elements, and to their mixtures, all of which are related to that primary source as daughters to their mother.

After Ibn al-ʿArabī, the new wisdom developed rapidly in intellectual circles in eastern Islam. Commentators began the process of harmonizing and integrating the views of the masters. Great poets made them part of every educated man's literary culture. Mystical fraternities became the custodians of such works, spreading them into Central Asia and the Indian subcontinent and transmitting them from one generation to another. Following the Mongol khan Hülagü's entry into Baghdad (1258), the Twelver Shi'ites were encouraged by the Il Khanid Tatars and Naṣīr al-Dīn al-Ṭūsī (the philosopher and theologian who accompanied Hülagü as his vizier) to abandon their hostility to mysticism. Mu'tazilī doctrines were retained in their theology. Theology, however, was downgraded to "formal" learning that must be supplemented by higher things, the latter including philosophy and mysticism, both of earlier Shi'ite (including Ismā'īlī) origin and of later Sunni provenance. Al-Ghazālī, al-Suhrawardī, Ibn al-ʿArabī, and Ibn Sīnā were then eagerly studied and (except for their doctrine of the imamate) embraced with little

or no reservation. This movement in Shi'ite thought gathered momentum when the leaders of a mystical fraternity established themselves as the Ṣafavid dynasty (1501–1732) in Iran, where they championed Twelver Shi'ism as the official doctrine of the new monarchy. During the 17th century Iran experienced a cultural and scientific renaissance that included a revival of philosophical studies. There, Islamic philosophy found its last creative exponents. The new wisdom as expounded by the masters of the school of Eṣfahān (Iṣfahān) radiated throughout eastern Islam and continued as a vital tradition until modern times. *See also* MĪR DĀMĀD; MULLĀ ṢADRĀ.

The new wisdom lived on during the 18th and 19th centuries, conserving much of its vitality and strength but not cultivating new ground. It attracted able thinkers such as Shāh Walī Allāh of Delhi and Hādī Sabzevārī and became a regular part of the program of higher education in the cultural centers of the Ottoman Empire, Iran, and the Indian subcontinent, a status never achieved by the earlier tradition of Islamic philosophy. In collaboration with its close ally Persian mystical poetry, the new wisdom determined the intellectual outlook and spiritual mood of educated Muslims in the regions where Persian had become the dominant literary language.

The wholesale rejection of the new wisdom in the name of simple, robust, and more practical piety (which had been initiated by Ibn Taymiya and which continued to find exponents among jurists) made little impression on its devotees. To be taken seriously, reform had to come from the devotees' own ranks and be espoused by thinkers such as the eminent theologian and mystic of Muslim India Aḥmad Sirhindī (16th–17th century)—a reformer who spoke their language and attacked Ibn al-ʿArabī's "unity of being" only to defend an older, presumably more orthodox form of mysticism. Despite some impact, however, attempts of this kind remained isolated and were either ignored or reintegrated into the mainstream until the coming of the modern reformers. The 19th- and 20th-century reformers JAMĀL AL-DĪN AL-AFGHĀNĪ, MUHAMMAD ʿABDUH, and MUHAMMAD IQBĀL were initially educated in this tradition, but they rebelled against it and advocated radical reforms.

The modernists attacked the new wisdom at its weakest points; that is, its social and political norms, its individualistic ethics, and its inability to speak intelligently about social, cultural, and political problems generated by a long period of intellectual isolation and further complicated by the domination of the European powers. Unlike the earlier tradition of Islamic philosophy from al-Fārābī to Ibn Rushd, which had consciously cultivated political science and investigated the political dimension of philosophy and religion and the relation between philosophy and the community at large, the new wisdom from its inception lacked genuine interest in these questions, had no appreciation for political philosophy, and had only a benign toleration for the affairs of the world.

None of the reformers was a great political philosopher. They were concerned with reviving their nations' latent energies, urging them to free themselves from foreign domination, and impressing on them the need to reform their social and educational institutions. They also saw that all this required a total reorientation, which could not take place so long as the new wisdom remained not only the highest aim of a few solitary individuals but also a social and popular ideal as well. Yet as late as 1917, Iqbāl found that "the present-day Muslim prefers to roam about aimlessly in the valley of Hellenic-Persian mysticism, which teaches us to shut our eyes to the hard reality around, and to fix our gaze on what is described as 'illumination.'" His reaction was harsh: "To me this self-mystification, this nihilism, *i.e.*, seeking reality where it does not exist, is a physiological symptom, giving me a clue to the decadence of the Muslim world."

To arrest this decadence and to infuse new vitality into a society in which they were convinced religion must remain the focal point the modern reformers advocated a return to the movements and masters of Islamic theology and philosophy antedating the new wisdom. They argued that these, rather than the "Persian incrustation of Islam," represented Islam's original and creative impulse. The modernists were attracted in particular to the views of the Muʿtazila: affirmation of God's unity and denial of all similarity between him and created things; reliance on human reason; emphasis on man's freedom; faith in man's ability to distinguish between good and bad; and insistence on man's responsibility to do good and fight against evil in private and public places. They were also impressed by the traditionalists' devotion to the original, uncomplicated forms of Islam and by their fighting spirit, as well as by the Ashʿarīs' view of faith as an affair of the heart and their spirited defense of the Muslim community from extreme expressions of RATIONALISM and sectarianism alike. In viewing the scientific and philosophical tradition of Eastern and Western Islam prior to the Tatar and Mongol invasions, they saw an irrefutable proof that true Islam stands for the liberation of human spirit, promotes critical thought, and provides both the impetus to grapple with the temporal and the demonstration of how to set it in order. These ideas initiated what was to become a vast effort to recover, edit, and translate into the Muslim national languages works of earlier theologians and philosophers, which had been long neglected or known only indirectly through later accounts.

The modern reformers insisted, finally, that Muslims must be taught to understand the real meaning of what had happened in Europe, which in effect meant the understanding of modern science and philosophy, including modern social

and political philosophies. Initially, this challenge became the task of the new universities in the Muslim world. In the latter part of the 20th century, however, the originally wide gap between the various programs of theological and philosophical studies in religious colleges and in modern universities narrowed considerably. See AL-AZHAR UNIVERSITY; ALĪGARH MUSLIM UNIVERSITY.

SOCIAL AND ETHICAL PRINCIPLES

Family life. A basic social teaching of Islam is the encouragement of marriage, and the Qur'an regards CELIBACY as something definitely exceptional, to be resorted to only under economic stringency. Thus, MONASTICISM as a way of life is severely criticized by the Qur'an. Many Sufis, on the other hand, prefer celibacy, and some even regard women as an evil distraction from piety, although marriage remains the normal practice also with Sufis.

Polygamy, which was practiced in pre-Islamic Arabia, is permitted by the Qur'an, which, however, limits the number of simultaneous wives to four, and this permission is made dependent on the condition that justice be done among co-wives (Q 4:3). Medieval law and society regarded this "justice" to be primarily a private matter between a husband and his wives, although the law did provide redress in cases of gross neglect of a wife. The right to divorce was also vested basically in the husband, who could unilaterally repudiate his wife, although the woman could also sue her husband for divorce before a court on certain grounds.

The virtue of chastity is regarded as of prime importance by Islam. The Qur'an advances its universal recommendation of marriage as a means to ensure a state of chastity (*iḥṣān*), which is held to be induced by a single free wife. The Qur'an states that those guilty of adultery are to be severely punished with 100 lashes (Q 24:2). Tradition has intensified this injunction and has prescribed this punishment for unmarried persons, while married adulterers are to be stoned to death. A false accusation of adultery is punishable by 80 lashes.

The general ethic of the Qur'an considers the marital bond to rest on "mutual love and mercy," and the spouses are said to be "each other's garments" (Q 2:187). The detailed laws of inheritance prescribed by the Qur'an also tend to confirm the idea of a central family—husband, wife, and children, along with the husband's parents (Q 4:7–12). Easy access to polygamy (although the normal practice in Islamic society has always been that of monogamy) and easy divorce on the part of the husband led, however, to frequent abuses in the family. In recent times most Muslim countries have enacted legislation to tighten marital relationships.

The right of parents to good treatment is stressed in Islam, and the Qur'an extols FILIAL PIETY, particularly tenderness to the mother, as an important virtue (Q 46:15–17). One who murders his father is automatically disinherited. The tendency of the Islamic ethic to strengthen the immediate family on the one hand and the community on the other at the expense of the extended family or tribe has not prevailed, however. With urbanization, the nuclear family bond has become more prominent, but tribal identities still prevail in the Arabian Peninsula and areas of Iraq, Syria, Jordan, and North Africa. So strong, indeed, has been the patriarchal family group ethos that in most Muslim societies daughters are not given the inheritance share prescribed by the sacred law in order to prevent disintegration of the joint family's patrimony.

The state. Because Islam draws no absolute distinction between the religious and the temporal spheres of life, the Muslim state is by definition religious. The main differences between the Sunni, Khārijite, and Shi'ite concepts of rulership have already been pointed out. Although the office of the Sunni caliph is religious, he has no authority either to define dogma or to legislate. He is the chief executive of a religious community, and his primary function is to implement the sacred law and to work in the general interests of the community. He himself is not above the law and if necessary can even be deposed, at least in theory.

Sunni political theory is essentially a product of circumstance—an after-the-fact rationalization of historical developments. Thus, while Shi'ite legitimism restricted rule to 'Alī's family and Khārijite democratism allowed rulership to anyone, even to "an Ethiopian slave," Sunnism held the position that "rule belonged

to the Quraysh" (the Prophet's tribe)—the condition that actually existed. Again between the extremes represented by the Khārijites, who demanded rebellion against what they considered to be unjust or impious rule, and the Shi'ites, who raised the imam to a metaphysical plane of infallibility, the Sunnis took the position that a ruler has to satisfy certain qualifications but that his rule cannot be upset by small issues. Indeed, in reaction to the civil wars started by the Khārijites, Sunnism drifted more and more toward conformism and actual toleration of injustice.

The first step taken in this direction by the Sunni was the enunciation that "one day of lawlessness is worse than 30 years of tyranny." This was followed by the principle that "Muslims must obey even a tyrannical ruler." Soon the SULTAN (ruler) was declared to be the "shadow of God on earth." No doubt the principle was also adopted—and insisted upon—that "there can be no obedience to the ruler in disobedience of God"; but there is no denying the fact that the Sunni doctrine came to be more and more heavily weighted on the side of political conformism. This change is also reflected in the principles of legitimacy. Whereas early Islam had confirmed the pre-Islamic democratic Arab principle of rule by consultation (SHŪRĀ) and some form of democratic election of the leader, that practice gave way to dynastic rule with the advent of the Umayyads. The *shūrā* was not developed into an institutionalized form but was, indeed, quickly discarded. Soon the principle of "might is right" came into being, and later theorists frankly acknowledged that actual possession of effective power is one method of the legitimization of power.

Despite this development, the ruler could not become absolute, as a basic restraint was placed on him by the SHARĪ'A (the Islamic legal and moral code) under which he held his authority and which he was bound to execute and defend dutifully. When, in the latter half of the 16th century, the Mughal emperor AKBAR in India wanted to arrogate to himself the right of administrative-legal absolutism, the strong reaction of the religious conservatives thwarted his attempt. In general, the *'ulamā'* (religious scholars and jurists) jealously upheld the sovereign position of the Sharī'a against political authority.

The effective shift of power from the caliph to the sultan was, again, reflected in the redefinition of the functions of the caliph. It was conceded that, if the caliph administered through *wazīrs* (viziers or ministers) or subordinate rulers (*amīrs*), it was not necessary for him to embody all the physical, moral, and intellectual virtues theoretically insisted upon earlier. In practice, however, the caliph was no more than a titular head from the middle of the 10th century onward, when real power passed to self-made and adventurous *amīrs* and sultans, who used the caliph's name merely for legitimacy.

Education. Muslim educational activity began in the 8th century, primarily in order to disseminate the teaching of the Qur'an and the sunna of the Prophet. The first task in this endeavor was to record ORAL TRADITIONS and collect written manuscripts. This information was systematically organized in the 8th–9th century CE, and by the 9th–early 10th century CE a sound corpus was agreed upon. This vast activity of "seeking knowledge" (*ṭalab al-'ilm*) resulted in the creation of specifically Arab sciences of tradition, history, and literature.

When the introduction of the Greek sciences—philosophy, medicine, and mathematics—created a formidable body of lay knowledge, its reaction with the traditional religious base resulted in the rationalist theological movement of the Mu'tazila. Based on the Greek legacy, from the 9th to the 12th century CE a brilliant philosophical movement flowered and presented a challenge to the emerging Sunni consensus on the issues of the eternity of the world, the doctrine of revelation, and the status of the Sharī'a.

Sunni scripturalists met the challenge positively by formulating a religious dogma. At the same time, however, for fear of HERESY, they began to draw a sharp distinction between religious and secular sciences. The custodians of the Sharī'a developed an unsympathetic attitude toward the secular disciplines and excluded them from the curriculum of the MADRASA (college) system. This exclusion proved fatal, not only for those disciplines but, in the long run, for religious thought in

general because of the lack of intellectual challenge and stimulation. A typical *madrassa* curriculum included logic, Arabic literature, law, Hadith, Qur'an commentary, and theology. Despite sporadic criticism from certain quarters, the *madrassa* system remained impervious to change.

One important feature of Muslim education was that primary education (which consisted of Qur'an reading, writing, and rudimentary arithmetic) did not feed candidates to institutions of higher education, and the two remained separate. In higher education, emphasis was on books rather than on subjects and on commentaries rather than on original works. This, coupled with the habit of learning by rote (which was developed from a tradition that encouraged learning more than thinking), impoverished intellectual creativity still further.

Despite these grave shortcomings, however, the *madrassa* produced one important advantage. Through the uniformity of its religio-legal content, it gave the 'ulama' the opportunity to effect that overall cohesiveness and unity of thought and purpose that, despite great variations in local Muslim cultures, has become a palpable feature of the world Muslim community. This uniformity has withstood even the tensions created against the seats of formal learning by Sufism through its distinctive disciplines and its own centers.

In contrast to the Sunnis, the Shi'ites continued seriously to cultivate philosophy, which developed a strong religious character. Indeed, philosophy has enjoyed an unbroken tradition in Persia down to the present and has produced some highly original thinkers. Both the Sunni and the Shi'ite medieval systems of learning, however, have come face to face with the greatest challenge of all—the impact of modern education and thought from the West.

The organization of education as an institution developed naturally in the course of time. Evidence exists of small schools already established in the first century of Islam that were devoted to reading, writing, and instruction in the Qur'an. These schools of "primary" education were called *kuttābs*. The well-known governor of Iraq at the beginning of the 8th century, the ruthless al-Ḥajjāj, had been a schoolteacher in his early career. When higher learning in the form of tradition grew in the 8th and 9th centuries, it was centered around learned men to whom students traveled from far and near and from whom they obtained a certificate (*ijāza*) to teach what they had learned. Women were excluded from *madrassas*, but in urban areas they had access to learning at mosques. Women in scholarly families sometimes became renowned teachers, especially of Hadith. Through the munificence of rulers, princes, and even wealthy female patrons, large private and public libraries were built, and schools and colleges arose. In the early 9th century a significant incentive to learning came from translations of scientific and philosophical works from the Greek (and partly Sanskrit) at the famous *bayt al-ḥikmah* ("house of wisdom") at Baghdad, which was officially sponsored by the caliph al-Ma'mūn. The Fāṭimid caliph AL-ḤĀKIM set up a *dār al-ḥikmah* ("hall of wisdom") in Cairo in the 10th–11th century. With the advent of the Seljuq Turks, the famous vizier Niẓām al-Mulk created an important college at Baghdad, devoted to Sunni learning, in the latter half of the 11th century. One of the world's oldest surviving universities, al-Azhar at Cairo, was originally established by the Fāṭimids, but Saladin (Ṣalāḥ ad-Dīn al-Ayyūbī), after ousting the Fāṭimids, consecrated it to Sunni learning in the 12th century. Throughout subsequent centuries, colleges and quasi-universities arose throughout the Muslim world from Spain (whence Islamic philosophy and science were transmitted to the Latin West) across Central Asia to India.

In Turkey a new style of *madrassa* came into existence; it had four wings, for the teaching of the four schools of Sunni law. Professorial chairs were endowed in large colleges by princes and governments, and residential students were supported by college endowment funds. A myriad of smaller centers of learning were endowed by private donations.

Cultural diversity. Underneath unity of law and creed, the world of Islam harbours a tremendous diversity of cultures, particularly in the outlying regions. The expansion of Islam can be divided into two broad periods. In the first period of the Arab conquests the assimilative activity of the conquering religion was far-reach-

ing. Although Persia resurrected its own language and a measure of its national culture after the first three centuries of Islam, its culture and language had come under heavy Arab influence. Only after Şafavid rule installed Shi'ism as a distinctive creed in the 16th century did Persia regain a kind of religious autonomy. The language of religion and thought, however, continued to be Arabic.

In the second period, the spread of Islam was not conducted by the state with 'ulamā' influence but was largely the work of Sufi missionaries. The Sufis, because of their latitudinarianism, compromised with local customs and beliefs and left a great deal of the pre-Islamic legacy in every region intact. Thus, among the Central Asian Turks, shamanistic practices were absorbed, while in Africa the holy man and his *barakah* (an influence supposedly causing material and spiritual well-being) survive. In India there are large areas geographically distant from the Muslim religio-political centre of power in which customs are still Hindu and even pre-Hindu and in which people worship a motley of saints and deities in common with the Hindus. The custom of SATĪ, under which a widow burned herself alive along with her dead husband, persisted in India even among some Muslims until late into the Mughal period. The 18th- and 19th-century reform movements strove to "purify" Islam of these accretions and superstitions.

Indonesia affords a striking example of this phenomenon. Because Islam arrived late and soon came under the influence of European colonialism, Indonesian society has retained its pre-Islamic world view beneath an overlay of Islamic practices. It has kept its customary law (called *adat*) at the expense of the Sharī'a; many of its tribes are still matriarchal, and culturally the Hindu epics RĀMĀYAṆA and MAHĀBHĀRATA hold a high position in national life. Since the 19th century, however, orthodox Islam has gained steadily in strength because of fresh contacts with the Middle East.

Apart from regional diversity, the main internal division within Islamic society is between urban and village life. Islam originated in the two cities of Mecca and Medina, and as it expanded its peculiar ethos appears to have developed mainly in urban areas. Culturally, it came under a heavy Persian influence in Iraq, where the Arabs learned the ways and style of life of their conquered people. The custom of veiling women (the PURDAH, which originally arose as a sign of aristocracy but later served the purpose of segregating women from men), for example, was acquired in Iraq.

Another social trait derived from outside cultures was the disdain for agriculture and manual labor in general. Because the people of the town of Medina were mainly agriculturists, this disdain could not have been initially present. In general, Islam came to appropriate a strong feudal ethic from the peoples it conquered. Also, because the Muslims generally represented the administrative and military aristocracy and because the learned class (the 'ulamā') was an essential arm of the state, the higher culture of Islam became urban based.

This city orientation explains and also underlines the traditional cleavage between the orthodox Islam of the 'ulamā' and the folk Islam espoused by the Sufi orders of the countryside. In the modern period, the advent of education and rapid industrialization threatened to make this cleavage still wider. With the rise of a strong and widespread fundamentalist movement in the second half of the 20th century, this dichotomy has decreased.

ISLAM, ART OF, artistic works created in the Islamic tradition. Although the Arabs had limited visual art, they did have a well-developed poetic art, which had been brought to full maturity and in which they took great pride. Some elements of Islamic art were borrowed from Persia and Byzantium. Whatever elements the Arabs borrowed they Islamized in a manner that fused them into a homogeneous spiritual-aesthetic complex. The most important principle governing art was ANICONISM; *i.e.*, the religious prohibition of figurization and representation of living creatures. Underlying this prohibition is the assumption that God is the sole author of life and that a person who produces a likeness of a living being seeks to rival God. Hence, in Islamic

Woman playing a lute, border decoration of a page of calligraphy, School of Herat, album 1262; in the Topkapı Palace Museum, Istanbul, Turkey

Scala—Art Resource

aniconism two considerations are fused together: rejection of such images that might become idols (these may be images of anything) and rejection of figures of living things.

This basic principle has, however, undergone modifications. First, pictures were tolerated if they were confined to private apartments and harems of palaces. This was the case with some members of the Umayyad and 'Abbāsīd dynasties, Turks, and Persians—in particular with the SHĪ'ITES, who have produced an abundance of pictorial representations of the holy family and of MUHAMMAD himself. Second, in the field of pictorial representation, animal and human figures are combined with other ornamental designs such as geometrical patterns and arabesques—stressing their ornamental nature rather than representative function. Third, for the same reason, in sculptural art they appear in low relief. In other regions of the Muslim world—in North Africa, Egypt, and India (except for Mughal palaces)—representational art was strictly forbidden.

Much more important than sculptural art were paintings, particularly frescoes and later Persian and Perso-Indian miniatures. Frescoes are found in the Umayyad and 'Abbāsīd palaces and in Spain, Iran, and the harem quarters of the Mughal palaces in India. Miniature paintings, introduced in Persia, assumed much greater importance later in Mughal India and Turkey. Miniature painting was closely

associated with the art of book illumination, and this technique of decorating the pages of the books was patronized by princes and other patrons from the upper classes.

ISLAM, NATION OF, also called American Muslim Mission, or World Community of al-Islam in the West, or Black Muslim movement, religious and cultural community that evolved in the 20th century in the United States out of various African nationalist organizations. Prominent among these precursor groups was the MOORISH SCIENCE TEMPLE OF AMERICA, founded in Newark, N.J., in 1913 by Prophet Drew Ali. The secular Universal Negro Improvement Association, founded in 1914 by Marcus Garvey, also espoused principles later adopted by the Black Muslims.

The movement proper was founded by WALLACE D. FARD, who is believed to have been an orthodox Muslim born in MECCA around 1877. He immigrated to the United States in 1930 and established a temple (or mosque) in Detroit a year later. Most of Fard's initial followers were African-American migrants from the southern United States who had clustered together in the ghettos of the great northern industrial cities. They believed Fard to be an incarnation of ALLĀH who had come to liberate what he called the "Lost-Found Nation of ISLAM in the West." Fard promised that if they would heed his teachings and learn the truth about themselves, they would overcome their white "slave masters" and be restored to a position of dignity and primacy among the peoples of the world.

The chief developer of the movement was ELIJAH MUHAMMAD, who became leader of what had come to be called the Nation of Islam after Fard's mysterious disappearance in 1934. Shortly thereafter Muhammad founded a second temple in Chicago. The Nation of Islam spread slowly at first, but after World War II it responded to the pent-up frustrations of African-Americans and offered them a militant, if avowedly nonviolent, expression. Soon there were mosques in all larger cities with sizable African-American populations.

Under Muhammad's leadership, the Nation of Islam professed the moral and cultural superiority of those of African descent, who were seen as destined by Allāh to assume cultural and political leadership of the earth. African-Americans were enjoined to give up CHRISTIANITY, which was regarded as the white man's chief stratagem for the enslavement of nonwhite people. Whites were presented as a race of devils whose time was coming to an end. African-Americans were urged to work together to reclaim their fallen (criminals, drug addicts), learn their true history, strive for economic independence, and prepare for the final struggle between GOOD AND EVIL.

During the 1960s the movement achieved national prominence through the contributions of MALCOLM X, Elijah Muhammad's spokesman, whose forceful articulations of racial pride and Muslim principles made him a cultural hero, especially among African-American youth. Disagreements among the sect hierarchy eventually led to Malcolm's suspension and to the establishment of a rival group, the Muslim Mosque, Inc., under his leadership. Disputes between the two groups eventually resulted in Malcolm's assassination in 1965.

A series of changes in the social, intellectual, and spiritual direction and development of the Nation of Islam was brought about in the late 1970s by Elijah Muhammad's successor, his son WARITH DEEN MOHAMMED. During this period all precepts of color-consciousness, racism, and the deification of Fard were repudiated, and the organization was

renamed the American Muslim Mission. In May 1985 W.D. Mohammed announced the dissolution of the Mission in order that its members might become a part of the worldwide orthodox Islamic community. The leadership and organization of the movement thus came to an end, though its network of mosques and their attendant religious, educational, and economic programs continued to function.

A splinter group based in New York City and under the leadership of LOUIS FARRAKHAN retained both the name and the founding principles of the Nation of Islam. Farrakhan began with a few thousand adherents but soon established a national movement. He published Elijah Muhammad's books and purchased Elijah Muhammad's former mosque in Chicago, which would become the new headquarters of the Nation of Islam. He also opened centers in England and Ghana. He gained notice outside the African-American community in 1984 when he supported the U.S. presidential campaign of JESSE JACKSON, though he was criticized for anti-Semitic remarks. Farrakhan won support for his promotion of African-American business and his efforts to reduce drug abuse and poverty. By the 1990s he had emerged as a prominent African-American leader, as demonstrated by the success in 1995 of the Million Man March in Washington, D.C., which he helped to organize. After a bout of prostate cancer in 2000, Farrakhan toned down his racial rhetoric and moved the group toward orthodox Islam. In the early 21st century the Nation of Islam had between 10,000 and 50,000 members.

ISLAM, PILLARS OF: *see* FIVE PILLARS OF ISLAM.

ISLAMIC CASTE, units of social stratification that developed among Muslims in India and Pakistan as a result of the proximity of Hindu culture. Most South Asian Muslims converted from Hinduism; despite the egalitarianism of ISLAM, the converts persisted in their Hindu social habits. *Hindus* gave the Muslim ruling class its own status.

In South Asian Muslim society a distinction is made between the *ashrāf* (Arabic, plural of *shārīf*, "nobleman"), descendants of Muslim Arab immigrants, and the non-*ashrāf*, Hindu converts. The *ashrāf* group is further divided into four subgroups: (1) SAYYIDS, descendants of MUHAMMAD through his daughter FĀṬĪMA and son-in-law 'ALĪ, (2) SHAYKHS (Arabic: "chiefs"), descendants of Arab or Persian immigrants but including some Rājputs, (3) Pashtuns, members of Pashto-speaking tribes in Afghanistan and northwestern Pakistan, and (4) Mughals, persons of Turkish origin, who came into India with the Mughal armies.

The non-*ashrāf* Muslim CASTES have three levels of status: at the top, converts from high Hindu castes, mainly Rājputs, insofar as they have not been absorbed into the shaykh castes; next, the artisan caste groups, such as the Julāhās, originally weavers; and lowest, the converted UNTOUCHABLES, who have continued their old occupations.

ISLAMISM \is-'lā-mi-zəm, iz-, -'lā-; 'iz-lə-, 'is-\, popular reformist movement throughout the Islamic world. Islamism has as its goal the reordering of government and society in accordance with the law of ISLAM. Islamist parties can be found in nations throughout the Muslim world including Algeria, Egypt, Pakistan, Afghanistan, and Turkey. Although there are regional differences among the various Islamist groups, there are a number of common traits, especially the belief that Islam is a comprehensive ideology that offers a blueprint for the social and political order.

Islamism is primarily an urban phenomenon and one

brought on by the urbanization of the Muslim world. It is not, however, motivated by the discontent of the poor or of displaced peasants but rather is a movement of lower-middle- and middle-class professionals. Many Islamists are university graduates, some with degrees from Western institutions. Among the ranks of the Islamist parties are doctors, educators, engineers, lawyers, and scientists. There are also *'ulamā'* (religious teachers) in the leadership, and all Islamists possess at least some knowledge of the holy texts.

Although not uniform throughout the Muslim world, Islamism is characterized by a number of shared values. The most important trait is a rejection of Western models of government and economics, both capitalism and communism. Islamists tend to believe that Muslim society has been corrupted by the SECULARISM, consumerism, and materialism of the West. As a consequence, Islamists generally advocate a new HĪJRA (sacred emigration), a flight from the corrupting influence of an alien, Western culture.

Islamism is not a completely negative ideology, however, and the Hijra itself can be seen as a flight toward a better Muslim society. Islamists look back to the golden age of Islam, before the arrival of the Westerners, and hope to restore the traditional values and social relations that characterized that golden age. It is Islam itself that holds the key to societal reform because it is not just a collection of beliefs and rituals but an all-embracing ideology to guide public and private life. Islamists, therefore, look to the teachings of Islam and, especially, to Islamic law (SHARĪ'A) as the key to the creation of a better social order.

Among the economically and politically disaffected populations of the Islamic world a radical Islamism has emerged. Among the more well-known groups are Hamas in Palestine, Hezbollah in Lebanon, and the Taliban in Afghanistan. Although these groups have been accused of terrorist acts, Islamism itself is not intrinsically violent and can be a movement of peaceful social and political reform.

ISMĀ'ĪL I \,is-mā-'ēl\, *also spelled* Esmā'īl I (b. July 17, 1487, Ardabīl?, Azerbaijan—d. May 23, 1524, Ardabīl, Şafavid Iran), shah of Iran (1501–24) and religious leader who founded the Şafavid dynasty and converted Iran from the SUNNI to the SHĪ'ITE branch of ISLAM.

Ismā'īl's father, leader of a Shi'ite group known as the Kizilbash (Red Heads), died in battle against the Sunnis when Ismā'īl was only a year old. Fearful that the Sunnis would wipe out the family, Shi'ite supporters hid family members for a number of years.

At age 14, Ismā'īl took his father's position. He established a base in northwestern Iran, and in 1501 he took the city of Tabriz and proclaimed himself shah (Persian: "king"). In a series of conquests he brought all of modern Iran and portions of present-day Iraq under his rule. In 1510, Ismā'īl defeated the Sunni Uzbek tribes in what is now Uzbekistan. The Uzbek leader was killed trying to escape, and Ismā'īl had his skull made into a drinking goblet.

Ismā'īl proclaimed Shi'ite Islam as the established religion. The fact that much of the population considered him a Muslim saint as well as shah facilitated the process of conversion. Ismā'īl's action provoked the Ottoman Turks. Friction grew after the Turkish ruler SULTAN Selīm I executed many of his Shi'ite subjects as heretics and potential spies. In 1514 the Ottomans invaded northwest Iran and defeated Ismā'īl's army. Ismā'īl was wounded and nearly captured. The warfare continued in a series of border skirmishes, but Ismā'īl remained strong enough to prevent further inroads by the Ottomans. In 1517 he moved northwest,

subduing the Sunni tribes in modern Georgia. The conflict between Ismāʿīl's Shiʿite empire and the Sunni Ottomans in the west and the Sunni Uzbek tribes in the east continued for more than a century. Ismāʿīl died at the age of 36, but the Šafavid dynasty ruled Iran until 1722.

ISMĀʿĪLĪS \,is-mā-ʿē-lēz, -iz-, a sect of the SHIʿITES that was most active as a religio-political movement in the 9th–13th centuries through its subjects, the Fātimids, the Qarāmiṭa (QARMATIANS), and the Assassins.

The Ismāʿīlīs were formed after the death of JAʿFAR IBN MUHAMMAD (765), the sixth IMAM, or spiritual successor to the Prophet, who was recognized by the Shiʿites. Jaʿfar's eldest son, ISMĀʿĪL, was accepted as his successor by a minority, who became known as the Ismāʿīlīs. Those who accepted Jaʿfar's younger son, Mūsā al-Kāzīm, as the seventh imam and acknowledged his successors through the 12th imam became known as the ITHNĀ ʿASHARIYA, or Twelvers, the largest of the Shiʿite sects. Certain of the Ismāʿīlīs believed that Ismāʿīl was the seventh and last imam and were designated as SEVENERS (Sabʿīya), while the majority of Ismāʿīlīs believed the imamate continued in the line of the Fātimid CALIPHS. The Seveners claimed that Ismāʿīl's son Muhammad al-Tamm would return at the end of the world as the MAHDI ("divinely guided one").

Ismāʿīlī doctrine, formulated in the late 8th and early 9th centuries, stressed the dual nature of Qurʾanic interpretation, exoteric and esoteric, and made a distinction between the ordinary Muslim and the initiated Ismāʿīlī. The secret wisdom of the Ismāʿīlīs was accessible only through a hierarchical organization headed by the imam and was spread by *dāʿīs* (missionaries), who introduced believers into the elite through graded levels. The *Rasāʾil ikhwān al-ṣafāʾ wa khillān al-wafāʾ* ("Epistles of the Brethren of Purity and Loyal Friends"), a 10th-century religious work influenced by NEOPLATONISM, was said to have been composed by a secret society connected with the Ismāʿīlīs.

The Ismāʿīlīs became active in the second half of the 9th century in southern Iraq under the leadership of Ḥamdān Qarmat. This branch of the sect, which came to be known as the Qarāmiṭa, established itself in Iraq, Yemen, and especially Bahrain during the 9th–11th centuries. In Tunis, ʿUbayd Allāh established himself as the first Fātimid caliph in 909, claiming descent—through a line of "hidden imams"—from Muhammad, son of Ismāʿīl, and through him from FĀTIMA, daughter of the Prophet, whence the dynastic name. The Fātimids conquered Egypt in 969, founding Cairo as their capital; although they did not succeed in converting the bulk of their subjects during their rule of two centuries, they did create a widespread Ismāʿīlī missionary network with followers all over the Islamic world.

The movement split over the succession to the Fātimid caliph al-Mustanshir (d. 1094). The Egyptian Ismāʿīlīs recognized his son al-Mustaʿlī, but the Ismāʿīlīs of Iran and Syria upheld the claims of his older son, Nizār; hence, there are two branches of Fātimids, the Mustaʿlīs and the Nizārīs.

When Ismāʿīliya came to an end in Egypt with the deposition of the last Fātimid caliph by Saladin in 1171, the Mustaʿlī Ismāʿīlīs survived in Yemen. They had not recognized any Fātimid after al-ʿĀmir, al-Mustaʿlī's son, and believed that al-ʿĀmir's infant son al-Ṭayyib remained alive and that the line of the imams was hidden until a future time. In the interim they are governed by the chief *dāʿī*. In the 16th century the *dāʿī* of a major branch of the Mustaʿlīs relocated to India. Today his successor resides in Surat, in Gujarāt district. His followers in India are usually known as Bohrās.

The Nizārīs, led by ḤASAN-E ŠABBĀḤ, gained control of a number of fortresses in Iran and Syria, the chief being Alamūt (1090). Known as Assassins, they remained in political power through the 13th century until displaced by the Mongols and the Mamlūks. The Nizārīs survived, though in two rival lines. The minor line died out by the 18th century, while the major line, led by an imam called the Aga Khan, moved from Iran to India in 1840. The Aga Khan has a following, estimated in the millions, in India and Pakistan and in parts of Iran, Africa, and Syria.

The DRUZE, a hill people living in modern southern Lebanon, neighboring Syria and Israel, separated from the main body of the Ismāʿīlites early in the 11th century. They then formed a special closed religion of their own, which acknowledged the imams as incarnations of the godhead.

ISMĀʿĪL SHAHĪD, MUHAMMAD \,is-mā-ʿēl-shā-ʿhēd\ (b. April 29, 1779, Phulat, India—d. May 6, 1831, Balakote), Indian Muslim reformer who attempted to purge IDOLATRY from Indian ISLAM and who preached holy war against the Sikhs and the British.

As a preacher in Delhi, Ismāʿīl Shahīd attracted attention for his forceful preaching against various heretical practices. After a PILGRIMAGE to MECCA, he preached holy war (JIHAD) against the Sikhs who had been oppressing their Muslim subjects. In 1824–26 Ismāʿīl accompanied a body of Muslim warriors led by Sayyid Aḥmad in a jihad against the Sikhs in the Punjab. Ismāʿīl led the *mujāhidīn* (holy warriors) in 1830, when they were driven from Peshāwar. On May 6, 1831, the Muslims were destroyed by a Sikh force at the battle of Balakote, in which Ismāʿīl lost his life.

ISNĀD \is-ʿnad\ (Arabic, from the root *s-n-d*, "to support, base, base a tradition on"), in ISLAM, a list of authorities who have transmitted a report (HADITH) of a statement, action, or approbation of MUHAMMAD, one of his Companions (Šaḥāba), or a later authority (*tābiʿī*); its reliability determines the validity of a Hadith. The *isnād* precedes the actual text (*matn*) and takes the form, "It has been related to me by A on the authority of B on the authority of C on the authority of D (usually a COMPANION OF THE PROPHET) that Muhammad said. . ."

During and after Muhammad's lifetime, Hadiths were quoted by his Companions and contemporaries and were not prefaced by *isnāds*. In the 2nd century AH (after 720 CE), when Muhammad's example as embodied in Hadiths was established as the norm (SUNNA) for an Islamic way of life, creation of Hadiths, all "substantiated" by elaborate *isnāds*, resulted. Since Hadiths were the basis of Islamic scholarship, especially Qurʾanic EXEGESIS (TAFSĪR) and legal theory (FIQH), Muslim scholars had to determine which were authentic. They did so by scrutinizing the *isnāds*, rating each Hadith by the completeness of its chain of transmitters and the reliability and orthodoxy of its authorities.

Compilations of the most reliable Hadiths (*musnads*) were classified according to the Companion of Muhammad to whom they were attributed. Most notable of these was the *Musnad* of AḤMAD IBN ḤANBAL (d. 855), incorporating about 29,000 traditions. *Musnads* proved difficult to use efficiently, and later compilations, *muṣannaf*, grouped Hadiths by subject matter. Shiʿite Hadith, compiled later than the six canonical Sunni collections, often include the names of the IMAMS in the *isnād*, since these are believed to be the most reliable means of transmission.

ISRĀʾ \is-ʿra\; see MĪRĀJ.

ISRAEL, in **JUDAISM**, either of the kingdoms of the **OLD TESTAMENT** or the social group formed by the practitioners of that faith. The general usage refers to the modern state formed in 1948.

In the ancient historical sense, Israel means either of two political units in the Old Testament: the united kingdom of Israel under the kings SAUL, DAVID, and SOLOMON that lasted from about 1020 to 922 BCE, or the northern kingdom of Israel, including the territories of the 10 northern tribes (*i.e.*, all except JUDAH and part of BENJAMIN), that was established in 922 BCE as the result of a revolt led by Jeroboam I. The southern kingdom, ruled by the Davidic dynasty, was thereafter referred to as Judah. The later kingdom's history was one of dynastic instability, with only two prolonged periods of stable government, under Omri (reigned 876–869 or *c.* 884–*c.* 872 BCE) and AHAB (*c.* 874–*c.* 853 BCE) and the JEHU dynasty (*c.* 842–746 BCE). In the 8th century BCE the northern kingdom was overrun by the Neo-Assyrian Empire, with Samaria, the capital, falling in 722/721.

The Israel social group refers to a people deemed to continue the genealogy and heritage of the Israel of whom the Hebrew SCRIPTURES speak—*i.e.*, on one side, the descendants of ABRAHAM and SARAH, and, on the other side, those who continue the faith of that people who received the TORAH at MOUNT SINAI. In RABBINIC JUDAISM, Israel encompassed all those who knew and worshiped the one and only God, and “the Gentiles”—from the Latin word *gens*, meaning nation—were comprised entirely by idolators. In medieval times ISLAM and CHRISTIANITY were included among the monotheist religions as well, thus a Gentile may not necessarily be considered irreligious or idolatrous. To the concept of Israel as the continuing embodiment of the Scripture's narrative is added the idea that God has chosen Israel from among all the nations (“Gentiles”), has sanctified Israel, and has given Israel particular responsibilities and commandments that distinguish this people from the nations.

Israel in Judaism, therefore, refers to the holy people, whom God singled out for the redemption of mankind, variously represented in both the written Torah (PENTATEUCH) and the oral Torah (MISHNAH) as an extended, holy family, a people or nation chosen by God for sanctification and service, to be his community and venue on earth. One antonym for Israel is Gentile. Another is Adam. Israel is Adam's counterpoint, the other model for Man. Israel came into existence in the aftermath of the failure of Creation and the Fall of Man—in the restoration that followed the Flood, God called upon Abraham to found a supernatural social entity to realize his will in creating the world. Called, variously, a family, a community, a nation, and a people, above all, Israel forms God's resting place on earth. This definition of Israel cannot be confused with any secular meanings attributed to the same word, *e.g.*, any nation or ethnic entity. The use of Israel to refer to “the state of Israel” has no basis in the theology of Judaism. In the liturgy of Judaism Israel means, and can only mean, “the holy people,” wherever located, whatever their political condition.

At the most profound level, in Judaism Israel means those destined to rise from the dead and enjoy the world to come. And these are the ones who have no portion in the world to come: (1) He who says, the resurrection of the dead is a teaching which does not derive from the Torah, (2) and says the Torah does not come from heaven; and (3) is an Epicurean. Tosefta-tractate Sanhedrin 12:9 adds to this list the rejection of the yoke of the commandments, the denial of the COVENANT, and the perversion of the Torah by maintaining that God did not reveal it. The upshot is, to be Isra-

el is to rise from the dead to the world to come. Gentiles, by contrast, are not going to be resurrected when the dead are raised, but those among them who bear no guilt for their SINS also will not be judged for eternal damnation, so Yerushalmi-tractate Shebiit 4:10 IX: “Gentile children who did not act out of FREE WILL and Nebuchadnezzar's soldiers who had no choice but to follow the orders of the evil king will not live after the resurrection of the dead but will not be judged for their deeds.”

The secular political sense of Israel and even “the Jews” occurs only very rarely in the oral Torah. In the oral Torah Israel bears three meanings: (1) family—a social entity different from the nations because it is formed by a common genealogy; (2) nation among nations; and (3) Israel as *sui generis*, different in its very category from all other nations.

Scripture told the story of Israel—a man, JACOB. His children therefore are the children of Jacob. That man's name was also Israel, and it followed his extended family would be the children of Israel. By extension upward, Israel formed the family of Abraham and Sarah, ISAAC and Rebecca, Jacob and LEAH and Rachel. Israel therefore invoked the metaphor of genealogy to explain the bonds that linked persons unseen into a single social entity; the shared traits were imputed, not empirical. That social metaphor of Israel—a simple one, really, and easily grasped—bore consequences in two ways. First, children in general are admonished to follow the good example of their parents. The deeds of the patriarchs and matriarchs therefore taught les-

On the festival of Simḥat Torah, the Scroll of the Law is shown to the congregation of a Tunisian synagogue
BBC Hulton Picture Library

sons on how the children were to act. Of greater interest in this context—Israel lived twice: once in the patriarchs and matriarchs, a second time in the life of the heirs as the descendants relived those earlier lives. The stories of the family were carefully reread to provide the meaning of the latter-day events of the descendants of that same family. Accordingly, the lives of the patriarchs signaled the history of Israel.

The theory of Israel as *sui generis* produced a political theory in which Israel's sole legitimate ruler is God, and whoever legitimately governs does so as God's surrogate. Here is a brief statement, framed out of the materials of LEVITICUS RABBAH, of the successor-documents' political theory and theological creed. The theory is as follows: God loves Israel, so gave them the Torah, which defines their life and governs their welfare. Israel is alone in its category (*sui generis*), proved by the fact that what is a virtue to Israel is a vice to the nation, life-giving to Israel, poison to the Gentiles. True, Israel sins, but God forgives that sin, having punished the nation on account of it. Such a process has yet to come to an end, but it will culminate in Israel's complete regeneration. Meanwhile, Israel's assurance of God's love lies in the many expressions of special concern, for even the humblest and most ordinary aspects of the national life: the food the nation eats, the sexual practices by which it procreates. These life-sustaining, life-transmitting activities draw God's special interest, as a mark of his general love for Israel. Israel then is supposed to achieve its life in conformity with the marks of God's love.

ISRAELI, ISAAC BEN SOLOMON \iz-'rā-lē\, *Arabic* Abū Ya-'qūb Ishaq ibn Sulaymān al-Isrā'īlī, *also called* Isaac the Elder (b. 832/855, Egypt—d. 932/955, Al-Qayrawān, Tunisia), Jewish physician and philosopher, widely reputed in the Middle Ages for his scientific writings and regarded as the father of medieval Jewish NEOPLATONISM.

Israeli first gained note as an oculist, maintaining a practice near Cairo until about 904, when he became court physician in Al-Qayrawān to the last Aghlabid prince, Ziyādāt Allāh. He also studied medicine under Ishaq ibn 'Amrān al-Baghādāī, with whom he sometimes has been confused.

Some five years after his arrival, Israeli entered into the service of AL-MAHDĪ, the founder of the North African Fātimid dynasty (909–1171). At the request of the CALIPH, Israeli wrote eight medical works in Arabic, later translated into Latin. Israeli's scientific works include treatises on fevers, urine, pharmacology, ophthalmology, and ailments and treatments. He wrote also on logic and psychology, showing particular insight in the field of perception.

Of his philosophical writings, *Kitāb al-ḥudūd* (Hebrew: *Sefer ha-gevulim*, "The Book of Definitions") is best known. Beginning with a discussion of Aristotle's four types of inquiry, Israeli goes on to present 56 definitions, including wisdom, intellect, soul, nature, reason, love, locomotion, and time. Others of his philosophical works include *Sefer ha-ru'ah ve-ha-nefesh* ("Treatise on Spirit and Soul") and *Kitāb al-jawāhir* ("Book of Substances"). Israeli's interpretation of eschatological matters in the light of Neoplatonic MYSTICISM was to influence Solomon ibn Gabriol in the 10th century and later Jewish philosophers.

ISRĀFĪL \is-rā-'fēl\; *see* ANGEL, ISLAM.

ISSACHAR \i-sə-'kār\, one of the 12 tribes that in biblical times constituted the people of ISRAEL. The tribe was named after the fifth son born to JACOB and his first wife, LEAH

(GENESIS 30:17–18). The tribe of Issachar occupied land lying west of the Jordan River and southeast of the southern tip of the Sea of Galilee (JOSHUA 19:17–23). After the death of King SOLOMON (922 BCE), Issachar was one of the 10 northern tribes that established the independent Kingdom of Israel (1 Kings 11:26ff; 2 Chronicles 10); dispersed to other regions after the Assyrian conquest of 721 BCE (2 Kings 17:5–6; 18:9–12), these tribes eventually became known as the TEN LOST TRIBES OF ISRAEL.

ISSERLES, MOSES BEN ISRAEL \ē-'ser-les\, *acronym* Rema (b. c. 1525, Kraków, Pol.—d. May 1, 1572, Kraków), Polish-Jewish RABBI and codifier who, by adding notes on customs of the ASHKENAZI to the great legal digest SHULḤAN 'ARUKH of codifier JOSEPH KARO, made it an authoritative guide for Orthodox Jews down to the present day.

Isserles became the head of the great YESHIVA (institution of Jewish learning) in Kraków while still a young man. Until his time, most great codifications of Jewish law had been written by Sephardim, *i.e.*, Jews of Spanish and Portuguese descent. Therefore many eastern European customs (*min-hagim*) had been ignored, making the Sephardic codes increasingly unacceptable to the Ashkenazim, the Jews of German-Polish descent. When Joseph Karo published *Shulḥan 'arukh* (1565; "The Well-Laid Table"), its Sephardic bias provoked Isserles to write a commentary entitled *Mapa* ("The Tablecloth"), first published in Kraków in 1571 as notes to an edition of *Shulḥan 'arukh*. This commentary, which extensively utilized Ashkenazic customs, made the *Shulḥan 'arukh* acceptable all over the Jewish world.

ISTHMIAN GAMES \is-mē-ən\, in ancient Greece, a festival of athletic and musical competition in honor of the sea god POSEIDON, held in the spring of the second and fourth years of each Olympiad at his SANCTUARY on the Isthmus of Corinth. Legend attributed the origin of the Games either to SISYPHUS, king of Corinth, or to THESEUS. Open to all Greeks, the Isthmian Games were especially popular with Athenians. The victors' prize, originally a crown of dry wild celery, was changed to a pine wreath in Roman times, the pine being sacred to Poseidon. The festival died out when CHRISTIANITY became dominant in the 4th century CE.

ISTIḤSĀN \is-tih-'san\ (Arabic: "to approve," or "to sanction"), among Muslim jurists, the use of one's own judgment to determine the best solution to a religious problem that cannot be solved by citing sacred texts. Proponents of *istiḥsān* believe MUHAMMAD sanctioned this procedure when he said: "Whatever true Muslims prefer, is preferable in the eyes of God." Most religious authorities restrict the use of *istiḥsān* to cases that cannot be satisfactorily solved by applying such other well-established norms as analogy (QIYĀS) and consensus of opinion (IJMĀ'). Certain prominent jurists, however, among them AL-SHĀFI'Ī (d. 820), forbade the use of *istiḥsān* altogether, fearful that true knowledge and correct interpretation of religious obligations would suffer from arbitrary judgments infused with error. The followers of ABŪ ḤANĪFA (d. 767) held the modified view that *istiḥsān* is in fact a form of analogy because any judgment about what is best necessarily follows careful consideration of all alternative solutions. *See also* FIQH.

ĪŚVARA \ēsh-və-rə\ (Sanskrit: "Lord"), in HINDUISM, God understood as a person, contrasting with the impersonal transcendent BRAHMAN. The title is particularly favored by devotees of the god SHIVA; the comparable term *Bhagavān*

(also meaning “Lord”) is more commonly used by Vaiṣṇavas (followers of the god VISHNU). Particular communities within the Hindu fold differ in their understanding of the relation between Īśvara and Brahman. Theistic communities tend to argue that these two are one and the same, or even that the personal representation is superior; others, including some adherents of ADVAITA VEDĀNTA, argue that Īśvara is a limited and ultimately inadequate representation of Brahman.

ITHNĀ ‘ASHARĪYA \iθ-nā-ā-shā-’rē-ə\, also called *Im-āmīs*, English Twelvers, the largest division of Shi’ism (see SHI’ITE), believing in a succession of 12 IMAMS, leaders of the religion after the death of MUHAMMAD, beginning with ‘ALĪ ibn Abī Tālib, fourth CALIPH and the Prophet’s son-in-law. Today they compose about 10 percent of the world Muslim population (close to 100 million).

Each imam—‘Alī, his sons ḤASAN and ḤUSAYN, ‘Alī Zayn al-‘Ābidīn, Muhammad al-Bāqir, Ja’far al-Ṣādiq, Mūsā al-Kāzīm, ‘Alī ar-Riḍā, Muhammad al-Jawād, ‘Alī al-Hādī, Ḥasan al-‘Askarī, and MUHAMMAD AL-MAHDĪ AL-ḤUJJAḤ—was chosen from the family of his predecessor, not necessarily the eldest son but a descendant deemed spiritually pure. The last imam recognized by the Ithnā ‘Ashariya disappeared in 873 and is thought to be alive and in hiding, ready to return at the LAST JUDGMENT (see GHAYBA). As the 12 imams are seen as preservers of the religion and the only interpreters of the esoteric meanings of law and theology, a cult has grown around them, in which they are thought to influence the world’s future. Indeed, Twelvers doctrine maintains that the world cannot exist without an imam. PILGRIMAGES to their tombs secure special rewards and are legitimate substitutes for pilgrimages to MECCA. In the time from the disappearance of the imam to the Mongol invasion (c. 1050), a body of literature known as HADITH (also called *akhbār*) was collected in support of Twelver beliefs. Like SUNNIS, Twelvers believe in God’s absolute unity, the office of PROPHECY, and the Last Judgment. They also regard belief in God’s justice and in the imams as essential.

Ithnā ‘Ashariya became the state religion of Iran under the Ṣafavīd dynasty (1501–1736), which claimed descent from the 7th imam and added the words “I testify that ‘Alī is the *walī* [friend] of God” to the Muslim profession of faith (SHAHĀDA). Besides Iran, Twelvers constitute majorities in Iraq and Bahrain. Sizeable communities also live in Lebanon, Kuwait, eastern Saudi Arabia, Afghanistan, and South Asia.

ITŌ JINSAI \’ē-tō-’jēn-sī\ (b. Aug. 30, 1627, Kyōto, Japan—d. April 4, 1705, Kyōto), sinologist, philosopher, and educator who helped found the KOGAKU (“Study of Antiquity”), which opposed the official NEO-CONFUCIANISM of Tokugawa Japan (see HAYASHI RAZAN). He advocated a return to classical Confucian teaching.

The son of a lumberman, Itō turned his hereditary business over to his younger brother in order to devote himself to teaching and scholarship. He and his son Itō Tōgai (1670–1736) founded the Kōgi-dō (“School for Study of Ancient Meaning”) in Kyōto. It was run by his descendants until 1904, when it was absorbed into the school system.

The outline of Itō’s thought is in a work called *Gōmōjigi* (1683), a commentary on the analects of the Chinese philosopher CONFUCIUS and MENCIOUS. Itō looked to what he saw as the underlying truths of Confucian thought for inspiration in developing a rational, as against an authoritarian, basis for human morality and the pursuit of happiness.

ITZAMNĀ \,ēt-sām-’nā\ (Mayan: “Iguana House”), principal pre-Columbian Mayan deity. (See PRE-COLUMBIAN MESO-AMERICAN RELIGIONS.) He was ruler of the opposing forces of heaven, earth, day, and night, and a culture hero who gave humankind writing and the calendar and was patron deity of medicine. He frequently appeared as four gods called Itzamná’s, who encased the world. The Itzamná’s were associated with the points of the compass and their colors (east, red; north, white; west, black; and south, yellow). MAYA rulers held a two-headed ceremonial bar that represented Itzamná’s cosmic powers as east-day-life and west-night-death. See also BACAB.

IXCHEL \ēsh-’chel\, also spelled *Ix Chel*, Mayan moon goddess. Ixchel was the patroness of womanly crafts but was often depicted as an evil old woman and had unfavorable aspects. She may have been a manifestation of the god ITZAMNĀ.

IXION \ik-’sī-ən, ’ik-sē-ən\, in Greek legend, son either of the god ARES or of Phlegyas, king of the Lapiths in Thessaly. He murdered his father-in-law and could find no one to purify him until ZEUS did so and admitted him as a guest to Olympus. Ixion then tried to seduce Zeus’s wife HERA, but Zeus substituted for her a cloud (Nephele), by which Ixion became the father of the CENTAURS. Zeus, to punish him, bound him on a fiery wheel, which rolled unceasingly through the air or, according to another tradition, through the Underworld.

IZANAGI AND IZANAMI \ē-’zā-nā-gē . . . ē-’zā-nā-mē\ (Japanese: “He Who Invites” and “She Who Invites”), in the Japanese CREATION MYTH, the eighth pair of brother and sister gods to appear after heaven and earth separated out of CHAOS. By standing on the floating bridge of heaven and stirring the primeval ocean with a heavenly jeweled spear, they created the first land mass.

Their first attempt at sexual union resulted in a deformed child, Hiruko (“Leech Child,” known in later SHINTŌ mythology as the god Ebisu), and they set him adrift in a boat. Attributing the mistake to a ritual error on the part of Izanami, they began again and produced numerous islands and deities. In the act of giving birth to the fire god, Kagutsuchi (or Homusubi), Izanami was fatally burned and went to Yomi, the land of darkness. Izanagi followed her there, but she had eaten the food of that place and could not leave. She became angry when he lit a fire and saw her rotting and covered with maggots, and the two were divorced.

As Izanagi bathed in the sea to purify himself from contact with the dead, the sun goddess AMATERASU was born from his left eye, the moon god Tsukiyomi was born from his right eye, and the storm god SUSANOO was born from his nose. Izanagi’s bath is regarded as the founding of the purification practices of Shintō. See HARAI.

‘IZRĀ’ĪL \,iz-rā-’ēl\ see ANGEL, ISLAM.

IZUMO SHRINE \ē-zū-mō, Angl ē-’zū-mō\, also called the Grand Shrine of Izumo, Japanese Izumo-taisha \-’tī-shā\, Shintō shrine in Taisha. The oldest Shintō shrine in Japan, the Grand Shrine attracts pilgrims throughout the year. Its present buildings, constructed largely in the late 19th century, cover an area of 40 acres and are approached through an avenue of pines. The temple complex contains a valuable art collection and is enclosed by hills on three sides.

JACKSON, JESSE (LOUIS), *original name* Jesse Louis Burns (b. Oct. 8, 1941, Greenville, S.C., U.S.), American civil rights leader, Baptist minister, and politician whose bids for the U.S. presidency were the most successful by an African-American.

In 1965 Jackson went to Selma, Ala., to march with MARTIN LUTHER KING, JR., and began working for King's Southern Christian Leadership Conference (SCLC). He moved to Chicago in 1966 and was ordained a Baptist minister in 1968. He founded Operation PUSH (People United to Save Humanity) in 1971 and the National Rainbow Coalition in 1984; these organizations merged in 1996. From the late 1970s Jackson travelled widely to mediate international disputes and to negotiate the release of U.S. captives in various countries. In 1983 he led a voter-registration drive in Chicago that helped to elect the city's first African-American mayor, Harold Washington. In 1983–84 and 1987–88 he ran for the Democratic presidential nomination. He was elected to the unpaid office of "statehood senator" for Washington, D.C., in 1990. He was awarded the Presidential Medal of Freedom in 2000. He later faced a scandal arising from the revelation in 2001 that he had fathered a child out of wedlock.

JACOB \ˈjā-kəb\, *Hebrew* Ya'aqov, *Arabic* Ya'qūb, *also called* Israel \ˈiz-rē-əl, -rā-\, *Hebrew* Yisra'el, *Arabic* Isrā'īl, Hebrew patriarch, grandson of ABRAHAM, son of ISAAC and Rebekah, and traditional ancestor of the people of Israel. Stories about Jacob in the BIBLE begin at GENESIS 25:19.

Jacob was the younger twin brother of ESAU, who was the ancestor of Edom and the Edomites (Genesis 25:30; 32:3; 36). The two are representatives of two different grades of social order: Jacob was a pastoralist and Esau a nomadic hunter (Genesis 25:27). During her pregnancy, Rebekah was told by God that she would give birth to twins; each of them would found a great nation, and Esau, the elder, would serve his younger brother (Genesis 25:23). Jacob managed to obtain both Esau's birthright and, by deception, Isaac's blessing (25:29–34; 27:1–40). Jacob then fled his brother's wrath and took refuge with the tribe of his ancestors at Haran in Mesopotamia (27:43; 28:10). The stories about Jacob's birth and his acquisition of the birthright provide an apology for the relation between Edom (Esau) and Israel in Davidic times. Edom, the older nation, was made subject to Israel by David (2 Samuel 8:8ff.).

Arriving at his uncle Laban's home in Haran, Jacob fell in love with his cousin, Rachel, but Laban tricked Jacob into first marrying Rachel's older sister, LEAH, and extracted from him 14 years of labor (Genesis 29–30). After Jacob amassed a large amount of property, he set out for CANAAN with his wives and children. On the way he wrestled with a divine being who changed Jacob's name to Israel (Genesis 32:22–32). Jacob then met and was reconciled with Esau and settled in Canaan (Genesis 33).

Jacob had 13 children, 10 of whom were founders of

tribes of Israel: REUBEN, SIMEON, Levi (*see* LEV-ITE), JUDAH, DAN, NAPHTALI, GAD, ASHER, ISSACHAR, ZEBULUN, DINAH, JOSEPH, and BENJAMIN (Genesis 29:31–30:24; 35:16–18). Late in his life, a famine prompted Jacob and his sons to migrate to Egypt, where he was reunited with his son Joseph, who had disappeared some years before (Genesis 42:1–47:12). Jacob died in Egypt at the age of 147 and was buried in Canaan at Hebron (Genesis 49:29–50:14).

In JUDAISM, the RABBIS took great pains to reinterpret Jacob's deviousness positively and to further discredit Esau. Jacob was identified with all of later Israel and Esau (likewise Laban) with Rome (Genesis Rabbah 63:6–10; 70:19). According to the rabbis, Jacob did not "steal" the birthright, but took it from unworthy Esau in order to offer sacrifices himself (Genesis Rabbah 63:13; Numbers Rabbah 4:8). Jacob also stands in contrast to Abraham and Isaac who, although righteous themselves, both had sons who were dishonorable. Jacob is hence the greatest patriarch (Genesis Rabbah 76:1).

JACOB BEN ASHER \ˈjā-kəb-ben-ˈa-shər\ (b. 1269?, Cologne? [Germany]—d. 1340?, Toledo, Castile [Spain]), Jewish scholar whose codification of Jewish law was considered standard until the publication in 1565 of the SHULHAN 'ARUKH ("The Well-Laid Table") by JOSEPH KARO.

Jacob is best known for his code *Arba'at turim* ("Four Rows"; first published in its entirety in 1475 and also known as *Tur*), which divided Jewish law into four "rows," or classes, a new arrangement that became classic. He is therefore called Ba'al ha-Turim ("Master of the Rows"). His four divisions are: (1) *Orah hayyim* ("Path of Life"), dealing with the laws governing prayer and ritual; (2) *Yore de'a* ("Teacher of Knowledge"), setting forth the laws concerning

things that are permitted or forbidden, such as dietary laws; (3) *Even ha-ezer* ("Stone of Help"), containing the laws governing family relations, such as marriage and divorce; and (4) *Hoshen mishpat* ("Breastplate of Judgment"), epitomizing civil and criminal law. Jacob eliminated all laws and customs rendered obsolete by the destruction of the Second Temple (70 CE; *see* JERUSALEM, TEMPLE OF).

Jacob's digest became, after the BIBLE, the most popular work among 15th-century Jews and the usual basis for rabbinic decisions. It departed from earlier codes by basing the preponderance of its laws on decisions by post-Talmudic rabbinical authorities rather than on the TALMUD itself.

JACOB JOSEPH OF POLONNOYE \ˈjā-kəb-ˈjō-səf, -zəf ... pə-ˈlōn-nə-yə\, *in full* Jacob Joseph Ben Tzevi Ha-Kohen Katz of Polonnoye (d. c. 1782), RABBI and preacher, the first theoretician and literary propagandist of Jewish HASIDISM.

Jacob Joseph was a rabbi in the large Jewish community at Shargorod in Podolia (in modern Ukraine). After he came under the influence of the BA'AL SHEM TOV, he was expelled (c. 1748). He was later rabbi of Rashkov, Nemirov, and ultimately of Polonnoye, where he remained until his death.

His main work was *Toldot Ya'aqov Yosef* (1780; "History of Jacob Joseph"), which related the teachings of the Ba'al Shem Ṭov and criticized Jewish leadership and values. The work provoked anti-Hasidic sentiment and was burned by some opponents. He also wrote homilies and scriptural commentaries, including *Ben Porat Yosef* (1781; "Joseph Is a Fruitful Vine") on Genesis and *Ketonet Passim* ("Coat of Many Colors") on Leviticus and Numbers.

JACOBUS DE VORAGINE \jə-'kō-bəs-də-vō-'ra-ji-nē\, also called Jacob of Voragine (b. 1228/30, Varazze, near Genoa [Italy]—d. July 13/14, 1298, Genoa), archbishop of Genoa, chronicler, and author of the *Golden Legend*.

Jacobus became a DOMINICAN in 1244. After gaining a rep-

utation as a preacher and theologian, he was provincial of Lombardy (1267–78 and 1281–86) and archbishop of the independent city of Genoa from 1292 until his death. He was beatified in 1816 for his work as a peacemaker between the Guelphs (pro-papal party) and the Ghibellines (pro-imperial); his feast day in the Dominican order is July 13.

His works include sermons on Gospel readings, saints' days, and the Virgin MARY; a chronicle of Genoa; and the *Legenda aurea* (*Golden Legend*, also known as the *Lombardica historia*). This book is a collection of saints' lives (see also HAGIOGRAPHY), accounts of events in the lives of JESUS CHRIST and the Virgin Mary, and information about holy days and seasons, the whole arranged as readings (Latin: *legenda*) for the church year. Immensely popular in the

Middle Ages, it was translated into all western European languages and gradually much enlarged. William Caxton's translation was one of the first books printed in English (1483). Its miraculous stories and lack of historical perspective rendered the book unacceptable at the REFORMATION, and thereafter its popularity declined.

JADE EMPEROR, *Wade-Giles* Yü-ti \yü-'dē\, *Pinyin* Yudi, also called Yü-huang \hwäŋ\ (Chinese: "Jade August One"), most revered and popular of Chinese deities in TAOISM and folk religion. In the Taoist pantheon, he is an impassive sage-deity, but he is popularly viewed as a celestial sovereign who guides human affairs and rules an enormous heavenly bureaucracy analogous to the Chinese Empire.

The worship of the Jade Emperor was officially sanctioned by the Taoist emperors of the Sung dynasty (960–1279 CE), who renamed him Yü-huang-shang-ti (Jade August Supreme Lord) and accorded him a status equivalent to that of the supreme power of Heaven. The Jade Emperor is usually depicted on a throne wearing the Imperial dragon-embroidered robes and beaded bonnet, holding a jade ceremonial tablet.

JA'FAR IBN MUHAMMAD \jā-fär-,i-bən-mü-'hā-məd\, also called Ja'far al-Šādiq \äs-sä-'dēk\ (Arabic: "Ja'far the Trustworthy") (b. 699/700 or 702/703, Medina, Arabia [now in Saudi Arabia]—d. 765, Medina), sixth IMAM, or spiri-

Jacob's Ladder, *Jacob's dream of angels climbing to Heaven*, Avignon school, 14th–15th century; in the Musée du Petit Palais, Avignon, France
Giraudon—Art Resource

tual successor to the Prophet MUHAMMAD, of the SHĪ'ITE branch of ISLAM and the last to be recognized as imam by all the Shī'ite sects.

Ja'far was the son of Muhammad al-Bāqir, the fifth imam, and great-grandson of the fourth CALIPH, 'ALĪ, who is considered to have been the first imam and founder of Shī'ism. On his mother's side, Ja'far was descended from the first caliph, Abū Bakr, whom Shī'ites usually consider a usurper.

The Shī'ites felt that the political leadership of Islam exercised by the caliph should belong to the direct descendants of 'Alī, and this political leadership was not clearly separated from religious leadership. To the end of the Umayyad regime, the caliphs sometimes preached in the mosque, using the sermon to reinforce their authority. Consequently, after his father's death, sometime between 731 and 743, Ja'far became a possible claimant to the caliphate and a potential danger to the Umayyads.

The Umayyad regime was already threatened by other hostile elements. The successful revolt of 749–750 that overthrew the Umayyads was under the leadership of the 'Abbāsīd family, descended from one of the Prophet's uncles; and they, not the family of 'Alī, founded the new ruling dynasty. The new caliphs were, understandably, worried about Ja'far. Al-Manṣūr (reigned 754–775) wanted him in his new capital, Baghdad, where he could keep an eye on him, but Ja'far preferred to stay in MEDINA. After the defeat and death of the 'Alid rebel Muhammad ibn 'Abd Allāh in 762, however, Ja'far thought it prudent to obey the caliph's summons to Baghdad. After a short stay, he convinced al-Manṣūr that he was no threat and was allowed to return to Medina, where he died.

Ja'far was both politically astute and intellectually gifted. He gathered around him learned pupils including ABŪ ḤANĪFA and MĀLIK IBN ANAS (founders of two of the four recognized Islamic legal schools, the ḤANAFĪ and MĀLIKĪ) and WĀṢIL IBN 'ATA' (founder of the MU'TAZILA school of theology). Equally famous was Jābir ibn Hayyān, the alchemist known in Europe as Geber, who credited Ja'far with many of his scientific ideas. As to the manuscripts of half a dozen works bearing Ja'far's name, scholars generally regard them as spurious.

Various Muslim writers have ascribed three fundamental religious ideas to him. First, he adopted a middle road about the question of PREDESTINATION, asserting that God decreed some things absolutely but left others to human agency—a compromise that was widely adopted. Second, in the science of HADITH, he proclaimed that what was contrary to the QUR'AN should be rejected, whatever other evidence might support it. Third, he described Muhammad's prophetic mission as a ray of light, created before Adam and passed on from Muhammad to his descendants.

Shī'ite divisions date from

Ja'far's death. His eldest son, Ismā'īl, predeceased him, but the "Seveners," represented today chiefly by the Ismā'īlites, argued that Ismā'īl merely disappeared and would reappear one day. Three other sons also claimed the imamate; of these, Mūsā al-Kāzīm gained widest recognition. Shī'ite sects not recognizing Ismā'īl are mostly known as "Twelvers"; they trace the succession from Ja'far to the 12th imam, who disappeared and is expected to return at the LAST JUDGMENT.

JA'FARI LEGAL SCHOOL \jā-fā-rē\, proposed fifth *madh-hab* [legal school] to be equal in status to the existing four orthodox, SUNNI legal schools (the ḤANAFĪ, ḤANBALĪ, MĀLIKĪ, and SHĀFĪ'Ī LEGAL SCHOOLS). After eliminating the last of the Ṣafavid puppet kings of Iran and successfully expanding the borders of Iran, the great Persian conqueror Nadir Shah (1688–1747) focused on religious reform for his realm. The proposed reform was to create a new legal school named after the widely respected sixth SHĪ'ITE imam, Ja'far al-Sādiq. Nadir hoped to integrate Shī'ite ISLAM with orthodox Sunni Islam and to see a fifth station established in Mecca for the celebration of the rites of the new school. To accomplish this reform, some of the fundamental Shī'ite teachings were to be abandoned. The new school would suspend belief in the divinity of the imams and would abandon the practice of the vilification of the first three CALIPHS and, instead, accept their legitimacy. Although Nadir's reforms received some support at a council he called and were accepted by Iraqi religious authorities under compulsion by Nadir, the teachings of the new school were clearly unacceptable to both Shī'ite and Sunni Muslims and the reform itself was a dismal failure.

JAGANNĀTH \'jə-gə-,nāt\, also spelled Jagannātha (Sanskrit: "Lord of the World"), form under which the Hindu god KRISHNA is worshiped at Puri, Orissa, one of the most famous religious centers of India. The 12th-century temple of

The great temple of Jagannāth, Puri, Orissa, India
Spectrum Colour Library/Heritage-Images

Jagannāth in Puri, to many Hindus the eastern point on the sacred compass that is India, towers above the town. In its sanctuary, rough-hewn wooden images represent Jagannāth, his brother Balabhadra (BALARĀMA), and his sister Subhadrā. Modern representations made in Puri of the 10 AVATARS (incarnations) of VISHNU often show Jagannāth as one of the 10, in place of the more usually accepted Buddha.

Jagannāth's most important yearly festival is the Chariot Festival (RATHAYĀTRĀ), which takes place on the second day of the bright fortnight of Āṣāḍha (June–July). The image is placed in a wagon so heavy that the efforts of thousands of devotees are required to move it to the “country house” of the god, a temple outside the city, where the deities reside for a week. Balabhadra and Subhadrā travel in smaller carts. Reports of these processions in the past have been much exaggerated, although accidents are common and occasionally pilgrims attempt to throw themselves under the wagon in hopes of attaining instant salvation. The English word *juggernaut*, with its connotation of a force crushing whatever is in its path, is derived from this festival.

JAHANNAM \jə-ˈhā-nəm\, in ISLAM, hell, described somewhat ambiguously in the QUR’AN and by MUHAMMAD. In one version, hell seems to be a fantastic monster that God can summon; in another description, it is a crater of concentric circles on the underside of the world that all souls must cross in order to enter paradise by way of a bridge, narrow as a razor’s edge. Punishment in hell is graded and varied according to offenses, and sinners are released only when God wills.

Muslim theologians have attempted to clarify the problems inherent in the Qur’anic description of hell. IBN SĪNĀ (Avicenna), for example, speaks of hell as a state in which souls retain sensual lusts but suffer because they have no bodies with which to fulfill their desires.

JĀHILĪYA \jə-hi-ˈlē-ə\, in ISLAM, the period preceding the revelation of the QUR’AN to the Prophet MUHAMMAD. In Arabic the word means “ignorance” or “barbarism” and indicates a negative Muslim evaluation of pre-Islamic life and culture in Arabia as compared to the teachings and practices of Islam. The term has a positive connotation only in literature; pre-Islamic Arabic poetry is esteemed by Muslims for its precise and rich vocabulary, sophisticated metrical structures, and fully developed systems of rhyme and thematic sequence. In the writings of modern Islamists, such as ABŪ’L-Ā’LĀ MAWDŪDĪ and Sayyid Qutb, it is used to label societies that have fallen under the corrupting influences of Western SECULARISM. Muslims are called upon to resist this “new jāhiliya” and bring about instead a new moral order that submits to divine will.

JAINA \ˈjī-nə\, byname of the Federation of Jain Associations in North America, the umbrella organization for all the local congregations and centers of Jains living in the United States and Canada. The first local center for JAINISM in North America was established in New York City in 1966. JAINA was started in 1981 by the Jain Center of Southern California in conjunction with the centers in Cleveland, San Francisco, and Washington, D.C., and held its first national convention that year in Los Angeles. The aim of JAINA is to foster cooperation and unity among the various Jain national organizations and local centers in North America and to address issues of concern to the whole Jain community, especially as it interacts with the broader North American society. As of 1998 JAINA con-

sisted of 54 member local centers (49 in the United States, 5 in Canada) and 10 affiliated national organizations, representing the majority of the estimated 40,000–60,000 Jains living in North America. Activities of JAINA include publishing a quarterly magazine, *Jain Digest*; organizing biennial conventions; supporting youth activities; organizing tours by Jain scholars and teachers from India; coordinating a matrimonial service for arranged marriages; publishing educational materials; publishing guidelines for Jain temples in North America; and establishing computer-based information networks.

JAINA VRATA \ˈjī-nə-ˈvrə-tə\ (Sanskrit: “vow”), in JAINISM, any of the vows that govern the activities of monks, nuns, and the lay community. The *mahāvratas*, or five “Great Vows,” are undertaken for life only by renunciators. They are (1) non-violence, (2) adhering to the truth, (3) not stealing, (4) sexual purity, and (5) renouncing possessions.

A lay member is not expected to be able to observe such vows strictly while living the life of a householder. If one has passed through the preliminary stages of spiritual discipline (the GŪNASTHĀNAS), one may promise to observe 12 vows for a stated period of time and may renew the pledge.

For a lay member, the first five vows are termed *anuvratas* (“little vows”) and are more moderate versions of the mendicant’s *mahāvratas*: abstaining from gross violence, falsehood, and stealing; sexual fidelity to one’s own spouse; and ownership of as little as possible. The remaining vows are the three *guṇavratas* (intended to help reinforce the *anuvratas*; they include very specific restrictions on the locus of one’s activities as well as acts that might potentially increase one’s karmic store), and the four *śikṣāvratas*, “vows of spiritual discipline,” which govern four different types of ritual activity. These include (1) narrowing one’s locus of activity as much as possible, (2) equanimity, (3) fasting, and (4) proper donation. There is also one final vow, termed *sallekhanāvratā*, to die in meditation during self-starvation when the observance of other vows is no longer physically possible due to old age, famine, personal calamity (such as capture), or to a terminal illness.

JAIN CANON, the sacred texts of JAINISM whose authenticity is disputed between sects. The SVETAMBARA canon consists principally of 45 works divided as follows: (1) 11 Āṅgas, the main texts—a 12th has been lost for at least 14 centuries; (2) 12 Upāṅgas, or subsidiary texts; (3) 10 Prakīrṇakas, or assorted texts; (4) 6 *Cheda Sūtras* on the rules of the ascetic life; (5) 2 *Cūlikā Sūtras* on cognition and epistemology; and (6) 4 *Mūla Sūtras* on miscellaneous topics. Svetambara, however, originally accepted a canon of 71 works derived from a 5th-century Council of Valabhī.

The Svetambara works cover a variety of topics, including a list of the TIRTHANKARAS, or Jinas (Jain saviors), their exploits and teachings, and doctrines. Some of the Āṅgas contain supposed dialogues between MĀHAVĪRA, the most recent Tirthankara, and his followers. Others are said to retain some of the earliest parts of the canon, which appears to have been preserved originally in oral form. The canon is written in the Prākṛit dialect, though from the Gupta period (4th–6th century CE) Jain writers have used Sanskrit.

The DIGAMBARA sect disputes the authenticity of the entire Svetambara canon. The Digambara believe that the original is lost but that the substance of Jain doctrine has been preserved in a variety of religious and philosophic texts written by various leaders and scholars of the Jain community over the centuries.

JAINISM

A religion

and philosophy of India, Jainism rose to prominence in about the 6th century BCE, in the time of Vardhamāna. Known as MAHĀVĪRA (“Great Hero”), he is considered to be the 24th of the TĪRTHAṆKARAS (“Ford-makers”), or JINAS (“Conquerors”; whence the name Jainism), the great religious figures on whose example the religion is centered. Jainism arose in protest against the Vedic (early Hindu) ritualistic cult of the period; its earliest proponents may have belonged to a sect that rebelled against the idea and practice of taking life prevalent in the Vedic animal sacrifice.

The name Jainism derives from the Sanskrit *ji*, “to conquer.” It refers to the battle that Jain ascetics must fight against the passions and bodily senses in order to gain omniscience and the complete purity of soul that represents the highest religious goal in the Jain system. The ascetic who achieves this omniscience and purity is called a Jina (literally, “Conqueror” or “Victor”), and adherents of the tradition are called Jainas, or Jains. In the 21st century there were more than 4,500,000 Jains worldwide.

HISTORICAL BACKGROUND

According to Jains their faith is eternal and has been revealed through the successive ages of the world by the Tīrthaṅkaras, each of whom attained perfection and absolute freedom, breaking free from the cycle of rebirths, and then preached Jainism to the world. The first Tīrthaṅkara of this time cycle is Ṛṣabha. Although his name occurs in the VEDAS and the PURĀṆAS (Hindu sacred literature), very little else is known of him; nor is there historical evidence of the other Tīrthaṅkaras until Pārśva, the 23rd in the line, who is thought to have died in the late 8th century BCE.

The contemporary Jain communities trace their origins to Mahāvīra, who was born c. 599 BCE near Patna (now in Bihar state). His father was a ruling Kṣatriya, chief of the Nāta, or Jñātr, clan. Mahāvīra was an elder contemporary of Siddhārtha Gotama (the Buddha) and is referred to in writings of BUDDHISM as Nātaputra (“Son of the Nāta”). When he was about 28 years old he took up the life of an ascetic. After years of hardship and meditation he attained enlightenment; thereafter he preached Jainism for about 30 years and died at Pāvāpurī (also in Bihar) in

Borromeo—Art Resource

527 BCE. Pāvāpurī has been, since then, one of the chief places of Jain pilgrimage; Dīvālī, a major Hindu autumn festival, is for Jains a day of great PILGRIMAGE for Mahāvīra.

Jainism has never been torn by philosophic dispute, but from the beginning it has been subject to schismatic movements. In the 4th or 3rd century BCE the Jains began to split into two sects on points of rules and regulations for monks, a rift which was complete at least by the end of the 1st century CE. The DIGAMBARAS ("Sky-clad"; *i.e.*, naked) hold that an adherent should own nothing, not even clothes. They also believe that salvation is not possible for women. The ŚVETĀMBARAS ("White-robed") differ from them on these points.

IMPORTANT FIGURES OF JAIN LEGEND

Sixty-three significant figures form the center of Jain legend and story. The most important of these are the 24 Tīrthaṅkaras, perfected human beings who appear from time to time to preach and embody the Jain religious path; they represent the highest religious attainment for Jains. The Tīrthaṅkaras, along with 12 *cakravartins* ("world conquerors"), nine VĀSUDEVAS (counterparts of Vāsudeva, the patronymic of KRISHNA), and nine *baladevas* (counterparts of BALARĀMA, the elder half-brother of Krishna), constitute a list of 54 *mahāpuruṣas* ("great souls"), to which were later added nine *prativāsudevas* (enemies of the *vāsudevas*). Other, more minor, figures include nine *nāradas* (counterparts of the deity Nārada, the messenger between gods and humans), 11 RUDRAS (counterparts of the Vedic god Rudra, from whom SHIVA is said to have evolved), and 24 *kāmadevas* (gods of love), all of which show how Jain thinkers consciously shaped the faith to incorporate but supersede its precursor from HINDUISM.

Subordinated to these figures are the gods, who are classified into four groups: the *bhavanavāsīs* (gods of the house), the *vyantaras* (intermediaries), the *jyotiṣkas* (luminaries), and the *vaimānikas* (astral gods). These, in turn, are divided into several subgroups. Other gods and goddesses include the 64 *dikkumārīs* (maidens of the directions), who act as nurses to a newborn Tīrthaṅkara.

DOCTRINES OF JAINISM

The Jain's religious goal is the complete perfection and purification of the soul. This can occur only when the soul is in a state of eternal liberation from and non-attachment to corporeal bodies. Liberation of the soul is impeded by the accumulation of karma, which consists of bits of material, generated by a person's actions, that bind themselves to the soul and consequently bind the soul to material bodies through many births. This rebirth has the effect of thwarting the full self-realization and freedom of the soul.

Time and the universe. Time, according to the Jains, is eternal and formless. It is conceived as a wheel with 12 spokes called *ārās* ("ages"), six making an ascending arc and six a descending one. In the ascending arc (*utsarpiṇī*), humans progress in knowledge, age, stature, and happiness, while in the descending arc (*avasarpiṇī*) they deteriorate. The two cycles joined together make one rotation of the wheel of time, which is called a *kalpa*.

The world is eternal and uncreated. Its constituent elements are the six substances (*dravyas*), namely, soul, matter, time, space, the principles of motion, and the arrest of motion. These are eternal and indestructible, but their conditions change constantly.

Jains divide the inhabited universe into five parts. The lower world (*adhloka*) is subdivided into seven tiers, each one darker and more torturous than the one above it. The middle world (*madhyaloka*) consists of numberless concentric continents separated by seas, the center continent of which is called Jambudvīpa. Human beings occupy Jambudvīpa, the second continent, and half of the third. The locus of Jain activity, however, is Jambudvīpa, the only continent on which it is possible for the soul to achieve liberation. The celestial world (*ūrdhvaloka*) consists of two categories of heaven: one for the souls of those who may or may not have entered the Jain path and one for the souls of those who are far along on the path and are close to the time of their emancipation. At the apex of the occupied universe is the *siddha-śilā*, the crescent-shaped abode of liberated souls (SIDDHAS). Finally, there are some areas inhabited solely by *ekendriyas*, organisms that have only a single sense. Although *ekendriyas* permeate all parts of the occupied universe, there are places where they are the only living beings.

Jīva and ajīva. Jain reality is constituted by *jīva* (i.e., "soul," or "living substance") and *ajīva* (i.e., "non-soul," or "inanimate substance"). *Ajīva* is divided into two categories: (1) nonsentient and material and (2) nonsentient and nonmaterial. All but *jīva* are without life.

The essential characteristics of *jīva* are consciousness (*cetanā*), bliss (*sukha*), and energy (*vīrya*). In its pure state, *jīva* possesses these qualities in infinite measure. The souls, infinite in number, are divisible in their embodied state into two main classes, immobile and mobile, according to the number of sense organs possessed by the body they inhabit. The first group consists of souls inhabiting im-

Rṣabha with the other 23 Tīrthaṅkaras, cast bronze from Akota, Gujarāt, 9th century; in the Baroda Museum

Borromeo—Art Resource

measurably small particles of earth, water, fire, and air, plus the vegetable kingdom, which possess only the sense of touch. The second group comprises souls that inhabit bodies that have between two and five sense organs. The Jains believe that the four elements (earth, water, fire, and air) also are animated by souls. Moreover, the universe is full of an infinite number of minute beings, *nigodas*, which are slowly evolving.

A *jīva* is formless and genderless and cannot be perceived by the senses. A soul is not all-pervasive but can, by contraction or expansion, occupy various amounts of space. Like the light of a lamp in a small or a large room, it can fill both the smaller and larger bodies it occupies. While the soul assumes the exact dimensions of the body it occupies, it is not identical with that body.

Matter (*pudgala*) has the characteristics of touch, taste, smell, and color. Its essential characteristic is lack of consciousness. The smallest unit of matter is the atom (*paramāṇu*). Heat, light, and shade are forms of fine matter.

The nonsentient, nonmaterial substances are the principles of motion and its arrest, space, and time. They are always pure and are not subject to defilement. The principles of motion and its arrest permeate the universe; they do not exist independently but, rather, form a necessary precondition for any object's movement or coming to rest. Space is infinite, all-pervasive, and formless and provides accommodation for the entire universe. It is divided into occupied (*i.e.*, the universe) and unoccupied portions. Time is said to consist of innumerable eternal and indivisible particles of "noncorporeal substance" that never mix with one another but that fill the entire universe. Thus, the nonsentient, nonmaterial substances form the context within which occurs the drama of a *jīva*'s struggle to extricate itself from involvement with matter.

Karma. The fundamental tenet of Jain doctrine is the belief that all phenomena are linked together in a universal chain of cause and effect. Every event has a distinct cause behind it. By nature each soul is pure, possessing infinite knowledge, bliss, and power; however, these faculties are restricted from beginningless time by foreign matter coming in contact with the soul. The chain of cause and effect, of birth and death, is produced by karma, conceived of as a fine atomic substance and not a process as in Hinduism. To be free from the shackles of karma, a person must stop the influx of new karma and eliminate what has been acquired.

Karmic particles are acquired as the result of intentional action tinged with passionate expression. Acquired karma can be annihilated through a process called *nirjarā*, which consists of fasting, not eating certain kinds of food, control over taste, resorting to lonely places, mortifications of the body, ATONEMENT and expiation for SINS, modesty, service, study, meditation, and renunciation of the ego. *Nirjarā* is, thus, the calculated cessation of passionate action.

A soul passes through various stages of spiritual development before becoming free from all karmic bondages. These stages of development (GUNAŚTHĀNAS) involve progressive manifestations of the innate faculties of knowledge and power and are accompanied by decreasing sinfulness and increasing purity.

Jīvas become imprisoned in a succession of bodies owing to their connection with karmic matter. These embodied souls bear different colors or tints (LEŚYĀ), varying according to the merits or demerits of the particular being. This doctrine of *leśyā*, peculiar to Jainism, seems to have been borrowed from the Ājīvika doctrine of six classes of bodies, expounded by Gośāla Maskarīputra. The six *leśyās* in Jainism are, in ascending order of human spiritual progress, black, blue, gray, fiery red, lotus-pink (or yellow), and white.

Theories of knowledge as applied to liberation. In Jain thought, four stages of perception—observation, will to recognize, determination, and impression—lead to a subjective cognition (*matijñāna*), the first of five kinds of knowledge (*jñāna*). The second kind of knowledge is *śrutajñāna*, derived from the SCRIPTURES and general information. Both of these are mediated forms of cognition, based on external conditions perceived by the senses. There are three kinds of immediate knowledge—*avadhi* (supersensory perception), *manahparyāya* (reading the thoughts of others), and *kevala*, which is the stage of omniscience. *Kevala* is necessarily ac-

accompanied by freedom from karmic obstruction and by direct experience of the soul's pure form unblemished by its attachment to matter. Omniscience is the foremost attribute of a liberated *jīva*, the emblem of its purity; thus, a liberated soul, such as a Tīrthaṅkara, is called a *kevalin* ("possessor of omniscience").

According to Jainism, *YOGA*, the ascetic physical and meditative discipline of the monk, is the means to the attainment of omniscience and thus to *MOKṢA*, or liberation. *Yoga* is the cultivation of true knowledge of reality, faith in the teachings of the Tīrthaṅkaras, and pure conduct; it is, thus, intimately connected to the three jewels (*ratnatraya*) of right knowledge, right belief, and right conduct (respectively, *samyajjñāna*, *samyagdarśana*, and *samyakcāritra*).

Jain ethics. The *ratnatraya* constitute the basis of Jain ethics. Right knowledge, faith, and conduct must be cultivated together; none of them can be achieved in the absence of the others. Right faith leads to calmness or tranquillity, detachment, kindness, and the renunciation of pride of birth, beauty of form, wealth, scholarship, prowess, and fame. Right faith leads to perfection only when followed by right conduct. Yet, there can be no virtuous conduct without right knowledge, which consists of clear distinction between the self and the nonself. Knowledge of scriptures is distinguished from inner knowledge. Knowledge without faith and conduct is futile. Without purification of mind, all austerities are mere bodily torture. Right conduct is thus spontaneous, not a forced mechanical activity. Attainment of right conduct is a gradual process, and a householder can observe only partial self-control; when he becomes a monk, he is further able to observe more comprehensive rules of conduct.

Two separate courses of conduct are laid down for the ascetics and the laity. In both cases the code of morals is based on the doctrine of *AHIMŚĀ*, or *NONVIOLENCE*. Since thought gives rise to action, violence in thought merely precedes violent

Chaumukha temple (1438) at Ranakpur, Rājasthān, a principal Jain pilgrimage site; the temple contains 1,444 intricately carved marble pillars

Porterfield/Chickering—Photo Researchers

behavior. Violence in thought, then, is the greater and subtler form of violence, because it arises from ideas of attachment and aversion, grounded in passionate states, which result from negligence or lack of care in behavior. Jainism enjoins avoidance of all forms of injury, whether committed by body, mind, or speech.

RITUAL PRACTICES AND RELIGIOUS AND SOCIAL INSTITUTIONS

The monks and their practices. The Śvetāmbara sect acknowledges two classes of monks: *jinakalpins*, who wander naked and use the hollows of their palms as alms bowls; and *sthavirakalpins*, who retain minimal possessions such as a robe, an alms bowl, a broom, and a *mukhavastrikā* (a piece of cloth held over the mouth to protect against the ingestion of small insects). An ascetic must obey the "great vows" (*mahāvratas*) to avoid injuring any life-form, lying, stealing, having sexual intercourse, or accepting personal possessions. To help them live out their vows, ascetics' lives are carefully regulated in all details by specific ordinances and by the oversight of their superiors.

Among the Digambara sect, a full-fledged monk remains naked, though there are advanced-grade laymen who wear a loincloth and keep with them one piece of cloth not more than one and one-half yards long. Digambara monks use a peacock-feather duster and water gourd, live apart from human habitations, and beg and eat only once a day, using the palm of one hand as an alms bowl.

Eight essentials noted for the conduct of monks include the three *guptis* (care in thought, speech, and action) and the five *samitis* (kinds of vigilance over conduct). The six *āvāśyakas*, or obligations, are equanimity; praise of the Tīrthaṅkaras (Jinas); obeisance to the Jinas, teachers, and scriptures; atonement; resolution to avoid sinful activities; and meditation.

The type of austerities in which a monk engages, the length of time he engages in them, and their severity are carefully regulated by his preceptor, who takes into account the monk's spiritual development, his capacity to withstand the austerities, and his ability to understand how they help further his spiritual progress at a given time. The culmination of a monk's ascetic rigors is the act of *sallekhanā*, in which he lies on one side on a bed of thorny grass and ceases to move or take food, ultimately starving to death. This act of ritual starvation is the ultimate act of nonattachment, in which the monk lets go of the body for the sake of his soul. The ascetic's preparatory rigors, which point to and culminate in this act, generally take 30 years or more to perform. Although it is a tenet of Jain doctrine that no one can achieve liberation in this corrupt time, it is thought that the act of *sallekhanā* nevertheless has value, because it can improve a soul's spiritual situation in the next birth.

Religious disciplines of the laity. The life of a lay votary is a preparatory stage to the rigors of ascetic life. The lay votary is enjoined to observe eight primary behavioral qualities (which usually include the avoidance of meat, wine, honey, fruits, roots, and night eating) and 12 vows. The *anuvratas* ("little vows") are vows to abstain from gross violence, falsehood, and stealing; to be content with one's own wife; and to limit one's possessions. The other sets of vows are supplementary in nature, meant to strengthen and protect the *anuvratas*. They involve avoidance of unnecessary travel, harmful activities, and the pursuit of pleasure; fasting and control of diet; offering of gifts and service to monks, the poor, and fellow believers; and voluntary death if the observance of vows proves impossible.

The *sāmāyika*, a meditative and renunciatory ritual of limited duration, aims at strengthening equanimity of mind and resolve to pursue the spiritual discipline of the Jain DHARMA (religious and moral law). This ritual brings the lay votary close to the demands required of an ascetic for a limited time. It may be performed in a person's own house, in a temple, in a fasting hall, or before a monk.

Eleven PRATIMAS, or stages of a householder's spiritual progress, are listed. Medieval writers conceived *pratima* (literally, "statue") as a regular series leading to higher stages of spiritual development. The last two stages lead logically to renunciation of the world and assumption of the ascetic life.

Sacred times and places. *Festivals and fairs.* Many Jain festivals are connected with the five major events in the life of each Tīrthaṅkara. These mark the

Jñānapañcamī (literally, “The Fifth Level of Knowledge,” *i.e.*, *kevala*), which the Jains celebrate with temple worship and with worship of the scriptures. Mahāvīra Jayanti, the birthday of Mahāvīra, is celebrated in early April or during the Paryuṣaṇa festival. The Jains also celebrate a number of festivals in common with Hindus, such as Holi (spring festival), Navaratra (nine nights festival), and PONGAL (a South Indian NEW YEAR FESTIVAL).

Pilgrimages and shrines. The erection of shrines and the donation of religious manuscripts are regarded as pious acts. Most villages or towns inhabited by Jains have at least one Jain shrine; some have become pilgrimage sites. Lists of these shrines have been composed, and the most noteworthy shrines are offered adoration in daily worship.

Places of pilgrimage were created at sites marking the principal events in the lives of Tīrthaṅkaras. Parasnāth Hill and Rājgīr in Bihār and Śatruñjaya and Girnār hills on the Kāthiāwār Peninsula are among such important ancient pilgrimage sites. Other shrines that have become pilgrimage destinations are Śravaṇa Belgōla in Karṇāṭaka, Mounts Ābu and Kesariajī in Rājasthān, and Antarikṣa PĀRŚVANĀTHA in Akola district, Mahārāshtra.

Several Jain cave temples, dating from as early as the 2nd century BCE, have been discovered and excavated. Cave temples are found at Udayagiri and Khandagiri, in Orissa; Rājgīr, in Bihār; Aihole, in Karṇāṭaka; Ellora, in Mahārāshtra; and Sittānavāsal in Tamil Nādu.

Temple worship and observance. Temple worship is mentioned in early texts that describe gods worshiping Jina images and relics in heavenly eternal shrines. Worship, closely associated with the obligatory rites of the laity, is offered to all liberated souls, to monks, and to the scriptures. Though Tīrthaṅkaras remain unaffected by offerings and worship, such actions serve as a form of meditative discipline for the votary offering them. Daily worship includes recitation of the

Devotees worship at the Śravaṇa Belgōla shrine by washing the image and making offerings to it

Paul Stepan—Photo Researchers

names of the Jinas and idol worship by bathing the image and making offerings to it. Śvetāmbaras decorate images with clothing and ornaments. The worshiper also chants HYMNS of praise and prayers and mutters sacred formulas. A long-standing debate within both Jain communities over the centuries has concerned the relative value of external acts of worship and internalized acts of mental discipline and meditation.

Domestic rites and rites of passage. Early Jain literature is silent about domestic rites and RITES OF PASSAGE marking the main events in a person's life. These rituals are modeled mainly on the 16 Hindu SAMSKĀRAS, which include conception, birth, naming, first meal, TONSURE, investiture with the sacred thread, beginning of study, marriage, and death. They are first discussed in Jinasena's 9th-century work, *Ādipurāṇa*.

CANONICAL AND COMMENTARIAL LITERATURE

The original, unadulterated teachings of the Jinas are said to be contained in 14 texts, called the *Pūrvas* ("Foundations"), which are now lost. Śvetāmbaras and Digambaras agree that a time will come when the teachings of the Jinas will be completely lost; Jainism will then disappear from the earth and reappear at an appropriate point in the next time cycle (*kālpa*). The two sects disagree, however, about the extent to which the corruption and loss of the Jinas' teachings has already occurred. Accordingly, the texts for each sect differ.

The Śvetāmbaras follow an extensive canon (ĀGAMA) as the repository of their tradition, which they believe is based upon compilations of Mahāvīra's discourses by his disciples. This canon preserves the teachings of Mahāvīra in an imperfect way, as it is thought to be mixed with much that was not said by the Jina. Western scholars have fixed the number of texts in this canon at 45, divided into six groups: the 11 *Aṅgās* ("Parts"; originally there were 12, but one, the *Dṛṣṭivāda*, has been lost), 12 *Upāṅgas* (subsidiary texts), four *Mūla-sūtras* (basic texts), six *Cheda-sūtras* (concerned with discipline), two *Cūlikā-sūtras* (appendix texts), and 10 *Prakīrṇakas* (mixed, assorted texts). The *Aṅgās* contain several dialogues, mainly between Mahāvīra and his disciple Indrabhūti Gautama, presumably recorded by the disciple Sudharman, who transmitted these teachings to his own disciples.

Bhadrabāhu, whom tradition credits with being the last Jain sage to know the contents of the *Pūrvas*, is asserted to be the author of the *Niryuktis*, the earliest commentaries on the Jain canonical texts. These concise, metrical commentaries, written in Prākṛit, gave rise to an expanded corpus comprising texts called *Bhāṣyas* and *Cūrṇis*. These were composed between the 4th and 7th centuries and contain many ancient Jain historical and legendary traditions, along with a large number of popular stories brought into the service of Jain doctrine. The *Bhāṣyas* and *Cūrṇis*, in turn, gave rise in the medieval period to a large collection of Sanskrit commentaries. HARIBHADRA, Sīlāṅka, Abhayadeva, and Malayagiri are the best-known authors of such works.

Digambaras give canonical status to two works in Prākṛit: the *Karmaprābhṛta* ("Chapters on Karma") and the *Kaṣāyaprābhṛta* ("Chapters on the Passions"). The *Karmaprābhṛta*, based on the now-lost *Dṛṣṭivāda* text, deals with the doctrine of *karma* and was committed to writing by Puṣpadanta and Bhūtabalin in the mid-2nd century; the *Kaṣāyaprābhṛta*, compiled by Guṇadhara from the same source at about the same time, deals with the passions that defile and bind the soul. Later commentaries by Virasena (8th century) and his disciple JINASENA (9th century) on the *Kaṣāyaprābhṛta* are also highly respected by Digambaras.

MODERN DEVELOPMENTS

In modern times, Śvetāmbara Jainism has maintained a more effective organization and has a larger monastic community than its Digambara counterpart. Jains have traditionally been professional and mercantile people. These trades have made them adaptable to other environments and societies besides those of India. Many Jains have emigrated overseas, and this has had the result of increasing international awareness of Jainism.

JAJMĀNĪ SYSTEM \jəj-'mä-nē, yəj-\ (Hindi, deriving from the Sanskrit *yajamāna*, “sacrificial patron who employs priests for a ritual”), reciprocal social and economic arrangements between families of different CASTES within a village community in India, by which one family exclusively performs certain services for the other, such as ministering to the ritual, barbering, or providing agricultural labor, and expects to receive pay, protection, and employment security in return. These relations are supposed to continue from one generation to another, and payment is normally made in the form of a fixed share in the harvest rather than in cash. The patron family itself can be the client of another whom it patronizes for certain services and by whom it is in turn patronized for other services. The hereditary character allows for certain forms of bond labor, since it is the family obligation to serve its hereditary patrons.

The extent to which this system has ever truly operated in the Indian countryside is a matter of considerable debate. The *jajmānī* ideal is suspect as the anthropological analog of the same theoretical system presented by texts that describe a unified, conflict-free, reciprocal, and hierarchically weighted system of interrelated *varṇas*. While aspects of *jajmānī* relationships have been clearly attested in both past and present, and the influence of the *jajmānī* ideal is something to be reckoned with, these are undeniably and increasingly accompanied by litigation, harassment, boycott, violence, political maneuvering, and a variety of monetized exchanges.

JALĀL AL-DĪN AL-RŪMĪ \jə-'ləl-üd-'dēn-är-'rü-mē\, also called Mawlānā \mäu-'lä-'nä\ (b. c. Sept. 30, 1207, Balkh, Ghūrīd empire [now in Afghanistan]—d. Dec. 17, 1273), the greatest Sufi mystic (see SUFISM) and poet in the Persian language, famous for his lyrics and for his didactic epic *Masnāvī-ye Ma'navī* (“Spiritual Couplets”).

Jalāl al-Dīn’s father, Bahā’ al-Dīn Walad, was a noted mystical theologian, author, and teacher. Mainly because of the threat of the approaching Mongols, Bahā’ al-Dīn and his family left their native town about 1218. After a PILGRIMAGE to MECCA and journeys through the Middle East, Bahā’ al-Dīn and his family reached Anatolia (Rūm, hence the surname Rūmī), a region that enjoyed peace and prosperity under the rule of the Turkish Seljuq dynasty. After a short stay at Laranda (Karaman) they were called to the capital, Konya, in 1228. Here, Bahā’ al-Dīn Walad taught at one of the numerous MADRASAS (religious schools); after his death in 1231 he was succeeded in this capacity by his son.

A year later, Burhān al-Dīn Muḥaqqiq, one of Bahā’ al-Dīn’s former disciples, arrived in Konya and acquainted Jalāl al-Dīn more deeply with some mystical theories that

had developed in Iran. Burhān al-Dīn, who contributed considerably to Jalāl al-Dīn’s spiritual formation, left Konya about 1240. Jalāl al-Dīn is said to have undertaken one or two journeys to Syria; there he may have met IBN AL-‘ARABĪ, the leading Islamic theologian whose interpreter and stepson, Ṣadr al-Dīn al-Qunawī, was Rūmī’s colleague and friend in Konya.

The decisive moment in Rūmī’s life occurred on Nov. 30, 1244, when in the streets of Konya he met the wandering DERVISH Shams al-Dīn (“Sun of Religion”) of Tabriz, whom he may have first encountered in Syria. Shams al-Dīn’s overwhelming personality revealed to Jalāl al-Dīn the mysteries of divine majesty and beauty. For months the two mystics lived closely together, and Rūmī neglected his disciples and family until his entourage forced Shams to leave the town in February 1246. Jalāl al-Dīn was heartbroken; his eldest son, Sulṭān Walad, eventually brought Shams back from Syria. The family, however, could not tolerate

the close relation of Jalāl al-Dīn with his beloved, and one night in 1247 Shams disappeared forever. It has been established that he was indeed murdered, not without the knowledge of Rūmī’s sons, who hurriedly buried him close to a well that is still extant in Konya.

This experience turned Rūmī into a poet. His mystical poems—about 30,000 verses and a large number of *robā’iyāt* (“quatrains”)—reflect the different stages of his love, until, as his son writes, “he found Shams in himself, radiant like the moon.” The identification of lover and beloved is expressed by his inserting the name of Shams instead of his own pen name at the end of most of his lyrical poems.

A few years after Shams al-Dīn’s death, Rūmī experienced a similar rapture in his acquaintance with an illiterate goldsmith, Ṣalāḥ al-Dīn Zarkūb. This love again inspired Jalāl al-Dīn to write

poetry. After Ṣalāḥ al-Dīn’s death, Ḥusām al-Dīn Chelebi became his spiritual love and deputy. Rūmī’s main work, the *Masnāvī-ye Ma’navī*, was composed under his influence. Ḥusām al-Dīn had asked him to follow the model of the poets ‘Aṭṭār and Sanā’i, who had laid down mystical teachings in long poems, interspersed with anecdotes, fables, stories, proverbs, and allegories. Jalāl al-Dīn thus composed nearly 26,000 couplets of the *Masnāvī* during the following years. The *Masnāvī* reflects the experience of divine love; both Ṣalāḥ al-Dīn and Ḥusām al-Dīn were, for Rūmī, renewed manifestations of Shams al-Dīn, the all-embracing light. He called Ḥusām al-Dīn, therefore, Ḍiyā’ al-Ḥaqq (“Light of the Truth”).

Rūmī lived for a short while after completing the *Masnāvī*. He always remained a respected member of Konya society, and his company was sought by the leading officials

Tomb of Jalāl al-Dīn al-Rūmī; Konya, Turkey

Fred J. Maroon—Photo Researchers

as well as by Christian monks. Husām al-Dīn was his successor and was in turn succeeded by Sulṭān Walad, who organized the loose fraternity of Rūmī's disciples into MAWLAWIYA, known in the West as the Whirling Dervishes because of the mystical dance that constitutes their principal ritual. Sulṭān Walad's poetical accounts of his father's life are the most important source of knowledge of Rūmī's spiritual development.

In addition to his poetry, Rūmī left a small collection of letters and occasional talks as they were noted down by his friends; in the collection, known as *Fihī mā fihī* ("There is in it what is in it"), the main ideas of his poetry recur. Rūmī's influence on Turkish cultural life can scarcely be overstated; his mausoleum, the Green Dome, today a museum in Konya, is still a place of pilgrimage for thousands.

JAMA'AT-I ISLAMĪ \jā-mā-āt-ē-is-'lā-mē\ (Arabic: "Islamic Society"), religious party founded in British-controlled India (now Pakistan) in 1941 by Mawlana ABŪ'L-A'LĀ MAWDŪDĪ (1903–79). The party was established to reform society in accordance with the faith and drew its inspiration from the model of the prophet MUHAMMAD's original Muslim community. It called for moral reform and political action but was not concerned with questions of nationalism or national boundaries because ISLAM is a universal religion. The Jama'at was to provide an alternative to the practices of the Sufi Brotherhoods and was designed to create an elite of educated and devout Muslim leaders that would direct the way toward the revival of Islam. (See SUFISM.)

Although a religious party, the Jama'at has not remained apart from political activity in Pakistan. Mawdūdī had opposed an independent Pakistan but, yielding to political reality, he focused his, and the party's, attention on Pakistan in 1947 until his retirement in 1972. In 1953, the Jama'at led a violent campaign against the Ahmadiyya sect that led to 2,000 deaths. For much of the next two decades, the party remained the voice of the 'ULAMĀ' and was active in opposition politics although it did support the wars with India in 1965 and 1971. After the overthrow of Zulfikar Ali Bhutto in 1977, the Jama'at supported General Zia ul-Haq's Islamization program but opposed his effort to ban student unions. More recently, members of the Jama'at supported Saddam Hussein during the Gulf War. They have been active in electoral politics and have sponsored legislation in the senate, both efforts having met with mixed success. The Jama'at remains active in its efforts to reform society according to Islamic law and took part in anti-government demonstrations before the fall of the Benazir Bhutto government in 1996.

JAMĀL AL-DĪN AL-AFGHĀNĪ \jā-'māl-ūl-'dēn-ūl-af-'gā-nē\, *in full* Jamāl al-Dīn al-Afghānī al-Sayyid Muhammad ibn Šafdar al-Husayn (b. 1838, Asadābād, Persia [now Iran]—d. March 9, 1897, Constantinople [now Istanbul, Turkey]), Muslim politician, political agitator, and journalist whose belief in the potency of a revived Islamic civilization in the face of European domination significantly influenced the development of Muslim thought in the 19th and early 20th centuries.

Some scholars believe that Afghānī was not an Afghan but a Persian SHĪ'ITE. An appreciable part of Afghānī's activities took place in areas where Sunnism was predominant, and it was probably to hide his Persian and Shi'ite origins, which would have aroused suspicion among SUNNIS, that he adopted the name Afghānī. As a young man he seems to have visited KARBALĀ' and al-Najaf, the Shi'ite centers in

southern Mesopotamia, as well as India and perhaps Istanbul. The intellectual currents with which he came in contact made him early into a religious skeptic.

From the death in 1863 of the famous Dōst Muhammad Khān, who had ruled for more than 20 years, Afghanistan had been the scene of civil wars occasioned by the quarrels of his sons over the succession. In 1866 one of these sons, Shīr 'Alī Khān, was established in the capital, Kābul, but two of his brothers, Muhammad Afḍal Khān and Moḥammad A'zam Khān, were threatening his tenure. In January 1867 Shīr 'Alī was defeated and expelled from Kābul, where Afḍal and, upon his death shortly afterward, A'zam reigned successively in 1867–68. At the end of 1866 A'zam captured Qandahār, and Afghānī immediately became A'zam's confidential counselor, following him to Kābul. He remained in this position until A'zam was in turn deposed by Shīr 'Alī in September 1868. Shīr 'Alī expelled Afghānī from his territory two months later.

Afghānī next appeared in Istanbul in 1870, where he gave a lecture in which he likened the prophetic office to a human craft or skill. This view gave offense to the religious authorities, who denounced it as heretical. Afghānī had to leave Istanbul and in 1871 went to Cairo, where for the next few years he attracted a following of young writers and divines, among them MUHAMMAD 'ABDUH, who was to become the leader of the modernist movement in ISLAM, and Sa'd Pasha Zaghlūl, founder of the Egyptian nationalist party, the Wafd. Again, a reputation for HERESY and unbelief clung to Afghānī. The ruler of Egypt then was the Khedive Ismā'īl, whose financial mismanagement led to pressure by his European creditors and great discontent among all his subjects by the mid-1870's. In response to French and British pressure, his suzerain, the Ottoman SULTAN, deposed him in June 1879. During this period Afghānī attempted to gain and manipulate power by organizing his followers in a Masonic lodge, of which he became the leader, and by delivering fiery speeches against Ismā'īl, hoping to attract thereby the favor and confidence of Tawfiq, Ismā'īl's son and successor; but the latter, reputedly fearing that Afghānī was propagating republicanism in Egypt, ordered his deportation in August 1879.

Afghānī then went to Hyderābād and later, via Calcutta, to Paris, where he arrived in January 1883. Together with his former student 'Abduh, Afghānī published an anti-British newspaper, *al-'Urwa al-wuthqā* ("The Strongest Link"), which claimed (falsely) to be in touch with and have influence over the Sudanese Mahdi (see MAHDIST), a messianic bearer of justice and equality expected by some Muslims in the last days. He also engaged Ernest Renan, the French historian and philosopher, in a famous debate concerning the position of Islam regarding science. He tried unsuccessfully to persuade the British government to use him as intermediary in negotiation with the Ottoman sultan, Abdülhamid II, and then went to Russia, where his presence is recorded in 1887, 1888, and 1889 and where the authorities seem to have employed him in anti-British agitation directed to India. Afghānī next appeared in Iran, where he again attempted to play a political role as the shah's counselor and was yet again suspected of heresy. The shah, Nāšir al-Dīn Shāh, became very suspicious of him, and Afghānī began a campaign of overt and violent opposition to the Iranian ruler. Again, in 1892, his fate was deportation. For this, Afghānī revenged himself by instigating the shah's murder in 1896. It was his only successful political act.

From Iran, Afghānī went to London, where he stayed briefly, editing a newspaper that attacked the shah. He then

went to Istanbul, in response to an invitation made by an agent of the sultan. The sultan may have hoped to use him in pan-Islamic propaganda, but Afghānī soon aroused suspicion and was kept inactive, at arm's length and under observation. His burial place was kept secret, but in 1944 what was claimed to be his body, owing to the mistaken impression that he was an Afghan, was transferred to Kābul, where a mausoleum was erected for it.

JAMES, SAINT \ˈjāmz\, also called James, Son of Zebedee, or James the Great (b. Galilee, Palestine—d. c. 44 CE, Jerusalem; feast day July 25), one of the Twelve APOSTLES, JESUS' innermost circle, and the only apostle whose martyrdom is recorded in the NEW TESTAMENT (Acts 12:2).

James and his younger brother, the apostle JOHN, were, with PETER and ANDREW, the first four disciples whom Jesus called (Mark 1:16–19). His question "Tell us, when will this [the end of time] be, and what will be the sign when these things are all to be accomplished?" sparks Jesus' eschatological discourse in Mark 13. As a member of the inner circle, James is said to have witnessed the raising of Jairus' daughter (Mark 5:37, Luke 8:51), the TRANSFIGURATION (Mark 9:2), and Jesus' agony in the Garden of GETHSEMANE (Mark 14:33, Matthew 26:37). James was beheaded by order of King Herod Agrippa I of Judaea; Spanish tradition holds that he evangelized in Spain and that his body was taken to Santiago de Compostela, where his shrine attracts pilgrims from all over the world.

JĀMĪ \ˈjō-mē\, in full Mawlanā Nūr al-Dīn ʿAbd al-Rahmān ibn Aḥmad (b. Nov. 7, 1414, district of Jam—d. Nov. 9, 1492, Herāt, Timurid Afghanistan), Persian scholar, mystic, and often regarded as the last great mystical poet of Iran.

Jāmī spent his life in Herāt except for two brief PILGRIMAGES to Mashad (Iran) and the Hijaz. During his lifetime his fame as a scholar resulted in numerous offers of patronage by many Islamic rulers. He declined most of these offers, preferring the simple life of a mystic and scholar to that of a court poet. His prose deals with a variety of subjects ranging from Qur'anic commentaries to treatises on SUFISM and music. Perhaps the most famous is his mystical treatise *Lava'ih* (*Flashes of Light*), a clear and precise exposition of the Sufi doctrines of *waḥdat al-wujūd* (the existential unity of Being), together with a commentary on the experiences of other famous mystics.

Jāmī's poetical works express his ethical and philosophical doctrines. His poetry is fresh and graceful and is not marred by unduly esoteric language. His most famous collection of poetry is a seven-part compendium entitled *Haft Awrang* ("The Seven Thrones," or "Ursa Major"), which includes *Salmān o-Absāl* and *Yūsuf o-Zalikhā*.

JAMUNĀ \ˈjə-mū-nə\, also called Jamnā, Jumna, or Yamunā, river in Uttar Pradesh state, northern India, rising in the HIMALAYAS near Jamnotri. Near Allahabad (Prayāga), after a course of about 855 miles, the Jamunā joins the GANGĀ (Ganges) River; their confluence is a sacred place to Hindus and is thought to include a third river, now invisible, called the SARASVATĪ. The Jamunā is regarded as a goddess by Hindus, and in that role is often understood and pictured as the Gaṅgā's sister; both are liquid forms of the power (*śakti*) associated with goddesses in general. Since the Jamunā is the central artery of the Braj region, where KRISHNA is believed to have spent his youth, the river has a special association with him. Many of the most famous episodes in his childhood, such as his defeat of the black snake Kāliya or his

St. James, detail from a 12th-century mural; in the monastery of Eski Gümüs, Turkey

Sonia Halliday

bathing games with the milkmaid *gopīs*, took place on her banks or in her waters.

JANAM SĀKHĪ \ˈjə-nəm-ˈsā-kē\ (Punjabi: "life story"), hagiographic genre of Punjabi prose celebrating the life and works of GURŪ NĀNAK, the founder of the Sikh tradition (see SIKHISM). In all likelihood, *sākhī* traditions began to appear in oral form soon after the death of Nānak in the 16th century, if not before. The earliest extant written versions, however, can be traced back only to the mid-17th century. Nānak's poetic compositions often provide the themes of these stories. The biographer's effort is then to explain the narrative context that produced the Gurū's thought or utterance. Every effort is made to present Nānak as the greatest teacher and spiritual master of the age, but many observers have felt that the resulting stories do not always faithfully support Nānak's own positions on issues of belief and practice, as enunciated in his own compositions.

JANMĀṢṬAMĪ \ˈjən-ˈmāsh-tə-mē\, Hindu festival celebrating the birth (*janma*) of the god KRISHNA (Kṛṣṇa) on the eighth (*aṣṭamī*) day of the dark fortnight of the month of Bhādrapada (August–September). The eighth also has significance in the Krishna legend, as he is usually regarded as the 8th of 10 AVATARS (incarnations) of Lord VISHNU and the eighth child of his mother, Devakī.

The occasion is observed with particular splendor in Mathura and VRINDĀBAD, the scenes of Krishna's childhood and early youth. The preceding day devotees keep a vigil and fast until midnight, the traditional hour of his birth. Then or on the following morning the image of Krishna is bathed in five sacred fluids, including water from the River Jamunā, and milk; dressed in especially regal clothes; and worshiped. Temples and household shrines are decorated with leaves and flowers; sweets are first offered to the god and then distributed as PRASĀDA (the god's favor) to all the

members of the household. The devotees of Krishna commemorate the events of his birth in various ways, including the *rās lilā* plays in which episodes relating to his birth are reenacted. On the morning of the day following Krishna's midnight birth, some temples witness scenes of joyful abandon in which devotees take the role of cowherds congratulating Krishna's foster parents, Nanda and Yaśodā, on the birth of their baby boy and raining turmeric-dyed curd on one another. There are several regional variations on this theme. In many places pots of milk are hung from tall poles in the streets, and men form human pyramids to reach and break the pots—this in imitation of Krishna's childhood play with the cowherd boys, when they stole the curds hung out of reach by their mothers. The festival is generally a time for group singing and dancing and is calculated as the beginning of the liturgical year by members of the VALLABHA SAMPRADĀYA.

JANSEN, CORNELIUS OTTO \ˈyän-sən, *Angl* ˈjan-sən \ (b. Oct. 28, 1585, Acquoi, near Leerdam, Holland—d. May 6, 1638, Ypres, Flanders, Spanish Netherlands [now in Belgium]), Flemish leader of the ROMAN CATHOLIC reform movement known as Jansenism.

Jansen entered the University of Louvain in 1602 to study theology. According to the custom adopted by the humanists of the Renaissance, Jansen Latinized his name to Cornelius Jansenius. He was deeply influenced by the thought of Michael Baius, who held that man is affected from his birth by the SIN of ADAM, that his instincts lead him necessarily to evil, and that he can be saved only by the GRACE of JESUS CHRIST, accorded to a small number of the ELECT who have been chosen in advance and destined to enter the kingdom of heaven. This doctrine, inspired by writings of ST. AUGUSTINE, also attracted another student, a Frenchman named Jean Duvergier de Hauranne. The two young men decided to revive theology, which they believed the theologians of the Sorbonne had reduced to subtle and vain discussions of SCHOLASTICISM.

In 1611 Jansen followed Duvergier to Bayonne, where he directed the episcopal college from 1612 to 1614. For three years afterward he dedicated himself to the study of the writings of the early CHURCH FATHERS. In 1617 Jansen returned to Louvain, where he directed the college of Sainte-Pulchérie, created for Dutch students. Jansen undertook a thorough study of the works of Augustine, and devoted himself most particularly to those texts drafted to combat the doctrine of PELAGIUS, who had held that, in spite of the fault committed by Adam, man continues to be entirely free to do good and to obtain salvation by means of his own merits. Jansen then began his great work, the *Augustinus*. For him, the divine grace that alone can save man is not due at all to his good actions but a gratuitous gift by means of which Christ leads the elect to eternal life; the multitude is doomed to damnation. He also wrote commentaries on the evangelists and on the Old Testament—notably on the PENTATEUCH—as well as a “Discourse on the Reformation of the Inner Man.” He was likewise the author of pamphlets directed against the Protestants.

Having acquired the degree of doctor in theology at Louvain, Jansen became the rector of that university in 1635, and in 1636 he became bishop of Ypres. A short time later he died of the plague. In 1640 his friends published at Louvain the work he had dedicated to St. Augustine, under the title *Augustinus Cornelii Jansenii, Episcopi, seu Doctrina Sancti Augustini de Humanae Naturae, Sanitate, Aegritudine, Medicina adversus Pelagianos et Massilienses* (“The

Augustine of Cornelius Jansen, Bishop, or On the Doctrines of St. Augustine Concerning Human Nature, Health, Grief, and Cure Against the Pelagians and Massilians”).

In a bull of 1642, Pope Urban VIII forbade the reading of the *Augustinus*, which had been published without the authorization of the Holy See. Five propositions in the *Augustinus* were condemned by Pope Innocent X in 1653, and by his successor, Alexander VII. The bishops of France were required to make all of the priests, monks, and nuns sign a formulary conforming to the pontifical decisions. But Duvergier de Hauranne, who had become the abbé of Saint-Cyran, had taught the doctrine of Jansen to the nuns of the abbey of Port-Royal. This CONVENT became a focus of resistance against the JESUITS, who, having obtained the pontifical decisions in their favor, intended to impose them.

Although Louis XIV was determined to eliminate the Jansenists as a threat to the unity of his kingdom, there was a temporary peace after Clement IX became pope in 1667, and the conflict ceased to be a major concern when the PAPACY and the French Roman Catholic church clashed on Gallicanism. But after that conflict was settled, Louis XIV obtained from Clement XI in 1705 a bull that renewed the earlier condemnations. In 1709 Louis XIV ordered the dispersal of the nuns of Port-Royal into diverse convents, and he had the abbey destroyed in 1710. He then obtained in 1713 the bull *Unigenitus Dei Filii*, which condemned 101 propositions of the exiled Jansenist theologian Pasquier Quesnel. The promulgation of *Unigenitus* as French law in 1730 began the decline of the Jansenist party.

In 1723 followers of Jansen's views established an autonomous Jansenist church at Utrecht, Holland, which still existed in the late 20th century. Jansenism also spread to Italy, where in 1786 the SYNOD of Pistoia, which was later condemned, propounded extreme Jansenist doctrines.

JANUS \ˈjā-nəs \, in ROMAN RELIGION, the spirit of doorways (*januae*) and archways (*jani*). The worship of Janus traditionally dated back to Romulus and a period even before the actual founding of the city of Rome. There were many *jani* (i.e., ceremonial gateways) in Rome; these were usually freestanding structures that were used for symbolically auspicious entrances or exits. It was believed that there were lucky and unlucky ways for a departing Roman army to march through a *janus*. The most famous *janus* in Rome was the Janus Geminus, which was actually a shrine of Janus at the north side of the Forum. It was a simple rectangular bronze structure with double doors at each end. Traditionally, the doors of this shrine were left open in time of war and were kept closed when Rome was at peace. According to the Roman historian Livy, the gates were closed only twice in the long period between Numa Pompilius (7th century BCE) and Augustus (1st century BCE).

Some scholars regard Janus as the god of all beginnings and believe that his association with doorways is derivative. He was invoked as the first of any gods in regular liturgies. The beginning of the day, month, and year, both calendrical and agricultural, were sacred to him. The month of January is named for him, and his festival took place on January 9, the Agonium.

Janus was represented by a double-faced head, and he was represented in art either with or without a beard. Occasionally he was depicted as four-faced—as the spirit of the four-way arch.

JASON \ˈjā-sən \, in Greek mythology, leader of the ARGONAUTS and son of Aeson, king of Iolcos in Thessaly. His fa-

ther's half-brother PELIAS seized Iolcos, and thus for safety Jason was sent away to CHIRON, a CENTAUR. Returning as a young man, Jason was promised his inheritance if he fetched the Golden Fleece for Pelias. Jason gathered the Argonauts and, after many adventures, obtained the fleece with the help of the sorceress MEDEA, whom he married. On their return Medea murdered Pelias, but she and Jason were driven out by Pelias' son and had to take refuge with King Creon of Corinth. Later Jason deserted Medea for Creon's daughter; this desertion and its consequences formed the subject of Euripides' *Medea*.

JĀṬ \jät\, also spelled (*Punjabi*) Jaṭ, major group of farmers in northern India and Pakistan. Their sense of group solidarity, pride, and self-sufficiency have been historically significant in many ways, as, for instance, during the rule of the Mughal emperor Aurangzeb (late 17th century), when Jāṭ leaders captained uprisings in the region of Mathura. A Jāṭ kingdom established at nearby Bharatpur in the 18th century became a principal rival for declining Mughal power, its rulers apparently seeing themselves as defenders of Hindu ways against the Muslim Mughals. Jāṭs living toward the western side of the Jāṭ region tend to be Muslim, and those inhabiting eastern Punjab are primarily Sikh. Numerically, Jāṭs form the largest percentage of the Sikh community and therefore vie for leadership of the faith with urban Khatrīs, the group to which all 10 GURŪS belonged. Some scholars attribute Sikh military tradition largely to its Jāṭ heritage.

JĀTAKA \jā-tə-kə\ (Pāli and Sanskrit: "Story of a Birth," akin to Sanskrit *jāta*, "born," *jāti*, "birth"), any of the extremely popular stories of former lives of the BUDDHA GOTAMA that are preserved in all branches of BUDDHISM. Some *Jātaka* tales are scattered in various sections of the Pāli canon, including a group of 35 that constitute the last book, the *Cariyā Piṭaka* ("Basket of Conduct"), of the *Khuddaka Nikāya*. Beyond this, a Sinhalese commentary of the 5th century that is questionably attributed to Buddhagosa and called the *Jātakatṭhavaṇṇanā* gathers together 547 *Jātaka* stories.

Each tale begins by noting the occasion that prompted its telling and ends with the Buddha disclosing his identity. In whatever form the Buddha appears, he exhibits some virtue that the tale thereby inculcates. Many *Jātakas* have parallels in the MAHĀBHĀRATA ("Great Epic of the Bhārata Dynasty"), the *Pañca Tantra* (animal fables), and the PURĀNAS. Some turn up again in such places as Aesop's fables. The *Jātaka* stories have also been illustrated frequently in sculpture and painting throughout the Buddhist world. See also VESSANTARA JĀTAKA.

JĀTĪ \jā-tē\, also spelled jāṭ, CASTE, in Hindu society. The Sanskrit word *jāti* means literally "birth," and by extension "the position in the community assigned to one by virtue of one's birth." Sociologically, *jāti* has come to be used universally to indicate a caste group among Hindus.

A sharp distinction should be made between *jāti*, as a limited endogamous group of families, often regionally defined and embracing only a certain set of characteristic occupations, and VARNA, the "classical" four-part model of social organization articulated in various Vedic and post-Vedic texts. The relation between these two has never been simple, and the ranking of *jātis* in relation to one another often diverges markedly from one area of India to another. Since the 19th century, Hindu social reformers, such as

GANDHI, have been eager to challenge the notion that birth should be the key determinant of a society that functions through a natural complementing of its constituent functions. Thinking such an idealist approach unrealistic and doomed to failure, other reformers, such as B.R. AMBEDKAR, have insisted that birth groups—since they exist—be granted separate, differential rights and privileges as a strategy for remedying social injustice.

JAYADEVA \jā-yə-'dā-və\; see GĪTAGOVINDA.

JEHOIACHIN \ji-'hōi-ə-,kin\, also spelled Joachin, Hebrew Joiachin, in the OLD TESTAMENT (2 Kings 24), son of King JEHOIAKIM and king of JUDAH. He came to the throne at the age of 18 and reigned three months. He was forced to surrender to Nebuchadrezzar II and was taken to Babylon (597 BCE), along with 10,000 of his subjects. He was released nearly 40 years later.

JEHOIAKIM \ji-'hōi-ə-,kim\, also spelled Joakim, in the OLD TESTAMENT (2 Kings 23:34–24:17; Jeremiah 22:13–19; 2 Chronicles 36:4–8), son of King JOSIAH and king of JUDAH (c. 609–598 BCE). Enthroned after his younger brother Jehoahaz (or Shallum) was taken to Egypt by the Egyptian conqueror Necho, Jehoiakim reigned under Egyptian protection for some time and paid heavy tribute. When the new Chaldean Empire under Nebuchadrezzar II defeated Egypt at the Battle of Carchemish (605), however, Jehoiakim changed his allegiance to Nebuchadrezzar. He remained loyal for three years but then revolted; after several battles and invasions, Nebuchadrezzar succeeded in besieging Jerusalem (598). Jehoiakim died at this time, but the circumstances of his death remain uncertain.

JEHORAM \jə-'hō-rəm\, also called Joram \jō-rəm\, Hebrew Yehoram, or Yoram, one of two contemporary OLD TESTAMENT kings.

Jehoram, the son of AHAB and JEZEBEL and king (c. 850–c. 842 BCE) of ISRAEL (2 Kings 1:17; 3:1–2), maintained close relations with JUDAH. Together with JEHOASHAPHAT, king of Judah, Jehoram unsuccessfully attempted to subdue a revolt of Moab against Israel (2 Kings 3:1–27). As had his father, Jehoram later endeavored to recover Ramoth-gilead from Hazael, king of Damascus. In this matter he was aided by his nephew Ahaziah, then king of Judah. Wounded during the fighting at Ramoth-gilead, Jehoram retired to Jezreel in Judah (2 Kings 8:28–29; 2 Chronicles 22:5–6). During his convalescence a revolution took place and JEHU was anointed king at Ramoth-gilead. Jehu then put to death all the members of Ahab's family including Jehoram, Jezebel, and Ahaziah (2 Kings 9:1–37; 2 Chronicles 22:7–9).

Jehoram, son of Jehoshaphat and king (c. 851–c. 842 BCE) of Judah, married ATHALIAH, daughter of Ahab, and was thus brother-in-law of the Jehoram of Israel.

JEHOASHAPHAT \ji-'hā-sə-,fat, -shə-\, also called Josaphat \jō-sə-,fat\, Hebrew Yehoshaphat, king (c. 873–c. 849 BCE) of JUDAH during the reigns in ISRAEL of AHAB, Ahaziah, and JEHORAM, with whom he maintained close political and economic alliances (1 Kings 22:1ff.; 22:41–50). In Judah he reorganized the army and attempted to centralize political power through a series of religious and legal reforms (2 Chronicles 17:1–21:1).

JEHOVAH \ji-'hō-və\, Judeo-Christian name for God, derived from YHWH. The Masoretes, who from about the 6th

to the 10th century worked to reproduce the original text of the Hebrew BIBLE, replaced the vowels of the Hebraic name YHWH with the vowel signs of the Hebrew words Adonai or ELOHIM. Thus, the artificial name Jehovah (YeHoWaH) came into being. *See* YAHWEH.

JEHOVAH'S WITNESS, an adherent of a millennialist sect (*see* MILLENNIALISM) that began in the United States in the 19th century and has since spread over much of the world; the group is an outgrowth of the International Bible Students Association founded in Pittsburgh, Pa., in 1872 by CHARLES TAZE RUSSELL.

The name Jehovah's Witnesses was adopted in 1931 by Russell's successor, Joseph Franklin Rutherford (Judge Rutherford; 1869–1942), who sought to reaffirm JEHOVAH as the true God and to identify those who witness in this name as God's specially accredited followers. Under his leadership, the democratic polity devised by Russell was replaced by a theocratic system directed from the society's headquarters in Brooklyn, N.Y.

Rutherford's policies were continued under his successor, Nathan Homer Knorr (1905–77). Knorr established the Watch Tower Bible School of Gilead (South Lansing, N.Y.) to train missionaries and leaders, decreed that all the society's books and articles be published anonymously, and set up adult education programs to train Witnesses to deliver their own apologetical talks. Under Knorr's direction a group of Witnesses produced a new translation of the Bible.

The Witnesses have little or no association with other denominations and maintain a complete separation from all secular governments. They regard world powers and political parties as the unwitting allies of SATAN. For this reason they refuse to salute the flag of any nation or to perform military services and almost never vote in public elections. Their beliefs also extend to religious denominations, and for many years they disavowed the use of such

terms as minister, church, or congregation in their organizational structure. This attitude has changed, but they are still exclusive and insulated from the ecumenical movement of the 20th century. Their avowed goal is the establishment of God's Kingdom, the Theocracy, which they believe will emerge following ARMAGEDDON, their basis for this assumption being the apocalyptic books of the Bible, especially Daniel and the Book of Revelation. Theologically they hold that JESUS CHRIST is God's agent in establishing the Theocracy. The concept of a literal hell is rejected, as is the inevitability of eternal life. Death in certain instances can mean total extinction. Pastor Russell established 1874 as the year of Christ's "invisible return" and designated 1914 as the year of Christ's SECOND COMING and the end of the "times of the GENTILES." Date setting and PROPHECY among the Witnesses have given way, however, to a more contemporary analysis of modern life based on world events and what they regard as signs of the times.

Witnesses faced active persecution in Germany and other Axis countries during World War II as well as in several Allied countries where their work was banned. In the post-colonial era, they encountered hostility in a number of new African nations whose nationalism conflicted with the Watch Tower idea of theocracy.

The Witnesses meet in churches called Kingdom Halls, baptize by immersion, insist upon a high moral code in personal conduct, disapprove of divorce except on grounds of adultery, oppose blood transfusions on a scriptural basis, and have won many cases in the U.S. courts establishing their right to speak in accordance with their belief.

Most members of a local congregation, or "company," are kingdom publishers, who are expected to spend five hours a week at meetings in Kingdom Hall and spend as much time as circumstances permit in doorstep preaching. Pioneer publishers hold part-time secular jobs and try to devote 100 hours a month to religious service. Special pioneers are full-time, salaried employees of the society who should spend at least 150 hours a month in this work. Each Kingdom Hall has an assigned territory and each Witness a particular neighborhood to canvass. The sect takes great pains to keep records of the number of visits, back calls, Bible classes, and books and magazines distributed. Publishing activities include books, tracts, recordings, and periodicals, chief among which are a semimonthly magazine, the *Watchtower*, and its companion publication, *Awake!*, which during the early 1980s reached a circulation of more than 10,000,000 in some 80 languages.

JEHU \ˈjē-ˌhyū, ˈjā-, -hü\, Hebrew Yehu, king (c. 842–815 BCE) of Israel. He was a commander of chariots for the king of ISRAEL, AHAB, and his son JEHORAM, on Israel's fron-

Jehu prostrating himself before King Shalmeneser III of Assyria, Assyrian bas-relief sculpture known as the Black Obelisk; in the British Museum, London

Erich Lessing—Art Resource

tier facing Damascus and Assyria. During Jehoram's rule, Jehu accepted the invitation of the prophet ELISHA to overthrow the dynasty of Omri (started by Ahab's father).

Jehu's revolt, which extinguished the dynasty of Omri, took place at a time when the dynasty was already in decline. The narrator in 2 Kings is clearly in favor of Jehu, but within a century the prophet HOSEA would cite the bloodbath in Jezreel, capital of the northern kingdom of Israel, as reason for the imminent end of the kingdom (1:4–5). Jehu's success ended the standing Phoenician alliance, and Israel alone was no match for the incursions of Shalmeneser III of Assyria, who moved westward in 841 BCE. The second scene in the famous Black Obelisk in the British Museum shows Jehu making his obeisance before the great king.

JELLINEK, ADOLF \ˈye-li,-nek\ (b. June 26, 1821, Drslavice, Moravia, Austrian Empire [now in Czech Republic]—d. Dec. 29, 1893, Vienna), RABBI and scholar who was the most forceful Jewish preacher of his time in central Europe.

From 1845 to 1856 Jellinek preached in Leipzig and from 1856 to 1893 in Vienna. More than 200 of his sermons were published (three volumes, 1862–66, and nine smaller collections, 1847–82), and these works measurably affected the development of the art of Jewish preaching.

Jellinek's scholarly activities chiefly comprised studies of the Qabbalah and Midrashic literature (see QABBALAH AND JEWISH MYSTICISM; MIDRASH). He was an exponent of *Wissenschaft des Judentums* ("science of Judaism"), the analysis of Jewish literature and culture with the tools of modern scholarly research. He was the first to compare the SEFER HA-ZOHAR, the fundamental text of the Qabbalists, with the Hebrew texts of MOSES DE LEÓN. Deducing that Moses de León was the principal author of the *Zohar*, Jellinek also postulated that the *Zohar* was an attempt to counteract the rationalist trend among his educated contemporaries. In the Midrashic field, he edited treatises on ancient and medieval homilies and documents of messianic thinking, such as *Bet ha-Midrash* (1853–77; "The House of Study").

JEN \ˈrən\, *Pinyin* ren, in Confucian philosophy, fundamental virtue variously translated as humaneness, warmheartedness, or benevolence. Before Confucius' time *jen* was understood as the kindness of rulers to their subjects. It was gradually broadened to mean benevolence in general, and CONFUCIUS further changed it to connote perfect virtue, which includes all particular virtues and applies to all people. MENCIOUS went on to say that *jen* is the distinguishing characteristic of man. During the Han period it was generally interpreted as love, and HAN YÜ in the T'ang period stressed it as love for all humanity.

Under the influence of BUDDHISM, the followers of NEO-CONFUCIANISM in the Sung and Ming dynasties extended *jen* to mean "forming one body with Heaven, Earth, and all

things." Some Sung Neo-Confucianists took *jen* to be a state of consciousness. CHU HSI called it "the character of the mind and the principle of love," and WANG YANG-MING equated it with the "clear character" of innate knowledge. Seventeenth- and 18th-century Neo-Confucianists returned to an emphasis on its social and active aspects, but all Neo-Confucianists agreed that *jen*, or humanity, is a moral quality imparted by heaven, characterized by production and reproduction, and being both life-affirming and life-giving. Under the influence of Western science in the late 19th and early 20th centuries, modern Confucianists likened *jen* to electricity and ether, a dynamic force and an all-pervasive substance.

JEPHTHAH \ˈjef-thə\, a judge or regent (often a hero figure) of ISRAEL who dominates a narrative in the Book of Judges, where he is presented as an exemplar of faith for Israel in its monotheistic commitment to YAHWEH. Of the Israelite tribe in Gilead (present northwest Jordan), he was banished from his home and became the head of a powerful band of brigands (Judges 11:1–3). He successfully defeated the non-Israelite peoples of Hauran and Ammon but at the cost, according to the story, of having to sacrifice his daughter to Yahweh in fulfillment of a vow setting the price of victory (Judges 11:12–40), a possible mythological basis for dedicating certain Israelite women to virginity. Scholars interpret the story of Jephthah as an expression of the Book of Judges' theological significance; namely, that Israel's fortunes fluctuated depending on the degree of their fidelity to Yahweh.

JEREMIAH \ˌjer-ə-ˈmī-ə\, *Hebrew* Yirmeyahu, *Latin* Vulgate Jeremias \-ˈmī-əs\ (b. probably after 650 BCE, Anathoth, Judah—d. c. 570 BCE, Egypt), Hebrew prophet, reformer, and author of an OLD TESTAMENT book that bears his name.

Life and times. Jeremiah was born and grew up in the village of Anathoth, a few miles northeast of Jerusalem, in a priestly family (Jeremiah 1:1; cf. Joshua 21:18). In his childhood he must have learned the prophecies of HOSEA,

whose influence can be seen in his early messages. The era in which he lived was one of transition for the ancient Near East. During Jeremiah's lifetime the foremost power was the Neo-Babylonian Empire, ruled by a Chaldean dynasty whose best known king was Nebuchadnezzar (Jeremiah 21:2). The small and comparatively insignificant state of JUDAH had been a vassal of Assyria and, when Assyria declined after two centuries of dominance, Judah asserted its independence for a short time (2 Kings 24:1; 2 Chronicles 36:13). Subsequently, Judah vacillated in its allegiance between Babylonia and Egypt and ultimately became a province of the Neo-Babylonian Empire (Jeremiah 37–39; 2 Kings 25; 2 Chronicles 36:1–21).

According to the biblical Book of Jeremiah, he began his prophetic career in 627/626—the 13th year of King JOSIAH's reign (Jeremiah 1:2). Jeremiah's early messages to the people were condemnations of them for their false worship and social injustice, with summons to repentance. He proclaimed the coming of a foe from the north, symbolized by a boiling pot facing from the north in one of his visions, that would cause great destruction (Jeremiah 1:13ff.), though scholars have differed in their identification of the northern foe to which he was referring.

Jeremiah commended King Josiah for doing justice and righteousness, but denounced his son JEHOIAKIM harshly for his selfishness, materialism, and practice of social injustice. Early in the reign of Jehoiakim, Jeremiah delivered his famous "Temple sermon," of which there are two versions, one in Jeremiah, chapter 7, verses 1 to 15, the other in chapter 26, verses 1 to 24. He denounced the people for their dependence on the Temple for security and called on them to effect genuine ethical reform. He predicted that God would destroy the TEMPLE OF JERUSALEM, as he had earlier destroyed that of SHILOH, if they continued in their present path. Jeremiah was immediately arrested and tried on a capital charge, but was later acquitted.

Near the time of the Battle of Carchemish, in 605, when the Babylonians decisively defeated the Egyptians and the remnant of the Assyrians, Jeremiah delivered an oracle against Egypt. When Jehoiakim withheld tribute from the Babylonians (about 601), Jeremiah began to warn the Judaeans that they would be destroyed at the hands of those who had previously been their friends. When the King persisted in resisting Babylonia, Nebuchadnezzar sent an army to besiege Jerusalem. King Jehoiakim died before the siege began and was succeeded by his son, JEHOIACHIN, who surrendered the capital to the Babylonians on March 16, 597, and was taken to Babylonia with many of his subjects. The Babylonians placed on the throne of Judah a king favorable to them, Zedekiah (597–586 BCE), who was more inclined to follow Jeremiah's counsel than Jehoiakim had been but was weak and vacillating. After paying Babylonia tribute for nearly 10 years, however, the King made an alliance with Egypt. A second time Nebuchadnezzar sent an army to Jerusalem, which he captured in August 586.

Early in Zedekiah's reign, Jeremiah wrote a letter to the exiles in Babylonia, advising them not to expect to return immediately to their homeland, as false prophets were encouraging them to believe, but to settle peaceably in their place of exile and seek the welfare of their captors. When emissaries from surrounding states came to Judah in 594 to enlist Judah's support in rebellion against Babylonia, Jeremiah put a yoke upon his neck and went around proclaiming that Judah and the surrounding states should submit to the yoke of Babylonia, for it was YAHWEH who had given them into the hand of the King of Babylonia (Jeremiah 27).

Even to the time of the fall of Jerusalem, Jeremiah's message remained the same: submit to the yoke of Babylonia.

When Jerusalem finally fell, Jeremiah was entrusted to Gedaliah, a Judaeon from a prominent family whom the Babylonians appointed as governor of the province of Judah. After Gedaliah was assassinated, Jeremiah was taken against his will to Egypt by some of the Jews who feared reprisal from the Babylonians. Even in Egypt he continued to rebuke his fellow exiles. Jeremiah probably died in about 570 BCE. According to a tradition that is preserved in extrabiblical sources, he was stoned to death by his exasperated fellow countrymen in Egypt.

Main teachings and prophecy. Jeremiah is noteworthy for his rich use of literary tools, especially of metaphor, simile, symbolic action, and drama to convey his message which is both of judgment (before the destruction of Jerusalem) and of comfort (to the exiles in Babylonia). The prophet is concerned with the immensity of evil in the nation and the just punishment that will surely follow. Hence, Jeremiah preaches inescapable divine justice: reward and punishment, repayment of GOOD AND EVIL, and the inevitable results of faithfulness and disobedience. These themes find expression in his metaphors (borrowed from Hosea) of the marriage and parental relationships, in which the wife is to submit to the husband and the children to the father (Jeremiah 2:2b–3; 19–25; 31:32). Likewise, Israel is to submit fully to God's covenantal law, responding to his love and free GRACE. Jeremiah freely denounces the foreign rulers and powers that threaten Israel or to whom Israel turns for aid (Jeremiah 4:7; 5:6; 8:17; 25:32), but he reserves his harshest judgment for Israel itself, whose rejection of God and worship of BAALS he likens to a prostitute cavorting with many lovers (Jeremiah 2:20; 3:1–3), a faithless wife (Jeremiah 3:20), wayward children (Jeremiah 3:21–22), and animals in heat (Jeremiah 2:23–24; 5:8).

In CHRISTIANITY, Jeremiah's most important prophecy concerning the future is that of the new COVENANT (Jeremiah 31:31–34; 32:38–40; cf. EZEKIEL 11:19). He prophesied of a time when Yahweh would make a covenant with Israel; Yahweh would write his law upon the hearts of men (rather than on tables of stone, as with the old Mosaic covenant), and all would know God directly and receive his forgiveness. This prophecy was very influential in some NEW TESTAMENT writings (Hebrews 8:8–13; 10:16–17) and lies behind the words attributed to Jesus at the LAST SUPPER: "This cup... is the new covenant in my blood" (Luke 22:20; cf. Matthew 26:28; Mark 14:24; John 13:34).

JERICHO \ˈjer-i-kō\, *Arabic* Arīḥā \ä-ˈrē-hä\, town in the West Bank area occupied by Israel since 1967, on the west side of the Jordan River valley. It is one of the earliest continuous settlements in the world, dating perhaps from about 9000 BCE.

Jericho is famous in biblical history as the first town attacked by the Israelites under JOSHUA after they crossed the Jordan River (Joshua 6). OLD TESTAMENT Jericho has been identified in the mound known as Tall as-Sultān (at the source of the copious spring 'As-Sultān), which rises 70 feet above the surrounding plain. After the town's destruction by the Israelites the site was abandoned until the Iron Age, when (according to the biblical account) Hiel the Bethelite established himself there in the 9th century BCE (1 Kings 16:34). There was a sizable settlement in the 7th century BCE, ending perhaps at the time of the second BABYLONIAN EXILE in 586 BCE. The site was then finally abandoned, and later Jerichos grew up elsewhere; the site of the Roman and

NEW TESTAMENT Jericho is approximately one mile south of that of the Old Testament town.

JEROME, SAINT, *Latin in full* Eusebius Hieronymus, *pseudonym* Sophronius (b. c. 347, Stridon, Dalmatia—d. 419/420, Bethlehem, Palestine; feast day September 30), biblical translator and monastic leader, traditionally regarded as the most learned of the Latin Fathers.

Jerome was born of well-to-do Christian parents. His education, begun at home, was continued in Rome when he was about 12. There he studied grammar, rhetoric, and philosophy. He frequented the CATACOMBS and was baptized (c. 366), probably by Pope Liberius.

He spent the next 20 years in travel. At Treveris (now Trier), he was profoundly attracted to MONASTICISM. In Aquileia (Italy) he was linked with an ascetic elite grouped around Bishop Valerianus. When the group disbanded (c. 373), Jerome decided to go on a trip through the East. On reaching Antioch in 374, he composed his earliest known work, *De septies percussa* ("Concerning Seven Beatings"). There also, in mid-Lent 375, during a near-fatal illness, he had a celebrated dream, in which he was dragged before a tribunal of the Lord, accused of being a Ciceronian—a follower of the 1st-century-BCE Roman philosopher—rather than a Christian, and was severely lashed; he vowed never again to read or possess pagan literature.

In 375 Jerome began a two-year search for inner peace as a HERMIT in the desert of Chalcis. His response to temptation was incessant prayer and fasting; he learned Hebrew from a Jewish convert, studied Greek, had manuscripts copied for his library and his friends, and carried on a brisk

correspondence. The crisis arrived when Chalcis became involved with ecclesiastical and theological controversies. Suspected of harboring heretical views (*i.e.*, Sabellianism, which emphasized God's unity at the expense of the distinct persons), Jerome insisted that the answer to ecclesiastical and theological problems resided in oneness with the Roman bishop. Pope Damasus did not respond, and Jerome quit the desert for Antioch.

In Antioch his host, EVAGRIUS, won Jerome over to the party of Bishop Paulinus, who was opposed by BASIL, the great orthodox bishop of Caesarea. Recognizing his importance—since Jerome was by now known as a scholar and a monastic figure of significance—Paulinus decided to ordain him. Jerome accepted (378) on two conditions: his monastic aspirations would not be prejudiced, and priestly functions would not be forced on him. He attended the exegetical lectures of Apollinaris of Laodicea and visited the Nazarenes (Jewish Christians) of Beroea to examine their copy of a Hebrew gospel purporting to be the original Gospel of Matthew.

Jerome spent almost three years (379–382) continuing his pursuit of scriptural studies. An enthusiastic disciple of GREGORY OF NAZIANZUS, Jerome also came to know GREGORY OF NYSSA and the theologian Amphilochius of Iconium at the COUNCIL OF CONSTANTINOPLE (381). Under such influences he improved his knowledge of Greek and developed an admiration for the EXEGESIS of ORIGEN. He translated 14 of Origen's homilies (sermons) on OLD TESTAMENT books into Latin. He also translated the church historian Eusebius' *Chronicon* (*Chronicles*) and continued it to the year 378.

But the most decisive influence on Jerome's later life was his return to Rome (382–385) as secretary to Pope Damasus. There he pursued his scholarly work on the BIBLE, revised the Old Latin version of the Gospels on the basis of the best Greek manuscripts at his command, and made his first revision of the Old Latin Psalter based on a few SEPTUAGINT manuscripts. But his preaching in support of the monastic life and his relationship with the ascetic coterie, his castigation of Roman clergy, lax monks, and hypocritical virgins, and his correction of the gospel text provoked a storm of criticism and calumny, and in August 385 he left Rome in bitter indignation and made his way to the Holy Land. He settled in Bethlehem, where by 389 a wealthy Roman patroness built a monastery for men under Jerome's direction, three cloisters for women under her own supervision, and a hostel for pilgrims. Here Jerome lived, except for brief journeys, until his death.

The literary legacy of Jerome's last 34 years is the outgrowth of contemporary controversies, Jerome's passion for SCRIPTURE, and his involvement in monastic life. An anti-Origen movement in the east, fanned by the bishop EPIPHANIUS, turned Jerome not only against the views of Origen—whose 39 sermons on LUKE he had translated c. 389–392—but against his friends Bishop John of Jerusalem and Rufinus. His petulance in correspondence with ST. AUGUSTINE, stemming from the African's strictures on Jerome's biblical efforts, imperiled their mutual respect, as well.

Jerome's biblical production in Bethlehem includes two works helpful to biblical scholars: *Liber locorum* ("Book of Places"); and *Liber interpretationis Hebraicorum nominum* ("Book of Interpretation of Hebrew Names"). Continuing his revision of the Old Latin version of the Septuagint based on Origen's *Hexapla* (an edition with the Hebrew text in Hebrew and Greek characters, and four different Greek versions arranged in six parallel columns), Jerome revised Ecclesiastes, Proverbs, the Song of Solomon, Chroni-

cles, and Job, and to his Roman revision of the Psalms added Origen's diacritical notes. Between 391 and 406 he produced his Latin translation of the Old Testament, as well. This completed his contribution to the version of the Bible known as the VULGATE. His commentary on Ecclesiastes (c. 387) is a milestone in exegesis, because it is the first original Latin commentary that takes advantage of the Hebrew text. Perhaps Jerome's best commentaries are on the prophets of the Old Testament.

JERUSALEM, COUNCIL OF \jə-'rū-sə-ləm, -'rū-zə-\, conference of the Christian Apostles in Jerusalem about 50 CE which decreed that GENTILE Christians did not have to observe the Mosaic Law of the Jews. It was occasioned by the insistence of certain Judaic Christians from Jerusalem that Gentile Christians from Antioch in Syria obey the Mosaic custom of CIRCUMCISION. A delegation, led by the apostle PAUL and his companion Barnabas, was appointed to confer with the elders of the church in Jerusalem.

The ensuing apostolic conference (noted in Acts 15:2–35), led by the apostles PETER and JAMES, decided the issue in favor of Paul and the Gentile Christians. From this time onward Gentile Christians were not bound by the Levitical ceremonial regulations, except for the provisions of the so-called apostolic decree: abstention “from what has been sacrificed to idols and from blood and from what is strangled and from unchastity” (Acts 15:29).

JERUSALEM, TEMPLE OF, either of two temples at the center of worship and national identity in ancient Israel.

In the early years of the Israelite kingdom, the ARK OF THE COVENANT was periodically moved about among several sanctuaries, but after King DAVID's capture of Jerusalem, the Ark was moved to that city. This action joined Israel's major religious object with the monarchy and the city itself into a central symbol of union of the Israelite tribes. As the site for a future temple, David chose Mount Moriah, or the Temple Mount, where it was believed ABRAHAM had built the altar on which to sacrifice his son ISAAC.

The First Temple was constructed during the reign of David's son, SOLOMON, and completed in 957 BCE. Other sanctuaries retained their religious functions, however, until JOSIAH (reigned c. 640–609 BCE) abolished them and established the Temple of Jerusalem as the only place of sacrifice in the Kingdom of JUDAH. The First Temple was built as an abode for the Ark and as a place of assembly. The Temple building faced eastward. It was oblong and consisted of three rooms: the porch, or vestibule (*'ulam*);

the main room of religious service, or Holy Place (*hekhal*); and the HOLY OF HOLIES (*devir*), the sacred room in which the Ark rested. A storehouse (*yazi'a*) surrounded the Temple except on its front (east) side.

The First Temple contained five altars: one at the entrance of the Holy of Holies, two others within the building, a large bronze one before the porch, and a large tiered altar in the courtyard. A huge bronze bowl, or “sea,” in the courtyard was used for the priests' ABLUTIONS. Within the Holy of Holies, two cherubim of olive wood stood with the Ark; this innermost SANCTUARY was considered the dwelling place of the Divine Presence (Shekhina) and could be entered only by the HIGH PRIEST and only on YOM KIPPUR. Nebuchadrezzar II of Babylonia removed the Temple treasures in 604 BCE and 597 BCE and totally destroyed the building in 587/586. This destruction and the deportations of Jews to Babylonia in 586 and 582, which came to be seen as fulfillments of PROPHECY, established JUDAISM as an international religion whose adherents, nonetheless, continued to hope for the reestablishment of the independent Jewish state.

Cyrus II, founder of the Achaemenian dynasty of Persia and conqueror of Babylonia, in 538 BCE issued an order allowing exiled Jews to return to Jerusalem and rebuild the Temple. Work was completed in 515 BCE. The Second Temple, which was constructed as a modest version of the original building, was surrounded by two courtyards with chambers, gates, and a public square. It did not include the ritual objects of the First Temple. Ritual, however, was elaborate and was conducted by well-organized families of priests and LEVITES.

Orthodox Jews praying at the Western Wall, the last remnant of the Second Temple of Jerusalem

Jan Lukas—Photo Researchers

During the Persian and Hellenistic (4th–3rd century BCE) periods, the Temple generally was respected, and in part subsidized, by Judaea's foreign rulers. Antiochus IV Epiphanes, however, plundered it in 169 BCE and desecrated it in 167 BCE by commanding that sacrifices be made to ZEUS on an altar built for him. This final act touched off the Hasmonean revolt, during which Judas Maccabeus (*see* MACCABEES) cleansed and rededicated the Temple (the event celebrated in the annual festival of HANUKKAH). During the Roman conquest, Pompey entered (63 BCE) the Holy of Holies but left the Temple intact. In 54 BCE, however, Crassus plundered the Temple treasury. Of major importance was the rebuilding of the Second Temple begun by Herod the Great, king (37 BCE–4 CE) of Judaea. Construction began in 20 BCE and lasted for 46 years. The area of the Temple Mount was doubled and surrounded by a wall with gates. The Temple was raised, enlarged, and faced with white stone.

The rebellion against Rome that began in 66 CE soon focused on the Temple and effectively ended with the Temple's destruction on the 9th/10th of Av, 70 CE. All that remained of the Temple was a portion of the Western Wall (also called the Wailing Wall), which continues to be the focus of Jewish aspirations and PILGRIMAGE. Made part of the wall surrounding the Muslim DOME OF THE ROCK and AL-AQSA MOSQUE in 691 CE, it returned to Jewish control in 1967.

JESSE \ˈje-sē\, *also spelled* Isai \ˈɪ-zī\, in the OLD TESTAMENT, the father of King DAVID. Jesse was the son of Ohed, and the grandson of Boaz and Ruth (Ruth 4:22). He was a farmer and sheep breeder in Bethlehem (1 Samuel 17:15–18). David was the youngest of Jesse's eight sons (1 Samuel 16:11; 17:14). The appellation "son of Jesse" became a standard poetic metaphor in the BIBLE, expanded by phrases such as "root of Jesse" and "stump of Jesse" (Isaiah 11:1,10) expand the metaphor. All evoke the figure of David.

Because Jesus belonged to one of the family branches descended from King David (Matthew 1:6; Luke 3:31), it became customary for medieval artists to visually depict Jesus' genealogy as beginning with Jesse in such works as the stained-glass windows known as Jesse windows.

JESUIT \ˈje-zū-ɪt, -zhū-, -zyū-\, member of the Society of Jesus (S.J.), a ROMAN CATHOLIC order of religious men, founded by ST. IGNATIUS OF LOYOLA, noted for its educational, missionary, and charitable works. The order was once regarded by many as the principal agent of the COUNTER-REFORMATION and later a leading force in modernizing the church.

The order grew out of the activity of Ignatius, a Spanish soldier who in 1539 drafted the first outline of the order's organization, which Pope Paul III approved on Sept. 27, 1540. The society introduced several innovations in the form of the religious life. Among these were the discontinuance of many medieval practices—such as regular penances or fasts obligatory on all, a common uniform, and the choral recitation of the liturgical office—in the interest of greater mobility and adaptability. Other innovations included a highly centralized form of authority with life tenure for the head of the order; probation lasting many years before final vows; gradation of members; and lack of a female branch. Particular emphasis was laid upon the virtue of obedience, including special obedience to the POPE. Emphasis was also placed upon flexibility, a condition that allowed Jesuits to become involved in a great variety of ministries in all parts of the world.

The society grew rapidly, and it quickly assumed a prominent role in the Counter-Reformation defense and revival

of Catholicism. Almost from the beginning, education and scholarship became the principal work. The early Jesuits, however, also produced preachers and catechists who devoted themselves to the care of the young, the sick, prisoners, prostitutes, and soldiers; and they were often called upon to undertake the controversial task of confessor to many of the royal and ruling families of Europe. The society entered the foreign MISSION field within months of its founding. More Jesuits were to be involved in missionary work than in any other activity, save education. By the time of Ignatius' death in 1556, about 1,000 Jesuits were already working throughout Europe and in Asia, Africa, and the New World. By 1626 the number of Jesuits was 15,544; and in 1749 the total was 22,589.

The preeminent position of the Jesuits among the religious orders and their championship of the pope exposed them to hostility. In 1773 Pope Clement XIV, under pressure especially from the governments of France, Spain, and Portugal, issued a decree abolishing the order. The society's corporate existence was maintained in Russia, where political circumstances—notably the opposition of Catherine II the Great—prevented the canonical execution of the suppression. The demand that the Jesuits take up their former work, especially in the field of education and in the missions, became so insistent that in 1814 Pope Pius VII reestablished the society.

After the restoration, the order grew to be the largest order of male religious. Work in education on all levels continued to involve more Jesuits than any other activity; but the number of Jesuits working in the mission fields, especially in Asia and Africa, exceeded that of any other religious order. They were also involved in the field of communications, in social work, in ecumenical groups, and even in politics.

JESUS CHRIST \ˈjē-zəs-ˈkrɪst, -zəz-\, *also called* Jesus of Nazareth (b. c. 6 BCE, Judaea—d. c. 30 CE, Jerusalem), founder of the Christian faith and arguably the most important figure in the history of western civilization. To the faithful Christian, Jesus is the son of God and God incarnate whose sacrifice on the cross offers the promise of salvation and whose life and passion are the fulfillment of the Jewish Scriptures.

Although the earliest accounts of Jesus' life—the Synoptic Gospels of Matthew, Mark, and Luke and the more philosophical Gospel of John—are marked by inconsistencies and differing agendas and no independent account by contemporary authors exists, a picture of his life can be discerned from Scripture. According to Matthew, Jesus was born to the house of DAVID, as foretold in Jewish scripture and messianic traditions. He was born of Mary, the wife of the carpenter Joseph. According to Luke the birth occurred during the time of a census held by Augustus and according to Matthew during the reign of Herod the Great. Although the chronology of the Gospels is inconsistent, they do agree that Jesus was born in the town of Bethlehem, in support of Jewish messianic teachings, and raised in the Galilean town of Nazareth. Little is told of Jesus' early life except for the stories found in Luke concerning the presentation of Jesus at the Temple and the encounter of Jesus with the teachers in the Temple.

While his birth and youth, according to the evangelists, fulfilled scriptural prophecy, it was the adult ministry of Jesus that established the foundation of the faith. Once again the Gospels are not wholly consistent—differences in the length of the ministry and the number of visits to Jerus-

Jesus Christ as Ruler, with the Apostles and Evangelists (represented by the beasts), mosaic in the apse of Santa Pudenziana, Rome, 401–417 CE

De Antonis

alem exist—but a coherent picture of the ministry does emerge. It begins with the baptism of Jesus by JOHN THE BAPTIST. Indeed, Jesus recognized the importance of John's teachings and sought baptism from John. This episode has led to the suggestion that Jesus was a follower of John, and the affinities they had with the teachings of the ESSENES and related Judaic teachings lends some credence to this possibility. But, as John acknowledged, Jesus was the greater of the two and would go beyond John's own ministry. Jesus began to preach and recruited a number of disciples, including the twelve APOSTLES. Jesus' ministry was characterized by charismatic preaching exercised with great moral authority that in some ways challenged existing law but also, as Jesus says, fulfilled the law. His preaching, which was often in the form of parables, spoke of the coming of the kingdom of God and demanded repentance of the people in preparation for the coming of the kingdom. Jesus was also a healer—curing a woman of an effusion of blood, healing the sick, and raising Lazarus from the dead—often in apparent violation of Sabbath prohibitions and Jewish laws of purity (see TOHORAH). The Gospels also record that Jesus was a miracle worker and that he calmed the seas, changed water into wine, and fed a great multitude with a few loaves and fishes.

The final chapter of Jesus' life involved his visit to Jerusalem. His entry at PASSOVER, riding a donkey, was heavily symbolic and evoked the messianic traditions of Judaism. It was in this final, although possibly not first, visit to Jerusalem that Jesus probably came to the attention of the authorities as a result of the incident at the TEMPLE OF JERUSALEM, in which he cast out the various merchants, declaring the Temple a house of prayer and not a den of thieves. He was questioned by Jewish leaders who, according to the Gospels, sought to put him in the wrong over such issues as the proper attitude toward the secular authority and over

matters concerning resurrection. While in Jerusalem Jesus responded to the questions of the Scribes saying that the highest commandment is to love God. He also prophesied the impending destruction of Jerusalem and the world.

The most important events of his time in Jerusalem involved his LAST SUPPER and Passion, the events surrounding his trial and death. He established the new CONVENANT by instituting the Eucharist and sharing the bread and wine—his body and blood—with the disciples, who were told to do this in his memory. He was betrayed by one of these disciples, JUDAS ISCARIOT, and condemned to death. For the Jewish authorities he was guilty of violating the law of Moses and blasphemy and for the Romans he was guilty of inciting the overthrow of Roman authority. Indeed, the Romans reserved the horrible punishment of CRUCIFIXION for their most dangerous political criminals. Recognizing himself as the suffering servant, Jesus quietly accepted his fate, forbidding his followers to defend him in the garden of GETHSEMANE when he was arrested and enduring his punishment. Suffering on the CROSS, he sought forgiveness for those around him and commended his soul to God. The sacrifice on the cross was followed by the burial and by the resurrection of Jesus three days later. Having risen, he met Mary Magdalene and other women before revealing himself to his disciples and commanding them to make disciples of all nations, baptizing them in the name of the Father, and of the Son, and of the Holy Spirit (Matthew 28:20).

To understand the teachings of JESUS fully, it is necessary to place him in the context of the JUDAISM of his time. Jesus

was in many ways an observant Jew—honoring the Passover, attending the Temple, and adhering to biblical teaching. Furthermore, the apocalyptic fervor of the period, the beliefs of the QUMRĀN sect, and the teachings of the PHARISEES shed considerable light on the message of Jesus. During his lifetime there was a wide range of messianic teachings, from the violence of the ZEALOTS to the otherworldly teachings of the Essenes, which foresaw the coming of a savior from the house of David. Notions of the “son of man” as an eschatological figure were current in Jewish circles as well. The Pharisees, moreover, taught a doctrine that included bodily resurrection, ANGELS, and SATAN, and they held an eschatological outlook (see ESCHATOLOGY).

Although Jesus was a part of contemporary Judaism, he made these traditions uniquely his own. Reluctant to identify himself as the MESSIAH, he called himself the son of man and placed himself in the contemporary messianic context. His passion can best be understood in light of the suffering servant as prophesied in Isaiah, whose sacrifice atones for the sins of others. His calls to personal moral reform and repentance, too, must be seen in the context of the imminent coming of the kingdom of God that he preached. His moral reform is outlined in the “SERMON ON THE MOUNT,” in which he taught that the kingdom of God awaits the peacemakers, the poor in spirit, and those who have suffered in Jesus’ name. The kingdom is not for the hypocrites or the weak in spirit nor is for those who worship idols or material possessions. Indeed, he asserts that one “cannot serve God and Mammon.” (Matthew 6:24) and that one must love God. Drawn from Jewish tradition but made his own, the doctrine Jesus taught was one of repentance and moral reform, the love of God and service to his will—service that Jesus undertook with his passion on the cross. The passion, Christians believe, was rewarded with resurrection and thus offers the hope of salvation to all.

JETHRO *\ˈjeth-rō*, also called Reuel, or Hobab, in the OLD TESTAMENT, priest of Midian of the KENITE clan, with whom MOSES took refuge after he killed an Egyptian and whose daughter Moses married (EXODUS 3:1).

After the Exodus, Jethro visited the Hebrews and brought with him Moses’ wife and sons. There he officiated at a sacrifice and suggested that Moses appoint able men to assist him in judging his people, thus founding the Hebrew judiciary (Exodus 18). Jethro’s Kenite descendants settled in Judaeen territory in the Negev.

JEWISH CALENDAR, religious and civil dating system of both ancient and modern JUDAISM, which is based upon both lunar and solar cycles.

In the Jewish calendar in use today, a day is counted from sunset to sunset, a week comprises seven days, a month contains 29 or 30 days, and a year has 12 lunar months and approximately 11 days (or 353, 354, or 355 days). In order to bring the calendar in line with the annual solar cycle, a 13th month of 30 days is intercalated in the 3rd, 6th, 8th, 11th, 14th, 17th, and 19th years of a 19-year cycle. Therefore, a leap year may total from 383 to 385 days. The Jewish Era in use today was popularly accepted about the 9th century CE and is based on biblical calculations placing the creation in 3761 BCE.

The names of the months of the year are derived from Babylonian terms. (Before the Exile, the names were in Hebrew. Only four of these Hebrew names are known today; those being Ethanim, Bul, Abib, and Ziv.) The months are ordered according to religious usage and are:

Nisan (Abib): March–April of the Western Gregorian calendar
 Iyyar (Ziv): April–May
 Sivan: May–June
 Tammuz: June–July
 Av: July–August
 Elul: August–September
 Tishri (Ethanim): September–October
 Heshvan, or Marheshvan (Bul): October–November
 Kislev: November–December
 Tevet: December–January
 Shevat: January–February
 Adar: February–March

The 13th month of the leap year, Adar Sheni (or ve-Adar), is intercalated before Adar and so contains the religious observances normally occurring in Adar.

The civil calendar begins with the month of Tishri, the first day of which is the holiday of ROSH HASHANAH. The SABBATH is observed on the seventh day of the week (Saturday). The annual cycle of the religious calendar begins with the celebration of PASSOVER (Pesah) on Nisan 15–22. The next major holiday of the year is that of SHAVUOT, celebrated on Sivan 6–7, the second of the PILGRIM FESTIVALS. The TEN DAYS OF PENITENCE begin with Rosh Hashanah on Tishri 1–2 and end with YOM KIPPUR on Tishri 10. The last of the major holidays, and the third of the Pilgrim Festivals is SUKKOT which is celebrated on Tishri 15–21.

The Jewish religious calendar also includes a series of minor holidays—so called because they are not accompanied by the proscription of work—and fasts. HANUKKAH is celebrated for eight days, beginning on Kislev 25, and is marked by the lighting of candles, feasting, songs, and the giving of gifts to children. The five fast days commemorate tragic events in Jewish history. They are Shiva’ ‘Asar be-Tammuz (FAST OF TAMMUZ 17); TISHA BE-AV (Fast of Av 9), which commemorates the destruction of the First and Second Temples in 586 BCE and 70 CE, respectively; Tzom Gedaliahu (Tishri 3); ‘Asara be-Ṭevet (Fast of Ṭevet 10); and Ta’anit Esther (Fast of Esther; Adar 13). Also celebrated are LAG BA-OMER (Iyyar 18), usually observed as a school holiday, and ṬU BI-SHEVAT (Shevat 15), in modern times associated with the planting of trees in Israel.

Since the establishment of the modern state of Israel in 1948, three other holidays have been added to the Jewish calendar. They are HOLOCAUST Day (Nisan 27), Remembrance Day (Iyyar 4), and Independence Day (Iyyar 5).

JEZEBEL *\ˈje-zə-bel*, also spelled Jezabel (d. c. 843 BCE), in the OLD TESTAMENT (1 and 2 Kings), the wife of AHAB, King of Israel; by interfering with the exclusive worship of the Hebrew god YAHWEH, disregarding the rights of the common people, and defying the great prophets ELIJAH and ELISHA, she provoked the internecine strife that enfeebled Israel for decades. She has come to be known as an archetype of the wicked woman.

Jezabel was the daughter of the priest-king Ethbaal, ruler of the coastal Phoenician cities of Tyre and Sidon (modern Ṣaydā, Lebanon). When she married Ahab (ruled c. 874–c. 853), she persuaded him to introduce the worship of the Tyrian god Baal-Melkart. She tried to destroy those who opposed her; most of the prophets of Yahweh were killed at her command. These actions provoked the wrath of Elijah; according to 1 Kings 17, he prophesied the onset of a severe drought as divine retribution. Some time later, Elijah had the BAAL priests slain after they had lost a contest with him;

when Jezebel heard of the slaughter, she angrily swore to have Elijah killed, forcing him to flee (1 Kings 18:19–19:3).

A few years later, Ahab perished in battle with the Syrians. Jezebel lived on for approximately another 10 years. Elijah's successor, Elisha, provoked civil war by causing a military commander named JEHU to be made king of Israel, though Jezebel's son JEHORAM then ruled. Jehu killed Jehoram and then went to Jezebel's palace. Expecting him, she adorned herself and, looking down from her window, taunted him. Jehu ordered her eunuchs to throw her out the window. Later, when he commanded that she be properly buried as a king's daughter, it was discovered that dogs had eaten most of her body.

JIBRĪL \ʃi-ˈbrēl\, also spelled *Jabrāʿīl*, in ISLAM, the ARCHANGEL who acts as intermediary between God and man and as bearer of revelation to the prophets, most notably to MUHAMMAD.

Muhammad himself could not at first identify the spirit that possessed him, and the QUR'AN mentions him by name only three times. Jibrīl, however, became Muhammad's constant helper, according to the HADITH and Ibn Ishāq's *Strā*. He and the archangel MĪKĀL purified Muhammad's heart in preparation for the Prophet's ascension to heaven (*mī'rāj*), and then Jibrīl guided him through the various levels until they reached the throne of God. When Muhammad recited a supposed revelation acknowledging the PAGAN goddesses AL-LĀT, al-'Uzzā, and Manāt, Jibrīl chastised him for presenting as divine a message inspired by the devil. Jibrīl also helped Muhammad in times of political crisis, coming to his aid at the BATTLE OF BADR (624) with thousands of ANGELS, then telling him to attack the Jewish tribes of Banū Qaynuqā' and Banū Qurayza.

Muhammad generally only heard the voice of his inspiration, but, according to 'Ā'ISHA, his wife, he saw Jibrīl twice "in the shape that he was created" and on other occasions as a man resembling Dihya ibn Khalifa al-Kalbī, a disciple of Muhammad. Others have described the archangel as having 600 wings, each pair so enormous that they crowd the space between East and West. Jibrīl has also been depicted as sitting on a chair suspended between heaven and earth. The popular image of Jibrīl is of an ordinary, turbaned man, dressed in two green garments, astride a horse or a mule.

Muslim traditions concerning Jibrīl largely concur with biblical accounts of the angel GABRIEL, but his special relationship with Muhammad inspired a large body of mythical detail. Jibrīl is said to have appeared at ADAM'S side after his expulsion from paradise and shown him how to write and work iron and raise wheat. Jibrīl later appeared in Egypt to help MOSES and to deceive the Egyptians into entering the Red Sea in pursuit of the Jews. His name figures in the preparation of charms and appears with those of the other archangels on the sides of magic squares.

JIGOKU \ʃjē-gō-kū\, in Japanese BUDDHISM, hell, a region popularly believed to consist of a number of hot and cold regions under the earth. Jigoku is ruled over by Emma-ō, the Japanese lord of death, who judges the dead. He is assisted in examining the dead by two disembodied heads on pillars at either side of him. The female head, Miru-me, can perceive the sinner's faults, while the male head, Kagu-hana, can detect any misdeed. Damnation is not eternal; the dead are sentenced to fixed periods of time, which can be shortened by the intervention of BODHISATTVAS.

The *Jigoku-zōshi*, a late 12th-century scroll, depicts the 8 great and the 16 lesser hells in both text and paintings.

JIHAD \ʃi-ˈhād\, also spelled *jehad* (Arabic: "fighting," or "striving"), in ISLAM, a key doctrine which calls upon believers to devote themselves to combating the enemies of their religion, both human and psychological, even if it means sacrificing their own material comforts and lives. As a doctrine of warfare, Islamic legal schools have offered various interpretations of when, how, and by whom it should be conducted. Generally, it may be offensive or defensive in nature, is subject to ethical injunctions upon combatants, and requires collective assent before it can be initiated. Alternately, Sufis (*see* SUFISM) have conceived of the "greater jihad" as combat against inner impulses and evil desires that prevent seekers from attaining spiritual renewal and a more intimate experience of God (*see* MUJĀHADA).

The classical juristic formulations of jihad, based on the QUR'AN and HADITH, were shaped by the experience of building both a community and an empire in a world of warring tribes and states. It was considered to be a duty that could be fulfilled in four ways: by the heart, the tongue, the hand, and the sword. The first is the "greater jihad" of the Sufis. The propagation of Islam through the tongue and hand is accomplished in large measure by supporting what is right and correcting what is wrong. The jihad of the sword, sometimes called the "lesser jihad," is to physically combat unbelievers and enemies of Islam. Believers who died in combat became martyrs and were guaranteed an esteemed place in paradise among the blessed. People of the Book (AHL AL-KITĀB)—Christians and Jews in particular—were shown special consideration in the jihad code. They could embrace Islam, or if they agreed to submit to Islamic rulers by paying poll and land taxes, they could assume the status of a "protected" (*dhimmi*) community within the House of Islam (DĀR AL-ISLAM).

Through much of Islamic history, wars against other Muslim states as well as non-Muslim ones, even those with significant political overtones, were labeled jihads to rally support and delegitimize opponents. In the 18th and 19th centuries it was invoked by Islamic movements in many regions, including the WAHHĀBĪS in the Arabian Peninsula, the Algerians in northern Africa, USMAN DAN FODIO (d. 1817) in western Africa, the MAHDISTS of the Sudan, the followers of Ahmad Barelewi (d. 1831) in the Northwest Frontier Province (now Pakistan), and the NAQSHBANDĪYA Sufis in the Caucasus and China. During the 20th century jihad was transformed into an ideological weapon to combat western influences and secular national governments and to establish an ideal Islamic society. It inspired the radical Islamist organizations opposed to the Egyptian government and Israeli occupation of the West Bank and southern Lebanon. Even Iraq, with an avowed secular regime, used jihad in its propaganda campaign against coalition forces involved in the 1990–91 Persian Gulf war.

JĪLĪ, AL- \ʃl-jē-'lē\, in full 'Abd al-Karīm Qutb al-Dīn ibn Ibrāhīm al-Jīlī (b. 1365—d. c. 1424), mystic whose doctrines of the "perfect man" became popular throughout the Islamic world.

Little is known about al-Jīlī's personal life. Possibly after a visit to India in 1387, he studied in Yemen during 1393–1403. Of his more than 30 works the most famous is *Al-insān al-kāmil fī ma'rīfat al-awākhir wa'l-awā'il* (partial Eng. trans., R.A. Nicholson, *Studies in Islamic Mysticism*), which contains his complex doctrine of the perfect man. The work shows clearly the influence of the pantheistic Spanish mystic IBN AL-'ARABĪ (d. 1240).

Al-Jīlī maintained that the perfect man can achieve unity

with the Divine Being. This unity is experienced not only by the prophets, from ADAM to MUHAMMAD, but also by others who reach the highest level of being (*wujūd*) and become, as it were, the most select of the select. At this level all contradictions, such as being with non-being and vengeance with mercy, are resolved. In every age the perfect man manifests the outward appearance and inner essences of the Prophet Muhammad. The perfect man is thereby a channel through which the community can enjoy contact with the Divine Being. Al-Jīlī claimed that, in the town of Zabid in Yemen in 1393, he had met the Prophet Muhammad, who then manifested himself through al-Jīlī as SHAYKH, or spiritual leader. Al-Jīlī's doctrine of the perfect man later developed into a belief that all holy men and mystics were able to achieve contact and unity with God.

JIMMU \jēm-mü\, in full Jimmu Tennō \-ten-nō\, original name Kow-Yamato-Iware-Hiko no Mikoto, legendary first emperor of Japan and founder of the imperial dynasty. Japanese chronicles record that Jimmu, a descendant of the sun goddess AMATERASU and husband of a descendant of the storm god SUSANOO, moved eastward from Hyuga in 607 BCE along Japan's Inland Sea, subduing tribes as he went. Arriving in YAMATO, he established his center of power there. Modern historians agree that there was an aggressive movement of peoples from the west, but date it to the early Common Era.

Jimmu Tennō (the posthumous reign name by which he is generally known) is said to be buried in Unebi. A SHINTŌ shrine was erected there by the Japanese government in 1890, but he has never had much of a cult following, despite his importance as a link between the ruling family of Japan and the divine ancestors.

JINA: see TĪRTHĀNKARA.

JINASENA \ji-nə-'sā-nə\, in JAINISM, 9th-century DIGAMBARA monk, philosopher, and poet whose royal patron, Amoghavarṣa I, renounced his throne to become Jinasena's disciple late in life. Jinasena was a disciple of Vīrasena. His commentary on the *Kaṣāyaprabhṛta* (a canonical Jain work) is highly respected by Digambaras. His *Ādipurāṇa*, a HAGIOGRAPHY of Ṛṣabha and his two sons Bāhubali and Bharata, provides the first discussion of Jain domestic rites, as well as depicting and lending authority to the CASTE system existent among the Jain laity of his day.

JINJA \jēn-jä, Angl 'jin-jə\, in SHINTŌ, the place where the spirit of a deity is enshrined or to which it is summoned. Historically, *jinja* were located in places of natural beauty; in modern times, however, urban shrines have become common. Though they may vary from large

complexes of buildings to small roadside places of prayer, they generally consist of three units: (1) the *honden* (also called *shinden*), the main sanctuary, where the spirit of the deity is enshrined, normally approached only by the priests; here are offered the prayers which "call down" the KAMI and subsequently send it away; (2) the *heiden* (hall of offerings), or *norito-den* (hall for reciting prayers), where religious rites are performed by the priests; and (3) the *haiden* (hall of worship), where the devotees worship and offer prayers. Large shrines may have additional structures, such as the *kagura-den* (stage for ceremonial dance), *shamusho* (shrine office), *temizu-ya* (ABLUTION basin for washing hands and mouth before worshiping), and also *komainu* (statues of guardian animals) and *tōrō* (stone or bronze lanterns given as offerings). The sacred compound is demarcated by an entrance gateway, or TORII.

From the Meiji Restoration in 1868 to the end of World War II, Shintō shrines were governed by the home ministry and subsidized by government funds. Following the disestablishment of STATE SHINTŌ, and the constitutional prohibition of subsidies, the shrines have depended for support on the offerings of their parishioners and other worshipers and on revenue from tourism and local services such as kindergartens. Many priests work at second jobs to maintain themselves and their families.

JINN \jin\, singular jinni, also called genie, Arabic jinnī, in Arabic mythology, supernatural spirits below the level of ANGELS and devils. *Ghūl* (treacherous spirits of changing shape), 'IFRĪT (evil spirits), and *sī'lā* (treacherous spirits of invariable form) constitute classes of jinn. Jinn are beings of flame or air who are capable of assuming human or animal form and are said to dwell in inanimate objects, underneath the earth, in the air, and in fire. They possess the bodily needs of human beings and can be killed, but they are free from all physical restraints. Jinn delight in punishing humans for any harm done them, intentionally or not, and are said to be responsible for many diseases and all kinds of accidents; however, those knowing the proper magical procedure can exploit the jinn to their advantage.

Belief in jinn was common in early Arabia, where they were thought to inspire poets and soothsayers. MUHAMMAD originally feared that his revelations might be the work of jinn, and official ISLAM held that they, like human beings, would have to face eventual salvation or damnation. Jinn, especially through their association with magic, have always been favorite figures in North African, Egyptian, Syrian, Persian, and Turkish FOLKLORE and are the center of an immense popular literature. In India and Indonesia they have entered local Muslim imaginations by way of the Qur'anic descriptions and Arabic literature.

JINNAH, MUHAMMAD 'ALI \ˈji-nā, ˈji-nə\, *also called* Qā'id-e A'zam (Perso-Arabic: "Great Leader") (b. Dec. 25, 1876, Karāchi, India [Pakistan]—d. Sept. 11, 1948, Karāchi), Indian Muslim politician, founder and first governor-general (1947–48) of Pakistan.

Jinnah was the child of a prosperous merchant who sent him to England to acquire business experience. Jinnah, however, had made up his mind to become a barrister. He completed his formal studies in London and also made a study of the British political system, frequently visiting the House of Commons, being especially influenced by the liberalism of William E. Gladstone. Jinnah also took a keen interest in the affairs of India and in Indian students and worked in the campaign of the PARSİ leader Dadabhai Naoroji, a leading Indian nationalist who was the first Indian to sit in the British House of Commons.

Jinnah returned to India in 1896 and started his legal practice in Bombay. He first entered politics by participating in the 1906 Calcutta session of the Indian National Congress. Four years later he was elected to the Imperial Legislative Council. Admiration for British political institutions and an eagerness to raise the status of India in the international community and to develop a sense of Indian nationhood among the peoples of India were the chief elements of his politics. At that time, he still looked upon Muslim interests in the context of Indian nationalism.

But, by the beginning of the 20th century, the conviction had been growing among the Muslims that their interests demanded the preservation of their separate identity rather than amalgamation in the Indian nation that would for all practical purposes be Hindu. Largely to safeguard Muslim interests, the All-India Muslim League was founded in 1906, and Jinnah joined it in 1913. When the Indian Home Rule League was formed, he became its chief organizer in Bombay and was elected president of the Bombay branch.

Jinnah consistently worked to bring about the political union of Hindus and Muslims. It was largely through his efforts that the Congress and the Muslim League began to hold their annual sessions jointly, to facilitate mutual consultation and participation. In 1916 the two organizations held their meetings in Lucknow, where the Lucknow Pact was concluded. Under the terms of the pact, the two organizations put their seal to a scheme of constitutional reform that became their joint demand vis-à-vis the British government.

Meanwhile, a new force in Indian politics had appeared in the person of MOHANDAS K. GANDHI. Opposed to Gandhi's Non-cooperation Movement and his essentially Hindu approach to politics, Jinnah left both the League and the Congress in 1920. After his withdrawal from the Congress, he used the Muslim League platform for the propagation of his views. When the failure of the Non-cooperation Movement and the emergence of Hindu revivalist movements led to antagonism and riots between the Hindus and Muslims, the league gradually began to come into its own. Among Jinnah's problems during the following years was to convince the Congress, as a prerequisite for political progress, of the necessity of settling the Hindu-Muslim conflict.

To bring about such a rapprochement was Jinnah's chief purpose during the late 1920s and early 1930s. He called for a federal form of government, greater rights for minorities, one-third representation for Muslims in the central legislature, separation of the predominantly Muslim Sind region from the rest of the Bombay province, and the introduction of reforms in the North-West Frontier Province. Many Muslims, however, thought that he was too nationalistic in

his policy and that Muslim interests were not safe in his hands, while the Indian National Congress would not even meet the moderate Muslim demands halfway. The Punjab Muslim League repudiated his leadership and organized itself separately. In disgust, Jinnah decided to settle in England. From 1930 to 1935 he was in London, devoting himself to practice before the Privy Council. But when constitutional changes were in the offing, he was persuaded to return home to head a reconstituted Muslim League.

Soon preparations started for the elections under the Government of India Act of 1935. In the elections of 1937 the Congress obtained an absolute majority in six provinces, and the league did not do particularly well. The Congress decided not to include the league in the formation of provincial governments, and exclusive all-Congress governments were the result. Relations between Hindus and Muslims started to deteriorate.

Jinnah had originally been dubious about the practicability of Pakistan, an idea that Sir MUHAMMAD IQBĀL had propounded to the Muslim League conference of 1930; but before long he became convinced that a Muslim homeland on the Indian subcontinent was the only way of safeguarding Muslim interests. Accordingly he converted the Muslim League into a powerful instrument for unifying the Muslims into a nation. On March 22–23, 1940, in Lahore, the league adopted a resolution to form a separate Muslim state, Pakistan. Pitted against Jinnah were men of the stature of Gandhi and Jawaharlal Nehru, but ultimately both the Congress and the British government had no option but to agree to the partitioning of India. Pakistan thus emerged as an independent state in 1947. Jinnah became the first head of the new state.

JĪVA \ˈjē-və\ (Sanskrit: "life essence"), according to the philosophy of JAINISM, "living sentient substance," or "SOUL," as opposed to *ajīva*, or "nonliving substance."

Souls are eternal and infinite in number and are not the same as the bodies that they inhabit. In a pure state (*mukta-jīva*), souls rise to the top of the universe, where they reside with other perfected beings and are never again reborn. Most souls are, however, bound to SAMSĀRA (mundane earthly existence) because they are covered with a thin veil of good or bad KARMA, which is conceived as a kind of matter, accumulated by the emotions in the same way that oil accumulates dust particles.

Jīvas are categorized according to the number of sense organs that they possess. Humans, gods, and DEMONS possess the five sense organs plus intellect. Minute clusters of invisible souls, called *nigodas*, belong to the lowest class of *jīva* and possess only the sense of touch, share common functions such as respiration and nutrition, and experience intense pain. The whole space of the world is packed with *nigodas*. They are the source of souls to take the place of the infinitesimally small number that have been able to attain MOKṢA.

Hindu thinkers also employ the term *jīva*, using it to designate the soul or self that is subject to embodiment. Since many Hindu schools of thought do not regard selfhood as intrinsically plural, however, they typically understand these individual *jīvas* as parts, aspects, or derivatives of the unifying ontological principle ĀTMAN, which is in turn identified with BRAHMAN. In this usage, *jīva* is short for *jīva-ātman*, an individual living being. Schools differ as to whether the relation between *jīvas* and *ātman*/Brahman should be understood as nondual (ADVAITA), nondual in a qualified way (VIŚIṢṬĀDVAITA), or simply dual (DVAITA).

JIZŌ \jē-'zō\; see KṢITIGARBHA.

JIZYA \jiz-yə\, also spelled *jizyah*, head or poll tax that early Islamic rulers demanded from their non-Muslim subjects.

Islamic law made a distinction between two categories of non-Muslim subjects—pagans and *dhimmis* (“protected peoples,” or “peoples of the book” [AHL AL-KITAB]; *i.e.*, those peoples who based their RELIGIOUS BELIEFS on sacred texts, such as Christians, Jews, and Zoroastrians). The Muslim rulers tolerated the *dhimmis* and allowed them to practice their religion. In return for protection and as a mark of their submission, the *dhimmis* were required to pay a special poll tax known as the *jizya*. The rate of taxation and methods of collection varied greatly from province to province and were greatly influenced by local pre-Islamic customs. In theory the tax money was to be used for charitable purposes and the payment of salaries and pensions. In practice, however, the revenues derived from the *jizya* were deposited in the private treasuries of the rulers. The Ottomans usually used the proceeds of the *jizya* to pay their military expenses.

A convert to ISLAM, in theory, was no longer required to pay the *jizya*. The Umayyad CALIPHS (661–750), however, faced with increasing financial difficulties, demanded the *jizya* from recent converts to Islam as well as from the *dhimmis*. This discrimination against converts was a cause of the Abū Muslim rebellion (747) in Khorāsān and helped to precipitate the downfall of the Umayyads.

JÑĀNA \gnā-nə, 'gnyä-\ (“knowledge”), in Hindu philosophy, a word with a range of meanings focusing on a cognitive event that proves not to be mistaken. In the religious realm it especially designates the sort of knowledge that is a total experience of its object, particularly the supreme being or reality, as contrasted with *vijñāna*, “knowing one thing from another,” or “practical knowledge.” The total cognitive experience of the supreme object sets the soul free from the transmigratory life and the polarities this imposes upon thought. Its opposite, *ajñāna* (also called *avidyā*), is the false apprehension of reality that keeps the soul from attaining release; it is a form of mistaken knowledge, which has a large measure of validity as far as the realities of the present world are concerned but conceals the truth of a reality outside it.

In the BHAGAVAD GĪTĀ, *jñāna yoga* (“the discipline of knowledge”) is recognized as one of three complementary paths to religious fulfillment. It centers on the recognition of the distinction between the perduring self and its transitory embodiments, a recognition fundamentally facilitated by the presence of the divine KRISHNA, who reorients the knowledge of his doubting interlocutor and ultimate devotee, ARJUNA.

JÑĀNEŚVAR \dnyä-'nāsh-wər, gnyä-\, also called *Jñānadeva*, or *Dhyānadev* (b. c. 1271–75, India—d. 1296, Alandi, India), foremost among the mystical poets of Maharashtra, and composer of the *Bhāvārthadīpikā* (popularly known as the *Jñāneśvarī*), a translation and commentary in Marathi oral verse on the Sanskrit classic BHAGAVAD GĪTĀ. *Jñāneśvar* was both a Vārkarī, a devotee of the Vaiṣṇava (see VAISNAVISM) deity Viṭṭhal (Viṭhobā), and a practitioner of the Śaiva (see ŚAIVISM) YOGA of the Nāths. Born into a family that had renounced society (SANNYĀSĪ), *Jñāneśvar* was considered an outcaste when his family returned to Alandi after years of living in seclusion. To reinstate their socio-religious status,

the family obtained a certificate of purity from a Brahmin council in the village of Paithan. Poems attributed to another Marathi poet, NĀMDEV, provide the oldest description of *Jñāneśvar*'s life. Three collections of *Nāmdev*'s songs describe *Jñāneśvar*'s birth and meeting with *Nāmdev*, their travels together through northern India to holy sites, and his entrance into what his followers believe to be a deathless state of meditation (SAMĀDHI) at Alandi. There is a small temple at Alandi where the saint is entombed.

Jñāneśvar, along with *Nāmdev*, is placed historically at the emergence of the Vārkarī (“Pilgrim”) devotional school, a 700-year-old sect particular to Maharashtra that conducts annual circumambulatory PILGRIMAGES throughout Maharashtra, culminating at the Viṭṭhal temple in PANDHARPUR in early July. *Jñāneśvar* composed the *Amṛtānubhāva*, a work on Upanishadic philosophy, and the *Haripāṭha*, a song praising the name of Hari (VISHNU). His siblings, two brothers, Nivr̥ttināth and Sopānadev, and particularly his sister Muktābāī, are themselves highly respected saints of the Vārkarī tradition.

JOAB \jō-'ab\ (fl. 1000 BCE), in the OLD TESTAMENT, a military commander under King DAVID, who was David's maternal uncle (2 Samuel 2:13). Joab led the party that captured Jerusalem and as a reward was appointed commander in chief of the army (1 Chronicles 11:6). He played a leading part in many of David's victories (2 Samuel 10:7; 12:26) and led the force that crushed the rebellion of David's son ABSALOM; subsequently he killed Absalom, although David had commanded that his life be saved (2 Samuel 18:5, 14). Joab showed his characteristic ruthlessness in the murder of two of his potential rivals, Abner and Amasa (2 Samuel 3:26–30; 20:9–10; 1 Kings 2:5). During David's last days, Joab supported the abortive bid for the throne by David's son Adonijah (1 Kings 1:5–8) and was executed by the successful SOLOMON (1 Kings 2:28–35).

JOACHIM OF FIORE \yō-'ä-kēm . . . 'fyō-rā\, Fiore also spelled Floris, Italian Gioacchino da Fiore (b. c. 1130/35, Celico, Kingdom of Naples [Italy]—d. 1201/02, Fiore), Italian mystic, theologian, biblical commentator, philosopher of history, and founder of the monastic order of San Giovanni in Fiore.

Joachim, after a PILGRIMAGE to the Holy Land, became a CISTERCIAN monk at Sambucina and in 1177 ABBOT of Corazzo (Sicily). About 1191 he retired into the mountains to follow the CONTEMPLATIVE life. Although claimed as a fugitive by the Cistercians, Joachim was allowed by Pope Celestine III to form the disciples who gathered around him into the Order of San Giovanni in Fiore in 1196.

He was summoned by Pope Lucius III in 1184 and urged to press on with the biblical EXEGESIS he had begun. This probably refers to the *Liber concordie Novi ac Veteris Testamenti* (“Book of Harmony of the New and Old Testaments”), in which Joachim worked out his philosophy of history, primarily in a pattern of “twos”—the concords between the two great dispensations (or Testaments) of history, the Old and the New. But already Joachim's spiritual experience was creating in his mind his “pattern of threes.” If the *spiritualis intellectus* springs from the letter of the OLD TESTAMENT and NEW TESTAMENT, then history itself must culminate in a final age of the spirit that proceeds from both the previous ages. Thus was born his trinitarian philosophy of history in which the three Persons are, as it were, built into the time structure in the three ages or *status* of the Father, Son, and HOLY SPIRIT.

In the *Expositio in Apocalypsim* ("Exposition of the Apocalypse"), Joachim seeks to probe the imminent crisis of evil, as pictured in the apocalyptic symbols of ANTI-CHRIST, and the life of the spirit to follow. His third main work, the *Psalterium decem chordarum* ("Psaltery of Ten Strings"), expounds his doctrine of the TRINITY through the symbol of a 10-stringed psalter. Here and in a lost tract he attacked the doctrine of "quaternity" (an overemphasis on the "one essence" of the Godhead that seems to separate it from the three Persons of the Trinity and so create a fourth), which he attributed to PETER LOMBARD.

Joachim's visual imagination is expressed in the unique *Liber figurarum* ("Book of Figures"; discovered in 1937), a book of drawings and figures thought to be a genuine work by most Joachim scholars today. Here his vision of the culminating age of history is embodied in trees that flower and bear fruit luxuriantly at the top; his doctrine of the Trinity is expressed in remarkable geometric figures.

In his lifetime Joachim was acclaimed as a prophet, gifted with divine illumination, and this is how he was seen by the first chroniclers after his death, though the condemnation of his tract against Peter Lombard by the fourth LATERAN COUNCIL in 1215 dimmed his reputation for a time. The Spiritual FRANCISCANS at mid-13th century and various other FRIARS, monks, and sects down to the 16th century appropriated his PROPHECY of a third age, but the debate as to whether he was orthodox or heretic continues today.

JOAN, POPE \ˈjɒn\, legendary female pontiff who supposedly reigned, as John VIII, for slightly more than 25 months, from 855 to 858, between the pontificates of Leo IV (847–855) and Benedict III (855–858). It has subsequently been proved that a gap of only a few weeks fell between Leo and Benedict and that the story is entirely apocryphal.

One of the earliest extant sources for the Joan legend is the *De septem donis Spiritu Sancti* ("The Seven Gifts of the Holy Spirit"), written by the 13th-century French DOMINICAN Stephen of Bourbon, who dated Joan's election to approximately 1100. In this account the nameless pontiff was a clever scribe who became a papal notary and later was elected pope; pregnant at the time of her election, she gave birth during the PROCESSION to the Lateran, whereupon she was dragged out of Rome and stoned to death.

The story was widely spread during the later 13th century, mostly by FRIARS. Support for the version that she died in childbirth and was buried on the spot was derived from the fact that in later years papal processions used to avoid a particular street, allegedly where the event had occurred.

The name Joan was not finally adopted until the 14th century; other names commonly given were Agnes or Gilberta.

According to later legend Joan was an Englishwoman, but her birthplace was given as the German city of Mainz—an apparent inconsistency that some writers reconciled by explaining that her parents migrated to that city. She supposedly fell in love with an English Benedictine monk and, dressing as a man, accompanied him to Athens. Having acquired great learning, she moved to Rome, where she became CARDINAL and pope. From the 13th century the story appears in literature, including the works of the Benedictine chronicler Ranulf Higden and the Italian humanists Giovanni Boccaccio and Petrarch.

In the 15th century, Joan's existence was regarded as fact, even by the COUNCIL OF CONSTANCE in 1415. During the 16th and 17th centuries the story was used for Protestant polemics. It was the Calvinist David Blondel who made the first determined attempt to destroy the fable in his *Éclaircissement familier de la question: Si une femme a été assise au siège papal de Rome* (1647; "Familiar Enlightenment of the Question: Whether a Woman Had Been Seated on the Papal Throne in Rome").

JOAN OF ARC, SAINT \ˈjɒn ... ˈɑːrk\, French Jeanne d'Arc \zhän-ˈdɑːrk\, byname The Maid of Orléans (b. c. 1412, Domrémy, Bar, France—d. May 30, 1431, Rouen; canonized May 16, 1920; feast day May 30; French national holiday, second Sunday in May), national heroine of France, a peasant girl who, believing that she was acting under divine guidance, led the French army in a momentous victory at

Orléans that repulsed an English attempt to conquer France during the Hundred Years' War. Captured a year afterward, Joan was burned by the English and their French collaborators as a heretic. She became the greatest national heroine of France; her achievement was a decisive factor in the awakening of French national consciousness.

JOB, THE BOOK OF \ˈjɒb\, OLD TESTAMENT book that is often counted among the masterpieces of world literature. It is found in the third section of the biblical canon known as the KETUBIM, or Writings. The book's theme is the eternal problem of unmerited suffering, and it is named after its central character, Job, who attempts to understand the sufferings that engulf him.

The Book of Job may be divided into two sections of prose narrative, consisting of a prologue (Chapters 1–2) and epilogue (Chapter 42:7–17); and intervening poetic disputation (Chapters 3–42:6). The prose narratives date to before the 6th century BCE, and the poetry has been dated be-

Satan leaves the presence of God to test Job, engraving by William Blake, 1825, for an illustrated edition of the Book of Job

By courtesy of the trustees of the British Museum—photograph, J.R. Freeman & Co., Ltd.

tween the 4th and the 6th century BCE. Chapters 28 and 32–37 were probably later additions.

The poetic disputations are set within the prose framework of an ancient legend that originated outside ISRAEL. This legend concerns Job, a prosperous man of outstanding piety. SATAN tests whether or not Job's piety is rooted merely in his prosperity. But faced with the appalling loss of his possessions, his children, and finally his own health, Job still refuses to curse God. Three of his friends then arrive to comfort him, and at this point the poetic dialogue begins, which probes the meaning of Job's sufferings. Job proclaims his innocence and the injustice of his suffering, while his friends argue that Job is so afflicted because of personal SIN. A final conversation between Job and God resolves the dramatic tension without, however, solving the problem of undeserved suffering. The speeches evoke Job's trust in the purposeful activity of God in the world, even though God's ways remain mysterious and inscrutable.

JOHANAN BEN ZAKKAI \jō-'ha-nən-ben-'za-kā-ī, -zā-'ki\, one of the most important early rabbinic authorities, who was active during the last years of the Second TEMPLE OF JERUSALEM and, after its destruction (70 CE), was founder and head of the rabbinic academy at Jamnia (now Yibna). He is named as the final link in the chain of authorities in Mishnah Abot that begins with MOSES and concludes with the early rabbinic movement. He is said to have received the traditions of the oral TORAH from Shammai and HILLEL, the latter of whom called him "father of wisdom" and "father of the coming generations" (Y. Nedarim 39b).

Later sources speak of Johanan's importance as a teacher of the leading 2nd-century sages and as a principal authority in establishing the foundations of the MISHNAH. But the Mishnah itself quotes in his name only a few matters of law concerning cultic cleanness and, in several cases, related to the impact of the destruction of the Temple on liturgical practices. Later Talmudic sources add a large number of stories about his life and work, commenting frequently on his piety. Among these materials, perhaps most famous is the depiction of his actions during the war with Rome in 70 CE. Unable to convince the Jews of Jerusalem to give up their fight for freedom from Roman dominion, Johanan reportedly escaped the besieged city in a coffin and went to the Roman camp. There he met with Vespasian, whom he announced would be made emperor of Rome, a prediction that almost immediately was fulfilled. In recognition of his wisdom, Vespasian is said to have granted Johanan the right to establish at Jamnia a center for study and religious observance (B. Gittin 56a–b).

Johanan is noted for his teaching (M. Abot 2:8), "If you have learned much Torah, do not puff yourself up on that account, for it was for that purpose that you were created." His devotion to study and piety is depicted at B. Sukkah 28a:

They said about Rabban Yohanan ben Zakkai: He never engaged in idle chatter, he never went four cubits without words of Torah and without wearing his phylacteries, no one ever got to the study house before him, he never slept in the study house, neither a real nap nor a snooze, he never reflected upon holy matters while in filthy alleys, he never left anyone behind him in the study house when he went out, no one ever found him sitting and dreaming, but only sitting and repeating traditions, only he himself opened the door of his

house for his disciples, he never said anything that he had not heard from his master, and he never said, "Time has come to arise from studying in the study house," except for doing so on the eve of Passover and on the eve of the Day of Atonement [when liturgical obligations required this]. And that is how R. Eliezer, his disciple, conducted himself after him.

JOHN OF DAMASCUS, SAINT, *also called* Saint John Damascene, *Latin* Johannes Damascenus (b. c. 675, Damascus—d. Dec. 4, 749, near Jerusalem; Western feast day December 4), Eastern Christian monk and doctor of the Greek and Latin churches who stood in the forefront of the ICONOCLASTIC CONTROVERSY and was also a preeminent intermediary between Greek and medieval Latin cultures.

John of Damascus succeeded his father as one of the Muslim caliph's tax officials, and while still a government minister he wrote three *Discourses on Sacred Images*, c. 730, defending their veneration against the Byzantine emperor Leo III and the Iconoclasts. The Iconoclasts obtained a condemnation of John at the Council of Hieria in 754 that was reversed at the second COUNCIL OF NICAIA in 787.

Soon after 730, John became a monk at Mar Saba, near Jerusalem, and there passed the rest of his life studying, writing, and preaching, acquiring the name "the Golden Orator" (Greek: Chrysorrhōas, literally "the Golden Stream"). Among his approximately 150 written works the most significant is *Pēgē gnōseōs* ("The Source of Knowledge"), a synthesis of Christian philosophy and doctrine that was influential in directing the course of medieval Latin thought and that became the principal textbook of Greek Orthodox theology. Its "Exposition [*Ekthesis*] of the Orthodox Faith," through its translation into oriental languages and Latin, served both Eastern and Western thinkers not only as a source of logical and theological concepts but also, by its systematic style, as a model for subsequent theological syntheses by medieval Scholastics in the West.

A counterpart to *The Source of Knowledge* is John's anthology of moral exhortations, the *Sacred Parallels*, culled from biblical texts and from writings of the CHURCH FATHERS. Among his literary works are several intricately structured HYMNS for the Greek liturgy, although his reputation in liturgical poetry rests largely on his revision of the Eastern Church's hymnal, the *Octoēchos*.

JOHN OF THE CROSS, SAINT, *original name* Juan de Yepes y Álvarez (b. June 24, 1542, Fontiveros, Spain—d. Dec. 14, 1591, Ubeda; canonized 1726; feast day December 14), one of the greatest Christian mystics and Spanish poets, doctor of the church, reformer of Spanish MONASTICISM, and cofounder of the order of Discalced CARMELITES.

John became a Carmelite monk at Medina del Campo, Spain, in 1563 and was ordained a priest in 1567. ST. TERESA OF ÁVILA enlisted his help (1568) in her restoration of Carmelite life to its original observance of austerity. A year later, at Duruelo, he opened the first Discalced Carmelite monastery. Reform, however, caused friction within the order and led to his imprisonment in 1576 and again in 1577 at Toledo, where he wrote some of his finest poetry. Escaping in 1578, he later won high office in the order, becoming vicar provincial of Andalusia from 1585 to 1587. Late in his life the Discalced Carmelites were again troubled by disension, and he withdrew to absolute solitude.

John schematized the steps of mystical ascent—a self-communion that in quietude leads the individual from the

distractions of the world to the sublime peace of reunion between the soul and God. John's schematization combines a poetic sensitivity for the nuances of mystical experience with a theological and philosophical precision guided by his study of ST. THOMAS AQUINAS. By virtue of his intense poems such as "Cántico espiritual" ("The Spiritual Canticle") and "Noche obscura del alma" ("The Dark Night of the Soul"), he achieves preeminence in Spanish mystical literature, expressing the experience of the mystical union between the soul and Christ.

JOHN PAUL II, POPE, *Latin* Johannes Paulus, *original name* Karol Wojtyła (b. May 18, 1920, Wadowice, Pol.—d. April 2, 2005, Vatican City), pope from 1978 to 2005, the first non-Italian pope in 455 years and the first from a Slavic country. A charismatic and popular figure, he was known for his traditional teachings on personal and sexual morality, his anticommunism, and his overtures to other religions, especially JUDAISM.

Wojtyła studied for the PRIESTHOOD at an underground seminary in Kraków during World War II; he was ordained in 1946. In 1948 he earned two doctoral degrees, one in philosophy and the other in sacred THEOLOGY. He became archbishop of Kraków in 1964 and cardinal in 1967. He was elected pope on Oct. 16, 1978. In 1981 he was shot in St. Peter's Square by a Turkish gunman, but he recovered and forgave his would-be assassin.

John Paul made numerous trips abroad, where his outdoor masses and sermons attracted some of the largest crowds ever assembled. His messages of nonviolence, democracy, and respect for human rights aided the Solidarity movement in communist Poland and were credited with contributing to the peaceful dissolution of the Soviet Union in 1991. He also championed economic and political justice in the West and in developing countries. Hoping to strengthen the Catholic faith in many cultures, he canonized numerous saints from non-Western regions and more saints altogether than had any of his predecessors.

His ecumenical efforts included meetings with Jewish, Muslim, Eastern Orthodox, and Protestant religious leaders; he was the first pope to enter the Great SYNAGOGUE in Rome and the first pope to enter a MOSQUE. In 2000 he made a historic pilgrimage to Jerusalem, where he prayed at the WESTERN WALL.

John Paul maintained the church's traditional prohibitions against the ORDINATION of women and clerical marriage. He also took steps to curb LIBERATION THEOLOGY, which he regarded as too closely allied with Marxism. His positions on issues such as artificial contraception and homosexuality alienated some segments of the laity.

His centralized style of church governance was perceived by some clergy as autocratic and stifling. Despite his enormous popularity, he failed to stem the long-standing decline in vocations and church attendance, and late in his reign he was faulted for not dealing effectively with revelations of sexual abuse committed by priests. In 2005 Pope BENEDICT XVI allowed the cause of John Paul II for beatification and CANONIZATION to proceed without the usual five-year waiting period.

JOHN THE APOSTLE, SAINT, *also called* Saint John the Evangelist, *or* Saint John the Divine (fl. 1st century CE), in Christian tradition, the author of three letters, the Fourth Gospel, and the REVELATION TO JOHN in the NEW TESTAMENT. He played a leading role in the early church at Jerusalem.

The son of Zebedee, a fisherman, and Salome, John and

his brother JAMES were among Jesus' first disciples. In the Gospel According to Mark, John is always mentioned after James and was no doubt the younger brother. His mother was among the women who ministered to the circle of disciples. John, James, and Simon Peter formed an inner nucleus of intimate disciples. In the Fourth Gospel the sons of Zebedee are mentioned only once, as being at the shores of the lake of Tiberias when the risen Lord appeared; whether the "disciple whom Jesus loved" (who is never named) mentioned in this Gospel is to be identified with John (also not named) is not clear from the text.

John's authoritative position in the church after the RESURRECTION is shown by his visit with PETER to Samaria to lay hands on the new converts there. It is to Peter, James (not the brother of John but "the brother of Jesus"), and John that PAUL submitted his Gospel for recognition.

John's subsequent history is obscure and passes into legend. At the end of the 2nd century, Polycrates, bishop of Ephesus, claims that John's tomb is at Ephesus, identifies him with the beloved disciple, and adds that he "was a priest, wearing the sacerdotal plate, both martyr and teacher." That John died in Ephesus is also stated by IRENAEUS, bishop of Lyon c. 180 CE, who says that John wrote his Gospel and letters at Ephesus and his Revelation at Patmos.

Legend was also active in the West, being especially stimulated by the passage in Mark 10:39, with its hints of John's martyrdom. TERTULLIAN reports that John was plunged into boiling oil from which he miraculously escaped. This event is still annually commemorated on May 6. John's feast day otherwise is December 27. The belief that John did not die is based on an early tradition. In the original form of the apocryphal Acts of John (second half of the 2nd century) the Apostle dies; but in later traditions he is assumed to have ascended to heaven like ELIJAH.

The legends that contributed most to medieval ICONOGRAPHY are mainly derived from the Acts of John, the source of the notion that John became a disciple as a young man. Iconographically, the young, beardless type came to be preferred in the medieval West. In the Byzantine world the evangelist is portrayed as old, with long, white beard and hair, usually carrying his Gospel. His symbol as an evangelist is an eagle. Because of the inspired visions of the book of Revelation the Byzantine churches called him "the Divine," a title which appears in Byzantine manuscripts of Revelation but not of the Gospel. John is also titled "the Theologian," as expositor of the doctrine of the TRINITY.

JOHN THE BAPTIST, SAINT (b. Judaea—fl. early 1st century CE), Jewish prophet of priestly origin who preached the imminence of God's Final Judgment and baptized those who repented in self-preparation for it; he is revered in the Christian church as the forerunner of JESUS CHRIST.

The sources of information about John are the GOSPELS (Matthew, Mark, Luke, and John), THE ACTS OF THE APOSTLES, and JOSEPHUS' *Antiquities of the Jews*. The Gospels recognize in John the forerunner of Jesus and the herald of the KINGDOM OF GOD. Each tries to reconcile John's precedence in time and Jesus' acceptance of his message and of BAPTISM from his hands (elements suggesting subordination to John) with the author's belief in Jesus as the MESSIAH and the Son of God. In the Gospels of Matthew and Mark, John is the prophet ELIJAH returned; in Luke's Gospel and his Acts of the Apostles, John is the inaugurator of the time of fulfillment of PROPHECY. John reduces the Baptist to a model Christian preacher and omits Jesus' baptism.

John was born in Judaea to Zechariah, a priest of the or-

der of Abijah, and his wife, Elizabeth, perhaps a relative of MARY, the mother of Jesus. His formative years were spent in the Judae-an desert, where monastic communities, such as the ESSENES, and individual HERMITS often educated the young in their own ideals. In 27/28 or 28/29 John attained public notice as a prophet. His austere camel-hair garment was the traditional garb of the prophets, and his diet of locusts and wild honey represented either strict adherence to Jewish purity laws or the ascetic conduct of a NAZIRITE. His message was that God's wrathful judgment on the world was imminent and that the people should repent their SINS, be baptized, and produce appropriate fruits of repentance.

Although John had an inner circle of disciples, baptism was not a rite of admission into this group. Instead it symbolized repentance in preparation for the coming judgment; it was to be accompanied, both before and after, by a righteous life. It was hardly conceived as a SACRAMENT in the Christian sense, and the Jewish rite of baptism of converts differs fundamentally from it and is not its source. John's baptism probably symbolized not so much anticipated entrance into the Kingdom of God as submission to the coming world judgment, which was represented as a coming second "baptism" by the HOLY SPIRIT in a river of fire.

The discovery of the DEAD SEA SCROLLS has drawn attention to the numerous parallels between John's mission and that of the Essenes, with whom John may have received some of his religious training. Both were priestly in origin, ascetic, and with intense and similar expectations about the end of the world. But John neither belonged to nor intended to found any organized community; he did not stress study of the Mosaic Law; and his message was more widely directed than was that of the Essenes.

Jesus, who was baptized by John, saw in him the last and greatest of the prophets, the one who prepared for the coming of God's Kingdom (Mark 9, Matthew 11, Luke 7), and in many ways his ministry continued and developed that of John. Whether John, who probably expected a divine Son of Man, recognized him in Jesus is not clear, but many of his disciples later followed Jesus.

Some time after baptizing Jesus, John was imprisoned and executed by Herod Antipas, ruler of Galilee and central Transjordan. Herod had married (illegally, by Jewish law) Herodias, the divorced wife of his half brother, after divorcing his first wife, the daughter of King Aretas IV of the Nabataeans. John's denunciation of this marriage doubtless convinced Herod of the danger that his Jewish subjects would combine with his semi-Arab subjects in opposition to him. According to the Gospel (Matthew 14:1–12; Mark

St. John the Baptist, fresco by Pinturicchio, 1504–05; in the chapel of St. John the Baptist, the cathedral of Siena, Italy
Alinari—Art Resource

6:14–29), Herod's stepdaughter, Salome, prompted by her mother Herodias, demanded John's head as a reward for dancing for Herod and his guests. It is probable that John's followers recovered and buried his body and revered his tomb. The traditional burial site, at Sebaste (originally Samaria), is attested from 360 onward. In 35–36, Herod was defeated by Aretas, an event popularly considered to have been divine vengeance for killing John.

JOHN XXIII, POPE, *original name* Angelo Giuseppe Roncalli (b. Nov. 25, 1881, Sotto il Monte, Italy—d. June 3, 1963, Rome; beatified Sept. 3, 2000; feast day October 3), one of the most popular popes of all times (reigned 1958–63), who inaugurated a new era of the ROMAN CATHOLIC church by his openness to change, shown especially in his convoking of the SECOND VATICAN COUNCIL.

Roncalli began preparing for the PRIESTHOOD at age 11. He was sent to Rome for theological studies in 1900. After a period of military service he was ordained on Aug. 10, 1904. He returned to Rome for further study, eventually receiving a doctorate in CANON LAW.

For most of his life Roncalli toiled in relative obscurity, first as director of the Italian organization for the support of foreign MISSIONS, then as apostolic visitor to Bulgaria (1925–35), and finally as apostolic delegate to Greece. In 1944 Roncalli, by now an archbishop, was named papal nuncio to Charles de Gaulle's newly liberated France. The post was particularly delicate, as Roncalli's predecessor had cooperated with the hated Vichy government and there was a growing trend of radicalism among the younger French clergy. His success in this assignment was acknowledged by the PAPACY when he was named a CARDINAL by PIUS XII. In 1953, at age 71, he was appointed Patriarch of Venice. After the death of Pius XII on Oct. 9, 1958, he was elected pope on the 12th ballot—a compromise candidate acceptable because of his advanced years.

Soon after his coronation, John XXIII announced plans for an ecumenical council, the first in almost a century. He was the first pope since the REFORMATION to acknowledge that Catholicism was in need of reform. Some cardinals sought to delay the council until the pope's death, when the project could be quietly dropped, but John pushed on with his plan. He presided over the first session of the Second Vatican Council in the fall of 1962.

The council was a pastoral one. No new dogmas were to be pronounced, though old teachings were to be reexamined. The council was to work toward achieving Christian unity by putting aside past hostilities and acknowledging a share of responsibility for a divided CHRISTIANITY. John received EASTERN ORTHODOX, Anglican [*see AN-*

GLICAN COMMUNION), and PROTESTANT religious leaders with cordiality and made sure that they were invited to send observers to the Vatican Council. He removed certain words offensive to Jews from the liturgy of the church. He played down his own position as ruler of the Vatican, emphasizing his role as "servant of the servants of God."

During the Cuban missile crisis of 1962, he publicly urged the United States and the Soviet Union to exercise restraint. His major ENCYCLICAL, *Pacem in Terris* ("Peace on Earth"), set forth the requirements for world peace in profoundly human terms. John suggested that peaceful coexistence between the West and the Communist East was not only desirable but was actually necessary if humankind was to survive. After his death in 1963 John's successor, PAUL VI, instituted formal proceedings that could lead to his CANONIZATION.

JONATHAN \ˈjə-nə-thən\, in the OLD TESTAMENT (1 and 2 Samuel), eldest son of King Saul; he is highly admired for his fidelity to the future king DAVID.

Jonathan's defeat of the Philistines at Geba is described in 1 Samuel 13:2. Later he and his armor bearer took the outpost at Michmash. The Israelites then attacked and defeated the Philistines. SAUL ordered a fast, but the absent Jonathan, unaware of the order, ate wild honey. When Saul asked God about the war and got no answer, Saul blamed the silence on Jonathan's failure to fast. Jonathan was saved from death when he was ransomed by Saul's own soldiers.

When David joined Saul's household, he and Jonathan became friends. After Saul turned against David, Jonathan strove to reconcile them. Saul tried to enlist Jonathan's aid to kill David, but Jonathan warned David instead. When the two met for the last time, they planned that David would be the next king of Israel and Jonathan his minister.

Saul, Jonathan, and Jonathan's brothers were killed in a battle against the Philistines at Mt. Gilboa. Despoiled and exposed by the Philistines, the bodies were buried in Jabesh. Years later, David reentered the remains in the tomb of Kish in the land of BENJAMIN.

JONES, JIM \ˈjɒnz\, byname of James Warren Jones (b. May 13, 1931, near Lynn, Ind., U.S.—d. Nov. 18, 1978, Jonestown, Guyana), American leader of the Peoples Temple, a NEW RELIGIOUS MOVEMENT, some 900 of whose members died in a mass murder-suicide known as the Jonestown Massacre (Nov. 18, 1978).

Jones began the Peoples Temple informally in the 1950s as an independent congregation in Indianapolis, Ind. Inspired by the ideal of a just society and mixing social concerns with FAITH HEALING and an enthusiastic worship style, he attracted mostly African-Americans to the group, though Jones himself was white. In 1965 he moved the church to northern California. Following accusations by journalists and defectors that he was defrauding church members, Jones and hundreds of his followers emigrated to Guyana and set up the Jonestown commune there in 1977.

On Nov. 14, 1978, U.S. Rep. Leo Ryan of California arrived in Guyana with a group of newsmen and relatives of church members to conduct an unofficial investigation of alleged abuses. As Ryan's party and 14 defectors prepared to return to the U.S. from an airstrip near Jonestown, Ryan and 4 others were killed by Jones' followers. The same day, the vast majority of church members obeyed Jones' command to drink cyanide-laced fruit punch. Jones died of a gunshot wound to the head, possibly self-inflicted. The death toll at Jonestown included 276 children.

JÖRD \ˈjœrð\ (Old Norse: "Earth"), also called Fjörgyn \ˈfyœr-gin\, or Hlóðyn \ˈhlö-ðin\, in GERMANIC RELIGION, a giantess, mother of THOR and mistress of ODIN. In the late pre-Christian era she was believed to have had a husband of the same name, perhaps indicating her transformation into a masculine personality.

JÖRMUNGAND \ˈjœr-mùn-gänd\, in GERMANIC RELIGION, the evil serpent that encircles the world and is the chief enemy of THOR. Jörmungand is also called the world-serpent, Midgardsorm. Legends relate that the serpent will be the cause of Thor's death at RAGNARÖK, the doom of the gods.

JOSEL OF ROSHEIM \ˈjɔsəl, -səl . . . ˈrɒs-hīm\, also called Joselmann, or Joselin, of Rosheim, or Joseph Ben Gershon Loans (b. c. 1478, Alsace?—d. March 1554, Rosheim, Alsace [now in France]), famous *shtadlan* (advocate who protected the interests and pled the cause of the Jewish people). He prevented many acts of persecution.

Josel realized keenly the precarious status of German Jewry, which was caught between rival imperial, municipal, and Christian religious sovereignties. By his diplomatic skills, he found listeners at the imperial court, which, through him, sought to strengthen its own hold over the Jewish communities. Thus, when Rosheim's Jewish community was threatened in 1525 by marauding peasants, Jo-

Jim Jones

UPI—Corbis—Bettmann

sel, by a combination of bribery and persuasion, managed to save his city. Soon after the coronation in 1520 of the Holy Roman emperor Charles V, Josel presented him with a memorandum that convincingly refuted the popular accusation that the Jews were allies of the expanding Ottoman Empire; this document averted proposed anti-Semitic measures. In the same year, Josel persuaded the government that the Jews desired better relations with it and convoked an assembly of representatives of all German Jewish communities.

JOSEPH \ˈjō-səf, -zəf\, in the OLD TESTAMENT, son of the patriarch JACOB and his wife Rachel. According to tradition, his bones were buried at Shechem, oldest of the northern shrines. His story is told in GENESIS (37–50).

Joseph, most beloved of Jacob's sons, is hated by his envious brothers. Angry and jealous of Jacob's gift to Joseph, a resplendent "coat of many colors," the brothers sell him to a party of Ishmaelites, or MIDIANITES, who carry him to Egypt. There Joseph gains the favor of the pharaoh of Egypt by his interpretation of a dream and obtains a high place in the kingdom. His acquisition of grain supplies enables Egypt to withstand a famine. Driven by the same famine, his brothers journey from CANAAN to Egypt, where they prostrate themselves before Joseph but do not recognize him. After Joseph reconciles with his brothers, he invites Jacob's household to come to Goshen in Egypt, where a settlement is provided for the family and their flocks. His brothers' sale of Joseph into slavery thus proves providential, since it protected the family from famine. The family's descendants grew and multiplied into the Hebrews, who would eventually depart from Egypt for Israel.

The purpose of the story is to relate the preservation of Israel. Its people survive despite their foolishness and wickedness, indeed, ironically, in part because of these. The story is a testimony to the operation of divine providence: "you meant evil against me; but God meant it for good" (Genesis 50:20) sums up its moral. Even so, God had realized his end through the faithfulness of Joseph, true to Israel's ideals under all circumstances and ever mindful of his obligations to his people.

JOSEPH, SAINT (fl. 1st century CE, Nazareth, Galilee, region of Palestine; principal feast day March 19, Feast of St. Joseph the Worker May 1), in the NEW TESTAMENT, Jesus' earthly father, the Virgin MARY's husband, and in ROMAN CATHOLICISM patron of the universal church. His life is recorded in the Gospels, particularly Matthew and Luke.

Joseph was descended of King David. After marrying Mary, he found her already pregnant and, being "a just man and unwilling to put her to shame" (Matthew 1:19), decided to divorce her quietly; but an ANGEL told him that the child was the son of God and was conceived by the Holy Ghost. Obeying the angel, Joseph took Mary as his wife. After Jesus' birth at Bethlehem in Judaea, the holy family eventually settled in Nazareth (Matthew 2:22–23) in Galilee, where Joseph taught his craft of carpentry to Jesus. Joseph is last mentioned in the Gospels when he and Mary frantically searched for the lost Jesus in Jerusalem, where they found him in the Temple (Luke 2:41–48). The circumstances of Joseph's death are unknown, except that he probably died before Jesus' public ministry began and was dead before the CRUCIFIXION (John 19:26–27).

The 2nd-century *Protevangelium of James* and the 4th-century *History of Joseph the Carpenter* present him as a widower with children at the time of his betrothal to Mary,

contributing to the confusion over the question of Jesus' brothers and sisters. Although the veneration of Joseph seems to have begun in Egypt, the earliest Western devotion to him dates from the early 14th century, when the Servites, an order of MENDICANT FRIARS, observed his feast on March 19, the traditional day of his death. Among the subsequent promoters of the devotion was Pope Sixtus IV, who introduced it at Rome c. 1479, and the celebrated 16th-century mystic ST. TERESA OF ÁVILA. Joseph was declared patron of the universal church by POPE PIUS IX in 1870. In 1955 POPE PIUS XII established the Feast of St. Joseph the Worker as May 1 as a Christian countercelebration to the Communists' May Day.

JOSEPH OF ARIMATHEA, SAINT \,ar-i-mə-'thē-ə\ (b. Arimathea, Samaria; fl. c. 30 CE; Western feast day March 17, Eastern feast day July 31), according to all four Gospels, secret disciple of JESUS, whose body he buried in his own tomb. In designating him a "member of the council," Mark 15:43 and Luke 23:50 suggest membership of the town council in Jerusalem. He held a high office and was the one to gain Pontius Pilate's permission to obtain Jesus' body for burial.

Joseph is accorded a long history in later literature. In the apocryphal *Gospel of Peter* (2nd century), he is a friend of Jesus and of Pilate. In the apocryphal *Gospel of Nicodemus* (or *Acts of Pilate*; 4th/5th century), Jews imprison Joseph after Jesus' burial, but he is released by the risen Christ, thus becoming the first witness of the RESURRECTION. In Robert de Boron's verse romance *Joseph d'Arimathie* (c. 1200), he is entrusted with the Holy Grail (cup) of the LAST SUPPER. A mid-13th-century interpolation relates that Joseph went to Glastonbury (in Somerset, Eng.), of which he is patron saint, as head of 12 missionaries dispatched there by the Apostle St. Philip.

JOSEPHUS, FLAVIUS \jō-'sē-fās\ (b. 37/38 CE, Jerusalem—d. c. 100 CE, Rome), historian whose works provide an invaluable record of Roman-era Judaism. Born Joseph, the son of Matthias, into a priestly family in Jerusalem, Josephus fought against the Romans in the great war (66–73/74 CE), was captured by them, then spent the last three decades of his life as a free man in Rome. While in Rome he wrote three works in Greek that have survived: *Bellum Judaicum* ("Judean War" [75–79]); *Antiquitates Judaicae* ("Judean Antiquities" [93]), and *Contra Apionem* ("Against Apion"). These works provide by far the most important chronological and geographical guides for the study of JUDAISM in the Greco-Roman world, especially for the period 200 BCE to 75 CE. A contemporary of the Gospel writers, Josephus incidentally provides critical background for the student of Christian origins.

Josephus composed his copious historical material in the service of statements about Judaism. His expression of Judaism gives us unique insight into the views of one aristocrat, though we may safely assume that at least some of his class held similar views. The genius of this outlook is its fusion of biblical themes with core values of the Greco-Roman world. Josephus' fundamental position was that God controlled all human affairs, causing various world powers to rise and fall in succession. Evincing a special debt to the biblical books of Jeremiah and Daniel, he structured both the *War* and the *Antiquities* around this central theme: that several nations had risen and fallen in the past, and now God was with the Romans. In the future, the Jewish nation would itself achieve greatness, and signs of this

Josephus before Vespasian, detail of a manuscript miniature, 14th century

By courtesy of the Hessische Landesbibliothek, Fulda, Ger.

development were already to be seen in the adoption of Jewish ways by others. The proper human response to this state of affairs, exemplified most brilliantly in Josephus' commentary on the ESSENES, was to be scrupulously faithful to Jewish law and customs, while at the same time cooperating with the provisional powers then ruling. Josephus' view of history thus supported the aristocrats' comfortable world; in laying responsibility for the choosing of political leadership with God, this view enshrined the status quo and precluded the popular revolutionary sentiments that threatened ancient aristocracies.

Josephus also believed the Jews to possess the finest "constitution" in existence, one that epitomized the highest aspirations of the entire world. Discussion of optimal constitutions was widespread in Josephus' day, and had been since Plato and Aristotle. Josephus argued in his work that MOSES had crafted the Jewish constitution—that is, effectively, the TORAH—in harmony with the very principles of the universe. This remarkable constitution, which inexorably punished criminals and rewarded the virtuous, was known intimately by all Jews, even women and children. It perfectly balanced clemency and humaneness, even toward animals, with speedy and incorruptible justice.

Josephus also emphasized the philosophical character of the Judean constitution. Philosophy, at least as a generic pursuit, had a respected place in Josephus' world. He portrayed ABRAHAM as the first serious philosopher, who had discovered MONOTHEISM and also taught mathematics and

astronomy to the Egyptians. Josephus believed that Pythagoras, Plato, and other Greeks had borrowed from the philosopher Moses. In his own day, Josephus described the main Jewish groups—the Essenes, whom he most admired, along with the PHARISEES and Sadducees—as philosophical schools within the national philosophy. Repeatedly throughout his writings, he tackled such philosophical questions as the soul, afterlife, and the roles of fate and free will; he explicitly repudiated EPICUREANISM.

Josephus claimed that he wrote the seven-volume *Judean War* to combat the numerous anti-Jewish accounts that had appeared after the Jewish-Roman conflict of 66–73/74 CE. Those accounts had apparently presented the Roman victory as a triumph of the Roman gods over the Jewish God, and the revolt itself as an expression of the allegedly rebellious, antisocial character of the Jewish nation. Josephus directly challenged both propositions. He claimed that, although the Jews had been sorely pressed by incompetent governors, the people and their legitimate leaders were committed to peaceful existence in a Roman world under divine control. It was only a handful of demagogues among them who had engineered the fateful conflict, and these had now been punished. The Roman victory, further, was orchestrated by the God of the Jews, who used the Romans as he used all others, to achieve his ends. The Romans who formed Josephus' most immediate audience for the *War* must have been somewhat sympathetic in advance to bother with this book.

Josephus composed his major work, the 20-volume *Judean Antiquities*, for the same sort of friendly audience, now associated with one Epaphroditus, a Gentile named in the *Antiquities* as patron. Claiming that he had been pursued by Gentiles who were keenly interested in the history and political constitution of the Jews, Josephus finally acceded to their demanding request: he offered 10 volumes on the period from creation to the destruction of the First Temple (to the 6th century BCE) and another 10 on the period of the Second Temple (to 66 CE). This work spells out in detail the foundations and terms of the Jewish constitution, and then gives numerous examples, from Judea and abroad (even from Rome), of its universal effectiveness. The appendix known as the *Life* is a highly rhetorical depiction of Josephus' character, based on his ancestry and career as Galilean commander in the war.

In Josephus' final work, commonly known as *Against Apion* after the essay of that name contained within this work—Josephus further elaborated the age and nobility of the Jewish constitution, but in a systematic rather than chronological way, and in direct debate with the Jews' main literary opponents, most of whom came from Alexandria.

JOSHUA \ˈjɑː-shə-wə\, also spelled Josue \ˈjɑː-shü-ē\, Hebrew Yehoshua' ("Yahweh is Deliverance"), leader of the Israelite tribes after the death of MOSES. His story is told in the OLD TESTAMENT Book of Joshua.

Joshua was the personally appointed successor to Moses (Deuteronomy 31:1–8; 34:9) who led ISRAEL in the conquest of CANAAN after the EXODUS from Egypt. Leading the Israel-

ites in an invasion across the Jordan River, he took the important city of JERICHO (Joshua 3–6) and then captured other towns in the north and south (Joshua 10:28–11:15) until most of Palestine was brought under Israelite control (Joshua 13:13; 15:63; 17:12–13). He divided the conquered lands among the TWELVE TRIBES OF ISRAEL and then bade farewell to his people, admonishing them to be loyal to the God of the COVENANT.

Scholars agree that Israel did not take Canaan by means of a single plan of conquest. It happened more gradually, through progressive infiltration and acculturation. This development went on for a couple of centuries, during which walled cities generally remained in Canaanite hands. Even if these cities were razed, Israel does not seem to have made military use of them; DAVID's occupation of Jerusalem was a first in this respect. The accounts of Joshua's campaigns tell of forays by a mobile community that increasingly constituted a force to be reckoned with in the open spaces between the walled cities.

The story of the book of Joshua conveys three complementary theological points: (1) Israel is YAHWEH's chosen people and he is their only sovereign, as demonstrated by Yahweh's liberation of Israel from slavery, re-forming them into his special and chosen people in the wilderness, and granting them the gift of the promised land of Canaan; (2) Yahweh, the God of Israel, is Lord of all that is (Joshua 2:11), as demonstrated by his taking the land from the Canaanites and giving it to the Israelites; (3) Yahweh is a God of grace, for the "conquest" is his supreme gift of protection and freedom.

JOSIAH \jō-'si-ə\, also spelled Josias, king of JUDAH (c. 640–609 BCE), who set in motion a reformation that left an indelible mark on Israel's traditions (2 Kings 22–23:30).

Josiah ascended the throne at the age of eight after the assassination of his father, AMON, in 641. For a century, Judah had been a vassal of the Assyrian empire. Imperial policy imposed alien cults on Judah that suppressed or obscured the Israelite religious identity. After the death of King Nabopolassar, the Assyrian empire fell into chaos. Egypt also was weak, and Judah thus obtained an unusual degree of independence. About 621 Josiah launched a program of national renewal, centered on the TEMPLE OF JERUSALEM and inspired in large part by a book containing provisions relating to religious traditions of premonarchic times. The Temple was purged of all foreign cults and dedicated wholly to the worship of YAHWEH, and all local sanctuaries were abolished, sacrifice being concentrated at Jerusalem.

In Assyria, Babylonia led a coalition that sacked Nineveh. Intending to keep Mesopotamia divided, Necho, the Egyptian pharaoh, set out to aid the Assyrians. He landed a force on the territory of ISRAEL. King Josiah, in an attempt to reunify Judah and Israel under the aegis of Babylonia, challenged the pharaoh to battle; but "Necho slew him at Megiddo, when he saw him." Soon thereafter Assyria was completely eliminated, the Egyptians retreated, and Josiah's son, JEHOIAKIM, whom Necho had placed on the throne of Judah as a vassal, had to submit to Babylonia.

JÖTUN \'yō-,tūn, 'yō-\, also spelled Jöten \-tən\, in GERMANIC RELIGION, race of GIANTS that lived in JÖTUNHEIM under one of the roots of YGGDRASIL. They were older than and ruled before the gods (ÆSIR), to whom they remained hostile. It was believed that RAGNARÖK, the destruction of this world and the beginning of a new one, would be brought about by a final battle between gods and giants.

JÖTUNHEIM \'yō-,tūn, 'yō-\, also known as Utgard \'üt-,gärd\, in GERMANIC RELIGION, home of the gods and one of the three realms (with NIFLHEIM and ASGARD) into which a root of the world-tree YGGDRASIL extended.

JUBILEE, YEAR OF, also called Holy Year, in the ROMAN CATHOLIC church, celebration that is observed on certain special occasions and for one year every 25 years, under certain conditions, when a special INDULGENCE is granted to members of the faith by the pope and confessors are given special faculties, including the lifting of censures. It resembles the OLD TESTAMENT Jubilee—in which, every 50 years, the Hebrews celebrated a year of perfect rest, emancipated slaves, and restored hereditary property—but does not seem to be based on it.

POPE BONIFACE VIII established the Holy Year in 1300 as a centenary observance. In 1342 Clement VI reduced the interval to 50 years, and in 1470 Paul II further reduced it to 25 years. The year begins on CHRISTMAS Eve, with the opening of the Holy Doors at the Roman BASILICAS of St. Peter, St. John Lateran, St. Paul Outside-the-Walls, and St. Mary Major, and ends with their closing on the following Christmas Eve. Since 1500 the Jubilee has been extended to the whole world in the year following a Holy Year.

Since at least 1560, special jubilees have been declared. Special jubilees have been declared for a pope's 50th anniversary in the PRIESTHOOD (Pope Pius XI, 1929), at the close of the SECOND VATICAN COUNCIL (1965) to promote the knowledge and application of the council's achievements. Pope John Paul II designated the year 2000 as a Jubilee to commemorate two millennia of CHRISTIANITY and to explore the church's mission in the 3rd millennium.

JUDAH \'jü-də\, one of the TWELVE TRIBES OF ISRAEL, descended from Judah, the fourth son of JACOB and his first wife, LEAH (GENESIS 29:35). It is disputed whether the name Judah was originally that of the tribe or the territory it occupied.

After the Israelites took possession of the Promised Land, the tribe of Judah settled in the region south of Jerusalem (Joshua 15) and in time became the most powerful and most important tribe. It produced the kings DAVID and SOLOMON (1 Samuel 16:1; 16:12), and it was prophesied that the MESSIAH would come from among its members (Micah 5:2). Modern Jews trace their lineage to the tribes of Judah and BENJAMIN (absorbed by Judah) or to the tribe, or group, of clans of religious functionaries known as LEVITES, since the Assyrian conquest of the Kingdom of Israel in 721 BCE led to the dispersion of the 10 northern tribes (2 Kings 17:5–6; 18:9–12) and their assimilation by other peoples (see TEN LOST TRIBES OF ISRAEL).

The southern Kingdom of Judah thrived until 587/586 BCE, when the Babylonians carried off many of its inhabitants into exile (2 Kings 24–25). When the Persians conquered Babylonia in 538 BCE, Cyrus the Great allowed the Jews to return to their homeland (2 Chronicles 36:22–23; EZRA 1, 2), where they replaced the TEMPLE OF JERUSALEM that the Babylonians had destroyed (Ezra 3:1–13; 4:24–6:22). The history of the Jews from that time forward is predominantly the history of the tribe of Judah.

JUDAH BEN SAMUEL \'jü-də-ben-'sam-yü-wəl\, also called Judah the Hasid of Regensburg, or Yehuda the Hasid (d. 1217), semilegendary Jewish mystic and pietist, founder of the fervent, ultrapious movement of German HASIDISM and principal author of the ethical treatise SEFER HASIDIM (1538; "Book of the Pious"), possibly the most important extant

document of medieval JUDAISM and a major work of Jewish literature. The Hasidic movement of Judah's time is not directly related to the 18th-century Hasidic movement founded by the BA'AL SHEM TOV.

Judah was the son of Samuel the Hasid, also a mystic, and belonged to the eminent Kalonymos family, which provided medieval Germany with many mystics and spiritual leaders. About 1195 he left Speyer for Regensburg, where he founded a YESHIVA (academy) and gathered such disciples as the mystic Eleazar of Worms (also a member of the Kalonymos family) and the codifiers Isaac ben Moses of Vienna and Baruch ben Samuel of Mainz.

The *Sefer Hasidim* is a compilation of the writings of Judah, his father Samuel, and Eleazar of Worms. Dealing with man's relations with God and his fellowman, his business practices, the SABBATH, social intercourse with GENTILES, penitence, and a host of other subjects, the book is a detailed manual of conduct. Judah also wrote a mystic work surviving only in citations dealing with the *kavod* ("divine glory"), the aspect of God that man can experience, as distinguished from the ultimate reality of God, which is beyond man's experience or comprehension. Judah was also the author of liturgies and RESPONSA.

JUDAH HA-LEVI \hă-'lĕ-,vī, -'lĕ-vĕ\, in full Yehuda ben Shemuel ha-Levi (b. c. 1075, Tudela, Kingdom of Pamplona [Navarre]—d. July 1141, Egypt), Jewish poet and religious philosopher. His works were the culmination of the development of Hebrew poetry within the Arabic cultural sphere. Among his major works are the poems collected in *Diwan*, the "Zionide" poems celebrating ZION, and the *Sefer ha-Kuzari* ("Book of the Khazar"), presenting his philosophy of JUDAISM in dialogue form.

At the time of Judah ha-Levi's birth, most of Spain, including his native town, was still under Muslim rule, but the Reconquista, the Christian sovereigns' struggle to regain their lost territories, was already under way. Judah ha-Levi, whose poetic gifts manifested themselves unusually early, spent his childhood in the Christian part of the country, but he felt himself drawn to Muslim Spain, then one of the principal cultural centers of Europe. He went to Andalusia in southern Spain some time before 1090, where he established contact with local Hebrew poets and intellectuals and attracted considerable attention. This period ended in 1090 when Granada was stormed by the ALMORAVIDS, North African Berber disciples of a zealous Muslim movement, who now established an orthodox and intolerant regime in Andalusia. It is not known with any certainty whether Judah ha-Levi witnessed the Almoravid invasion in Granada or elsewhere, but the event greatly influenced the remainder of his life and his worldview.

In the last years of his life he lived in Córdoba, which remained an important center of Jewish culture even in the period of decline. As old age approached, however, Judah ha-Levi felt an increasing need to travel to Jerusalem, writing about it at length in verse and prose. The epilogue of the *Kuzari* explains his attachment to Zion and sounds like a farewell to Spain. Among his many poems celebrating the Holy Land is "Zionide" ("Ode to Zion"), his most famous work and the most widely translated Hebrew poem of the Middle Ages. He also carried on a heated controversy in verse with the opponents of his Zionist ideas.

Judah ha-Levi left Spain in 1140. He planned first to embark for Egypt and then to proceed via the land route to Palestine. Aboard ship he composed a whole series of sea songs, which in both theme and mood represented a con-

siderable innovation in Hebrew literature. His ship entered Alexandria harbor on May 3, 1140, where he, along with a large Jewish party, was splendidly received. From Alexandria he went to Cairo, or Fustat, the city where lived Samuel ben Hananiah, the Nagid, or head, of all Egyptian Jews, and there he was further acclaimed. Judah ha-Levi felt deep awe and humility in the land in which some of the biblical miracles had occurred and at the same time a kind of delight in all the beauties that revealed themselves to him; he wrote prolifically and easily. But he certainly always bore in mind his sacred destination and was often disturbed by the thought that death might yet intervene.

He did not in fact go beyond Egypt, although it is not known what detained him there. He died in 1141 and was deeply mourned in Egypt.

Judah ha-Levi was strongly influenced by Arabian literature, elements of which he ingeniously assimilated. His great collection of poems entitled *Diwan* includes secular and religious poetry, both of which express passionate attachment to Zion (the Land of Israel). For the poet, the Holy Land was not only a site where the Jewish people would one day gather after their deliverance from exile; immigration and settlement in Palestine would also hasten the coming of the MESSIAH. He celebrated Jerusalem in song as had none of his medieval predecessors. He also expounded his views on the nature of Judaism in an Arabic prose work consisting of dialogues between a learned Jew and the Khazar king who was converted to Judaism in the 8th century. It was widely circulated in Hebrew translation under the title *Sefer ha-Kuzari*.

JUDAH HA-NASI \hă-nă-'sē\, important figure in early RABBINIC JUDAISM, active at the end of the 2nd and beginning of the 3rd centuries CE. Tradition considered him to have been the redactor of the MISHNAH. Judah was the first of HILLEL's successors to carry the designation *ha-Nasi*, that is, "the patriarch," indicating his position as head of the Jewish community in the land of Israel. In the Mishnah, he generally is referred to simply as "Rabbi," that is, the rabbinic master par excellence.

While the TALMUDS declare that Judah prepared the Mishnah, the reality is more complex, and Judah's actual role is not known. The Mishnah itself contains no definitive statements about its own redaction, and Judah is cited there exactly as any other RABBI. Traditional scholarship has generally held that Judah did the final editing of a compilation prepared by ME'IR, who had continued the work of his teacher AKIBA BEN JOSEPH. None of this, however, can be verified on the actual evidence of the Mishnaic text.

Later sources frequently discuss Judah's life and pietistic teachings. He defined piety as follows (M. Abot 2:1):

What is the straight path a person should choose for himself? Whatever is an ornament to the one who follows it and an ornament in the view of others. Be meticulous in a small religious duty as in a large one, for you do not know what sort of reward is coming for any of the various religious duties. And reckon the cost of carrying out a religious duty against the reward for doing it, and the reward for committing a transgression against the cost for doing it. And keep your eye on three things, so you will not come into the clutches of transgression: Know what is above you: an eye that sees, and an ear that hears, and all your actions are written down in a book.

JUDAISM

religion of ethical MONOTHEISM in the class of CHRISTIANITY and ISLAM—Judaism encompasses all the related religious systems that exhibit these common traits: (1) belief that God is unique and made manifest in his revelation of himself to MOSES in the TORAH at Mount Sinai; (2) privileging the Torah, or PENTATEUCH (the Five Books of Moses), among the Israelite Scriptures; and (3) acceptance of the Jews in later times and in other places as the continuation of Scripture's "ISRAEL" in the Land of Israel. In the early 21st century there were nearly 15 million Jews worldwide.

THE TORAH

The Pentateuchal framework. The Pentateuch—consisting of the books of GENESIS, EXODUS, Leviticus, Numbers, and Deuteronomy—is written from the perspective of the loss and recovery of the Land of Israel between 586 and 450 BCE. These events of a long-ago past begin with the creation of the world, the making of man and woman, the fall of humanity through disobedience, and the flood that wiped out nearly all of humanity except for NOAH and his kin (making Noah the progenitor of all humanity). There then follows the decline of humanity from Noah to Abraham; the rise of humanity through ABRAHAM, ISAAC, JACOB (who is also called Israel), and the 12 sons of Jacob; the exile in Egypt; and the deliverance to Sinai. There, the scriptural narrative continues, God revealed the Torah to Moses, and that revelation contained the terms of the COVENANT, or contract, that God then made with Israel—*i.e.*, the family of Abraham, Isaac, and Jacob. The book of Genesis therefore narrates the story of creation and then of the beginnings of the family that would always constitute Israel: the children of Abraham, Isaac, and Jacob. The book of Exodus presents the story of the children of Israel's slavery in Egypt and how God redeemed them from Egyptian bondage and brought them to Sinai, there to make a covenant with them by which they would accept the Torah and carry out its rules. The book of Leviticus portrays the founding of the priests' service to God: that service being through the sacrifice of the produce of the Holy Land to which God had brought Israel. The book of Numbers provides an account of the wandering in the wilderness. The book of Deuteronomy then presents a reprise of the story, a long sermon by Moses looking back on

the history of Israel from the beginning of the wandering through the point of entry into the Promised Land, followed by a restatement of the rules of the covenant between Israel and God.

Thus, it follows that every Judaism, wherever and whenever created, believes that through the Scriptures of ancient Israel it can trace its beginnings to the creation of the world. Following the biblical record, each system maintains that God created the world and for ten dismal and declining generations, from Adam to Noah, despaired of creation. For ten generations, from Noah to Abraham, God waited for humanity to acknowledge the sovereignty of the one God, creator of heaven and earth. Finally came Abraham and SARAH; Abraham obeyed God's commandment to leave his home in the city of Ur in Chaldea (an area that would become known as Babylonia) and journey to the Promised Land. Thus, Israel begins with the experience of alienation: "Go from your country and your kindred and your father's house to the land that I will show you" (Genesis 12:1). Through their descendants Sarah and Abraham founded Israel, the people of the Lord, to whom, later at Sinai, God revealed the Torah, the complete record of God's will—initially for Israel (the Jewish people), but eventually for all humanity. The biblical record goes on to speak of DAVID, the king of Israel and founder of the ruling household, from which, at the end of time, the MESSIAH is destined to come forth. So Judaism tells the story of the world from the creation of ADAM AND EVE, through the revelation of the Torah at MOUNT SINAI, to the redemption of humanity through the Messiah at the end of time—a picture of the world, beginning, middle, and end. This account of the history of humanity and all creation derives from a people that traces its origins to the beginnings of history and yet thrives in the world today.

The Pentateuch includes a composite of materials by different authors, each of whom had his own viewpoint and intellectual traits. It must be remembered that it was only after the destruction of the First TEMPLE OF JERUSALEM in 586 BCE that the Torah—in this context, the Five Books of Moses—came into being, coming together as a pastiche of received stories, some old, some new, all revised to fulfill the purposes of the final authors and to explain the origins of Israel, the Jewish people. In light of Israel's ultimate destiny, which the authors took to be the loss and restoration of the Holy Land, the origins of the people in its land became meaningful. Israel began with its acquisition of the land, through Abraham; attained its identity as a people through the promise of the land, in the covenant of Sinai; and entered the land under JOSHUA. Israel's history then formed the story of how, because of its conduct on the land, Israel, in spite of the prophets' persistent warnings, lost its land, first in the north (Israel), then in the south (Judaea). Exiled in Babylonia, the authors of the Torah recast Israel's history into the story of the existence of the people, a conditional existence dependent on their carrying out a contract: do this, get that; do not do this, do not get that.

The Pentateuch as fully formulated comes from the small number of Israelite families who remembered the exile, survived in Babylonia, and then, toward the end of the 6th century BCE, began the return to ZION. To the priests who rebuilt the Temple and gave the Pentateuch its final form what mattered historically was the destruction of the First Temple (586 BCE), and, some three generations later, the resto-

ration of Zion and the rebuilding of the Temple. To them the cult was the key, the Temple the nexus between heaven and earth. The Pentateuch set forth the priest's conception of a shared consciousness, a collective myth of a people subject to condition and stipulation, forever threatened with desolation, always requiring renewal—nothing was a given. Beginning at this time the Pentateuch, declaimed in the SYNAGOGUE from week to week, taught this one lesson of the human condition of Israel. The priests' Torah, the Pentateuch in its final statement, constituted the first and enduring Judaic paradigm, to which all Judaisms to come would either conform or object.

The Pentateuchal paradigm of all Judaisms. A Judaic religion confronts an urgent question and supplies an answer that is self-evidently valid within the paradigm of Israel's exile and return as interpreted in the Pentateuch. Responding to the agenda framed by Scripture in the original encounter—death and resurrection, as interpreted in the destruction of the Temple and the later return to Zion—the question addressed by Judaic systems from the Pentateuch onward was, and would remain, "Who is Israel? And what rules define Israel as a social, and therefore political, entity?" In one way or another, Israel, the Jewish people wherever they lived, sought means of declaring itself distinct from its neighbors. However, this persistent stress on differentiation—the exclusion of the neighbors from the group, and vice versa—yields a preoccupation with self-definition that runs contrary to the situation of ancient Israel, with the unmarked cultural frontiers and constant trade among diverse groups that was characteristic of ancient times. At the formation of the Pentateuch, Israel was deeply affected by the shifts and changes in social, cultural, and political life. The problem of self-definition came to renewed expression when, more than a century after the formation of the Pentateuch under EZRA and NEHEMIAH, the Greeks under Alexander the Great conquered the entire Middle East (c. 330 BCE) and incorporated the Land of Israel into the international Hellenistic culture. And, when the war of independence fought by the Jews under the leadership of the MACCABEES (c. 160 BCE) produced an independent state for a brief period, that state found itself under the government of a Jewish court that accommodated itself to the international style of politics and culture.

So what made Israel separate in any sense from its neighbors? In fact, the principal propositions of the Pentateuchal Torah and the historical and prophetic writings of the century beyond 586 BCE—namely, Israel's heightened sense of its own social reality and its status as an elected people standing in a contractual or covenantal relationship with God—reveal the inner structure of the system. They express the paradigm's logic—which is not dictated by events, even in events selected and reworked—and apply its theological premises, not the hard data of Israel's common life in either Babylonia or the Land of Israel. The Pentateuchal system not only selected the events it would deem consequential, it dictated to whose experience those events would bear consequence. For from

the perspective of a vast population of Israel—Jews who remained in the Land of Israel after 586, or in Babylonia after Cyrus' decree in 538 permitted return to Zion—the system spoke of events that simply never happened. For both groups, for different reasons, there was no alienation and consequently, no reconciliation—for these groups what was normative corresponded to the merely normal, they lived life like any other nation, wherever it happened to locate itself. As an example of a religious system creating a society, we can find few better instances than the power of the conception of Israel as expressed by the Pentateuch and associated writings after 586 BCE. It served to show people not only the meaning of what had happened but to also tell them what had happened: to create for Israelite society a picture of what it must be and therefore what it had been. That sense of heightened reality and intense focus on the identification of the nation as extraordinary represented only one possible meaning of events. However, we do not have access to any interpretation other than the system of the Torah and the prophetic and historical writings framed by the priests and given definitive statement under the auspices of Persia's Jewish viceroy in Jerusalem, Nehemiah, and his counsellor Ezra.

Since the Pentateuchal face of Judaism began as a paradigm, not as a set of actual events, the conclusions generated by the paradigm, derived not from reflection on things that happened but from the logic of the paradigm. Additionally, that same paradigm created expectations that could not be met, thereby renewing the resentment presented in the myth of exile within people who had never experienced the phenomena. At the same time the paradigm set the conditions for remission of resentment, and so resolving the crisis of exile with the promise of return. This self-generating, self-renewing paradigm formed the self-fulfilling prophecy that all Judaisms have offered as the generative tension and critical symbolic structure of their systems.

The Judaic system devised in the Pentateuch's basic structure by the priests not only addressed, but also created, a continuing, chronic social fact of Israel's life. So long as the people perceived the world in such a way as to make urgent the question that Scripture framed and answered, Scripture enjoyed a power of persuasion beyond all need for argument, imparting to it the self-evident status of God's revealed will to Israel. And that power lasted for a very long time. Scripture gained its own authority, however, independent of the circumstance of society, and the priests' paradigm of exile and return imposed itself even in situations where its fundamental premises hardly pertained. Accordingly, when the world imposed different questions upon them, Jews went in search of not only more answers—an additional Torah (hence the formation of the Judaism of the dual Torah)—but different answers (hence the formation, in modern times, of Judaic systems of a different character altogether). But even then, a great many Jews continued to envision the world through the original perspective of exile and return created in the aftermath of destruction and restoration—to see the world as a gift instead of a given, and themselves as chosen for a life of special suffering but also special reward.

The generative tension—precipitated by the interpretation of the Jews' life as exile and return—that had formed the critical center of the Torah of Moses remained. Therefore the urgent question "Who is Israel?" answered by the Torah retained its original character and definition, and the self-evidently valid answer—as read in the synagogue—retained its relevance. With the renewal, generation after generation, of that same resentment—the product of a memory of loss and restoration joined to the danger of a further loss in the here and now—the priests' authoritative answer did not lose its power to persist and to persuade. Scripture kept reminding people to ask the question, to see the world as described, in Scripture's mythic terms, through the experience of exile and return. To those troubled by the question of exile and return—that is, the chronic allegation that Israel's group-life did not constitute a given but formed a gift accorded on conditions and stipulations—the answer enjoyed the status of (mere) fact. For a small, uncertain people, who were captivated by a vision of distant horizons, behind and before such a powerful and immediate message was a map of meaning.

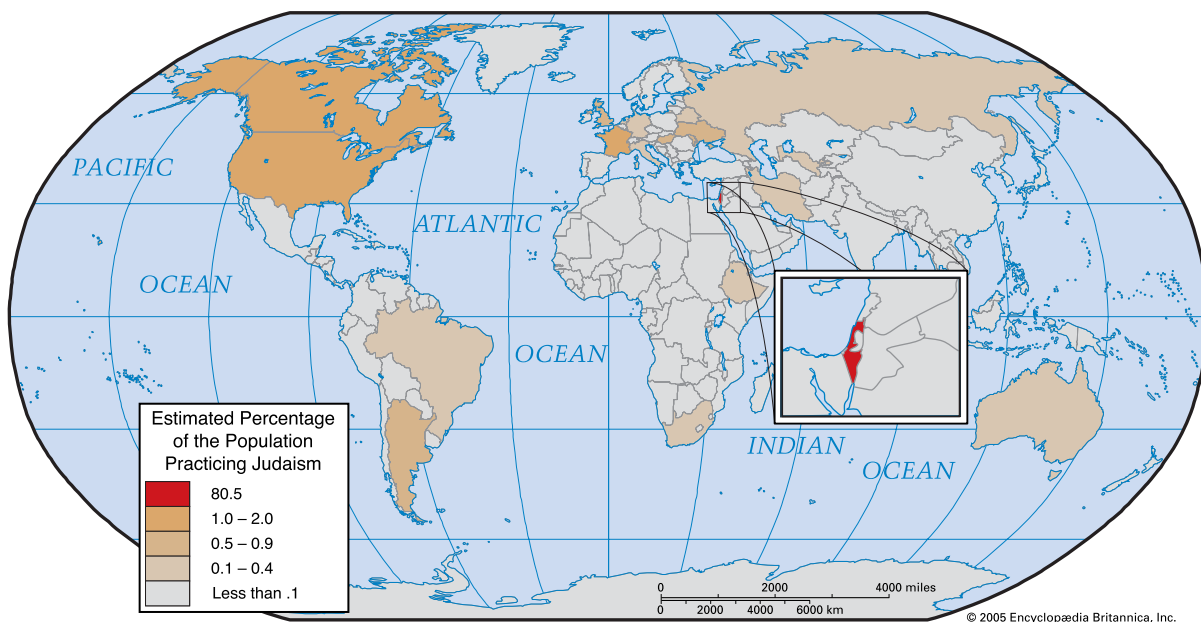

SECOND TEMPLE JUDAISMS, 450 BCE TO 70 CE

Ancient Israel's Scriptures yielded not only the priestly model but, in fact, three quite distinct points of emphasis, definitions of what, in the life of community, nation, and individual, mattered. The Judaisms that emerged from Scripture centered upon three types or points of emphasis: (1) the one that emerged from the priestly viewpoint, with its interest in sanctification, and so stressed doctrine, law, and a way of life; (2) the one that took a special interest in the wise conduct of everyday affairs, yielded by the wisdom-writings, with a stress on the here and now of ordinary life; and (3) the one that emphasized the meaning and end of history, produced by the prophetic angle of vision, with a focus on salvation. To describe the three basic sorts of Second Temple Judaisms, we turn first to the idealized type as it will have reached expression in generative symbol: (1) an altar for an offering, (2) a Torah-scroll, (3) a coin. The altar for the priestly ideal, the scroll of Scripture for the ideal of wisdom, and the coin marked "Israel's freedom: year one," for the messianic modality (drawing on a later messianic movement, the one led in 132–135 CE by BAR KOKHBA). The principal strands of ancient Israelite life come to realization in the distinct types of holy men we identify as priests, scribes, and messiahs, with their definitive activities in cult, school and government offices, and (ordinarily) the battlefield.

The priest described society as organized through lines of structure emanating from the Temple. His caste stood at the top of a social scale in which all things were properly organized, each with its correct name and proper place. The inherent sanctity of Israel, the people, came through genealogy to its richest embodiment in him, the priest. Food set aside for his rations at God's command possessed that same sanctity, as did the table at which he ate. To the priest the history produced by the sacred society of Israel was an account of what happened in, and (alas) on occasion to, the Temple.

To the sage, the life of society demanded wise regulation. Human relationships required guidance by the laws embodied in the Torah and best interpreted by the sage. Accordingly, the task of Israel was to construct a way of life in accordance with the revealed rules of the Torah, and so the sage, master of the rules, stood at the head of society. As for prophecy's insistence that the fate of the nation depended upon the faith and moral condition of society, history testified to the external context and inner condition of Israel, viewed as a whole. Both sage and

priest saw Israel from the aspect of eternity. But the nation lived out its life in the history of this world, among other peoples who coveted the very same land, within the politics of empires. It was the messiah's kingship that would resolve the issues of Israel's subordinated relationship to other nations and empires, establishing once for all time the correct context for priest and sage alike.

The social world of Second Temple Judaism. Among a number of Judaic groups that distinguished themselves between 450 BCE and 70 CE, we have sufficient evidence to describe two sects in their broader social context, and not merely their statements of belief: first, the Judaic system, identified by some with the ESSENES, and put forth by the writings found at QUMRĀN; and second, the PHARISEES. Each in its way realized in sharp and extreme form the ideals of the normative system of the priests' Torah of Moses. The community-writings (assigned by some to the Essenes) of Qumrān and the writings of the Pharisees turned back to the PRIESTLY CODE and its generative symbols and myths. One encompassing example of that fact is the stress among both groups upon cultic cleanness and uncleanness. Each of these social groups defined itself around the eating of cultic meals in the state of cleanness prescribed in Leviticus for the Temple priest in the eating of his share of the Temple sacrifices.

Qumrān's Judaic system. The Judaism portrayed by the library discovered at Qumrān (*see* DEAD SEA SCROLLS) flourished in the last two centuries BCE to 68 CE. The main element of the library's worldview of Judaism was the conviction that the community formed the final remnant of Israel, and that God would shortly annihilate the wicked. These "converts" to the true faith would be saved and this "Israel" at Qumrān would endure because their founder, the Teacher of Righteousness, established a new contract or covenant between the community and God. The task of the community was to remain faithful to the covenant, endure the exile in the wilderness, and prepare for the restoration of the Temple in its correct form. So it recapitulated the history of Israel, seeing itself as the surviving remnant of some disaster that had destroyed the faith, and preparing for the restoration they anticipated would soon come—just as it had before. Therefore, we find in the Qumrān system a replication of the Judaic system of the PRIESTHOOD, with one important qualification. While the Judaic system represented by the Pentateuch laid great stress on the holy way of life, the Qumrān system added a powerful element of eschatological expectation and so combined the holy way of life with a doctrine of salvation at the end of time. The principal components of the scriptural composite—Torah-laws, prophetic historical interpretation, and sagacious rules on the conduct of everyday life—found counterparts in the library of the community as the Qumrān Judaism reworked the several strands into a distinctive and characteristic statement of its own.

The Qumrān library sets forth the Judaic system of a holy community in the here and now, awaiting an eschatological climax. The elements of the original paradigm are three: first, the notion of a saving remnant, a chosen few, which surely originated in the pattern of Israel that endured beyond 586 BCE; second, the conception of a community with a beginning, middle, and end, rather than a community that exists more or less permanently; third, the notion that the Israel at hand replicates the sanctification of the temple in its very being. These are large and encompassing principles, and within them we can make provision for the indicative traits of the Qumrān system. All commentators on the library of Qumrān have found the community's sense of itself striking: a people different, separate from the rest of Israel, the clean, saved few among the unclean many, the children of light. The fundamental notion that this small group constituted in microcosm the Israel that mattered rested on the premise that the "Israel" out there, the nation as a whole, live on condition and respond to stipulation. That "Israel" had failed; its people had become (in the mind of the followers at Qumrān) the children of darkness. Making such distinctions within the old Israel in favor of the new requires the conviction that the life of Israel is not a given, a fact of ordinary reality, but a status to be attained through appropriate regeneration, in context, sanctification. And that basic notion expresses the general pattern of the Pentateuchal structure: Israel is called and, out of nothing, in formed a very par-

ticular entity, subject to very special conditions: the children of light, as against the rest, the children of darkness. The prerequisite for such an acutely self-conscious understanding of one's people is the original and paradigmatic experience of national death and resurrection.

Pharisaic Judaism before 70 CE. The Pharisees, who also stressed the observance of cultic rules of sanctification, were especially diligent in keeping the laws concerning the correct preparation of food, including the proper separation of a portion of the crops for the support of the priesthood and other scheduled castes (tithing). Scripture had specified a variety of rules on tithing and other agricultural offerings, in general holding that God owned a share of the crops, and God's share was to go to the holy castes (priests, LEVITES, as well as to the poor). In addition to making sure everything that was supposed to yield its portion to the castes did, the Pharisees obeyed those rules concerning the preparation of food that linked meals to the altar and its service. Scripture—the book of Leviticus—had furthermore laid down rules governing the sources and affects of uncleanness (*see also* TOHORAH). Such sources of uncleanness, specified in Leviticus 11–15, derive from the bodily flux of human beings, including excretions from sexual organs, and contact with certain deceased creatures, for example. The primary result of contact with such sources of uncleanness was not hygienic but, mainly, cultic: one affected by uncleanness could not enter the Temple. Therefore, for the authors of the Priestly Code, the concern for the cleanness or uncleanness of utensils and persons was rooted in the desire to protect the cult and the Temple against the dangers lurking in the sources of uncleanness. But the rules laid out in the MISHNAH that affect uncleanness—many of them going back to the earliest stratum of the Mishnaic system, before 70 CE, and, hence, many assume, to Pharisaic origins—deal primarily with domestic matters. The Pharisees maintained that Israel was meant to observe ritual purity in the home as well as the Temple, and recent archaeological findings show that many Pharisees did. (These findings include immersion pools [*miqvaot*] in homes.) The fundamental assumption was that one should eat not only food deriving from the altar, but meals eaten at home in a state of cultic cleanness. The further and more important assumption was that ordinary people, and not only priests, keep those rules. Put together, the two premises describe a group of lay people emulating priests, much on the order of the Qumrān Judaism, and treating their homes as temples, their tables as altars.

The Pharisaic stress on the sanctification of the home and the paradigmatic power of the Temple for the home suggests the Pharisees had a more extreme position on the priestly paradigm of the Pentateuch than the priests themselves. What the priests wanted for the Temple, the Pharisees wanted for the community at large, and so carried to a still more radical extreme the fundamental systemic position of the priests' Torah of Moses. Admittedly, we have little access to positions taken in the 1st century by the Pharisaic system on other matters, besides

those represented in the GOSPELS and by the later RABBIS of the Mishnah. Still, one cannot imagine that the group took these positions only on the questions concerning cultic sanctification, as that was only a partial aspect of the complete system. The Qumrān Judaism presented a substantial account of the meaning and end of history; its doctrine of salvation spelled out in so many words the community's idea of Israel—or, rather of itself as the final remnant of Israel. What we know of the Pharisaic system allows us to characterize it also as a Judaism of sanctification—at least that—and permits us to identify that generative Pentateuchal paradigm of the 6th and early 5th centuries BCE. No wonder the Pharisees affirmed the eternity of the soul (as JOSEPHUS says) or the resurrection of the dead (as PAUL, himself a Pharisee before conversion to Christianity, is presented in Luke's ACTS). For the way of sanctification led past the uncleanness of the grave to the renewed purity of the living person, bringing purification out of the most unclean of all sources of uncleanness, the realm of death itself. Thus the pattern of everyday sanctification brought immediacy to the cosmic pattern of death and resurrection.

RABBINIC JUDAISM

Taking shape after 70 CE out of the union of the traditions of Pharisaism and of pre-70 scribes, RABBINIC JUDAISM—in the Mishnah, the Talmuds BAVLI and YERUSHALMI, and the MIDRASH—culminated in the doctrine of the dual Torah. That is, the Torah both oral and written, that God revealed to Moses at Mount Sinai. The Pharisees' belief system incorporated "Traditions of the Fathers," and to these later Rabbinic Judaism would assign the ORAL TRADITION from Sinai. This oral tradition, the doctrine held, was handed on from master to disciple in a chain extending from Moses down to the rabbis themselves. It was then preserved in the writing of the Mishnah, a philosophical law code; the Talmuds, which comment on the code; and the midrashic compilations, which interpret Scripture in accord with the rabbis' doctrines.

Rabbinic Judaism took shape in two stages: firstly, from 70 to the 4th century CE, as represented by the Mishnah (dating to *c.* 200 CE), commentaries on the Mishnah (which date from 200 to around 300 CE), and commentaries on the Scripture produced during that same period; and, secondly, by the two Talmuds—the Yerushalmi (dating to *c.* 400 CE) and the Bavli (dating to *c.* 600 CE), and the later midrashic compilations. The first stage set forth a Judaic religious system without reference to the challenge of Christianity; the second was a revision of the initial system, now responding to the challenge of Christianity's use of the canon and Scriptures of Judaism to prove and validate Christian beliefs. That second, fully articulated system of Judaism would then form the framework for all Judaisms until the 20th century (*see below*: Twentieth-century Judaisms beyond the Rabbinic framework). Some Judaisms took shape in response to the Rabbinic system and amplified it or added to its resources; others took shape as heresies defined by rejection of principal parts of that same system. But so long as Christianity, and later, Islam, set the critical issue confronting Israel, the holy people, Rabbinic Judaism defined the paramount, norm-setting Judaism.

The first phase of Rabbinic Judaism. As portrayed in the Mishnah, the first phase of Rabbinic Judaism—which was continuous with pre-70 Pharisaism—responded to the destruction of the Temple by maintaining that although the holiness of Israel, the people, had formerly centered on the Temple, it had endured and transcended the physical destruction of the building and the cessation of sacrifices. Thus, Israel the people was holy. The system created by Rabbinic Judaism instructed Israel to act as if there was a new Temple formed of Israel, with the Jewish people becoming the medium and instrument of God's sanctification. Joined with this new Pharisaic view of life was the substance of the scribal ideal, which stressed learning the Torah and carrying out its teachings. Like the scribes of old, the emerging system claimed it was possible to serve God not only through sacrifice but also through study of the Torah.

The way of life of Rabbinic Judaism, in its final definition, was the Pharisaic method, with its stress on the everyday sanctification of all Israel. The worldview

and substance of that Judaism was the scribal message, with its stress on the Torah. Pharisaism stressed the universal keeping of the law, obligating every Jew to do what only the elite—the priests—were normally expected to accomplish. But, it was this doctrine of who actually constituted Israel that would at first glance seem fresh and unpredictable. The people who constituted Israel was surviving Israel: after the rupture marked by the destruction of the Temple the crisis centered attention on what had endured, persisting beyond the end: the people itself. In the life of a nation that had ceased to be a nation on its own land and then once more had regained that land, the calamity of the Temple's destruction represented once more the paradigm of the death and resurrection. Consequently after 70 CE the truly fresh and definitive component of the new system actually restated in contemporary terms the fixed and established doctrine with which the first Judaism, the Judaism of the Torah of Moses after 450 BCE, had commenced.

The initial statement of Rabbinic Judaism—the Mishnah—stresses sanctification, which is understood as the correct arrangement of all things, each in its proper category, and each called by its rightful name, just as at the creation. Everything (except the beasts that would be named by Adam) had been given its proper name—or, in the language of Scripture, been classified in its correct category. God then called the natural world very good and God sanctified it. The system of philosophy expressed through concrete and detailed Mishnaic law is a worldview that speaks of transcendent things, presenting a way of life in response to the supernatural meaning of what is done, and thus, a heightened and deepened perception of the sanctification of Israel in deed and in deliberation. Therefore sanctification means two things: first, the distinguishing of Israel in all its dimensions from the rest of the world and its ways; and second, the establishment of the stability of Israel in the world of nature and supernature, particularly when threatened by instability or disorder. Each principal topic of the Mishnah takes up a critical and indispensable moment or context of social being and fully expresses what the halakhic system (*see* HALAKHAH AND HAGGADAH) as a whole wishes to declare on that subject.

The world that the Mishnah addressed was hardly congruent to the worldview presented within the Mishnah. In the aftermath of Bar Kokhba's war against Rome in 132–135 CE, Jews were barred from Jerusalem and the Temple. Thus, at this time, there was no cult, no Temple, no holy city to which the Mishnaic laws applied. The laws of the Mishnah were formulated before the loss of the Temple, but the codification of the laws began after the Temple was gone. Therefore, at the very outset, a sizable proportion of the Mishnah dealt with matters to which the sages had no material access or practical knowledge of at the time of their work. We have seen that the Mishnah contains a division on the conduct of the cult (the fifth division), as well as one on the preservation of the cultic purity of the sacrificial system along the lines laid out in the book of Leviticus (the sixth division). In fact, a fair part of the second division takes up the conduct of the cult on special days—*e.g.*, the sacrifices offered on the Day of Atonement (YOM KIPPUR), PASSOVER, and the like. Indeed, what the Mishnah wants to know about appointed seasons concerns the cult far more than it does the synagogue. The fourth division, on civil law, presents an elaborate account of a political structure and system of Israelite self-government that speaks of king, priest, Temple, and court. But in the time in which the 2nd-century authorities did their work it was not Jewish kings, priests, and judges who conducted the government of Israel in the Land of Israel but the Romans. So it would appear that well over half of the document speaks of the lost cult, Temple, government, and priesthood. Moreover, as we shall see, the Mishnah takes up a profoundly priestly and Levitical conception of sanctification. When we consider that the Temple lay in ruins, the city of Jerusalem was prohibited to all Israelites, and the Jewish government and administration that had been centered on the Temple and based its authority on the holy life there were dismantled, the fantastic character of the Mishnah's address to its own catastrophic day becomes clear. Much of the Mishnah speaks of matters not in being at the time of its creation, because the Mishnah wishes to make its statement on what really matters.

The Mishnah tells us something about how things were, but it tells us everything about how a small group of rabbinic sages wanted things to be. The document is orderly, repetitious, and careful in both language and message. It is small-minded, picayune, obvious, dull, and routine—everything its age was not. Standing in contrast with the world to which it speaks, the Mishnah's message is one of small achievements and modest hope intended to defy a world of large disorders and immodest demands. It offers this message to an Israelite world that could not shape affairs in any important ways and speaks to people who by no means willed the way things were. The Mishnah lays down a practical judgment on and in favor of a people who must go forth with the imagination and will to reshape their reality, regain a system, and reestablish an order upon which trustworthy existence is to be built.

The Mishnah's principal message is that humanity is at the center of creation, and as the head of all creatures upon earth, corresponds to God in heaven, in whose image humanity is made. The Mishnah makes this simple and fundamental statement by imputing the power to man to inaugurate and initiate those corresponding processes, sanctification and uncleanness, which play such a critical role in the Mishnah's account of reality. Human will, expressed through human deed, is the active power in the world. Will and deed constitute those actors of creation that work upon those neutral realms that are subject to either sanctification or uncleanness: the Temple and table, the field and family, the altar and hearth, as well as woman, time, space, and transactions in the material world and in the world above as well. An object, a substance, a transaction, even a phrase or a sentence is inert but may be made holy when its potential to be sanctified is aroused or generated by the interplay of man's will and deed. Each thing may either be treated as ordinary or (where relevant) made unclean by the neglect of the will and the inattentive acts of humankind. The entire system of uncleanness and

holiness awaits the intervention of humanity, which imparts the capacity to become unclean upon what was formerly inert, or which removes the capacity to impart cleanliness from what was formerly in its natural and powerful condition. Likewise, in the other ranges of reality humanity is at the center on earth, just as is God in heaven. People are God's counterpart and partner in creation, and, like God, they have power over the status and condition of creation, putting everything in its proper place, and calling everything by its rightful name.

Whereas the urgent question had previously been "Who is Israel?," when the answer was found by Judaism in the first Rabbinic

Roman soldiers carrying the menorah taken from the Temple of Jerusalem as war booty, 70 CE; detail of a relief on the Arch of Titus, Rome, 81 CE

Alinari—Art Resource

phase—that Israel is the surviving people faithful to the Covenant—the question then became “What can a man do?” Addressing itself to holy Israel, the Mishnah proceeded to answer that man, through will and deed, is master of this world, the measure of all things. When the Mishnah thinks of man it means Israel, the subject and actor of its system, and so the statement is clear: this man is Israel, who can do what he wills. In the aftermath of the two Roman wars (66–73 and 132–135 CE), the message of the Mishnah cannot have proved more pertinent—or poignant and tragic. The first stage of Rabbinic Judaism’s formation therefore answered a single encompassing question: in the aftermath of the destruction of the holy place and holy cult, what remained of the sanctity of the priestly caste, the holy land, and, above all, Israel and its holy way of life? The answer was that sanctity persists, indelibly, in Israel, the people—in its way of life, in its land, in its priesthood, in its food, in its mode of sustaining life, in its manner of procreating and so sustaining the nation—and that sanctity would endure. But in time to come that answer found itself absorbed within a successor-system, one with its own points of stress and emphasis.

The second phase of Rabbinic Judaism. Rabbinic Judaism, which emerged about 70 CE and reached its final statement in the Talmud Bavli, took shape in response to both internal and external stimuli. Its internal set of questions derived from the character of the Mishnah itself, while its external questions came from the catastrophic political change the Jews underwent following the conversion of the Roman emperor CONSTANTINE I to Christianity in 312 and the subsequent establishment of the Christian religion as the religion of the state.

As soon as the Mishnah made its appearance in about 200 CE the vast labor of explaining its meaning and justifying its authority got under way. The Mishnah presented one striking problem in particular: it rarely cited scriptural authority for its rules. By omitting scriptural proof-texts, the Mishnah bore the implicit claim to an authority independent of Scripture, and in that striking fact the Mishnah set a new course for itself, raising problems for those who would apply its laws. From the time of the formation of ancient Israelite Scripture into a holy book, the Torah—after the return to Zion in Ezra’s time (c. 450 BCE)—the established canon of revelation (whatever its contents) was with Scripture, in that proof-texts were cited alongside their own rules. Otherwise the new writings could find no ready hearing in Israelite culture.

Over the next 650 years after the formation of the Torah, four conventional ways to accommodate new writings, or new “tradition,” to the established canon of received Scripture had come to the fore. First and simplest, a writer would sign a famous name to his book, attributing his ideas to Adam, Enoch, Jacob’s sons, JEREMIAH, Baruch, or any number of others, down to Ezra. But the Mishnah bore no such attribution. Implicitly the Mishnah carried the further notion that sayings of people on the list of authorities from Moses to nearly their own day derived from God’s revelation at Sinai. But no one made that premise explicit before the time of the Talmud Yerushalmi. Second, an author might also imitate the style of biblical Hebrew and so try to creep into the canon under the cloak of Scripture. But the Mishnah’s authors ignore biblical syntax and style. Third, an author would surely claim his work was inspired by God, a new revelation for an open canon. The Mishnah, however, contains no claim that it forms part of the Torah of Sinai; that claim would be added only in the mid-3rd century by the compilers of the *Pirke Abot* (“The Sayings of Our Fathers”), which linked authorities of the Mishnah to Moses on Sinai. Fourth, at the very least, an author would link his opinions to biblical verses by including an EXEGESIS of the latter in line with the former so that Scripture would validate his views. The authorship of the Mishnah did so occasionally, but far more commonly stated on its own authority whatever rules it proposed to lay down.

The solution to the problem of the Mishnah’s authority—that is, its relationship to Scripture—was worked out after its compilation and set forth in the subsequent writings of the rabbis, particularly in the Talmuds, the commentaries to the Mishnah. There were several ways in which the work of legitimization went forward, as represented by diverse documents that succeeded and dealt with the

A page of the tractate Makkot of the fourth order, Neziqin, from the Vilna edition of the Bavli, or Babylonian Talmud, first printed 1880–86. It concerns the fate of a man who was convicted and escaped and how he is to be judged. The box surrounding the Mishnah and code numbers have been superimposed on the page. They indicate a variety of notes, commentaries, and references to Scripture and other Talmudic and Rabbinic sources that span hundreds of years of scholarship

Mishnah. The three principal forms of legitimization were: (1) The tractate Abot (c. 250 CE), which represents the authority of the sages cited in Abot as autonomous of Scripture. Abot claims the Mishnah requires no systematic support through exegesis of Scripture in light of Mishnaic laws. The authorities in Abot do not cite verses of Scripture, but what they say does constitute a statement of the Torah. (2) The book TOSEFTA (c. 400 CE), whose authors took the middle position that the Mishnah by itself provided no reliable information and all its propositions demanded linkage to Scripture, to which the Mishnah must be subordinate and secondary. Tosefta very commonly cites a passage of the Mishnah and then adds an appropriate proof text. (3) The far extreme, which states that everything in the Mishnah makes sense only as a (re)statement of Scripture or upon Scripture's authority. This stance was tak-

en by the SIFRA, a post-Mishnaic compilation of exegeses on Leviticus, redacted at an indeterminate point, perhaps about 300 CE. The Sifra systematically demolishes the logic that sustains an autonomous Mishnah, for the Mishnah appeals to the intrinsic traits of things, and those traits allow for classification and hierarchization; it in no way depends on classification from external sources (not even Scripture). Sifra, however, demonstrates that the identification of the correct classification of things depends not upon the traits of things viewed in the abstract but upon the classification of things by Scripture. The framers of the Sifra thus recast the two parts of the Torah into a single coherent statement through unitary and cogent discourse. So the authorship of Sifra made its entire statement by choosing, for structure, a book of the Pentateuch—Leviticus—and, for form, an exegesis of a base-text of Scripture.

THE CHALLENGE OF CHRISTIANITY

Five fundamentally important events in the history of Judaism took place in the 4th and 5th centuries CE. All of them except for the last were well known in their day. These events were as follows: (1) the Christian conversion of the Roman emperor Constantine in 312; (2) the failure of the emperor Julian's (reigned 361–363) plan to rebuild the Temple of Jerusalem, seen by Israel as a sign of its reconciliation with God; (3) the beginning of the depaganization of the Roman Empire, including a program of attacks on PAGAN temples and, along the way, synagogues; (4) the Christianization of the majority of the population of Palestine (the land Jews believed God had set apart for the people of Israel); and (5) the creation of the Talmud Yerushalmi and of the compositions of Scriptural exegeses, in particular GENESIS RABBAH and LEVITICUS RABBAH (both part of midrash Rabbah). This world-historical change could not be absorbed into Israel's system of theories on the outsiders (GENTILES), in general, and the meaning of the history of the great empires, in particular. (That theory—coming from, among other places, the books of the prophets—contained the belief that the God of Israel is revealed in the

events of nations and the history of the world, and not only through the rhythms of nature. For example, when God was pleased with Israel, Israel was given self-rule. But the Pentateuch at Leviticus 26 and Deuteronomy 32–34 stated explicitly that Israel's rule by pagans was God's punishment of Israel's disobedient intransigence toward his covenant.)

Additionally, the Roman Empire under Christianity was fundamentally different in two ways from the Empire under pagan rulers. First, it shared Israel's reverence for exactly the same Holy Scriptures on which Jewry based its existence. So it was no longer a wholly other, entirely alien empire that ruled over the horizon. It was now a monotheist biblical empire, formerly persecuted and not so different from Israel in its basic convictions about the all important matters of time and eternity. The Christian emperors read the same Scriptures as the rabbis, so the challenge to Judaism was acute in a way that the pagan challenge had never been. Second, established policies of more than a half a millennium—from the time of the Maccabees' alliance with Rome to the start of the 4th century—now gave way. Pagan tolerance of Judaism and an accommodation with the Jews in their Holy Land (disrupted only by the Jews' own violation of the terms of the agreement in 66–73 and 132–135) was no longer a governing principle. Instead, there was intolerance of Judaism and persecution of Jews through attacks on their persons and property.

Given the political changes of the age, with their implications for the meaning and end of history as Israel would experience it, the fresh emphasis on salvation, the introduction of the figure of the Messiah as a principal teleological force, the statement of an eschatological teleology for the system as a whole—these constitute answers to questions that were raised by Christian theologians. These theologians held that the Christian triumph confirmed the Godhood of Jesus and thus the rejection of Israel and the end of Israel's hope for salvation at the end of time. The answer offered by Judaic sages was the Torah in its dual media, the affirmation of Israel as children of Abraham, Isaac, and Jacob, and the coming of the Messiah at the end of time. The questions and answers fit the challenge of the age.

Canon. The text-based answer to Christianity's ascent was revealed in the unfolding of the sages' canon as it pertained to the use of Scripture. The Mishnah and the exegetical literature that served it (*e.g.*, the Tosefta and the Talmuds) had followed a topical organizational pattern that arranged ideas by subject matter. However, in the 3rd and, especially, the later 4th centuries, writings entering the sages' canon took shape around the explanation of verses of Scripture, instead of around a set of topics.

From the 4th century the rabbis produced compositions of biblical exegeses that were collected into holy books. The making of such collections facilitated the next natural step in the process as precipitated by the appearance of the Mishnah. Christianity addressed the world (including the Jews) with a systematic exegetical apologetic—Matthew's and the other Gospels demonstrated a living exegesis showing how events in the life of Jesus fulfilled the prophecies of the shared Scripture (the OLD TESTAMENT). The Judaic task of creating a counterpart exegesis of the Mishnah was a pressing issue in the confrontation with Christianity; it became necessary to show in a systematic and orderly way how Scripture was to be read by Israel. In the Mishnah the sages had found a systematic exegesis of Scripture unnecessary since there was no contrary reading to theirs to present a challenge. But confronting the powerful Christian challenge made further indifference impolitic and impossible, and sages replied with their compositions of the Talmud and the midrashic compilations, restating their reading of Scripture in the face of the Christians' interpretation of God's message.

By the 4th century the Christian church had reached a consensus on the bulk of the NEW TESTAMENT canon, having earlier accepted the Old Testament. Accordingly, the issue of what constituted Scripture had come to the fore for Judaism, as Christianity focused the sages' attention on that larger matter of systematic exegesis. This issue was raised, for example, when the Christian scholar JEROME (d. 419/420) referred to the Jews' having a "second" Torah (meaning the oral Torah) that was not authoritative, and when a series of important fathers of the Chris-

tian church produced profoundly Christological exegeses of Scripture. It would be heightened when the sages, speaking on their own and to their chosen audience, went through pretty much the same processes. They explained the standing of that "second Torah" and produced not merely counterpart exegeses to those of the Christians but counterpart compilations of such exegeses as well.

Symbol. As the generative symbol of the literary culture of the sages, the Torah stands for the system of Rabbinic Judaism as a whole. The Torah was symbolic of the doctrine that Moses received the Torah at Mount Sinai in two media, written and oral. The written Torah was transmitted and is now contained in the Pentateuch. The oral Torah was formulated for ease in memorization and then transmitted through sages and their disciples, from Moses and Joshua to the most current generation of rabbis today.

That doctrine of the dual Torah, that is, of the Torah in two media, came about in response to the problem of explaining the standing and authority of the Mishnah. But broadening the symbol of the Torah was actually accomplished around the figure of the sage. The symbol of the Torah accounted for the sages' authority—the sage being the one in possession of God's oral law. Only later on in the pages of the Talmud Yerushalmi did the doctrine of the dual Torah reach expression. So in the evolution of the documents of the canon of Judaism, the generative symbol of Torah reveals a striking change. Beginning as a rather generalized account of how sages' teachings relate to God's will, the symbol of Torah gained concrete form in its application to the dual Torah, written and oral, Pentateuch and Mishnah. What once stood for a few specific books came to stand for all the teachings and laws of Israel, as well as the system that taught and promulgated those laws.

Torah thus took on a multiplicity of meaning: standing for a kind of human being, connoting a social status and group, and referring to a type of social relationship. It further came to denote a legal status, differentiating things and persons, actions and status, as well as "revealed truth." In all, the main points of insistence of the whole of Israel's life and history come to full symbolic expression in that single word. If people wanted to explain how they would be saved, they would use the word Torah. Torah stood for salvation and accounted for Israel's this-worldly condition and the hope, for both individual and nation alike, of life in the world to come. For the kind of Judaism under discussion, therefore, the word Torah stood for everything, symbolizing at once the whole.

After the appearance of the Mishnah, the Torah moved, in two significant stages, from standing for a concrete, material object, a scroll, to symbolizing a broad range of relationships. The first stage is marked off by tractate Abot, the second by the Talmud Yerushalmi. As to the former, Abot regards the study of Torah as what a sage does, while the substance of Torah is what a sage says, and likewise what a sage says falls into the classification of Torah. At issue in Abot is not Torah but the authority of the sage. It is the sage's standing that transforms a saying into a Torah-saying, placing it into the classification of Torah. Abot then stands as the first document of incipient Rabbinic Judaism—the doctrine wherein the sage embodies the Torah and is a holy man in the likeness and image of God, like Moses "our rabbi." So the claim that a saying falls into the category of Torah if a sage says it as Torah leads to the view that the sage himself is Torah incarnate.

To the rabbis the principal salvific deed was to "study Torah," memorizing Torah-sayings by constant repetition, and, as the Yerushalmi itself amply testifies, for some sages this included profound analytic inquiry into the meanings of those sayings. The innovation alters the symbol such that the "study of Torah" is imparted with a material supernatural power. For example, by repeating words of Torah as incantations, the sage could ward off the angel of death, as well as accomplish other kinds of miracles. Mastery of Torah transformed the man engaged in Torah-learning into a supernatural figure, able to do things ordinary folk could not. The vast expansion of the category of "Torah" meant that through the transformation of the Torah from a concrete thing to a symbol, a Torah-scroll could be compared to a man of Torah, namely, a rabbi. It had been established that salvation would come from keeping God's will in general, as Israelite holy men had in-

sisted for so many centuries. So it was a small step for rabbis to identify their particular corpus of learning, namely, the Mishnah and associated sayings, with God's will as expressed in Scripture, which was the universally acknowledged medium of revelation.

The symbolization of the Torah proceeded from its removal from the framework of material objects, or of its own contents, to its transformation into something quite different and abstract, distinct from the document and its teachings. Specifically, the Torah stands for something more when it comes to be identified with a living person, the sage, and endowed with those particular traits that the sage claimed for himself.

Teleology. The teleology of a system answers the question of a system's purpose and goal, presupposing that a system has a purpose or goal. Teleology explains why someone should do what the system requires, and what will happen if they do not. The Mishnah and its closely related successor documents, Abot and the Tosefta in particular, present a teleology without eschatological focus (that is, a teleology in which the messianic theme plays no considerable role). These books speak more commonly about preparing in this world for life in the world to come, and focus on the individual and his or her personal salvation, rather than the nation and its destiny at the end of time. By contrast, the Talmuds provide an eschatological and therefore messiah-centered teleology. There is the more familiar teleology of Judaism, which, from the Talmud Yerushalmi onward, commonly explains the meaning of the Rabbinic system of Judaism by referring to the end of time and the coming of the Messiah.

The Mishnah's authors constructed a system of Judaism in which the entire teleological dimension reached full exposure while hardly invoking the person or functions of a messianic figure of any kind. The Mishnah's framers presented no elaborate theory of events, a fact fully consonant with their systematic points of insistence and encompassing concern: one by one, events do not matter. The philosopher-lawyers also exhibited no theory of history. Their conception of Israel's destiny was not historical but existential. They did not retell stories, or teach lessons called for by events. They taught that the future would be shaped by the character of Israel in the here and now; its loyalty to the Torah that marked its covenant with God in no way called upon historical categories of either narrative or didactic explanation to describe and account for the future. Therefore, the small importance attributed to the figure of the Messiah as a historical-eschatological figure is in full accord with the larger traits of the system as a whole. If, as in the Mishnah, what is important in Israel's existence was the ongoing process of sanctification and not a salvation understood as a one-time event at the end of time, then there was no reason to narrate history. Thus few formed the obsession about the Messiah so characteristic of Judaism in its later, Rabbinic

Torah scroll
The Jewish Museum

mode, when a messianic focus formed, in large part, in response to the sudden ascent of Christianity.

The Talmudic reply to political events. With its political triumph, Christianity's explicit claims, now validated in the world-shaking events of the age, demanded a reply. The sages of the Talmud Yerushalmi provided it. Responding to the very specific points where the Christian challenge met old Israel's worldview head-on, the sages' doctrines reemphasized the biblical message that history teaches lessons. They restated the Pentateuchal-prophetic teaching that said Israel's covenant with God accounts for Israel's fate and they stressed the Pentateuchal theme that Israel was to make itself holy because the Lord God is holy and Israel was to be like God. The sages also taught that when Israel had made itself holy ("sanctified") God would respond by saving Israel from its lamentable situation among the nations and bring it back to the Land for judgment and entry into the world to come.

What did Israel's sages have to present as the Torah's answer to the cross, with its doctrine of the triumphant Christ, Messiah and king, ruler now of earth as of heaven? It was the Torah in three forms. The Torah was defined in the doctrine, first, as the status, as oral and memorized revelation, of the Mishnah, and, by implication, of other rabbinical writings. The Torah, moreover, was presented as the encompassing symbol of Israel's salvation. The Torah, finally, was embodied in the person of the Messiah who, of course, would be a rabbi. The outcome was a stunning success for that society for which the sages, and, in the sages' view, God, cared so deeply: eternal Israel "after the flesh" (*i.e.*, those who are Jewish by birth). In the rabbis' statement Judaism did endure in the Christian West, as the sages gave Israel a secure conviction of an Israel after the flesh, to which the Torah continued to speak. We know the sages' Judaism won because when, in turn, Islam gained its victory, Christianity throughout the Middle East and North Africa gave way, leaving only pockets of the faithful. But the sages' Judaism in those same vast territories retained the loyalty and conviction of the people of the Torah. The cross would rule only where the crescent did not, but the Torah of Sinai, sanctified Israel in time everywhere and always, and promised secure salvation for eternity.

RABBINIC JUDAISM'S SUCCESS IN WESTERN CIVILIZATION

The eventual success of Rabbinic Judaism in overcoming Christianity's challenge and holding the faith of its people cannot be attributed only to its power to recapitulate and systematize Scripture's system. Whatever the power of a well-crafted and cogent theology, in the end the political and social world also decided the fate of Rabbinic Judaism. Judaism endured in the Christian West, as well as in the Muslim East, for two reasons. First, Christianity and Islam permitted it, and second, Israel, the Jewish people, wanted it to endure.

The importance of the first of the two factors can be seen in the fate of paganism in the 4th century (and the fate in the 7th and 8th centuries under Islam of ZOROASTRIANISM and Sabianism, a religion that worshiped a moon deity at Harran in Assyria). It was not the intellectual power of sages alone that secured the long-term triumph of Judaism. It also was the Christian emperors' policy toward Judaism that afforded to Jews and their religion such toleration as they would enjoy then and thereafter. There may have been some incidents of ANTI-SEMITISM against Jews or their synagogues, but the religious worship of Judaism was never actually prohibited. Pagan sacrifice, by contrast, came under interdict in 341, and, while pagan festivals went on into the 5th century, the die had been cast.

But the Jews also remained faithful to Rabbinic Judaism because it contained the answers that allowed them to make sense of their world. The Judaism of the dual Torah constructed for Israel a world in which the loss of political sovereignty and the persistence of tolerated subordination within Islamic and Christian nations actually attested to Israel's importance and centrality in the human situation. So the long-term condition of the conquered people found more than mere explanation in that pattern which had defined God's will in the Torah for Israel beyond the first catastrophe and restoration. That generative experience of loss

and restoration, death and resurrection, set forth by the first Scripture allowed Israel to maintain a renewed sense of its own distinctive standing among the nations of the world.

But while Judaism taught the Jews that Israel's subordinated position gave probative evidence of its true standing, Judaism also promised an eventual ascendancy: the low would be raised up, the humble placed into authority, the proud reduced, the world made right. So the Judaism of the dual Torah did more than react: it reassured and encouraged. For a long time that Judaism defined the politics and policy of the community. It instructed Israel, the Jewish people, on the rules for the formation of the appropriate world and it designed those attitudes and actions that would yield an Israel on one side subordinate and tolerated, but on the other proud and hopeful. The Judaism of the dual Torah began with the encounter of a successful Christianity and persisted in the face of a still more successful Islam. But for Israel, the Jewish people, that Judaism persevered long after the conditions that originally precipitated the positions and policies deemed normative, because that same Judaism not only reacted to, but also shaped Israel's condition in the world. In making a virtue of a policy of subordination that was not always necessary or even wise, the Judaism of the dual Torah defined the Jews' condition and set the limits to its circumstance.

The theology of Rabbinic Judaism. The theological beliefs of Rabbinic Judaism—the Judaism that had become the normative system—are as follows: God is one and unique, loving and just. Monotheism by nature explains many things in a single way. One God rules. Life is meant to be fair, and just rules should describe what is ordinary, all in the name of that one and only God. Thus, in monotheism a simple logic governs, limiting the ways of making sense of things. But that logic contains its own dialectics. If one true all-powerful and omniscient God has done everything, then all things are credited to, and blamed on, him. In that case he can be either good or bad, just or unjust—but not both. Responding to the generative dialectics of monotheism, the sages' dual Torah systematically reveals the justice of the one and only God of all creation. God is not only God but he is also good. Appealing to the facts of Scripture—the written part of the Torah—the sages constructed in the documents of the Oral part of the Torah a coherent theology, creating a cogent structure and logical system to expose the justice of God. The theology of the dual Torah presents a world order based on God's justice and equity. The categorical structure of the dual Torah encompasses God and humans, the Torah, and Israel and the nations. The working system of the dual Torah finds its dynamic in the struggle between God's plan for creation—to create a perfect world of justice—and man's will. That dialectic took the events contained in the sequences of rebellion, sin, punishment, repentance, and atonement; exile and return; and embodied them in a single paradigm: the disruption of world order and its subsequent restoration.

The four principles of the dual Torah's theology are as follows:

1. God formed creation according to a plan, which the Torah reveals. The facts

Jews, longing for a return to the Holy Land, point to a visionary Jerusalem. They are shown with the pointed hats that they were required to wear to distinguish them from Christians, and they are depicted with birds' heads since they felt it was sacrilegious to depict the human form in sacred texts. of nature and society set forth in that plan conform to a pattern of reason based upon justice, showing the world order. Those who possess the Torah (Israel) know God and those who do not (the Gentiles) reject him in favor of idols. What happens to each of these two sectors of humanity depends on their respective relationship with God. Israel in the present age is subordinate to the nations, because God has designated the Gentiles as the medium for penalizing Israel's rebellion, provoking Israel to repent through its subordination and exile. Private life and the public order conform to the principle that God rules justly in a perfected and static creation.

2. The perfection of creation, as realized in the rule of exact justice, is signified by the timelessness of the world of human affairs—this world conforms to a few enduring paradigms that transcend change (a theory known as the theology of history). Time is marked not by present, past, or future but only by the recapitulation of those patterns. Perfection is further embodied in the unchanging relationships of the social

commonwealth (an idea known as the theology of political economy), assuring that scarce resources, once allocated, remain in stasis. A further indication of perfection lies on one side in how the components of creation complement one another, and on the other, the correspondence between God and man, who was made in God's image (known as theological anthropology).

3. Israel's public and personal condition marks flaws in creation. Perfection is disrupted by the sole power capable of standing on its own against God's power: man's FREE WILL. What man controls and God cannot coerce is man's capacity to form intention and therefore choose to either arrogantly defy God or humbly love God. Because man defies God, the sin that results from man's rebellion flaws creation and disrupts world order (a view known as theodicy, which defends the goodness of God despite evil in the world). The paradigm of Adam's rebellion in Eden governs; thus the act of arrogance leading to exile from Eden accounts for the condition of humanity. But, as in the original transaction of alienation and consequent exile, God retains the power to encourage repentance through the punishment of man's arrogance. In mercy, moreover, God exercises the power to respond to repentance with forgiveness; a change of attitude can evoke a counterpart change. Since he commands his own will, man also has the power to initiate the process of reconciliation with God, through an act of humility and repentance, man may restore the perfection of that order that his arrogance has marred.

4. God ultimately will restore the perfection that embodied his plan for creation. In this restoration death by reason of sin will die, the dead will be raised and judged for their deeds, and most of them, having been justified, will go on to eternal life in the world to come. The paradigm of man's restoration to Eden is realized in Israel's, the people's, return to the Land of Israel at the resurrection of the dead and the LAST JUDGMENT. In the language of the Mishnah tractate Sanhedrin, "All Israel has a portion in the world to come," meaning that Israel, the people, will be brought back to the land, judged, and (in most cases) granted eternal life in Eden. (This eschatological theology should not be confused with contemporary political and secular events.) In that world or age to come the sector of hu-

manity that knows God through the Torah will encompass all of humanity. Idolators will perish, and the humanity that comprises Israel at the end will know the one, true God and spend eternity in his light.

Here we have nothing other than the Pentateuch's paradigm of exile and return, beginning with the fall of Adam and the loss of Eden, and paralleled in the fall of Israel and the loss of the Land of Israel, Jerusalem, and the Temple. But the sages underscored that, as prophecy insisted, through return to God, Israel would recover and keep its Eden. And, they added, even now on certain occasions and through certain rites and practices on the Sabbath Israel could regain Eden for a moment. In the dual Torah the rabbis reworked Scripture's story, trying to translate its lessons into the organizational norms of the community of Israel. The law represented the conclusions drawn by sages from Scripture's story about humanity from Genesis through Israel in 586. Furthermore, the liturgy of synagogue and home recapitulates the characteristic modes of thought of the dual Torah and reworks its distinctive constructions of exemplary figures, events, and conceptions. In defining the religion the world calls "Judaism" and that calls itself "the Torah," sages have always maintained that they possessed the Torah revealed by God to Moses at Mount Sinai ("Moses received Torah at Sinai and handed it on to Joshua, Joshua to elders, and elders to prophets, and prophets handed it on to the men of the great assembly" [Mishnah Abot 1:1]). As a matter of fact, by making the theology of the dual Torah the pivot between the written Torah and the liturgy and piety of the faith, the sages were right in registering that claim.

Set forth baldly, Rabbinic Judaism takes up the critical theological heritage of the Hebrew Scriptures and hands it on to the age to come as an ordered, coherent, integrated system. Sages take as their task the recapitulation of the structure and system that they identify with the written Torah and encompass within that theology their own, as we see, very limited amplifications. For sages implicitly insist that those very ideas—that logic, this story of theirs—do recapitulate the ones set forth by the written Torah. Their heirs, in early medieval times, saw in the dual Torah, written and oral, a single coherent revelation: "the one whole Torah given by God to Moses, our rabbi, at Sinai." That apologetics, integral to the theology of the oral Torah, takes a critical position in nearly every line of every document. It defines the form of many documents and the generative energy of them all.

The hegemony of Rabbinic Judaism. In the history of Judaism from the 7th to the 20th centuries two facts attested to the power of Rabbinic Judaism. First, the Judaic system was able to absorb massive innovations in modes of thought and media of piety. Second, the same system defined issues so that heresies took shape in explicit response to its doctrines, showing that the system predominated to the extent that it dictated the character of its critics and enemies.

The power of the Judaism of the dual Torah and the cogency of the system is attested to by its capacity to both precipitate and also accommodate diverse Judaisms. Over the centuries, from the 4th to the present time, derivative systems took shape, restating in distinctive ways the fundamental convictions of the Judaism of the dual Torah, or adding their particular perspective or doctrine to that system.

Others attained heretical status specifically by rejecting important components of the received system—*e.g.*, its doctrine of the dual Torah or of the Messiah as a sage and model of the Torah fully observed. So long as the self-evident truth of the established Judaism persisted for believers, each of these derivative systems—orthodox or heretical—had a relationship with that fundamentally paramount statement of matters. It was only when this received Judaism no longer enjoyed a virtually unique standing as the valid answer to urgent questions that Judaic systems took shape that were utterly out of phase with that system that had reached its initial version in the 4th century and its final one in the Talmud Bavli.

Within Rabbinic Judaism, however, most of the diverse systems found ample space for their beliefs without resorting to HERESY. Some of these systems concerned new doctrines which had to be brought into accord with the received ones. Among them, for example, was a massive rethinking of the very modes of thought of Judaism, which took shape over a long period of time, moving from

mythic to philosophical thinking. The philosophical movement presents striking testimony to the power of the received system, for it set out to validate and vindicate the faith of that system, inclusive of the law and doctrine of the oral Torah. Each continuator-Judaism laid its stress on a received component of the original system or explicitly reaffirmed the whole of that system, while adding to it in interesting ways. All of the continuator-Judaisms claimed to stand in a linear and incremental relationship to the original. For example, they made constant reference to the established and authoritative canon or affirmed the importance of meticulous obedience to the law. Each one in its own way proposed to strengthen, purify or otherwise confirm the dual Torah of Sinai.

SUBSETS OF RABBINIC JUDAISM

New modes of thought and the advent of philosophical thinking. Because of the character of Islamic culture, the rise of Islam brought important intellectual changes to Judaism. The system set forth by Rabbinic Judaism accommodated this new mode of thought. Specifically, Muslim theologians—who could read Greek (or who read Greek philosophy translated into Arabic)—developed a rigorous, abstract, and scientific mode of thought along philosophical lines, with special interest in a close reading of Aristotle, one of the founders of the philosophical tradition. Rabbinic Judaism, embodied in the great authorities of the Torah, naturalized philosophy within the framework of the dual Torah. While in ancient times a school of Judaic philosophy in the Greek-speaking Jewish world—represented by Philo of Alexandria (d. 45–50 CE)—read Scripture in a philosophical light, the sages of the Talmud did not follow that generalizing and speculative mode of thought. But as the Judaic intellectuals under Muslim rule faced the challenge of Muslim RATIONALISM and philosophical rigor, they read Scripture as well as the oral Torah in a new way, attempting to reconcile and accommodate

the one with the other. In medieval Islamdom and Christendom, no Judaic intellectuals could rest easy in an admission of conflict between Scripture and science in its philosophical form.

Thus, alongside study of Torah—the spending of one’s life in learning the Talmud Bavli and later codes, commentaries, and rabbinical court decisions—a different sort of intellectual-religious life flourished in classical Judaism. It was the study of the tradition through the instruments of reason and the discipline of philosophy. The philosophical enterprise attracted small numbers of elitists and mainly served their specialized spiritual and intellectual needs. But they set the standard, and those who followed it included the thoughtful and the perplexed—those who took the statements of the tradition most seriously and intended through questioning and reflection, to examine and then effect them. The philosophers, moreover, did not limit their activities to study and teaching; they frequently occupied high posts within the Jewish community and served in the high society of politics, culture, and science outside the community as well. Though not numerous, the philosophers exercised considerable influence.

Philosophy flourished in a world of deep religious conviction—a conviction common to the several disparate religious communities. The issues of philosophy were set not by lack of belief but by deep faith; few, if any, denied the ideas of providence, a personal God, and a holy book revealed by God through his chosen messenger. Nearly everyone believed in reward and punishment, in a last judgment, and in a settling of accounts. The Jewish philosopher had to cope with problems imposed not only by the classical faith but also by the anomalous situation of the Jews themselves. How was philosophy to account reasonably for the homelessness of God’s people, who were well aware that they lived as a minority among powerful, prosperous majorities of Christians or Muslims? If Torah were true, why did different revelations claiming to be based upon it—but to complete it—flourish while the people of the Torah suffered? Why, indeed, ought one remain a Jew when every day one was confronted by the success of the daughter religions? For a member of a despised minority conversion was always an inviting possibility, even under the best of circumstances. The search was complicated by the formidable appeal of Greek philosophy to medieval Christian and Islamic civilization. Philosophy’s rationalism, openness, and search for pure knowledge challenged all revelations, and called into question all assertions of truth that were verifiable not through reason but only through appeals to a source of truth not universally recognized. Thus it seemed reason stood against revelation. Mysterious divine plans came into conflict with allegations of the limitless capacity of human reason: free inquiry might lead anywhere, and not necessarily to the synagogue, church, or mosque. And not just traditional knowledge, but the specific propositions of faith and the assertions of a holy book had to be measured against the results of reason. Faith or reason—this seemed to be the choice.

For the Jews, moreover, a formidable obstacle was posed by the very substance of their faith in a personal, highly anthropomorphic God who exhibited character traits not always in conformity with humanity’s highest ideals and who in rabbinic hands looked much like the rabbi himself. Classical philosophical conundrums were further enriched by the obvious contradictions between belief in free will and belief in divine providence. Is God all-knowing? Then how can people be held responsible for what they do? Is God perfect? Then how can he change his mind or set aside his laws to forgive people? No theologian in such a cosmopolitan, rational age could permit the assertion of a double truth or a private, relative truth. There was little appeal in the notion that something could be true for one party and not for another, or that faith and reason were equally valid and yet contradictory. The holy book had to retain the upper hand. Two philosophers represent the best efforts of medieval Judaic civilization to confront these perplexities.

Maimonides (1135–1204). First is MOSES MAIMONIDES, who was a distinguished student of the Talmud and of Jewish law in the classical mode, a community authority, a great physician, and a leading thinker of his day. His achievement was to synthesize a Neoplatonic Aristotelianism with biblical revelation. His *The Guide of the Perplexed* (original Arabic title, *Dalālat al-ḥā’irīn*, later known un-

der its Hebrew title as the *More nevukhim*), compiled in 1190, was intended to reconcile the believer to the philosopher and the philosopher to faith. For him philosophy was not alien to religion but identical with it, for in the end truth was the sole issue. Faith is a form of knowledge; philosophy is the road to faith. His proof for the existence of God was Aristotelian. He argued from creation to Creator but accepted the eternity of the world. God becomes, therefore an "absolutely simple essence from which all positive definition is excluded" (Julius Guttman, *Philosophies of Judaism: The History of Jewish Philosophy from Biblical Times to Franz Rosenzweig*, trans. by David Silverman [1964], p. 158). One can say nothing about the attributes of God. He is purged of all sensuous elements. One can say only that God is God, and nothing more, for God can only be known as the highest cause of being.

What then of revelation? Did God not say anything about himself? And if he did, what need is there for reasonings such as these? For Maimonides, prophecy, like philosophy, depends upon the active intellect (human intellectual and imaginative capabilities). Prophecy is a gift bestowed by God upon man. The Torah and commandments are clearly important, but ultimately are not beyond question or reasonable inquiry. They, however, survive the inquiry unimpaired. The Torah fosters a sound mind and body. The greatest good, however, is not to study Torah in the sense described earlier, but rather to know God—that is, to worship and love him. Piety and knowledge of Torah serve merely to prepare people for this highest achievement. The study of Torah loses its character as an end in itself and becomes a means to a philosophical goal. This constituted the most striking transformation of the old values.

Maimonides provided a philosophical definition of Judaism—a list of articles of faith he thought obligatory for every faithful Jew. These required beliefs are as follows: (1) that God exists, (2) he has absolute unity, (3) he is incorporeal, (4) he is eternal, (5) he must be worshiped exclusively, (6) he speaks through prophecy, (7) that Moses was the greatest of the prophets, (8) that the Torah is divine in origin, (9) that the Torah is eternally valid, (10) that God has knowledge of man's deeds, (11) that God will reward and punish mankind, (12) that God has promised to send a messiah, and (13) that God has promised to resurrect the dead. The esoteric words of the philosopher were thus transformed into a message of faith complex enough to sustain critical inquiry according to the canons of the day and simple enough to bear the weight of the faith of ordinary folk and to be sung in the synagogue, as the hymn entitled "Yigdal." The "God without attributes" remains guide, refuge, and stronghold.

Judah ha-Levi (1080–1141). JUDAH HA-LEVI was a poet and mystic who represented those Jews who did not concur with Maimonides' position; who found the philosophers presumptuous, inadequate, and incapable of investigating the truths of faith. But the critics of "philosophy" were themselves philosophers. Judah ha-Levi produced *Sefer ha-Kuzari* ("Book of the Khazar"), a work that comprised a set of dialogues between a king in search of true religion and advocates of the religious and philosophical positions of the day, including Judaism. (The monarch was the king of the Khazar [now southeastern Russia], a kingdom which did, in fact, adopt Judaism about the 8th century.) Judah ha-Levi objected to philosophy's indifference to the comparative merits of the competing traditions, since in philosophy's approach, religion is recommended, but which religion does not matter much. Such an indifference may have been tolerable for the majority religions in the West—Islam and Christianity—but not for a minority destined any day to have to die for their faith.

Judah ha-Levi argues that martyrdom such as Jews faced will not be evoked by the unmoved mover, the God anyone may reach through either revelation or reason. Only for the God of Israel will a Jew give up his or her life. By its nature, philosophy is insufficient for the religious quest. It can hardly compete with—let alone challenge—the history of the Jewish people, which records extraordinary events centering on God's revelation. What does philosophy have to do with Sinai, the land, or prophecy? On the contrary, in expounding religion to the king of the Khazars, the Jew begins not like the philosopher with a disquisition on divine

attributes, nor like the Christian who starts with the works of creation and expounds the TRINITY, nor like the Muslim who acknowledges the unity and eternity of God. The Jew states: "I believe in the God of Abraham, Isaac, and Israel, who led the Israelites out of Egypt with signs and miracles; who fed them in the desert and gave them the Land, after having made traverse the sea and the Jordan in a miraculous way; who sent Moses with his Torah and subsequently thousands of prophets, who confirmed his law by promises to those who observed and threats to the disobedient. We believe in what is contained in the Torah—a very large domain" (Isaak Heinemann, "Judah Halevi, Kuzari," in *Three Jewish Philosophers*, ed. by Isaak Heinemann, Alexander Altmann, and Hans Lewy [1960], p. 33).

In *Sefer ha-Kuzari* the king then asks: Why did the Jew not say he believes in the creator of the world and in similar attributes common to all creeds? The Jew responds that the evidence for Israel's faith is Israel, the people, and its history and endurance, and not the kinds of reasonable truths offered by other traditions. The proof of revelation is the testimony of those who were there and wrote down what they heard, saw, and did. If so, the king wonders, what accounts for the despised condition of Israel today? The Jew compares Israel to the dry bones of EZEKIEL: "These bones, which have retained a trace of vital power and have once been the seat of a heart, head, spirit, soul, and intellect, are better than bones formed of marble and plaster, endowed with heads, eyes, ears, and all limbs, in which there never dwelt the spirit of life" (*ibid.*, p. 72). God's people is Israel; he rules them and keeps them in their present status: "Israel amid the nations is like the heart amid the organs: it is the most sick and the most healthy of them all . . . The relationship of the Divine power to us is the same as that of the soul to the heart. For this reason it is said, 'You only have I known among all the families of the earth, therefore I will punish you for all your iniquities' (AMOS 3:2) . . . Now we are oppressed, while the whole world enjoys rest and prosperity. But the trials which meet us serve to purify our piety, cleanse us, and to remove all taint from us" (*ibid.*, p. 75).

The pitiful condition of Israel is, therefore, turned into the primary testimony and vindication of Israel's faith. That Israel suffers is the best assurance of divine concern since the suffering constitutes the certainty of coming redemption. In the end, the Jew parts from the king in order to undertake a journey to the Land of Israel, where he will seek perfection with God. The king objects to this. He thought that the Jew loved freedom, but will find himself in bondage by imposing upon himself those duties obligatory for a Jew residing in the Land of Israel. The Jew replies that the freedom he seeks is from the service of men and the courting of their favor. He seeks the service of one whose favor is obtained with the smallest effort: "His service is freedom, and humility before him is true honor." He therefore turns to Jerusalem to seek the holy life. There is no effort to identify Judaism with rational truth, but rather there is the claim that the life of the pious Jew stands above truth—indeed constituting the best testimony to it.

Judah ha-Levi proposes that the source of truth is biblical revelation and that this revelation was public, complete, and fully in the light of history. History, not philosophy, testifies to the truth and in the end constitutes its sole criterion. Philosophy claims that reason can find the way to God. Judah ha-Levi says that only God can show the way to God, and he does so through revelation, and therefore through history. For the philosopher, God is the object of knowledge. For Judah ha-Levi, God is the subject of knowledge. And Israel has a specifically religious faculty that mediates the relationship to God; in references the role of Israel among the nations is similar to the role of the heart among the organs. Judah ha-Levi seeks to explain the supernatural status of Israel. The religious faculty is Israel's peculiar inheritance and makes it the core of humanity. But while the rest of humanity is subject to the laws of nature, Israel is subject to supernatural, divine providence, manifested in reward and punishment. The very condition of the Jews, in that God punishes them, verifies the particular place of Israel in the divine plan. The teaching of prophecy returns in Judah ha-Levi's philosophy.

Judah ha-Levi and Maimonides were part of a number of important thinkers who attempted to meet the challenge of philosophy and of reason by constructing

a comprehensive theological system. While they were much like the Muslim and Christian intellectuals in mentality, the Jewish philosophers had more in common with the Talmudic rabbis than with Gentile philosophers. The rabbis accepted the Bible and the Talmud and Mishnah as “the whole Torah,” and so did the Jewish philosophers. Both groups devoted themselves to the articulation of the role of Torah in the life of Israel, to the meaning of the fate of Israel, and to the effort to form piety and shape faith. And for both reason was the means of reaching into Torah—of recovering and achieving truth. Both agreed that words could contain and convey the sacred, and, therefore, reason was, through the examination of the meaning and referents of words, the golden measure. They differed only in the object of reason; one studied law, the other, philosophy. Yet Maimonides, the complete and whole Jew, studied both and made a lasting impact upon the formation of not only both sorts of Judaic tradition but also of the pious imagination of the ordinary Jew. This is because he translated his philosophical and theological principles and convictions into his presentation of the concrete, practical law.

Media of piety—mysticism and Hasidism. Not only did Rabbinic Judaism draw strength from new modes of thought, it also accommodated emphases in piety that placed a higher value on direct encounter with God and on spiritual gifts, even more than upon knowledge of the Torah. In mid-18th century Poland and Lithuania, HASIDISM, a mystical movement drawing upon the resources of the QAB-BALAH, began with emphases quite at variance with those of Rabbinic Judaism. Though Hasidism favors the holy man’s direct encounter with God over the sages’ meeting God in the Torah, it ultimately found a central place in its piety for Torah-study. Hasidism developed in mystic circles in Lithuania and Poland which carried on practices that marked them as different from other Jews—for example, special prayers, distinctive ways of observing certain religious duties, and the like. The first among the leaders of the movement of ecstasies and anti-ascetics, Israel ben Eliezer BA’AL SHEM ̇OV, “the Besht,” worked as a popular healer. From the 1730s onward he traveled and attracted circles of followers in Podolia (a region in present-day western Ukraine), Poland, Lithuania, and elsewhere. When he

Archive France/Tallandier—Archive Photos

died in 1760 he left behind a broad variety of disciples, followers, and admirers in southeastern Poland and Ukraine. Leadership of the movement passed to a succession of holy men, about whom stories were told and preserved. In the third generation, from the third quarter of the 18th century into the first of the 19th, the movement spread and took hold. Diverse leaders, holy men and charismatic figures called zaddikim, developed their own standing and doctrine.

Given the controversies that swirled about the movement, we would expect many of its basic ideas to have been new. But that was hardly the case. The movement drew heavily on available mystical books and doctrines, which from medieval times onward had won a place within the faith as part of the Torah. The Hasidic thinkers' emphasis on a given doctrine should not obscure the profound continuities between the modern movement and its medieval sources. To take one example of how the movement imparted its own imprint on an available idea, Menaḥem Mendel Schneerson of Lubavich notes that God's oneness—surely a given in all Judaisms—means more than that God is unique. It means that God is all that is: "There is no reality in created things. This is to say that in truth all creatures are not in the category of something or a thing as we see them with our eyes. For this is only from our point of view, since we cannot perceive the divine vitality. But from the point of view of the divine vitality which sustains us, we have no existence and we are in the category of complete nothingness like the rays of the sun in the sun itself. . . . From which it follows that there is no other existence whatsoever apart from his existence, blessed be he. This is true unification." (cited by Louis Jacobs, "Basic Ideas of Hasidism," *Encyclopaedia Judaica* [1972], vol. 7, col. 1404). Since all things are in God, the suffering and sorrow of the world cannot be said to exist. So to despair is to sin.

Hasidism laid great stress on joy and avoiding melancholy. It also maintained that religious deeds must be carried out in a spirit of devotion. The doctrine of Hasidism moreover held that, "In all things there are 'holy sparks' (*nizozot*) waiting to be redeemed and rescued for sanctity through man using his appetites to serve God. The very taste of food is a pale reflection of the spiritual force which brings the food into being" (*ibid.*, col. 1405). Before carrying out a religious deed, the Hasid would recite the formula, "For the sake of the unification of the Holy One, blessed be he, and his SHEKHINAH [presence in the world]." On that account they were criticized. But Hasidism was defined by the fundamental pattern of life and received worldview contained in the holy canon of Judaism. Hasidism therefore constituted a Judaism within Judaism—distinctive, yet related closely enough in its major traits to the Judaism of the dual Torah as to be indistinguishable except in trivial details. But one of these details mattered a great deal, and that is the doctrine of zaddikism: the ZADDIK, or holy man, had the power to raise the prayers of the followers and to work miracles. The zaddik was the means through which GRACE reached the world, as he was the one who controlled the universe through his prayers. The zaddik would bring humanity nearer to God and God closer to humanity. The Hasidim were well aware that this doctrine of the zaddik—the pure and elevated soul that could reach to that realm of heaven in which only mercy reigns—represented an innovation. As did the massive opposition to Hasidism organized by the great sages of the Torah of that time.

By the end of the 18th century this powerful opposition, led by the most influential figures of Eastern European Judaism, characterized Hasidism as heretical. Hasidism's stress on ECSTASY, visions, miracles of the leaders, and its enthusiastic way of life were seen as delusions, and the veneration of the zaddik was interpreted as worship of a human being. The stress on prayer to the denigration of study of the Torah likewise called into question the legitimacy of the movement. In this war Hasidism found itself anathematized, its books burned, and its leaders vilified: "They must leave our communities with their wives and children . . . and they should not be given a night's lodging; . . . it is forbidden to do business with them and to intermarry with them or to assist at their burial." Under these circumstances, no one could have anticipated Hasidism finding a place for itself in what would at some point be deemed Orthodoxy. But it did. By the 1830s Hasidism, which began as a persecuted sect, now defined the way of life of the Jews in

the Ukraine, Galicia (now in modern day Poland and Ukraine), and central Poland, with offshoots in White Russia (present-day Belarus) and Lithuania on one side and Hungary on the other. Waves of emigration from the 1880s onward carried the movement to Western Europe, and, in the aftermath of World War II, to the United States as well as the state of Israel. Today the movement forms a powerful component of Orthodox Judaism, demonstrating Rabbinic Judaism's capacity to find strength by naturalizing once-alien modes of thought and media of piety.

HERETICAL SYSTEMS

Karaism and Shabbetaianism.

Whereas some religions—Roman Catholicism, for example—have central authorities that define what is orthodox belief, no such authority existed for the Judaism of the dual Torah. Yet still, as we

shall see, the dual Torah did come to define what was orthodox for Judaism—as judged by the fact that nearly all movements considered heretical by Jews were formed in direct opposition to the system of the dual Torah, which, in its ascendancy, defined the limits of heresy, imposing its values and stresses upon the contrary-minded statements of the age.

In the age of the dual Torah's dominance of Judaism it is difficult to find evidence that the dual Torah faced heresies essentially alien to its structure and system. From the 4th to the 19th century in Christendom, and to the mid-20th century in the Muslim world, Judaic heresies commonly took a position on exactly the program and agenda of the Judaism of the dual Torah. What characterized a heresy then was the rejection of one or another of the definitive doctrines of the norm. Two systemic heresies addressed a fundamental plank in the platform of the Judaism of the dual Torah. KARAIISM denied the myth of the dual Torah, and Shabbetaianism rejected the doctrine of the messiah as defined in the classical system and created a new doctrine within the received structure and system: a messiah outside of the law.

The indicative trait of the Judaism of the dual Torah was the doctrine that at Sinai God revealed the Torah to be transmitted thorough two media, written (the Pentateuch) and oral (which would eventually be written down in such canonical works as the Mishnah and Talmuds). Focusing upon that central belief, Karaism denied that God revealed to Moses at Sinai more than the written Torah, and explicitly condemned belief in an oral one. Karaism advocated the return to Scripture as against tradition, inclusive of rabbinic tradition. Although Karaism claimed to originate in biblical times and to derive its doctrine from the true priest, Zadok, the sect took shape in the 8th century in Babylonia in the period following the formation of the Talmud of Babylonia, on the one side, and the rise of Islam, on the other. The founder of the movement, ANAN BEN DAVID, claimed then to have recovered the original Torah of Moses. Ben David imposed rules concerning food that were stricter than the rabbis', and in other ways he legislated a version of the law of a more strict character than the Talmudic authorities admitted. The basic principle of Karaism was that Scriptures were to be studied freely, independently, and individually so that no uniformity of view could emerge. Given the stress placed by the Judaism of the dual Torah on the authority of the Tal-

and related canonical documents, we could not find a more precise statement of the opposite view.

The Shabbetaian movement was a 17th-century messianic movement organized around the figure of SHABBETAI TZEVI (1626–76) and is important in that it defined the messiah not as a sage who kept and embodied the law as did the Judaism of the dual Torah, but as the very opposite. Shabbetaianism posited the messiah as a holy man who violated the law in letter and in spirit, but by doing so in a complete reversal of the sage-messiah of the Judaism of the dual Torah, the Shabbetaian movement, like Karaism, also paid its respects to the received system.

RABBINIC JUDAISM MEETS COMPETITION

Between the 4th and the 19th centuries, Rabbinic Judaism in its classical paradigm found the strength to absorb innovation in intellectual life and in piety and even to define the character of heresies. When politics revised the urgent question facing Israel, Rabbinic Judaism began to face competition from other Judaisms, including both those that continued its system and those that rejected it altogether. Specifically, in modern times in the West (though not in Muslim countries) the long-established system of Judaism formed in ancient days—the worldview and way of life, that was addressed to a distinctive Israel and was framed in response to urgent and perennial questions—lost its near-monopoly among Judaisms. That received Judaic system—built on the experience of exile and return and modified in the oral Torah to encompass the sanctification of the life of the people as the condition of the salvation of the nation at the end of time—competed with, and even gave way to, a number of systems. Some Judaisms, such as Reform and Orthodoxy, stood in direct continuation with the received system, revering its canon and repeating its main points. Others utterly rejected the mythic structure and system of the Judaism of the dual Torah. These are represented by Zionism—originally a political, and not a religious, system—and the American Judaism of HOLOCAUST and Redemption, a system that completely ignores the Torah as generative symbol. But, as we shall see, these two systems also recapitulate the original system's pattern of exile and return, one of them explicitly, the other structurally.

A political change in the circumstance of the Jews in central and western Europe as well as in the United States demanded a rethinking of "Who is Israel?" and what it meant to be Israel, because Christianity could no longer be used to define the terms of debate. The original paradigm—that of exile and return—had emerged out of an essentially political problem confronting the authors of the Torah, namely, defining Israel within the political hegemony of Christianity. In subsequent settings the Rabbinic paradigm served to create a powerful and definitive myth of "Who is Israel?" The thought of Jews about perennial questions was affected by a stunning shift in the political circumstance of Judaism in the West brought about by the American Constitution of 1787 and the French Revolution of 1789. What happened from the end of the 18th century was the secularization of political life and institutions. Earlier modes of organization had recognized differing groups, guilds, and classes as political entities, and the Jews had found a place among them. In the hierarchical scheme, with church, monarchy, and aristocracy in their "proper" alignment, other political entities could likewise find their location. With church disestablished, monarchy rejected, and aristocracy no longer dominant in politics, the political unit became (theoretically at least) the undifferentiated individual making up the nation-state. That theory left no room for a collective such as Israel, the Jewish people, when viewed as a political unit, though (again, in theory) there might be room for the Jewish individual alongside other undifferentiated individuals. This produced a considerable crisis for the Judaism of the dual Torah.

In the aftermath of the changes in Western politics in the 19th century, Jews indeed asked themselves whether and how they could be something in addition to Jewish, and initially that something invariably found expression in the name of the locale in which they lived, whether it be France, Germany, Britain, or the United States. Could one be both Jewish and, for instance, German? That ques-

Hershkowitz—Monkmeyer

tion found its answer in two givens: the datum of the received Judaism of the dual Torah and the datum that being German or French imposed certain clearly defined responsibilities as well.

The Jews had formerly constituted a distinct group and in Eastern Europe and the Muslim countries they continued to. Now in the West, however, they, in theory, formed part of an undifferentiated mass of citizens, all of them equal before and subject to the same law. The Judaism of the dual Torah rested on the political premise that the Jews were governed by God's law and formed God's people. The two political premises of the nation-state and of the Torah

scarcely permitted reconciliation. The consequent Judaic systems in the 19th century, REFORM JUDAISM and ORTHODOX JUDAISM, each addressed issues regarded as acute and not merely chronic and alleged that they formed the natural next step in the unfolding of "the tradition," meaning the Judaic system of the dual Torah. The Judaic systems born in the 20th century did not make that claim, but they recapitulated that pattern, familiar from the very beginning of the Torah, that taught them what to expect and how to explain what happened.

The further political shift in the 20th century confronted Jews with a different and still more acute question: whether and how they could be human beings, if they were, or had been, Jewish. The 20th-century innovation of totalitarianism, whether Soviet-Communist or German-Nazi, made its imprint in full force upon the Judaic agenda. The question that then predominated became: where and how could the Jew endure? Its self-evident answer was: not among Gentiles, but only in the Jewish state, and this response produced one Judaism for the Jews of the state of Israel, and another, quite different one for the Jews of the Western democracies. Yet, at the threshold of the 21st century, it was only in those two environments that Jews found themselves free enough to ask such questions and receive such answers at all.

CONTINUATOR-JUDAISMS OF THE 19TH CENTURY

Reform Judaism. From the perspective of the political changes taking place following the American and French revolutions, the received system of the Juda-

ism of the dual Torah answered only irrelevant questions and did not respond to acute ones. Secular nationalism conceived of society not as the expression of God's will for the social order under the rule of Christ and his Church or his anointed king (or emperor or tsar), but as the expression of popular will for the social order under the government of the people and their elected representatives—a considerable shift. When society does not form the aggregate of distinct groups—each with its place and definition, language and religion, but rather undifferentiated citizens (though male, white, and wealthy, to be sure)—then the Jews in such a society will have to work out a different order of Judaism altogether. That Judaism will have to frame a theory of “who is Israel?” that is consonant with the social situation of Jews who are willing to be different, but not so different that they cannot also be citizens. Both Reform and Orthodoxy responded to this concern. Each rightly claimed to continue the received “tradition,” that is, the Judaism of the dual Torah.

The world at large no longer verified, as had the world of Christendom and Islamdom, the generative social category of Israel's life that saw Israel as supernatural entity. This raised the problem of defining what sort of entity Israel did constitute, what sort of way of life should characterize it, and what sort of worldview should explain it. This produced a new set of questions, and, in the nature of things, also self-evidently true answers. The American Reform rabbis, meeting in Pittsburgh in 1885 (*see also* PITTSBURGH PLATFORM), issued a clear and accessible statement of their Judaism:

We recognize in the Mosaic legislation a system of training the Jewish people for its mission during its national life in Palestine, and today we accept as binding only its moral laws, and maintain only such ceremonies as elevate and sanctify our lives, but reject all such as are not adapted to the views and habits of modern civilization. . . . We hold that all such Mosaic and rabbinical laws as regular diet, priestly purity, and dress originated in ages and under the influence of ideas entirely foreign to our present mental and spiritual state. . . . Their observance in our days is apt rather to obstruct than to further modern spiritual elevation. . . . We recognize, in the modern era of universal culture of heart and intellect, the approaching of the realization of Israel's great messianic hope for the establishment of the kingdom of truth, justice, and peace among all men. We consider ourselves no longer a nation, but a religious community and therefore expect neither a return to Palestine, nor a sacrificial worship under the sons of Aaron, nor the restoration of any of the laws concerning the Jewish state.

Here we find a Judaism in theoretical formulation, answering the key questions, “Who is Israel? What is its way of life? How does it account for its existence as a distinct, and distinctive, group?” Israel once was a nation (“during its national life”) but today is not. It once had a set of laws that regulated diet, clothing, and the like, which no longer apply, because Israel is not now what it was then. However, Israel forms an integral part of Western civilization. The reason to persist as a distinctive group was that the group has its work to do—namely, to realize the “messianic hope for the establishment of a kingdom of truth, justice, and peace.” For that purpose Israel no longer constituted a nation. It formed a religious community.

Orthodox Judaism. The term Orthodoxy in connection with Judaism first surfaced in 1795, and covers all Jews who believe that God revealed the dual Torah at Sinai and that Jews must carry out the requirements of Jewish law contained in the Torah as interpreted by the sages through time. Obviously, so long as that position was believed and practiced by the generality of Jewry, Orthodoxy as a distinct and organized Judaism did not have to exist. The point at which two events took place is interesting: first, the recognition of the received system, “the tradition,” as Orthodoxy, and second, the specifying of the received system as religion. The two of course go together. So long as the Judaism of the dual Torah enjoyed

recognition as a set of self-evident truths, those truths did not add to something so distinct as “religion,” but rather were a general statement of how things are: all of life explained and harmonized in one whole account.

Orthodox Judaism, founded in Germany in the mid-19th century in response to the success of Reform, mediates between the received Judaism of the dual Torah and the requirements of a life integrated in modern circumstances. Orthodoxy maintains the worldview of the received dual Torah, constantly citing its sayings and adhering, with only trivial variations, to the bulk of its norms for the everyday life. At the same time Orthodoxy holds that Jews adhering to the dual Torah may wear the same clothing as non-Jews wear instead of distinctively Jewish (even Judaic) clothing; they may live within a common economy and not practice distinctively Jewish professions (however these professions may be defined in a given setting); and they may, in diverse ways, take up a life not readily distinguished in important characteristics from that lived by people in general. So for Orthodoxy, a portion of Israel’s life may prove secular, in that the Torah does not dictate and so sanctify all details under all circumstances. The Judaism of the dual Torah presupposed not only the supernatural entity Israel, but also a way of life that distinguished, in important ways, that entity from the social world at large. Orthodoxy accommodated Jews who valued the received way of life and worldview but who also planned to live in an essentially integrated social world. Therefore the difference between Orthodoxy and the system of the dual Torah comes to expression in social policy: integration, however circumscribed, versus the total separation of the holy people.

Orthodoxy addressed the same questions as Reform but gave different answers. Reform maintained that the distinctive way of life had to go, since the Jews no longer constituted the holy people living a distinct existence but instead formed a religious group as part of a larger nation-state. Orthodoxy held that the Torah made provision for areas of life in which a Jew could be something other than a Jew. For example on the important point of education, the institutions of the Judaism of the dual Torah commonly held that one should study only Torah. Orthodoxy in the West included study of the secular sciences in its curriculum as well. The Judaism of the dual Torah ordinarily identified particular forms of dress as

Israeli men cover their heads with the tallit, or prayer shawl, as a sign of respect during morning prayers

Roy Pinney—Monkmeyer

being Judaic. Orthodoxy required only the wearing of fringes (which could be concealed inside of a man's clothing) and a covering for the head. In these and in other ways Orthodoxy formed a fresh statement of the Judaism of the dual Torah, distinctive in its provision, for the Jew, of a life lived legitimately outside—though never in violation—of the Judaic norms. The distinction between adhering to the received system of the dual Torah and identifying with the mid-19th-century German Orthodox Judaism rested on such indicators as clothing, language, and above all, education.

Jews who kept the law of the Torah—for example, its strictures on food choices and the use of leisure time (to speak of the Sabbath and festivals in modern, secular terms)—crossed the boundary between the received Judaism and the new (if also traditional and received) Judaism of Orthodoxy when they sent their children to secular schools, in addition to or instead of solely Jewish ones, or when they included subjects outside of the sciences of the Torah in Jewish schools' curriculum. The notion that science, German, Latin, or philosophy deserved serious study was not alien to important exemplars of the received system of the dual Torah, but in the 19th century it felt wrong to those for whom the received system remained self-evidently right. Those Jews (including, as a rule such Jews as the Hasidim) did not send their children to Gentile schools, or include anything other than Torah-study in the curriculum of the Jewish schools. The Reformers held that Judaism could change, and that Judaism was a product of history. The Orthodox opponents denied that Judaism could change and insisted that Judaism derived from God's will at Mount Sinai and was eternal and supernatural, not historical and man-made. In these two convictions, of course, the Orthodox recapitulated the convictions of the received system. But in their appeal to the given traditional thought, they found some components of that system more persuasive than others, and in this picking and choosing, and the articulation of Judaism as a distinct religion autonomous of politics, society, and "the rest of life," the Orthodox entered the same world of self-conscious believing that the Reformers also explored.

TWENTIETH-CENTURY JUDAISMS BEYOND THE RABBINIC FRAMEWORK

Zionism. In the 20th century two Judaic systems dropped the theme of Torah altogether, while reworking the paradigm of exile and return that the Pentateuch set forth. Though neither of them are religious in any conventional sense, both have powerful influences among Jews who practice a Judaic religious system. The American Judaism of Holocaust and Redemption and ZIONISM both responded to political crises: one to the advent of anti-Semitism that denied Jews the right to live in Europe at all, the other to the reconstruction and re-ethnicization of the American cultural order in the late 1960s. Both of these Jewish systems—they cannot strictly speaking be called Judaic, that is, religious—continue the generative paradigm of exile and return.

Zionism was the Jews' self-emancipation, in response to the nations' (Gentiles') failed promises of Jewish emancipation. It framed its worldview and way of life for its definition of Israel in response to the lack, by the end of the 19th century, of political improvement in the Jews' status and condition. Zionism called for Jews to face the fact that, in the main, Gentiles hated Jews and so they must emancipate themselves. Founding a Jewish state where Jews could build their own destiny free of anti-Semitism, the Zionist worldview declared the simple proposition that the Jews form a people, one people, and should transform themselves into a political entity and build a Jewish state. Zionism came into existence with the founding of the Zionist Organization at the First Zionist Congress in Basel (August 29–31, 1897) and reached its fulfillment, and dissolution in its original form, with the founding of the state of Israel in May 1948. Zionism began with its definition of Israel: a people, one people, in a secular sense. Then came a worldview combining the diverse histories of Jews into a singular history of the Jewish people (nation), leading from the Land of Israel, through exile, back to the Land of Israel. This component of Zionism constituted an exact recapitulation of the biblical narrative, though it derived from a nationalist, not a religious, per-

spective. The way of life of the Zionist required participating in meetings, organizing within the local community, and attending national and international conferences in a focus of life's energy on the movement. After settlement in the Land itself became possible in 1903, Zionism defined the most noble way of living life as migration to the Land, and, for the socialist wing of Zionism, building a collective community (kibbutz). So, Zionism presented a complete and fully articulated Judaism, which was prior to the creation of the state of Israel in 1948, one of the most powerful and effective of them all.

Three main streams of theory flowed together in the formative decades. Ahad Ha'am (1856–1927) laid stress on Zion as a spiritual center, uniting all of the Jewish

people wherever they lived, and emphasizing spiritual preparation, ideological and cultural activities, and the long-term intellectual persuasion of the Jews to Zionist premises. A political stream began in 1897 and maintained that the Jews should provide for the emigration of their nation's masses from Eastern Europe to the land of Israel, or anywhere, as Europe was entering a protracted state of political disintegration and already long suffering from economic dislocation. The founder of Zionism, THEODOR HERZL (1860–1904) placed more importance on the requirement for legal recognition of a Jewish state than upon the location of the state, and, in doing so, he defined

Israeli soldiers in the Old City of Jerusalem during the 1967 Six-Day War

Archive Photos

Zionism as the practical salvation of the Jews through political means. Herzl stressed that the Jewish state would come into existence in the forum of international politics. The instruments of state—a political forum, a bank, a mode of national allegiance, a press, and a central body and leader—came into being in the aftermath of the First Zionist Congress. Herzl spent the rest of his life—less than a decade—seeking an international charter and recognition of the Jews' state. A third stream expressed a Zionist vision of socialism (or a socialist vision of Zionism): the Jewish state was to be socialist, and for its first three decades it was. The early theoretical formulation of socialist Zionism (before its near-total bureaucratization) emphasized that a proletarian Zionism would define the arena for the

class struggle to be realized within the Jewish people. The socialist Zionists dominated the settlement of the Land of Israel and controlled its political institutions for three quarters of a century. They founded the labor unions, the large scale industries, the health institutions and organizations, the press, and the nascent army. They created the nation.

A Judaism entirely out of phase with the received system of the dual Torah, Zionism enunciated a powerful doctrine of Israel: The Jews form "a people, one people." Given the Jews' diversity, it was easier for people to concede the supernatural reading of Judaic existence than the national construction given to it. Scattered across the European countries and the Muslim world, Jews did not speak a single language, follow a single way of life, or adhere in common to a single code of belief and behavior. The Zionist worldview's central theme was the question of what made them a people, one people, and further validated their claim and right to a nation-state of their own. No facts of perceived society validated that view, since, except for a common fate, the Jews did not form a people, one people. True, in the Judaic system of the dual Torah and its continuators they commonly did. But these systems imputed to Israel, the Jewish people, a supernatural status, mission, and purpose, which Zionism did not. Zionist theory had the task of explaining how the Jews forming a unified people lead to the invention of "Jewish history," in which the past is read in a secular framework as a single and unitary story. Zionist theory showed how all the Jews came from one place, traveled together, and would return to that same place, and thus constituted one people as a matter of secular fact. Like Reform Judaism, Zionist theory derived strength from the study of history, and in time generated a great renaissance of Judaic studies, as the scholarly community of the nascent Jewish state took up the task at hand. The sort of history that emerged took the form of factual and descriptive narrative, but its selection of facts, its recognition of problems requiring explanation, and its choice of what did and did not matter all sprang from the larger program of nationalist ideology. So although the form was secular and descriptive, the substance was ideological in the extreme.

At the same time, Zionist theory explicitly rejected the precedent formed by that Torah, selecting not the history of the faith but the history of the nation, with Israel construed as a secular entity. Zionism defined episodes as linear Jewish history and appealed to those strung-together events, all of a given classification to be sure, as vindication for actions. This distinctive worldview explains a very particular way of life and defines for itself that Israel to which it wishes to speak. Like Reform Judaism, Zionism found the written component of the Torah more interesting than the oral. And in its search for a usable past, it turned to documents formerly neglected or treated as not authoritative—for instance, the books of Maccabees. Zionism went in search of heroes unlike those of the present—it sought warriors, political figures, and others who might provide a model for the movement's future, and for the projected state beyond. So instead of rabbis or sages, Zionism chose figures such as DAVID the warrior king, Judah Maccabee, who had led the revolt against the Syrian Hellenists, and SAMSON the powerful fighter—these provided the appropriate heroes for a Zionism that proposed to redefine Jewish consciousness and turn storekeepers into soldiers, lawyers into farmers, corner grocers into the builders and administrators of great institutions of state and government. The Judaism of the dual Torah treated David as a rabbi, but the Zionist system of Judaism saw him as a more worldly hero: a courageous nation-builder.

Yet the principal components of Zionism's worldview fit comfortably within the paradigm of the Torah, which stated, based on its own genealogical reasons, that the Jews form a people, one people, and should (when worthy) have the land back and build a state on it. It is not surprising that Zionism found ample precedent for its program in writings about the return to Zion as it linked today's politics to something very like God's will for Israel, the Jewish people, in ancient times. Thus, calling the newly formed Jewish city "Tel Aviv" invoked the memory of Ezekiel's reference to a Tel Aviv. Zionism would reconstitute the age of the return to Zion of Ezra and Nehemiah's era, and so carry out the prophetic promis-

es. Again the mode of thought is entirely reminiscent of Reform Judaism's, which, to be sure, selected a different, mythic perfect world; a golden age other than the one that glistened so brightly to Zionism. Yet the points of continuity should not be overstated. Alongside the search of Scripture, Zionism articulated very clearly what it wished to find there. And what Zionism did not find, it deposited on its own, its own systemic design marking it as heresy: the celebration of the nation as a secular, not supernatural, category, and the imposition of the nation and its heroism in place of the heroic works of the supernatural God. This classic shift can be seen in the recasting of the verse of Psalms, which originally read "Who will retell the great deeds of God" and ended up reading "Who will retell the great deeds of Israel"—and that only typifies Zionism's profound revisioning of Israel's history. For Israel in its dual Torah (though not only in that Judaism) formed a supernatural entity; a social unit unlike any other on the face of the earth and all humanity divided into two parts: Israel and the (undifferentiated) nations. Moreover, the Judaism given literary expression in Constantine's day maintained that the one thing Israel should not do is arrogant deeds. That meant Israel waited with patience, loyalty, humility, and obedience for God to save it. The earliest pronouncements of a Zionist movement were received in the Jewish heartland of Eastern Europe like the tocsin of the coming messiah, but for that same reason they seemed as BLASPHEMY to the sages of the dual Torah. God will do it—or it will not be done. Considerable time would elapse before most of the avatars of the dual Torah could make their peace with Zionism, and some never did.

American Judaism of Holocaust and Redemption. In the context of this article "the Holocaust" refers to the Nazi's murder of nearly six million Jewish children, women, and men in Europe in 1933 through 1945. The "Redemption" is the creation of the state of Israel. This Judaic system—an ethnic ideology, not a religious formulation built out of the Torah—flourishes in the United States and, from 1967, has been the principal force in the public life of American Jews. This Judaism stresses the unique complementary experiences of mid-20th century Jewry: the mass murder of six million European Jews in death factories, and the providential and redemptive meaning of the creation of the state of Israel three years after the massacre's end. The way of life of Holocaust and Redemptive Judaism requires actively raising money and political support for the state of Israel. Whereas Zionism held that Jews should live in a Jewish state, this system gives Jews living in the United States a reason and explanation for being Jewish. As a whole it presents an encompassing myth, linking the Holocaust to the state of Israel as an instructive pattern, and it moves Jews to follow a particular set of actions. Diverse Judaic systems flourish in the United States: Reform, Orthodoxy, Conservatism, RECONSTRUCTIONISM, as well as others less choate. But the American Judaism of Holocaust and Redemption exercises enormous power over the mind and imagination of Jewish Americans. It answers two separate and distinct urgent questions, the first addressed to the particular world of the Jews, the second to the world at large. The first question is, "Why should I be different, why should I be Jewish?" The second is, "How should I relate to the world at large?"

The Judaism of Holocaust and Redemption gives a powerful and critical answer to the question of why be Jewish: because you have no choice. It also explains that "Israel" should relate to the world at large through its own nation-state overseas, and in its distinctive and distinct communities at home. So American Judaism addresses the inner world as well as policy toward the outer world.

The two questions are connected—both emerge from the special circumstances of the Jewish American whose grandparents or great-grandparents immigrated to the United States or Canada. For that sort of American Jew, there is no common acknowledged core of RELIGIOUS EXPERIENCE by which "being Jewish" may be explained and interpreted. Also, because anti-Semitism has become less common than it was from the 1920s through the early 1950s, there is no common core of social alienation to account for the distinctive character of the group and explain why it must continue to endure. Indeed, many American Jews, though they continue to affirm their Jewishness, have no clear notion of how they are Jewish, or what their Jewish heritage demands of them. Judaism is, for this critical part of

the American Jewish population, merely one reference point among many. For ideologists of the Jewish community, the most certain answer to the question "Why am I Jewish?," posed by the third generation, must be, "There is no real choice" since the Holocaust provides the answer: "Hitler considered you Jewish." The formative experiences of the Holocaust are now immediately accessible through emotions unmediated by sentiment or sensibility. These "Judaizing experiences" take the place of the Torah in nurturing an inner and distinctive consciousness of "being Jewish." So the Holocaust is made to answer the inner question of "Who are we, and why are we what we are and not something else?"

By the late 1960s third-generation American Jews—the grandchildren of the immigrants who were born between 1920 and 1940—had found the continuator-Judaisms of the synagogue conventional and irrelevant. These Judaisms did not address their questions and provide self-evidently valid answers. And how could those Judaisms serve, when they invoked experiences of learning and sensibility unavailable to American Jews beyond the immigrant generation and their children? Jews found that to make a model for viable life—an explanation of the world, and an account of how to live—out of those Judaisms, they had to give what they did not have. What was required was either memories few possessed or locating a road back to find memories, and very few found the will for this. The world of the everyday did not provide access to a worldview as subtle and alien as that of the Judaism of the dual Torah with its conception of humanity and Israel, let alone to the way of life formed within that worldview. How then to engage the emotions without the mediation of learning in the Torah that few possessed or wished to attain? And how to define a way of life that imparted distinction without great material difference? To put it bluntly, what distinctively Judaic way of life would allow devotees to eat whatever they wanted? The answer to the question of how to gain access to the life of feeling and experience that made one distinctive without leaving the person terribly different from everybody else emerged in the Judaic system of Holocaust and Redemption. This system presented an immediately accessible message that was cast in extreme emotions of terror and triumph, and its round of endless activity demanded only spare time. In all, the system of American Judaism realized in a poignant way the conflicting demands of Jewish Americans to be intensely Jewish (but only once in a while) but to not be too meaningfully different from others.

Three factors reinforced one another in turning the Judaism of Holocaust and Redemption into a set of self-evident and descriptive facts, truths beyond all argument and gave it a position of paramount importance among the bulk of the organized American Jewish community: the Six-Day War of 1967, the re-ethnicization of American life, and the transformation of the mass murder of European Jews into an event of mythic and world-destroying proportions. Why date the birth of the Judaism of Holocaust and Redemption so precisely as the 1967 war? People take the importance of the state of Israel in American Jewish consciousness as routine. But in the 1940s and '50s, American Jewry had yet to translate its deep sympathy for the Jewish state into political activity, or the shaping element for local cultural activity and sentiment. Likewise, the destruction of European Jewry did not right away become "the Holocaust," in contemporary Jewish consciousness. (The term "holocaust"—which originally meant a sacrifice wholly consumed by fire, or a burnt offering—was not actually used to refer to the Nazi death camps until the 1950s. The term became more common through its use by such writers as Elie Wiesel [b. 1928] in his 1958 work *Night*.) Additionally, the re-ethnicization of the Jews could not have taken the form that it did—a powerful identification with the state of Israel as the answer to the question of the Holocaust—without a single, catalytic event.

That event was the 1967 war between the state of Israel and its Arab neighbors. On June 5, after a long period of threat, the dreaded war of "all against one" began, and American Jews feared the worst. Six days later they faced an unimagined outcome, with the state of Israel holding territory on the Jordan River, the Nile, and the outskirts of Damascus. The trauma of the weeks preceding the war, when the Arabs promised to drive the Jews into the sea and no other power intervened

or promised help, renewed for the third generation the nightmare of the second. Once more the streets and newspapers became the school for being Jewish. On that account the Judaism in formation took up a program of urgent questions—and answered them. In the 1930s and '40s, the age of Hitler's Germany and the murder of the European Jews in death factories, every day's newspaper brought lessons of Jewish history. Everybody knew that if he or she were in Europe, death would be the sentence for the "crime" of Jewish birth. And the world was indifferent. No avenues of escape were opened to the Jews who wanted to flee, and many roads to survival were deliberately blocked by anti-Semitic foreign service officials. Likewise, in 1967 the Arab states threatened to destroy the state of Israel and murder its citizens. The Israelis turned to the world, the world again ignored Jewish suffering, and a new Holocaust loomed. But this time the outcome was quite different. The entire history of the century at hand came under a new light as this moment of powerful and salvific weight placed everything that had happened from the beginning to the present into a fresh perspective.

The third generation now had found its memory and its hope, much as Zionism had invented a usable past. Its members could now confront the murder of the Jews of Europe, along with the exclusion and bigotry experienced by their parents and themselves. It was no longer necessary to avoid painful, intolerable memories. Now what had happened had to be remembered, because it bore within itself the entire message of the new day in Judaism. The binding of the murder of nearly six million Jews of Europe to the creation of the state of Israel transformed both events. One became "the Holocaust," the purest statement of evil in all of human history. The other became salvation in the form of "the first appearance of our redemption" (as the language of the Jewish prayer for the state of Israel has it). Accordingly, a moment of stark epiphany had captured the entire experience of the age and imparted to it that meaning and order that a religious system has the power to express as self-evident. For the third generation the self-evident system of American Judaism encompassed a salvific myth deeply and personally relevant to the devotees. At a single instant that myth made equal sense of both the world and the self, of what the newspapers had to say, and what the individual understood in personal life.

The distinctively American form of Judaism clearly connects to the Judaism of the dual Torah with its exact recapitulation of the pattern of the original Torah. The exile has its counterpart in the Holocaust, and the return to Zion is, in the Redemption, represented by the state of Israel. But American Judaism is not completely continuous; in fact it forms a heresy structurally out of phase with the Judaism of the dual Torah. In its stress upon the realization, in the here and now, of ultimate evil and salvation and in its mythicization of contemporary history, American Judaism offers a distinctively American, therefore a new and unprecedented, reading of the received tradition. This is by definition; when Jews have come to speak of fully realized salvation and an end of history, the result has commonly proved to be a new religion, connected to, but not continuous with, the received religion of Judaism.

RABBINIC AND OTHER JUDAISMS IN MODERN TIMES: CONTINUITY AND DISCONTINUITY

The 19th-century Judaisms, represented by Reform and Orthodoxy, made constant reference to the received system of the dual Torah; its writings, its values, its requirements, its viewpoints, and its way of life. The 20th-century Judaisms, Zionism and the American Judaism of Holocaust and Redemption, did not pretend to negotiate with Rabbinic Judaism or draw on its holy books. But there is a clear connection of all four Judaisms to the generative paradigm of the Torah—that experience of exile and return as announced in the time of Ezra. There are, of course, important differences between the continuator-Judaisms of the 19th century and the Judaic innovations of the 20th. Each Judaism born in the 19th century faced the task of validating the change affirmed by all of the borning Judaisms in one way or another. But all of those new Judaisms articulated a principle in which change guided relationships with the received system. And all the Juda-

isms recognized themselves as answerable, in diverse ways to be sure, to the received system, which continued to define the agenda of law and theology alike. We cannot point to a similar relationship between the new Judaisms of the 20th century and the received Judaism of the dual Torah. For none of them made much use of the intellectual resources of that system, found urgent, important issues within that system, or even regarded themselves as answerable to the Judaism of the dual Torah.

The 20th-century systems came to expression within the larger world—that of the nationalism of the smaller peoples of Europe and Zionism's rejection of the government of the international empires of Central and Eastern Europe—and, for American Judaism, the reframing, in American culture, of the policy governing social and ethnic difference. While these Judaic systems of believing and behaving did not draw extensively on the received Judaic system of the dual Torah, they did vastly overshadow in acceptance the Judaisms that did. From the 18th to the 20th century there was a radical attenuation of the bonds that joined the Jews to the Judaism of the dual Torah. The difference between the 20th-century Judaisms and the 19th-century ones was in the character of the ages in which they took shape. The Judaisms of the 19th century retained close and nurturing ties to the Judaism of the dual Torah, confronted its issues, drew heavily on its symbolic system, cited its texts as proof-texts, and eagerly referred to its sources in justification for the new formations. They looked backward and assumed responsibility toward that long past of the Judaism of the dual Torah, acknowledging its authority, accepting its program of thought, and acceding to its way of life—if only by way of explicit rejection. The Judaisms of the 20th century in common treated with entire disinterest the same received Judaism of the dual Torah. They looked forward and drew heavily upon contemporary systems of belief and behavior. But they turned to the received system of the dual Torah only adventitiously.

The difference between the 20th-century Judaisms and the 19th-century ones was much more than a century. It was the difference between the civilization of the West in its Christian form and that same civilization as it took new, secular forms altogether. With its interest in Scripture, messiah, and the long trends of history worked out in sanctification now for salvation at the end of days, what pertinence had the Judaism that was formed in response to Christianity? The new world imposed its own categories, including such organizing constructions as class struggle, the ideology of a homogeneously cultural and ethnic nation-state, and, in the United States and Canada, diverse and rootless people's search for ethnic identity. These issues characterized a world that had cast loose the moorings that had long held things firm and whole. What was left in the 20th century, for people with no relationship with the Judaism of the dual Torah, was a Judaic experience composed of politics on one side and raw emotions on the other. The ideologies of the 20th-century Judaisms came after the fact of experience and emotion. They explained the fact; they did not, as religions had done, transform feeling into sensibility and sentiment into an intellectual explanation of the world. The 20th-century systems represented by Zionism and the American Judaism of Holocaust and Redemption in common appeal to a self-evidence deriving from a visceral response to intolerable experience. Zionism formed into a single whole the experiences of remarkably diverse people living in widely separated places, showing that all those experiences formed a single fact—exclusion, victimization, and anti-Semitism—which Zionism could confront. American Judaism linked to an inchoate past the aspirations of a third and fourth generation of Jewish Americans who wanted desperately to be Jewish but in its own experience and intellectual resources could find slight access to something "Jewish." Emotion—of resentment in particular—formed the road within: for American Judaism, strong feelings about suffering and redemption; for Zionism, a powerful appeal to concrete deeds in the here and now by people who thought themselves helpless. Yet these Judaisms, so remote from the circumstance and substance of the generative system of the Torah, do not stand far from the starting point; for the contemporary Judaisms invoke exile and homecoming as the norm, just as stated in the Pentateuch: All have Eden in mind and eternal life in the mind's eye.

JUDAISM, ART OF, artistic works created in a Judaic context or intended to facilitate or accompany Jewish worship. Although the Second Commandment (Exodus 20:4; Deuteronomy 5:8), "You shall not make yourself a graven image, or any likeness of anything that is in heaven above, or that is in the earth beneath, or that is in the water under the earth," has been understood by some Jewish scholars as absolutely prohibiting any and all artistic representation, it can also be interpreted as a prohibition against the construction of such likenesses as were the object of worship in the cultural area in which the Israelites dwelt. Even in the BIBLE there are reports of artistic productivity in the construction of the tent SANCTUARY and its ritual vessels (Exodus 25–31) and of the TEMPLE OF JERUSALEM (I Kings 6–7).

Cecil Roth, the great art historian of JUDAISM, writes, "At every stage of their history the Jews . . . expressed themselves in various art forms which inevitably reflect contemporary styles and fashions. For purposes of cult and of religious observance . . . Jews have constantly produced . . . objects which appealed in some fashion to their aesthetic sense" (*Encyclopaedia Judaica* 3:499). The Talmudic sages, in BAVLI Shabbat 133b, recommended the use of lovely ornaments for religious observance. The biblical prohibitions against representing God in graven images tended to discourage the representation of the human form, especially in plastic arts. But in painting, drawing, and mosaics SYNAGOGUES of antiquity were elaborately decorated with all manner of images, including human. In ancient times the prohibition of graven images pertained principally to images meant to be worshiped; human and animal forms were otherwise accepted. Interestingly, the zodiac motif occurs in a number of synagogues, as do representations of the seasons. By medieval times, representational art was avoided, and nonrepresentational art became preferred.

Illuminated manuscripts from the medieval period in Europe were frequently decorated with biblical figures, some quite clearly copied from Christian prototypes. The Renaissance period saw the appearance of beautifully decorated Scrolls of Esther and *ketubbot* (KETUBAH, or marriage contracts). A fascinating mediating position in representational art is to be seen in a HAGGADAH in which the human figures have bird heads.

Given the general anti-iconic attitude, however, much of Jewish artistic endeavor has been directed toward the creation of ceremonial objects: KIDDUSH goblets, candelabra, spice boxes for the HABDALAH ceremony at the end of the SABBATH, ornamented containers for the mezuzah, the silver crowns placed on the TORAH scrolls, and many other objects designed to embellish the performance of ritual acts.

JUDAS ISCARIOT \ˈjü-dəs-i-ˈskar-ē-ət\ (d. c. 30 CE), in CHRISTIANITY, one of the Twelve APOSTLES, who betrayed JESUS CHRIST for 30 pieces of silver. His surname may have been an alteration of Latin *sicarius* ("murderer" or "assassin"), suggesting that he belonged to the Sicarii, the most radical Jewish group. Other than his apostleship, betrayal, and death, little is said about Judas in the Gospels.

There are variant traditions about Judas' death. According to Matthew 27:3–10, he repented after seeing Jesus condemned to death, then returned the silver and hanged himself (traditionally from the Judas tree). In Acts 1:18, he "bought a field with the reward of his wickedness; and falling headlong he burst open in the middle and all his bowels gushed out," implying that he threw himself down. Apocryphal gospels developed the point in Acts that calls the spot of his death the place (field) of blood. The Apostolic

Father Papias gave macabre details about Judas' death, presumably to show that Gospel prophecies were fulfilled.

In Muslim polemic literature, however, Judas ceases to be a traitor; instead, he supposedly lied to the Jews in order to defend Jesus (who was not crucified). The 14th-century cosmographer Ibn Abi 'Aşrūn maintains that Judas assumed Jesus' likeness and was crucified in his place. His name has subsequently become associated with traitor (a "Judas") and treacherous kiss (a "Judas kiss"), the latter signifying the way Judas identified Jesus to his captors.

JULIAN OF NORWICH \ˈjü-lē-ən . . . ˈnär-ij, -ich; ˈnör-wich\, also called Juliana (b. 1342, probably Norwich, Norfolk, Eng.—d. after 1416), celebrated mystic whose *Revelations of Divine Love* is generally considered one of the most remarkable documents of medieval RELIGIOUS EXPERIENCE. She spent the latter part of her life as a recluse at St. Julian's Church, Norwich.

On May 13, 1373, Julian was healed of a serious illness after experiencing a series of visions of Christ's suffering and of the Blessed Virgin, about which she wrote two accounts; the second, longer version was composed 20 or 30 years after the first. Unparalleled in English religious literature, *Revelations* spans the most profound mysteries of the Christian faith—such as the problems of PREDESTINATION, the foreknowledge of God, and the existence of evil. The clarity and depth of her perception, the precision and accuracy of her theological presentation, and the sincerity and beauty of her expression reveal a mind and personality of exceptional strength and charm. Never beatified, Julian is honored on the unofficial feast day of May 13. A modern chapel in the Church of St. Julian is dedicated to her.

JULIUS II, POPE, *original name* Guiliano della Rovere (b. Dec. 5, 1443, Albisola, republic of Genoa—d. Feb. 21, 1513, Rome), pope (1503–13), patron of the arts, and one of the most powerful political and military leaders of his age.

The nephew of Pope Sixtus IV, he fled Rome in 1494 to escape assassination by Pope Alexander VI. Elected pope in 1503, Julius set out to restore the Papal States, subjugating Perugia and Bologna (1508) and defeating Venice (1509) with the aid of the League of Cambrai. His first effort to expel the French from northern Italy failed, but a popular revolt drove them out in 1512, and Parma and Piacenza were added to the Papal States. The greatest art patron of all the popes, Julius was a close friend of Michelangelo, from whom he commissioned the sculpture of MOSES and the paintings in the Sistine Chapel. He also commissioned Raphael's Vatican frescoes.

JUNAYD, SHAYKH \jü-ˈnāid\ (b. c. 1430, Iranian Azerbaijan?—d. March 4, 1460, near the Kura River), fourth head of the Şafavid order of Sufi mystics, who sought to convert the order's spiritual strength into political power.

When Junayd's father died in 1447 he became the head of the Şafavid order, which had its capital at Ardabil, Iran. As a minor, he was placed under the guardianship of his paternal uncle, Shaykh Ja'far. Departing from previous custom, Junayd attempted to convert spiritual respect into temporal power, a policy that led to a split in the order. The majority remained with Shaykh Ja'far, and the rest followed Junayd. Junayd was the first Şafavid leader to whom the term SULTAN, indicative of temporal rule, was applied. The arming of his *murids* (spiritual followers), who regarded him as an emanation of divinity, brought him into conflict with Jahān Shāh (d. 1467), the ruler of Azerbaijan, and resulted in the

expulsion of Junayd and his followers from Ardabil, the traditional center of the Şafavid order, in 1448.

Junayd then sought a new power base. When Sultan Murad II, the Ottoman ruler, refused him sanctuary in his domains, Junayd led his followers to Aleppo (now in Syria) but was expelled by the authorities. He next attempted to settle along the southern shores of the Black Sea. In 1456 he led an unsuccessful campaign against the Christian Greek principality of Trabzon (now in Turkey). He then sought refuge with the Turkish ruler Uzun Ḥasan, who allowed him to remain in the city of Amid.

Junayd married Uzun Ḥasan's sister, Khadījah Begūm. This alliance revived the fortunes of the extremist wing of the Şafavid order and was in line with Uzun Ḥasan's policy of supporting Sufi orders (*see* SUFISM) to add legitimacy to his rule. Junayd sought an alliance with Uzun Ḥasan's SUNNI Turks, who were enemies of the SHI'ITE Jahān Shāh. Leaving Amid in 1459 to retake Ardabil, Junayd was blocked by the superior forces of Jahān Shāh. Junayd and his troops turned north to attack the Christian Circassians in the Caucasus region, where he was killed in an ambush. His policies of military adventurism and Shi'ite and Sufi piety were continued by his son, Ḥaydar, and culminated in the establishment of the Şafavid dynasty and of Twelver Shi'ite ISLAM in Iran under his grandson, ISMĀ'IL I.

JUNO \ˈjū-nō\, in ROMAN RELIGION, chief goddess and female counterpart of JUPITER, she resembled and was identified with the Greek HERA. With Jupiter and MINERVA, she was a member of the Capitoline triad of deities introduced by the Etruscan kings. Juno was connected with the life of women, particularly married life. As female comforter she assumed various descriptive names. Individualized, she was a female guardian angel: as every man had his GENIUS, so every woman had her *juno*. Thus, she represented the female principle of life.

As her cult expanded she assumed wider functions and became the principal female divinity of the state. As Sospita, portrayed as an armed deity, she was invoked originally as a savior of women but eventually as savior of the state. As Juno Moneta (perhaps literally "the Warner"), she had a temple on the Arx (the northern summit of the Capitoline Hill) from 344 BCE; it later housed the Roman mint, and the words "mint" and "money" derive from the name. Her significant festivals were the MATRONALIA on March 1 and the Nonae Caprotinae, which was celebrated under a wild fig

tree in the Campus Martius on July 7. She is portrayed as a standing matron of statuesque proportions and severe beauty, occasionally exhibiting military characteristics.

JUPITER \ˈjü-pə-tər\, also called Jove \ˈjöv\, Latin Iuppiter, Iovis, or Diespiter, chief ancient Roman and Italian god. Like ZEUS, the Greek god to whom he is related, Jupiter was a sky god. One of his most ancient epithets is Lucetius (from Latin *luc-*, "light"); and later literature has preserved the same idea in such phrases as *sub Iove*, "under the open sky." As Jupiter Fulgur he had an altar in the Campus Martius, and places struck by lightning were made his property and were guarded from the profane by a circular wall.

Throughout Italy he was worshiped on the summits of hills; thus, on the Alban Hill south of Rome was an ancient seat of his worship as Jupiter Latiaris, which was the center of the league of 30 Latin cities of which Rome was originally an ordinary member. At Rome itself on the Capito-

line Hill was his oldest temple; here there was a tradition of his sacred tree, the oak, and here were kept the *lapides silices*, pebbles or flint stones, which were used in symbolic ceremonies by the *fetiales*, the Roman priests who declared war or made treaties on behalf of the Roman state.

Jupiter was especially concerned with OATHS, treaties, and leagues, and in the presence of his priest the most ancient and sacred form of marriage (*confarreatio*) took place. The lesser deities Dius Fidius and FIDES were, perhaps, originally identical and certainly were connected with him. In Virgil's *Aeneid*, though Jupiter is in many ways as much Greek as Roman, he is still the great protecting deity who keeps the hero on the path of duty (PIETAS) toward gods, state, and family.

But this aspect of Jupiter gained a new force and meaning at the close of the early Roman monarchy with the building of the famous temple on the Capitol, of which the foundations are still to be seen. It was dedicated to Iuppiter Optimus Maximus (*i.e.*, Jupiter, the Best and Greatest), and with him were associated JUNO and MINERVA, in a fashion that clearly indicates a Greco-Etruscan origin, since the combination of three deities in one temple was foreign to the ancient ROMAN RELIGION, while it is found in both Greece and Etruria. The temple's dedication festival fell on September 13, on which day the consuls originally succeeded to office, accompanied by the Senate and other magistrates and priests. In fulfillment of a

Juno, classical sculpture; in the Museo Archeologico Nazionale, Naples

Alinari—Art Resource

vow made by their predecessors, the consuls offered to Jupiter a white ox, his favorite sacrifice, and, after rendering thanks for the preservation of the state during the past year, they made the same vow as that by which their predecessors had been bound. Then followed the feast of Jupiter. In later times this day became the central point of the great Roman games. When a victorious army returned home the triumphal procession passed to this temple.

Throughout the Roman Republic this remained the central Roman cult; and in imperial times he became the protecting deity of the reigning emperor as representing the state, as he had been the protecting deity of the free republic. His worship spread over the whole empire.

JUPITER DOLICHENUS \jü-pi-tər-ˌdō-li-ˈkā-nəs\, god of a Roman mystery cult, originally a local Hittite-Hurrian god of fertility and thunder worshiped at Doliche (modern Dülük), in southeastern Turkey. Later the deity was given a Semitic character, but, under Achaemenidian rule (6th–4th century BCE), he was identified with the Persian god AHURA MAZDĀ, thus becoming a god of the universe. Through Greek influence he was renamed ZEUS Oromasdes; and under that title he was closely associated with the cult of MITHRA, another Persian deity. The worship of Jupiter Dolichenus and of his consort was gradually carried westward to Rome and other military centers, where it became extremely popular during the 2nd and 3rd centuries CE. In the Roman mystery religion he was believed to control military success and safety. In art Jupiter Dolichenus was usually represented standing on a bull and carrying the double ax and the thunderbolt.

JUSTIFICATION, in Christian theology, either (1) the act by which God moves a person from the state of SIN to the state of GRACE; (2) the change in a person's condition as he moves from a state of sin to a state of righteousness; or (3) especially in PROTESTANTISM, the act of acquittal whereby God gives contrite sinners the status of the righteous.

The term is a translation of the Greek *dikaiōsis* (Latin *justificatio*). Justification has had importance in the history of the church and of theology since the time of the Apostle Paul, who asserted that one becomes just before God not by works, nor even by obeying the commandments (the law of God, which in itself is good). A person stands before God as a sinner, entirely dependent on God's grace. It is God who calls the sinner righteous. This is no arbitrary pronouncement but is made with reference to JESUS CHRIST, "who was put to death for our trespasses and raised for our justification" (Romans 4:25). In this way, the sinner is acquitted from law, sin, and death; is reconciled with God; and is not merely declared but is truly made just.

In response, one should accept God's merciful judgment in Christ and place complete trust in the Lord; in short, have faith. The person who has been justified is tempted as before and therefore remains dependent on the grace of

God. Faith must not be inactive, but a "faith working through love" (Galatians 5:6); *i.e.*, one must authenticate religious faith by deeds of love.

The Greek Fathers of the church did not emphasize the doctrine of justification, but it became an important theological concept in the thought of AUGUSTINE during his controversy with the Pelagians, a group who were teaching an ethical self-sanctification by works. The doctrine received great stress in MARTIN LUTHER'S struggle against the concept of justification by works current in the late Middle Ages, a struggle that led to a reappraisal of Paul's doctrine of justification. It became a capital doctrine for the Reformers. The COUNCIL OF TRENT (1545–63) defined the ROMAN CATHOLIC position in terms that for the next several centuries drew the lines for opposition between Roman Catholics and Protestants in their understanding of the doctrine.

JUSTINIAN I \jə-ˈsti-nē-ən\, *Latin in full* Flavius Justinianus, *original name* Petrus Sabbatius (b. 483, Tauresium, Dardania [modern Serbia, Yugos.]—d. Nov. 14, 565, Constantinople [now Istanbul, Turkey]), Byzantine emperor (527–565), noted for his reorganization of the imperial government and his sponsorship of a codification of laws known as the *Codex Justinianus* (529).

A Latin-speaking Illyrian of peasant stock, Justinian took the name from his uncle, the emperor Justin I, to whom he owed his advancement. While still a young man, he went to Constantinople to be educated. When Justin became emperor in 518, Justinian was a powerful influence in guiding the policy of his elderly and childless uncle. He was legally adopted by Justin and held important offices. In 525 he received the title of caesar and, on April 4, 527, was made co-emperor with the rank of augustus. At the same time, his wife, the former actress Theodora, who exercised considerable influence over him, was crowned augusta. On Justin I's death Justinian succeeded him as sole emperor.

Justinian considered it his duty to regain provinces lost to the empire "through indolence," and he could not ignore the trials of ROMAN CATHOLICS living under Arian rule in Italy and in the Vandal kingdom of North Africa. He attacked North Africa in June 533. By the following March (534) his general Belisarius had mastered the kingdom and received the submission of the Vandal ruler Gelimer. Northern Africa was reorganized as part of the empire.

In Italy, Justinian found a situation particularly favorable to his ambitions. The Ostrogoth Theodoric, who toward the end of his reign had begun to persecute Catholics, had died. Furthermore, not only was there antagonism between Arian Goths and Catholic Italians, but there was a rift within the ranks of the Ostrogoths as well. Thinking that this was now his opportunity to support his fellow Catholics and to reassert direct control over the province, Justinian dispatched an army and sent Belisarius with a fleet to attack Sicily. After the defeat of the Ostrogothic king Witigis and the capture of Ravenna in 540, imperial rule was rees-

Jupiter, classical sculpture; in the Vatican Museum
Alinari—Art Resource

established in Italy. Justinian hoped to restore the well-being of Italy by a series of measures, the Pragmatic Sanction of 554, but the country was so ravaged by war that a return to normal life proved impossible, and after his death part of the country was lost to the Lombard invaders.

In the Byzantine Empire, CHURCH AND STATE were indissolubly linked as essential aspects of a single Christian empire that was thought of as the terrestrial counterpart of the heavenly polity. It was therefore the duty of Justinian to promote the good government of the church and to uphold orthodox teaching. He forbade PAGANS, heretics, and SAMARITANS to teach any subject whatsoever, and he expelled pagan teachers from the once-famous Academy at Athens.

Justinian's main doctrinal problem was the conflict between the orthodox view accepted at the COUNCIL OF CHALCEDON (451), that the divine and human natures coexist in Christ, and the MONOPHYSITE teaching that spoke of "one nature of the incarnate LOGOS." Monophysitism was strongly held in Syria and Egypt and was closely allied to growing national feelings and resentment of Byzantine rule. Justinian, whose wife, Theodora, was a strong champion of the Monophysites, knew that any concessions to the eastern provinces would almost certainly alienate Rome and the West. Justinian tried to compel the orthodox Western bishops to arrive at a compromise with the Monophysites—even going so far as to hold Pope Vigilius against his will in Constantinople, forcing Vigilius to condemn some writings by such anti-Monophysite figures from Antioch as THEODORE OF MOPSUESTIA, Theodoret, and Ibas. (This event came to be known as the "Three Chapters Controversy.") The second COUNCIL OF CONSTANTINOPLE (553) also condemned the suspect writings. Justinian achieved nothing,

however; he did not conciliate the Monophysites, he enraged Antioch, and he aroused Rome particularly by his handling of Pope Vigilius and his attempt to determine doctrinal matters. The decrees of the council were not accepted by Vigilius' successors, and a SCHISM thus occurred between Rome and Constantinople that lasted until 610.

JUSTIN MARTYR, SAINT \ˈjəs-tin\ (b. c. 100, Flavia Neapolis, Palestine [now Nābulus]—d. c. 165, Rome [Italy]; feast day June 1), one of the most important of the Greek philosopher-Apologists in the early Christian church. His writings represent the first positive encounter of Christian revelation with Greek philosophy and laid the basis for a theology of history.

A pagan reared in a Jewish environment, Justin studied Stoic, Platonic, and other philosophies and then became a Christian in 132, possibly at Ephesus, near modern Selçuk, Turkey. Soon after 135 he began wandering from place to place proclaiming his newfound Christian philosophy. He spent a considerable time in Rome. Some years later, after debating with the cynic Crescens, Justin was denounced to the Roman prefect as subversive and condemned to death. Authentic records of his martyrdom survive.

Of the works bearing Justin's authorship and still deemed genuine are two *Apologies* and the *Dialogue with Trypho*. The first, or "Major Apology," was addressed about 150 to the Roman emperors Antoninus Pius and Marcus Aurelius. In the *First Apology*, Justin expresses the core of his Christian philosophy: the highest aspiration of both CHRISTIANITY and Platonic philosophy is a transcendent and unchangeable God; consequently, an intellectual articulation of the Christian faith would demonstrate its harmony with reason. Such a convergence is rooted in the relationship between human reason and the divine mind, both identified by the same term, LOGOS (Greek: "intellect," "word"), which enables man to understand basic truths regarding the world, time, creation, freedom, the human soul's affinity with the divine spirit, and the recognition of GOOD AND EVIL. Justin asserts that JESUS CHRIST is the INCARNATION of the entire divine *logos* and thus of these basic truths, whereas only traces of truth were found in the great works of the pagan philosophers. The purpose of Christ's coming into the world was to teach men the truth and save them from the power of DEMONS.

In the *Dialogue with Trypho*, Justin tries to prove the truth of Christianity to a learned Jew named Trypho. Justin attempts to demonstrate that a new COVENANT has superseded the old covenant of God with the Jewish people; that Jesus is both the MESSIAH announced by the OLD TESTAMENT prophets and the preexisting *logos* through whom God revealed himself in the Scriptures; and that the GENTILES have been chosen to replace Israel as God's CHOSEN PEOPLE.

Justin's distinctive contribution to Christian theology is his conception of a divine plan in history, a process of salvation structured by God, wherein the various historical epochs have been integrated into an organic unity directed toward a supernatural end; the Old Testament and Greek philosophy met to form the single stream of Christianity.

Justin's concrete description of the sacramental celebrations of BAPTISM and the EUCHARIST remain a principal source for the history of the primitive church. Justin serves, moreover, as a crucial witness to the status of the 2nd-century NEW TESTAMENT corpus, mentioning the first three Gospels and quoting and paraphrasing the letters of Paul and 1 Peter; he was the first known writer to quote from THE ACTS OF THE APOSTLES.

KA \kə\, in ancient EGYPTIAN RELIGION, with BA and AKH, a principal aspect of the soul of a human being or of a god. The exact significance of *ka* remains a matter of controversy, chiefly for lack of an Egyptian definition. Written by a hieroglyph of uplifted arms, it seems originally to have designated the protecting divine spirit of a person, and later the personified sum of physical and intellectual qualities constituting an "individuality." The *ka* survived the death of the body and could reside in a picture or statue of a person.

KA'BA \kə-bə\, also spelled Kaaba, small shrine located near the center of the Great Mosque in MECCA and considered by Muslims everywhere to be the most sacred spot on earth. Muslims orient themselves toward this shrine during the five daily prayers, bury their dead facing its meridian, and cherish the ambition of visiting it on HAJJ, or pilgrimage, in accord with the command of God in the QUR'AN.

The cube-shaped structure, constructed of gray stone and marble, is oriented so that its corners roughly correspond to the points of the compass. The interior contains nothing but the three pillars supporting the roof and a number of suspended silver and gold lamps. During most of the year the Ka'ba is covered with an enormous cloth of black brocade, the *kiswa*.

Built into the eastern wall of the Ka'ba is the Black Stone of Mecca (Arabic: al-Ḥajar al-Aswad), an object of veneration that probably dates from the pre-Islamic religion of the Arabs. It now consists of three large pieces and some fragments, surrounded by a stone ring and held together with a silver band. According to popular Islamic legend, the stone was given to ADAM on his fall from paradise and was originally white but has become black by absorbing the SINS of the thousands of pilgrims who have kissed and touched it. In 930 it was carried away by adherents of the QARMATIAN sect and held for ransom for about 20 years.

Every Muslim who makes the pilgrimage is required to walk around the Ka'ba seven times, kissing and touching the Black Stone, or saluting it as they pass by. When the month of pilgrimages (Dhū al-Ḥijjah) is over, a ceremonial washing of the Ka'ba takes place; religious officials as well as pilgrims take part.

The early history of the Ka'ba is not well known, but it is certain that in the period before the rise of ISLAM it was revered as a sacred SANCTUARY and was a site of pilgrimage. The Qur'an says of ABRAHAM and Ishmael that they "raised the foundations" of the Ka'ba. The exact sense is ambiguous, but Muslim legend has interpreted the phrase to mean that they rebuilt a shrine first erected by Adam of which only the foundations still existed. The Ka'ba has been destroyed, damaged, and subsequently rebuilt several times. Early in his prophetic ministry MUHAMMAD seems to have disregarded the Ka'ba, but, after his immigration to MEDINA and his difficulties there with the Jews, he changed the direction toward which the prayer is recited from Jerusalem

to the Ka'ba. When he took Mecca (630), he caused the idols within and surrounding the sanctuary to be destroyed and had the building cleansed of the pictures covering its interior. The Ka'ba has been the focal point of Muslim piety ever since.

In Sufi (see SUFISM) literature the true Ka'ba is identified with the heart of the seeker.

KABBALAH: see QABBALAH.

KABĪR \kə-'bīr\ (fl. late 15th century, Varanasi, India—d. near Magahar?), iconoclastic Indian poet-saint revered alike by Hindus, Muslims, and Sikhs. Though Kabīr is often depicted in modern times as a harmonizer of Hindu and Muslim belief and practice, it would be more accurate to say that he was equally critical of both, often conceiving them as parallel to one another in their misguided ways. In his view, the mindless, repetitious, prideful habit of declaiming SCRIPTURE could be visited alike on VEDA or QUR'AN; the religious authorities doing so could be Brahmmins or Qāzīs; meaningless rites of initiation could focus either on the sacred thread (see UPANAYANA) or on CIRCUMCISION. What really counted for Kabīr was utter fidelity to the one deathless truth of life, which he associated equally with the designations Allah and Rām—the latter understood as a general Hindu name for the divine, not the hero of the RĀMĀYANA. Kabīr experienced this ineffable reality as simple or spontaneous (*sahaj*), and the sometimes openly paradoxical language he used to describe it suggests the formative influence of Nāth Yogī practices (see HAṬHA YOGA; GORAKHNĀTH). Kabīr's principal media of communication were songs called *padas* and rhymed couplets (*dohās*) sometimes called "words" (śABDAS) or "witnesses" (*sākhīs*). A number of these memorable

couplets have become common coin among speakers of north Indian languages, amplified by others attributed to Kabīr since his death.

Kabīr's poetic personality differs somewhat according to the emphases of the religious traditions that revere him, and the same can be said for his HAGIOGRAPHY. For Sikhs he is a precursor and interlocutor of NĀNAK, the founding Sikh GURŪ; for Muslims he takes his place in Sufi lineages; for Hindus, he becomes a Vaiṣṇava with universalist leanings. But when one goes back to the poetry that can most reliably be attributed to Kabīr, only two aspects of his life emerge as truly certain: he lived most of his life in Banaras (now VARANASI), and he was a weaver (*juḷāhā*), a low-ranked CASTE that had become largely Muslim in Kabīr's time. His humble social station and his own combative reaction to any who would regard it as such have contributed to his celebrity among Dādū Pathīs, Ravidāsīs (see RAVIDĀS), and Radhasoamis (see RADHASOAMI SATSUNG) and helped shape the Kabīr Panth, a sect found across north and central India that draws its members especially but not exclusively from Scheduled Caste (working classes) people. The Kabīr Panth regards Kabīr as its principal GURU or even

Ka'ba, shrine in the Great Mosque at Mecca
Mehmet Biber—Rapho/Photo Researchers

as a divinity—truth incarnate. The broad range of traditions on which Kabīr has had an impact is testimony to his massive authority, even for those whose beliefs and practices he criticized so unsparingly. From early on, his presence in anthologies of north Indian BHAKTI poetry is remarkable.

KACHINA \kə-'chē-nə\, Hopi qacína, in Pueblo Indian religious practice, any of more than 500 ancestral spirits often associated with fertility who act as intermediaries between the human and divine. Kachinas reside with the tribe for half of each year and allow themselves to be seen by the community if the men perform a traditional ritual while wearing kachina masks. The being depicted on the mask is thought to be present with the performer, temporarily transforming him. Kachinas are also depicted in small, carved-wood dolls, which are presented to children both as playthings and as devices to teach the identities of the kachinas and the symbolism of their costumes. The identity of the spirit is depicted primarily by the applied color and elaborate feather, leather, and, occasionally, fabric ornamentation of its mask.

KADDISH \ˈkă-dish\, also spelled Qaddish, in JUDAISM, a hymn of praise usually recited in Aramaic at the end of principal sections of SYNAGOGUE services. The nucleus of the prayer is the phrase “Glorified and sanctified be God’s great name throughout the world which He has created according to His will. May He establish His kingdom in your lifetime and during your days.” The congregation responds: “May His great name be blessed forever to all eternity.”

Originally the Kaddish was recited in the rabbinical academies at the conclusion of public study or after the sermon of the preacher. In time it became a regular feature of the synagogue service. The prayer pleads for the realization of the messianic age; and, because the resurrection of the dead is associated with the coming of the MESSIAH, the Kaddish eventually became the prayer of mourners who recite it for 11 months and one day after the death of a parent or close relative.

KAGURA \ˈkă-gü-ˌră\, in SHINTŌ, traditional style of music and dancing used in religious ceremonies. Tradition states that *kagura* originated in the performances of Amenouzume, the patron goddess of dancers. *Kagura* dances dedicated to native deities and performed at the imperial

court or in villages before local Shintō shrines are in essence a symbolic reenactment of the propitiatory dance that lured the sun goddess AMATERASU from the cave in ancient myth. Although *kagura* dance has been influenced by later, more sophisticated dance forms, it is still performed much as it was 1,500 years ago, to religious chants accompanied by drums, brass gongs, and flutes.

The kind of music and ritual used exclusively in the imperial palace grounds is called *mi-kagura*, that in large Shintō shrines, *o-kagura*, and Shintō music for local shrines, *sato-kagura*. The music for *mi-kagura* ceremonies is divided into two types: one to praise the spirits or seek their aid (*torimono*), the other to entertain the gods (*saibari*). *Mi-kagura* is exclusively a male event, but Shintō female dancers (*miko*) are found in other shrines.

KAIBARA EKIKEN \ˈkī-bä-rä-e-ˈkē-ken\, Ekiken also spelled Ekken \ˈek-ken\, original name Atsunobu (b. Dec. 17, 1630, Fukuoka, Japan—d. Oct. 5, 1714, Japan), philosopher, travel writer, and pioneer botanist of the early Tokugawa period (1603–1867) who popularized Confucian doctrines. He was the first to apply Confucian ethics to women and children and the Japanese lower classes.

Originally trained as a physician, he left the medical profession in 1657 to study the thought of the Neo-Confucian philosopher CHU HSI. Kaibara wrote about 100 philosophical works in which he stressed Chu Hsi’s conception of the hierarchical structure of society. In his *Taigi roku* (“Grave Doubts”), however, he took issue with Chu Hsi’s DUALISM in favor of a single creative force. In his *Dōji kun* (“Instructions for Children”), Kaibara tells parents to discipline their children severely, so that they might accept all that parents tell them, whether it is right or wrong. To Kaibara is usually attributed *Onna daigaku* (“The Great Learning for Women”), long considered the most important ethical text for women in Japan, which advocates women’s obedience to their parents, parents-in-law, husband, and, if widowed, their eldest son. Kaibara’s own wife, Tōken, was also a

K'AI-FENG JEW

scholar, calligrapher, and poet, and it has been suggested that she was the real author of his books.

K'AI-FENG JEW \k'i-'fəŋ\, member of a former religious community in Honan province, China. It is likely that Jews entered K'ai-feng about 1127 from India or Persia, and the oldest known **SYNAGOGUE** in K'ai-feng was built in 1163. There is evidence that other Jewish communities existed in China for much more than 1,000 years, but only the history of the K'ai-feng Jews has been well documented.

In the early 17th century Chinese **JESUITS** learned of the existence of a community of monotheists living in the city of K'ai-feng. There was a large synagogue (with a **HOLY OF HOLIES** accessible only to the chief **RABBI**), and the community observed the **SABBATH** and major religious festivals, practiced **CIRCUMCISION**, read the **TORAH**, had Hebrew manuscripts, used name tablets rather than pictures in their synagogue, and abstained from eating pork. Their Chinese name, T'iao-chin chiao ("pick out the tendons"), refers to practices prescribed by Jewish dietary laws.

The religious life of the Jewish community in K'ai-feng was permanently disrupted by the protracted period of war and social upheaval that accompanied the establishment of the Ch'ing (Manchu) dynasty in 1644, which saw the destruction of the synagogue as well as Jewish records, books, and burial grounds. Though the synagogue was rebuilt in 1653, few members of the community were left who could read Hebrew by 1700. The last Chinese rabbi died in 1800. The community is presumed to have died out in the early 1900s.

KĀLACAKRA TANTRA \k'ā-lā-'chə-krə-'tən-trə\ (Sanskrit: "Wheel of Time Tantra"), chief text of a distinctive school of Tantric **BUDDHISM** that arose in northwestern India in the 10th century. The work represents the final phase of Tantric Buddhism in India, just prior to the Muslim invasion, but it has retained its prominence in Tibet.

At the center of the text's **MANDALA** (ritual drawing) is an image of the deity Kālacakra, another manifestation of the Buddha **AKṢOBHYA**, either alone or embracing his consort **Viśvamātrī** (Mother of the Universe). Surrounding them are more than 250 divine figures. The most notable innovation in this **TANTRA** is its astrological frame of reference. The figures constituting the mandala are identified with planets and stars, and the structure of the mandala is correlated with the temporal rhythms of the heavens.

KALĀM \kə-'lām\, in **ISLAM**, speculative theology. *Kalām* is short for 'ilm al-kalām, in Arabic, "knowledge of debate" or "science of discourse" on God. Those who practice *kalām* are known as *mutakallimūn*.

In its early stage, *kalām* was merely a defense of Islam against Christians, Manichaeans, and believers in other religions. As interest in philosophy grew among Muslim

thinkers, *kalām* adopted the methodology of the Greek skeptics and the stoics and directed these against the Islamic philosophers who attempted to fit Aristotle and Plato into a Muslim context.

Several schools of *kalām* developed. The most significant was the **MU'TAZILA**, often described as the rationalists of Islam, who appeared in the 8th century. They believed in the autonomy of reason with regard to revelation and in the supremacy of reasoned ('aqlī) faith against traditional (*naqlī*) faith. The Mu'tazila championed the freedom of the human will, holding that it was against divine justice to either punish a good man or pardon an unrighteous one. The Ash'ariya, a school of *kalām* originating in the 10th century, was a mediation between the rationalization of the Mu'tazila and the **ANTHROPOMORPHISM** of the traditionalists and represented the successful adaptation of Hellenistic philosophical reasoning to Muslim orthodox theology. They too affirmed the freedom of the human will but denied its efficacy. Closely resembling but more liberal than the Ash'ariya was the al-Māturīdīya school, which also originated in the 10th century. See also **ASH'ARĪ**, **ABŪ AL-HASAN AL-**; **KASB**; **MĀTURĪDĪYA**.

KALEVALA \k'ā-lā-,vā-lä\, Finnish national epic compiled from old Finnish ballads, lyrical songs, and incantations that were a part of Finnish **ORAL TRADITION**.

The Kalevala was compiled by Elias Lönnrot, who published the folk material in two editions (32 cantos, 1835; enlarged into 50 cantos, 1849). Kalevala, the dwelling place of the poem's chief characters, is a poetic name for Finland, meaning "land of heroes." The leader of the "sons of Kale-

va" is **VÄINÄMÖINEN**, a powerful seer with supernatural origins, who is a master of the *kantele*, a harp-like stringed instrument. Other characters include the smith **ILMARINEN**, one of those who forged the "lids of heaven" when the world was created; **LEMMINKÄINEN**, an adventurer-warrior and charmer of women; Louhi, the female ruler of **POHJOLA**, a powerful land in the north; and Kullervo, who is forced by fate to be a slave from childhood.

Among the main dramas of the poem are the creation of the world and the adventurous journeys of Väinämöinen, Ilmarinen, and Lemminkäinen to Pohjola to woo the beautiful daughter of Louhi, during which the miraculous **SAMPO** is forged and recovered for the people of Kalevala. Although the Kalevala depicts the conditions and ideas of the pre-Christian period, the last canto seems to predict the decline of traditional religions: the maid Marjatta gives birth to a son who is baptized king of Karelia, and Väinämöinen makes way for him, departing from Finland without his *kantele* and songs.

KĀLĪ \k'ā-lē\ (Sanskrit, literally: "She Who Is Black"), major Hindu goddess whose **ICONOGRAPHY**, cult, and mythology commonly associate her with death, sexuality, violence,

Kālī, relief from Bherāghāt, near Jabalpur, Madhya Pradesh state, India, 10th century CE
Prמוד Chandra

and, paradoxically in some of her later historical appearances, motherly love. Although depicted in many forms throughout South Asia (and now much of the world), Kālī is most often characterized as a black or blue goddess, partially or completely naked, with a long lolling tongue, a skirt or girdle of human arms, a necklace of decapitated heads, and multiple arms. She is often depicted standing or dancing on her husband, the god Shiva, who lies prostrate beneath her.

Kālī was originally most likely a deity of the tribal and mountain cultures of South Asia who was gradually appropriated and transformed, if never quite tamed, by the more traditional and public pan-Indian Sanskrit traditions. She makes her first major appearance in Sanskrit culture in the *Devī-Māhātmya* ("The Greatness of the Goddess," c. 6th century CE), where she springs from the angry brow of the goddess DURGĀ to slay the DEMON Raktabīja. Her paradoxical nature, deeds of violence and grace, and ecstatic secrets have since then been displayed, encoded, and meditated on in a wide range of Sanskrit, vernacular, and artistic media (PURĀNAS, TANTRAS, philosophical treatises, meditation manuals, sculpture, ritual theatre, vernacular songs) up until the present.

Kālī's cult has been particularly popular at different points of Indian history in Kashmir, Kerala, South India, Bengal, and Assam. She has thus inhabited a space "on the edges" of the subcontinent and culture in both a geographic and a doctrinal sense. The last three decades of the 20th century have seen a growing interest in Kālī's mythology and ritual in the West, particularly in the United States among feminist-oriented scholars and writers, who see Kālī as a symbol of feminine empowerment and radical embodiment, and "New Age" believers, who are often attracted to the positive and liberating roles that sexuality and theological paradox play in her more Tantric manifestations.

KĀLKĪ \ˈkəl-kē\, also called Kalkin \ˈkəl-kin\, tenth and final AVATAR (incarnation) of the Hindu god VISHNU, who is yet to appear. At the end of the present Kali age, when virtue and religion have disappeared into CHAOS and the world is ruled by unjust men, Kalkī will appear to destroy the wicked and usher in a new age. Often he is pictured as being seated on a white horse, with a naked sword in his hand, blazing like a comet. According to some myths, Kalkī's horse will stamp the earth with its right foot, causing the tortoise that supports the world to drop into the deep. Then Kalkī will restore the earth to its initial purity.

Certain aspects of the mythology of Kalkī contain motifs shared with millennial aspects of other religious traditions, especially the horsemen of the APOCALYPSE in CHRISTIANITY and the utopian locale Shambhālā in BUDDHISM. This place, described in Hindu accounts as

the village in which Kalkī will be born and to which he will repeatedly return, is in TIBETAN BUDDHISM a secret mountain kingdom whose future ruler will inaugurate a world-wide golden age.

KALPA SŪTRA \ˈkəl-pə-ˈsü-trə\, any of several manuals of Hindu religious practice, a number of which emerged within the different schools of the VEDA. Each manual explains the procedures (*kalpa*) of its school as it applies to the sacrificial ritual (the *Śrauta Sūtras*), the domestic ritual (the *Gṛhya Sūtras*), and the conduct of life (the *Dharma Sūtras*). They are written in the short aphoristic style of the *sūtra* (literally "thread") so that they can be committed easily to memory. *Kalpa* is one of six fields of scholarly discipline known as Vedāṅgas ("accessories to the Vedas"). Regarded to be of human origin, they are considered *Smṛti* ("Tradition") as distinct from the Veda itself, which is *Śruti* ("Revelation").

KALVIS \ˈkäl-vis\, also called Kalvaitis, or Kalvelis (Lithuanian), Latvian Kalējs \ˈkäl-lās\, in BALTIC RELIGION, the heavenly smith, usually associated with a huge iron hammer. Kalvis also seems to have been a dragon killer, a function in which he was superseded by the Christian St. George. Every morning Kalvis hammers a new sun for Aušrinē (Latvian: AUSEKLIS), the dawn, and a silver belt and golden stirrups for Dievo sūneliai (Latvian: Dieva dēli), the morning and evening stars.

Kalvis' extraordinarily large iron hammer, by whose aid the sun was said to have been freed from imprisonment, was honored by the Lithuanians as late as the turn of the 15th century.

KĀMA \ˈkämə\, in the mythology of India, the god of love. During the Vedic age, he personified cosmic desire, or the

creative impulse, and is called the first-born of the primeval CHAOS that makes all later creation possible. In later periods he is depicted as a handsome youth, attended by heavenly nymphs, who shoots love-producing flower-arrows. His bow is of sugarcane, his bowstring a row of bees. Once directed by the other gods to arouse SHIVA's passion for PĀRVATĪ, he disturbed the great god's meditation on a mountaintop. Enraged, Shiva burned him to ashes with the fire of his third eye. Thus he became Ananga (Sanskrit: "the Bodiless"). Some accounts say Shiva soon relented and restored him to life after the entreaties of Kāma's wife, Rati. Others hold that Kāma's subtle, bodiless form renders him even more deftly omnipresent than he would be if constrained by bodily limitation.

The Sanskrit term *kāma* also refers to one of the four proper aims of human life—pleasure and love. A classic textbook on

Kalkī, 17th-century Nepalese miniature; in a private collection

Pramod Chandra

erotics and other forms of human pleasure, the *Kāma Sūtra*, is attributed to the sage Vātsyāyana.

KAMI \ˈkɑ-ˈmē-, Angl ˈkɑ-mē\, plural *kami*, object of worship in SHINTŌ and other indigenous religions of Japan, often translated as “god,” “lord,” or “deity” but including forces of nature that are objects of reverence. The sun goddess AMATERASU Ōmikami, illustrious ancestors, and things such as plants, rocks, birds, beasts, and fish may be treated as *kami*. In early Shintō, the heavenly *kami* (*amatsukami*) were considered more noble than the earthly *kami* (*kunitsukami*), but in modern Shintō this distinction is not made. *Kami* are usually worshiped in their manifestations in a symbolic object (see SHINTAI). Shintō myths speak of the “800 myriads of *kami*” to express the infinite number of potential *kami*, and new ones continue to be recognized.

KAMIDANA \ˈkɑ-mē-,dɑ-nɑ\ (Japanese: “god-shelf”), in SHINTŌ, a miniature shrine, the center of daily worship in a household or a shop. The *kamidana* consists of a shelf that displays articles of veneration and daily offerings. At the center of the shrine is the *taima*, an inscribed board from the main Shintō shrine, the GRAND SHRINE OF ISE, which represents a universal KAMI. On either side are paper AMULETS (*o-fuda*) associated with local tutelary gods (*uji-gami*) and ancestral spirits. The *kamidana* may include a *shimenawa*, a sacred rope of rice straw used to demarcate a sacred area. Offerings of water, sake, food, and twigs are placed daily at the shrine, and prayers are offered for blessings on the household.

KAMMATTHĀNA \,kɑ-mə-ˈtɑ-nə\ (Pāli: “basis of meditation”), Sanskrit *karmasthāna*, in THERAVĀDA BUDDHISM, one of the objects of mental concentration or a stage of meditation employing it. Theravāda recognizes six human dispositions: covetousness, anger, stupidity, trustfulness, wisdom, and reason. Each disposition has its appropriate objects for mental concentration among the *kammatthānas*. The meditation of *kammatthāna* is highly valued among Buddhist monks and is still practiced in Myanmar (Burma), Thailand, and other Southeast Asian countries.

KANDY, byname Maha Nuwara (“Great City”), city in the Central Highlands of Sri Lanka. Kandy is derived from *Kanda*, a Sinhalese word meaning “hill”; from the city’s initial construction, about AD 1480, it was known as Kanda Uda Pas Rata (“Palace on Five Hills”). Kandy is an administrative, commercial, cultural, and educational center and attracts many pilgrims and tourists. The surrounding region produces tea, rice, and other crops.

From the 13th or 14th century, Kandy was a center of Mahāyāna and Theravāda BUDDHISM. The most important of its many Buddhist temples is Daḷadā Māligāva (“Temple of the Tooth”), where a sacred relic, supposed to be the BUDDHA’s tooth, has been preserved since 1590. The temple was constructed under Kandyan kings during the periods 1687–1707 and 1747–82. In 1998 Tamil separatists bombed the temple; restoration began immediately afterward. Temples southwest of Kandy include the Lankatilaka Vihare (Hindu) and the Gadaladeniya Vihare (Buddhist), which were built in the 14th century. The city was designated a UNESCO World Heritage site in 1988. The Esala Perahera, the annual 10-day torchlight parade of dancers and drummers, dignitaries, and decorated elephants, commemorates the sacred tooth; it may be the largest Buddhist celebration in the world.

KANIṢKA \kɑ-ˈnish-kə\, also spelled *Kanishka*, Chinese Chia-ni-se-chia, greatest king of the Kushān dynasty and patron of BUDDHISM.

Most of what is known about Kaniṣka derives from Chinese sources. He probably came to the throne between 78 and 144 CE; his reign is believed to have lasted 23 years.

Kaniṣka’s kingdom came to cover areas in modern-day Uzbekistan, the GAṄGĀ (Ganges) Valley, Tajikistan, central India, Pakistan, and possibly Chinese Turkistan. Contact between Kaniṣka and the Chinese in Central Asia may have inspired the transmission of Buddhism to China.

As a patron of Buddhism Kaniṣka is noted for convening the fourth great Buddhist council in Kashmir that marked the beginnings of MAHĀYĀNA Buddhism. At the council, according to Chinese sources, authorized commentaries on the Buddhist canon were prepared. These texts have survived only in Chinese translations and adaptations. Kaniṣka was a tolerant king; his coins show that he honored Zoroastrian, Greek, and Brahmanic deities as well as the Buddha.

KANNON \kɑn-ˈnɒn\, in Japanese BUDDHISM, the BODHISATTVA of infinite compassion and mercy. See AVALOKITEŚVARA.

KĀPĀLIKA AND KĀLĀMUKHA \kɑ-ˈpɑ-li-kə . . . ˈkɑ-lɑ-mu-kə\, members of either of two groups of Śaivite (see ŚAIVISM) ascetics in 8th–13th-century India, notorious for their practices of worship, which included the five tantric rites and animal and HUMAN SACRIFICE. They were successors of the PĀŚUPATAS, a sect that worshiped SHIVA and took antisocial, or “animal” (*paśu*), vows.

The Kāpālikas (worshippers of Kāpālin, the skull bearer, a name of Shiva) and the Kālāmukhas (black-faced, so called because of the black mark, or *tilaka*, worn on their foreheads) were often confused. They were designated as *mahāvratins* (“observers of the great vows”), referring to a 12-year vow of self-abnegation that was said to follow the sacrifice of a BRAHMIN, in imitation of Shiva’s act of severing one of Brahmā’s five heads. During this time ascetics ate and drank from the skull of the person so sacrificed and followed tantric practices such as going naked, eating the flesh of the dead, smearing themselves with the ashes of corpses, and frequenting CREMATION grounds where they meditated on the YONI, the symbol of the female sexual organ. Other Śaivites were enraged by such practices.

Sculptures on medieval Indian temples are sometimes thought to depict Kāpālika ascetics. An inscription at Igatpuri in Nasik district (Maharashtra state) confirms that the Kāpālika were established there in the 7th century; another center was Śrīparvata (now Nāgārjunikoṇḍā), in Andhra Pradesh. In an 8th-century Sanskrit drama, *Mālatīmādhava*, the heroine escapes being sacrificed to the goddess Cāmuṇḍā by a pair of Kāpālika ascetics. Modern successors to the Kāpālikas are the Aghoris, or Aghorapanthis.

KAPILA \kɑ-pē-lə\ (fl. 550 BCE?), Vedic sage who is identified, with others, especially Āsuri, as the founder of the system of Sāṃkhya, one of six schools of Vedic philosophy.

According to Hindu sources, Kapila was a descendant of MANU, the primal human being, and a grandson of the creator-god BRAHMĀ or, alternatively, an AVATAR of VISHNU. The BHAGAVAD GĪTĀ pictures him as a recluse associated with yogic adepts (SIDDHAS). The Sāṃkhya system attributed to Kapila has had a considerable impact on the Hindu tradition as a whole, especially through its close association with YOGA, as symbolized in Kapila’s own renunciant

persona. For example, Sāmkhya forms a notable part of the philosophical background of the *Bhagavad Gītā*. In mythology, Kapila is portrayed as an exemplar of yogic stringency. His HERMIT regimen is said to have produced in him an inner store of such intense heat that he was capable of reducing to ash the 60,000 sons of Sagara.

KAPLAN, MORDECAI MENAHEM \ˈka-plən\ (b. June 11, 1881, Švenčionys, Lithuania—d. Nov. 8, 1983, New York, N.Y., U.S.), American RABBI, educator, theologian, and religious leader who founded the influential Reconstructionist movement in JUDAISM.

Kaplan was a visionary who thought it urgent that Judaism adapt to the crisis of modernity. Utilizing the disciplines of history and sociology, he defined Judaism as the evolving religious civilization of the Jewish people. With this definition, he resisted defining Judaism as solely a religion, whose beliefs and practices are timeless and unchanging. Rather, he understood Judaism as the civilization—the culture, languages, values, literature, and FOLKLORE, in addition to RELIGIOUS BELIEFS and ritual practices—of communities of Jewish people through the ages. He showed how all aspects of that civilization had evolved in response to the ever changing historical circumstances.

Based on that analysis, Kaplan argued that it is the responsibility of each generation of Jews to continue the ongoing evolution, reconstructing Judaism to meet contemporary challenges. Specifically, Kaplan sought to address the crisis in Jewish life caused by the political emancipation of the American Jews, who, for the most part, are primarily integrated within American culture. He advocated the formation of voluntary intensive communities in which Judaism could continue to flourish. Embracing the democratic values of the United States, he sought to reformulate Jewish beliefs and practices in ways that Jews would find compelling. He described God in naturalistic terms, eschewing supernatural miracles, as the Power that makes for salvation. He understood TORAH not as a one-time revelation at Sinai, but rather as the ongoing product of successive generations: quests for ultimate value and meaning. He advocated intensive ritual observance and prayer, because a civilization is transmitted through the values embedded in cultural forms, but he also urged that prayer and ritual be reinterpreted when they express values that are now repugnant. In this regard, he eliminated all chauvinistic references to the chosen status of the Jewish people. He also initiated gender equity in ritual practice, most dramatically by the introduction in 1922 of the bat mitzvah ceremony for girls.

KARAISM \ˈkar-ə-i-zəm\, also spelled Karaitism, or Qaraism (from Hebrew: *qara*, “to read”), a Jewish religious movement that repudiated ORAL TRADITION as a source of divine law and defended the Hebrew BIBLE as the sole authentic font of religious doctrine and practice. Initially, supporters of the movement were called Ananites, after ANAN BEN DAVID, the first literary figure of the group, who worked out a code of life independent of the TALMUD. During the 9th or 10th century, the name Karaites was adopted to underscore the group's emphasis on a personal reading of the Bible.

The movement began in 8th-century Persia. Though its members were never numerous, it spread to Egypt and Syria and later into Europe by way of Spain and Constantinople. Karaism proclaimed the Bible to be self-explanatory and sanctioned personal interpretations of the SCRIPTURES. The movement, however, soon found it necessary to devel-

op an oral tradition of its own in applying scriptural principles to daily life. Extreme ASCETICISM was practiced, the festival of HANUKKAH was suppressed, and great rigor was applied to dietary laws, ritual purity, fasting, clothing, and marriage (adherents were forbidden to marry outside the sect). An uncompromising MONOTHEISM led to the exclusion of traditional Jewish ritual objects such as phylacteries and mezuzahs.

The movement suffered from numerous SCHISMS and from a lack of competent scholars to defend its position on the Bible. SA'ADIA BEN JOSEPH (10th century) was an outspoken and effective opponent of Karaism and tried to exclude Karaites from Jewish communities. He and others, however, were forced by Karaism to develop Jewish philosophy and sharpen their EXEGESIS to defend rabbinic Judaism's use of oral tradition (and the Talmud in particular). These controversies produced a great mass of polemical literature in Hebrew and Aramaic, the largest collection of which is now in the St. Petersburg Public Library.

Karaites still exist today, about 10,000 of them living in or near Ramla, outside Tel Aviv-Yafo, and probably small enclaves survive in Poland and Russia. Their liturgy has little poetry but many readings of scriptural texts.

KARBALĀ' \ˈkär-bä-lä\, also spelled Kербela \ˈkər-bə-lə\, city, central Iraq. The city is Iraq's foremost holy city and lies 55 miles southwest of Baghdad.

The city's religious importance derives from the Battle of Karbalā' (680 CE) between SUNNI and SHI'ITE forces. Ḥusayn ibn 'Alī, the Shi'ite leader and grandson of MUHAMMAD, was killed, and his tomb remains one of the greatest Shi'ite shrines and PILGRIMAGE centers. It was destroyed in 1801 but was soon rebuilt. Shi'ite Muslims consider burial in Karbalā' a sure means of reaching paradise; the city therefore has extensive cemeteries. The city is also a departure point for pilgrimages to MECCA. In the aftermath of the 1991 Persian Gulf War both the city and the shrine were devastated when Saddam Hussein's Republican Guard moved in to eradicate a widespread Shi'ite uprising in the region.

KARMA \ˈkər-mə, ˈkär-\ (“act,” “deed,” or “task”), *Sanskrit* karman, *Pāli* kamma, in Indian philosophy, the impact of an individual's past actions on future lives, or REINCARNATIONS. The doctrine of karma reflects the conviction that this life is but one in a chain of lives (SAMŚĀRA) and that it is significantly influenced by actions in a previous life. Such a system, in which actions in the present produce future reactions in kind, but sometimes with lapses in time or changes of medium, is offered as a simple description of moral reality; as a justification for the evident disparities in status that exist between beings, both human and otherwise; and as an impetus for virtuous behavior. But it is rarely well understood in the West that this “law of karma” has often been disputed in India, not only by those whose station in life is low, as might be expected, but by others as well.

Buddhists and Jains join Hindus in incorporating doctrines of karma as part of their common Indian legacy. Buddhists tend to interpret it strictly in terms of ethical cause and effect with a range of views about the mechanics of rebirth that contrast somewhat with those held by Hindus, since issues of enduring personhood pose different philosophical problems for Buddhists than they do for Hindus. For Jains, karma is not viewed as a process but as a fine particulate substance that produces the universal chain of cause and effect and of birth and death.

KARO, JOSEPH BEN EPHRAIM \ˈkär-ō\, Karo *also spelled* Caro, or Qaro, *also called* Maran \ˈmär-än\ (Aramaic: "Our Master") (b. 1488, Spain—d. March 24, 1575, Safed, Palestine [now Zefat, Israel]), Spanish-born Jewish author of the last great codification of Jewish law, the *Bet Yosef* ("House of Joseph"). Its condensation, the SHULḤAN 'ARUKH ("The Prepared Table," or "The Well-Laid Table"), is still authoritative for Orthodox Jewry.

When the Jews were expelled from Spain in 1492, Karo and his parents settled in Turkey. About 1536 he immigrated to Safed in Palestine, then the center for students of the TALMUD and the QABBALAH. Because of the partial disintegration in Jewish life after the Spanish expulsion, and the diversity of Talmudic authorities in different countries, Karo undertook two major works to standardize Judaism's customs and laws. The first and greater of his works was the commentary *Bet Yosef* on the codification *Arba'a turim* (1475; "Four Rows") of JACOB BEN ASHER. Karo brought together the legal decisions of three leading representative Talmudists: MOSES MAIMONIDES, ISAAC BEN JACOB ALFASI, and Asher ben Jehiel. When he found disagreement among the three, Karo took the majority opinion as final. That procedure, however, gave a Sephardic bias to the work, because both Maimonides and Alfasi were Sephardic—*i.e.*, Jews of Spanish and Portuguese descent. In addition, Karo often decided difficult points of law on his own authority. Because of the complexity and erudition of the *Bet Yosef*, Karo produced a popular condensation, *Shulḥan 'arukh* (1564–65). A corrective commentary by Moses Isserles entitled *Mappa* (1571; "The Tablecloth"), made Karo's code acceptable to Sephardic and Ashkenazic Jews alike.

Karo was also the author of a mystical diary, entitled *Maggid mesharim* (1646; "Preacher of Righteousness"), in which he recorded the nocturnal visits of an angelic being, the personification of the MISHNAH. His visitor spurred him to acts of righteousness and ASCETICISM, exhorted him to study the Qabbalah, and reproved him for moral laxities.

KARTĒR \kär-ˈtēr\, *also spelled* Kartir, or Karder (fl. 3rd century CE, Persia [now Iran]), influential HIGH PRIEST of ZOROASTRIANISM, whose aim was to purge Persia of all other religions, especially MANICHAISM. What little is known of Kartēr comes from inscriptions on cliff faces, mostly dating from the reign of Shāpūr I (241–272). On more than 700 cliffs he proclaimed the fundamental doctrines of the religion of ZOROASTER.

Beginning his career under King Ardashīr I (ruled 224–241), Kartēr sought to restore the Mazdean religion (Zoroastrianism) into what he believed was its pure form. Under Shāpūr I, he held the title of *ehrpāt* ("master of learning"). Later, under another king, Hormizd, he was elevated to the rank of *magaput*, or chief, of the MAGI of Hormizd, a title previously unknown to the Magi, the priestly caste of ancient Persia.

When Bahrām I (ruled 273–276) assumed the throne, Kartēr was at last afforded an opportunity to get rid of his archrival MANI, who had been protected by Shāpūr. Bahrām put Mani in prison, where he finally died. Kartēr managed to establish his version of orthodox Zoroastrianism and proceeded to persecute all other religions, especially the Zandīks (Zoroastrian heretics, perhaps Zurvanites), who insisted on interpreting the AVESTA in the light of their own thinking. After the death of Kartēr, a degree of religious tolerance gradually reasserted itself, and the many titles created for Kartēr or taken by him were recovered by other priests.

KASB \ˈkā-səb\ (Arabic: "acquisition"), a doctrine in ISLAM adopted by the theologian AL-ASH'ARĪ (d. 935) as a mean between PREDESTINATION and FREE WILL. According to al-Ash'arī, all actions, good and evil, are originated by God, but they are "acquired" (*maksūb*, whence *kasb*) by men. As for the criticism that his *kasb* theory attributes evil to God, al-Ash'arī explained that, by creating evil, God is not an evildoer.

Al-Ash'arī chose the term *kasb* to avoid attributing *khalq* (creation) to anyone but God. His main concern was to maintain God's total omnipotence and at the same time allow humans a degree of responsibility for their actions. Al-Ash'arī rejected the assertion of the MU'TAZILĀ theological school, of which he had been a member, that humans have the power to will an act or its opposite. He maintained rather that humans have the power to will only the act, not the opposite: they do not initiate anything, but merely acquire what God has created. Thus human responsibility comes from the decision as to which actions one should acquire.

The *kasb* doctrine was regarded by many Muslim theologians as being indistinguishable from pure predetermination. Despite the efforts of al-Ash'arī and his followers (the Ash'arīyā) to clarify *kasb*, it remained one of the most vague theories in Islamic theology, as the proverb *adaqq min kasb al-Ash'arī* ("more subtle than the *kasb* of al-Ash'arī") indicates.

KASHF \ˈkā-shəf\ (Arabic: "uncovering," "revelation"), in SUFISM, the privileged inner knowledge that mystics acquire through personal experience and direct vision of God. The truths revealed through *kashf* cannot be transmitted to those who have not shared with them the same experience. The Sufis regard *kashf* as the alternative to 'ILM ("knowledge"), which applies systematic theology, logic, and speculative philosophy to the study of the nature of God. Its place in Sufi discourse was secure by the time of al-Hujwiri (d. c. 1072), who wrote a treatise on Sufism called *Kashf al-mahjūb* ("Revelation of Veiled Reality"). When the Muslim jurist and theologian AL-GHAZĀLĪ (d. 1111) felt that philosophy and speculative theology had failed him, he turned wholeheartedly to Sufism. After a period of mystical contemplation, he became certain that pure philosophical systems are contradictory and illusory and that the intellect should be used only to destroy trust in human logic. He concluded that *kashf* is the only means through which true and trustworthy knowledge can be attained and described it as "a light with which God floods the heart of the believer." *See also* GNOSTICISM; MYSTICISM.

KASHMIR ŚAIVISM \ˈkash-mir-ˈshī-vi-zəm, ˈkash-\, *also called* Pratyabhijñā (Sanskrit: "Recognition"), an important religio-philosophical system of India whose followers worship Lord SHIVA as the supreme reality. The school is idealistic and monistic, as contrasted with the realistic and dualistic school of ŚAIVA-SIDDHĀNTA.

The principal texts of the school are the *Śiva Sūtra*, which is said to have been revealed to Vasugupta; Vasugupta's *Spanda-kārikā* ("Verses on Activity"; 8th–9th century); Utpala's *Pratyabhijñā Śāstra* (c. 900; "Manual on Recognition"); Abhinavagupta's *Paramārthasāra* ("The Essence of the Highest Truth"), *Pratyabhijñāvimarśini* ("Reflections on Recognition"), and *Tantrāloka* ("Lights on the Doctrine"; 11th–12th century); and Kṣemarāja's *Śiva Sūtra Vimarśini* ("Reflections on the Aphorisms on Shiva"; 12th century).

Shiva is seen as the sole reality and both the material and efficient cause of the universe. His power is known in five aspects: *cit* ("consciousness"), *ĀNANDA* ("bliss"), *ichā* ("will"), *jñāna* ("knowledge"), and *kriyā* ("action"). For the adherents of Kashmir Śaivism, liberation comes about through intense meditation on the Lord and recognition of the identical nature of the individual soul and the Lord. (Compare ŚAIVISM.)

KASHRUTH \kă-'shrüt, 'kă-shrüt\, also spelled *kashrut*, or *kashrus* \kă-'shrüs\, Hebrew *kashrüt* ("fitness"), in JUDAISM, regulations that prohibit the eating of certain foods and require that other foods be prepared in a specified manner. The term also denotes the state of being KOSHER according to Jewish law. Most prescriptions regarding *kashruth* are found in the biblical Leviticus, Deuteronomy, GENESIS, and EXODUS.

In general, Jews observing *kashruth* may eat only those fish that have both fins and scales (*i.e.*, not shellfish), certain birds, and mammals that chew the cud and have cloven feet. These mammals and birds must be slaughtered according to a ritual (*shehitah*) that, if violated, makes the meat unfit for use. The slaughterer (*shohet*) recites a prayer and then makes an incision across the neck of the animal or fowl with a special knife that is razor-sharp and has a smooth edge with absolutely no nicks. The cutting must be made by moving the knife in a single swift and uninterrupted sweep and not by pressure or by stabbing. The cut severs the main arteries, rendering the animal unconscious and permitting the blood to drain from the body. Because animal blood may not be eaten, meat must undergo a ritual process of presoaking and "salting" (*meliha*) to draw off any blood that may remain within the meat after death. Objections have sometimes been raised to this method of slaughter on the grounds of cruelty, and in some European countries this resulted in legislation forbidding *shehitah*.

Strict separation of meat and dairy products is enjoined, both in eating and in preparation; these two types of food may not be eaten at the same meal and distinct sets of dishes, cutlery, utensils, and table linens must be used for meat and dairy products during the time of preparation. Some foods are "neutral" (PAREVE) and may be eaten freely with meat or milk. No restrictions apply to the use of vegetables and fruit. Ultra-Orthodox Judaism requires that non-Jews be excluded from the preparation of kosher wine. During the festival of PASSOVER (Pesah), special laws exclude the use of leaven in bread and other baked goods. (See also TOHORAH.)

KAVA \kă-və\, also spelled *cava*, or *ava*, euphoria-producing beverage that is made from the root of the pepper plant, principally *Piper methysticum* and is used in most of the South Pacific islands. It is yellow-green in color and somewhat bitter in taste, and the active ingredient is apparently alkaloidal in nature.

Consumption of the beverage takes place in the kava ceremony, which includes the ritual making and drinking of kava and a ceremonial feast. Occasions for the kava ceremony can be social, such as a gathering of chiefs, a visit of a chief from a neighboring island, or a gathering before battle, or it can be ceremonial, such as the conclusion of a public assembly presided over by a chief or king, the inauguration of a new chief, or a meeting with a god or gods for DIVINATION.

KÄVERĪ RIVER \kă-və-rē\, also spelled *Cauvery* \kô-və-rē\, sacred river of southern India, rising on Brahmagiri Hill in the Western Ghāts in Coorg district of Karnataka state, flowing in a southeasterly direction for 475 miles through Karnataka and Tamil Nadu states, and descending the Eastern Ghāts in a series of great falls. Before emptying into the Bay of Bengal south of Cuddalore, Tamil Nadu, it breaks into a large number of distributaries describing a wide delta called the "garden of southern India." Known to devout Hindus as Dakṣina Gaṅgā (Ganges of the South), it is celebrated for its scenery and sanctity in Tamil literature, and its entire course is considered holy ground.

In Karnataka, the river bifurcates twice, forming the sacred islands of Śrīraṅapatnam and Śivasamudram, 50 miles apart. After sweeping past the historic rock of Tiruchchirappalli (Trichinopoly), the Kāveri breaks at Śrīraṅgam Island, a main PILGRIMAGE center. The only navigation on any part of the Kāveri course is in basketwork boats. Its main tributaries are the Kabbani, AMARĀVATI, Noyil, and Bhavāni rivers.

KEDESHA \ke-de-shā\, also spelled *kedeshah*, Akkadian *qadishtu*, Hebrew *qedesha*, one of a class of sacred prostitutes found throughout the ancient Middle East, especially in the worship of the fertility goddess ASTARTE. These prostitutes, who often played an important part in official temple worship, could be either male or female. In Egypt, a god-

A kava ceremony being performed in Fiji

dess named Qedeshu, Lady of Kadesh (Syria), was worshiped in the 19th and 20th dynasties (1292–c. 1075 BCE). On stelae she is shown nude, posed frontally on a lioness (or a leopard), holding arrows in her hands. Although Israelite prophets and reformers repeatedly denounced sacred prostitution, the early Israelites seem to have adopted the local Canaanite rites, which they apparently practiced publicly until the reform of King JOSIAH about 622 BCE.

KEGON: *see* HUA-YEN.

KEIZAN JÖKIN \kã-zän-'jõ-kën\, *posthumous name* Jōsai Daishi (b. Nov. 13, 1268, Echizen province [now in Fukui prefecture], Japan—d. Sept. 22, 1325, Noto province [now in Ishikawa prefecture]), priest of the SŌTŌ sect of ZEN BUDDHISM, who founded the Sōji Temple (now rebuilt in Yokohama), one of the two head temples of the sect.

At the age of 12 Keizan entered the PRIESTHOOD at the Eihei Temple, the headquarters of the sect. After studying at the Daijō Temple, he became a teacher there, where he propagated the teachings of the Sōtō sect for 10 years. He then became the head priest of the Shogaku Temple.

Keizan gave the temple a new name, Shogaku-zan Sōji Temple, and affiliated it with the Sōtō sect in 1321. Later, when he preached to the emperor Go-Daigo on the Ten Questions on Buddhism, Sōji Temple became an imperial temple. Keizan devoted himself to establishing many temples, renewing the religious traditions of his sect, and popularizing the teachings of its founder, DŌGEN. Under him the Sōtō sect developed rapidly. Now called Taishō ("Great Master"), he is worshiped as the restorer of the sect.

KEKRI \ke-krē\, *also spelled* Keyri, or Käyri, in ancient Finnish religion, a feast day marking the end of the agricultural season that also coincided with the time when the cattle were taken in from pasture for the winter. Kekri originally fell on Michaelmas, September 29, but was later shifted to November 1, ALL SAINTS' DAY. In the old system of reckoning time, Kekri was a critical period between the old and new years when the ancestor spirits came to visit their former homes and the living held feasts honoring the dead. Food and drink were left for the spirits, the sauna was heated, and the dead were referred to as "holy men." The feast was generally restricted to the members of the family, but in some areas the occasion was also marked by the sacrifice of a sheep by the men of the entire village.

KENITE \kē-nīt\, member of a tribe of itinerant metal-smiths, mentioned several times in the OLD TESTAMENT, who were related to the MIDIANITES and the Israelites. The Kenites' name was derived from CAIN, whose descendants they were believed to be.

The father-in-law of MOSES, JETHRO, was a Kenite and was priest-leader of the tribe he led in the worship of YAHWEH, whom Moses later revealed to the Hebrews as their own God whom they had forgotten. Settling among the Israelites, AMALEKITES, and Canaanites, the Kenites apparently became absorbed into the tribe of JUDAH. Conservative groups of Kenites retained their nomadic way of life and beliefs and practices, however, and one such group, the RECHABITES (2 Kings), fought alongside the rebel and future king of Israel, JEHU, against the Omri dynasty.

KER \kir\, *also spelled* Cer \sir\, in ancient GREEK RELIGION, a destructive spirit. Popular belief attributed death and illness to the action of impersonal powers, often spoken

of in the plural (Keres). *Ker* was also used as a word signifying an individual's doom. In the Attic festival of the ANTHES-TERIA, the "Keres" (presumably spirits of the dead) were expelled at the end of the ceremony; thus some scholars have conjectured that this was the original meaning of the word.

KERYGMA AND CATECHESIS \kə-'rig-mə, 'kir-ig-mə . . . ,kə-tə-'kē-sis\, in the theology of CHRISTIANITY, respectively, the initial proclamation of the gospel message and the oral instruction given before BAPTISM to those who have accepted the message. Kerygma refers primarily to the preaching of the Apostles, as recorded in the NEW TESTAMENT, that JESUS CHRIST, in fulfillment of the prophecies of the OLD TESTAMENT, was sent by God, preached the coming of the KINGDOM OF GOD, died, was buried, rose from the dead, and was raised to the right hand of God in heaven. To those who accepted this proclamation, the reward was salvation, or deliverance from SIN. Acceptance into the church required a turning away from a life of sin. Early Christian catechesis was concerned primarily with exhorting those preparing for baptism to follow the way of "life" as opposed to that of "death"; it was distinguished from the more doctrinal instruction that followed one's baptism. Catechesis was usually accompanied by self-denial and EXORCISM (an attempt to expel the devil from the potential convert).

The mode of teaching, geared to the general absence of literacy, was characterized by the use of formalized expressions (some of which are preserved in the New Testament). The emphasis given to the use of the APOSTLES' CREED (including its antecedents) and the LORD'S PRAYER as mnemonic devices, as well as the frequent use of numbered lists, is indicative of the rote nature of the instruction during the early medieval period. In the East, the connection between the liturgy and practical instruction had never been lost; this was not the case in the West, where only a minority understood Latin, the language of liturgy and theology.

In the 16th century, both PROTESTANTS and ROMAN CATHOLICS began to make extensive use of written manuals called CATECHISMS. By the 19th century the term catechetics referred to all religious education outside of that found in the liturgy and preaching. In reaction to the abstract catechesis of recent centuries, some in the 20th century have called for a "kerygmatic theology" that would be concerned more with the saving work of Jesus Christ than with speculative theology and would treat the Christian message as an event to be experienced rather than ideas to be studied.

KETUBAH \kə-tü-'bä, kə-'tü-bə\, *also spelled* ketubba, in JUDAISM, a formal Jewish marriage contract written in Aramaic and guaranteeing a bride certain future rights before her marriage. Since Jewish religious law permits a man to divorce his wife at any time for any reason, the ketubah was introduced in ancient times to protect a woman's rights and to make divorce a costly matter for the husband. The conditions stipulated in the document also guarantee the woman's right to property when her husband dies.

In Orthodox and Conservative congregations, the ketubah is a prerequisite for marriage. It must be signed by two witnesses not related to the couple or to each other and, in some congregations, by the bridegroom also. A summary of the conditions is often added in the vernacular, and this is usually read together with the formal document just before or during the marriage ceremony. The formula used by Conservative Jews obliges the couple to appear before a rabbinic court to settle marital disputes, precluding the possibility of immediate divorce in a state of high emotion.

Ketubah, Jewish marriage contract, from Utica, N.Y., 1864; in the Library of the Jewish Theological Seminary, New York City

Erich Lessing—Art Resource

KETUBIM \kə-tü-'vēm\ (Hebrew), *English Writings*, *Greek Hagiographa* \hə-gē-'ä-grə-fə, hā-, jē-\, the third division of the Hebrew Bible, or OLD TESTAMENT. The writings of the Ketubim are notoriously difficult to date. Divided into four sections, they include (1) the *poetical books* of the Psalms (compiled in the early Second Temple period), Proverbs (also compiled after the BABYLONIAN EXILE), and Job (composed c. 6th century BCE); (2) the *Megillot*, or *Scrolls*, comprising the Song of Solomon (perhaps postexilic), Ruth (exilic or postexilic), Lamentations of Jeremiah (perhaps soon after 587 BCE), Ecclesiastes (c. 3rd century BCE), and Esther (c. early 2nd century BCE); (3) *prophecy*, comprising the book of Daniel (c. early 2nd century BCE); and (4) *history*, including Ezra, Nehemiah, and 1 and 2 Chronicles (all c. 5th or 4th century BCE, perhaps composed as a unit).

The Ketubim were composed over a period stretching from before the Babylonian Exile in the early 6th century BCE to the middle of the 2nd century BCE. Unlike the TORAH and the NEB'IM (Prophets), which were canonized as groups, each book of the Ketubim was canonized separately, often on the basis of its popularity.

KHADĪJA \kə-'dē-jā\ (d. 619, Mecca, Arabia [now Saudi Arabia]), the first wife of the Prophet MUHAMMAD, whom she met when she was the widow of a wealthy merchant and had become prosperous in the management of her own commercial dealings.

Having hired Muhammad as a business agent, Khadija soon came to see him as a suitable husband. She had been married twice before and had children from each marriage. According to most sources she was about 40 and Muhammad about 25 when they married. That she bore him at least six children (including FĀTIMA, the wife of 'ALĪ), however, may suggest that she was younger. She gave Muhammad support and encouragement when he received his first revelations, after which she became the first convert to ISLAM according to some accounts. She remained loyal to him when many prominent Meccans began to oppose him. While she lived, Muhammad took no other wives.

KHAJRĀHO \kuj-'rā-hō\, *ancient name* Kharjuravāhaka, historical town, northern Madhya Pradesh state, central India. It is a famous tourist and archaeological site known for its sculptured temples dedicated to SHIVA, VISHNU, and Jain patriarchs.

Khajrāho was one of the capitals of the kings of the Chandela, who from the 9th to the 11th century CE developed a large realm, Jejakabhukti (Jijhoti), which at its height included almost all of what is now Madhya Pradesh state. The original capital extended over 8 square miles and contained about 85 temples, built by successive rulers from about 950 to 1050. In the late 11th century the Chandela, in a period of chaos and decline, moved to hill forts elsewhere. Kahjrāho continued its religious importance until the 14th century but was afterward largely forgotten; its remoteness probably saved it from the desecration that the Mughal conquerors generally inflicted on Hindu monuments. In 1838 a British army captain, T.S. Burt, employed by the Asiatic Society in Calcutta, came upon information that led him to the rediscovery of the complex of temples in the jungle in Khajrāho.

Of the area's original temples, about 20 are still reasonably well preserved. With a few exceptions, they are constructed of hard river sandstone. Both internally and externally the temples are richly carved with excellent sculptures that are frequently sensual and, in a few instances, sexually explicit. The temples are divided into three complexes, of which the western is the largest and best known, containing the magnificent Śaivite temple Kaṇḍārya Mahādeva (c. 1000), a 102-foot-high agglomeration of porches and turrets culminating in a spire.

KHALISTAN \kə-'li-'stān, kə-'li-'stān\ (Punjabi: Khālistān, "Land of the Khālsā," meaning "pure"), in Sikh political ideology, autonomous Sikh homeland.

The declaration of the KHĀLSĀ by Gurū GOBIND SINGH in 1699 and the religio-political vision that came with it fired the Sikh imagination with the belief that it was their God-given right to rule the Punjab. In 1710, under the leadership of BANDĀ SINGH BAHĀDUR (d. 1716), Sikh forces captured Sirhind, the most powerful Mughal administrative center between Delhi and Lahore, and established a capital in nearby Mukhlispur ("City of the Purified"). They struck coins, designed an official seal, and issued letters of command invoking the authority of God and of the Gurūs. The belief that "the Khālsā shall rule" (*rāj karegā Khālsā*) was formally added to Sikh liturgical prayer at the time, and it remains an indivisible part of it. Although the Khālsā Rāj under Bandā Singh was short-lived, the idea found its realization in the early 19th century in the form of the kingdom of Maharaja Ranjit Singh (1780–1839). Though the subsequent rapid decline of the Khālsā Rāj and its final loss to the British (1849) was a painful experience, it failed to

extinguish many Sikhs' hope that the Khālsā Raj would yet return in some form.

In the protracted negotiations that preceded the partition of the Punjab in 1947 the idea of an independent Sikh state figured prominently. The Sikh population's lack of numerical strength in relation to other residents of the Punjab made this an unviable proposition, but it has resurfaced in various forms since. In the 1970s and '80s a violent secessionist movement to create Khalistan paralyzed the Punjab for a decade. It received support from the All India Sikh Students' Federation and was led most effectively by SANT JARNAIL SINGH BHINDRANWALE. The movement failed for a complex set of reasons, but the idea of a state of the Khālsā continues to be invoked twice a day in GURDWARĀS (temples), as Sikhs mention in prayer their responsibility to rule.

KHĀLSĀ \ˈkāl-sā, ˈkāl-\, term chosen by Gurū GOBIND SINGH in 1699 to designate the Sikh community. His declaration had three dimensions: it redefined the concept of authority within the Sikh community; it introduced a new initiation ceremony and code of conduct; and it provided the community with a new religio-political vision.

The early Sikh community had been shaped by three levels of authority: the *masands* ("Gurū's deputies") were responsible for local congregations, the GURŪ was the active central authority, and the revealed word as recorded in Sikh scriptural text served as the symbolic base. With the establishment of the Khālsā, the authority of the *masands* was eliminated. They were expected either to become members of the community on a par with all others or to leave the fold.

The initiation ceremony that Gurū Gobind Singh introduced, called *khande kī pāhul* (literally, "ceremony of the double-edged sword"—more commonly called *amrit pahul*, "the nectar ceremony"), was centered on a belief in the transformative power of the revealed word. It was recited while water for initiation was stirred with a double-edged sword. Every Sikh who had undergone the ceremony became a member of the Khālsā and was assigned the name Singh ("Lion") and was expected to observe a rigorous code of conduct (*rahit*) symbolized by the wearing of five items: *kes* (long hair), *kañghā* (a comb), *kachha* (a pair of shorts), *karhā* (a steel bracelet), and *kirpān* (a sword). The names of all these items begin with the Punjabi letter k and thus came to be known as the five Ks. The Singhs were also expected to foreswear tobacco, alcohol, and certain types of meat. Ideally, all Khālsā Sikhs were expected to undergo this ceremony.

In its third aspect the Khālsā embodied a concrete political agenda: the pledge to realize the rule of the Sikh community (Khālsā Rāj) in the Punjab. These three interlocking dimensions have made the institution of the Khālsā perhaps the most powerful force in shaping Sikh identity during the past three centuries. Initially a male institution, it is now open to women as well, although Khālsā authority remains firmly in male hands.

KHARĀJ \kɑ-ˈrāj\, a special Islamic fiscal imposition that was demanded from recent converts to ISLAM in the 7th and 8th centuries.

The origin of the concept of the *kharāj* is closely linked to changes in the status of non-Muslims and of recent converts to Islam in newly conquered Islamic territories. The indigenous Jewish, Christian, or Zoroastrian populations were permitted to convert to Islam, while those who pre-

ferred not to convert were required to pay a special tribute, usually in the form of a poll tax or head tax known as the *JIZYA*. Those who did choose to convert would, in theory, be placed on an equal fiscal footing with other Muslims.

Under Islamic law, only original Muslims or converts to Islam could own land. Thus, there was incentive for non-Muslim cultivators to convert to Islam so that they could maintain their agricultural holdings. Upon conversion, the cultivators were required to pay the *'ushr* (or *TITHE*), a tax equivalent to one-tenth of their produce. But the Umayyad CALIPHS (reigned 661–750), faced with increasing financial problems, imposed a kind of *kharāj* on the land of recent converts in addition to their payment of *'ushr*. This extra imposition of the *kharāj* was unpopular, and many converts felt that it violated the egalitarian principles of Islam.

In Khorāsān, the northeastern province of Iran, the collection of the *kharāj* was one of the grievances that led to Abū Muslim's revolt in 747, which precipitated the downfall of the Umayyad caliphate. During the early years of the succeeding 'Abbāsīd caliphate, the collection of the *kharāj* fell into disuse.

KHĀRIJITES \ˈkār-i-jīts, ˈkār-\, Arabic *Khawārij* ("Separatists"), the earliest Islamic sect, which traces its beginning to a religio-political controversy over the caliphate.

After the murder of the third CALIPH, 'UTHMĀN, and the succession of 'ALĪ (Muhammad's son-in-law) as the fourth caliph, Mu'āwiya, the governor of Syria, sought to avenge the murder of 'Uthmān. After fighting the indecisive Battle of Šiffīn (July 657) against Mu'āwiya's forces, 'Alī was forced to agree to arbitration. This concession aroused the anger of a large group of 'Alī's followers, who believed that arbitration would be a repudiation of the Qur'anic dictum "If one party rebels against the other, fight against that which rebels" (49:9). A small number of these pietists withdrew (*kharājū*) to the village of Harūrā' under the leadership of Ibn Wahb and, when arbitration proved disastrous to 'Alī, were joined near Nahrawān by a larger group.

These Khārijites, as they came to be known, were opposed equally to 'Alī's claims and to those of Mu'āwiya. Repudiating not only the existing caliphal candidates but all Muslims who did not accept their views, the Khārijites engaged in campaigns of harassment and terror. In the Battle of Nahrawān (July 658) Ibn Wahb and most of his followers were killed by 'Alī, but the Khārijite movement persisted in a series of uprisings that plagued both 'Alī (whom they assassinated) and Mu'āwiya (who succeeded 'Alī as caliph). In the period of civil war (*fitna*) following the death of the caliph Yazīd I (683), the Khārijites were the source of serious disruptions within the Umayyad domain and in Arabia. Subdued through the intensive campaigning of al-Ḥajjāj, the Khārijites did not stir again until the collapse of the Umayyads, and then their two major rebellions, in Iraq and Arabia, ended in defeat.

The Khārijites held that the judgment of God could be expressed only through the free choice of the entire Muslim community. They insisted that anyone, even a slave, could be elected caliph if he possessed the necessary qualifications, chiefly religious piety and moral purity. A caliph might be deposed upon the commission of any major SIN. The Khārijites thus set themselves against the legitimist claims to the caliphate of the tribe of QURAYSH (among the SUNNIS) and of 'Alī's descendants (among the SHĪ'ITES). As proponents of the democratic principle, the Khārijites drew to themselves many who were dissatisfied with the existing political and religious authorities.

The Khārijites were also known for their puritanism and fanaticism. Any Muslim who committed a major sin was considered an apostate. Luxury, music, games, and concubinage without the consent of wives were forbidden. Inter-marriage and relations with other Muslims were strongly discouraged. The doctrine of justification by faith without works was rejected, and literal interpretation of the QUR'AN was insisted upon.

Within the Khārijite movement the Azāriqa of Basra were the most extreme subsect, separating themselves from the Muslim community and declaring death to all sinners and their families. The more moderate subsect of the Ibādīya, however, survived into the 20th century in Oman, Zanzibar, and scattered communities in North Africa, with about 500,000 members.

KHEPRI \ˈke-prē\, morning form of the Egyptian sun god. See ATUM.

KHIDR, AL- \āl-ˈki-dər\ (Arabic, literally, “the Green,” derived from the earlier epithet *al-Khaḍir*, “the Green One”), a mythical Islamic figure endowed with immortality who became a popular saint, especially among sailors and Sufis.

The cycle of myths and stories surrounding al-Khidr originated in a narrative in the QUR'AN (18:60–82) that describes the long and arduous journey of Mūsā (MOSES) and his servant to the “meeting of the two seas.” In the course of their travels, they lose a fish they had taken with them; a man of God appears, offering to help them in their search for the fish but performs seemingly senseless deeds along the way—he sinks a boat, kills a young man, then restores a wall in a city hostile to them. Mūsā questions what the man has done and receives a satisfactory explanation for everything; but by questioning, Mūsā forfeits the man’s patronage. Arab commentators elaborated and embellished the Qur’anic story and named the “man of God” Khidr, claiming that he turned green as he dived into the spring of life, though variant interpretations identify Khidr with the vegetable world.

On a popular level, Khidr has been given a name (most frequently Balyā ibn Malkān), many different genealogies, and dates that have made him a contemporary of ABRAHAM or Alexander. Khidr’s immortality and ability to assume a variety of local characteristics probably account for his popularity among Arabs, Turks, Iranians, and other Muslims, despite orthodox Islamic opposition. In Syria, Khidr became partially identified with St. George, who, according to a local tradition, is of Syrian birth; in India and Pakistan, Khidr is identified with a water deity (Khwādja Khidr) who protects mariners and river travelers; and, among the Sufis (see SUFISM), he is associated with their founders, who were often endowed with holiness and sainthood.

KHIRQA \ˈkir-kə\ (Arabic: “rag”), woolen robe traditionally bestowed by Sufi masters (see SUFISM) on those who had newly joined the Sufi path, in recognition of their sincerity and devotion. While most sources agree that the *khirqa* was a patched piece of cloth, there is no uniform description of the color or shape. Some described it as a blue woolen robe, and, since blue is the color of mourning, it signified the rejection of worldly pleasure. Others described it as white indicating purity.

The *khirqa* was a sign of *faqr* (poverty) and symbolized the devotee’s vow to abandon the earthly world and to devote himself entirely to the love of God. It took a period of good work under the supervision of the SHAYKH (Sufi mas-

ter) for a novice to obtain the *khirqa*, which was then bestowed upon him in a special ceremony to mark his “entering upon the way of Truth.”

There were different types of *khirqa*. The *khirqat al-irāda* (“robe of will”) was given to those who entered the Sufi path fully aware of the difficult duties that they must undertake and prepared to accept and obey without question the shaykh’s orders. The inferior *khirqat at-tabarruk* (“robe of benediction”) was given to those whom the shaykh felt had the potential of surviving the tests that eventually would lead to their acceptance in the Sufi brotherhood, even if they did not yet know the full meaning of wearing the *khirqa*.

Investiture of a cloak recalls stories of the mantle worn by MUHAMMAD during his ascent (MIRĀJ) and preserves the memory of the derivation of the term Sufi from woolen garments (*sūf*) worn by early ascetics. The ceremony was especially elaborate in eastern Islamic lands, but many Sufis rejected the idea of a universal attire as unnecessary. All Sufis agree that a real seeker of truth is known by his *harqa* (inner flame), and that the *khirqa* is merely a symbol that should not be overvalued.

KHNUM \ˈknüm\, also spelled Khnemu \ˈkne-mü\, ancient Egyptian god of fertility, associated with water and with procreation. Khnum was worshiped from the 1st dynasty (c. 2925–2775 BCE) into the early centuries CE. He was represented as a ram with horizontal, twisting horns or as a man with a ram’s head. Khnum was believed to have created humankind from clay like a potter; this scene was de-

Khnum (left) with Sekhmet and a human, from the Tomb of Nefertari, Luxor, Thebes, Egypt

Borromeo—Art Resource

icted in later times. The god’s first main cult center was Herwer, near Al-Ashmūnayn in Middle Egypt. From the New Kingdom (1539–1075 BCE) on, however, he became the god of the island of Elephantine, near present-day Aswān, and was known as the lord of the surrounding First Cataract of the Nile River. At Elephantine he formed a triad of deities with the goddesses Satis and Anukis. Khnum also had an important cult at Esna, south of Thebes.

KHOMAINI, RUHOLLAH MUSAVI \kō-mā-nē\, Khomeini *also spelled* Khumayni or Khomeyni, Ruhollah *also spelled* Ruhallah, Musavi *also spelled* Musawi (b. Sept. 24, 1902, Khumayn, Iran—d. June 3, 1989, Tehrān), Iranian SHĪ'ITE cleric who led the revolution that overthrew Mohammad Reza Shah Pahlavi in 1979 and became Iran's ultimate political and religious authority for the next 10 years.

Khomeini was the grandson and son of mullahs, or Shi'ite religious leaders. When he was five months old, his father was killed on the orders of a local landlord. The young Khomeini was raised by his mother and aunt and then by his older brother. He was educated in various Islamic schools, and he settled in the city of QOM about 1922. About 1930 he adopted the name of his hometown, Khomeyn (also spelled Khumayn), as his surname. As a Shi'ite scholar and teacher, Khomeini produced numerous writings on Islamic philosophy, law, and ethics, but it was his outspoken opposition to Iran's ruler, Mohammad Reza Shah Pahlavi, his denunciations of Western influences, and his uncompromising advocacy of Islamic purity that won him his initial following in Iran. In the 1950s he was acclaimed as an ayatollah, or major religious leader, and by the early 1960s he had received the title of grand ayatollah, thereby making him one of the supreme religious leaders of the Shi'ite community in Iran.

In 1962–63 Khomeini spoke out against the shah's reduction of religious estates in a land-reform program and against the emancipation of women. His ensuing arrest sparked antigovernment riots, and, after a year's imprisonment, he was forcibly exiled from Iran on Nov. 4, 1964. He eventually settled in the Shi'ite holy city of Al-Najaf, Iraq, where he taught and continued to call for the shah's overthrow and the establishment of an Islamic republic in Iran.

From the mid-1970s Khomeini's influence inside Iran grew dramatically owing to mounting public dissatisfaction with the shah's regime. Iraq's ruler, Saddam Hussein, forced Khomeini to leave Iraq on Oct. 6, 1978. Khomeini then settled in Neauphle-le-Château, a suburb of Paris. When massive demonstrations, strikes, and civil unrest in late 1978 forced the departure of the shah from the country on Jan. 16, 1979, Khomeini arrived in Tehrān in triumph on Feb. 1, 1979, and was acclaimed as the religious leader of Iran's revolution. He appointed a government four days later and on March 1 again took up residence in Qom. In December a referendum on a new constitution created an Islamic republic in Iran, with Khomeini named Iran's political and religious leader for life.

Khomeini proved unwavering in his determination to transform Iran into a theocratically ruled Islamic state. Iran's Shi'ite clerics largely took over the formulation of governmental policy, while Khomeini arbitrated between the various revolutionary factions and made final decisions on important matters requiring his personal authority. First his regime took political vengeance, with hundreds of people who had worked for the shah's regime reportedly executed. The remaining domestic opposition was then suppressed. Iranian women were required to wear the veil, Western music and alcohol were banned, and the punishments prescribed by Islamic law were reinstated.

The main thrust of Khomeini's foreign policy was the adoption of an attitude of unrelenting hostility toward both superpowers, while in the meantime Iran tried to export its brand of Islamic fundamentalism to neighboring Muslim countries. Khomeini sanctioned Iranian militants' seizure of the U.S. embassy in Tehrān (Nov. 4, 1979) and their holding of American diplomatic personnel as hostages for more

than a year. He also refused to countenance a peaceful solution to the Iran-Iraq war, which had begun in 1980 and which he prolonged in the hope of overthrowing Iraq's ruler, Saddam Hussein. Khomeini finally approved a cease-fire in 1988 that effectively ended the war.

Iran's course of economic development foundered under Khomeini's rule, and his pursuit of victory in the Iran-Iraq War ultimately proved futile. But Khomeini was able to retain his charismatic hold over Iran's Shi'ite masses, and he remained the supreme political and religious arbiter in the country until his death. His gold-domed tomb in Tehrān's Behesht-i Zahra' cemetery has since become a shrine for his supporters. Ideologically, he is best remembered for having developed the concept of *vilāyat-i faqīh* ("guardianship of the jurist") in a series of lectures and tracts first promulgated during exile in Iraq in the late 1960s and '70s. He argued therein for the establishment of a theocratic government administered by Islamic jurists in place of corrupt secular regimes. The Iranian Constitution of 1979 embodies articles upholding this concept of juristic authority.

KHORRAM-DĪNĀN \kōr-ram-dē-nān\ (Persian: "Glad Religionists"), *also called* Khorramīyeh \kōr-ra-mē-'yeh\, esoteric Islamic sect whose leader Bābak led a rebellion in Azerbaijan that lasted from 816 until 837.

The doctrinal beliefs of the Khorram-dīnān are not altogether clear. Although the sect accepted the general principles of ISLAM, its members also believed in transmigration of the soul and placed special emphasis on the Zoroastrian DUALISM of light and darkness (see ZOROASTRIANISM). They differed from SUNNI Muslims in that they believed in the SHĪ'ITE doctrine of the imamate (the belief that the religious community should be led by the descendants of the union of FĀṬĪMA, the daughter of the Prophet MUHAMMAD, and 'ALĪ, the Prophet's nephew).

The Khorram-dīnān differed from most Shi'ites, however, in believing that the imamate should be hereditary in the person of Abū Muslim (d. 755), who had led a revolutionary movement in Khorāsān. According to some sources, Bābak, spiritual leader of the Khorram-dīnān, claimed, in the early 9th century, to be a descendant of Abū Muslim. Other sources, emphasizing the belief in transmigration of souls current among the Khorram-dīnān, maintain that Bābak claimed to possess the soul of Jawizān ibn Sahl, a former leader of the Khorram-dīnān. In 816 Bābak, believing that he had a divinely inspired mission to right the wrongs of the temporal world, led the Khorram-dīnān in open rebellion against the 'Abbāsīd CALIPHS that ruled from Baghdad. The rebellion lasted 20 years and was suppressed only in 837, when Bābak was captured. Although the rebellion died out with Bābak's execution in 838, the Khorram-dīnān survived as a sect until the 11th century.

KHUMS \kūms\, in ISLAM, tax paid to an IMAM; *see also* FIVE PILLARS OF ISLAM.

KHUTBA \kūt-bə\, in ISLAM, the sermon, delivered especially at a Friday service, at the two major Islamic festivals (ĪDS), at celebrations of saintly birthdays (MAWLIDS), and on extraordinary occasions. It is customarily delivered from a podium (*minbar*) situated by the QIBLA wall of the mosque in imitation of MUHAMMAD.

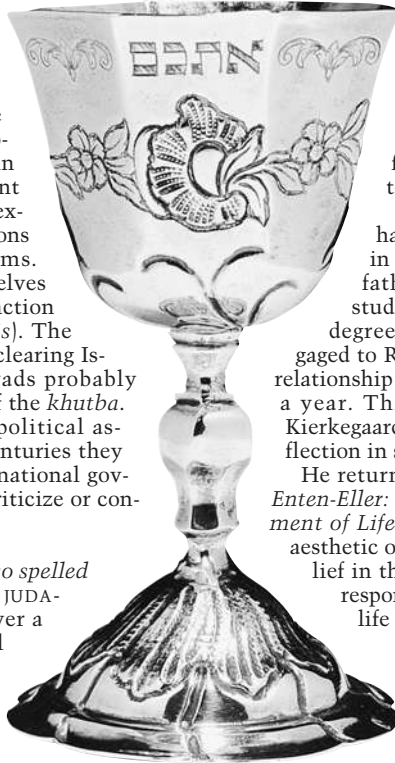

The *khutba* probably derived, though without a religious context, from the pronouncements of the *khaṭīb*, a prominent tribal spokesman of pre-Islamic Arabia. The *khaṭīb* expressed himself in prose extolling the nobility and

achievements of his tribesmen and denigrating the weakness of the tribe's enemies. Even Muhammad presented himself as a *khaṭīb* after taking MECCA in 630. The first four CALIPHS, the Umayyad caliphs, and the Umayyad provincial governors all delivered *khutbas* in their respective areas, though the content of the speeches was no longer strictly exhortatory but dealt with practical questions of government and on political problems. Under the 'Abbāsids, the caliphs themselves no longer preached but assigned the function of *khaṭīb* to the religious judges (*qadis*). The pointed insistence of the 'Abbāsids on clearing Islam of the SECULARISM of the Umayyads probably helped strengthen the religious aspect of the *khutba*. *Khutbas* never completely lost their political aspects, however. In the 19th and 20th centuries they were used to legitimate the policies of national governments in Muslim countries and to criticize or condemn those governments, as well.

KIDDUSH \ˈki-dəsh, -dəsh, ki-ˈdūsh\, also spelled Qiddush (Hebrew: "sanctification"), in JUDAISM, BENEDICTION and prayer recited over a cup of wine immediately before the meal on the eve of the SABBATH or of a festival; the ceremony acknowledges the sanctity of the day that has just begun. Chanting, or recitation, usually performed by the head of the household, may involve several or all members of the family, depending on the custom; each then sips wine from the cup, which was held in the right hand during the benediction. In the ASHKENAZI (German) tradition, two covered loaves of bread (*halloth*) on the table symbolize the double portion of MANNA gathered before the Sabbath by Israelites during their years of wandering in the wilderness. If no wine is available, bread may also be used as a substitute.

KIERKEGAARD, SØREN AABYE \ˈkir-kə-gård, -gôr\ (b. May 5, 1813, Copenhagen, Den.—d. Nov. 11, 1855, Copenhagen), Danish religious philosopher and critic of RATIONALISM, regarded as the founder of existentialist philosophy.

Kierkegaard's father was a wealthy man who, during a period of grinding poverty in his youth, had solemnly cursed God for his indif-

Kiddush cup, engraved silver by Johann Georg Stenglin or Johann Gottfried Schleissner, 1749–51; in the Jewish Museum, New York, gift of Dr. Harry G. Friedman

ference to human suffering. Kierkegaard came to know of his father's sin and remained haunted by the elder Kierkegaard's conviction that God's curse lay on the family, a conviction that the deaths of Kierkegaard's mother and five of his six brothers and sisters seemed to confirm.

He went to the University of Copenhagen to study theology but neglected this in favor of philosophy. After the death of his father in 1838, he resumed his theological studies and two years later took his master's degree. At the same time he had become engaged to Regine Olsen but ultimately broke off the relationship and fled to Berlin, where he lived for half a year. This romance had a profound effect on Kierkegaard and furnished him with material for reflection in several of his books.

He returned from Berlin with the manuscript for *Enten-Eller: et-livs fragment* (1843; *Either/Or: A Fragment of Life*). *Either/Or* offers the alternatives of an aesthetic or an ethical view of life. Kierkegaard's belief in the necessity of making a fully conscious, responsible choice among the alternatives that life offers has become fundamental in all existential writing and thought. The book can be seen as a communication to Olsen, intended to explain and justify his attitude to her.

Frygt og baeven (1843; *Fear and Trembling*) deals with faith and with the idea of sacrifice. The starting point of *Fear and Trembling* is the story of ABRAHAM and ISAAC. Once more Kierkegaard examines the implications of his break with Olsen, a sacrifice, like that of Abraham, performed in obedience to what he saw as a higher duty, and, like Abraham's readiness to slay

his son, an act that contravenes the laws of ethics. The problem is whether situations can be imagined in which ethics can be suspended by a higher authority—i.e., by God, when God himself must be considered the essence of everything ethical. This problem—which Kierkegaard calls "the teleological suspension of the ethical"—led him to the conclusion that faith is essentially paradoxical.

In 1844 *Philosophiske smuler* (*Philosophical Fragments*) and *Begrebet angst* (*The Concept of Dread*) appeared. The former presents CHRISTIANITY as a form of existence that presupposes FREE WILL, without which everything becomes meaningless. With *The Concept of Dread*, Kierkegaard perceived that the discussion of freedom does not belong to the sphere of logic but to that of psychology, which cannot discuss freedom itself but can describe the state of mind that makes freedom possible. This state of mind is dread. Through experiencing dread, one leaps from innocence to sin, and, if the challenge of Christianity is accepted, from guilt to faith. Dread is thus sin's prelude, not its sequel.

In 1845 Kierkegaard brought out *Stadier paa livets vei* (*Stages on Life's Way*), which distinguishes the religious stage, or sphere, not merely from the aesthetic but also from the ethical. His next book, *Concluding Unscientific Postscript to the Philosophical Fragments. A Mimic-Pathetic-Dialectic Composition, an Existential Contribution* (1846) attacked Hegel's attempt to systematize the whole of

existence, declaring that a system of existence cannot be constructed, since existence is incomplete and constantly developing.

Meanwhile, Kierkegaard had come to believe that God had appointed him to reveal the true nature of Christianity and to expose the ESTABLISHED CHURCH of Denmark, the clergy of which, in Kierkegaard's opinion, had become too comfortable in secular society. In the works that he now produced, particularly *Kjerlighedens gjerninger* (1847; *Works of Love*), *Christelige taler* (1848; *Christian Discourses*), *Sydommen til døden* (1849; *The Sickness unto Death*), and *Indøvelse i Christendom* (1850; *Training in Christianity*), he depicted a Christianity sterner and more uncompromising than in any of his other writings.

It was not until several decades after Kierkegaard's death that the philosophical and artistic value of his work began to be fully appreciated, and it was not until the years between the two world wars that knowledge of Kierkegaard's work became widespread. The theology of the Swiss Protestant theologian KARL BARTH helped to escalate existentialist thinking, as did the philosophical thought of Karl Jaspers and Martin Heidegger and the Jewish religious thinker MARTIN BUBER. The crucial understanding of Kierkegaard's writing came in the post-World War II years, which seem to have created a more penetrating realization of such states as angst and suffering.

KIJA \kē-jä\, legendary Korean king of Chinese origin whose arrival in Korea with 5,000 refugees introduced Chinese civilization, as well as rice and barley, to the Korean people. The band allegedly fled China in 1111 BCE, refusing to serve the new Chou-dynasty ruler who had overthrown Kija's Shang-dynasty relatives. Kija is credited with bringing the art of writing to Korea and with instituting a code of law that punished murderers with the same kind of death suffered by their victims. Other legends associate Kija's name with SORCERY and the fashioning of Korea's flat-topped, wide-brimmed national hat (*kat*).

KILESA \ki-lā-sə\ (Pali), Sanskrit kleśa \klā-shə\ ("affliction"), also called *āśava* \ā-sə-və\ (Pāli), Sanskrit āśrava \āś-rə-və, \āsh-\ ("what flows out"), in BUDDHISM, moral defilements that find individuals within the realm of birth, death, and rebirth. The eradication of *kilesa*, which are understood as the source of evil, is one of the four activities that are deemed essential to the attainment of release.

KIMBANGUIST CHURCH \kim-bāŋ-gü-ist\, French in full *Église de Jésus-Christ sur la terre par le prophète Simon Kimbangu* ("Church of Jesus Christ on Earth Through the Prophet Simon Kimbangu"), largest independent African church and the first to be admitted (in 1969) to the WORLD COUNCIL OF CHURCHES. It takes its name from its founder, Simon Kimbangu (1889–1951), a BAPTIST mission catechist of the Lower Congo region, who in April 1921 inaugurated a mass movement by miraculous healings and biblical teaching. In October 1921 he was charged with insurrection by Belgian colonial authorities and imprisoned for life.

The movement continued clandestinely as Ngunzism (Prophetism), and deportations during government persecutions helped it to grow. Toleration was granted in 1957, and the church was legally recognized in 1959. It spread in Central Africa and developed a hierarchical organization under Kimbangu's three sons. Nkamba, the prophet's birth and burial place, was named the New Jerusalem.

The church eschews politics and embraces a puritan eth-

ic, rejecting violence, polygamy, WITCHCRAFT, alcohol, tobacco, and dancing. Its worship is Baptist in form, though the institution of communion was not introduced until 1971. Extensive social services in agriculture, healing, education, youth work, and cooperatives make it a modernizing agency for an estimated membership of 1,000,000 to 3,000,000. Many other smaller groups in Central Africa also regard Kimbangu as God's special prophet.

KIM SISŪP \kēm-'shē-'səp\, Korean author of the early Choson period (1392–1598). His collection *Kūmo sinwha* ("New Stories from Golden Turtle Mountain"), written in Chinese, includes tales of love affairs between mortals and ghosts and dream journeys to the Underworld or to the Dragon Palace. He promoted the unity of CONFUCIANISM, TAOISM, and BUDDHISM but is known for his NEO-CONFUCIAN views.

KINDĪ, YA'QŪB IBN IŞĤĀQ AL-ŞABĀĤ, AL- \āl-'kindē\ (d. c. 870), the first outstanding Islamic philosopher, known as "the philosopher of the Arabs."

Al-Kindī was born of noble Arabic descent and flourished in Iraq under the CALIPHS al-Ma'mūn (813–833) and al-Mu'tasim (833–842). He concerned himself with philosophical questions that had been treated by the Aristotelian Neoplatonists of Alexandria and with ASTROLOGY, medicine, Indian arithmetic, logogriphs (word puzzles), the manufacture of swords, and cooking. He wrote more than 270 works (mostly short treatises), many of which are extant, some in Latin translations.

KING, MARTIN LUTHER, JR. (b. Jan. 15, 1929, Atlanta, Ga., U.S.—d. April 4, 1968, Memphis, Tenn.), U.S. civil-rights leader who helped end legal segregation of African-Americans in the South and other parts of the United States.

Although King, the son and grandson of BAPTIST preachers, had a comfortable middle-class upbringing, he experienced the racial prejudice then common in the South. He became acquainted with MOHANDAS GHANDI's philosophy of nonviolence while studying at Crozer Theological Seminary in Chester, Pa. Ordained a Baptist minister in 1954, he became pastor of a church in Montgomery, Ala.; the following year he received a doctorate in theology from Boston University. He was selected to head the Montgomery Improvement Association after Rosa Parks, an African-American woman, was arrested for refusing to give up her bus seat to a white passenger; the association's boycott eventually ended the city's policy of racial segregation on public transportation. In 1957 he formed the Southern Christian Leadership Conference and began lecturing nationwide, urging nonviolent protest to achieve civil rights for African-Americans. In 1960 he returned to Atlanta to become copastor, with his father, of Ebenezer Baptist Church. He received national attention after he was jailed for protesting segregation at a local lunch counter; he was released only after presidential candidate John F. Kennedy interceded on his behalf. In 1963 he helped organize the March on Washington, at which he delivered his famous "I have a dream" speech to an assembly of more than 200,000. The march influenced the passage of the Civil Rights Act of 1964. In December 1964 King was awarded the Nobel Prize for Peace. In 1965 he was criticized by civil-rights activists for yielding to state troopers at a march in Selma, Ala., and for failing to change Chicago's policy of racially segregated housing. Thereafter he began to address the plight of the poor of all races, and he joined those who opposed U.S. in-

volvement in the Vietnam War. King was assassinated by James Earl Ray, a petty criminal, on April 4, 1968, in Memphis, Tenn.; the murder sparked disturbances in more than 100 cities across the country. A U.S. national holiday is celebrated in King's honor on the third Monday in January.

KINGDOM OF GOD, *also called* Kingdom of Heaven, in CHRISTIANITY, the spiritual realm over which God reigns as king, or the fulfillment on earth of God's will. The phrase occurs frequently in the NEW TESTAMENT, primarily as used by JESUS CHRIST in the first three GOSPELS; the Kingdom is also referred to in the Lord's Prayer in the phrase "Thy Kingdom come."

The phrase rarely occurs in pre-Christian Jewish literature, but the idea of God as king was fundamental to JUDAISM, and Jewish ideas on the subject underlie New Testament usage. Behind the Greek word for kingdom (*basileia*) lies the Aramaic term *malkut*, which Jesus may have used. It refers primarily to the activity of the king, his exercise of sovereign power. The idea might better be conveyed in English as kingship, rule, reign, or sovereignty.

To most Jews of Jesus' time the world seemed so alienated from God that nothing would save it short of direct divine intervention on a cosmic scale. It was widely expected that God would send a supernatural intermediary (the MESSIAH or Son of Man), whose functions would include a judgment to decide who was worthy to "inherit the Kingdom," an expression which emphasizes that the Kingdom was thought of as a divine gift.

Scholarly opinion is divided on the question of whether Jesus taught that the Kingdom had actually arrived during his lifetime. Possibly, he recognized in his ministry the signs of its imminence, but he nevertheless looked to the future for its arrival "with power." He may have regarded his death as the providential condition of its establishment. Nevertheless, he seems to have expected the final consummation in a short time (Mark 9:1). Thus, Christians were perplexed when the end of the world did not occur within a generation. Christian experience suggested, however, that Christ's RESURRECTION made accessible to the believer in this age the blessings traditionally reserved until the life of the age to come. Thus, though the phrase Kingdom of God was used with decreasing frequency, that for which it stood was thought of as partly realized in the life of the church, which at various later times was virtually identified with the Kingdom. The Kingdom of God, however, would be fully realized only after the LAST JUDGMENT.

KING JAMES VERSION, *also called* Authorized Version, English translation of the BIBLE published in 1611 under the auspices of James I of England. Forty-seven scholars labored in six groups at three locations for seven years, utilizing previous English translations and texts in the original languages. The resulting translation had a marked influence on English style and was generally accepted as the standard English Bible for more than three centuries.

KINGS OF ROME, in ancient Roman tradition, series of kings who preceded the Republic. Some of these figures were historical and others were legendary.

Romulus, traditionally Rome's first king, was invented by ancient historians; he was so called to explain the origin of Rome's name. His fictitious reign was filled with the

The first king of Rome, Romulus, with his twin, Remus, and their wolf foster-mother, bronze sculpture; in the Museo Nuovo in the Palazzo dei Conservatori, Rome

Alinari—Art Resource

deeds expected of an ancient city founder and the son of a war god: He established Rome's political, military, and social institutions and waged war against neighboring states.

The names of the other six kings are authentic, but much of what was attributed to them stemmed from the ancient Roman practice of explaining early Roman customs and institutions as the inventions of kings. Romulus was succeeded by the Sabine Numa Pompilius, who was supposed to have created Rome's religious institutions and practices. The tradition of his religiosity probably derives from the ancient connection of his name with the Latin word *numen*, meaning "divine power." Numa was succeeded by Tullus Hostilius, whose reign was filled with warlike exploits; the name Hostilius was later interpreted to suggest belligerence. Tullus was followed by Ancus Marcius, the grandson of Numa; his reign combined the traits of his two predecessors—religious innovation and warfare.

The last three kings were Lucius Tarquinius Priscus (Tarquin the Elder), Servius Tullius, and Lucius Tarquinius Superbus (Tarquin the Proud). According to tradition, the two Tarquins were father and son. One tradition made Servius Tullius a Latin; another described him as an Etruscan. All three were traditionally regarded as great city planners (this belief has been confirmed by archaeology). Tarquin the Proud was associated with the revolt that ended the monarchy and established the Roman Republic. His oppression inspired the revolt, and his son's rape of the noblewoman Lucretia was the immediate cause of the rebellion.

KINGU \ˈkiŋ-ɡü\, in Babylonian mythology, the consort of TIAMAT. The creation epic *Enuma elish* tells how Tiamat, determined to destroy the other gods, created a mighty army and set Kingu at its head. When Kingu saw MARDUK coming against him, however, he fled. After Tiamat's defeat, Kingu was taken captive and executed; the god Enki (EA) created humans from his blood.

KINSHIP, socially recognized relationship between people in a culture who are given the status of relatives by marriage, adoption, or other ritual.

Kinship is the broad-ranging term for all the relationships that people are born into or create later in life and that are considered binding in the eyes of their society. Although customs vary as to which bonds are accorded greater weight, their very acknowledgment defines individuals and the roles that society expects them to play.

All cultures recognize the structure of the nuclear family unit as a set of relations: brother/sister, husband/wife, father/son, maternal uncle/nephew, and so on. New families are formed or established families are augmented depending upon whether the newly married couple sets up a new household or remains with close kin of the bride or groom. Different arrangements along these lines form different kinds of families. A “stem” family is one in which only one child stays at home after marriage to care for the elderly parents and to work the land. This type was especially common in Japan, where farms were too small to be divided among numerous offspring. An extended family is formed when married sons and daughters remain at home or when others are brought into the family unit and made kin through adoption. A married couple may also adopt children, who then assume the societal position of their adoptive parents. Although the nuclear family unit is no doubt the oldest form of societal organization, a domestic family can be any group of kinsmen and spouses who share food and usually a common roof.

Patrilineal identifies an individual with the father’s side of the family, and matrilineal is identification with one’s mother. The terms connoting descent—patrilineal and matrilineal—derive from the same concept, with either the father or the mother acting as the primary ancestor. In a cognatic society, people acknowledge an equal responsibility to both sides of the family. All the persons connected to an individual through parent–child progressions are considered lineal ancestors (*e.g.*, grandparents and great-grandparents). Those linked less directly (*e.g.*, a parent’s sibling or a sibling’s child) are consanguineal kin. Cousins, aunts, uncles, nieces, and nephews fall into this category.

The nature of kinship is not limited to blood ties; some notable omissions are fictive, or ritual, kin relationships, which include ritual coparenthood (the Christian tradition of GODPARENTS); blood brotherhood, which is a forged bond of mutual trust and cooperation; and a Japanese custom known as *oyako-kankei*, or *oyabun-kobun*, which sets up an interdependency between those in need of economic aid and wealthy patrons. While motherhood can never be disputed, certain societies recognize three kinds of fatherhood: the genetic father; the “pater” (usually the mother’s husband who may also be the genetic father) who gives the child its position in society; and the “genitor,” who is a person believed to have contributed to the growth of the fetus in the womb.

The common thread that links all these relationships together under the umbrella term of “kinship” is societal recognition, so they are all subject in some degree to societal scrutiny, expectations, and control—particularly in sexual relationships.

Marriage creates many kinship bonds. Some marriages are arranged, others are entered into after a culturally shaped courtship. Monogamy, an exclusive sexual relationship between a man and a woman, is practiced in most areas. Polygyny, in which one man is married to several women at once, is practiced in some areas. Polyandry, sel-

dom practiced, is the marriage of one woman and several men. The nearest approach to a universal rule found in all cultures is the incest prohibition, which forbids sexual intercourse between a parent and child, between siblings, or between other specified kin. So, although most cultures require that immediate kin approve a proposed marriage, men and women must look outside the immediate family for a spouse.

KĪRTAN \ˈkir-tən\, *also spelled* *kīrtana* \ˈkir-tə-nə\, form of musical worship or group devotion practiced by the sects of VAIŚNAVISM (devotion to the god VISHNU) of Bengal. *Kīrtan* usually consists of a verse sung by a soloist and then repeated by a chorus, to the accompaniment of percussion instruments. Sometimes the singing gives way to the recitation of a religious poem, the repetition of God’s name (*nām-kīrtan*), or dancing. Frequently *kīrtan* songs describe the love of the divine cowherd KRISHNA and his favorite, RĀDHĀ. An evening of *kīrtan* may last for several hours, often bringing about in the participants a state of religious exaltation. *Kīrtan* as a form of worship was popularized by the 15th–16th-century Bengal mystic CAITANYA, who continually strove for more direct emotional experience of God. More generally, the word *kīrtan* may also designate devotional singing and chanting across North India.

KITTEL \ˈki-təl\, *plural* *kittel*, in JUDAISM, a burial shroud; also, a white robe worn in the SYNAGOGUE on such major festivals as ROSH HASHANAH and YOM KIPPUR. The RABBI wears it, as does the CANTOR, the blower of the SHOFAR, and male members of ASHKENAZI congregations. Before a SEDER dinner, the leader of the PASSOVER (Pesah) service dons a kittel, and in Orthodox communities the bridegroom wears it at his wedding.

KIVA \ˈkē-və\ (Hopi *kiva*), semisubterranean ceremonial and social chamber found in the Pueblo American Indian villages of the southwestern United States, often containing colorful mural paintings decorating the walls.

A small hole in the floor of the kiva (sometimes carved through a plank of wood), called the *sipapu*, served as the symbolic place of origin of the tribe. Although its most important purpose is for ritual ceremonies, for which altars are erected, the kiva is also used for political meetings or casual gatherings. Women are almost always excluded.

The traditional round slope of the earliest kiva recalls the circular pit houses of the prehistoric basket-weaving culture from which these tribes, primarily Hopi and Zuni, are descended.

The kiva murals depict sacred figures or scenes from daily life. The style of these paintings tends to be geometric, with an emphasis on straight rather than curved lines and with the entire mural laid out in a linear pattern around the walls. The murals are painted on adobe plaster with warm, colorful pigments made from the rich mineral deposits of the area. Frequently the Indians plastered over an old mural to paint a new one on top; in recent years the several layers of a number of kiva murals have been unpeeled and restored. (See NATIVE AMERICAN RELIGIONS.)

KNOX, JOHN \ˈnäks\ (b. c. 1514, near Haddington, Lothian, Scot.—d. Nov. 24, 1572, Edinburgh), foremost leader of the Scottish REFORMATION, who set the austere moral tone of the Church of Scotland and shaped the democratic form of government it adopted.

Almost nothing is known of Knox’s life before 1540. It is

supposed that he trained for the PRIESTHOOD at the University of St. Andrews. He was in priest's orders by 1540 and was in 1543 known to be also practicing as an apostolic notary. Two years later Knox came into association with George Wishart, a Scottish Reformation leader, who converted him to the Reformed faith. Wishart was burned for HERESY in March 1546 by Cardinal David Beaton, archbishop of St. Andrews. Three months later, Beaton was murdered by Protestant conspirators who fortified themselves in St. Andrews castle. In April 1547, Knox went to St. Andrews, where he took up preaching for the first time. At the end of June 1547, the garrison of St. Andrews castle capitulated, and Knox and others were carried off to slavery. English intervention secured his release 19 months later, though with permanently broken health.

In England the Protestant government of Edward VI made Knox a licensed preacher and sent him north to propagate the Reformation in the turbulent garrison town of Berwick-upon-Tweed. He established a congregation there on Puritan lines. Early in 1551 he was given a new assignment in Newcastle and a little later was appointed to be one of the six royal CHAPLAINS whose duties included periodic residence at, and preaching before, the court.

In three respects Knox left his mark on the Church of England: he took part in the shaping of its articles; he secured the insertion into THE BOOK OF COMMON PRAYER of the so-called black rubric, which denies the corporal presence of

On the accession of Mary Tudor, a Roman Catholic, to the throne in 1553, Knox was one of the last of the Protestant leaders to flee the country. That the personal whim of a sovereign was permitted to settle the religion of a nation drove him to the conclusion that God-fearing magistrates and nobility have both the right and the duty to resist, if necessary by force, a ruler who threatens the safety of true religion. In 1554 Knox became minister of a congregation of English refugees, mainly Puritan, in Frankfurt am Main; but he remained there for only a few months. He then became minister of the growing congregation of English exiles in Geneva.

In Scotland matters reached a crisis in the spring of 1559 when the Queen Regent, the French-born Mary of Guise, summoned the Protestant preachers to appear before her. The Protestants replied by recalling Knox from Geneva and taking a defiant stance. By the end of June, Edinburgh was temporarily in Protestant hands, but the triumph was illusory and Knox knew it. At this juncture Henry II of France died and power fell into the hands of the Guises, the brothers of the Queen Regent. A French victory in Scotland would place Elizabeth and England in peril. It therefore behooved England to make common cause with the Scottish Protestants. In April of 1560, 10,000 English troops joined the Scottish Protestants, the Queen Regent died in Edinburgh castle, and the disheartened French gave up. By treaty, French and English troops were then withdrawn, leaving

the victorious Scottish Protestants to set their own house in order. The Scots confession (prepared by Knox and three others) was adopted by the Scottish Parliament and papal jurisdiction was abolished.

Knox, aided by a committee of distinguished churchmen, composed the *First Book of Discipline* containing proposals for the constitution and finance of the REFORMED CHURCH. Worship was to be regulated by the *Book of Common Order* (also called Knox's Liturgy), according to which congregations were to be governed by elders elected annually by the people and the elders were to aid the minister to maintain firm moral discipline among the people. Ministers were to be elected by the people but to be

pointed only after rigorous examination of life and doctrine by their ministerial brethren. In the high place given to the laity, Knox's system contains the most essential element of later Presbyterianism.

Ruins of a Pueblo kiva, at Aztec Ruins National Monument, New Mexico

Bob Harper

Christ in the consecrated bread and wine used in Holy Communion and explains that kneeling at communion implies no adoration of the elements; and he was one of the chief foster fathers of English PURITANISM.

Mary, Queen of Scots arrived in Scotland in 1561 and soon joined battle with Knox, who opposed her proposed marriage with Don Carlos of Spain. Mary, enraged at this intervention in affairs of state, charged Knox with treason, but the Privy Council refused to convict him. Knox further angered Mary in 1564 by marrying, without the royal assent, a distant relative of the Queen. In 1567 came Mary's ruin and abdication, and the country was plunged into a struggle between the supporters of the Queen and those of the regency. Knox was involved in the turmoil, but he suffered a paralytic stroke. When Edinburgh became a battleground between the factions in 1571, the leaders on both sides insisted on his removal to safety in St. Andrews, from where he returned in 1572 to die.

KOAN \ˈkō-än\, *Japanese* *kōan*, in the ZEN (Chinese: Ch'an) BUDDHISM of East Asia, a succinct paradoxical statement or question used as a meditation discipline, particularly in the Japanese RINZAI sect. The effort to "solve" a koan is intended to exhaust the analytic intellect and the egoistic will, readying the mind to entertain an appropriate response on the intuitive level.

A characteristic example of the style is the well-known koan "When both hands are clapped a sound is produced; listen to the sound of one hand clapping." Sometimes the koan is set in question and answer form, as in the question "What is Buddha?" and its answer, "Three pounds of flax."

Koans—the word itself is borrowed from the Middle Chinese words ancestral to Modern Standard Chinese *kung-an*, "public notice," or "public announcement"—are based on anecdotes of Zen masters. There are said to be 1,700 koans in all. The two major collections are the *Pi-yen lu* (Chinese: "Blue Cliff Records"; Japanese: *Hekigan-roku*) and the *Wumen kuan* (Japanese: *Mumon-kan*). Compare ZAZEN.

KOBDAS \ˈgō-àù-dēs\, also spelled *goavddis*, in FINNO-UGRIC RELIGION, drum used for trance induction and DIVINATION by the Sami SHAMAN, or NOAIDE. The drum consisted of a wooden frame, ring, or bowl over which a membrane of reindeer hide was stretched. The hide was usually covered with figures of deities, tutelary spirits of the *noaide*, and otherworld localities, painted with the juice of alder bark. Metal trinkets, pieces of bone, teeth, or claws might be strung on the underside of the drum or around its outer edges. When used for divination, the *kobdas* was beaten with a hammer made of reindeer antler, which caused a triangular piece of bone or metal called an *arpa* to move along the surface of the drum. The *arpa* might be in the shape of a brass ring or even a frog, which represented the tutelary spirit of the *noaide* that went out to discover the things he wanted to know. From the movements of the *arpa*, the *noaide* divined the nature of illness and the location of lost or stolen objects. The use of the drum was limited to the Samis, Mansi (Voguls), and Khanty (Ostyaks) among the Finno-Ugric peoples, but similar divinatory practices with the aid of a sieve were known among the Finns and other Balto-Finnic groups.

KOGAKU \ˈkō-gä-kü\ (Japanese: "Study of Ancient Things"), one of three schools of NEO-CONFUCIAN studies that began in Japan in the Tokugawa period (1603–1867).

KOHEN \kō-ˈhän, -ˈhen\, also spelled *cohen* \ˈkō-ən\ (Hebrew: "priest"), plural *kohanim* \kō-hä-ˈnēm\, in JUDAISM, a priest, one who is a descendant of Zadok, founder of the PRIESTHOOD when the FIRST TEMPLE OF JERUSALEM was built

by SOLOMON (10th century BCE) and through Zadok related to AARON, the first Jewish priest, who was appointed to that office by his younger brother, MOSES. Though laymen such as GIDEON, DAVID, and Solomon offered sacrifice as God commanded, the Hebrew priesthood was hereditary in biblical times and was transmitted exclusively to male descendants of Aaron of the tribe of Levi.

In biblical times the Hebrew HIGH PRIEST (*kohen gadol*) headed a priestly hierarchy in Jerusalem. He had many privileges but was also bound by numerous restrictions. Until the time of King JOSIAH (7th century BCE), the high priest was anointed with oil before assuming office, and he alone could enter the HOLY OF HOLIES once a year to offer sacrifice on YOM KIPPUR.

Of lesser rank were his deputy and the military chaplain, who accompanied troops into battle. Other priests had charge of Temple finances or assumed administrative functions connected with the Temple, such as assigning duties to the lowest rank of priests (the *kohanim*), who, divided into 24 groups, took turns serving in the Temple. The Jewish priesthood reached its apogee during the period of the Second Temple.

During the post-Temple era, all priestly functions were necessarily curtailed, and priests lost most of their prerogatives. In the Diaspora, RABBIS replaced the *kohanim* as teachers and authorities on the Law, but the priesthood still belonged by right of blood to *kohanim*, who trace their lineage back to Aaron. *Kohanim* are granted first preference in the SYNAGOGUE in the reading of the TORAH and pronounce the priestly blessing over the congregation on festivals. They also officiate at the ritual whereby a father (only a father who is not a *kohen*, however) "redeems" his first-born son from service to the Temple with an offering of five silver coins (usually returned as a gift to the child). A *kohen* must also preserve his ritual purity by avoiding contact with the dead and hence may not attend funerals, except those of close relatives. There are also certain restrictions regarding marriage. Rules and privileges pertaining to *kohanim* are disregarded by REFORM JUDAISM.

KOHLER, KAUFMANN \ˈkō-lər\ (b. May 10, 1843, Fürth, Bavaria [Germany]—d. Jan. 28, 1926, New York, N.Y., U.S.), German-American RABBI, one of the most influential theologians of REFORM JUDAISM in the United States.

Although his upbringing and early schooling were Orthodox, Kohler was strongly affected by the teachings of ABRAHAM GEIGER, one of the most prominent German leaders of Reform. Kohler's quest for the reconciliation of traditional faith with modern knowledge excluded him from the Jewish pulpit in Germany. He immigrated to the United States and was welcomed by the eminent Reform rabbi David Einhorn, whose daughter he married. He then became rabbi of Reform congregations in Detroit (1869–71), Chicago (1871–79), and, finally, New York City (1879–1903).

In 1885 Kohler convened the Pittsburgh rabbinical conference, which adopted a platform drafted by him that remains the classic expression of Reform principles and is a landmark in the history of American Judaism (see PITTSBURGH PLATFORM). From 1901 to 1906 Kohler served as an editor of the *Jewish Encyclopedia*, to which he contributed some 300 articles. In 1903 he became president of the Hebrew Union College (now Hebrew Union College–Jewish Institute of Religion) in Cincinnati, Ohio, a position he retained until 1921.

Kohler's primary work is *Jewish Theology Systematically and Historically Considered* (1918), which succinctly sets

forth the teachings of Jewish theology; although Reform principles are promulgated, Orthodox and Conservative concepts are also sympathetically treated. The posthumous *Origins of the Synagogue and the Church* (1929) concerns the relationship of the Jews and early Christians and speculates that JESUS and JOHN THE BAPTIST were ESSENES.

KO HUNG \ˈgə-ˈhʌŋ, ˈgō-, Pinyin Ge Hong, also called (Wade-Giles romanization) Pao-p’u-tzu \ˈbɑu-ˈpü-ˈdzə\ (b. 283? CE, Tan-yang, China—d. 343 CE, Tan-yang), prominent Taoist alchemist of China, who tried to combine the ethics of CONFUCIANISM with the occult doctrines of TAOISM.

He received a Confucian education but later grew interested in the Taoist cult of physical immortality (HSIEN). His monumental work, *Pao-p’u-tzu* (“He Who Holds to Simplicity”), is divided into two parts. The first part, “The 20 Inner Chapters,” discusses alchemy and recommends sexual hygiene, special diets, and breathing and meditation exercises. The second part of the book, “The 50 Outer Chapters,” shows Ko as a Confucianist who stresses the importance of ethical principles for the regulation of proper human relations and who severely criticizes the hedonism that characterized the Taoist individualists of his day.

KOJIKI \kō-ˈjē-kē\ (Japanese: “Records of Ancient Matters”), together with the NIHON SHOKI, the first written record in Japan, part of which is considered a sacred text of SHINTŌ. The *Kojiki* text was compiled from ORAL TRADITION in 712, and for lack of a native Japanese alphabet was written using Chinese characters to represent Japanese sounds.

The *Kojiki* includes myths, legends, and historical accounts of the imperial court from the earliest days of its creation up to the reign of Empress Suiko (628). Much of Shintō thought is based on interpretations of its mythology accounts. The religious and ethical values of the *Kojiki* were rediscovered and reevaluated by Moto-ori Norinaga (1730–1801), who wrote the complete “Annotation of the *Kojiki*” in 49 volumes.

KOKUGAKU \ˈkō-kū-gā-kū\ (Japanese: “Study of National [i.e., Japanese] Things”), a movement in late 17th- and 18th-century Japan that emphasized Japanese classical studies. The movement initially received impetus from the NEO-CONFUCIANISTS, but soon attempted a purge of all foreign influences, including BUDDHISM and CONFUCIANISM. The Kokugaku movement culminated in the Fūko (Restoration) school of SHINTŌ under the leadership of such men as Kamo Mabuchi, MOTOORI NORINAGA, and HIRATA ATSUTANE. The Shintō revival, Kokugaku movement, and royalist sentiments all combined in the Meiji period (1868–1912) in the restoration of imperial rule and the establishment of Shintō as a state cult.

KOKUTAI \kōk-ˈtī, Angl ˈkō-kū-tī\ (Japanese: “national essence”), expression first used in the 18th century by MOTOORI NORINAGA to refer to the social and cultural values embodied in the SHINTŌ mythology of the KOJIKI. This ideal was appropriated in the first part of the 20th century to emphasize the religious and political unity of Japan as linked with STATE SHINTŌ and the imperial cult.

KOL NIDRE \ˈkōl-ˈni-drā, ˈkōl-, -ni-ˈdrā, -ni-drə\ (Aramaic: “All Vows”), a prayer sung in Jewish SYNAGOGUES at the beginning of the service on the eve of YOM KIPPUR. The name, derived from the opening words, also designates the melody to which the prayer is traditionally chanted.

Though equally ancient versions exist in Hebrew and Aramaic, the Aramaic is generally used in the predominant ASHKENAZIC and SEPHARDIC rites. The prayer begins with an expression of repentance for all unfulfilled vows, OATHS, and promises made to God during the year. Some Jewish authorities contend that even fulfilled vows are included since the act of vowing itself is considered sinful. The prayer was used as early as the 8th century.

The melody to which the Kol Nidre is sung in the Ashkenazic (German) rite became famous when the Protestant composer Max Bruch used it (1880) as the basis for variations for cello. The melody’s origin is unknown; the earliest known mention of a specific—rather than an improvised—melody dates from the 16th century. The Sephardic (Spanish), Italian, and Oriental Jewish traditions use their own distinct melodies unrelated to the Ashkenazic melody.

KONJAKU MONOGATARI \ˈkōn-jä-kū-mō-nō-ˈgä-tä-rē\ (Japanese: “Tales of Now and Then”), massive 12th-century collection of religious stories and folktales drawn from the Japanese countryside and from Indian and Chinese sources. These stories provide glimpses of how the common people spoke and behaved in an age marked by warfare and new religious movements.

KONKŌ-KYŌ \kōn-ˈkō-kyō\, Japanese religious movement founded in the 19th century, a prototype of the new religious movements that proliferated in post-World War II Japan. The movement was founded in 1859 by Kawate Bunjirō, a farmer who lived in present-day Okayama Prefecture. He believed that he was appointed by the deity Konkō (“Bright Metal”; new name for the formerly malevolent deity Konjin) to act as a mediator (*toritsugi*) between god and mankind. The mediator takes on the pain and sufferings of his followers and transmits them to god. Succession to the mediatorship is reserved for male descendants of the founder. Konkō-kyō emphasizes the interdependence of god and man, which is likened to the relationship of parent and son. The group continues to be recognized as a denomination of SECT SHINTŌ and in 1978 claimed about 480,000 followers.

KOOK, ABRAHAM ISAAC \ˈkük\ (b. 1865, Greiva, Courland, Latvia—d. Sept. 1, 1935, Jerusalem), Jewish mystic, fervent Zionist, and first chief RABBI of Palestine under a British administration.

After serving as rabbi in a number of small towns in eastern Europe, in 1904 Kook became rabbi of the seaport city of Jaffa in Palestine, and he established a YESHIVA there. During World War I, Kook, who had left Palestine for a visit to Germany, was interned as an alien, but he escaped to England via Switzerland. He became rabbi of the congregation Machzike Hadath in London and in 1919 was appointed rabbi of the Ashkenazic communities in Jerusalem. In 1921 he was elected chief rabbi of Palestine, a post he held for the rest of his life.

A mystic by nature, Kook viewed Jewish national revival as part of the divine plan for strengthening faith against the rising tide of HERESY. He expounded this philosophy in several essays, many of which were published posthumously under the title *Orot ha-qodesh*, 3 vol. (1963–64; “Lights of Holiness”).

Other important works are *Iggerot ha Re’ayah* (1962–65; “Letters”); *Orot* (1961; “Lights”); *Orot ha-Teshuvah* (1955; *Rabbi Kook’s Philosophy of Repentance*, 1968); *Eretz Hefetz* (1930; “Precious Land”); *Eder ha-Yekar ve-Ikvei ha-*

KOREAN RELIGIONS

ton (1967; "The Precious Mantle and Footsteps of the Flock"); *Shabbat ha-Arez* (1937); and *Mishpat Kohan* (1966).

KOREAN RELIGIONS, RELIGIOUS BELIEFS that include aspects of ancient indigenous agricultural and shamanistic traditions, TAOISM, BUDDHISM, and CONFUCIANISM imported from China, aspects of Chinese Buddhism (especially Ch'an [ZEN] tradition), ISLAM, CHRISTIANITY, and various eclectic new religious movements. But while Korea is a part of the East Asian cultural contingent heavily influenced by Chinese civilization, it has its own unique characteristics associated with eastern Siberian and central Asiatic shamanistic traditions that draw on cosmological symbolism associated with animals and the sun. Some of these distinctive characteristics are seen in the ancient myths associated with the establishment of the Korean peninsula and the creation of the Korean people, the most famous tales being those of Tan'gun, a semidivine man-animal descended from heaven, who became the patron god of the sacred Mt. Paegak and the Korean state.

Very early in Korean tradition there was an active interaction with the relatively more advanced Chinese civilization, a cultural differential that led to the adoption of a system of social values and a political order consciously modeled on Confucian thought and practice as developed by the Han dynasty. During the foundational Koguryo period (37 BCE–668 CE), the indigenous clan traditions developed elaborate rituals associated with the agricultural cycle of life—indeed, the harvest rite of the 10th month was associated not only with human and vegetal fertility but also with the maintenance of a unified political order. Other rites and magical practices, such as healing and exorcistic rituals, were performed at significant transitional moments in the celestial and seasonal round, and many were conducted by SHAMANS and shamanic political leaders or kings. Taoist magic and other talismanic and geomantic operations were often associated with these indigenous practices. These agricultural, shamanistic, and magical practices continue down to the present day in relation to rural traditions and popular urban rituals. After the 10th and 11th centuries, Chinese NEO-CONFUCIANISM and Ch'an Buddhism were especially influential at the elite levels of society, a situation that persisted until the 19th century and the impact of Western traditions.

During the 19th century one of the most active manifestations of Korean religious life was the efflorescence of voluntary "new religions" associated with the revelations and leadership of some powerful charismatic figure. The teachings of these new religions are often syncretistic and blend features of traditional Buddhism, Taoism, and Confucianism with an evangelical style of Christianity. One of the first and most influential of these new religions was the late 19th century CH'ONDŌGYO ("Religion of the Heavenly Way"). Very active recently have been the Chondogwon or Evangelical Church, founded by Pak Tae-son in the 1950s, and the UNIFICATION CHURCH [known somewhat pejoratively in the West as the "Moonies" in reference to the founder SUN MYUNG MOON [b. 1920]].

KOSHER \kō-shər\, Hebrew *kāshēr* \kā-'sher\ ("fit," or "proper"), in JUDAISM, the fitness of an object for ritual purposes. See KASHRUT.

KOTHAR \kō-'thär\, also called *Khasis* \k̄ä-sēs\, or *Khayin* \k̄ä-yin\, ancient West Semitic god of crafts. Kothar was re-

sponsible for supplying the gods with weapons and for building and furnishing their palaces. During the earlier part of the 2nd millennium BCE, Kothar's forge was believed to be on the biblical Caphtor (possibly Crete), though later, during the period of Egyptian domination of Syria and Palestine, he was identified with the Egyptian god PTAH, patron of craftsmen, and his forge was thus located at Memphis in Egypt. According to Phoenician tradition, Kothar was also the patron of magic and inventor of magical incantations; in addition, he was believed to have been the first poet.

K'OU CH' IEN-CHIH \kō-'chyen-'jə, -'jər\, *Pinyin* Kou Qianzhi (d. 448 CE, Northern Wei Empire, China), Taoist who organized many of the ceremonies and rites of TAOISM, reformulated its theology, and managed to establish it as the official state religion of the Northern Wei dynasty (386–534/535).

K'ou apparently began his career as a Taoist physician and hygienist. But in 415 he had a vision in which a spirit awarded him with the title of *t'ien-shih* ("celestial master") and charged him with eliminating excesses in Taoist rituals. Accordingly, K'ou began to attempt to curb the orgiastic practices and mercenary spirit that had become associated with Taoist rites and to place greater emphasis on hygienic ritual and good works. He gained many adherents and attracted the attention of Emperor T'ai-wu ti (reigned 423–452), who in 423 officially conferred the title of *t'ien-shih* on him. Subsequently the title was passed to the church's leader in an unbroken generational line. By conspiring with certain court officials, K'ou was able to have BUDDHISM, Taoism's chief competitor, proscribed and all its practitioners subjected to a bloody persecution. Taoism then became the official religion of the empire.

K'ou's efforts were only temporarily effective: Buddhism soon returned to China, stronger than ever. Moreover, because orgiastic Taoist rites were still noted as late as the T'ang dynasty (618–907), many observers view his reforms as transitory.

KO-WU \gə-'wü\, *Pinyin* gewu (Chinese: "investigation of things"), Neo-Confucian practice associated with Chu Hsi's Li-hsüeh ("School of Principle"), which stressed the close examination and study of things, persons, and events in the world in order to arrive at an understanding of the inner "principle" (Li) of reality. Connected with the gradual awareness of *li* is the Neo-Confucian emphasis on moral commitment to social harmony and the material betterment of the real world.

KŌYA, MOUNT \kōi-ä\, sacred Japanese mountain, most notable for its association with KŪKAI (774–835), the founder of the SHINGON sect of Japanese BUDDHISM. Located in the present Wakayama Prefecture, it was traditionally said to be several days' journey on foot from Kyōto. After studying Tantric Buddhism in China for two years (804–806), Kūkai returned to his native Japan intent upon establishing an appropriate monastic center for engaging in meditation. According to one legend, Kūkai had vowed to build a monastic center for Shingon Buddhism in Japan, and he chose its location by hurling a three-pronged VAJRA (a kind of mythological weapon) into the air, while returning by sea from China. The *vajra*, according to legend, was discovered to have landed on Mount Kōya.

Mount Kōya was given to Kūkai in the year 816 by Emperor Saga after Kūkai had petitioned him for permission to build his monastery there. According to Kūkai, such a re-

treat needed to be set on a high mountaintop, far away from village temples or monasteries, so that meditation could be pursued properly. Kūkai proposed that his monastery be built in harmony with the natural surroundings unique to Mount Kōya. He viewed its eight peaks surrounding the central plateau as the eight petals of a lotus, and he imagined that both the outer mountain peaks and the inner buildings and chambers of his monastic center would form complementary, auspicious circles, highly symbolic in Shingon Buddhism. The monastic center was constructed over the course of many years and was not completed until after Kūkai's death. However, many believers hold that Kūkai remains alive deep inside the peaks of Mount Kōya in a meditative trance, awaiting the coming of the future Buddha, MAITREYA.

KRISHNA \ˈkrɪʃ-nə\, Sanskrit कृष्ण, one of the most popular of all Hindu divinities, widely worshiped as the eighth incarnation (AVATAR, or *avatāra*) of the Hindu god VISHNU and also as the supreme deity. Krishna is the focus of numerous BHAKTI (devotional) cults, which over the centuries have produced a wealth of religious poetry, music, and painting. The basic Sanskrit sources for the story of Krishna are the epic MAHĀBHĀRATA, the *Harivaṃśa* (1st–3rd centuries CE?, traditionally regarded as an appendix to the epic), and the PURĀNAS, particularly the *Viṣṇu Purāṇa* and Books 10 and 11 of the BHĀGAVATA-PURĀNA. They relate how Krishna (literally “black”) was born into the Yādava clan, the son of Vasudeva and Devakī, sister of Kāṃsa, the wicked king of Mathura (in modern Uttar Pradesh). Kāṃsa, hearing a PROPHECY that he should be destroyed by Devakī's eighth child, tried to slay her children; but Krishna was smuggled across the Jamunā River to Gokula (or Vraja), where he was raised by the leader of the cowherds, Nanda, and his wife Yaśodā.

The child Krishna was adored for his mischievous pranks; he also performed many miracles and slew DEMONS. As a youth, the cowherd Krishna became renowned as a lover, the sound of his flute prompting the *gopīs* (wives and daughters of the cowherds) to leave their homes to dance ecstatically with him in the forests. His favorite among them was the beautiful RĀDHĀ, whose romance

with Krishna is a particular focus of the extensive literature of love concerning Krishna and the *gopīs*. At length Krishna and his brother BALARĀMA returned to Mathura to slay the wicked Kāṃsa. Afterward, finding the kingdom unsafe, he led the Yādavas to the western coast of Kathiawar and established his court at Dvaraka. He married the princess Rukmiṇī and took other wives as well.

Krishna refused to bear arms in the great war between the Kauravas and the PĀNḌAVAS but offered a choice of his personal attendance to one side and the loan of his army to the other. The Pāṇḍavas chose the former, and Krishna thus served as charioteer for ARJUNA. After he had returned to Dvaraka, a brawl broke out one day among the Yādava chiefs, and Krishna's brother and son were slain in the course of the fray. As the god sat in the forest lamenting his loss, a huntsman, mistaking him for a deer, shot him and struck him in his one vulnerable spot, the heel, killing him.

Krishna's personality has distinguishable facets: Vāsudeva-Kṛṣṇa, the heroic Vṛṣṇi prince; Krishna Gopāla, the cowherd youth closely associated with the Braj (Vraja) region; and the epic figure who subtly superintends the vast ritual of battle described in the *Mahābhārata*. Historically, one sees a shift from a heroic and epic focus to a more amorous one, with increasing attention also paid to the intimate wonders of the divine child. At several levels, the loves surrounding Krishna become theaters for exploring the elaborate interplay between God and the human soul—sometimes literally, as in the *rās līlā* dramas that have for centuries depicted Krishna's “play” (LĪLĀ) in Braj.

The rich variety of legends associated with Krishna's life has led to an abundance of representation in painting and sculpture. The child Krishna (Bālakṛṣṇa) is often depicted crawling on his hands and knees or dancing with joy, a ball of butter held in his hand. The divine lover (today the most common representation) is apt to be shown playing the flute, surrounded by adoring *gopīs*. In painting, Krishna is characteristically depicted with blue-black skin, wearing a yellow dhoti (loincloth) and a crown of peacock feathers. In the period from about 500 to 1500 CE, sculptors appear to have preferred above all the vision of Krishna as cosmic

victor, taming the sky god INDRA at Mount Govardhana or the great snake (NĀGA) Kāliya at the Jamuna.

KROCHMAL, NACHMAN \ˈkrōk-mäl\, also called (by acronym) Ranak \rā-ˈnäk\ (b. Feb. 17, 1785, Brody, Austrian Poland [now in Ukraine]—d. July 31, 1840, Tarnopol, Galicia, Austrian Empire [now Ternopil, Ukraine]), Jewish scholar and philosopher.

During his lifetime Krochmal published only a few essays; his unfinished *Moreh nevukhe ha-zeman* (1851; “Guide for the Perplexed of Our Time”), was edited and published posthumously by the eminent Jewish scholar Leopold Zunz (1794–1886). Krochmal’s aim—like that of MOSES MAIMONIDES, whose work was quite influential for him—was to reconcile the traditions of JUDAISM with modern secular knowledge, which he sought to accomplish by tracing the Jewish spirit through its manifestations in history, literature, and religious philosophy. A major achievement of Krochmal’s book is that it shifted attention from Judaism as an abstract religion to Judaism as a process expressed through the activities of a people.

KṢĀTRIYA \ˈkshə-trē-ə\, also spelled Kshattriya, Ksatriya, or Kshatriya, second highest in ritual status of the four VARNAS, or social classes, of Hindu India, traditionally the military or ruling class.

The earliest Vedic literature listed the Kṣatriya (holders of *kṣatra*, or authority) as first in rank, then the BRAHMINS (priests and teachers of law), next the VAIŚYA (merchant-traders), and finally the ŚŪDRA (artisans and laborers). Movements of individuals and groups from one class to another, both upward and downward, were not uncommon; a rise in status even to the rank of Kṣatriya was a recognized reward for outstanding service to the rulers of the day. The legend that the Kṣatriya were destroyed by PARASŪRĀMA, the sixth REINCARNATION of VISHNU, as a punishment for their tyranny is thought by some scholars to reflect a long struggle for supremacy between priests and rulers. Brahminic texts such as *The Laws of Manu* and most other DHARMA ŚĀSTRAS tend to report a Brahmin victory, but epic texts often read rather differently, and a good argument can be made that in social reality rulers have usually ranked first. The persistent representation of deities (especially Vishnu, KRISHNA, and RĀMA) as rulers underscores the point, as does the elaborate series of ritual roles and privileges pertaining to kings through most of Hindu

history. These largely buttress the image of a ruler as preserver of DHARMA and auspicious wealth. In modern times, the Kṣatriya *varṇa* is held to include a broad class of CASTE groups, differing considerably in status and function, but united by their claims to rulership, the pursuit of war, or the possession of land. See also JĀTI.

KṢITIGARBHA \ˈkshi-ti-ˈgər-bə, -ˈgär-\ (Sanskrit: “Womb of the Earth”), BODHISATTVA who, though known in India as early as the 4th century CE, became immensely popular in China as Ti-ts’ang and in Japan as Jizō. He is the savior of the oppressed, the dying, and the dreamer of evil dreams, for he has vowed not to stop his labors until he has saved

the souls of all the dead condemned to hell. In China, where he is considered the overlord of hell, stories about him are recounted in the SCRIPTURE on *Ti-ts’ang’s Vows*, and he is especially associated with Chiu-hua Mountain, which is a favorite place of PILGRIMAGE. In Japan he does not reign over hell (the job of Emma-ō) but is venerated for the mercy he shows the departed and in particular for his kindness to dead children. His widespread worship in Central Asia is attested to by his frequent appearances on temple banners from the Uighur Autonomous Region of Sinkiang, China (Chinese Turkistan).

Kṣitigarbha is most commonly represented as a monk with a nimbus about his shaved head and with the *ūrṇā* (tuft of hair) between his eyebrows. He is depicted carrying the clerical staff (*khakkara*) with which he forces open the gates of hell, together with the flaming pearl (*cintāmaṇi*) with which he lights up the darkness.

KUAN-TI \ˈgwän-ˈdē\, Pinyin Guandi, historical name (Wade-Giles romanization) Kuan Yü, also called Kuan Kung \-ˈgūŋ\, or Wu-ti \ˈwü-ˈdē\, Chinese god of war and patron of numerous trades and

professions. His control over evil spirits is so great that even actors who play his part in dramas share his power over DEMONS. Traditions that he had memorized a Confucian classic, the TSO-CHUAN, led the literati to adopt him as the god of literature, a post he now shares with another deity, WEN-TI.

Kuan Yü lived during the chivalrous era of the Three Kingdoms (3rd century CE) and has been romanticized in popular lore, in drama, and especially in the Ming dynasty novel *San-kuo yen-i*, in which he plays a role similar to that of Robin Hood. Kuan Yü was captured and executed in

Kuan-ti with his son Kuan-p'ing (left) and his squire Ch'ou-ts'ang; in the Religionskundliche Sammlung der Philipps-Universität, Marburg, Ger.

Foto Marburg—Art Resource

219 CE, but his fame continued to grow as rulers conferred successively greater titles upon him. Finally, in 1594, a Ming dynasty emperor canonized him as god of war—protector of China and of all its citizens. Thousands of temples were constructed, each bearing the title Wu-miao (Warrior Temple) or Wu-sheng Miao (Sacred Warrior Temple). Sacrifices were offered on the 15th day of the second moon and on the 13th day of the fifth moon.

For a time the public executioner's sword was housed in Kuan-ti's temple. After a criminal was put to death, the magistrate in charge of executions worshiped in the temple, certain that the spirit of the dead man would not dare to enter the temple or even follow the magistrate home.

In the 17th century Kuan-ti's cult spread to Korea, where it was popularly believed that he saved the country from invasion by the Japanese.

KUAN-YIN \ˈgwän-ˈyin, ˈkwän-, in Chinese BUDDHISM, the BODHISATTVA of infinite compassion and mercy. See AVALOKITEŚVARA.

KUBABA \kü-ˈbä-bä\, goddess of the ancient Syrian city of Carchemish. In religious texts of the Hittite empire (c. 1400–c. 1190 BCE), she played a minor part. After the downfall of the empire her cult spread westward and northward, and she became the chief goddess of the neo-Hittite successor kingdoms from Cilicia to the Halys River.

Kubaba was represented as a dignified figure draped in a long robe, either standing or seated, and holding a mirror. Although her name was adopted by the Phrygians for their great MOTHER GODDESS in the form of Cybebe (CYBELE), the Phrygian goddess bore little resemblance to Kubaba in other respects.

KUBERA \kü-ˈbä-rə\, in Hindu mythology, the king of the YAKṢAS (nature spirits) and the god of wealth. He is associated with the earth, mountains, all treasures such as minerals and jewels that lie underground, and riches in general. According to most accounts he first lived in Laṅkā (Sri Lanka), but his palace was taken away from him by his half brother, RĀVAṆA, and he now resides in a beautiful mountain residence near SHIVA'S home on Mount Kailāsa, where he is attended by all manner of genies.

Kubera is the guardian of the north and is usually depicted as a dwarfish figure with a large paunch, holding a money bag or a pomegranate, sometimes riding on a man. Also known as Vaiśrāvaṇa and Jambhala, he is a popular figure in Buddhist and Jain mythology as well. In Buddhist sculptures he is often shown accompanied by a mongoose.

KUEI \ˈgwä\, *Pinyin* gui (Chinese: “ghost,” or “spirit”), in popular Chinese religion, a troublesome spirit that roams the world causing misfortune, illness, and death.

Kuei are malevolent spirits of individuals who were not properly buried or were denied the proper memorial offerings and hence cannot ascend to the spirit world. Protective rituals and talismans ward *kuei* away from the home, and the main entrance is usually screened by a protective “shadow wall.”

KUFR \ˈkü-fər\, in ISLAM, unbelief, that is, lack of faith in God. See also BID'Ā; IMAN.

KUGA SORTA \kü-ˈgä-sör-ˈtä\ (Mari: “Big Candle”), pacifist and theocratic movement among the Mari (or Chere-mis), a FINNO-UGRIC tribal people living chiefly in Mari El

republic, Russia. The emergence of the movement around 1870 was an attempt by the Mari—who were nominally Christianized during the 16th–19th centuries—to resist Russian acculturation by a synthesis of their own religion with Christianity.

The movement takes its name from the large candle central to its worship. The ritual is conducted in houses or forest groves, without priests or images. An ascetic ethic includes TABOOS on certain foods and stimulants and enjoins love, tolerance, respect for nature, and rejection of modern goods and medicine. Adherents believe that Christ was the greatest of prophets. The Mari element contributes ancient marriage ceremonies, the cult of the dead, and a mythology of the spirit world.

KŪKAI \ˈkü-ki\, *original name* Saeki Mao, *posthumous name* Kōbō Daishi (b. July 27, 774, Byōbugaura [modern Zen-tsūji], Japan—d. April 22, 835, Mount Kōya, near modern Wakayama), one of the best known and most beloved Buddhist saints in Japan, founder of the SHINGON school of BUDDHISM that emphasizes SPELLS, magic formulas, ceremonies, and masses for the dead.

As a youth Kūkai was trained in the Confucian FIVE CLASSICS. In 791, at the age of 17, he is said to have completed his first major work, the *Sangō shiiki* (“Essentials of the Three Teachings”), in which he proclaimed that Buddhism contained everything that was worthwhile in CONFUCIANISM and TAOISM, while it also showed more concern than either for man's existence after death. Kūkai went to China in 804 and met the great master of esoteric Buddhism, Hui-kuo (746–805; Japanese: Keika), and became the master's favorite disciple, receiving his secret teachings when he lay dying. Returning to Japan in 806, Kūkai was given imperial sanction to promulgate his new doctrines. In 816 he began building a monastery on MOUNT KŌYA. This grew into one of the largest and most vigorous monastic complexes in the country, and the Shingon sect became one of the most popular forms of Japanese Buddhism.

Kūkai was also a poet, an artist, and a calligrapher and, thus, had a profound influence on the development of Japanese religious art over the next two centuries. His major work, the *Jūjū shinron*, written in Chinese in a poetic style, classified Confucianism, Taoism, and all the existing Buddhist literature into 10 stages, the last and highest stage being that of Shingon philosophy. This work assured Kūkai a leading rank among the intellectual figures of Japanese Buddhism.

KUMĀRAJĪVA \kü-ˈmār-ə-ˈjē-və\ (b. 343/344 CE—d. 413), Buddhist scholar and seer, famed for his encyclopedic knowledge of Indian and Vedantic learning. He was one of the greatest translators of the SCRIPTURES of BUDDHISM from Sanskrit into Chinese and as a result was a major contributor to the dissemination of Buddhist ideas in China.

Before his ordination Kumārajīva studied HĪNAYĀNA Buddhism at Kashgar, in an area of central Asia that is now part of China. He was converted to the MĀDHYAMIKA school of Buddhism. Captured by Chinese raiders, he was taken prisoner and brought to the Chinese capital of Ch'ang-an in 401. There he gained the approval of the imperial family and headed a famous school of translators.

KUMAZAWA BANZAN \ˈkü-mä-,zä-wä-ˈbän-,zän\ (b. 1619, Kyōto, Japan—d. Sept. 9, 1691, Shimofusa), political philosopher and Japanese disciple of the Chinese NEO-CONFUCIAN philosopher WANG YANG-MING (d. 1529).

KUMBH MELA

Born a *rōnin* (“masterless samurai”), Kumazawa showed such great promise that he was taken into the service of the great feudal lord of Okayama, Ikeda Mitsumasa, at the age of 15. Largely self-taught, Kumazawa was attracted to the ideas of Wang because of their anti-scholastic bent and emphasis on direct action. His commonsensical solutions to problems were held in great esteem, and in 1647 he was appointed chief minister of Okayama. His attempts to return to the barter economy of Japan’s simpler past provoked opposition, and in 1656 Kumazawa was forced to resign; he spent the rest of his years in study and writing.

Writing in colloquial Japanese rather than the classical Chinese usually used for philosophical works, Kumazawa advocated advancement based on individual merit rather than on hereditary status, an increased government responsibility for economic life, and a relaxation of central control over the great feudal lords. His ideas caused such a fury in the government that Kumazawa was kept in custody or under surveillance for the rest of his life.

KUMBH MELA \ˈkūm-bə-ˈmā-lə\, also called Kumbha Mela, *Hindi* Kumbh Melā, in HINDUISM, religious festival that is celebrated four times every 12 years, the site of the observance rotating between four PILGRIMAGE places on four sacred rivers: at Hardwar on the GAṄGĀ (Ganges) River, at Ujjain on the Śīprā, at Nāsik on the Godāvarī, and at Prayāg (Allahabad) at the confluence of the Gaṅgā, JAMUNA, and the mythical SARASVATĪ. Each site’s celebration is based on particular zodiacal positions of the sun, moon, and Jupiter, the holiest time occurring at the exact moment these zodiacal conditions are fulfilled. Bathing at this moment is believed to generate the greatest religious merit, but the Kumbh time is regarded as being so holy that other bathing days are designated weeks or even months before and after this climactic time.

Tradition ascribes the Kumbh Mela’s origin to the 8th-century philosopher ŚAMKARA, who sought to strengthen Hindu religion by instituting regular gatherings of learned ascetics for discussion and debate. Yet the Kumbh Mela’s most important historical figures have been the *nāga akhādās*, militant ascetic orders whose members formerly made their living as mercenary soldiers and traders. These *akhādās* still monopolize the holiest spots at each Kumbh’s most propitious moment, and although the government

Devotees offering prayers in the river Gaṅgā during the Kumbh Mela festival

Reuters—Corbis-Bettmann

now enforces an established bathing order, history records bloody disputes between groups vying for precedence.

Aside from the *akhādās*, attendees at the Kumbh Mela display the full spectrum of Hindu religious life, ranging from SADHUS (holy men) who remain naked the year round or practice the most severe physical disciplines to HERMITS who leave their isolation only for these pilgrimages and even to silk-clad teachers who spread their teachings using the latest technology. The religious organizations represented range from social welfare societies to political lobbyists. Vast crowds of disciples, friends, and spectators join the individual ascetics and organizations, making the Kumbh Mela the world’s largest religious gathering—an estimated 10 million were drawn to Hardwar in April 1998.

The charter myth of the Kumbh Mela—attributed to the PURĀNAS but actually found in none of them—recounts how the gods and DEMONS fought over the pot (*kumbha*) of *amṛta*, the elixir of immortality produced by their joint CHURNING OF THE MILK-OCEAN. During the struggle, drops of the elixir fell on the Mela’s four earthly sites. At each Mela’s climactic moment, the rivers are believed to turn back into that primordial nectar, giving pilgrims the chance to bathe in the essence of purity, auspiciousness, and immortality. The name *Kumbh* comes from this mythic pot of elixir but is also the name for Aquarius, the sign of the ZODIAC in which Jupiter resides during the Hardwar Mela.

KUNDAKUNDA \ˈkūn-də-ˈkūn-də\, 2nd-century Jain philosopher, the first to develop Jain logic (see JAINISM). His influential Prakrit works include the *Pravacanasāra* (on ethics), the *Samayasāra* (on doctrine), and the *Niyamasāra* (on Jain monastic discipline). He also provided the foundation for Jain mysticism.

KUNḌALINĪ \kūn-dā-'lē-nē\, *Sanskrit* kuṇḍala ("coil"), in some Tantric forms of YOGA, the cosmic energy that lies within everyone, pictured as a coiled serpent lying at the base of the spine. In the practice of Laya Yoga ("Discipline of Dissolution"), the adept is instructed to awaken the *kuṇḍalinī*, also identified with the deity ŚAKTI, through a series of techniques that combine prescribed postures, gestures, and breathing exercises. In the process the *kuṇḍalinī* passes upward through six centers, or CHAKRAS (Sanskrit: *çakras*). When the *kuṇḍalinī* arrives at the seventh chakra, at the top of the head, the practitioner experiences a feeling of bliss that registers the dissolution (*laya*) of the ordinary self into its eternal essence, ĀTMAN. This experience is also understood as the primordial union of the male and female cosmic principles, the former being represented by the *liṅga* of SHIVA and the latter by the *kuṇḍalinī* of his consort ŚAKTI. It is thus simultaneously a microcosmic, bodily occurrence and a universal one. (See HATĦA YOGA.)

KÜNG, HANS \'kœŋ, 'kũŋ\ (b. March 19, 1928, Sursee, Switz.), Swiss ROMAN CATHOLIC theologian whose controversial views led to his censorship by the Vatican.

Küng studied at Gregorian University in Rome and obtained a doctorate in theology from the Catholic Institute at the Sorbonne in 1957. He was ordained a priest in 1954, and he taught at the University of Münster (1959–60) and at the University of Tübingen (1960–96), where he also directed the Institute for Ecumenical Research from 1963. In 1962 he was named by POPE JOHN XXIII a *peritus* (theological consultant) for the SECOND VATICAN COUNCIL.

Küng's prolific writings questioned such traditional church doctrine as PAPAL INFALLIBILITY, the divinity of JESUS CHRIST, and the dogma of the Virgin MARY. In 1979 a Vatican censure that banned his teaching as a Catholic theologian provoked international controversy, and in 1980 a settlement was reached at Tübingen that allowed him to teach under secular rather than Catholic auspices.

KUO HSIANG \'gwò-'shyāŋ\, *Pinyin* Guo Xiang (d. 312 CE, China), Chinese Neo-Taoist philosopher to whom is attributed a celebrated commentary on the CHUANG-TZU, one of the basic writings of TAOISM.

Kuo was a high government official. His *Chuang-tzu chu* ("Chuang-tzu Commentary") is thought to have been begun by another Neo-Taoist philosopher, Hsiang Hsiu. When Hsiang died, Kuo is said to have incorporated Hsiang's commentary into his own. For this reason the work is sometimes called the Kuo-Hsiang commentary.

Kuo deviated from LAO-TZU in interpreting TAO ("the Way") as nothingness. As nonbeing, Tao does not produce being—that is, it cannot be regarded as a first cause. Investigation of the cause of a thing ultimately arrives at something which has no cause, which is self-produced; ultimately, he therefore argued, everything produces itself spontaneously. The "self-transformation" of a thing as well as its existence is conditioned by other things and in its turn conditions them. Applying this general principle to human affairs, Kuo argued that social institutions and moral ideas must be changed when situations change. Kuo also interpreted the Taoist term "nonaction" (WU-WEI) to mean spontaneous action, not sitting still. Everything has a definite nature; if it follows its own way, it finds satisfaction and enjoyment; if it is not content with what is, and craves to be what it is not, then there is dissatisfaction and regret. The Perfect Man ignores all such distinctions as right and wrong, life and death; his happiness is unlimited.

KUROZUMI-KYŌ \kū-rō-'zü-mē-kyō\, "new religion" of Japan, named for its founder, Kurozumi Munetada (1780–1850), a SHINTŌ priest of the area that is now Okayama prefecture. The believers venerate the sun goddess AMATERASU as the supreme god and creator of the universe and consider the other traditional 8,000,000 Shintō KAMI to be her manifestations. Devotional activities include morning worship of the sun, with breathing exercises, described as "swallowing the sun," intended to bring about spiritual union with the sun and physical well-being. The movement was officially recognized as a Shintō sect in 1846 and reorganized under its present name in 1876. It is still recognized as a denomination of SECT SHINTŌ and in the late 20th century claimed over 200,000 followers.

KUSHUKH \'kū-,shūk\, *also spelled* Kushuh, the Hurrian moon god. Kushukh was regularly placed above the sun god, Shimegi; his consort was Niggal (the Sumero-Akkadian Ningal). His home was said to be the city of Kuzina (location unknown), and his cult was later adopted by the Hittites. As Lord of the OATH he had as his special function the punishment of perjury. He was represented as a winged man with a crescent on his helmet and sometimes standing on a lion; in this form he appears among the images of Hittite gods at the rock SANCTUARY of Yazılıkaya (near modern Boğazköy in Turkey). See ANATOLIAN RELIGIONS.

KUT \'küt\, trance ritual in Korean folk shamanism, directed to the repulsion of spirits who might cause harm. The ceremony attempts to bring good fortune and is sometimes used for healing purposes or to promote the welfare of an individual or a village. See SHAMAN; MUDANG.

KVASIR \'kvä-sir\, in Norse mythology, a poet and the wisest of all beings. Kvasir was born of the saliva of two rival groups of gods, the AESIR and the VANIR, when they performed the ancient peace ritual of spitting into a common vessel. He wandered around teaching and instructing, never failing to give the right answer to a question. Two dwarfs, Fjalar and Galar, who were weary of learning, killed Kvasir and distilled his blood in Odrerir, the magic caldron (whose name means "stirring up ecstasy"). When mixed with honey by the GIANT Suttung, his blood formed mead that gave wisdom and poetic inspiration to those who drank it. The story of Kvasir's murder is told by Snorri Sturluson in his EDDA.

KWANZAA \'kwän-zə\, *also spelled* Kwanza, African-American holiday, celebrated each year from December 26 to January 1; it is patterned after various African harvest festivals. The name was taken from the Swahili phrase *matunda ya kwanza* ("first fruits"). Kwanzaa was created in 1966 by Maulana Karenga, a black-studies professor at California State University at Long Beach, as a nonreligious celebration of family and social values. Each day of Kwanzaa is dedicated to one of seven principles: unity (*umofa*), self-determination (*kujichagulia*), collective responsibility (*ujima*), cooperative economics (*ujamaa*), purpose (*nia*), creativity (*kuumba*), and faith (*imani*). Each evening family members gather to light one of the candles in the *kinara*, a seven-branched candelabra, and discuss the principle for that day; often gifts are exchanged. On December 31 the family joins other members of the community for a feast, called the *karamu*.

KYŌHA SHINTŌ: see SECT SHINTŌ.

LAG BA-'OMER \ˈlāg-bə-'ō-mər, -'bō-mər\, also spelled *Lag B'Omer*, or *Lag be-Omer*, in JUDAISM, minor observance falling on the 33rd day in the period of the counting of the 'omer ("barley sheaves"); on this day semi-mourning ceases and weddings are allowed. One tradition has it that MANNA first fell from heaven on this day, another that a plague that raged among the followers of RABBI AKIBA BEN JOSEPH during 'omer ceased on this day. In Meron in Upper Galilee, Israel, Orthodox Jews make a PILGRIMAGE to the burial site of the rabbi SIMEON BEN YOHAI, and young children receive their first haircuts as part of a celebration that includes playing with bows and arrows (symbols of the rain-bow) and dancing around a bonfire.

LAHMU AND LAHAMU \ˈlāk-,mü . . . lä-'kämü\, in Mesopotamian mythology, twin deities, the first gods to be born from the CHAOS that was created by the merging of Apsu (the watery deep beneath the earth) and TIAMAT (the personification of the salt waters); this is described in the Babylonian mythological text *Enuma elish* (c. 12th century BCE).

Usually, Lahmu and Lahamu represent silt, but in some texts they seem to take the form of serpents, and some scholars believe that Lahmu and Lahamu may have been only synonyms of Tiamat. Lahmu and Lahamu do not seem to have played any significant part in subsequent myths, although they are considered the progenitors of ANSHAR AND KISHAR, who in turn give birth to more active gods.

LAIMA \ˈlī-mä\, also called *Laima-Dalia* \-dä-'lī\, in BALTIC RELIGION, goddess of fate, associated with the linden tree. Her name is a variant of a generic noun in Baltic languages (Lithuanian *laimė*, Latvian *laime*) meaning "luck," "fortune," or "happiness." Together with DIEVS, the sky, and SAULE, the sun, Laima determines the length and fortune of human life. In the course of each life she helps arrange marriages, oversees weddings, protects pregnant women, and appears at childbirth to pronounce each infant's destiny.

Revered as patroness of cows and horses, Laima decides the life span of plants and animals and determines the length of the day.

LAKṢMĪ \ˈlāk-shmē\, also spelled *Lakshmi*, also called Śrī \ˈshrē\, HINDU and JAIN goddess of wealth and good fortune. The wife of VISHNU, she is said to have taken different forms in order to be with him in each of his INCARNATIONS. In the most widely received account of Lakṣmī's birth, she rose from the churning of the primal MILK-OCEAN, seated on a lotus blossom and holding another in her hand. Controversy arose between the gods and DEMONS over possession of her.

Lakṣmī is often represented in sculpture seated or standing on a lotus, full-breasted, broad-hipped, beneficently smiling, and sometimes being anointed or consecrated by a pair of elephants, a scene suggesting her royal authority and her association with fertilizing rains. In the Śrī Vaiṣṇava

sampradāya, she is also shown as a jewel upon the breast of her consort Vishnu. This recognizes her constant, heartlike presence with her mate and suggests the tender, mediating role she plays between the more austere Vishnu and his human devotees. Yet on the whole, Lakṣmī is worshiped independently. She is a major presence in poster art; in home and temple worship, especially on Fridays when she is honored along with other goddesses; and in various festivals. She is a principal object of worship during DĪVĀLĪ, when her presence is sought in homes, temples, and businesses for the whole of the year to come.

LALLĀ DED \ˈlā-lə-'dād\, also known as *Lal Ded*, or *Lalles hvāri*, 14th-century Hindu poet-saint from Kashmir, who defied social convention in her search for God.

Legend tells of the harsh treatment LALLĀ DED received from her husband and mother-in-law and extols her patience and forbearance. Twelve years after being wed, she left her home in order to dedicate herself to SHIVA and became a wandering religious singer. Her poems and songs concern the longing for God and the joy she finds in the deity who lives within, as well as her disregard for conventional forms of worship such as image worship: "Temple and image, the two that you have fashioned, are no better than stone." Her highly emotional lyrics have become famous among the devotees of Shiva and are revered as being among the finest products of the poet-saints of the Hindu BHAKTI tradition.

LALITAVISTARA \ˈlā-li-tə-'vis-tə-rə\ (Sanskrit: "Detailed Narration of the Sport [of the Buddha]"), legendary life of the BUDDHA GOTAMA, written in a combination of Sanskrit and a vernacular language. Like the MAHĀVASTU, the subject matter of which has

a number of similarities, the *Lalitavistara* contains late material but also preserves some very ancient passages. It shares with the Hindu PURĀNAS similarities of style as well as the concept of a divine being's earthly activities as "sport," or "play." In this narrative it is especially with regard to the Buddha's conception and birth that this work adds to the miraculous and mythological elements of earlier accounts. The *Lalitavistara* is regarded as especially sacred in MAHĀYĀNA circles, and it has inspired a considerable amount of Buddhist art.

LAMA \ˈlā-mə\, Tibetan *bla-ma* ("superior one"), in TIBETAN BUDDHISM, a spiritual leader. Originally used to translate "GURU" (Sanskrit: "venerable one") and thus applicable only to heads of monasteries or great teachers, the term is now extended out of courtesy to any respected monk or priest.

Some lamas are considered REINCARNATIONS of their predecessors. These are termed *sprul-sku* lamas, as distinguished from "developed" lamas, who have won respect because of the high level of spiritual development they have achieved. The highest lineage of reincarnate lamas is that

of the DALAI LAMA, who was, until his exile in 1959, the temporal ruler of Tibet. The title is given to the head of the DGE-LUGS-PA (Yellow Hat sect). He is considered the physical manifestation of the BODHISATTVA of compassion AVALOKITEŚ-VARA. The second highest line of succession is that of the Panchen Lama, head ABBOT of the Tashilhunpo monastery, believed to be the manifestation of the self-born Buddha AMITĀBHA. Other, lesser *sprul-sku* lamas are revered as reincarnations of great saints or teachers. The idea probably originated from the tradition of the 84 MAHĀSIDDHAS, or master yogins, many of whom were identified as manifestations of earlier sages, coupled with the accepted Buddhist belief in rebirth.

The process of discovering the rebirth of a reincarnated lama can be elaborate and exacting, particularly in the selection of a Dalai Lama. The rebirth may take place at any time, from days to years, following the death of the previous lama. Remarks made by the Dalai Lama before his death are frequently accepted as indications of a favored place for rebirth, as are any unusual signs that are observed during his death or during a birth thereafter. The state oracle at Nechung has also been consulted for the whereabouts of the newly born Dalai Lama. Often two or more candidates are subjected to a critical physical and mental examination, which includes recognition of personal belongings handled by the previous lama. In case of doubt, lots may be drawn. After selection, the young child is given extensive monastic training from an early age. During the years of search for and education of a newly incarnated lama, a regent is appointed to rule in his stead.

LAMASHTU \lā-'māsh-tū\ (Akkadian), Sumerian Dimme, in MESOPOTAMIAN RELIGION, most terrible of all female DEMONS, daughter of the sky god ANU (Sumerian: An), who slew children, drank the blood of men, and ate their flesh. She had seven names and was often described in incantations as the "seven witches." Lamashtu disturbed sleep and brought nightmares; she killed foliage and infested rivers

Relief of the Buddha as Siddhārtha competing at archery, inspired by the Lalitavistara; from the temple complex of Borobudur, Indon., 750–850 CE

J. Powell, Rome

and streams; she bound the muscles of men, caused pregnant women to miscarry, and brought disease and sickness. Lamashtu was often portrayed on AMULETS as a lion- or bird-headed female figure kneeling on an ass; she held a double-headed serpent in each hand and suckled a dog at her right breast and a pig or another dog at her left breast.

LAMENT FOR THE DESTRUCTION OF UR \ˈər, ˈūr\, ancient Sumerian composition bewailing the collapse of the 3rd Dynasty of Ur (c. 2112–c. 2004 BCE) in southern Mesopotamia. The lament, primarily composed of 11 "songs" or stanzas of unequal length, begins by enumerating some of the prominent cities and temples of Sumer and the deities who had deserted them. In the second "song," the people of Ur and of other cities of Sumer are urged to set up a bitter lament. The third "song" relates that the goddess Ningal hears the pleas of the people of Ur, but she is not able to dissuade the gods ANU and ENLIL from their decision to destroy the city, and the remaining "songs" relate the devastating results of Ur's defeat in battle. The last stanza ends with a plea to NANNA, the husband of Ningal, that the city may once more rise up and that the people of Ur may again present their offerings to him.

LAMIA \ˈlā-mē-ə\, in Greek mythology, female DEMON who devoured children. According to late myths she was a queen of Libya who was beloved by ZEUS. When HERA robbed her of her children from this union, Lamia killed every child she could get into her power. She was also known as a fiend who, in the form of a beautiful woman, seduced young men in order to devour them.

LANDAU, EZEKIEL \ˈlān-dəu\ (b. Oct. 8, 1713, Opatów, Pol.—d. April 29, 1793, Prague), POLISH RABBI and author of a much-reprinted book on Jewish law (HALAKHAH).

In 1734 Landau was appointed head of the rabbinical court at Brody, and in 1745 he became rabbi of Jampol, Podolia (then part of Poland). There he gained fame by his diplomacy in arbitrating the controversy between Rabbi JACOB EMDEN and Rabbi JONATHAN EYBESCHÜTZ. In 1755 he went to Prague as rabbi and remained there until his death. His Halakhic decisions (RESPONSA) were collected under the title *Noda' be-Yehuda* ("Known in Judah").

He was an implacable opponent of the two major currents of JUDAISM that arose in his generation: HASIDISM, which he opposed as sinfully ignorant, and HASKALAH, which he attacked as a threat to Jewish identity. Landau even went so far as to order the public burning of a famous Hasidic polemic, the *Toledot Ya'aqov Yosef* ("History of Jacob Joseph") of JACOB JOSEPH OF POLONNOYE (d. c. 1782).

LANGUAGE, RELIGIOUS, language that is usually understood as symbolic in nature, its hidden meanings needing to be decoded or translated. An explanation of religious language, however, really depends upon how we define religion and language. In general there are three basic approaches to the study of religious language. The first assumes that religion refers to some transcendent reality, usually called the sacred, or to all-encompassing questions in life, such as the meaning of life and death, good and evil, and suffering. The second approach views religion as basically expressive of emotions. With both of these approaches, religious language is not to be taken literally but is to be seen as symbols that stand for emotions that are noncognitive. The third approach denies that there is anything special about religious language. This theory, known as se-

mantic theory, draws on LOGICAL POSITIVISM and claims that the meaning of religious language should be explained as part of ordinary language, in which meaning is determined by the truth conditions entailed by all languages.

Throughout most of the 20 century the truth conditions of language of the Logical Positivists were based on empirical verification. Semantic theory accordingly takes religious language literally, since the notion of “hidden meaning” does not make semantic sense. This, however, led to the conclusion that religious language can be neither true nor false, since many statements—*i.e.*, about the nature of God, on miracles, etc.—cannot be empirically verified. This in turn led to the search for hidden meanings on the part of other scholars of religious language. Thus, while the development of many theories of symbolic meaning can be traced back to the power of Logical Positivism in the domain of semantic theory, many contemporary theories of semantic-truth conditions no longer entail the empirical correspondence theory of truth as the basic principle of meaning. While most studies of religious language assume some notion of symbolic, and thus hidden, meaning, no agreement has been reached concerning what the hidden meaning of religious language refers to.

LANĀVATĀRA SŪTRA \lɑŋ-,kāvə-ˈtār-ə-ˈsü-trə\, *in full* Saddharma LanĀvatāra Sūtra (Sanskrit: “Sutra of the Appearance of the Good Doctrine in LanĀ”), distinctive and influential philosophical discourse in the MAHĀYĀNA Buddhist tradition that is said to have been preached by the Buddha in the mythical city LanĀ; it was first translated into Chinese in the 5th century. It teaches the doctrine of the YOGĀCĀRA (Vijñānavāda) school—that the world is an illusory reflection of an ultimate, undifferentiated mind and that this truth becomes an inner realization upon concentrated meditation. The thought of the *LanĀvatāra* provides some of the philosophical background of the ZEN (Ch’an) schools as well.

LAOCOÖN \lā-ˈä-kō-än\, in Greek legend, seer and priest of the god Apollo; he was the son of Agenor of Troy or the brother of ANCHISES (the father of AENEAS). Laocoön offended APOLLO by breaking his OATH of CELIBACY and begetting children. Thus, while preparing to sacrifice a bull on the altar of the god POSEIDON (a task that had fallen to him by lot), Laocoön and his twin sons, Antiphas and Thymbraeus (also called Melanthus), were crushed to death by two great sea serpents, Porces and Chariboea (or Curissia or Periboea), sent by Apollo. An additional reason for his punishment was that he had warned the Trojans against accepting the wooden horse left by the Greeks. The legend found its

most famous expressions in Virgil’s *Aeneid* (ii, 109 *et seq.*) and in the Laocoön statue (now in the Vatican Museum) by three Rhodian sculptors, Agesander, Polydorus, and Athenodorus, dating probably from the 2nd century BCE.

LAOMEDON \lā-ˈä-mə-,dän\, legendary king of Troy and father of Podarces (later famous as King PRIAM of Troy). Laomedon refused to give APOLLO and POSEIDON their wages after they had built the walls of Troy for him. The gods therefore sent a pestilence and a sea monster to ravage the land, which could be delivered only by the sacrifice of the king’s daughter Hesione. But HERACLES killed the monster and rescued the maiden on the understanding that Laomedon should give him his divine horses. When Laomedon later refused, Hercules returned with a band of warriors, captured Troy, and slew Laomedon and all his sons except Priam. Laomedon was buried near the Scaean Gate, and, according to legend, as long as his grave remained undisturbed the walls of Troy would remain impregnable.

LAO-TZU \ˈläü-ˈdzə\, Pinyin Laozi (Chinese: “Master Lao,” or “Old Master”), also called Li Erh \lī-ˈər\, Lao Tun \-ˈdün\, or Lao Tan \-ˈdän\, deified as Lao-chün, T’ai-shang Lao-chün, or T’ai-shang hsüan-yüan huan-gti (fl. c. 6th century BCE?, China), legendary first philosopher of Chinese TAOISM and alleged author of the TAO-TE CHING (*Lao-tzu*), a primary Taoist writing, though many modern scholars discount the possibility that the *Tao-te ching* was written by only one person. Lao-tzu is venerated as a philosopher by Confucianists and as a saint or god by later religious Taoists and was worshiped as an imperial ancestor during the T’ang dynasty (618–907).

The life of Lao-tzu. The principal source of information about Lao-tzu’s life is a biography in the *Shih-chi* (“Historical Records”) by Ssu-ma Ch’ien. This historian, who wrote about 100 BCE, says that Lao-tzu was a native of Ch’ü- jen, a village in the district of Hu in the state of Ch’u, which corresponds to the modern Lu-i in the eastern part of Honan province. His family name was Li, his proper name Erh, his appellation Tan. He was appointed to the office of *shih* at the royal court of the Chou dynasty (c. 1111–255 BCE). In ancient China the *shih* were scholars specializing in matters such as ASTROLOGY and DIVINATION and were in charge of sacred books.

Interspersed among these few historical details are legendary tales, including an account of Lao-tzu’s voyage to the west. Realizing that the Chou dynasty was on the decline, the philosopher departed and came to the Hsien-ku pass, which was the entrance to the state of Ch’in. Yin Hsi, the legendary guardian of the pass (*kuan-ling*), begged him

to write a book for him. Thereupon, Lao-tzu wrote a book in two sections of 5,000 characters, in which he set down his ideas about the TAO (literally "Way," the Supreme Principle) and the TE (its "virtue" or "power"): the *Tao-te ching*. Then he left, and "nobody knows what has become of him," says Ssu-ma Ch'ien. The *Tao-te ching*, however, cannot be the work of a single man; some of its sayings may date from the time of Confucius; others are certainly later; and the book as a whole dates from about 300 BCE. The name Lao-tzu seems originally to have designated a type of sage rather than an individual.

Hagiographical legends. Several hagiographies were written from the 2nd century CE onward that relate the history of the formation of religious Taoism (Tao-chiao). During the Eastern, or Later, Han dynasty (25–220 CE), Lao-tzu had already become a mythical figure who was worshiped by the people and occasionally by an emperor. Later, in religious circles, he became the Lord Lao (Lao-chün), revealer of sacred texts and savior of mankind. There were several stories about his birth, one of which was influenced by the legend of the miraculous birth of the BUDDHA GOTAMA. Lao-tzu's mother is said to have borne him 72 years in her womb and he is said to have entered the world through her left flank.

Two legends were particularly important in the creed of the Taoists. According to the first, the Lao-chün was believed to have adopted different personalities throughout history and to have come down to the earth several times to instruct the rulers in the Taoist doctrine. The second legend developed from the story of Lao-tzu's voyage to the west. In this account the Buddha was thought to be none other than Lao-tzu himself. During the 3rd century CE an apocryphal book was fabricated on this theme with a view to combating Buddhist propaganda. This book, the *Lao-tzu hua-hu ching* ("Lao-tzu's Conversion of the Barbarians"), in which BUDDHISM was presented as an inferior kind of Taoism, was condemned by the Chinese imperial authorities.

Lao-tzu has never ceased to be generally respected in all circles in China. To the Confucianists he was a venerated philosopher; to the people he was a saint or a god; and to the Taoists he was an emanation of the Tao and one of their greatest divinities.

LAR (lär), plural *Lares*, in ROMAN RELIGION, any of numerous tutelary deities. They were originally gods of the cultivated fields, worshiped by each household at a crossroads. Later the *Lares* were worshiped in the houses in association with the PENATES, the gods of the storeroom (*penus*); the household Lar (Familiaris) was conceived as the center of the family and of the family cult.

Originally each household had only one Lar. It was usually represented as a youthful figure, dressed in a short tunic, holding in one hand a drinking horn, in the other a cup. Under the empire, two of these images were commonly to be found, one on each side of the central figure of the GENIUS, of VESTA, or of some other deity. The whole group came to be called indifferently *Lares* or *Penates*. A prayer was said to the Lar every morning, and special offerings were made at family festivals.

The public *Lares* belonged to the state religion. Among these were included the *Lares compitales*, who presided over the crossroads (*compita*) and the whole neighboring district. They had an annual festival called the *Compitalia*.

The state had its own *Lares*, called *praestites*, the protecting patrons and guardians of the city. They had a temple and altar on the Via Sacra and were represented as

men wearing a military cloak, carrying lances, seated, with a dog (the emblem of watchfulness) at their feet.

LAST JUDGMENT, general, or sometimes individual, judging of the thoughts, words, and deeds of persons by God, the gods, or by the laws of cause and effect.

In ancient EGYPTIAN RELIGION, a dead person's heart was judged by being placed on a balance held by ANUBIS. If the heart was light, thus indicating a person's comparative goodness, the soul was allowed to go to the blessed region ruled by OSIRIS, god of the dead. If the heart was heavy, the soul might be destroyed by a creature called the Devouress.

ZOROASTRIANISM, similarly, teaches that after death the soul waits for three nights by the grave and on the fourth day goes to the Bridge of the Requirer, where his deeds are weighed. If the good deeds outweigh the bad, the soul is able to cross the bridge to heaven; if the bad deeds outweigh the good, the bridge becomes too narrow for the soul to cross, and it plunges into the cold, dark abyss of hell. This is not the end, however, for there will be a final overthrow of AHRIMAN, the prince of DEMONS, by AHURA MAZDĀ, the Wise Lord, who will resurrect all men, preside over a Last Judgment, and restore the world to goodness.

Early Judaic writers emphasized a day of YAHWEH, the God of Israel, which is also called the day of the Lord. This day, which will be a day of judgment of Israel and all nations, will inaugurate the KINGDOM OF GOD. CHRISTIANITY, further developing the concept of the Last Judgment, teaches that it will occur at the Parousia (the SECOND COMING, or Second Advent, of Christ in glory), when all men will stand before a judging God.

In ISLAM the Day of Judgment is one of the five cardinal beliefs. After death, persons are questioned about their faith by two ANGELS: Munkar and Nakir. If a person has been a martyr, his soul immediately goes to paradise; others go through a type of PURGATORY. At doomsday all persons will die and then be resurrected to be judged according to the records kept in two books, one containing a person's good deeds, and the other his evil deeds. According to the weight of the book that is tied around a person's neck, he will be consigned to paradise or hell.

LAST SUPPER, also called *Lord's Supper*, in the NEW TESTAMENT (Matthew 26:17–29; Mark 14:12–25; Luke 22:7–38; 1 Corinthians 11:23–25), final meal shared by Jesus and his disciples in an upper room in Jerusalem, the occasion of the institution of the EUCHARIST. In the biblical account, Jesus sent two of his disciples to prepare for the meal and met with all of them in the room. He told them that one of them would betray him. After blessing bread and wine and giving it to them to eat and drink, Jesus told them that it was his body and his blood.

The SYNOPTIC GOSPELS and the traditions of the church affirm that the Last Supper occurred on the PASSOVER, though the account of the CRUCIFIXION in the Gospel According to John indicates that the Last Supper could not have been a Passover meal. Two aspects of the Last Supper have been traditionally depicted in Christian art: Christ's revelation to his Apostles that one of them will betray him and their reaction to this announcement, and the institution of the SACRAMENT of the Eucharist with the communion of the Apostles. In early Christian art the presence of a fish on the table symbolizes the institution of the Eucharist. This symbol appeared in Western depictions of the communion of the Apostles until the 15th century, when a CHALICE and wafer were substituted for it.

LĀT, AL- \əl-'lat\, North Arabian goddess to whom a stone cube at at-Ṭā'if (near MECCA) was held sacred as part of her cult. Two other North Arabian goddesses, Manāt (Fate) and al-'Uzzā (Strong), were associated with al-Lāt in the QUR'AN. According to some traditions MUHAMMAD once recognized these three as goddesses, but a new revelation led him to abrogate the approving verses he had earlier recited and to abandon his attempt to placate Meccan PAGANS. Members of the tribe of QURAYSH circumambulated the KĀ'BA in Mecca (now a central shrine of ISLAM in the Great Mosque in Mecca) chanting the praises of al-Lāt, al-'Uzzā, and Manāt. Each of the three had main sanctuaries near Mecca that were sites of pious visits and offerings until Muhammad ordered them destroyed. The goddesses were also worshiped by various Arab tribes located as far away as Palmyra, Syria.

LATERAN COUNCIL \ˈlɑ-tə-rən\, any of the five ecumenical councils of the ROMAN CATHOLIC church held in the Lateran Palace in Rome.

The first Lateran Council, the ninth ecumenical council (1123), was held during the reign of Pope Calixtus II. The council promulgated a number of canons (probably 22), many of which merely reiterated decrees of earlier councils. Much of the discussion was occupied with disciplinary or political decisions relating to the INVESTITURE CONTROVERSY settled the previous year by the Concordat of Worms; SIMONY was condemned, laymen were prohibited from disposing of church property, clerics in major orders were forbidden to marry, and uncanonical consecration of bishops was forbidden. There were no specific dogmatic decrees.

The second Lateran Council, the 10th ecumenical council (1139), was convoked by Pope Innocent II to condemn as schismatics the followers of Arnold of Brescia, a reformer and opponent of the temporal power of the pope, and to end the SCHISM created by the election of Anacletus II, a rival pope. Supported by ST. BERNARD DE CLAIRVAUX and later by Emperor Lothair II, Innocent was eventually acknowledged as the legitimate pope. The second Lateran Council declared invalid all marriages of those in major orders and of professed monks, canons, lay brothers, and nuns, and repudiated the heresies of the 12th century concerning holy orders, matrimony, infant BAPTISM, and the EUCHARIST.

The third Lateran Council, the 11th ecumenical council, was convoked in 1179 by Pope Alexander III and attended by 291 bishops who studied the Peace of Venice (1177), by which the Holy Roman emperor, Frederick I Barbarossa, agreed to withdraw support from his ANTIPOPE and to restore the church property he had seized. This council also established a two-thirds majority of the College of CARDINALS as a requirement for papal election and stipulated that candidates for bishop must be 30 years old and of legitimate birth. The CATHARI (OR ALBIGENSES) were condemned as heretical, and Christians were authorized to take up arms against vagabond robbers.

The fourth Lateran Council, the 12th ecumenical council (1215), was convoked by Pope INNOCENT III and is generally considered the greatest council before Trent, involving more than 400 bishops, 800 abbots and priors, envoys of many European kings, and personal representatives of Frederick II (confirmed by the council as emperor of the West). The purpose of the council was twofold: reform of the church and the recovery of the Holy Land. The council ruled on such vexing problems as the use of church property, TITHES, judicial procedures, and patriarchal precedence. It ordered Jews and Saracens to wear distinctive

dress and obliged Catholics to make a yearly CONFESSION and to receive communion during the EASTER season. The council sanctioned the word TRANSUBSTANTIATION as a correct expression of eucharistic doctrine. The teachings of the Cathari and WALDENSES were condemned. Innocent also ordered a four-year truce among Christian rulers so that a new crusade could be launched.

The fifth Lateran Council, the 18th ecumenical council (1512–17), was convoked by Pope Julius II in response to a council summoned at Pisa by a group of cardinals who were hostile to the Pope. It restored peace among warring Christian rulers. The council affirmed the immortality of the soul and repudiated declarations of the councils of Constance and Basel that made church councils superior to the pope.

LATINUS \lə-'ti-nəs\, in Roman mythology, king of the aborigines in Latium and eponymous hero of the Latin race. He was believed to be either the son of the Greek hero ODYSSEUS and the enchantress CIRCE or the son of the Roman god FAUNUS and the NYMPH Marica. According to the *Aeneid*, the hero AENEAS landed at the mouth of the Tiber River and was welcomed by Latinus, the peaceful ruler whose daughter Lavinia he ultimately married.

LAUMA \ˈlɑu-mä\ (Latvian), *Lithuanian* Laumė \ˈlɑu-mä\, or Deivė \d'vā-vā\, in Baltic FOLKLORE, fairy who appears as a beautiful naked maiden with long fair hair. *Laumas* dwell in the forest near water or stones. Being unable to give birth, they often kidnap babies to raise as their own. Sometimes they marry young men and become excellent wives, perfectly skilled in all domestic work. They are noted as swift spinners and weavers, and, when they spin on Thursday evenings and launder after sunset on the other days, no mortal woman is allowed to do the same.

Laumas are benevolent, motherly beings, helpful to orphans and poor girls, but they are extremely vindictive when angered, particularly by disrespectful men.

Among the Lithuanians, a *laumė* was sometimes called *laumė-ragana*, indicating that she may have been a prophetess (*ragana*) at one time. By the 18th century *laumė* was totally confused with *ragana* and came to denote a witch or hag capable of changing into a snake or toad. Not only could a *laumė* fly, she could also transform people into birds, dogs, and horses and dry up a cow's milk. Similarly, in modern Latvian *lauma* is a hag and *lauminet* means "to practice WITCHCRAFT."

LAZARUS, MORITZ \ˈlät-sä-rūs\ (b. Sept. 15, 1824, Filehne, Prussia [now Wielen, Pol.]—d. April 13, 1903, Meran, Austria [now Merano, Italy]), Jewish philosopher and psychologist, a leading opponent of ANTI-SEMITISM and a founder of comparative psychology.

The son of a rabbinical scholar, Lazarus studied Hebrew literature and history, law, and philosophy at Berlin. He served as professor at Bern (1860–66), at the Kriegs Akademie in Berlin (1867–73), and at the Friedrich Wilhelm University (now Humboldt University of Berlin, 1873).

Lazarus' philosophy stated that truth must be sought in psychological investigation and the psychologist must study humanity from the historical or comparative standpoint, analyzing the elements that constitute the fabric of society. To further this *Völkerpsychologie*, he founded, with the philologist H. Steinthal, the journal *Zeitschrift für Völkerpsychologie und Sprachwissenschaft* (1859). His chief philosophical work is *Das Leben der Seele*, 3 vol.

(1855–57; “The Life of the Soul”).

In both 1869 and 1871 Lazarus was president of the Liberal Jewish synods at Leipzig and Augsburg. His works on Jewish subjects include *Treu und frei: Reden und Vorträge über Juden und Judenthum* (1887; “Faithful and Free: Speeches and Lectures About Jews and Judaism”); a monograph on the prophet JEREMIAH (1894); and *Die Ethik des Judentums*, 2 vol. (vol. 1, 1898; vol. 2, 1911; *The Ethics of Judaism*), which soon achieved the rank of a standard work.

Moritz Lazarus, 1892

LEAH \ˈlē-ə, ˈlā-ə\, also spelled Lia \ˈli-ə\, in the

OLD TESTAMENT, first wife of JACOB and the traditional ancestor of five of the TWELVE TRIBES OF ISRAEL. Leah was the mother of six of Jacob's sons: REUBEN, SIMEON, Levi (*see* LEVITE), ISSACHAR, ZEBULUN, and JUDAH (GENESIS 29:31–35; 30:17–20).

After Jacob had deprived his brother ESAU of his birthright and blessing (Genesis 25:29–34; 27:1–40), he took refuge in the household of his uncle Laban (Genesis 27:43; 28:1–5). There he fell in love with Laban's younger daughter, Rachel, working for Laban seven years to win her hand. On the night of the nuptial feast, however, Laban deceived him by sending in Leah; thus, Jacob was compelled to work another seven years for Rachel (Genesis 29:1–30). Jacob did not love Leah, but God consoled her with children before allowing Rachel to become pregnant. According to some traditions, she was buried in Hebron on the west bank of the Jordan River (Genesis 49:31).

LECTIONARY \ˈlek-shə-,ner-ē\, in CHRISTIANITY, a book containing portions of the BIBLE appointed to be read on particular days of the year. The word is also used for the list of such SCRIPTURE lessons. The early Christians adopted the Jewish custom of reading extracts from the OLD TESTAMENT on the SABBATH. They soon added extracts from the writings of the Apostles and Evangelists. During the 3rd and 4th centuries, several systems of lessons were devised for churches of various localities.

At first, the lessons were marked off in the margins of manuscripts of the Scriptures. Later, special lectionary manuscripts were prepared, containing in sequence the appointed passages. The Greek church developed two forms of lectionaries, one (*Synaxarion*) arranged in accord with the ecclesiastical year and beginning with EASTER, the other (*Mēnologion*) arranged according to the civil year (beginning September 1) and commemorating the festivals of various saints and churches. Other national churches produced similar volumes. Among the Western churches during the medieval period the ancient usage at Rome prevailed, with its emphasis on ADVENT.

During the 16th-century REFORMATION the LUTHERANS and Anglicans (*see* ANGLICAN COMMUNION) made changes in

the ROMAN CATHOLIC lectionaries, Luther including a greater proportion of doctrinal passages. In the Anglican church, the first edition of THE BOOK OF COMMON PRAYER assigned for each day a passage of the Old Testament and the NEW TESTAMENT to be read at both the morning and evening services. Nearly all the saints' days were dropped, and the new system assigned chapters of the Bible to be read consecutively.

LECTISTERNIUM \ˌlek-tə-ˈstər-nē-əm\ (Latin, from *lectum sternere*, “to spread a couch [with blankets or cushions]”), ancient Greek and Roman rite in which a meal was offered to gods and goddesses whose representations were laid upon a couch positioned in the open street. On the first occasion of the rite (399 BCE), which originated in Greece, couches were prepared for three pairs of gods: APOLLO and Latona, Hercules (*see* HERACLES) and DIANA, MERCURY and NEPTUNE. The feast, lasting for seven or eight days, was also celebrated by private individuals; the citizens kept open house, debtors and prisoners were released, and everything was done to banish sorrow. In later times, similar honors were paid to other divinities. The rite largely replaced the old Roman *epulum* and *daps*, in which the god was not visibly represented. In Christian times, the word was used for a feast in memory of the dead.

LEDA \ˈlē-də\, in Greek mythology, daughter of Thestius, king of Aetolia, and wife of Tyndareus, king of Lacedaemon; alternatively, mother by Tyndareus of Clytemnestra and Castor, one of the DIOSCURI. She was also believed to have been the mother (by ZEUS, who had approached her in the form of a swan) of the other twin, Polydeuces, and of HELEN of Troy, both of whom hatched from eggs. Variant tales gave divine parentage to both the twins and possibly also to Clytemnestra, with all three of them having hatched from the eggs of Leda, while others say that Leda bore the twins to her mortal husband, Tyndareus. Still other variants say that Leda may have hatched Helen from an egg laid by the goddess NEMESIS, who was similarly approached by Zeus in the form of a swan.

LEE, ANN \ˈlē\, byname Mother Ann (b. Feb. 29, 1736, Manchester, Eng.—d. Sept. 8, 1784, Watervliet, N.Y., U.S.), religious leader who brought the SHAKER sect from England to the American colonies.

The daughter of a blacksmith, she was a factory worker who in 1758 joined the Shaking Quakers, an offshoot of the Quakers. She married in 1762, an unhappy union that probably influenced her later doctrinal insistence on CELIBACY.

In 1770, during a period of religious persecution by the English authorities, she was imprisoned and while in jail became convinced of the truth of certain religious ideas perceived in a vision. She came to believe that sexual lust impeded Christ's work and that only through celibacy could men and women further his kingdom on earth. Four years later, commanded in another vision, Lee persuaded her husband, brother, and six other followers to emigrate to America. There, her followers founded a settlement in the woods of Niskeyuna (now Watervliet), near Albany (in present-day New York state). Beginning with converts from nearby settlements, the Shaker movement grew and began to spread throughout New England to embrace thousands. Mother Ann, as she came to be known, was believed to have ushered in the MILLENNIUM, for the Shakers asserted that, as Christ had embodied the masculine half of God's dual nature, so she embodied the female half.

In 1780 Mother Ann was imprisoned for treason because

of her pacifist doctrines and her refusal to sign an OATH of allegiance. She was soon released and in 1781–83 toured New England. According to witnesses, she performed a number of miracles, including healing the sick by touch.

LEI-KUNG \ˈlā-ˈgʊŋ\, *Pinyin* Leigong, also called Lei-shen \-ˈshən\ (Chinese: “Lord of Thunder”), Chinese Taoist and folk deity who, when so ordered by heaven, punishes earthly mortals guilty of secret crimes and evil spirits who have used their knowledge of TAOISM to harm human beings.

Lei-kung is depicted as a fearsome creature with claws, bat wings, and a blue body and wears only a loincloth. Lei-kung’s assistants are those capable of producing other heavenly phenomena: lightning (Tien-mu), clouds (Yün-t’ung), rain (Yü-tzu), and winds (Feng-po, later transformed into the goddess Feng p’o-p’o).

LEMMINKÄINEN \ˈlem-mēn-ka-ē-nen\, hero of Finnish traditional songs. In these songs Lemminkäinen travels to an otherworldly place where he overcomes many obstacles such as a ditch full of burning rocks and a fence made of snakes. When he reaches his goal he must also succeed at a series of tests and best his host in a wizard’s contest. The narrative up until this point is reminiscent of shamanistic tales of travels to the otherworld, but it takes a different turn when Lemminkäinen is killed. In some versions it is done with a hollow reed, in others with a snake, but in all tales he is killed with the only weapon against which he is defenseless. After Lemminkäinen’s death, his mother goes to great lengths to retrieve his body and she finally succeeds, but her attempts to revive it are successful in only a few versions of the story. This last part may show some Christian influence and also influence from the Nordic story of the death of BALDER.

LEMURES \ˈle-mə-rās, ˈlem-yə-rēz\, also called Larvae, in ROMAN RELIGION, wicked and fearsome specters of the dead. Appearing in grotesque and terrifying forms, they were said to haunt their living relatives and cause them injury. To propitiate these ghosts and keep them from the household, ritual observances called Lemuria were held yearly on May 9, 11, and 13. These Lemuria, reputedly instituted by Romulus in expiation of his brother’s murder, required the father of every family to rise at midnight, purify his hands, toss black beans for the spirits to gather, and recite entreaties for the spirits’ departure.

LENT, in the Christian church, period of penitential preparation for EASTER. In Western churches it begins on ASH WEDNESDAY, 6 weeks before Easter, and provides for a 40-day fast (Sundays are excluded), in imitation of Jesus Christ’s fasting in the wilderness. In Eastern churches it begins eight weeks before Easter (both Saturdays and Sundays are excluded as fast days).

Since apostolic times a period of preparation and fasting has been observed before the Easter festival. It was a time of preparation of candidates for BAPTISM and a time of penance for sinners. In the early centuries fasting rules were strict, as they still are in Eastern churches. One meal a day was allowed in the evening, and meat, fish, eggs, and butter were forbidden. In the West these fasting rules have gradually been relaxed. The strict law of fasting among ROMAN CATHOLICS was dispensed with during World War II, and only Ash Wednesday and GOOD FRIDAY are now kept as Lenten fast days, though the emphasis on penitential practice remains.

LEO I, SAINT \ˈlē-ō\, *byname* Leo the Great (b. late 4th century, Tuscany?—d. Nov. 10, 461, Rome; Western feast day November 10, Eastern feast day February 18), pope from 440 to 461, master exponent of papal supremacy. His pontificate—which saw the disintegration of the Roman Empire in the West and the formation in the East of theological differences that were to split Christendom—was devoted to safeguarding orthodoxy and securing the unity of the Western church.

Consecrated on Sept. 29, 440, as successor to St. Sixtus III, Leo worked to suppress HERESY, which he regarded as the cause of corruption and disunity. The monk Eutyches of Constantinople had founded Eutychianism, a form of MONOPHYSITISM holding that Christ had only one nature, his human nature being absorbed in his divine nature. PATRIARCH Flavian of Constantinople excommunicated Eutyches, who then appealed to Leo. Leo sent Flavian (449) his celebrated *Tome*, which rejected Eutyches’ teaching and argued that Christ’s natures coexist and his INCARNATION reveals how human nature is restored to perfect unity with divine being. The Council (451) of Chalcedon (modern Kadıköy, Turkey), summoned to condemn Eutychianism, declared that Leo’s *Tome* was the ultimate truth.

Leo I, detail of a miniature from an ecclesiastical calendar, 10th century
Biblioteca Apostolica Vaticana

Leo held that papal power was granted by Christ to St. Peter alone and that that power was passed on by Peter to his successors. He cautioned the bishop of Thessalonica that, although he had been entrusted with office and shared Leo’s solicitude, he was “not to possess the plenitude of power.” Leo further enhanced the prestige of the PAPACY and helped to place Western leadership in its hands by dealing with invading barbarian tribes. He persuaded the Huns not to attack Rome in 452 and the Vandals not to sack Rome when they occupied it in 455. Leo was declared a doctor of the church by Pope Benedict XIV in 1754.

LEO X, POPE, *original name* Giovanni de’ Medici (b. Dec. 11, 1475, Florence—d. Dec. 1, 1521, Rome), one of the most extravagant of the Renaissance popes (reigned 1513–21), who made Rome a center of European culture and raised the PAPACY to significant political power in Europe. However, he depleted the papal treasury, and, by his response to the developing REFORMATION, he contributed to the dissolution of the unified Western church. Leo excommunicated MARTIN LUTHER in 1521.

LEO XIII, POPE, *original name* Vincenzo Gioacchino Pecci (b. March 2, 1810, Carpineto Romano, Papal States—d. July 20, 1903, Rome), head of the ROMAN CATHOLIC church (1878–1903) who brought a new spirit to the PAPACY, manifested in a more conciliatory position toward civil government, through care that the church not be opposed to scientific progress, and through an awareness of the pastoral and social needs of the times.

Pecci's family was of the lower nobility. After his early education in Viterbo and Rome he completed his studies at the Accademia dei Nobili Ecclesiastici (Academy of Noble Ecclesiastics) in Rome. In 1837 he was ordained a priest and entered the diplomatic service of the Papal States. He was made delegate (the equivalent of provincial governor) of Benevento in 1838 and was transferred in 1841 to the more important delegation of Perugia. In January 1843 he was appointed nuncio to Brussels and shortly after was consecrated an archbishop. But King Leopold I, considering him less docile than his predecessor, soon demanded his recall. He was then named, early in 1846, bishop of Perugia, a small DIOCESE to which he was confined for 32 years, despite his having been made a CARDINAL in 1853; his harsh judgment of the opposition in the Papal States to the Roman Revolution of 1848 and his concern to avoid useless conflicts with the Italian authorities after the annexation of Umbria in 1860 made Rome wrongly suspect him of liberal sympathies.

During this period of exile Pecci occupied himself with the renewal of Christian philosophy and studied particularly the writings of ST. THOMAS AQUINAS. He was also led to reconsider the problem of the relations between the church and modern society and became increasingly convinced of the mistake committed by ecclesiastical authorities in taking a fearful, negative attitude toward the aspirations of the times. In 1877 he was named camerlengo, the office of chief administrator of the church in the event that the pope dies.

At the death of PIUS IX in February 1878 Cardinal Pecci was elected on the third ballot. The age of the new pope and his delicate health caused speculation that his pontificate would be brief. But, in fact, he directed the church for a quarter of a century.

Pius IX had been a strong, conservative authoritarian, both in his governing of the church and in his opposition to the new Italian government that annexed the Papal States. Although the pontificate of Leo XIII had a new spirit, the new pope was as intractable as his predecessor on the principle of the temporal sovereignty of the pope and continued to consider the traditional doctrine of the Christian state as an ideal. He reacted strongly against secular liberalism. In church administration he continued to accentuate the centralization of authority in the papacy rather than in the national churches and reinforced the power of the nuncios (papal legates accredited as ambassadors to civil governments). He renewed the condemnations of rationalism—the theory that reason is the primary source of knowledge and of spiritual truth—and pursued with fresh vigor the re-establishment of the philosophy of St. Thomas Aquinas.

In other respects, however, Leo XIII's pontificate was characterized by change. In his relations with civil governments, Leo XIII showed his preference for diplomacy. He was also an intellectual sympathetic to scientific progress and to the need for the church to demonstrate itself open to such progress. In several instructions he recommended that CHURCH AND STATE live together in peace within the framework of modern society. The ENCYCLICAL *Rerum Novarum* ("Of New Things") in 1891 showed that the papacy

had cautiously taken cognizance of the problems of the working class. He supported the organization of the Catholic laity and the attempt to create a link between the Anglican church and Rome (despite his rejection of the validity of Anglican ORDINATION). During the last years of his pontificate there was a hardening of church policy and a more reserved attitude toward Christian democracy.

LESHY \lʲe-shəy\, in Slavic mythology, forest spirit. The *leshy* is a sportive spirit who enjoys playing tricks on people, though when angered he can be treacherous. He is seldom seen, but his voice can be heard in the forest laughing, whistling, or singing. When the *leshy* is spotted, he can be easily recognized; for, though he often has the appearance of a man, his eyebrows, eyelashes, and right ear are missing and his head is somewhat pointed. In his native forest the *leshy* is as tall as the trees, but, the moment he steps beyond, he shrinks to the size of grass.

The Ukrainians living in steppe country lack a fully articulated *leshy* and know about him from hearsay. Similar to the *leshy* are the field spirit (*polevoy*) and, perhaps, the water spirit (*VODYANOY*).

LEŚYĀ \lāsh-yā\ (Sanskrit: "light," "tint"), according to JAINISM, the special aura of the soul that can be described in terms of color, scent, touch, and taste and that indicates the stage of spiritual progress reached by the creature, whether human, animal, demon, or divine. The *leśyā* is determined by the adherence of karmic matter to the soul, resulting from both good and bad actions. This adherence is compared to the way in which particles of dust adhere to a body smeared with oil.

The JĪVA, or soul, is classified according to the good or bad emotions that hold sway. Thus the *saleśī* ("having *leśyā*") are all those who are swayed by any of the emotions, and the *aleśī* are those liberated beings (SIDDHAS) who no longer experience any feelings—neither pain nor pleasure, nor even humor. The three bad emotions (ill will, envy, and untruthfulness) give the *leśyā* a bitter taste, a harsh or dull color, a smell that can be likened to the odor of a dead cow, and a texture rougher than the blade of a saw. The three good emotions (good will, union with goodness, and non-distinction) lend the aura the fragrance of sweet flowers, the softness of butter, a taste sweeter than fruit or honey, and a pleasing hue ranging from bright red to pure white.

LETHE \lē-thē\ (Greek *lēthē*, literally, "act of forgetting," "forgetfulness," or "oblivion"), in Greek mythology, daughter of ERIS (Strife). Lethe is also the name of a river or plain in the Underworld.

In Orphism, it was believed that the newly dead who drank from the River Lethe would lose all memory of their past existence. The initiated were taught to seek instead the river of memory, MNEMOSYNE, thus securing the end of the transmigration of the soul. At the oracle of Trophonius near Lebadeia (modern Levadhia, Greece), which was thought to be an entrance to the Underworld, there were two springs called Lethe and Mnemosyne.

Aristophanes' *The Frogs* mentions a plain of Lethe. In Book X of Plato's *The Republic* the souls of the dead must drink from the "river of Forgetfulness" before rebirth. In the works of the Latin poets Lethe is one of the five rivers of the Underworld.

LETO \lē-tō\, *Latin* Latona \lā-'tō-nə\, in classical mythology, TITAN daughter of Coeus and PHEBE and mother of APOL-

LEUCOTHEA

LO and ARTEMIS. Leto, pregnant by ZEUS, sought a place of refuge to be delivered. She finally reached the isle of Delos, which, according to some, was a wandering rock borne about by the waves until it was fixed to the bottom of the sea for the birth of Apollo and Artemis. In later versions the wanderings of Leto were ascribed to the jealousy of Zeus's wife, HERA, who was enraged at Leto's bearing Zeus's children. The foundation of DELPHI followed immediately upon the birth of Apollo. Leto has been identified with the Lycian goddess Lada. She was also known as Kouroutrophos (Rearer of Youths).

LEUCOTHEA \lū-'kā-thē-ə\ (Greek: "White Goddess [of the Foam]"), in Greek mythology, a sea goddess first mentioned in Homer's *Odyssey*, in which she rescues ODYSSEUS from drowning. She was identified with Ino, daughter of the Phoenician Cadmus; because she cared for the infant god DIONYSUS, the goddess HERA drove Ino (or her husband, ATHAMAS) mad so that she and her son, Melicertes, leaped into the sea. Both were changed into marine deities—Ino as Leucothea, Melicertes as Palaemon. The body of Melicertes was carried by a dolphin to the Isthmus of Corinth and deposited under a pine tree. There Melicertes' body was found by his uncle SISYPHUS, who removed it to Corinth and instituted the ISTHMIAN GAMES and sacrifices in his honor.

LEVI BEN GERSHOM \lē-vī-ben-'gər-shəm, -səm\, also called Gersonides \gər-'sä-nə-dēz\, Leo de Bagnols, Leo Hebraeus, or (by acronym) Ralbag \räl-'bäg\ (b. 1288, Bagnols-sur-Cèze, France—d. 1344), French Jewish mathematician, philosopher, astronomer, and Talmudic scholar.

Levi's mathematical works, written between 1321 and 1343, dealt with such topics as arithmetical operations (*Sefer ha-mispar* ["Book of the Number"]), sine theorems for plane triangles and tables of sines (*De sinibus, chordis et arcibus* ["On Sines, Chords, and Arcs"]), and Euclidean geometry (*De numeris harmonicis* ["The Harmony of Numbers"]). Influenced by the works of Aristotle and IBN RUSHD (Averroës), Levi wrote *Sefer ha-hekkesh ha-yashar* (1319; Latin *Liber syllogismi recti*; "Book of Proper Analogy"), criticizing several arguments of Aristotle; he also wrote commentaries on the works of both philosophers.

Levi presupposed an audience familiar with these commentaries, medieval astronomical literature, and the works of Ibn Rushd when he wrote (1317–29) his major work, *Sefer milhamot Adonai* ("The Book of the Wars of the Lord"; partial trans. *Die Kämpfe Gottes*, 2 vol.). The work treats the immortality of the soul; dreams, DIVINATION, and PROPHECY; divine knowledge; providence; celestial spheres and separate intellects and their relationship with God; and the creation of the world, miracles, and the criteria by which one recognizes the true prophet.

Levi's work has been criticized because of his bold expression and the unconventionality of his thought, but he continued to exercise wide influence into the 19th century.

LEVITE \lē-,vīt\, member of a group of clans of religious functionaries in ancient Israel who apparently were given a special religious status, conjecturally for slaughtering idolaters of the GOLDEN CALF during the time of MOSES (EXODUS 32:25–29).

Leucothea giving Dionysus a drink from the horn of plenty, antique bas-relief; in the Lateran Museum, Rome
Alinari—Art Resource

There is no clear evidence that the Levites originally constituted a secular tribe that was named after Levi, the third son born to JACOB and his first wife, LEAH. Unlike the TWELVE TRIBES OF ISRAEL, the Levites were not assigned a specific territory of their own when the Israelites took possession of the Promised Land but rather 48 cities scattered throughout the entire country (Numbers 35:1–8). Moreover, their ranks may have included representatives of all the tribes. It is equally unclear what relationship existed between the Levites and the members of the PRIESTHOOD, who were descendants of AARON, himself a descendant of Levi. The priests of Aaron (*see* AARONIC PRIESTHOOD) clearly acquired sole right to the Jewish priesthood. Those who performed subordinate services associated with public worship were known as Levites. In this capacity, the Levites were musicians, gatekeepers, guardians, Temple officials, judges, and craftsmen.

LEVITICUS RABBAH \li-'vi-ti-kəs-rä-'bä\, compilation of 37 propositional compositions on topics suggested by the book of

Leviticus, c. 450 CE, which argues that the rules of sanctification for the PRIESTHOOD deliver a message of the salvation of all Israel (*i.e.*, the Jewish people). The compilation makes no pretense at a systematic EXEGESIS of sequences of verses of SCRIPTURE, abandoning the verse-by-verse mode of organizing discourse; each of the 37 chapters is cogent in its own terms. The message of Leviticus Rabbah is that the laws of history may be known and that these laws focus upon the holy life of the community. If Israel obeys the laws of society aimed at Israel's sanctification, then the foreordained history, resting on the merit of the ancestors, will unfold as Israel hopes. Israel, for its part, can affect its destiny and effect salvation. The authorship of Leviticus Rabbah has thus joined the two great motifs, sanctification and salvation, by reading a biblical book, Leviticus, that is devoted to the former in the light of the requirements of the latter. In this way the authors made their fundamental point, that salvation at the end of history depends on sanctification in the here and now.

LI \lē\, Pinyin li, CONFUCIAN concept often rendered as "ritual," "proper conduct," "ceremony," or "propriety." Originally, *li* denoted rites performed to sustain social and

cosmic order. Confucians, however, reinterpreted it to mean formal social patterns that, in their view, the ancients had abstracted from cosmic models to order communal life. From customary patterns, *li* came to mean conventional norms, yielding a new concept of an internalized code of civility that defined proper human conduct. It is this concept that is detailed in the Confucian Classic called the *LI-CHI* ("Record of Rites"). Yet, even in this context, *li* transcends mere politeness or convention, for, as a derivative of natural order, it retains a cosmic role, harmonizing humans with nature.

LI \lǐ\, *Pinyin* li, in Chinese NEO-CONFUCIAN thought, cosmological, metaphysical, and moral principle meaning "reason." It refers to the inner order of the physical universe and moral tradition. CHU HSI is the most famous philosopher to advance this concept.

LI AO \lǐ-'aù\, *Pinyin* Li Ao (d. c. 844, China), Chinese scholar who helped reestablish CONFUCIANISM at a time when it was severely challenged by BUDDHISM and TAOISM, laying the groundwork for the Neo-Confucianists of the Sung dynasty (960–1279).

Li was a high official of the T'ang dynasty (618–907) who was apparently friends with or a disciple of the great Confucian stylist and thinker HAN YÜ. Unlike Han Yü, Li was much influenced by Buddhism, helping to integrate many Buddhist ideas into Confucianism and beginning the development of a metaphysical framework to justify Confucian ethical thinking; he insisted that questions of human nature and human destiny were central to Confucianism, ideas that became the core of later NEO-CONFUCIANISM. His quotations from the TA-HSÜEH ("Great Learning"), the CHUNG-YUNG ("Doctrine of the Mean"), and the I-CHING ("Classic of Changes") helped bring recognition to these previously obscure works. Finally, Li helped establish the importance of MENCIOUS for later Neo-Confucians as almost the equal to that of CONFUCIUS.

LIBATION, act of pouring a liquid (frequently wine, but sometimes milk or other fluids) as a sacrifice to a deity.

LIBERALISM, THEOLOGICAL, form of religious thought that establishes religious inquiry on the basis of a norm other than the authority of tradition. It was an important influence in PROTESTANTISM from the mid-17th century through the 1920s.

The defining trait of this liberalism is a will to be liberated from the coercion of external controls and a consequent concern with inner motivation. The first overt evidence of this temper of mind came during the Renaissance, when curiosity about natural man and appreciation for the human spirit developed. The modern period of theological liberalism began, however, in the 17th century with René Descartes, who designated the thinking self as the primary substance from which the existence of other realities was to be deduced (except that of God), and thereby initiated a mode of thinking that remained in force through the 19th century and laid the ground for the presuppositions of this modern consciousness: (1) confidence in human reason, (2) primacy of the person, (3) immanence of God, and (4) meliorism (the belief that human nature is improvable and is improving). The many persons influencing religious thought in this period included the philosophers Benedict de Spinoza, Gottfried Wilhelm Leibniz, Gotthold Ephraim Lessing, John Locke, and Samuel Clarke.

The second stage of theological liberalism, ROMANTICISM, lasted from the late 18th century to the end of the 19th and was marked by the significance it placed on individual experience as a distinctive source of meaning. The American and French revolutions provided the symbol of this spirit of independence and dramatically exemplified it in political action. Jean-Jacques Rousseau and Immanuel Kant were the architects of Romantic liberalism. In theology, FRIEDRICH SCHLEIERMACHER, called the father of modern Protestant theology, was outstanding. Unlike Kant, who saw in moral will the clue to man's higher nature, Schleiermacher identified the feeling of absolute dependence as simultaneously that which "signifies God for us" and that which is distinctive in the religious response. Thus, self-consciousness becomes God-consciousness; the Christian is brought to this deeper vein of self-consciousness through the man Jesus, in whom the God-consciousness had been perfected.

ALBRECHT RITSCHL dominated liberal Protestant theology after Schleiermacher, and Wilhelm Herrmann and Adolf von Harnack were Ritschl's most prominent followers. In the United States, HORACE BUSHNELL was the most significant liberal theologian, along with WALTER RAUSCHENBUSCH, leader of the SOCIAL GOSPEL movement.

The third period of theological liberalism, MODERNISM, from the mid-19th century through the 1920s, was marked by the significance it placed on the notion of progress. The decisive events stimulating these interests were the Industrial Revolution and the publication of Charles Darwin's *Origin of Species* (1859). Modernists sought to bring religious thought into accord with modern knowledge and to solve issues raised by modern culture, and they transformed the study of Christian doctrine into the psychological, sociological, and philosophical study of RELIGIOUS EXPERIENCE, institutions, customs, knowledge, and values. Important figures during this period included Thomas Huxley, Herbert Spencer, William James, John Dewey, Shailer Mathews, Harry Emerson Fosdick, and ERNST TROELTSCH.

After the 1920s many theologically liberal ideas were challenged by neoorthodoxy, a theological movement in Europe and the United States that returned to the traditional language of Protestant orthodoxy and biblical faith centered in Christ, although it accepted modern critical methods of biblical interpretation.

LIBER AND LIBERA \lǐ-bər . . . 'lǐ-bə-rə\, in ROMAN RELIGION, pair of cultivation deities of uncertain origin. Liber, though an old and native Italian deity, came to be identified with DIONYSUS. The triad CERES, Liber, and Libera (his female counterpart) represented in Rome, from early times and always under Greek influence, the Eleusinian DEMETER, Iacchus-Dionysus, and Kore (PERSEPHONE). At the festival of the Liberalia, held at Rome on March 17, the *toga virilis* was commonly assumed for the first time by boys who were of age. At the town of Lavinium, a month was consecrated to Liber, and the festival activities there were believed to make the seeds grow.

LIBERATION THEOLOGY, in late 20th-century ROMAN CATHOLICISM, movement centered in Latin America that sought to apply religious faith to the circumstances of the poor and the politically oppressed. It stressed both heightened awareness of the socioeconomic structures that caused social inequities and active participation in changing those structures.

Liberation theologians believed that God speaks particularly through the poor and that the BIBLE can be understood

only when seen from the perspective of the poor. They perceived that the Roman Catholic church in Latin America was a church for and of the poor, a state fundamentally different from that of the church in Europe. In order to build this church, they established base communities, local Christian groups composed of 10 to 30 members each, that both studied the Bible and attempted to meet their parishioners' immediate needs for food, water, sewage disposal, and electricity. Many such base communities, led mostly by laypersons, sprang up throughout Latin America.

The birth of the movement is usually dated to the second Latin American Bishops' Conference, which was held in Medellín, Colombia, in 1968. The attending bishops issued a document affirming the rights of the poor and asserting that industrialized nations enriched themselves at the expense of Third World countries. The movement's seminal text, *Teología de la liberación* (1971; *A Theology of Liberation*), was written by Gustavo Gutiérrez, a Peruvian priest and theologian. Other leaders of the movement included Archbishop Oscar Arnulfo Romero of El Salvador (killed in 1980), Brazilian theologian Leonardo Boff, JESUIT scholar Jon Sobrino, and Archbishop Helder Câmara of Brazil.

The liberation theology movement gained strength in Latin America during the 1970s. Because of their insistence that ministry includes involvement in the political struggle of the poor against wealthy elites, liberation theologians were often criticized by those within the Roman Catholic church and others as naive advocates of Marxism and left-wing social activism. By the 1990s the Vatican, under Pope John Paul II, had begun trying to curb the movement's influence through the appointment of more conservative PRELATES in Brazil and elsewhere in Latin America.

LIBITINA \li-bə-'tī-nə, -'tē-nə\, in ROMAN RELIGION, goddess of funerals. At her SANCTUARY in a sacred grove (perhaps on the Esquiline Hill), a piece of money was deposited whenever a death occurred. There the undertakers (*libitinarii*) had their offices, and there all deaths were registered for statistical purposes. The word Libitina thus came to be used for the business of an undertaker, funeral requisites, and, by poets, for death itself. Libitina was often mistakenly identified with VENUS Lubentia (Lubentina), an Italian goddess of gardens.

LI-CHI \lī-'jē\, *Pinyin* Liji (Chinese: "Record of Rites"), one of the FIVE CLASSICS (WU-CHING) of Chinese Confucian literature, the original text of which is said to have been compiled by CONFUCIUS (551–479 BCE). The text was extensively reworked during the 1st century BCE by Elder Tai and his cousin Younger Tai.

Li-chi underscores moral principles and treats such subjects as royal regulations, ritual objects and sacrifices, education, music, and the doctrine of the mean (CHUNG-YUNG).

In 1190 CHU HSI, a NEO-CONFUCIAN philosopher, gave two chapters of *Li-chi* separate titles (*i.e.*, "Ta-hsüeh" and "Chung-yung") and published them together with two other CONFUCIAN texts under the name *Ssu-shu* ("FOUR BOOKS"). This collection is generally used to introduce Chinese students to Confucian literature.

LIEH-TZU \līe-'dzə\, *Pinyin* Liezi (fl. 4th century BCE, China), legendary TAOIST master and presumed author of the Taoist work *Lieh-tzu*. Many of the writings attributed to Lieh-tzu have been identified as later forgeries.

Little is known of Lieh-tzu's life save that, like his contemporaries, he had a large number of disciples and roamed

through the different warring states into which China was then divided, advising kings and rulers. His work is distinguished stylistically by its wittiness and philosophically by its emphasis on determinism.

LIEH-TZU \līe-'dzə\, *Pinyin* Liezi, Chinese Taoist classic bearing the name of Lieh-tzu, a legendary Taoist master. In its present form, the *Lieh-tzu* possibly dates from the 3rd or 4th century CE. The text echoes themes seen in the *Chuang-tzu*.

The *Lieh-tzu's* "Yang Chu" chapter—named after a legendary figure of the 5th–4th century BCE, incorrectly identified as its author—acknowledges the futility of challenging the immutable and irresistible TAO (Way); it concludes that humans can look forward in this life only to sex, music, physical beauty, and material abundance, and even these goals are not always satisfied. Such fatalism implies a life of radical self-interest (a new development in TAOISM), according to which a person should make no sacrifice for the benefit of others.

LİGO FEAST \lē-gwò\, in BALTIC RELIGION, major celebration honoring the sun goddess, SAULE. It took place on St. John's Eve (June 23, Midsummer Eve). Bonfires were lighted and the young people leaped over them.

LIGUORI, SAINT ALFONSO MARIA DE' \äl-'fòn-sō...lē-'gwò-rē\, Alfonso *also spelled* Alphonsus (b. Sept. 27, 1696, Marianella, Kingdom of Naples—d. Aug. 1, 1787, Pagani; canonized 1839; feast day August 1), Italian doctor of the church, one of the chief 18th-century moral theologians, and founder of the Redemptorists, a congregation dedicated primarily to PARISH and foreign MISSIONS.

After practicing law for eight years, he was ordained a priest in 1726. In 1732 he founded the Congregation of the Most Holy Redeemer, or the Redemptorists, at Scala. Dissension within the congregation culminated in 1777 when he was tricked into signing what he thought was a royal sanction for his rule but was actually a new rule devised by one of his enemies, thus causing the followers of the old rule to break away. In 1762 Pope Clement XIII made Alfonso bishop of Sant' Agata del Goti near Naples; he was obliged to resign the appointment in 1775 because of ill health. He was declared a doctor of the church by Pope PIUS IX in 1871, and in 1950 he was named patron of moralists and confessors by Pope PIUS XII.

Liguori's works include moral theology, best represented by his *Theologia moralis* (1748); ascetical and devotional writings, including *Visits to the Blessed Sacrament*, *The True Spouse of Jesus Christ* (for nuns), *Selva* (for priests), and *The Glories of Mary*—one of the most widely used manuals of devotion to the Virgin Mary; and dogmatic writings on such subjects as PAPAL INFALLIBILITY and the power of prayer. By the middle of the 20th century, his works had been translated into 60 languages. In theology Liguori is known as the principal exponent of equiprobabilism, a system of principles designed to guide those in doubt, whether they be free from or bound by a given civil or religious law.

LI-HSÜEH \lī-'shwe\, *Pinyin* Lixue (Chinese: "School of Universal Principles"), school of NEO-CONFUCIAN philosophy, often called the Ch'eng-Chu after its leading philosophers, Ch'eng I and CHU HSI. The Li-hsüeh school stressed that the way to discover LI (conventional norms grounded in universal principles) is to investigate—by means of induction, deduction, the study of history, and participa-

tion in human affairs—the myriad things of the universe in which *li* is present.

LĪLĀ \ˈlī-lä\ (Sanskrit: “play,” “sport,” “spontaneity,” or “drama”), in HINDUISM, a term that has several different meanings, most focusing in one way or another on the effortless or playful relation between the Supreme Reality and the contingent world. For the monistic philosophical tradition of VEDĀNTA, *līlā* refers to the manifestation of the Cosmic One, or BRAHMAN, expressed in every aspect of the empirical world. Some philosophers argue that *līlā* springs from the abundance of the Supreme Being’s bliss, which provides a motive for creation.

In the devotional sects, *līlā* has other and more particular meanings. In the Śākta traditions, *līlā* is generally understood as a certain sweet and playful goodness that characterizes a universe whose essential nature is Śakti (the powerful, energetic principle) becoming Śakti. It is therefore associated with the goddesses LAKṢMĪ and Lalitā; one of the latter’s names is Lilāvinodini. The concept takes on other shadings and plays a central role in the thinking and practice of the Vaiṣṇava (see VAIṢNAVISM) sects. In North India, the adventures of the god RĀMA, depicted in the epic RĀMĀYAṆA, are regarded as his “play,” implying he entered the action as an actor might engage a drama—deeply involved, but with an element of freedom that prevents his being constrained by the “play” of life as lesser beings must be.

Among the worshippers of the god KRISHNA, *līlā* refers to the playful and erotic activities in which he sports with the young women of Braj (*gopīs*) and especially his favorite, RĀDHĀ, as they explore their mutual devotion. His interactions with others who surround him in this pastoral setting—whether heroic, playful, or deeply sad—also qualify as *līlā*. One of the most powerful images associated with this tradition is that of the circle (*rās*) dance, in which Krishna multiplies his form so that each *gopī* thinks it is she who is his partner. It provides the touchstone for a series of staged dramas called *rās līlās* that replicate Krishna’s paradigmatic “sports” so as to draw the devotees into an appropriate “mood” or emotion of love and *līlā* so that they experience the world itself in its true form as divine play. Similarly, the dramatic reenactment of the events of the *Rāmāyaṇa* are known as Rām Līlā, celebrating his deeds in such a way as to draw devotees of this god into his cosmic play.

LILITH \ˈli-lith\, in Jewish FOLKLORE, female DEMON derived from the class of Mesopotamian demons called *lilītu* (feminine: *lilītu*). In rabbinic literature Lilith is variously depicted as the mother of Adam’s demonic offspring or as his first wife. The evil she threatened, especially against children, was counteracted by the wearing of an AMULET

Lilith tempting Eve with an apple in the Garden of Eden, German woodcut, 1470

The Granger Collection

bearing the names of the ANGELS. A cult of Lilith survived among some Jews as late as the 7th century CE.

LIMBO, in ROMAN CATHOLIC theology, border place between heaven and hell where dwell those souls who, though not condemned to punishment, are deprived of the joy of eternal existence with God in heaven. The concept of limbo probably developed in the Middle Ages. Two distinct kinds of limbo have been supposed to exist: (1) the *limbus patrum* (“fathers’ limbo”), which is the place where the OLD TESTAMENT saints were thought to be confined until they were liberated

by Christ in his “descent into hell”; and (2) the *limbus infantum*, or *puerorum* (“children’s limbo”), which is the abode of those who have died without actual SIN but whose ORIGINAL SIN has not been washed away by BAPTISM. This “children’s limbo” included not only unbaptized infants but also the mentally defective.

The question of the destiny of infants dying unbaptized presented itself to Christian theologians at a relatively early period. Generally speaking, the Greek Fathers of the Church inclined to optimism and the Latin Fathers to pessimism. Indeed, some of the Greek Fathers expressed opinions that are almost indistinguishable from the Pelagian view that children dying unbaptized might be admitted to eternal life, though not to the KINGDOM OF GOD. By contrast, ST. AUGUSTINE drew a sharp antithesis between the state of the saved and that of the damned. Later theologians followed Augustine in rejecting the notion of any final place intermediate between heaven and hell, but they otherwise were inclined to take the mildest possible view of the destiny of the irresponsible and unbaptized.

The Roman Catholic church in the 13th and 15th centuries made several authoritative declarations on the subject of limbo, stating that the souls of those who die in original sin only (*i.e.*, unbaptized infants) descend into hell but are given lighter punishments than those souls guilty of actual sin. The damnation of infants and also the comparative lightness of their punishment thus became articles of faith, but the details of the place such souls occupied in hell or the nature of their actual punishment remained undetermined. From the COUNCIL OF TRENT (1545–63) onward, there were considerable differences of opinion as to the extent of the infant souls’ deprivation, with some theologians maintaining that the infants in limbo are affected with sadness because of a felt privation, and other theologians holding that the infants enjoy every kind of natural felicity, as regards their souls now and their bodies after the RESURRECTION. The concept of limbo has remained undefined and problematic and in the 20th century has increasingly been relegated to a marginal position in Roman Catholic theology.

LING

LING \ˈliŋ\, *Pinyin* ling (Chinese: “numinous energy,” or “magic power”), in Chinese popular religion, term used to refer to the effects achieved by supra-human agents such as gods, ancestors, and DEMONS. It is a particularly potent form of CH’I (matter-energy). The manifestation of *ling* is evidence of the active presence and efficacy of the divine realm. When associated with human beings, it can lead to their deification and to the emergence of devotional cults.

LIŪGA \ˈliŋ-gə\, also spelled *liṅgam* \-gəm\ (Sanskrit: “sign,” “distinguishing symbol”), in HINDUISM, symbol of the god SHIVA, worshiped as an emblem of generative power.

The *liṅga* is the main object of worship in Śaivite temples (see ŚAIVISM) and the private shrines of Śaiva families throughout India. Historically, the *liṅga* was a representation of the phallus, as sculptures from the early centuries CE make clear, but many—probably most—modern Hindus do not think of the *liṅga* in these terms. In fact, the general stylization of the *liṅga* into a smooth cylindrical mass asserts a distinctively aniconic meaning, quite by contrast to the *mūrtis* (deities in image form) that serve otherwise as the most important foci of Hindu worship. This interplay is found in Śaivite temples themselves, where the *liṅga* is apt to be at the center, surrounded by a panoply of *mūrtis*. A sexual dimension remains in the most common form in which the *liṅga* appears today, where the *lingam* is placed in the center of a dish-shaped object called the YONI, a symbol of the female sexual organ, often associated with the goddess (ŚAKTI). The two together are a reminder that the male and female principles are forever inseparable and that together they represent the totality of all existence.

Worship of the *liṅga* is performed with offerings of milk, water, fresh flowers, young sprouts of grass, fruit, leaves, and sundried rice. Among the most important of all *liṅgas* are the *svāyambhuva* (“self-originated”) *liṅgas*, which are believed to have come into existence by themselves at the beginning of time;

nearly 70 are worshiped in various parts of India. Another common icon in South India is the *liṅgōdbhavamūrti*, which shows Shiva emerging out of a fiery *liṅga*. This is a representation of the sectarian myth that the gods VISHNU and BRAHMA were once arguing about their respective importance when Shiva appeared in the form of a blazing pillar to quell their pride. Brahma took the form of a swan and flew upward to see if he could find the top of the pillar, and Vishnu took the form of a boar and dived below to find its source, but neither was successful, and both were compelled to recognize Shiva’s superiority.

Liṅga, of a type known as a liṅgōdbhavamūrti, c. 900

LING-PAO \ˈliŋ-ˈbəu\, *Pinyin* Lingbao, form of TAOISM based upon one of the great Taoist scriptural traditions.

Ko Ch’ao-fu began composing the *Ling-pao ching* (“Classic of the Sacred Jewel”) about 397 CE. He claimed that they had been first revealed to his own ancestor, the famous Ko Hsüan, early in the 3rd century. In these works the TAO is personified in a series of “celestial worthies” (*t’ien-tsun*), its primordial and uncreated manifestations. These in turn were worshiped by means of a group of liturgies, which, during the 5th century, became supreme in Taoist practice, completely absorbing the older, simpler rites of the T’IEN-SHI TAO (“Way of the Celestial Masters”). As each celestial worthy represented a different aspect of the Tao, so each ceremony of worship had a particular purpose, which it attempted to realize by distinct means. The rites as a whole were called *chai* (“retreat”), from the preliminary abstinence obligatory on all participants. They lasted a day and a night or for a fixed period of three, five, or seven days; the number of persons taking part was also specified, centering on a sacerdotal unit of six officiants. One’s own salvation was inseparable from that of his ancestors; the Huang-lu *chai* (Retreat of the Yellow Register) was directed toward the salvation of the dead. Chin-lu *chai* (Retreat of the Golden Register), on the other hand, was intended to promote auspicious influences on the living. The T’u-t’an *chai* (Mud and Soot Retreat, or Retreat of Misery) was a ceremony of collective contrition; in Chinese civil law, confession resulted in an automatic reduction or suspension of sentence. These and other rituals were accomplished for the most part in the open, within a specially delimited sacred area, or altar (*t’an*), the outdoor complement of the oratory. The chanted liturgy, innumerable lamps, and clouds of billowing incense combined to produce in the participants a cathartic experience that assured these ceremonies a central place in subsequent Taoist practices.

LINUS \ˈli-nəs\, also spelled *Linus*, in Greek mythology, the personification of lamentation. The name derives from the ritual cry *ailinos*, the refrain of a dirge.

According to an Argive story, Linus, child of APOLLO and Psamathe (daughter of Crotopus, king of Argos), was exposed at birth and was torn to pieces by dogs. In revenge, Apollo sent a Poine, or avenging spirit, which destroyed the Argive children. The hero Coroebus killed the Poine, and a festival, Arnis, otherwise called dog-killing day (*kunophonis*), was instituted, in which stray dogs were killed, sacrifice offered, and mourning made for Linus and Psamathe.

In a Theban variant, Linus was the son of OURANIA, muse of astronomy, and the musician Amphimarus, and he was himself a great musician. He invented the Linus song but was put to death by Apollo for presuming to be his rival.

A later, half-burlesque story related that Linus was the Greek hero HERACLES’ music master and was killed by his pupil, whom he tried to correct.

LI SHAO-CHÜN \ˈlɛ-ˈshəu-ˈjüən\, *Pinyin* Li Shaojun (fl. 2nd century BCE, China), noted Chinese Taoist and occult practitioner (*fang-shih*) of the Han period. Li was the first known Taoist alchemist, the first to make the practice of certain hygienic exercises a part of Taoist rites, and the first to claim that a Taoist’s ultimate goal was to achieve the status of HSIEN, or immortal sage.

In 133 BCE, Li persuaded the emperor Wu-ti that immortality could be achieved by eating from a cinnabar vessel that had been transmuted into gold. When that occurred, one would see the famous sages on P’eng-lai, the legendary

isles of immortality. If one performed the proper rituals while gazing on these *hsien*, one would never die. The first step in the transmutation of cinnabar involved prayers to TSAO-CHÜN, the Furnace Prince. These prayers became an established part of some forms of later Taoist ritual, and shortly after Li's death, Tsao-chün came to be considered the first of the great Taoist divinities.

LITURGICAL MOVEMENT, 19th- and 20th-century effort in Christian churches to restore the active and intelligent participation of the people in the liturgy, or official rites, of CHRISTIANITY. The movement sought to make the liturgy both more attuned to early Christian traditions and more relevant to modern Christian life by simplifying rites, developing new texts (in the case of ROMAN CATHOLICISM, translating the Latin texts into the vernacular of individual countries), and reeducating both laity and clergy on their role in liturgical celebrations.

In the Roman Catholic church, the movement can be traced back to the mid-19th century, when it was initially connected with monastic worship, especially in the BENEDICTINE communities in France, Belgium, and Germany. After about 1910, it spread to Holland, Italy, and England and subsequently to the United States. Changes introduced by POPE PIUS X that mark the beginning of the Liturgical Movement include his eucharistic decrees, which eased the regulations governing daily communion, his revival of the Gregorian plainsong, and his recasting of the breviary and of the missal.

POPE PIUS XII issued in 1947 the ENCYCLICAL *Mediator Dei*, in which he stressed the importance of liturgy and the need for people to participate. The reform of rites began with HOLY WEEK revisions in 1951 and 1955. The SECOND VATICAN COUNCIL (1962–65) recommended that Roman Catholics should actively take part in the liturgy; legislated the use of the vernacular for liturgies, overturning the traditional use of Latin as the sole liturgical language; and ordered the reform of all sacramental rites. A new LECTIONARY and calendar (the *Ordo Missae*) appeared in 1969, and a definitive Roman Missal was published in 1970.

Protestant churches have also revised texts and updated archaic expressions in their liturgical rites. The United Presbyterian Church published a liturgy for congregational use, the *Worshipbook*, in 1970. In 1978 the Lutheran Church in the United States published its revised *Lutheran Book of Worship*, offering more individual choices in liturgy and also an expanded variety of musical styles. In 1979 the Episcopal Church adopted a revised *Book of Common Prayer*, which offered a choice of texts, one preserving the traditional language.

LLEU \ˈhləi\, or Llew Llaw Gyffes \-ˈhlaü-ˈgə-fes\: see LUGUS.

LLYR \ˈhlir\, in Celtic mythology, leader of one of two warring families of gods. In Welsh tradition, Llyr and his son Manawydan, like the Irish gods Lir and Manannán, were associated with the sea. Llyr's other children included BRÂN (Bendigeidfran), a god of bards and poetry; Branwen, wife of the sun god Matholwch, king of Ireland; and Creidylad (in earlier myths, a daughter of Lludd).

Hearing of Matholwch's maltreatment of Branwen, Brân and Manawydan led an expedition to avenge her. Brân was killed in the war, which left only seven survivors, among them Manawydan and Pryderi, son of PWYLL. Manawydan married Pryderi's mother, RHIANNON, and was thereafter closely associated with them.

LOGIA \ˈlō-gē-ə, -ä\, hypothetical collection, either written or oral, of the sayings of JESUS, which might have been in circulation around the time of the composition of the SYNOPTIC GOSPELS. (The Greek word *logion*, which meant "oracular utterance" in Ancient Greek, was used in the plural form *logia* in the Greek of the SEPTUAGINT and NEW TESTAMENT to refer to bodies of sayings of sacred significance.) Most biblical scholars agree that MATTHEW and LUKE based their written accounts largely on The Gospel According to Mark, but both share a good deal of material that is absent from Mark. This shared material is largely made up of sayings attributed to Jesus, and this has led biblical scholars to hypothesize the existence of a source, perhaps the logia, from which the shared material is drawn.

The first references to the logia were made by Papias, a 2nd-century bishop of Hierapolis in Asia Minor, in his work *Logiōn kyriakōn exēgēseis* ("Interpretation of the Logia of the Lord"), and by other early Christian writers, such as Polycarp, a 2nd-century bishop of Smyrna in Asia Minor. According to EUSEBIUS, a 4th-century church historian, Papias wrote that the apostle Matthew arranged the logia of Jesus in an orderly form in Hebrew.

Some scholars contend that the logia was a collection of OLD TESTAMENT oracles predicting the coming of the MESSIAH, but this view has been challenged. In addition to the sayings of Jesus, Matthew and Luke share narrative material. Scholars have therefore hypothesized the existence of a kind of proto-gospel that incorporates the logia. Experts have called this hypothetical source Q (from German *Quelle*, "source"). The existence of the source Q is theoretical. Though the logia may not have been part of either Q or of the Old Testament messianic oracles, it is generally assumed that early Christians either wrote down or transmitted orally the sayings of Jesus, much as Jews of the period collected the sayings of respected RABBIS, and that this material was used by both Matthew and Luke.

LOGICAL POSITIVISM, also called Logical Empiricism, philosophical doctrine formulated in Vienna in the 1920s, according to which scientific knowledge is the only kind of factual knowledge and all traditional metaphysical doctrines are to be rejected as meaningless—that the "great unanswerable questions" about substance, causality, freedom, and God are unanswerable just because they are not genuine questions at all.

One fundamental element of Logical Positivism is the verification principle, which holds that a statement is meaningful only if it is either empirically verifiable or else tautological (*i.e.*, such that its truth arises entirely from the meanings of its terms). According to this principle, which gave what the positivists considered to be the touchstone of meaning, an assertion has meaning if and only if it is verifiable at least in principle by sense experience. Thus, religious and moral statements would be without literal significance, because there is no way in which they can be either justified or falsified (refuted). Such statements may influence feelings, beliefs, or conduct but not in the sense of being true or false and hence of imparting knowledge. A non-tautological statement has meaning only if some set of observable conditions is relevant to determining its truth or falsity; thus the meaning of a statement is the set of conditions under which it would be true.

In the years immediately after World War II this account of factual meaning was applied to theological statements, raising such questions as: What observable difference does it make whether it is true or false that "God loves us"?

Whatever tragedies occur, do not the faithful still maintain their belief? But if it is not possible to conceive of circumstances in which “God loves us” would have to be judged false, is not the statement factually empty or meaningless? This challenge evoked three kinds of response. Some Christian philosophers declared it to be a non-challenge, on the ground that the positivists never succeeded in finding a precise formulation of the verification criterion that was fully satisfactory even to themselves. Among those who thought it necessary to face this challenge, one group granted that theological statements lack factual meaning and suggested that their proper use lies elsewhere, as expressing a way of looking at the world or a moral point of view and commitment. The other group claimed that THEISM is ultimately open to experiential confirmation. The theory of eschatological verification (developed by John Hick) holds that the belief in future postmortem experiences will be verified if true (though not falsified if false), and that in a divinely governed universe such experiences will take forms confirming theistic faith. Thus although the believer and the disbeliever do not have different expectations about the course of earthly history, they do expect the total course of the universe to be radically different. In the late 20th century attention was directed to the multiple legitimate uses of language in the various language games developed within different human activities and forms of life; and it was urged that RELIGIOUS BELIEF has its own autonomous validity, not subject to verificationist criteria. Statements about God and eternal life do not make true-or-false factual claims but express, in RELIGIOUS LANGUAGE, a distinctive attitude to life and way of engaging in it.

LOGOS \ˈlō-gōs, ˈlō-gōs\ (Greek: “word,” “reason,” or “plan”), plural *logoi*, in Greek philosophy and theology, the divine reason implicit in the cosmos, ordering it and giving it form and meaning. Though the concept defined by the term *logos* is found in Greek, Indian, Egyptian, and Persian philosophical and theological systems, it became particularly significant in Christian writings and doctrines to describe or define the role of JESUS CHRIST as the principle of God active in the creation and the continuous structuring of the cosmos and in revealing the divine plan of salvation to man. It thus underlies the basic Christian doctrine of the preexistence of Jesus.

The idea of the *logos* in Greek thought harks back at least to the 6th-century-BCE philosopher Heraclitus, who discerned in the cosmic process a *logos* analogous to the reasoning power in man. Later, the Stoics, philosophers who followed the teachings of the thinker Zeno of Citium (4th–3rd century BCE), defined the *logos* as an active rational and spiritual principle that permeated all reality. They called the *logos* providence, nature, god, and the soul of the universe, which is composed of many seminal *logoi* that are contained in the universal *logos*. PHILO JUDAËUS, a 1st-century-CE Jewish philosopher,

taught that the *logos* was the intermediary between God and the cosmos, being both the agent of creation and the agent through which the human mind can apprehend and comprehend God. According to Philo and the Middle Platonists, the *logos* was both immanent in the world and at the same time the transcendent divine mind.

In the first chapter of *The Gospel According to John*, Jesus Christ is identified as “the Word” (Greek *logos*) incarnated, or made flesh. This identification of Jesus with the *logos* is based partly on the Jewish view that Wisdom is the divine agent that draws man to God and is identified with the word of God. The author of *The Gospel According to John* used this philosophical expression, which easily would be recognizable to readers in the Hellenistic world, to emphasize the redemptive character of the person of Christ. Just as the Jews had viewed the TORAH (the Law) as preexistent with God, so also the author of *John* viewed Jesus, but interprets the *logos* as inseparable from the person of Jesus and does not simply imply that the *logos* is the revelation that Jesus proclaims.

The identification of Jesus with the *logos* was further developed in the early church on the basis of Greek philosophical ideas. This development was dictated by the need to express the Christian faith in terms that would be intelligible to the Hellenistic world and to convey the view that CHRISTIANITY was superior to, or heir to, all that was best in pre-Christian philosophy. Thus, in their apologies and polemical works, the early Christian Fathers stated that Christ as the preexistent *logos* (1) reveals the Father to humankind and is the subject of the OLD TESTAMENT manifestations of God; (2) is the divine reason in which the whole human race shares, so that the 6th-century-BCE philosopher and others who lived with reason were Christians before Christ; and (3) is the divine will and word by which the worlds were framed.

LOKA \ˈlō-kə\ (Sanskrit: “world,” “open space,” “universe”), in the cosmography of HINDUISM, the universe or any particular division of it. The most common division of the universe is the *tri-loka*, or three worlds (heaven, earth, atmosphere; later, heaven, world, netherworld), each of which is divided into seven regions.

Sometimes 14 worlds are enumerated: 7 above Earth and 7 below. The various divisions illustrate the Hindu concept of innumerable hierarchically ordered worlds. *Lokas* are often associated with particular divinities, a linkage that is carried over into BUDDHISM, with the deities replaced by Buddhas or BODHISATTVAS.

LOKI \ˈlō-kē\, in Norse mythology, cunning trickster who had the ability to change his shape and sex. Although his father was the GIANT Fárbaúti, he was included among the AESIR (a tribe of gods). Loki was represented as the companion of ODIN and THOR, helping them but sometimes causing difficulty for them and himself. He appeared as the enemy of the gods; he caused the death of the god BALDER. With the giantess Angerboda (Angrboda: “Distress Bring-

Forge stone incised with the face of Loki, his lips sewn, Horsens Fjord, Denmark; in the *Werner Forman Archive*, Arhus Kunstmuseum, Denmark
Art Resource

er"), Loki produced three evil progeny: HEL, the goddess of death; JÖRMUNGAND, the serpent surrounding the world; and FENRIR (Fenrisúlfr), the giant wolf that will swallow Odin at the end of the world. *See also* GERMANIC RELIGION.

LOLLARDS, followers of JOHN WYCLIFFE in late medieval England. The pejorative name (from Middle Dutch *lollaert*, "mumbler") had been applied earlier to groups suspected of heresy. The first Lollard group was formed among some of Wycliffe's colleagues at Oxford. In 1382 the archbishop of Canterbury forced some Oxford Lollards to renounce their views, but the sect continued to grow. The accession of Henry IV in 1399 signaled a wave of repression. In 1414 a Lollard rising was quickly defeated by Henry V; it marked the end of the Lollards' overt political influence. A Lollard revival began in 1500, and by 1530 Lollard and Protestant forces had begun to merge. The Lollards were responsible for a translation of the Bible, and their core teachings included an emphasis on personal faith and the authority of the Bible and the rejection of clerical CELIBACY, TRANSUBSTANTIATION, and INDULGENCES.

LORD'S PRAYER, *Latin* Oratio Dominica, *also called* Pater Noster (Latin: "Our Father"), prayer taught by JESUS to his disciples and principal prayer used by all Christians in common worship. It appears in two forms in the NEW TESTAMENT, the shorter version in Luke 11:2–4 and the longer version in Matthew 6:9–13. Scholars believe that the version in Luke is closer to the original, the extra phrases in Matthew's version having been added in liturgical use.

The Lord's Prayer contains three common Jewish elements: praise, petition, and a yearning for the coming KINGDOM OF GOD. It consists of an introductory address and seven petitions. The Matthean version used by the ROMAN CATHOLIC church is as follows:

- ◆ **Our Father who art in Heaven,
Hallowed be thy name;
Thy Kingdom come;
Thy will be done
On earth as it is in heaven.
Give us this day our daily bread;
And forgive us our trespasses
As we forgive those who trespass against us;
And lead us not into temptation,
But deliver us from evil.** ◆

The English version of the Lord's Prayer used in many Protestant churches departs from the Roman Catholic version by using "debts" and "debtors" instead of "trespasses" and "those who trespass against us" and adding the concluding DOXOLOGY (short formula of praise):

- ◆ **For thine is the Kingdom
And the power
And the glory,
Forever and ever.** ◆

In the Catholic Mass, the doxology is recited following a brief interruption by the presiding priest. The doxology was probably added early in the Christian era, since it occurs in some early manuscripts of the Gospels and is used in both Roman Catholic and EASTERN ORTHODOX liturgies as an elaboration of the Lord's Prayer.

A more straightforward, ecumenical version of the prayer, called the English Language Liturgical Consultation

(ELLC), has been adopted by many denominations, even some Roman Catholic churches, since the 1970s. It eliminates words like "art" and "thine" and replaces them with vocabulary commonly used today. Other changes include replacing "debts" with "sins" and "And lead us not into temptation" with "Save us from the time of trial."

Scholars disagree about Jesus' meaning in the Lord's Prayer. Some view it as "existential," referring to present human experience on earth; others interpret it as eschatological, referring to the coming Kingdom of God. The prayer lends itself to both interpretations, and further questions are posed by the existence of different translations. In the case of "daily bread," for example, the Greek word *epiousion*, which modifies "bread," has no parallels in Greek and may have meant "for tomorrow." Thus the petition "Give us this day our daily bread" may be given the eschatological interpretation "Give us today a foretaste of the heavenly banquet to come." This view is supported by Ethiopic versions and by ST. JEROME'S reference to the "bread of the future" in the lost Gospel According to the Hebrews.

LOTUS-EATER, *Greek plural* Lotophagoi, in Greek mythology, one of a tribe encountered by ODYSSEUS on his way back to Ithaca after the Trojan War. Odysseus' scouts were invited to eat a mysterious plant. Those who did were overcome by blissful forgetfulness; they had to be dragged back to the ship or they would never have returned. The phrase "to eat lotus" is used by numerous ancient writers to mean "to forget," or "to be unmindful."

LOTUS SUTRA \ˈsü-trə\, *Sanskrit* Saddharmapuṇḍarīka-sūtra \səd-ˈdər-mə-ˌpʊn-də-ˈrē-kə-ˈsü-trə, -ˈdär-\ ("Lotus of the Good Law [or True Doctrine] Sutra"), MAHĀYĀNA Buddhist texts venerated as the quintessence of truth by the T'ĪEN-T'AI (Japanese: Tendai) school and the NICHIREN sect.

In the *Lotus Sutra* the buddha spoken of is the divine eternal buddha, who attained perfect enlightenment aeons ago. The goals of emancipation and sainthood are deemed inferior: all beings are invited to become fully enlightened buddhas through the grace of innumerable BODHISATTVAS.

The *Lotus Sutra* has a total of 28 chapters and contains many charms and MANTRAS. It was first translated into Chinese (*Miao-fa lien-hua ching*) in the 3rd century CE and was extremely popular in China and Japan, where it was believed that the act of chanting it would bring salvation.

LOURDES \ˈlürd, ˈlürd\, PILGRIMAGE town, southwestern France, Hautes-Pyrénées *département*, Provence-Alpes-Côte-d'Azur region, southwest of Toulouse.

Lourdes' renown dates from 1858, when, from February 11 to July 16, Marie-Bernarde Soubirous (*see* BERNADETTE OF LOURDES, SAINT), a 14-year-old girl, allegedly had visions of the Virgin MARY in the nearby Massabielle grotto. The visions were declared authentic by the pope in 1862, and the veneration of Our Lady of Lourdes was authorized. The spring in the grotto, revealed to Bernadette, was declared to have miraculous qualities, and Lourdes has become a major pilgrimage center. Almost 3,000,000 pilgrims, about 50,000 of them sick or disabled, go there annually. The BASILICA, built above the grotto in 1876, proved too small for the increasing number of pilgrims, and in 1958 an underground church, seating 20,000, was dedicated.

LOYOLA, SAINT IGNATIUS OF \ig-ˈnā-shē-əs, -shəs... löi-ˈb-lə\, *Spanish* San Ignacio de Loyola, *baptized* Iñigo (b.

1491, Loyola, Castile—d. July 31, 1556, Rome; canonized March 12, 1622; feast day July 31), Spanish theologian and one of the most influential figures in the Catholic COUNTER-REFORMATION of the 16th century, founder of the Society of Jesus (JESUITS) in Paris in 1534.

Born in the Basque province of Guipúzcoa the youngest son of a noble and wealthy family, in 1517 Ignatius became a knight in the service of a relative, Antonio Manrique de Lara, duke of Nájera and viceroy of Navarre. While defending the citadel of Pamplona against the French in 1521, Ignatius sustained a bad fracture of his right leg and damage to his left.

After treatment at Pamplona, he was transported to Loyola, where he chose to undergo painful surgery to correct blunders made when the bone was first set. The result was a convalescence of many weeks, during which he read a life of Christ and a book on the lives of the saints. The version of the lives of the saints he was reading contained prologues to the various lives by a CISTERCIAN monk who conceived the service of God as a holy chivalry. After much reflection, he resolved to imitate the holy austerities of the saints in order to do penance for his sins.

In 1522 Ignatius went to Manresa, where he lived as a beggar, ate and drank sparingly, scourged himself, and for a time neither combed nor trimmed his hair and did not cut his nails. Daily he attended MASS and spent seven hours in prayer, often in a cave outside Manresa. While sitting by a river, he experienced what he described as a profound understanding. On this basis he sketched the fundamentals of *The Spiritual Exercises*, which he continued to revise until Pope Paul III approved it in 1548. *The Spiritual Exercises* is a manual of spiritual arms containing a vital and dynamic system of spirituality.

Ignatius left Barcelona on PILGRIMAGE in March 1523 and reached Jerusalem in September. He would have liked to settle there permanently, but the FRANCISCAN custodians of the shrines of the Latin church would not listen to this plan. After visiting Bethany, the Mount of Olives, Bethlehem, the Jordan, and Mount of Temptation, Ignatius left Palestine and reached Barcelona in March 1524.

Ignatius then decided to acquire a good education, convinced that a well-trained man would accomplish in a short time what one without training would never accomplish. He studied at Barcelona for nearly two years. In 1526 he transferred to Alcalá, and then Salamanca, each time acquiring disciples but meeting with charges of heresy; ultimately he was forbidden to teach until he had finished his studies. This prohibition induced Ignatius to leave his disciples and Spain.

From 1528 to 1535 he studied in Paris while living on alms. Eventually Ignatius won the M.A. of the university. He also gathered the companions who were to be cofounders with him of the Society of Jesus, among them FRANCIS XAVIER. On Aug. 15, 1534, they bound themselves by vows of poverty, chastity, and obedience, though as yet without the express purpose of founding a religious order.

Ignatius and most of his companions were ordained on June 24, 1537. Later, while in prayer, Ignatius seemed to see Christ with the cross on his shoulder and beside him God, who said, "I wish you to take this man for your servant," and Jesus took him and said, "My will is that you should serve us." On Christmas Day 1538 Ignatius said his first mass at the Church of St. Mary Major in Rome.

In 1539 the companions decided to form a permanent union, and in 1540 Pope Paul III approved the plan of the new order. Loyola was the choice of his companions for the

office of general of the order. The Society of Jesus developed rapidly under his hand. When he died there were about 1,000 Jesuits divided into 12 administrative units, called provinces. Loyola dispatched missionaries to Germany, India, the Congo, and Ethiopia. He founded the Roman College, embryo of the Gregorian University, and a German seminary. He also established a home for fallen women and one for converted Jews. In 1546 Loyola secretly received into the society Francis Borgia, duke of Gandía and viceroy of Catalonia. When word of this became public four years later it created a sensation. Borgia organized the Spanish provinces of the order and became the order's third general.

In the *Constitutions* of the Society of Jesus he decreed that his followers were to abandon some of the traditional forms of the religious life in favor of greater adaptability and mobility; they also renounced chapter government by the members in favor of a more authoritative regime. Loyola insisted on long and thorough training of his followers. Convinced that women are better ruled by women than by men, he excluded a female branch of the order.

Though frequently sick, he continued to direct the order until his death. He was beatified by Pope Paul V in 1609 and canonized by Pope Gregory XV in 1622. In 1922 he was declared patron of all spiritual retreats by Pope Pius XI.

LUCIFER \ˈlū-sə-fər\ (Latin: "Light Bearer"), Greek Phosphorus, or Eosphorus, in classical mythology, morning star (*i.e.*, the planet VENUS at dawn); personified as a male figure bearing a torch, Lucifer had almost no legend, but in poetry he was often herald of the dawn. In Christian times Lucifer came to be regarded as the name of SATAN before his fall. It was thus used by John Milton (1608–74) in *Paradise Lost*.

LUD \ˈlūd\, among the Votyaks and Zyryans, sacred grove where sacrifices were performed. The sacrificial ceremonies performed annually in the groves were usually centered on some ancient tree dedicated to a deity. The *lud*, surrounded by a high board or log fence, generally consisted of a grove of fir trees, a place for a fire, and tables for the sacrificial meal. The grove was so sacred that no unseemly behavior was allowed in its vicinity, and those with legitimate business at the enclosure had to bathe before entering it. People were forbidden to break even a branch from its trees, which was watched over by a special guardian whose position was hereditary. In some areas women and children were banned from the grove altogether. Each family had its own *lud*, and, in addition, there were great *luds* at which the entire clan met for sacrificial feasts. All food had to be

St. Ignatius of Loyola, death mask

By courtesy of the Archivum Romanum Societatis Iesu

consumed on the premises, and the hides of the sacrificed animals were hung on the trees.

Similar sacrificial groves existed among most of the Finno-Ugrian peoples (see FINNO-UGRIC RELIGIONS). In the *keremet* of the Mordvins, sacrifices were made both upward to the sun or downward to the night. In groves of deciduous trees the HIGH GODS were worshiped, whereas the lower spirits lived in the fir groves. In the Cheremis *keremet* only the native language could be spoken because the deities would have been offended by foreign speech. Some of the groves were specifically dedicated to heroic ancestors, and carved images were reported present in the groves by the earliest travelers to the area.

The Finnish *hiisi* and Estonian *hiis* were apparently comparable groves. In Ingria sacred groves were still in use during the latter part of the 19th century, where prayers and offerings were directed to UKKO, a thunder god, and Sämpsä, a god of vegetation.

LUDI PUBLICI \ˈlü-dē-ˈpü-blē-kē\ (Latin: “public games”), ancient Roman spectacles, primarily consisting of chariot races and various kinds of theatrical performances, usually held at regular intervals in honor of some god; they are distinct from the gladiatorial contests (originally associated with funeral rites). A special magistrate presided over them. Oldest and most famous were the Ludi Romani, or Magni, dedicated to JUPITER and celebrated each year in September. Like the Ludi Apollinares (for APOLLO) and the Ludi Cereales (for CERES), they centered on the chariot races of the Circus Maximus. A special feature of the Megalensia, or Megalesia, held in April and dedicated to Cybele, the GREAT MOTHER OF THE GODS, were the *ludi scaenici*, consisting of plays and farces.

LUIDLUL BEL NEMEQI \ˈlūd-lül-ˈbäl-ne-ˈme-kē\ (Akkadian: “Let Me Praise the Expert”), in the literature of ancient MESOPOTAMIAN RELIGION, philosophical composition concerned with a man who, seemingly forsaken by the gods, speculates on the changeability of men and fate. The composition, also called the “Poem of the Righteous Sufferer” or the “Babylonian JOB,” has been compared to the biblical Book of Job.

LUGNASAD \ˈlü-nə-sə, ˈlūg-nə-səth\, also spelled Lughnasadh, Celtic religious festival celebrated August 1 as the feast of the marriage of the god LUGUS; this was also the day of the harvest fair.

LUGUS \ˈlü-gəs\, also called Lug, or Lugh \ˈlūg\, in ancient CELTIC RELIGION, one of the major gods. He is probably the deity whom Julius Caesar identified with the Roman god MERCURY. His cult was widespread throughout the early Celtic world, and his name occurs as an element in many continental European and British place-names, such as Lyon, Laon, Leiden, and Carlisle (formerly Luguwallium, “Strong in the God Lugus”).

According to Irish tradition, Lug Lámfota (“Lug of the Long Arm”) was the sole survivor of triplet brothers all having the same name. At least three dedications to Lugus in plural form, Lugoues, are known from the European continent, and the Celtic affinity for trinitarian forms would suggest that three gods were likewise envisaged in these dedications. Lug’s son, or rebirth, according to Irish belief, was the great Ulster hero, CÚ CHULAINN.

In Wales, as Lleu Llaw Gyffes (“Lleu of the Dexterous Hand”), he was also believed to have had a strange birth.

His mother was the virgin goddess Aranrhod (“Silver Wheel”). When her uncle, the great magician MATH, tested her virginity by means of a wand of chastity, she at once gave birth to a boy child, who was instantly carried off by his uncle GWYDION and reared by him. Aranrhod then sought repeatedly to destroy her son, but she was always prevented by Gwydion’s powerful magic; she was forced to give her son a name and provide him with arms; finally, as his mother had denied him a wife, Gwydion created a woman for him from flowers.

Lug was also known in Irish tradition as Samildánach (“Skilled in All the Arts”). The variety of his attributes and the extent to which his calendar festival LUGNASAD on August 1 was celebrated in Celtic lands indicate that he was one of the most important of all the ancient Celtic deities.

LU HSIANG-SHAN \ˈlü-ˈshyāŋ-ˈshän\, Pinyin Lu Xiangshan, also called Lu Chiu-yüan \-ˈjyō-ˈyüwän, -ˈyüwän\, courtesy name (tzu) Tzu-ching, literary name (hao) Ts’un-chai (b. 1139, Kiangsi, China—d. Jan. 10, 1193, China), idealist NEO-CONFUCIAN philosopher of the Southern Sung and rival of the rationalist CHU HSI. Lu’s thought was revised and refined three centuries later by Wang Yang-ming. The name of their school is HSIN-HSÜEH, often called the Lu-Wang school, after its two great proponents. It was opposed to the other great school (and the one that was dominant), the LI-HSÜEH.

Lu held a number of government posts, but he devoted most of his life to teaching and lecturing. He taught that the highest knowledge of the TAO comes from the constant practice of inner reflection and self-education. In this process, man develops his original goodness, for human nature is basically good, or regains his goodness if it has been corrupted and lost through material desires (*wu yü*).

After his death, Lu’s works were collected and published under the title of *Hsiang-shan hsien-sheng ch’üan-chi* (“Complete Works of Master Hsiang-shan”). In 1217 he was canonized as Wen-an, and in 1530 a tablet in his honor was placed in the Confucian temple of the Ming dynasty.

LU HSIU-CHING \ˈlü-ˈshyō-ˈjīŋ\, Pinyin Lu Xiuqing (b. 406—d. 477 CE), scholar of TAOISM in South China who edited the revealed LING-PAO scriptures that became the basis for the most important ritualistic, or liturgical, traditions in religious TAOISM. His efforts to assemble Taoist texts and to unify Taoist rituals show the influence of BUDDHISM during the 5th century and led eventually to the creation of a coherent sectarian tradition and scriptural canon.

LUKE, SAINT \ˈlük\ (fl. 1st century CE), in Christian tradition, the author of both the third Gospel and THE ACTS OF THE APOSTLES, and a close companion of the Apostle PAUL. Luke may have accompanied Paul on several missionary journeys. His writing style indicates a cultivated literary background.

Information about his life is scanty. Luke is first mentioned in the letters of the Apostle Paul as the latter’s “co-worker” and as the “beloved physician.” The former designation is the more significant one, for it identifies him as one of a professional cadre of itinerant Christian “workers,” many of whom were teachers and preachers. His medical skills, like Paul’s tentmaking, may have contributed to his livelihood. If Luke was the author of the third Gospel and the Acts of the Apostles, as is very probable, the course and nature of his ministry may be sketched in more detail. He excludes himself from those who were eyewitnesses of Christ’s ministry. His participation in the Pauline mission,

however, is indicated by the use of the first person in the “we” sections of Acts.

The “we” sections place the author with Paul during his initial mission into Greece (c. 51 CE). It is there that Luke later rejoins Paul and accompanies him on his final journey to Jerusalem (c. 58 CE). He appears with Paul on his prison voyage from Caesarea to Rome and again, according to 2 Timothy 4:11, at the time of the APOSTLE'S martyrdom in the imperial city (c. 66 CE).

The literary style of his writings and the range of his vocabulary mark him as an educated man. His intimate knowledge of the OLD TESTAMENT and the focus of interest in his writings favor, on balance, the view that he was a Jewish Christian who followed a Greek lifestyle and was comparatively lax in ritual observances. Writings from the latter half of the 2nd century provide further information. A number of them—ST. IRENAEUS' *Against Heresies*, the Anti-Marcionite Prologue to the Gospel, and the *Muratorian Canon* listing the books received as sacred by the Christians—identify Luke as the author of the third Gospel and Acts, identifying him as a man from Antioch, Syria, who wrote “moved by the Holy Spirit”—that is, as a prophet. Whether Luke is to be identified with the prophet Lucius mentioned in Acts 13:1 and with St. Paul's “fellow worker” (and kinsman) in Romans 16:21 is more questionable, although not impossible. Less than certain also is the comment of the prologue placing the writing of the Gospel and Luke's death in Greece; but, on the whole, it is more probable than the later traditions locating his literary work in Alexandria (or Rome) and his death in Bithynia. The identification of St. Luke as “a disciple of the Apostles” probably reflects the concern of the 2nd-century church to place all canonical Christian writings under an apostolic umbrella. Later notions that Luke was one of the 70 disciples appointed by the Lord, that he was the companion of Cleopas, and that he was an artist appear to be legendary. In liturgical tradition Luke's feast day is October 18.

Luke had a literary background and wrote in good idiomatic Greek. The Gospel bearing his name and the Acts of the Apostles were probably written during or shortly after the Jewish revolt (66–73 CE), although a somewhat later date is not inconceivable. Some scholars have also associated Luke with the Pastoral Letters and the Letter to the Hebrews, either as author or as amanuensis, because of linguistic and other similarities with the Gospel and the Acts. The Gospel and Acts were, in all likelihood, tagged with the name Luke when they were deposited in the library of the author's patron, Theophilus (Luke 1:3). Within a century there was a widespread tradition identifying that Luke with an otherwise insignificant physician and colleague of Paul. The tradition is on the whole consistent with the literary and historical character of the documents, and one may be reasonably certain that it is correct.

LUMBINĪ \lŭm-'bē-nē\, grove near the southern border of modern-day Nepal where, according to Buddhist legend, Queen MAHĀMĀYĀ stood and gave birth to the future BUDDHA GOTAMA while holding onto a branch of a sal tree. The site is a popular destination of Buddhist PILGRIMAGE. There are two references to Lumbinī as the birthplace of the Buddha in PĀLI SCRIPTURE, but the earliest canonical accounts of the birth are in Sanskrit scripture, the MAHĀVĀSTU (ii. 18) and the LALITAVĪSTĀRA (ch. 7), neither of which can be dated earlier than the 3rd or the 4th century CE. The discovery of an inscription recording the visit of AŚOKA, Maurya emperor of India from about 265 to 238 BCE, to the spot he con-

sidered the birthplace makes it probable that the legend was established at least as early as the 3rd century BCE.

LUNAR DEITY, any god or goddess related to or associated with the moon and its cycles.

LUNG-MEN CAVES \'lŭŋ-'mən\, *Pinyin* Longmen, series of Chinese cave temples carved into the rock of a high river bank south of the city of Lo-yang, in Honan province. The temples were begun late in the Northern Wei dynasty (386–535) and construction continued sporadically through the 6th century and the T'ang dynasty (618–907).

The Northern Wei caves at Lung-men (including the often-cited Ku-yang cave and the Pin-yang cave) are intimate in scale, contain complex ICONOGRAPHY, and were elegantly crafted to create ethereal effects in the hard stone.

Stone sculptures in the Pin-yang cave, Lung-men, Northern Wei dynasty (386–535 CE)

Jimbunkagaku Kenkyusho, Kyoto

The BUDDHA images—clothed in the costume of the Chinese scholar, with a sinuous cascade of drapery falling over an increasingly flattened figure—provide the type form for what is known as the Lung-men style. Work at the site, which continued in a minor and sporadic way through later times, culminated in the T'ang dynasty with the construction of a cave shrine, known as Feng-hsien Ssu, of truly monumental proportions, carved out over the three-year period 672–675. The square plan measures about 100 feet on each side, and a colossal seated Buddha figure upon the back wall, flanked by attendant figures, is more than 35 feet high. (See also YÜN-KANG CAVES.)

LUNG-MEN TAOISM \ˈlʊŋ-ˈmən-ˈdaʊ-i-zəm\, *Pinyin* Longmen (Chinese: “Dragon Gate”), offshoot of the Ch’üan-chen, or Perfect Realization, school of TAOISM founded by WANG CHE. The Lung-men, or Northern, school resulted from the efforts of Wang Che’s disciple, CHIU CHU-CHI (b. 1148—d. 1227), who was patronized by the Yüan emperor Tai-tzu (Genghis Khan). This sect, like Ch’üan-chen in general, promotes the spiritual cultivation of inner alchemy and was heavily influenced by Ch’an (ZEN) Buddhist practices. It continues today in Beijing at the PAI-YÜN KUAN, or Temple of the White Cloud; in Hong Kong; and in other Chinese communities of the diaspora.

LUN-YÜ \lʊn-ˈyü\, *Pinyin* Lunyu, *English Analects* \ˈa-nə-ˈlekt\ (Chinese: “Conversations”), one of four Confucian texts that, when published together in 1190 by the Neo-Confucian philosopher CHU HSI, became the great Chinese classic known as *Ssu-shu* (“FOUR BOOKS”).

Lun-yü is considered by scholars to be the most reliable source of the doctrine of CONFUCIUS (551–479 BCE). It covers the basic ethical concepts of Confucius—e.g., JEN (“benevolence”), CHÜN-TZU (“the superior man”), T’IEN (“Heaven”), CHUNG-YUNG (doctrine of “the mean”), LI (“proper conduct”), and *cheng-ming* (“adjustment to names”). The last argues that all phases of a person’s conduct should correspond to the true significance of “names”; e.g., marriage should be true marriage, not concubinage. In addition to many direct quotations attributed to Confucius, *Lun-yü* also contains homely glimpses of Confucius as recorded by his disciples.

LUPERCALIA \lʊ-pər-ˈkāl-ē-ə, -ˈkāl-yə\, ancient Roman festival that was conducted annually on February 15 under the superintendence of a corporation of priests called Luperci. The origins of the festival are obscure, although the likely derivation of its name from *lupus* (Latin: “wolf”) has variously suggested connection with a primitive deity who protected herds from wolves and with the legendary she-wolf who nursed ROMULUS AND REMUS. As a fertility rite, the festival is also associated with the god FAUNUS.

Each Lupercalia began with the sacrifice by the Luperci of goats and a dog, after which two of the Luperci were led to the altar, their foreheads were touched with a bloody knife, and the blood wiped off with wool dipped in milk; then the ritual required that the two young men laugh. The sacrificial feast followed, after which the Luperci cut thongs from the skins of the victims and ran in two bands around the Palatine hill, striking with the thongs at any woman who came near them. A blow from the thong was supposed to render a woman fertile. In 494 CE the Christian church under Pope Gelasius I appropriated the day of this rite as the Feast of the Purification of the Blessed Virgin MARY. (That feast was later moved to February 2.) See CANDLEMAS.

LURIA, ISAAC BEN SOLOMON \ˈlʊr-yä\, *byname* Ha-Ari (Hebrew: “The Lion”) (b. 1534, Jerusalem, Palestine, Ottoman Empire—d. Aug. 5, 1572, Safed, Syria [now Zefat, Israel]), founder of the Lurianic school of QABBALAH.

The main source for Luria’s life story is an anonymous biography, *Toledot ha-Ari* (“Life of the Ari”), written or perhaps edited some 20 years after his death, in which factual and legendary elements are indiscriminately mingled. Legend has it that the prophet ELIJAH appeared to Luria’s father and foretold the birth of the son, whose name was to be Isaac. According to the *Toledot*, Luria’s father died while

Isaac was a child, and his mother then took him to Egypt to live with her well-to-do family. It was while in Egypt that he became versed in rabbinic studies, including HALAKHAH (Jewish law), and even wrote glosses on the *Sefer ha-Halakhot* of ISAAC BEN JACOB ALFASI.

While still a youth, Luria began the study of JEWISH MYSTICISM and lived for nearly seven years in seclusion at his uncle’s home on an island in the Nile River. His studies concentrated on the SEFER HA-ZOHAR (late 13th–early 14th century), the central and revered work of the Qabbalah, but he also studied the early Qabbalists (12th–13th century). The greatest Qabbalist of Luria’s time was MOSES BEN JACOB CORDOVERO of Safed (modern Zefat), in Palestine, whose work Luria studied while still in Egypt. During this period he wrote a commentary on the *Sifra di-tzen’uta* (“Book of Concealment”), a section of the *Zohar*.

Early in 1570 Luria journeyed to Safed, and he studied there with Cordovero. At the time of Luria’s arrival, the group of Qabbalists gathered around Cordovero had already developed a unique style of living and observed special rituals, going out, for instance, into the fields to welcome the SABBATH, personified as the Sabbath Queen. With Luria’s arrival, new elements were added to these excursions, such as communion with the souls of the zaddikim (men of outstanding piety; see ZADDIK) by means of special *kawwanot* (“ritual meditations”) and *yihudim* (“unifications”) that were in essence a kind of lesser redemption whereby the souls were lifted up from the *kelipot* (“shells”; i.e., the impure, evil forms) into which they were banned until the coming of the MESSIAH.

Luria began to teach Qabbalah according to a new system and attracted many pupils. The greatest of these was Hayyim Vital, who later set Luria’s teachings down in writing. Luria apparently looked upon himself as the Messiah ben Joseph, the first of the two messiahs in Jewish tradition, who is fated to be killed in the wars (of GOG AND MAGOG) that will precede the final redemption. In Safed there was an expectation (based on the *Zohar*) that the Messiah would appear in Galilee in the year 1575. He apparently expounded his teachings only in esoteric circles; not everyone was allowed to take part in these studies. While he devoted most of his time to the instruction of his pupils, he probably made his living in trade.

Luria composed three hymns for the Sabbath meals that became part of the Sephardic Sabbath ritual and were printed in many prayer books. The hymns are known as “Azamer be-she-vaḥim” (“I Will Sing on the Praises”), “Asader se’udata” (“I Will Order the Festive Meal”), and “Bene hekh-ala de-khesifin” (“Sons of the Temple of Silver”). They are mystical, erotic songs about “the adornment (or fitting) of the bride”—i.e., the sabbath, who was identified with the community of Israel—and on the other *partzufim*: *arikh anpin* (the long-suffering: the countenance of grace) and *ze’ir anpin* (the impatient: the countenance of judgment).

During his time in Safed Luria managed to construct a many-faceted and fertile Qabbalistic system from which many new elements in Jewish mysticism drew their nourishment. He set down almost none of his doctrine in writing, with the exception of a short text that seems to be only a fragment: his commentary on the first chapter of the *Zohar*—“Be-resh hormanuta de-malka”—as well as commentaries on isolated passages of the *Zohar* that were collected by Hayyim Vital, who attests to their being in his teacher’s own hand. Luria died in an epidemic that struck Safed in August 1572.

Lurianic Qabbalah became the new thought that influenced all Jewish mysticism after Luria, competing with the Qabbalah of Cordovero. It played an important role in the movement of the false messiah SHABBETAI TZEVI in the 17th century and in the popular Hasidic movement a century later. It propounds a theory of the creation and subsequent degeneration of the world based on three concepts: *tzimtzum* ("contraction," or "withdrawal"), *shevirat ha-kelim* ("breaking of the vessels"), and *tiqqun* ("restoration"). God as the Infinite (En Sof) withdraws into himself in order to make room for the creation, which occurs by a beam of light from the Infinite into the newly provided space. Later the divine light is enclosed in finite "vessels," most of which break under the strain, a catastrophe whereby disharmony and evil enter the world. Hence comes the struggle to rid the world of evil and accomplish the redemption of both the cosmos and history. This event occurs in the stage of *tiqqun*, in which the divine realm itself is reconstructed, the divine sparks returned to their source, and Adam Qadmon, the symbolic "primordial man," who is the highest configuration of the divine light, is rebuilt. Man plays an important role in this process through various *kawwanot* used during prayer and through mystical intentions involving secret combinations of words, all of which is directed toward the restoration of the primordial harmony and the reunification of the divine name.

LUSTRATION \,lŭs-'trā-shən\ (from Latin *lustratio*, "ritual cleansing"), in ancient Greece and Rome, any process whereby individuals or communities rid themselves of ceremonial impurity (e.g., bloodguilt, pollution incurred by contact with childbirth or with a corpse) or of the profane or ordinary state, which made it dangerous to come into contact with sacred rites or objects.

The purification process varied from culture to culture. The usual Greek method seems to have been to lead certain persons or animals, which were thought capable of absorbing the pollution, through and then out of the village. The Roman practice was to lead or carry purifying materials around the person or community in question. Many noteworthy public rites were of this kind, such as the LUPERCALIA (around the Palatine hill) and the *amburbium* ("around the city").

LUTHER, MARTIN \lŭ-thər, German 'lŭ-tər\ (b. Nov. 10, 1483, Eisleben, Saxony [Germany]—d. Feb. 18, 1546, Eisleben), preacher, biblical scholar, and linguist whose NINETY-FIVE THESES, an attack on various ROMAN CATHOLIC ecclesiastical abuses, precipitated the Protestant REFORMATION.

Luther was the son of a prosperous copper miner. After receiving a B.A. (1502) and an M.A. (1505) from the University of Erfurt, he entered the monastery of the eremitical order of St. Augustine; he was ordained a priest in April 1507. In 1508 he went to the University of Wittenberg, where he earned a doctorate in theology in 1512 and soon received the chair of biblical theology.

After a period of religious doubts and guilt at what he

saw as his failure to obey God's Law, Luther found relief through the notion that JUSTIFICATION came through FAITH; that salvation is a divine gift of grace; that Christ represents God's mercy; and that the soul, free from the burden of guilt, may serve God with a joyful obedience.

Luther was moved to public protest by a jubilee INDULGENCE, the purpose of which was the rebuilding of St. Peter's BASILICA in Rome. (Indulgences were the commutation for money of part of the penalty for SIN, as part of the penance which also required contrition and priestly ABSOLUTION. They did not imply that divine forgiveness could be bought or sold.) For Luther the provocation lay in extravagant claims made by a DOMINICAN indulgence salesman.

According to a tradition that is probably apocryphal, Luther fastened the Ninety-five Theses to the door of the Castle Church in Wittenberg, on Oct. 31, 1517. The theses were tentative opinions, to some of which Luther himself was not committed. The first thesis claimed that repentance involves the whole life of the Christian person; the 62nd claimed that the true treasure of the church is the most holy gospel of the glory and the GRACE of God. The closing section attacked those who refuse to recognize that being a Christian involves embracing the cross and entering heaven through tribulation. Luther sent copies of the theses to the archbishop of Mainz and to his bishop, and additional copies were circulated. The archbishop forwarded the documents to Rome in December 1517 with the request that Luther be inhibited. The pope, Leo X, instructed the VICAR general of the AUGUSTINIANS to deal with Luther through the usual channels, and in October CARDINAL Cajetan at Augsburg ordered him to recant.

In June 1520 Leo issued the papal bull *Exsurge Domine* ("Arise, O Lord") against 41 articles of Luther's teaching, and Luther's writings were burned in Rome. Luther replied in a series of treatises issued in 1520, the second of which, *De captivitate Babylonica ecclesiae praeludium* ("A Prelude Concerning the Babylonian Captivity of the Church"), reduced to three—BAPTISM, the Lord's Supper (EUCCHARIST), and penance—the seven SACRAMENTS of the church; denied MASS and attacked TRANSUBSTANTIATION; made vehement charges against papal authority; and asserted the supremacy of Holy SCRIPTURE and the rights of individual conscience. In January 1521 Leo issued the bull of formal EXCOMMUNICATION (*Decet Romanum Pontificem*).

On April 17, 1521, Luther appeared before civic and religious authorities at the DIET OF WORMS. When required to recant his assertions, he stated that he would not act against his conscience unless convinced of his error by Scripture or by evident reason. The emperor cut short the proceedings, and Luther was allowed to depart. Luther's enemies, nonetheless, salvaged something when a rump Diet passed the Edict of Worms. It declared Luther to be an outlaw whose writings were proscribed. The edict fettered his movements for the rest of his days. Luther was taken by his friends to Wartburg, where he remained until March 1522. There he translated the NEW TESTAMENT into German (pub-

Portrait of Martin Luther, oil on panel by Lucas Cranach, 1529; in the Uffizi Gallery, Florence

The Bridgeman Art Library/Getty Images

lished in September 1522). His later translation of the OLD TESTAMENT was published in 1534.

Luther deplored violence, and he was dismayed by the unrest in Germany. In 1523 he issued a treatise *Von weltlicher Obrigkeit* ("Of Earthly Government"), in which he distinguished between the realms of spiritual and of temporal government and stressed the sinfulness of rebellion against lawful authority. In May 1525, after the Peasants' War had broken out, he published the *Ermahnung zum Frieden* ("Exhortation for Freedom"), in which he expressed sympathy with the peasants' just grievances but repudiated the notion of a so-called Christian rebellion; he also claimed that the worldly kingdom cannot exist without inequality of persons.

In June 1525 Luther married Katherina von Bora, a former nun. His home was an emblem for him of Christian vocation, so that he included domestic life among the three hierarchies (or "orders of creation") of Christian existence in this world, the other two being political and church life. Later that year he wrote the brutal *Wider die räuberischen und mörderischen Rotten der andern Bauern* ("Against the Murdering and Thieving Hordes of Peasants"), which only served to increase the peasants' radicalism. Thereafter he was occupied with divisions within the camp of reformers, particularly with regard to the Eucharist.

Luther is one of the most influential figures in Western civilization of the past millennium. He was the catalyst for the division of Western Christendom into several churches, not only Lutheran but other Protestant denominations. His Ninety-five Theses contributed to the Reformation and Counter-Reformation. He also left a host of cultural legacies. His translation of the Bible profoundly influenced the development of the German language, and he composed a number of beautiful hymns.

According to many scholars, Luther's disavowal of the German peasants in 1525 and his notion that "the Gospel has nothing to do with politics" facilitated a tendency toward political passivity among Protestants in Germany. His strident pronouncements against Jews, especially near the end of his life, have raised the question of whether he significantly contributed to the development of German anti-Semitism. Such speculations, however, tend to place too much emphasis on Luther and not enough on the peculiarities of German history. However these questions may be settled, Luther remains one of the seminal figures in German history and the history of Christianity.

LUTHERANISM \ˈlü-thə-rə-ni-zəm\, branch of the Western Christian church that adopted the religious principles of MARTIN LUTHER. Lutheran churches often call themselves Evangelical as distinct from Reformed (Calvinist), but these terms are not strictly applied. There were some 65 million Lutherans worldwide in the early 21st century.

Lutheranism cannot be defined or understood without some reference to the experience and the biblical studies of Luther, as expressed in 1517 in his NINETY-FIVE THESES and in his attack on the theology and sacramental practice of the late medieval church of the West. In 1521 Luther was excommunicated; his followers accepted the designation "Lutheran" against his will and despite the fact that it initially carried derisive connotations. The Lutheran movement, a central element of the REFORMATION, spread through much of Germany and into Scandinavia, where it was eventually established by law.

The theological vigor of Luther's generation gave way to an increasingly rigid orthodoxy in the late 16th and 17th

centuries. This in turn precipitated a pietist reaction that asserted the need for living faith in addition to right doctrine. The Pietists encouraged missionary and charitable work in addition to devotional practice. Eighteenth-century Lutheranism was marked by rationalist influences. Orthodoxy was reasserted during the next century, notably by the Danish bishop and poet N.F.S. Grundtvig.

In America, Lutherans were among the earliest colonists to settle on the Delaware River, and they were followed by German colonists who settled in the present Middle Atlantic states, the Shenandoah Valley, Georgia, and Nova Scotia, Canada. The spread of Lutheranism in the United States was extended by migrations to the western frontier and by the immigration of large numbers of northern Europeans during the 19th and early 20th centuries. These immigrants settled in the Midwest and later pushed on to the far West. They organized in congregations and SYNODS according to their national origins. It was the prolongation of linguistic and ethnic barriers that prevented Lutheran union until well into the 20th century, when the advance into intra-Lutheran ecumenical relations became rapid.

Lutheran doctrinal statements are usually said to include nine separate formulations that together form the BOOK OF CONCORD. Three belong to the early Christian church—the APOSTLES' CREED, the NICENE CREED in its Western form, and the so-called ATHANASIAN CREED. Six derive from the 16th-century Reformation—the AUGSBURG CONFESSION, the Apology for the Augsburg Confession, the SCHMALKALDIC ARTICLES, Luther's two CATECHISMS, and the Formula of Concord. Only the three early creeds and the Augsburg Confession are recognized by all Lutherans. Luther's Catechisms have met almost universal acceptance, but many Lutheran churches rejected the Formula of Concord because of its strict and detailed doctrinal statements. The Augsburg Confession and Luther's Small Catechism may properly be said to define Lutheranism inclusively in its doctrinal aspect, though Lutherans may be divided on many issues raised since the Augsburg Confession of 1530.

The largest and one of the oldest of non-Roman Catholic, non-Orthodox families of Christians, Lutheranism is represented in most areas of the world, particularly in northern and western Europe and in younger countries settled by Germans and Scandinavians. Lutheranism acknowledges no world headquarters, but the vast majority of the world's Lutherans cooperate in the Lutheran World Federation, which has offices in Geneva.

LUVIAN RELIGIONS \ˈlü-ē-ən\: *see* ANATOLIAN RELIGIONS.

LUZZATTO, MOSHE HAYYIM \lüt-ˈtsät-tō\ (b. 1707, Padua, Venetian republic [Italy]—d. May 6, 1747, Acre, Palestine [now 'Akko, Israel]), Jewish Qabbalist and writer, one of the founders of modern Hebrew poetry.

Luzzatto wrote lyrics and drama, but early on he turned to Qabbalist studies, becoming convinced that he was receiving divine revelation and, finally, that he was the MESSIAH. After being expelled by the Italian RABBIS, he moved to Amsterdam (1736), where he wrote his morality play *La-yesharim tehilah* (*Praise for Uprightness*).

LYCAON \li-ˈkā-än\, in Greek mythology, legendary king of Arcadia. Impious and cruel, Lycaon tried to trick ZEUS into eating human flesh. The god was not deceived, and in wrath he caused a deluge to devastate the earth. The story of Lycaon was told to explain a ceremony, the Lycaea, held in honor of Zeus Lycaeus at Mount Lycaeus.

MAA-ALUSED \ˈmä-ˈä-lü-,sed\, in Estonian folk religion, mysterious small folk living under the earth. Corresponding to these are the Finnish *maahiset* and Karelian *mua-hiset*, which refer both to the spirits and to an illness caused by them respectively.

These beings lead an existence quite parallel to that of people living on earth, except that up becomes down and right becomes left. In Finland the subterranean abode of the *maahiset* was believed to be a source of many kinds of skin disease, which were called by the same term. People came in contact with the *maa-alused* or *maahiset* either by chance or at the wish of these elf-like creatures themselves. Legends tell of distraught elves seeking help from humans in difficult cases of childbirth or illness. A human could marry an elf, but such a marriage eventually dissolved as the spouse returned to his or her former home.

The elf tradition is by no means homogeneous, carrying with it many often distinct concepts. Some scholars have considered the *maa-alused* to be spirits of the dead. Others place them in the realm of nature spirits. The elves are also thought of as overseers of certain localities, and in this sense they blend with the HALTIA, the household spirit, and function as supernatural guardians of moral order among the humans dwelling on their territory.

MA'AMADOT \,mä-ä-mä-'döt\ (Hebrew: "stands," or "posts"), 24 groups of laymen that witnessed the daily sacrifice in the Second Temple of Jerusalem as representatives of the people. Gradually *ma'amadot* were organized in areas outside Jerusalem; some scholars view these village *ma'amadot* as representing the first step toward regular SYNAGOGUE worship.

Though public sacrifices were terminated when Jerusalem was destroyed in 70 CE, daily prayers called *ma'amadot* are still recited privately by many pious Jews.

MA'AT \ˈmä-ät\, also spelled *Mayet* \ˈmä-yet\, in ancient EGYPTIAN RELIGION, the personification of truth, justice, and the cosmic order. The daughter of the sun god RE, she was associated with THOTH, god of wisdom.

The ceremony of judgment of the dead (called the "Judgment of OSIRIS," named for Osiris, the god of the dead) was believed to focus upon the weighing of the heart of the deceased in a scale balanced by Ma'at (or her hieroglyph, the ostrich feather), as a test of conformity to proper values. The Hall of Double Justice where this occurred was so called from Ma'at's frequent appearances there as two identical goddesses.

In its abstract sense, *ma'at* was the divine order established at creation and reaffirmed at the accession of each new king of Egypt. In setting *ma'at*, "order," in place of *izfet*, "disorder," the king played the role of the sun god, the god with the closest links to Ma'at. Ma'at stood at the head of the sun god's bark as it traveled through the sky and the Underworld. Although aspects of kingship and of *ma'at*

were at at various times subjected to both criticism and reformulation, the principles underlying these two institutions were fundamental to ancient Egyptian life and thought and endured to the end of ancient Egyptian history.

MABINOGION \mä-bē-'nóg-yən, *Angl* ,mä-bə-'nō-gē-ən\, collection of 11 medieval Welsh tales based on MYTHOLOGY, FOLKLORE, and heroic legends. The name Mabinogion derives from a scribal error and is an unjustified but convenient term for these anonymous tales.

The finest of the tales are the four related stories known as "The Four Branches" (dating, in their present form, from the late 11th century), the only tales in which the word Mabinogi (meaning "Matters Concerning [the Family of?]" *Maonos*) appears. Of great interest to Welsh studies are "The Four Independent Native Tales," which show minimal continental influence and include "Kulhwch and Olwen," "Lludd and Llefelys," "The Dream of Macsen," and "The Dream of Rhonabwy." The tales "Owein and Luned" (or "The Lady of the Fountain"), "Geraint and Enid," and "Peregrin Son of Efraug" parallel the French romances *Yvain*, *Erec*, and *Perceval* of Chrétien de Troyes.

MACCABEES \ˈma-kə-bēz\ (fl. 2nd century BCE, Palestine), in Jewish history, priestly family who organized a successful rebellion against the Seleucid ruler Antiochus IV Epiphanes and re consecrated the TEMPLE OF JERUSALEM. The name Maccabee was a title of honor given to Judas, a son of Mattathias and the hero of the Jewish wars of independence, 168–164 BCE. Later, the name was extended to include the rest of his family.

There is no unanimity about the meaning of the title Maccabee. The Hebrew may be read as "Hammer," "Hammerer," or "Extinguisher."

Antiochus IV, who ruled Syria from 175 to 164/163 BCE, seized Judaea (or JUDAH) and sought to unify it with his other conquests by imposing a universal religion on the Hebrews. He forbade the observance of the SABBATH, the performance of sacrifice, the reading of the Law of MOSES, or the practice of CIRCUMCISION. In place of these practices Antiochus encouraged the development of cultural clubs called gymnasia, in which people gathered to study, to learn, and to enjoy each other's company. In 168 BCE, Antiochus invaded Jerusalem and desecralized the HOLY OF HOLIES in the Temple. A number of Jews, including Jason the HIGH PRIEST, chose to conform with the new trends, but when, on Dec. 25, 167 BCE, Antiochus rededicated the Temple in Jerusalem to the Greek god ZEUS, he touched off a rebellion.

The resistance was sparked when Mattathias, a priest in the village of Modi'im, 17 miles northwest of Jerusalem, struck a Jew who was preparing to offer sacrifice to the new gods and killed the king's officer who was standing by. Mattathias then fled with his family to the hills. Many joined them there, and Mattathias was the first leader of the rebel-

lion. Josephus gives Mattathias' great-grandfather the surname Asamoniaios. From this title comes the name Hasmonean that was applied to the dynasty that descended from the Maccabees in the following century.

After the death of Mattathias (c. 166 BCE), his son Judas Maccabeus became the leader of the resistance movement. In December 164 BCE he recaptured Jerusalem. He then had priests cleanse the Holy Place and erect a new altar of unhewn stones. They then reconsecrated the SANCTUARY. The Hebrew word for this act, HANUKKAH ("Dedication"), is the name of the festival that commemorates the event. Judas next continued the war in Galilee and even Transjordan.

The war continued, however, and when Judas was killed in battle after more than five years of leadership, his brother Jonathan succeeded him as general. King Alexander Balas (also known as Alexander Epiphanes) made peace with Jonathan, and in 153 or 152 BCE he elected Jonathan as high priest in Jerusalem, but still the war continued. Jonathan died by treachery and was succeeded by his brother Simon. On his own initiative Simon brought peace and security to Jerusalem. He was the second Hasmonean high priest. In 135/134 BCE he was assassinated.

Simon's son John, known later as Hyrcanus I, remained as high priest in Jerusalem until his death in 104 BCE. He was able to consolidate and extend Jewish control, bringing Samaria into subjection and forcing the Idumaeans to accept JUDAISM.

MACEDONIANISM \ˌmɑ-sə-ˈdō-nē-ə-ˌni,zəm\, also called Pneumatomachian heresy \ˌnü-mə-tə-ˈmā-kē-ən\, 4th-century Christian HERESY that denied the full personality and deity of the HOLY SPIRIT, arguing that the Holy Spirit was created by the Son and was thus subordinate to the Father and the Son. (In Orthodox Christian theology, God is one in essence but three in Person—Father, Son, and Holy Spirit, who are distinct and equal.) Those who accepted the heresy were called Macedonians but were also and more descriptively known as pneumatomachians, the "spirit fighters."

Some sources attribute leadership of the group to Macedonius, a semi-Arian who was twice bishop of Constantinople, but the writings of the Macedonians have all been lost, and their doctrine is known mainly from polemical refutations by Orthodox writers, particularly ST. ATHANASIUS of Alexandria (*Letters to Serapion*) and ST. BASIL of Caesarea (*On the Holy Spirit*). The second ecumenical COUNCIL OF CONSTANTINOPLE (381 CE) formally condemned the Macedonians and expanded the Creed of Nicaea to affirm the Orthodox belief in the Holy Spirit, "who with the Father and the Son together is worshiped and glori-

fied." The Macedonian heresy was suppressed by the emperor Theodosius I.

MACHA \ˈmā-kə\, in CELTIC RELIGION, one of three war goddesses. It is also a collective name for the three, who were also referred to as the three Morrígan. As an individual, Macha was known by a great variety of names, including Dana and Badb ("Crow," or "Raven"). She was the great EARTH MOTHER and a slaughterer of men, as was another of the trinity, Morrígan, or Black Annis, who survives in Arthurian legend as Morgan le Fay. The third goddess was Nemain.

MACUMBA \mə-ˈkūm-bə\, Afro-Brazilian religion that is characterized by a marked syncretism of traditional African religions, European culture, Brazilian SPIRITUALISM, and ROMAN CATHOLICISM. Of the several Macumba sects, the most important are CANDOMBLÉ and Umbanda.

African elements in Macumba rituals include an outdoor ceremonial site, the sacrifice of animals (such as cocks), spirit offerings (such as candles, cigars, and flowers), and ritual dances. Macumba rites are led by mediums, who communicate in trance with holy spirits. Roman Catholic elements include use of the cross and the worship of saints, who are given African names such as Ogum (ST. GEORGE), Xangô (ST. JEROME), and Iemanjá (the Blessed Virgin MARY).

Candomblé, practiced in Bahia state, is considered to be the most African of the Macumba sects. Umbanda, practiced in urban areas such as Rio de Janeiro and São Paulo, also reflects Hindu and Buddhist influence; its appeal has spread to the white middle class. Macumba sects continue to flourish throughout Brazil.

MADDERAKKA \ˈmäd-dä-ˌräh-kä\, Sami goddess of childbirth. She is assisted by three of her daughters—Sarakka, the cleaving woman, Uksakka, the door woman, and Juk-sakka, the bow woman—who watch over the development of the child from conception through early childhood. Madderakka was believed to receive the soul of a child from VERALDEN-RADIEN, the world ruler deity, and to give it a body, which Sarakka would then place in the mother's womb. Uksakka was believed to aid in the actual childbirth; Juk-sakka would then take care of the child after birth. Sarakka was also thought of as the separating woman who made childbirth easier and was considered to be a deity of women in a more general sense, aiding them in concerns such as MENSTRUATION. (See also FINNO-UGRIC RELIGION.)

MĀDHAVA \ˈmā-də-və\, also called Mādhavācārya, or Vidyāranya (b. 1296?—d. 1386?, Sringeri, Karnataka, India), Hindu statesman and philosopher. He lived at the court of Vijayanagar, a southern Indian kingdom.

Mādhava became an ascetic in 1377 and was thereafter known as Vidyāranya. He was part author of *Jīvan-muk-tiviveka* and *Pañcadaśī*, works of VEDĀNTA philosophy; *Nyāya-mālāvistara*, a work on the Mīmāṃsā system, one of the earliest orthodox systems of Vedic philosophy; and *Parāśarasmr̥tivyākhyā*, an elaborate comment on the *Parāśarasmr̥ti*. The influential *Sarvadarśanasamgraha* ("Compendium of All Philosophical Positions") is signed by Mādhava, but scholars differ as to whether its author is the same as the Mādhava described here. See also VEDIC RELIGION.

MADHVA \ˈmäd-və\, also called Ānandatīrtha \ˈä-nən-də-ˈtir-tə\, or Pūrṇaprajña \ˈpür-nə-ˈpræg-nyə\ (b. c. 1199, Kalyān-

Mā't, bronze figure dating to the 26th dynasty (664–525 BCE)

By courtesy of the trustees of the British Museum

pur, near Udipi, Karnataka, India—d. c. 1278, Udipi), Hindu philosopher, exponent of DVAITA (DUALISM). His followers are called Mādhvas.

Born into a Brahmin family, as a youth he disappeared for a short time, according to tradition. After a four-day search his parents found him engaged in discourse with the learned priests of VISHNU; later, on a PILGRIMAGE to the sacred city of VARANASI (Benares), he walked on water, calmed rough sea, and became a “fisher of men.” Similarities between his life story and narratives found in the Christian Gospels suggest that he may have been influenced during his youth by a group of NESTORIAN Christians who were residing at Kalyānpur.

Madhva set out to refute the nondualistic ADVAITA philosophy of ŚAMKARA (d. c. 750 CE), who believed the individual self to be a phenomenon and the absolute spirit (BRAHMAN) the only reality. Thus, Madhva rejected the venerable Hindu theory of MĀYĀ (“illusion”), which taught that only spirituality is eternal and the material world is illusory and deceptive. Madhva maintained that the simple fact that things are transient and ever-changing does not mean they are not real.

Departing from orthodox Hinduism, he believed in eternal damnation, offering a concept of heaven and hell, plus a Hindu PURGATORY of endless transmigration of souls. Madhva’s cult outlawed temple prostitutes and offered figures made of dough as a substitute for blood sacrifices, and its adherents customarily branded themselves on the shoulder with a multiarmed figure of Vishnu.

During his lifetime, Madhva wrote 37 works in Sanskrit, mostly commentaries on Hindu sacred writings and treatises on his own theological system and philosophy.

MĀDHYAMIKA \mād-’yə-mi-kə\ (Sanskrit: “Intermediate,” or “Middle Way”), important school in the MAHĀYĀNA Buddhist philosophy. Its name derives from its having sought a middle position between the realism of the SARVĀSTIVĀDA school and the idealism of the YOGĀCĀRA school. The most renowned Mādhymika thinker was NĀGĀRJUNA (d. c. 250 CE), who developed *śūnyavāda*, the doctrine that all is void. Three of the most authoritative texts for the school are the *Mādhymika Śāstra* (Sanskrit: “Treatise of the Middle Way”) and the *Dvādaśa-dvāra Śāstra* (“Twelve Gates Treatise”) by Nāgārjuna and the *Sataka Śāstra* (“One Hundred

Verses Treatise”), which has been attributed to his pupil Āryadeva.

BUDDHISM in general assumed that the world is a cosmic flux of momentary interconnected events (DHARMAS), however the reality of these events might be viewed. Nāgārjuna sought to demonstrate that the flux itself could not be held to be real, nor could the consciousness perceiving it, as it itself is part of this flux. If this world of constant change is not real, neither can the cycle of death and rebirth be real, nor its opposite, NIRVANA. In the final analysis, reality can only be attributed to something entirely different from all

that is known, which must therefore have no identifiable predicates and can only be styled the void (*śūnyatā*).

The basic Mādhymika texts were translated into Chinese by KUMĀRAJĪVA in the 5th century, and the teachings were further systematized (as the SAN-LUN, or “Three Treatises,” school) in the 6th–7th centuries by Chi-tsang. The school spread to Korea and was subsequently transmitted to Japan, as Sanron, in 625 by the Korean monk Ekwan.

MADONNA \mə-’dā-nə\ (Old Italian: “My Lady”), in Christian art, depiction of the Virgin Mary; the term is usually restricted to those representations that are devotional rather than narrative and that show her in a nonhistorical context and emphasize later doctrinal or sentimental significance. The Madonna is accompanied most often by the infant JESUS CHRIST, but there are several important types that show her alone.

Byzantine art developed a great number of Madonna types. All are illustrated on ICONS, and one or another type was usually pictured prominently on the eastern wall of Byzantine churches below the image of Christ; the location dramatized her role as mediator between Christ and the congregation. The major types of the Madonna in Byzantine art are the *nikopoia* (“bringer of victory”), a regal image of the Madonna and Child enthroned; the *hodēgētria* (“she who points the way”), showing a standing Virgin holding the Child on her left arm; and the *blacherniotissa* (from the Church of the Blachernes, which contains the icon that is its prototype), which emphasizes her role as intercessor, showing her alone in an orant, or prayer posture, with the Child pictured in a medallion on her breast. The Virgin also figured prominently as an intercessor in the group of the Deësis, where she and ST. JOHN THE BAPTIST appear as intercessors on

The Grand-Duke's Madonna, oil painting by Raphael, 1505; in the Pitti Palace, Florence

SCALA—Art Resource

either side of Christ. The Virgin also appears in the more intimate types of the *galaktotrophousa*, in which she nurses the Child, and the *glykophilousa*, in which the Child caresses her cheek while she seems sadly to contemplate his coming Passion.

In the West, particularly with the spread of devotional images at the end of the Middle Ages, the theme of the Madonna was developed into a number of additional types, in general less rigidly defined than those of the East but often modeled on Byzantine types. As a rule, Western types of the Madonna sought to inspire piety through the beauty and tenderness rather than the theological significance of the subject. By far the most popular type in the West throughout the Renaissance and into the Baroque period was that derived from the *glykophilousa*. Though this type has many variants, it usually depicts a Virgin of grave expression, turning her gaze away from the playful Child.

Three major Madonna types showing the Virgin alone have theological significance. As the Madonna of mercy, a type that flourished in the 15th century, the Virgin spreads her mantle protectively over a group of the faithful. The *immacolata*, which in the 17th century emphasized her IMMACULATE CONCEPTION, shows her as a young girl descending from the heavens, supported by a crescent moon and crowned by stars. The Madonna of the ROSARY, shows the Virgin giving the rosary to ST. DOMINIC, founder of the order that spread its use.

The theme of the Madonna appeared less frequently in the major arts after the 17th century. Representations of the Madonna and Child, however, continued to be important in popular art into the 20th century, most following 16th- and 17th-century models.

MADRASA \ˈmä-drə-sə\ (Arabic: “school”), *Turkish* *medrese*, in Muslim countries, institution of higher education. Originating in the 10th century, the *madrasa* functioned until the 20th century as a theological seminary and law school, with a curriculum centered on the QUR’AN. It served to promote scripturalist Islamic learning in opposition to speculative or heretical movements. In addition to Islamic theology and law, Arabic grammar and literature, mathematics, logic, and, in some cases, natural science were studied in *madrasas*. Limited exclusively to males, the schools offered free tuition, and food, lodging, and medical care were provided as well. Instruction usually took place in a courtyard and consisted primarily of memorizing textbooks and the instructor’s lectures. The lecturer issued certificates to his students that constituted permission to repeat his words. Financed by donations from wealthy and powerful patrons, SUNNI *madrasas* flourished in Damascus, Baghdad, Mosul, Cairo, and most other Muslim cities by the end of the 12th century. Leading SHI’ITE *madrasas* are located in NAJAF, MASHHAD, and QOM. In the mid-20th century these *madrasas* provided focal points for Iranian political activism; the religious leaders who established the Islamic Republic of Iran in 1979 studied and taught there.

MADRID CODEX \mə-ˈdrid-ˈkō-,deks\; see MAYA CODICES.

MADURAI \mä-dü-ˈrī\, formerly Madura, city, south-central Tamil Nadu state, southeastern India. Situated on the Vaigai River, Madurai dates to the early centuries CE, if not before, and was the site of the Pāṇṭya (4th–11th century CE) capital, which centered on the great temple of Mīnākṣī (the “fish-eyed” goddess) and her consort Sundarēśvara (“the beautiful lord”), who are ŚAKTI and SHIVA. Fourteenth-centu-

ry Muslim invaders destroyed the temple complex except for its central shrines, but in the following century the Hindu rulers of Vijayanagara mounted a decades-long campaign of rebuilding. Major British construction projects obscured the city’s original plan, a sacred diagram (YANTRA) emanating axially from the dwelling place of Mīnākṣī and Sundarēśvara and incorporating the palace of the Pāṇṭya ruler. Within that space the amalgam of divine and human realms was represented as being possible, owing first to the self-manifestation of the deities as images and second to the dharmic guidance of their servant, the king. Often the city’s design was described as a lotus, with its thoroughfares as petals and the Śakti-Shiva temple at the center.

MAELDÚIN \ˈmil-ˈdün\, also spelled Mael Dúin, or Mael-dun, hero of the longest of the Irish *immram* (“travel-tale”), known as *Immram Curaig Mael Dúin*. Maeldúin originally sets out on a journey when a DRUID advises him that he must find his father’s killer. Maeldúin sees the man who killed his father at the first island he and his companions approach, but they are driven out to sea by a storm. They go on to encounter many wonders—during his journey Maeldúin visits no fewer than 31 islands.

Some of the islands contain strange beings—on one island the ants are as large as foals. Some islands are very structured; one is split in a black and a white half, where everything white becomes black on the other side and vice-versa. Another is divided by fences that correspond to the aristocratic hierarchy. On one island is a mill where half the corn of Ireland is ground, namely, all that which men begrudge one another. The island of women is difficult for the voyagers to leave. The queen throws a ball of yarn out to the boat each time they try to leave and every time they catch the ball they are obliged to stay another three months. At last they cut off the hand of the man who catches the ball and are saved.

On the penultimate island they meet a monk who stole treasures from his church and was guided to the rocky island and miraculously fed. He advises Maeldúin to reconcile himself with his father’s killer. The next island is the same as the first they saw, and here the reconciliation takes place. Stories of travels at sea are part of the Irish literature and not all are as obviously Christian as this one. In the tale of St. Brendan (*Navigatio Brendani*) the theme has become completely Christian, and some of the wonders encountered by Brendan are also found in the earlier story of Maeldúin.

MAGGID \mä-ˈgēd, ˈmä-gid\ (Hebrew: “preacher”), plural *maggidim*, any of the many itinerant Jewish preachers who flourished especially in Poland and Russia during the 17th and 18th centuries. Because RABBIS at that time preached only on the SABBATHS preceding PASSOVER and YOM KIPPUR, *maggidim* were in great demand throughout the year. Through their preaching, the *maggidim* were instrumental in spreading 18th-century HASIDISM. Rabbi Dov Baer of Mezhirich, who succeeded Ba’al Shem Tov as leader of the Hasidic movement, is known as the Great Maggid.

Closely associated with the *maggidim* were the *mokhiḥim* (“reprovers,” or “rebukers”), who warned their listeners of severe punishments if they failed to observe the commandments. A heavenly being (or voice) that revealed secrets to a Jewish mystic was also called a *maggid*.

MAGI \ˈmä-jī, ˈma-\, singular *magus* \-gəs\, originally, member of an ancient Median PRIESTHOOD specializing in

cultic activities. The name is the Latinized form of *magoi*, the Greek transliteration of the Iranian original. From it the word magic is derived.

It is disputed whether the magi were from the beginning followers of ZOROASTER. They do not appear as such in the inscription of Bisitūn, in which Darius the Great describes his speedy and final triumph over the magi who had revolted against his rule (522 BCE). Rather it appears that they constituted a priesthood serving several religions. The magi were a priestly CASTE during the Seleucid, Parthian, and Sāsānian periods; later parts of the AVESTA, such as the ritualistic sections of the *Vidēvdāt* (*Vendidad*), probably derive from them. From the 1st century CE the word in its Syriac form (*magusai*) was applied to magicians and soothsayers, chiefly from Babylonia, with a reputation for the most varied forms of wisdom. As long as the Persian empire lasted there was always a distinction between the Persian magi, who were credited with profound and extraordinary religious knowledge, and the Babylonian magi, who were often considered to be outright imposters. The word is thus used as a derogatory term for a traveling soothsayer in addition to its use as a title of respect.

MAGI, singular *Magus*, also called *Wise Men*, in Christian tradition, the noble pilgrims “from the East” who followed a miraculous guiding star to Bethlehem, where they paid homage to the infant JESUS as king of the Jews (Matthew 2:1–12). Eastern tradition sets the number of Magi at 12, but Western tradition sets their number at 3, probably based on the three gifts of “gold and frankincense and myrrh” presented to the infant.

The Gospel of Matthew relates how at Jerusalem the Magi attracted the interest of King Herod I of Judaea by announcing Jesus’ birth. Herod extracted from them the place of Jesus’ birth, requesting that they disclose the exact spot upon their return. An ANGEL in a dream, however, warned the Wise Men of Herod’s intentions, and, after adoring the Christ Child, they returned to their own country.

Subsequent traditions embellished the narrative. As early as the 3rd century, they were considered to be kings, probably interpreted as the fulfillment of the PROPHECY in ISAIAH 60:3 (“And the GENTILES shall come to thy light, and

kings to the brightness of thy rising”). About the 8th century the names of three Magi—Bithisarea, Melchior, and Gathaspa—appear in a chronicle known as the *Excerpta latina barbari*. They have become known most commonly as Balthasar, Melchior, and Gaspar (or Casper). According to Western church tradition, Balthasar is often represented as a king of Arabia, Melchior as a king of Persia, and Gaspar as a king of India. Their supposed relics were transferred from Constantinople, possibly in the late 5th century, to Milan and thence to Cologne Cathedral in the 12th century. Devotion to the Magi was especially fervent in the Middle Ages. The Magi are venerated as patrons of travelers; their feast day is July 23.

The Adoration of the Magi—*i.e.*, their homage to the infant Jesus—early became one of the most popular themes in Christian art, the first extant painting on the subject being the fresco in the Priscilla CATACOMB of Rome dating from the 2nd century.

MAGIC, SCIENCE, AND RELIGION, categories used to depict different types of worldviews or developmental stages in the history of culture. Broadly speaking, the debate over the use of these categories comes down to the extent to which the terms should properly be distinguished from one another, and the basis for making such distinctions.

In the history of anthropology and COMPARATIVE RELIGION, three different understandings of these terms have emerged. The first views magic, religion, and science as different evolutionary stages in a single developmental progression. Within this approach, each term refers to a stage of cultural development. Magic, under this view, describes the worldview of so-called primitive or technologically underdeveloped societies. Among such peoples, magic is employed as a technique to explain and control the world in the absence of better methods for doing so. This stage gives way to a more sophisticated worldview, that of religion, wherein human beings have a more realistic view of their abilities to control the natural world, and the automatic workings of magic SPELLS give way to the worship of and dependence upon powerful superhuman entities (gods and goddesses). Finally, the third and most highly evolved stage, according to this view, is modern science, demonstrably more successful than magic or religion as an explanatory mechanism and means of controlling nature that then supersedes the magical and religious worldviews.

This evolutionary theory of human culture enjoyed wide currency in the 19th and early 20th centuries, particularly within the ethnographies of SIR EDWARD BURNETT TYLOR and SIR JAMES FRAZER and the social psychology of Sigmund Freud. It has since fallen into general disuse, however, in the face of criticism that it is prejudicial and teleological, fails to account for the complexity and diversity of culture, and drastically simplifies the variety of processes that make up historical development.

The second approach takes magic and science together and separates religion out as something intrinsically different. This approach begins from the premise that a kind of science is to be found in all cultures, though sometimes in a quite rudimentary form. Both magic and science share the assumption of “laws of nature”

An angel warns the Magi not to return to King Herod, 12th-century relief by Gislebertus in the cathedral of Saint-Lazare, Autun, France
Giraudon—Art Resource

and of causality; both attempt to operate on the world through the exploitation and manipulation of these laws. Therefore, magic is regarded as fundamentally similar to modern science, though it is based on a different belief system, identifies different laws of nature, and understands causality differently. Religion is, by contrast, relatively unconcerned with natural laws of cause and effect; rather, it is characterized by its moral and social concerns or is focused on ultimate meaning and therefore seeks to answer questions that science does not attempt to ask.

The third approach, finally, asserts that there is no necessary or real difference between the terms magic and religion, and often the proponents of this approach use the term magico-religious to signal this fundamental unity. This approach frequently asserts that the distinctions between magic and religion are often imposed by the outside observer: those operations which he feels to be truly religious are identified as such, but those things which seem fundamentally alien to his own value system are labeled as magical. Science, on the other hand, can be regarded as an empirically based technique; its findings are accepted as truth only when they can be replicated by others. Still, within science, the way in which findings are interpreted can change dramatically, that is, shifts in the paradigm, to use the language of philosophy of science scholar Thomas Kuhn, do occur. Also, for most nonscientists living in scientifically oriented cultures, science functions much like religion and magic does in other cultures—as a belief system or worldview whose claims are taken more or less on faith. Thus, within this approach, magic, science, and religion are all somewhat imprecise terms that refer to more or less different ways of viewing the world and operating in accordance with the rules which are believed to govern it. *See also* RELIGION, DEFINITION OF.

MAGNES, JUDAH LEON \ˈmæg-nəs\ (b. July 5, 1877, San Francisco, Calif., U.S.—d. Oct. 27, 1948, New York, N.Y.), RABBI, religious leader, Zionist, and prime founder and first president of the Hebrew University of Jerusalem.

Magnes attended Hebrew Union College and was ordained a rabbi in 1900. After receiving a Ph.D. from the University of Heidelberg in 1902, Magnes returned to the United States and in 1904 became rabbi of a Reform SYNAGOGUE, Temple Israel of Brooklyn. From 1905 to 1908 he was secretary of the Federation of American Zionists. In 1906 he assumed the pulpit of the Reform temple Emanu-El in New York City. He founded Qehilla (Community) to unite the disparate elements of New York Jewry; its Bureau of Jewish Education (1910–41) had a profound effect for decades. A growing dissatisfaction with REFORM JUDAISM caused Magnes to resign from Emanu-El in 1910 and accept the pulpit of Temple B'nai Jeshurun, an Orthodox congregation. (*See* ORTHODOX JUDAISM.)

During World War I Magnes was a pacifist and drifted away from ZIONISM, whose leaders supported the Allied war effort. He joined the Joint Distribution Committee, which emphasized relief to Jews in Palestine rather than political activism there. At the war's end he went to Palestine and subsequently became the guiding spirit of the effort to establish the Hebrew University of Jerusalem. He devised the university's academic program and, when the institution was completed at Mt. Scopus in 1925, became chancellor. In 1935 he became the university's first president, a post he retained until his death.

Magnes also founded Iḥud (Unity), an association dedicated to the advancement of Arab-Jewish reconciliation,

and advocated an Arab-Jewish state that would be part of an Arab Federation.

MAGNIFICAT \ˈmæg-ˈni-fi-,kət, -,kät; män-ˈyi-fi-,kät\, in CHRISTIANITY, the HYMN of praise by MARY, the mother of JESUS, found in Luke 1:46–55 and incorporated into the liturgical services of the Western churches (at Vespers) and of the Eastern Orthodox churches (at the morning services). Though some scholars have contended that this canticle was a song of Elizabeth (the wife of Zechariah and the mother of JOHN THE BAPTIST), most early Greek and Latin manuscripts regard it as the “Song of Mary.”

It is named after the first word of its first line in Latin (“Magnificat anima mea Dominum,” or “My soul magnifies the Lord”). Elaborate musical settings have been created for the Magnificat. It has been chanted in all eight modes of the plainsong and has been the subject of numerous other settings.

The following is the text of the Magnificat in the English Revised Standard Version:

- ◆ **My soul magnifies the Lord,
and my spirit rejoices in God my Savior,
for he has regarded the low estate
of his handmaiden.
For behold, henceforth all generations
will call me blessed;
for he who is mighty has done great
things for me,
and holy is his name.
And his mercy is on those who fear him
from generation to generation.
He has shown strength with his arm,
he has scattered the proud in the
imagination of their hearts,
he has put down the mighty from
their thrones,
and exalted those of low degree;
he has filled the hungry with good things,
and the rich he has sent empty away.
He has helped his servant Israel,
in remembrance of his mercy,
as he spoke to our fathers,
to Abraham and to his posterity for ever.** ◆

MAGOG \ˈmā-gäg\, in biblical and apocalyptic literature, a hostile power associated with GOG.

MAG TUIRED \ˈmäg-ˈtù-rʲəth\, also spelled Moytura, mythical plain in Ireland, which was the scene of two important battles. The first battle was between the Fir Bolg and the TUATHA DÉ DANANN, or race of gods. In this battle the Dé Danann overcame the Fir Bolg and won Ireland for themselves, but NUADU, the king of the gods, lost his hand in the battle. Because of this flaw, he was no longer permitted to be king. Bres, the beautiful son of a goddess and a FOMOIRE king, was chosen to rule in Nuadu's stead. Bres's reign was not successful because of his lack of generosity and kingly qualities. Nuadu was given a functional human hand by Mirach (*see* DIAN CÉCHT), and Bres was overthrown. Bres went to his father's family for aid and led a great army against the gods in the second battle of Mag Tuired. The gods had for a leader Lugh (*see* LUGUS), one of the most important Celtic gods, who won the battle and killed BALOR, the king of the Fomoiré. The battle marks an end to the threat of the Fomoiré in Irish myths and sagas.

MAHĀBHĀRATA \mə-ˌhā-ˈbār-ə-tə\ (Sanskrit: “Great [Tale of the] Bhāratas”), one of the two major Sanskrit epics of India, valued for its high literary merit and its religious inspiration. The *Mahābhārata* consists of a mass of legendary and didactic material surrounding a central heroic narrative that tells of the struggle for supremacy between two groups of cousins—the Kauravas and the PĀNḌAVAS. Together with the second major epic, the RĀMĀYANA, it is an important source of information about the evolution of HINDUISM during the period from about 400 BCE to 200 CE. Contained within the *Mahābhārata* is the BHAGAVAD GĪTĀ, which is the single most important religious text of Hinduism.

The poem is made up of almost 100,000 couplets—its length thus being about seven times that of the *Iliad* and the *Odyssey* combined—divided into 18 *parvans*, or sections, to which has been added a supplement entitled *Harivamśa* (“Genealogy of the God Hari”—*i.e.*, Krishna-Vishnu). Authorship of the poem is traditionally ascribed to the sage Vyāsa, although it is more likely that he compiled existing material. The traditional date for the war that is the central event of the *Mahābhārata* is 3102 BCE, but most historians prefer a later date. The poem reached its present form about 400 CE.

The epic narrates a power struggle between the five Pāṇḍava brothers (Yudhiṣṭhira, Bhīma, ARJUNA, Nakula, and Sahadeva) and their cousins, the Kauravas. Forced into exile, the Pāṇḍavas jointly marry Draupadī and meet their cousin KRISHNA, who remains their friend and companion thereafter. The feud culminates in a great series of battles on the field of Kurukṣetra (north of modern Delhi, in Haryana state). All the Kauravas are annihilated, and, on the victorious side, only the five Pāṇḍava brothers and Krishna survive. Krishna dies at the hands of a hunter who mistakes him for a deer. The five brothers, along with Draupadī and a dog who joins them (Dharma, the god of justice, in disguise), set out for INDRA’S heaven, yet only Yudhiṣṭhira, the son of Dharma, reaches its gate. After further tests of his faithfulness and constancy, Yudhiṣṭhira is finally reunited with his brothers and Draupadī to enjoy perpetual bliss.

The feud constitutes little more than a fifth of the total work and may once have formed a separate poem, the *Bhārata*. Interwoven with its episodes are the romance of Nala and Damayantī, the legend of SĀVITRĪ, whose devotion to her dead husband persuades YAMA, the god of death, to restore him to life; descriptions of places of pilgrimages; and many other myths and legends.

Above all, the *Mahābhārata* is an exposition on DHARMA (codes of conduct), including the proper conduct of a king, of a warrior, of a man living in times of calamity, and of a person seeking to attain emanci-

pation from rebirth. The several centuries during which the epic took shape were a period of transition from the religion of Vedic sacrifice to the sectarian, internalized worship of later Hinduism, and different sections of the poem express varying and sometimes contradictory beliefs. Some sections, such as the *Nārāyaṇīya* (a part of Book XIII), the *Bhagavad Gītā* (Book VI), the *Anugītā* (Book XIV), and the later supplement, the *Harivamśa*, are important sources of early Vaiṣṇavite thought. There Krishna is identified with Lord VISHNU, and other AVATARS (incarnations) are also described.

MAHABODHI SOCIETY \mə-ˌhā-ˈbō-dē\, organization that was established to encourage BUDDHISM and Buddhist studies in India and abroad. The society was founded in Ceylon (now Sri Lanka) in 1891 by Anagarika Dharmapala; one of its original goals was the restoration of the Mahābodhi temple at BODHI GAYĀ, Bihār state, India, the site of the BUDDHA GOTAMA’S enlightenment.

The society has its headquarters in Calcutta and operates centers in several other cities in India and at Anuradhapura, Sri Lanka. An English-language journal, *The Maha Bodhi*, is published by the society.

MAHĀDEVĪ \mə-ˌhā-ˈdā-vē\, also known as Mahādevīyakka, 12th-century-CE Hindu poet-saint of the Karnataka region of India.

Married to a local king against her will, Mahādevī subsequently left her husband and renounced the world. Legend has it that she wandered naked, singing songs of passionate love for her “true husband,” the god SHIVA. Some of her poems concern the irreconcilable conflict between secular and religious love and devotion: “Take these husbands who die, decay, and feed them to your kitchen fires!” Her devotional songs revolve around a theme typical of the Indian

devotional tradition—the interplay between, on the one hand, love in separation and the longing for the divine lover, and on the other hand, love in union and the inexpressible bliss it brings: “When he’s away I cannot wait to get a glimpse of him. Friend, when will I have it both ways, be with Him yet not with Him.”

MAHĀMĀYĀ \mə-ˌhā-ˈmā-yā\, also called Māyā, mother of the BUDDHA GOTAMA; she was the wife of Rāja Śuddhodana.

In Buddhist legend, Mahāmāyā dreamt that a white elephant with six tusks entered her right side, which was interpreted to mean that she had conceived a child who would become either a world ruler or a buddha. After 10 lunar months she went to the Lumbinī grove outside the city of Kapilavastu. While she stood upright and held onto the branch of a sal tree (in the posture adopted by mothers of all buddhas), the child came

Mahāmāyā dreaming of the white elephant, Gandhāra relief, 2nd century CE

By courtesy of the trustees of the British Museum

forth from her right hip. Seven days after his birth (again, in accordance with the destiny of the mothers of all buddhas) she died and was reborn again in the Heaven of the Thirty-three Gods.

MAHAMUNI \mə-ˈhā-mü-nē\, brass Buddha statue (12 feet high), one of the most sacred images in Myanmar (Burma) and believed to be of great antiquity. Located in the Mahamuni, or Arakan, PAGODA south of the city of Mandalay, the statue was among the spoils of war brought from the Arakan Coast in 1784 by King Bodawpaya.

MAHAR \mə-ˈhär\, caste-cluster, or group of many endogamous CASTES, living chiefly in Mahārāshtra state, India, and in adjoining states. In the early 1980s the Mahar community was believed to constitute about 9 percent of the total population of Mahārāshtra—by far the largest, most widespread, and most important of all the officially designated Scheduled castes (formerly UNTOUCHABLES or Harijans) in the region.

Traditionally, Mahars lived on the outskirts of villages and served as village watchmen, messengers, street sweepers, removers of carcasses, and agricultural laborers. In the mid-20th century, Mahars began to migrate in large numbers to urban centers (Bombay, Nāgpur, Pune [Poona], and Sholāpur), where they were employed as industrial laborers, mechanics, and bus and truck drivers. Mahars were unified by the eminent 20th-century leader BHIMRAO RAMJI AMBEDKAR, who urged them to militant political consciousness and to great educational improvement. Before his death in 1956, Ambedkar and hundreds of thousands of his Mahar followers converted to BUDDHISM in protest against their Hindu caste status.

MAHĀSAṄGHĪKA \mə-ˈhā-ˈsəŋ-gi-kə\ (Sanskrit, from *mahā-*, “great” + *saṅgha*, “community, brotherhood [of monks]”), early Buddhist school in India that was a precursor of the MAHĀYĀNA tradition. The school’s emergence about a century after the death of the BUDDHA GOTAMA (483 BCE) represented the first major schism in the Buddhist community. Traditional accounts of the second Buddhist council at Vaiśālī attribute the split to a dispute over monastic rules between the Mahāsaṅghikas and the more conservative Sthaviravādins. Later texts stress the Mahāsaṅghika beliefs regarding the nature of the Buddha—that there are a plurality of buddhas who are supramundane (*lokottara*) and that what passed for the Buddha Gotama in his earthly existence was only an apparition.

The school’s influence spread from Vaiśālī to southern India, where it further divided into several subsets, of which the best known was the Lokottaravāda.

MAHĀSIDDHA \mə-ˈhā-ˈsid-də\ (Sanskrit: “great perfect one”), Tibetan *grub-thob chen* \ˈd̪up-t̪öp-ˈt̪ʰen\, in the Tantric, or esoteric, traditions of India and Tibet, a person who, by the practice of meditative disciplines, has attained SIDDHA (miraculous powers). See TANTRIC HINDUISM; TANTRIC BUDDHISM.

Both the Śaivites (followers of SHIVA) of Hindu India and the Tantric Buddhists of Tibet preserve legends of 84 *mahāsiddhas* who flourished up to the 11th century. (The number 84 is a conventional, mystical number representing totality.) The lists of names vary considerably. All classes of society and both sexes are represented, and many non-Indian names appear. The prominence of the 84 *mahāsiddhas* reflects a synthesis during that period of the two reli-

gious traditions, combined with elements of HATHA YOGA, magic, and alchemy.

The 84 *mahāsiddhas* continue to be revered in Tibet. They are the authors of most of the Tantric works on magic and are the originators of spiritual lines of descent—from master to disciple—still honored. The most famous of the Tibetan *mahāsiddhas* is the great 8th-century Tantric master PADMASAMBHAVA.

MAHĀ-ŚIVARĀTRĪ \mə-ˈhā-ˌʃi-və-ˈrā-trē\ (Sanskrit: “Great Night of Shiva”), in HINDUISM, the most important sectarian festival of the year for devotees of SHIVA. The 14th day of the dark half of each lunar month is specially sacred to Shiva, but when it occurs in the month of Māgha (January–February) and, to a lesser extent, in the month of Phālguna (February–March), it is a day of particular rejoicing. The preceding day the participant observes a fast and at night a vigil during which a special worship of the LINGA is performed. The following day is celebrated with feasting and, among the members of the South Indian VĪRAŚAIVA sect, with the giving of gifts to the GURU.

MAHĀVAIROCANA SUTRA \mə-ˈhā-vī-ˈrō-čə-nə-ˈsü-trə\ (Sanskrit: “Great Illuminator Sutra”), *Japanese* Dainichikyō \d̪i-ˈn̪e-č̪e-kyō\, text of Indian TANTRIC BUDDHISM that became a principal SCRIPTURE of the SHINGON sect. The text received a Chinese translation, under the title *Ta-jih Ching*, about CE 725, and its teachings were propagated a century later in Japan by KŪKAI. These teachings center upon Mahāvairocana (Japanese: Dainichi Nyorai), the supreme cosmic buddha, whose body forms the universe. Through mystic rituals with an Indian flavor (even involving Hindu deities), one is led to realize that all one’s thoughts, words, and actions are in reality expressions of Mahāvairocana.

MAHĀVASTU \mə-ˈhā-ˈvəs-tü\ (Sanskrit: “Great Story”), legendary life of the BUDDHA GOTAMA, a late canonical work of the MAHĀSAṄGHĪKA school. Its three sections treat the Buddha’s former lives, the events from his entering the womb of MAHĀMĀYĀ to his enlightenment, and his first conversions and the rise of the monastic community.

The central narrative of the text is frequently interrupted by JĀTAKAS, AVADĀNAS, and doctrinal discourses. The life of the Buddha itself is presented as a profusion of wondrous events. The *Mahāvastu* reflects a growth of ideas about BODHISATTVAS that was to continue in MAHĀYĀNA circles, but at the same time, like the LALITAVISTARA, it preserves many ancient stories, traditions, and textual passages. The core of the work may go back to the 2nd century BCE, but much material was added in the centuries that followed.

MAHĀVIHĀRA \mə-ˈhā-vi-ˈhär-ə\, Buddhist monastery founded in the late 3rd century BCE in Anurādhapura, the ancient capital of Sri Lanka. The monastery was built by the Sinhalese king Devānampiya Tissa not long after his conversion to BUDDHISM. Though during the 12 ensuing centuries the other monasteries in Sri Lanka came to rival the Mahāvihāra in terms of size and influence, the Mahāvihāra monks played a central role through their preservation and development of the THERAVĀDA school of Buddhism and its Pāli textual tradition. Through a series of reforms sponsored by Sinhalese kings during the 12th and 13th centuries, the Mahāvihāra community and the reformed version of the Theravāda/Pāli tradition with which it was associated became the dominant religious force in Sri Lanka. The

reformed Theravāda tradition continued to have its center at the Mahāvihāra as it spread from Sri Lanka and became an important force in Southeast Asian Buddhism.

MAHĀVĪRA \mə-ˈhā-ˈvī-rə\ (Sanskrit: “Great Hero”), epithet of Vardhamāna \,vər-də-ˈmā-nə, \vər-\ (b. c. 599 BCE, Kuṇḍagrāma, India—d. 527, Pāvāpurī), last of the 24 TĪRTHĀNKARAS (Jain saints), and the reformer of the Jain monastic community (see JAINISM). The traditions of the two main Jain sects record that Mahāvīra became a monk and followed an extremely ascetic life, attaining *kevala-jñāna*, the stage of omniscience or highest perception. Teaching a doctrine of austerity, Mahāvīra advocated NONVIOLENCE, vegetarianism, and the acceptance of the *ma-hāvratas*, the five “great vows” of renunciation.

Mahāvīra appears to have been a younger contemporary of the BUDDHA GOTAMA. The son of a KṢATRIYA family, he grew up in Kuṇḍagrāma, a large city in the kingdom of Vaiśālī (modern Basarh, Bihār state), the area of origin of both JAINISM and BUDDHISM. His father was Siddhārtha, a ruler of the Nāta, or Jñātr, clan. According to one Jain tradition his mother was named Devānandā and was a member of the Brahmin class; other traditions name her Triśalā, Videhadinnā, or Priyakāriṇī, and place her in the Kṣatriya class.

The 6th century BCE was a period in which certain members of the Kṣatriya class opposed the cultural domination of the Brahmins, who used their positions as members of the highest class to make demands upon the lower CASTES. In particular, there was growing opposition to the large-scale Vedic sacrifices (YAJÑA), which involved the killing of many animals. Unnecessary killing had become objectionable to many thoughtful people of the time as a result of the spread of the doctrine of REINCARNATION, which linked animals and human beings in the same cycle of rebirth. Economic factors may also have encouraged the growth of the doctrine of nonviolence. Mahāvīra and his contemporary Siddhārtha Gotama, the Buddha, were two of the greatest leaders in the anti-Brahmin movement.

Mahāvīra apparently was reared in luxury, though as a younger son he could not inherit the leadership of the clan. At the age of 30, after he had married and had a daughter, he renounced the world and became a monk. According to legend, his parents had died by practicing the rite of *sallekhanā*—i.e., voluntary self-starvation.

It is related that Mahāvīra used one garment for more than a year, but subsequently went about naked and kept

no possessions—not even a bowl for obtaining alms or drinking water. He meditated day and night and lived in various places—workshops, cremation and burial grounds, and at the feet of trees. Trying to avoid all sinful activity, he especially avoided harming any kind of life, thus developing the doctrine of AHIMSĀ, or noninjury. He kept numerous fast periods and never ate anything that was expressly prepared for him.

After 12 years of practicing such austerities, he attained *kevala-jñāna*, the highest stage of perception. The school of PĀRŚVANĀTHA, the 23rd Tīrthānkara, apparently had been waning in appeal; Mahāvīra revived and reorganized Jain doctrine and its monastic order, thus being credited as the founder of Jainism. Basing his doctrines, according to tradition, on the teachings of Pārśvanātha, a 9th-century-BCE teacher from Vārānāsī, Mahāvīra systematized earlier Jain doctrines—along with metaphysical, mythological, and cosmological beliefs—and also established the rules and guidelines for the monks, nuns, and laity of Jain religious life.

Mahāvīra’s advocacy of nonviolence encouraged his followers to become strong advocates of vegetarianism, which in the course of time helped to bring about a virtual end to sacrificial killing in Indian rituals. His followers accept his five *mahāvratas*: renunciation of killing, of speaking untruths, of greed, of sexual pleasure, and of all attachments to living beings and nonliving things.

Mahāvīra was given the title *jina*, or “conqueror” (i.e., conqueror of enemies such as attachment and greed), which subsequently became a synonym for Tīrthānkara. He died, according to tradition, in 527 BCE at Pāvāpurī in Bihār state, leaving a group of followers

who established Jainism, which, with its practice of nonviolence, has profoundly influenced Indian culture.

MAHĀYĀNA \mə-ˈhā-ˈyā-nə, \mə-hə-\ (Sanskrit: “Greater Vehicle”), one of the three major Buddhist traditions and the form most widely adhered to in China, Korea, Vietnam, and Japan. Mahāyāna BUDDHISM emerged about the 1st century CE from the ancient Buddhist schools as a more liberal and innovative interpretation of the Buddha’s teachings. Mahāyānists differ from the conservatives (represented in the modern world by the Theravādins) in their views of Buddhas and related figures and in the goal that they set forth for Buddhist practitioners. Whereas THERAVĀDA Buddhists revere the BUDDHA GOTAMA as a real, historically situated being and focus their attention on him, Mahāyānists see Gotama as an earthly manifestation of a transcendent

Mahāvīra enthroned, miniature from the Kalpa Sūtra, 15th century

celestial buddha and affirm the accessibility and immediate religious importance of many different buddhas and celestial *BODHISATTVAS*. In addition, Mahāyānists do not believe that the ideal goal for a Buddhist practitioner is to become an *ARHAT*, or perfected saint; this they consider to be a limited, selfish goal. Rather, the goal is to attain the condition of a *bodhisattva*, or person who has approached the achievement of buddhahood but has postponed entrance into *NIRVANA* in order to work toward the salvation of all sentient beings. Thus, compassion, the chief virtue associated with the *bodhisattva*, is accorded an equal place with wisdom or insight, the virtue emphasized by the ancient schools. The merit accrued by buddhas and *bodhisattvas* is considered transferable to others, a concept that led to the development of devotional traditions, in which the faith of the practitioner plays a crucial role.

The Mahāyāna tradition encompasses a wide variety of schools and sects, including the *MĀDHYAMIKA* and *YOGĀCĀRA* philosophical schools of India, the great East Asian scholastic schools such as *T'ien-t'ai* (Tendai) and *HUA-YEN* (Kegon), the *Ch'an* (*ZEN*) schools of East Asia, the *PURE LAND* school of East Asia, and the *NICHIREN* sect in Japan.

The third major branch of Buddhism is the Esoteric branch, which includes the *VAJRAYĀNA* school, predominant in *TIBETAN BUDDHISM*, and the East Asian tradition represented by the *SHINGON* school, which persists in Japan. This branch accepts most aspects of Mahāyāna Buddhism and the basic principles of Mahāyāna doctrine, but these very distinctive schools and sects supplement the Mahāyāna orientation with important components of Esoteric teaching and ritual practice.

MAHDĪ, AL- \æl-'mä-dē, -'mä-hə-dē\ (Arabic: "Divinely Guided One"), in Islamic *ESCHATOLOGY*, a messianic deliverer who will fill the earth with justice and equity, restore true religion, and usher in a golden age lasting seven, eight, or nine years before the end of the world. The *QUR'AN* does not mention him, and almost no reliable *HADITHS* concerning the Mahdī can be adduced. Many *SUNNI* theologians accordingly question Mahdist beliefs, but such beliefs rise among the populace in times of crisis, and they form a necessary part of *SHĪ'ITE* doctrine.

The doctrine of the Mahdī seems to have gained currency during the religious and political upheavals of early *ISLAM* (7th and 8th centuries). In 686 *AL-MUKHTĀR IBN ABŪ 'UBAYD AL-THAQAFĪ*, leader of a revolt of non-Arab Muslims in Iraq, seems to have first used the doctrine by maintaining his allegiance to a son of 'ALĪ (Muhammad's cousin, son-in-law, and fourth *CALIPH*), Muhammad ibn al-Ḥanafīya, even after Ibn al-Ḥanafīya's death. Abū 'Ubayd taught that, as Mahdī, Ibn al-Ḥanafīya remained alive in his tomb in a state of occultation (*GHAYBA*) and would reappear to vanquish his enemies. In 750 the 'Abbāsīd revolution made use of eschatological prophecies current at the time that the Mahdī would rise in Khorāsān in the east, carrying a black banner.

Belief in the Mahdī has tended to receive new emphasis in every time of crisis. Thus, after the battle of Las Navas de Tolosa (1212), when most of Spain was lost for Islam, Spanish Muslims circulated traditions ascribed to the Prophet foretelling a reconquest of Spain by the Mahdī. During the Napoleonic invasion of Egypt, a person claiming to be the Mahdī appeared briefly in Lower Egypt.

Because the Mahdī is seen as a restorer of the political power and religious purity of Islam, the title has tended to be claimed by social revolutionaries in Islamic society. North Africa in particular has seen a number of self-styled

Mahdīs, the most important of these being 'Ubayd Allāh, founder of the Fātimid dynasty (909); MUHAMMAD IBN TŪMART, founder of the Almohad movement in Morocco in the 12th century; and Muhammad Aḥmad, the Mahdī of the Sudan who, in 1881, revolted against the Egyptian administration.

MAHDĪ, AL- \ül-maḡ-'dē, -'mä-dē\ (Sudanese), *original name* Muhammad Aḥmad ibn al-Sayyid 'Abd Allāh (b. Aug. 12, 1844—d. June 22, 1885, Omdurman, Sudan), creator of a vast Islamic state extending from the Red Sea to central Africa and founder of a movement that remained influential in The Sudan a century later. As a youth he moved from traditional *SUNNI* religious study to a mystical interpretation of *ISLAM*. In 1881 he proclaimed his divine mission to purify Islam and the governments that defiled it. His extensive campaign culminated in the capture of Khartoum (Jan. 26, 1885). He then established a theocratic state in The Sudan, with its capital at Omdurman.

Muhammad Aḥmad was the son of a shipbuilder from the Dongola district of Nubia. Shortly after his birth, the family moved south to Karari, a river village near Khartoum. As a boy, Muhammad developed a love of religious study. Increasingly, he tended to a more mystic interpretation of Islam, in the Sufi tradition, through study of the *QUR'AN* and the practice of self-denial under the discipline of a religious brotherhood.

He joined the *Sammāniya* order and grew to manhood in a wholly Sudanese religious setting, purposely separating himself from the official ruling class. By now he had begun to attract his own disciples and, in 1870, moved with them to a hermitage on Abā Island in the White Nile, 175 miles south of Khartoum. His highly emotional and intransigent religious observance brought him into conflict with his *SHAYKH* (teacher), whom he reproved for worldliness. The exasperated *shaykh* expelled him from the circle of his disciples, whereupon Muhammad Aḥmad, having vainly asked his teacher's pardon, joined the brotherhood of a rival *shaykh* within the same order.

The Sudan at this time was a dependency of Egypt, itself a province of the Ottoman Empire and governed by a multi-racial, Turkish-speaking ruling class. In appearance, education, and way of life, the rulers contrasted starkly with their Sudanese subjects, and the situation was politically dangerous. Gradually, during 1880 and the first weeks of 1881, Muhammad Aḥmad became convinced that the ruling class had deserted Islam and that the viceroy of Egypt was a puppet in the hands of unbelievers and thus unfit to rule over Muslims. In March 1881 he revealed to his closest followers that God had appointed him to purify Islam and to destroy all governments that defiled it. On June 29 he publicly assumed the title of the "Anticipated Mahdī" (*al-Mahdī al-Muntazar*), a figure who, according to tradition, would appear to restore Islam.

In less than four years al-Mahdī, who set out from Abā Island with a few followers (*see ANSAR*) armed with sticks and spears, was master of almost all the territory formerly occupied by the Egyptian government. By the end of 1883, his forces had annihilated three Egyptian armies sent against them. His fame reached responsive ears in Arabia to the north and as far west as Bornu (Nigeria). Al-Mahdī's crowning victory was the capture of Khartoum in 1885. After many of the citizens of Khartoum had been massacred, al-Mahdī made a triumphal entry into the city and led the prayers in the principal mosque.

The withdrawal of the British expedition, which had

failed to relieve Khartoum, left al-Mahdī free to consolidate his religious empire. He abandoned Khartoum and set up his administrative center at Omdurman, an expanded village of mud houses and grass-roofed huts on the left bank of the Nile, opposite Khartoum. He directed every aspect of community and personal life by proclamations, sermons, warnings, and letters. The political institutions, as well as the nomenclature of his government, were based insofar as practicable on those of early Islam. In the manner of the Prophet MUHAMMAD, he appointed four CALIPHS to be the living successors of the four earliest caliphs in Islamic history. Al-Mahdī referred to himself as “the successor to the apostle of God”—that is, successor to the Prophet Muhammad, but only in the sense of continuing his work. Al-Mahdī’s rule was brief. He took ill, possibly of typhus, and died in June 1885, only 41 years old.

MAHDIST \ˈmä-dɪst\; see ANSAR.

MAHESH YOGI, MAHARISHI \mə-ˌhā-ˈrē-shē-ˈmä-hesh-ˈyō-gē, mä-hə-\ (b. 1911?, India), Hindu religious leader who introduced the practice of TRANSCENDENTAL MEDITATION (TM) to the West.

Little is known of the Maharishi’s early life. He studied physics at the University of Allahābād and worked for a time in factories. He later left for the HIMALAYAS, where for 13 years he studied under GURU Dev, the founder of TM. When Guru Dev died in 1952, the Maharishi organized a movement to spread his teachings throughout the world; his first world tour took place in 1959 and brought him to the United States.

TM is a type of meditation, practiced twice a day, in which the subject mentally recites a special MANTRA (sacred sound or phrase). Concentration on the repeated utterances

decreases mental activity, and as a result the subject is expected to reach a higher state of consciousness. The movement grew slowly until the late 1960s, when it was adopted by many of the spiritual seekers of that era.

MAHZOR \mäk-ˈzór, ˈmäk-zər\, also spelled machzor, plural mahzorim \mäk-zó-ˈrēm\, or mahzors (Hebrew: “cycle”), originally a Jewish prayer book arranged according to liturgical chronology and used throughout the entire year. *Mahzor* has come to mean the festival prayer book, as distinguished from the SIDDUR, the prayer book used on the ordinary SABBATH and on weekdays.

Though the basic structure and prayers of the rites of the ASHKENAZI and SEPHARDI are essentially the same, religious hymns (*piyyutim*) composed by such celebrated medieval poets as Eleazar Kalir abound in the Ashkenazic *mahzor* but do not appear in Sephardic festive liturgies, which draw on the compositions of the great Spanish poets. Local ritual differences have given rise to somewhat different *mahzorim* within both the Ashkenazic and the Sephardic rites.

MAIMON, SALOMON \ˈmī-mön\, original name Salomon ben Joshua (b. c. 1754, Nieświcz, Grand Duchy of Lithuania [now Nesvizh, Belarus]—d. Nov. 22, 1800, Nieder-Siegersdorf, Silesia), Jewish philosopher who combined an early and extensive familiarity of rabbinic learning with a proficiency in Hebrew. After acquiring a special reverence for MOSES MAIMONIDES, he took the philosopher’s surname.

In 1770, before he was 20, Maimon wrote an unorthodox commentary on Maimonides’ *More nevuḥim* (*Guide of the Perplexed*) that earned him the hostility of fellow Jews. At 25 he wandered over Europe until he settled in Posen, Pol., as a tutor. In 1790 he was given residence on the estate of Count Friedrich Adolf, Graf von Kalckreuth, at Nieder-

Siegersdorf. During the next decade he wrote his major philosophical works, including the autobiography edited for him by K.P. Moritz as *Salomon Maimons Lebensgeschichte* (1792; *Solomon Maimon: An Autobiography*) and his major critique of Kantian philosophy, *Versuch über die Transcendentalphilosophie* (1790; “Search for the Transcendental Philosophy”).

By emphasizing the limits of pure thought, Maimon helped to advance philosophical discussion of the connection between thought and experience and between knowledge and faith. In his view there was religious and ethical value in the pursuit of truth, even though the goal itself was not completely attainable. His other major writings are *Philosophisches Wörterbuch* (1791; “Philosophical Dictionary”), *Über die Progressen der Philosophie* (1792; “On the Progresses of

Maharishi Mahesh Yogi (center) with George Harrison and John Lennon of the Beatles
Archive Photos—Popperfoto

Philosophy"), and *Kritische Untersuchungen über den menschlichen Geist* (1797; "Critical Investigations of the Human Spirit").

MAIMONIDES, MOSES \mī-'mä-nə-,dēz\, *original name* Moses ben Maimon \ben-mī-'mōn\, *also called* Rambam \räm-'bäm\, *Arabic* Abū 'Imran Mūsā ibn Maymūn ibn 'Ubayd Allāh (b. March 30, 1135, Córdoba [Spain]—d. Dec. 13, 1204, Egypt), Jewish philosopher, jurist, and physician, the foremost intellectual figure of medieval JUDAISM. His monumental contributions in religion, philosophy, and medicine influenced Jewish and non-Jewish scholars alike.

Maimonides was born into a distinguished family of Córdoba, where citizens were accorded full religious freedom. But before Moses' 13th birthday the Islamic Mediterranean world was shaken by a revolutionary Islamic sect, the ALMOHADS, who captured Córdoba in 1148, leaving the Jewish community faced with the alternative of submitting to ISLAM or leaving the city. The Maimons remained in Córdoba for some 11 years, practicing their Judaism in private while disguising their ways in public.

When the double life proved too irksome, the family left the city about 1159 to settle in Fez, Morocco, where Moses continued his studies in rabbinics, Greek philosophy, and medicine. In 1165, however, RABBI Judah ibn Shoshan, with whom Moses had studied, was executed for practicing Judaism. The Maimon family moved again, this time to Palestine, then on to Egypt, settling in Fostat, near Cairo. There Jews were free to practice their faith openly.

Moses was soon left as the sole support of his family. He became a practicing physician. His fame as a physician spread rapidly, and he soon became the court physician to the SULTAN Saladin and his son al-Afḍal. He also continued a private practice and lectured before his fellow physicians at the state hospital. At the same time he became the leading member of the Jewish community, teaching in public and helping his people with various personal and communal problems.

Maimonides' earliest written work was the *Millot ha-Higgayon* ("Treatise on Logical Terminology"), a study of various technical terms employed in logic and metaphysics. Another of his early works was the "Essay on the Calendar" (Hebrew title: *Ma'amar ha'ibur*). The first of his major works, begun at the age of 23, was his commentary on the MISHNAH, *Kitāb al-Sirāj*, written in Arabic. Maimonides' commentary clarified individual words and phrases, frequently citing relevant information in the fields of archaeology, theology, or science, and featured a series of introductory essays dealing with general philosophic issues touched on in the Mishnah. One of these essays summarizes the teachings of Judaism in a creed of THIRTEEN ARTICLES OF FAITH.

He completed the commentary on the Mishnah at the age of 33, after which he began his magnum opus, the code of Jewish law, on which he also labored for 10 years. Bearing the name of MISHNE TORAH ("The Torah Reviewed") and written in a lucid Hebrew style, the code offers a brilliant systematization of all Jewish law and doctrine. Maimonides wrote two other works in Jewish law of lesser scope: the *Sefer ha-mitzwot* ("Book of Precepts"), a digest of law for the less sophisticated reader, written in Arabic; and the *Hilkhot ha-Yerushalmi* ("Laws of Jerusalem"), a digest of the laws in the PALESTINIAN TALMUD that was written in Hebrew.

His next major work, on which he labored for 15 years, was his classic in religious philosophy, the *Dalālat al-ḥā'ir-*

in (*The Guide of the Perplexed*), later known under its Hebrew title as the *More nevuḳhim*. A plea for what he called a more rational philosophy of Judaism, it was written in Arabic and sent as a private communication to his favorite disciple, Joseph ibn Aknin. The work was translated into Hebrew in Maimonides' lifetime and later into Latin and most European languages.

Maimonides also wrote occasional essays dealing with current problems that faced the Jewish community, and he maintained an extensive correspondence with scholars, students, and community leaders. Among his minor works are *Iggeret Teman* ("Epistle to Yemen"), *Iggeret ha-shemad* or *Ma'amar Qiddush ha-Shem* ("Letter on Apostasy"), *Iggeret le-qahal Marsilia* ("Letter on Astrology," or, literally, "Letter to the Community of Marseille"), and works dealing with medicine, including a popular miscellany of health rules, dedicated to the sultan, al-Afḍal.

MAISON-CARRÉE \mä-,zòⁿ-kä-'rā\, Roman TEMPLE at Nîmes, France. According to an inscription, it was dedicated to Gaius and Lucius Caesar, adopted sons of Augustus, and dates from the beginning of the Christian era.

The temple, 82 feet long by 40 feet wide, is one of the most beautiful monuments built in Gaul by the Romans. It houses a collection of Roman sculpture and classical fragments.

MAITREYA \mī-'trā-yə\, in BUDDHISM, a future buddha, presently a BODHISATTVA residing in the Tuṣṭa heaven, who will descend to earth in order to renew preaching of the DHARMA when the teachings of the BUDDHA GOTAMA have completely decayed. Maitreya is the earliest bodhisattva around whom a cult developed and is mentioned in SCRIPTURES from as early as the 3rd century CE.

The name Maitreya is derived from the Sanskrit *maitrī* ("friendliness"). In Pāli the name becomes Metteyya, in Chinese Mi-lofo, in Japanese Miroku, and in Mongolian Maidari; in Tibetan the bodhisattva is known as Byams-pa ("kind," or "loving"). His worship was especially popular during the 4th to 7th century, and his images are found throughout the Buddhist world. He is represented in painting and sculpture both as a bodhisattva and as a buddha, and he is frequently depicted seated in European fashion or with his ankles loosely crossed. In some contexts, particularly, though not exclusively, in medieval China, the expectation of the coming of Maitreya came to be associated with peasant rebellions and the hope for the establishment of a new religion and social order.

MAKTAB \ˈmāk-tāb\, also called *kuttāb* (Arabic: “school”), Muslim elementary school. Until the 20th century boys were instructed in QUR’AN recitation, reading, writing, and grammar in *maktabs*, which were the only means of mass education. Girls had limited access to this level of learning, but it was not until the 19th century that their access to the *maktab* became usual. During the 20th century government-supported primary schools have tended to supplant the *maktab* in Muslim countries, providing education for both girls and boys. Some religious education is incorporated in the curriculum of government schools in most Muslim countries.

MALAKBEL \mä-läk-ˈbäl\ (Hebrew: “Angel of Baal”), West Semitic sun god and messenger god, worshiped primarily in the ancient Syrian city of Palmyra; he was variously identified by the Greeks with ZEUS and HERMES and by the Romans with SOL. His name may have been of Babylonian origin, and he was considered the equivalent of the Babylonian sun god SHAMASH. Engravings on a marble altar from Palmyra depict the four annual stages in the life of Malakbel, symbolizing the yearly sequence of the sun. Most other representations portray Malakbel with Aglibol, the moon god.

MALĀMATĪYA \mä-lā-mā-ˈtē-ə\, Sufi group that appeared in Sāmānid Iran during the 9th century (see SUFISM). The name *Malāmātiya* was derived from the Arabic verb *lāma* (“blame”). *Malāmātī* doctrines were based on the reproach of the carnal self and a careful watch over its inclinations to surrender to the temptations of the world. They often claimed as the basis of their philosophy the Qur’anic verse “I [God] swear by the reproachful soul,” which, they said, clearly praised a self that constantly reproached its owner for the slightest deviation from the world of God. The reproachful self in *Malāmātī* terminology was the perfect self.

The *Malāmātiya* found value in self-blame, believing that it would be conducive to a true detachment from worldly things and to disinterested service of God. They feared the praise and respect of other persons. Piety, the *Malāmātī* believer said, is a private affair between a person and God. A *Malāmātī* believer further concealed his knowledge as a precaution against acquiring fame and strove to make his faults known, so that he would always be reminded of his imperfection. Toward others they were as tolerant and forgiving as they were strict and harsh on themselves.

While other Sufis revealed their *ahwāl* (states of ECSTASY) and their joy over progressing from one MAQĀM (spiritual stage) to the next, the *Malāmātiya* kept their achievements and their feelings concealed. Sufis wore particular clothes, organized various orders, and assumed many titles; the *Malāmātiya* concealed their identities and belittled their achievements. In fact, *Malāmātī* doctrines were so different from those of most Sufi groups that a few Muslim scholars did not consider the *Malāmātiya* to be Sufis.

MALCOLM X \ˈmäl-kəm-ˈeks\, original name Malcolm Little, Muslim name el-Hajj Malik el-Shabazz \el-ˈhaj-mə-

\lĕk-el-shə-ˈbazz\ (b. May 19, 1925, Omaha, Neb., U.S.—d. Feb. 21, 1965, New York, N.Y.), African-American militant leader who articulated concepts of racial pride and nationalism in the early 1960s. After his assassination, the widespread distribution of his life story—Alex Haley’s *The Autobiography of Malcolm X* (1965) and the 1992 film *Malcolm X*, directed by Spike Lee—made him an ideological hero, especially among black youth.

Drawn to the doctrines of ELIJAH MUHAMMAD while serving a prison term, Malcolm X converted to the NATION OF ISLAM in 1946. After his release in 1952 he soon became the most effective speaker and organizer for the Nation of Islam. He

was assigned to be minister of the important Mosque Number Seven in New York City’s Harlem in 1954. He founded many new mosques and greatly increased the movement’s membership. In 1961 he launched *Muhammad Speaks*, the official publication of the movement.

Speaking with bitter eloquence against the white exploitation of African-American people, Malcolm developed a brilliant platform style, which soon won him a large and dedicated following. He derided the civil-rights movement and rejected both integration and racial equality, calling instead for racial pride and self-reliance within a separatist African-American community. Because he advocated the use of violence for self-protection, his leadership was rejected by most civil-rights leaders, who emphasized nonviolent resistance to racial injustice.

Malcolm X described the assassination of President John F. Kennedy as a

“case of chickens coming home to roost”—i.e., an instance of the kind of violence that whites had long used against African-Americans. Malcolm’s success had by this time aroused jealousy within the Black Muslim hierarchy, and, in response to his comments on the Kennedy assassination, Elijah Muhammad suspended Malcolm from the movement. In March 1964 Malcolm X left the Nation of Islam and announced the formation of his own religious organization. As a result of a PILGRIMAGE he took to MECCA in April 1964, he modified his views of separatism, declaring that he no longer believed whites to be innately evil and acknowledging his vision of the possibility of world brotherhood. In October 1964 he reaffirmed his conversion to Sunni Islam. Growing hostility between Malcolm’s followers and the rival Black Muslims manifested itself in violence and threats against his life. He was shot to death at a rally of his followers at a Harlem ballroom. Three Black Muslims were convicted of the murder.

MĀLIK IBN ANAS \mä-lik-i-bən-a-ˈnas\, in full Abū ‘Abd Allāh Mālik ibn Anas ibn al-Ḥārith al-Aṣḥabī (b. c. 715, Medina, Arabia [now in Saudi Arabia]—d. 796, Medina), Muslim jurist who played an important role in formulating early legal doctrines of ISLAM.

Few details are known about Mālik ibn Anas’ life, most of which was spent in the city of MEDINA. He became learned in Islamic law and attracted a considerable number of students, his followers coming to be known as the Mālikī school of law. His prestige involved him in politics, and

he declared during a rebellion that loyalty to the CALIPH was not a religious necessity since homage to him had been given under compulsion. However, Abbasid al-Mansūr (reigned 754–775), the caliph, was victorious, and Mālik received a flogging for his complicity. This only increased his prestige, and during later years he regained favor with the central government.

Mālik ibn Anas produced one major book—the *Muwattaʿa* (“The Leveled Path”). This is the oldest surviving compendium of Islamic law based on HADITHS from MUHAMMAD, his COMPANIONS, and their followers.

MĀLIKĪ LEGAL SCHOOL \ˈmā-li-kē\, also called Madhhab Mālik, English Malikites \ˈmā-lə-kīts\, in ISLAM, one of the four Sunni schools of law, formerly the ancient school of MEDINA. Founded in the 8th century and based on the teachings of the imam MĀLIK IBN ANAS, the Mālikī legal school stressed local Medinese community practice (SUNNA), preferring traditional opinions (*raʿy*) and analogical reasoning (QIYĀS) to a strict reliance on HADITH as a basis for legal judgment. Hadith, however, was always applied, though arbitrarily. The Mālikī school, which once was predominant in Andalusia in Spain, currently prevails throughout northern and western Africa, in The Sudan, and in some of the Persian Gulf states.

MALINOWSKI, BRONISŁAW \ˌmā-lə-ˈnɒf-skē, ˌmä-\ (b. April 7, 1884, Kraków, Poland, Austria-Hungary—d. May 16, 1942, New Haven, Conn., U.S.), one of the most important anthropologists of the 20th century. He is widely recognized as the founder of social anthropology and the development of FUNCTIONALISM.

Malinowski was the son of Lucjan Malinowski, a professor of Slavic philology at the Jagiellonian University in Kraków and a linguist of some reputation. Bronisław Malinowski’s mother, Józefa, *née* Łacka, of a moderately wealthy land-owning family, was highly cultured and a good linguist. Although his early education was conducted largely at home, he subsequently attended the Jagiellonian University, completing his doctorate in philosophy in 1908, with physics and mathematics as subsidiaries. Happening upon SIR JAMES FRAZER’S *Golden Bough* changed his course; in 1910 he entered the London School of Economics and Political Science where anthropology had been recently established as a discipline.

In 1914 he went to New Guinea. His six months’ work among the Mailu on the south coast produced a monograph that was sufficient to earn him a doctor of science (D.Sc.) degree from the University of London in 1916. He moved to the nearby Trobriand Islands, where he worked for two years in 1915–16 and 1917–18, it was there that he discovered the now famous *kula* ritual that ranged between islands in the Pacific. The published works on agricultural economics; on sex, marriage, and family life; on primitive law and custom; and on magic and myth, drew heavily on his Trobriand data in putting forward theoretical propositions of basic significance and stimulus in the development of social anthropology. Writing in Polish for his own private record, Malinowski kept field diaries in which he exposed very frankly his problems of isolation and of his relations with New Guinea people.

After living in the Canary Islands and southern France, Malinowski returned in 1924 to the University of London as reader in anthropology; he became professor in 1927. In 1938 Malinowski went on sabbatical leave to the United States. When World War II was declared, he became Bishop

Museum Visiting Professor of Anthropology at Yale University and then accepted a tenured appointment there. He was able to study peasant markets in Mexico in 1940 and 1941 and had plans for a study of social change in Mexican-Indian communities when he died in 1942. *Argonauts of the Western Pacific* (1922) and *Magic, Science and Religion* (1948) remain two of his most popular works.

MALLEUS MALEFICARUM \ˈmā-lē-əs-mā-lə-fi-ˈkā-rəm, ˈmä-lē-ūs-,mä-lä-fē-ˈkär-əm\ (Latin: “Hammer of Witches”), detailed legal and theological document (c. 1486) regarded as the standard handbook on WITCHCRAFT, including its detection and its extirpation, until well into the 18th century. Its appearance did much to spur on some two centuries of witch-hunting hysteria in Europe. The *Malleus* was the work of two DOMINICANS: Johann Sprenger, dean of the University of Cologne in Germany, and Heinrich Kraemer, professor of theology at the University of Salzburg, Austria, and inquisitor in the Tirol region of Austria.

In 1484 Pope Innocent VIII issued the bull *Summis Desiderantes*, in which he authorized Sprenger and Kraemer to extirpate witchcraft in Germany. The *Malleus* codified the FOLKLORE and beliefs of the Alpine peasants and was divided into three parts. In Part I the reality and the depravity of witches is emphasized, and any disbelief in demonology is condemned as HERESY. Because of the nature of the enemy, any witness, no matter what his credentials, may testify against an accused. Part II is a compendium of fabulous stories about the activities of witches—e.g., diabolic compacts, sexual relations with devils (incubi and succubi), transvection (night-riding), and metamorphosis. Part III is a discussion of the legal procedures to be followed in witch trials. Torture is sanctioned as a means of securing confessions. Lay and secular authorities are called upon to assist the inquisitors in the task of exterminating those whom SATAN has enlisted in his cause.

The *Malleus* went through 28 editions between 1486 and 1600 and was widely accepted as authoritative on SATANISM and as a guide to Christian defense.

MANA \ˈmä-nə\ (Maori *mana*, or a cognate word in other Austronesian languages), among Melanesian and Polynesian peoples, supernatural force or power that may be ascribed to persons, spirits, or inanimate objects. Mana may be either good or evil, beneficial or dangerous. The term was first used in 19th-century scholarship during debates concerning the ORIGIN OF RELIGION. It was interpreted to be an impersonal, amoral, supernatural power that manifested itself in extraordinary phenomena and abilities. Anything distinguished from the ordinary (e.g., an uncommonly shaped stone) could be possessed by mana.

Subsequent scholarship has challenged both the original description of mana and the conclusions drawn from it. Mana is by no means universal; it is not even common to all of Melanesia; many of the parallels that have been adduced have been found to be specious. Mana is not impersonal. It is never spoken of by itself but always in connection with powerful beings or things. Thus, mana would seem to be descriptive of the possession of power and not itself the source of power. Rather than being an impersonal power, mana is inextricably related to belief in spirits.

Among contemporary scholars a functionalist and political interpretation has been offered. Mana seems to be a symbolic way of expressing the special qualities attributed to persons of status and authority in a society, of providing sanction for their actions, and of explaining their failures.

MANALA \ˈmä-nä-lä\, in Finnish mythology, the realm of the dead. The word is possibly derived from the compound *maan-ala*, “the space (or area) under the earth.” It is also called TUONELA, the realm of Tuoni, and POHJOLA, derived from the word *pohja*, meaning “bottom” and also “north.”

The Finnish Underworld and related concepts among other Finno-Ugric peoples, such as the *yabme-aimo* of the Sami, do not provide a consistent COSMOLOGY. Manala is often reached by crossing a fiery stream, the river of death, either over a narrow bridge or by a boat brought by a denizen of the otherworld. Manala is a dark, gloomy place ruled by the goddess Louhi, a fierce haglike creature with several vaguely defined sons, daughters, and servants in her retinue. Pohjola is similarly found in various forms in the underworld, but it is to the north and at the outer edges of the universe, outside the known world. In a more concrete sense the realm of the dead was where the dead were buried, and many of the descriptions of the Underworld depict the COFFINS and funerary shelters erected at the burial sites.

MANANNÁN MAC LIR \ˈmä-nä-nän-mäk-ˈlʲirʲ\ (Middle Irish: “Manannán, Son of [the] Sea”), Irish sea god from whom the name of the Isle of Man allegedly derived. Manannán traditionally ruled an island paradise, protected sailors, and provided abundant crops. He gave immortality to the gods through his swine, which returned to life when killed; those who ate of the swine never died. He wore impenetrable armor and, carrying an invincible sword, rode over the waves in a splendid chariot. He and his Welsh equivalent, Manawydan, brother of the god BRÂN, apparently derived from an early Celtic deity.

MANASĀ \ˈmā-nə-sā\, goddess of snakes, worshiped mainly in northeastern India, chiefly for the prevention and cure of snakebite and also for general prosperity. As the protector of children, she is often identified with the goddess Śaṣṭhī (“the Sixth,” worshiped on the sixth day after birth). The written texts that contain her myth, the *Manasā-maṅgals*, date from the 16th to 17th century but are probably based on an earlier ORAL TRADITION. Manasā is a goddess local primarily to Bengal who was later incorporated into the classical Hindu pantheon. She is probably related to the NĀGAS, a legendary half-human, half-serpent race in India.

MANASSEH \mə-ˈnə-sə\, one of the 12 biblical tribes of Israel, named after a younger son of JOSEPH, son of JACOB.

After the exodus from Egypt, the tribe of Manasseh settled in central Palestine. When Israel was conquered by the Assyrians in the late 8th century BCE, many Israelites were carried off into slavery (2 Kings 18:9–12). In time the tribe of Manasseh was assimilated by other peoples and thus became one of the TEN LOST TRIBES OF ISRAEL.

MANASSEH BEN ISRAEL \mə-ˈnə-sə-ben-ˈiz-rē-əl, -rā-əl\, Manasseh also spelled Menasseh, original name Manoel Dias Soeiro [b. 1604, Lisbon? [Portugal]—d. Nov. 20, 1657, Middelburg, Netherlands], major Hebraic scholar and the founder of the modern Jewish community in England.

Manasseh was born into a family of Marranos (Jews of Spain and Portugal who publicly accepted CHRISTIANITY but privately practiced JUDAISM). Ultimately the family emigrated to Amsterdam, where Manasseh became the RABBI of a Portuguese Jewish congregation in 1622.

Manasseh believed that the MESSIAH would return to lead the Jews to the Holy Land only after their dispersal throughout the world was achieved. He considered immi-

grating to Brazil in 1640 and reported the alleged discovery in South America of the TEN LOST TRIBES OF ISRAEL in *Esperança de Israel* (“Hope of Israel”). To support the settlement of Jews in Protestant England, where their presence had been officially banned since 1290, he dedicated the Latin edition of this work (1650) to the English Parliament. Manasseh’s plea before Oliver Cromwell in 1655 for the formal recognition of Jewish settlement in England ultimately led to the granting of an official charter of protection to the Jews of England in 1664.

MANDAEANISM \man-ˈdē-ə-ni-zəm\ (from Mandaean: *mandayya*, “having knowledge”), ancient Middle Eastern religion still surviving in Iraq and Khuzistan (southwest Iran). The religion is usually treated as an instance of GNOSTICISM; it resembles MANICHAISM in some respects. Most scholars date the beginnings of Mandaeanism to sometime during the first three centuries CE. Some, emphasizing the Babylonian elements in Mandaean magical texts, use of the Iranian calendar, and Iranian words in the Mandaic language, argue that Mandaeanism originated in southwestern Mesopotamia in early Christian or even pre-Christian times. Others argue for a Syro-Palestinian origin, based on the quasi-historical Mandaean document, the *Haran Gawaita*, which narrates the exodus from Palestine to Mesopotamia in the 1st century CE of a group called Nasoreans (the Mandaean priestly CASTE as opposed to Mandaiia, the laity). They also call attention to certain Mandaean affinities to JUDAISM: familiarity with OLD TESTAMENT writings; parallels to Jewish ethics, particularly the high value placed on marriage and procreation; and concern for cultic purity.

Mandaeanism stresses salvation of the soul through esoteric knowledge (gnosis) of its divine origin. In its cosmological superstructure, evil ARCHONS (rulers) obstruct the ascent of the soul through the heavenly spheres to reunion with the supreme deity. Unlike many Gnostic systems, however, Mandaeanism strongly supports marriage and forbids sexual license. The Mandaeanism also developed an elaborate cultic ritual, particularly for BAPTISM. The Mandaeanism viewed Jesus as a false MESSIAH but revered JOHN THE BAPTIST, who performed miracles of healing through baptism, which the Mandaeanism viewed as a powerful process giving immortality and purification.

Among the more important extant Mandaean writings are: the *Ginza* (“Treasure,” also known as the *Book of Adam*), a cosmological treatise; the *Book of John*, describing the activities of John the Baptist; the *Book of the Zodiac*, a collection of magical and astrological texts; and the *Baptism of Hibil Ziwa*, describing the purification of the heavenly savior of the Mandaeanism.

MANDALA \ˈmən-də-lə\, Sanskrit *maṅḍala* (“circle,” or “plan of the cosmos”), in TANTRIC HINDUISM and BUDDHISM, a symbolic diagram used in the performance of sacred rites and as an instrument of meditation. The mandala is a representation of the universe, a consecrated area that serves as a receptacle for the gods and as a collection point of universal forces. By mentally “entering” the mandala and “proceeding” toward its center, practitioners are by analogy guided through the cosmic processes of disintegration and reintegration.

In China, Japan, and Tibet mandalas are of two primary types, representing different aspects of the universe: the *garbha-dhātu* (Sanskrit: “womb world”; Japanese: *taizō-kai*), where movement is from the one to the many; and the *vajra-dhātu* (Sanskrit: “diamond [or thunderbolt] world”;

Japanese *kongō-kai*), from the many into one. Mandalas may be painted on paper or cloth, drawn on prepared ground with white and colored threads or with rice powders, fashioned in bronze, or built in stone.

The mandala of a Tibetan *tanka* (cloth scroll painting) characteristically consists of an outer enclosure around one or more concentric circles, which in turn surround a square transversed by lines from the center to the four corners. In the center and the middle of each triangle are five circles containing symbols or images of divinities, most commonly the five “self-born” buddhas. Of the borders surrounding the mandala, the first is a ring of fire, which both bars entry to the uninitiated and symbolizes the burning of ignorance; next comes a girdle of diamonds, which stands for illumination; then a circle of eight graveyards, symbolizing the eight aspects of individuating cognition; next a girdle of lotus leaves, signifying spiritual rebirth; and, finally, at the center, the mandala itself, where the images are set.

MANDATE OF HEAVEN: *see* T'IENT MING.

MAṄGAL-KĀVYA \ˈməŋ-gəl-ˈkā-vyə\ (Bengali: “auspicious poem”), type of eulogistic verse in honor of a god or goddess in Bengal (India) and most often associated with a local Bengali deity—*e.g.*, MANASĀ, the goddess of snakes; Śitalā, the goddess of smallpox; or the folk god Dhama-Ṭhākūr.

*Maṅgal-kāvya*s are most often heard at the festivals of the deities they celebrate. They tell the story of how a particular god or goddess succeeded in establishing his or her worship on earth. They are similar in form, written for the most part in the simple *payār* meter, a couplet form with rhyme scheme “aa bb,” etc. Typical of *maṅgals* is their earthy imagery, drawn from village, field, and river.

MANI \mə-ˈnē\, also called Manes \mə-ˈnē, ˈmā-nēz\, or Manichaeus \ˌma-nə-ˈkē-əs\ (b. April 14, 216, southern Babylonia—d. 274?, Gundeshapur), Iranian founder of MANICHAISM, which advocates a dualistic doctrine that viewed the world as a fusion of spirit and matter, the original contrary principles of GOOD AND EVIL, respectively.

Before Mani’s birth, his father, Patek, a native of Hamadan, had joined a religious community practicing BAPTISM and abstinence. Information about his life appears to derive from his own writings and the traditions of his church. He grew up at his birthplace, speaking a form of eastern Aramaic. Twice, as a boy and young man, he saw in visions an ANGEL, the “Twin,” who, the second time, called him to preach a new religion.

He traveled to India (probably Sind and Turan) and made converts. Favorably received on his return by the newly

crowned Persian king, Shāpūr I, he was permitted to preach his religion in the Persian empire. Under the reign of the Persian king Bahrām I, however, he was attacked by Zoroastrian priests and was imprisoned by the king at Gundeshapur (Belapet), where he died after undergoing a trial that lasted 26 days.

MANICHAISM \ˈma-nə-ˌkē-i-zəm, ˌma-nə-ˈkē-\, dualistic religious movement founded in Persia in the 3rd century CE by MANI, who was known as the “Apostle of Light” and supreme “Illuminator.” Manichaeism was long considered a Christian HERESY, but it was a religion in its own right that, because of the coherence of its doctrines and the rigidity of its structure and institutions, preserved throughout its history a unity and unique character.

With Mani’s “annunciation” at the age of 24 he obeyed a heavenly order to manifest himself publicly and to proclaim his doctrines; thus began the new religion. From that point on, Mani preached throughout the Persian Empire.

At first unhindered, he later was opposed by the king, condemned, and imprisoned. After 26 days of trials, which his followers called the “Passion of the Illuminator” or Mani’s “crucifixion,” Mani delivered a final message to his disciples and died (sometime between 274 and 277).

Mani viewed himself as the final successor in a long line of prophets, beginning with ADAM and including BUDDHA, ZOROASTER, and JESUS. He viewed earlier revelations as being limited because they were local and taught in one language to one people. Mani regarded himself as the carrier of a universal message destined to replace all other religions. Hoping to avoid corruption and to ensure doctrinal unity, he recorded his teachings in writing and gave those writings canonical status during his lifetime.

Mani encouraged the translation of his writings into other languages and organized an extensive mission program, so that Manichaeism rapidly spread from Egypt across northern Africa (where the young AUGUSTINE temporarily became a convert), reaching Rome in the early 4th century. The 4th century marked the height of Manichaeism expansion in the West, with churches in southern Gaul and Spain. Vigorously attacked by both the Christian church and the Roman state, it almost disappeared from western Europe by the end of the 5th century, and, during the 6th century, from the eastern portion of the Empire. Within Persia the Manichaean community maintained itself in spite of severe persecutions, until Muslim ‘Abbāsīd persecution in the 10th century forced the transfer of the seat of the Manichaean leader to Samarkand (now in Uzbekistan).

A Manichaean missionary reached the Chinese court in 694, and in 732 an edict gave the religion freedom of worship in China. When East Turkistan was conquered in the

8th century by the Uighur Turks, one of their leaders adopted Manichaeism and it remained the state religion of the Uighur kingdom until its overthrow in 840. Manichaeism itself probably survived in East Turkistan until the Mongol invasion in the 13th century. In China it was forbidden in 843, but, although its followers were persecuted, it continued there at least until the 14th century.

Teachings similar to Manichaeism resurfaced during the Middle Ages in Europe in the so-called neo-Manichaean sects. Beliefs of the PAULICIANS (Armenia, 7th century), the BOGOMILS (Bulgaria, 10th century), and the CATHARI or Albigensians (France, 12th century) strongly resembled Manichaeism, though direct historical links to the religion of Mani are difficult to establish.

Mani sought to found a truly ecumenical and universal religion that would integrate into itself all the partial truths of previous revelations. However, beyond mere syncretism, it sought the proclamation of a truth that could be translated into diverse forms in accordance with the different cultures into which it spread. Thus, Manichaeism, depending on the context, resembles Iranian and Indian religions, CHRISTIANITY, BUDDHISM, and TAOISM.

At its core, Manichaeism was a type of GNOSTICISM, teaching that life in this world is unbearably painful and radically evil. Inner illumination reveals that the soul which shares in the nature of God has fallen into the evil world of matter and must be saved by means of the spirit or intelligence (*nous*). To know one's self is to recover one's true self from ignorance because of its mingling with the body and with matter. In Manichaeism, to know one's self is to see one's soul as sharing in the nature of God and as coming from a transcendent world. Knowledge enables a person to realize that, despite his abject present condition in the material world, he does not cease to remain united to the transcendent world by eternal and immanent bonds with it. Thus knowledge is the only way to salvation.

The saving knowledge of the true nature and destiny of humanity, God, and the universe is expressed in Manichaeism in a complex mythology which stressed that the soul is fallen, entangled with evil matter, and then liberated by the spirit or *nous*. The myth unfolds in three stages: a past period in which there was a separation of the two radically opposed substances—Spirit and Matter, GOOD AND EVIL, Light and Darkness; a middle period (corresponding to the present) during which the two substances are mixed; and a future period in which the original duality will be re-established. At death the soul of the righteous person returns to paradise. The soul of the person who persisted in things of the flesh—fornication, procreation, possessions, cultivation, harvesting, eating of meat, drinking of wine—is condemned to rebirth in a succession of bodies.

Only a portion of the faithful followed the strict ascetic life advocated in Manichaeism. The community was divided into the ELECT, who felt able to embrace a rigorous rule,

and the hearers who supported the elect with works and alms. The essentials of the Manichaean sacramental rites were prayers, almsgiving, and fasting. CONFESSION and the singing of hymns were also important in their communal life. The Manichaean scriptural canon includes seven works attributed to Mani. Portions of the Manichaean SCRIPTURES were rediscovered in the 20th century, mainly in Chinese Turkistan and Egypt.

MANIKKAVACAKAR \ˈmə-nē-kə-ˈvə-sə-gər\, also spelled Manikkavasagar, 9th-century Hindu mystic and poet-saint of the Śaiva tradition (see ŚAIVISM).

Manikkavacakar was born of Brahmin parents in South India and became the chief minister to the king of Madura. Legend has it that, while on an errand for the king, Manikkavacakar had a vision of the god SHIVA and from that time on dedicated his life to the religious piety and devotional poetry, written in Tamil, that made him famous. His best-known work is the *Tiruvacakam*, or “Blessed Utterance,” which became the inspiration for later devotional poetry in Tamil. The text, apparently influenced by the BHAGAVAD GĪTĀ, is

a collection of poems and songs dedicated to Shiva, who is said to take on human form and teach the means to salvation to people of all classes. The work is revered by Tamil Śaivites, who commit its psalms to memory and daily sing its verses in temples and homes.

MAÑJUŚRĪ \ˌmən-ˈjü-shrē\, in MAHĀYĀNA BUDDHISM, the BO-DHISATTVA personifying supreme wisdom. His name in Sanskrit means “gentle, or sweet, glory”; he is also known as Mānjughoṣa (“Sweet Voice”) and Vāgīśvara (“Lord of Speech”). In China he is called Wen-shu Shih-li, in Japan Monju, and in Tibet ‘Jam-dpal.

Although SŪTRAS were composed in his honor by at least 250 CE, he does not seem to have been represented in Buddhist art before 400 CE. He is commonly shown wearing princely ornaments, his right hand holding aloft the sword of wisdom to cleave the clouds of ignorance and his left holding a palm-leaf manuscript of the PRAJÑĀPĀRAMITĀ.

His devotional cult spread widely in China in the 8th century, and Mount Wu-t’ai in Shansi province, which is dedicated to him, is covered with his temples. Though he is usually considered a celestial bodhisattva, some traditions endow him with a human history. He is said to manifest himself in many ways—in dreams; as a pilgrim on his sacred mountain; as an incarnation of the monk Vairocana, who introduced Buddhism into Khotan; as the Tibetan reformer Atiṣa; and as the emperor of China.

MANNA \ˈma-nə\, in biblical literature, one or more of the foods that sustained the Hebrews during the 40 years that intervened between their exodus from Egypt and their arrival in the Promised Land (Exodus 16). The word is perhaps derived from the question *man hu?* (“What is it?”; Exo-

dus 16:15, 31). The manna was gathered and was used in part to prepare bread, and it was therefore referred to as "bread from heaven" (Exodus 16:4).

In the NEW TESTAMENT, Jesus spoke of himself as the "true bread from heaven" (John 6:32), and manna consequently is a Christian symbol for the EUCHARIST.

MANTRA \ˈmən-trə, ˈmān-, ˈman-\, in HINDUISM and BUDDHISM, sacred utterance (syllable, word, or verse) that is considered to possess mystical or spiritual efficacy. Various mantras are either spoken aloud or merely sounded in one's thoughts, and they are either repeated continuously for some time or just sounded once. Some have no apparent verbal meaning, but they are thought to have a profound significance and are in effect distillations of spiritual wisdom. Thus, repetition of or meditation on a particular mantra can induce a trancelike state in the participant and can lead him to a higher level of spiritual awareness.

One of the most powerful and widely used mantras in Hinduism is the sacred syllable OM. The principal mantra in Buddhism is *om maṇi padme hūṃ* ("om, the jewel in the lotus, hūṃ"). Initiation into many Hindu sects involves the whispering of a secret mantra into the ear of the initiate by the GURU. Indeed, mantras are thought to be truly efficacious only when they are received verbally from one's guru or other spiritual preceptor.

MANTRAYĀNA \ˌmən-trə-ˈyā-nə\, important Indo-Tibetan movement within Buddhism; see VAJRAYĀNA.

MANU \ˈmā-nū\, in the mythology of India, first man and legendary author of an important Sanskrit code of law, the *Manu-smṛti*. In the VEDAS, Manu performs the first sacrifice. He is the first king, and most rulers of medieval India traced their genealogy to him, through either his son (the solar line) or his daughter (the lunar line).

The *Śatapatha Brāhmaṇa* recounts how Manu was warned by a fish, to whom he had done a kindness, that a flood would destroy the whole of humanity. He therefore built a boat, and when the flood came, he tied this boat to the fish's horn and was safely steered to a resting place on a mountaintop. When the flood receded, Manu performed a sacrifice, pouring oblations of butter and sour milk into the waters. After a year there was born from the waters a woman who announced herself as "the daughter of Manu." These two then became the ancestors of a new human race to replenish the earth. In the MAHĀBHĀRATA the fish is identified with the god BRAHMĀ, while in the *Purāṇas* it is Matsya, the fish INCARNATION of the lord VISHNU.

In the cosmological speculations of later HINDUISM, a day in the life of Brahmā is divided into 14 periods called *manvantaras* ("Manu intervals"), each of which lasts for 306,720,000 years. In every secondary cycle the world is recreated, and a new Manu appears to become the father of the next human race. The present age is considered to be the seventh Manu cycle.

MANU-SMṚTI \ˈmā-nū-ˈsmri-tē\ (Sanskrit: "Precepts of Manu"), traditionally, the most authoritative of the books of the Hindu code (DHARMA ŚĀSTRA) in India; its official title is *Mānava-dharma-śāstra*. It is attributed to the first man and lawgiver, MANU, and dates from the 1st century BCE.

The *Manu-smṛti* prescribes Hindu dharma—*i.e.*, that set of obligations incumbent on each individual as a member of one of the four social classes (VARNAS) and engaged in one of the four stages of life (ASHRAMS). Its vast range of topics

includes COSMOGONY, the sacraments (SAMSKĀRAS), initiation (UPANAYANA) and study of the VEDA, social rites and obligations, dietary restrictions, pollution and means of purification, the conduct of women and wives, the law of kings, the doctrine of KARMA, the soul, and hell.

MAO SHAN \ˈmau-ˈshān\, *Pinyin* Maoshan, in TAOISM, sacred mountain in Kiangsu province, associated with a 4th-century-CE apocalyptic visionary, Yang Hsi. Mao Shan is the traditional center of Shang-ch'ing Taoism.

Yang Hsi was visited by a group of perfected immortals (CHEN-JEN) from the heaven of Shang-ch'ing (Supreme Purity) between the years of 364 and 370, during which he received a new scriptural and hagiographic literature. The perfected announced that the prevailing social order was soon to end and that the rule of men on earth was to be replaced by a universal Taoist imperium. The 4th century was seen as a time of trials, given over to the reign of the demonic Six Heavens, at the end of which the earth was to be cleansed of evildoers by a cataclysm of fire and flood. At that time the Good would take refuge deep in the earth, in the luminous caverns of the perfected beneath such sacred mountains as Mao Shan. There they would complete the study of immortality already begun in their lifetimes, so as to be ready for the descent from heaven of the new universal ruler, Lord Li Hung, the "sage who is to come" (*hou-sheng*). This was prophesied for the year 392.

Yang Hsi gave great consistency and consummate literary form to his comprehensive synthesis of many spiritual traditions, which has become known as the Mao Shan literature. Popular messianism was adapted to provide an encompassing framework and temporal cogency, and Buddhist concepts were merged into Yang's Taoist system. The perfected also dictated a "Taoicized" version of large portions of an early Buddhist compilation, the *Sutra in Forty-two Sections* (*Ssu-shih-erh chang ching*). Buddhist notions of PREDESTINATION and REINCARNATION were subtly blended with native Chinese beliefs in hereditary character traits and the clan as a single unit involving mutual responsibility on the part of all its members, living and dead. Furthermore, the Mao Shan revelations envisaged some reform of the practices of Taoism.

MAPONOS \mä-ˈpō-nōs\ ("Divine Son," or "Divine Youth"), also called Mabon \mä-bōn\, or Mac ind Óg \mä-kən-ˈdōg\, or Oenghus \ē-nəs, ˈoin-gəs\, Celtic deity, attested in Gaul but occurring mainly in northern Britain. He appears in medieval Welsh literature as Mabon, son of Modron, and he evidently figured in a myth of the infant god carried off from his mother when three nights old. His name survives in Arthurian romance under the forms Mabon, Mabuz, and Mabonagrain. His Irish equivalent was Mac ind Óg ("Young Son," or "Young Lad"), known also as Oenghus, who dwelt in Bruigh na Bóinne, the great Neolithic, and therefore pre-Celtic, passage grave of Newgrange (or Newgrange House). He was the son of DAGDA (or Daghdha), chief god of the Irish, and of BOANN, the personified sacred river of Irish tradition.

MAPPŌ \ˈmāp-ō\, in Japanese BUDDHISM, a version of the widespread notion of an age of degeneration that culminates a process of decline following the death of the BUDDHA GOTAMA. In different Buddhist contexts this process of decline was associated with different chronologies. According to one view that became very prominent in medieval Japan, the period following the death of the Buddha is divisible

into three ages: the age of the “true law,” the age of the “counterfeit law,” and the age of the “degeneration of the law,” or *mappō*. The first two periods were often thought to last 1,000 years each. Assuming the date of the Buddha Gotama’s death to be 949 BCE, many Japanese Buddhists calculated that the age of *mappō*—which would last another 10,000 years—began about 1052 CE.

In the 12th and 13th centuries the Japanese experienced a number of crises that seemed to confirm that *mappō* had, in fact, begun. In this situation there arose Buddhist leaders who came to see *mappō* as a time in which the decline of the traditionally aristocratic religious and social order mandated new, less demanding forms of Buddhist practice that could make Buddhist goals accessible to all. The result was the formation, and great success, of new, distinctively Japanese PURE LAND sects that offered means of salvation (such as faith in the Buddha Amida [AMITĀBHA]) that were accessible to all who were open to receive them.

MAQĀM \mə-ˈkām\ (Arabic: “station,” or “place of residence”), plural *maqāmāt*, in SUFISM, a spiritual stage that periodically marks the long path followed by Sufi mystics leading to the vision of and union with God. The Sufi progresses by means of his own MUJĀHADA (work, or self-mortification) and through the help and guidance of the masters (SHAYKHS). In each *maqām* the Sufi strives to purify himself from all worldly inclination and to prepare himself to attain an ever-higher spiritual level.

The order and number of the *māqams* are not uniform among all Sufis. The majority, however, agree on seven major *maqāms*: (1) the *maqām* of *tawba* (repentance); (2) the *maqām* of *waraʿ* (fear of the Lord), which is the dread of being veiled eternally from God; (3) the *maqām* of ZUHD (renunciation, or detachment); (4) the *maqām* of *faqr* (poverty); (5) the *maqām* of *ṣabr* (patience); (6) the *maqām* of *tawakkul* (trust, or surrender); (7) the *maqām* of *riḍā* (satisfaction), a state of quiet contentment and joy that comes from the anticipation of the long-sought union with God.

In other contexts, *maqām* is used to designate a shrine dedicated to a holy man or woman which devotees visit to obtain a cure or divine blessing (*boraka*). It also designates a stone near the KAʿBA where, according to tradition, Ibrāhīm (ABRAHAM) stood to build that shrine.

MĀRA \ˈmār-ə\, in BUDDHISM, lord of the realm of desire who was, in traditional accounts, the Buddha’s tempter. When the BODHISATTVA Gotama seated himself under the BODHI TREE to seek Enlightenment, Māra appeared first in the guise of a messenger stating that a rival, DEVADATTA, had usurped the throne from Gotama’s family. Next Māra sent a great storm of ashes and darkness, frightening away the gods who had gathered to honor the future Buddha. He challenged Gotama’s right to sit beneath the tree, provoking the future Buddha to call upon the earth to give witness to his previous charities. Māra sent his three daughters, Trṣṇā, Rati, and Rāga (Thirst, Desire, and Delight), to seduce Gotama, but to no avail. After the Buddha had achieved supreme Enlightenment, he experienced doubt that others could understand the truth, and Māra pressed him not to preach. But when the gods implored him to preach the law (DHARMA), the Buddha agreed.

In Buddhist lore Māra continued to tempt and challenge the Buddha and his followers. On the one hand, Māra, his daughters, and his other associates are often treated as beings who act externally. At the same time, they are often identified with the psychic impurities, defilements, and

The Buddha assaulted by Māra and his demon horde, relief sculpture from Gandhara, Pakistan

vices that, according to Buddhist teaching, cause suffering and prevent release from the continuing process of birth, death, and rebirth.

MARABOUT \ˈmar-ə-ˌbū\, Arabic *Murābiṭ*, originally, in North Africa, member of a Muslim religious community living in a *ribāt*, a fortified monastery, serving both religious and military functions. Men who possessed certain religious qualifications, such as the reciters of the QURʿAN (QURRĀʾ), transmitters of HADITH (*muḥaddithūn*), jurists of Islamic law (*fuqahāʾ*), and ascetics, lived in the *ribāt* and were held in honor by the people. When ISLAM spread to western Africa in the 12th century, its propagators became known as al-Murābiṭūn (ALMORAVIDS), and every missionary who organized a group of disciples became known as a *murābiṭ*. In the 14th century, when SUFISM pervaded Muslim religious life, the *murābiṭ*, in the Maghrib, came to designate any preacher calling for the formation of Sufi fraternities according to the “order” (ṬARĪQA) of Abū Madyan. Thus, the word lost all trace of its original meaning of military defense, and in Algeria *murābiṭ* came to be used for the tomb, usually domed, in which a pious man is buried.

MARCIONITE \ˈmār-shə-ˌnīt\, any member of a gnostic sect that flourished in the 2nd century CE. The name derives from MARCION OF PONTUS who, sometime after his arrival in Rome, fell under the influence of Cerdo, a gnostic Christian, whose stormy relations with the Church of Rome were the consequence of his belief that the God of the OLD TESTAMENT could be distinguished from the God of the NEW TESTAMENT—the one embodying justice, the other goodness. For accepting and propagating such ideas, Marcion was expelled from the church in 144 as a heretic, but the movement he headed became both widespread and powerful.

The basis of Marcionite theology was that there were two cosmic gods. A vain and angry creator god who demanded and ruthlessly exacted justice had created the material world of which humans, body and soul, were a part—a striking departure from the usual gnostic thesis that only the human body is part of creation, that the soul is a spark from the true but unknown superior God, and that the world creator is a demonic power. The other god, according to Marcion, was completely ineffable and bore no intrinsic relation to the created universe at all. Out of sheer goodness, he had sent his son JESUS CHRIST to save humans from the material world and bring them to a new home. Christ’s sacrifice was a legalistic act that cancelled the claim of the creator God upon men. Marcion and his followers empha-

sized faith in the effect of Christ's act and practiced stern ASCETICISM to restrict contact with the creator's world while looking forward to eventual salvation in the realm of the extra-worldly God. They admitted women to the PRIESTHOOD and bishopric. The Marcionites were considered the most dangerous of the gnostics by the established church. When Polycarp met Marcion at Rome he is said to have identified Marcion as "the firstborn of SATAN."

MARCION OF PONTUS \ˈmār-shē-ən, -shən\ (fl. 2nd century CE), Christian heretic. Although Marcion is known only through reports and quotations from his orthodox opponents, especially Tertullian's *Adversus Marcionem* ("Against Marcion"), the principal outlines of his teaching seem clear. His teaching made a radical distinction between the God of the OLD TESTAMENT (the Creator) and the Father of JESUS CHRIST (the God of Love).

According to Marcion, that distinction had been obscured at the very earliest stages of the Christian movement, and, among the Apostles, only Paul had understood it. Because the corruptions that had consequently been introduced into the life and message of the church and into the very text of the NEW TESTAMENT had to be expunged, Marcion edited his own versions of the biblical books. His collection of those books that he regarded as authoritative seems to have had some influence on the formation of the church's canon of the New Testament, and various elements of early Christian creeds, such as the widespread equation of Father with Creator, may have been formulated partly in response to his teachings.

MARDI GRAS \ˈmār-dē-grā, -grō\ (French: "Fat Tuesday"), festive day celebrated in France on the Tuesday (Shrove Tuesday) before ASH WEDNESDAY, which marks the close of the pre-Lenten season. In the United States the festival is most elaborately celebrated in New Orleans, La.

MARDUK \ˈmār-dük\, in Mesopotamian religion, the chief god of the city of Babylon and the national god of Babylonia; as such he was eventually called simply BEL, or Lord. Originally he seems to have been a god of thunderstorms. The poem *Enuma elish*, dating from the reign of Nebuchadnezzar I (1124–03 BCE), refers to Marduk as the god of 50 names, each one that of a deity or of a divine attribute. After conquering the monster of primeval chaos, TIAMAT, he became "lord of the gods of heaven and earth." All nature, including humans, owed its existence to him; the destiny of kingdoms and subjects was in his hands.

Marduk's chief temples at Babylon were the ESAGILA and the ETEMENANKI, a ZIGURAT with a shrine of Marduk on the top. In Esagila the *Enuma elish* was recited every year at the NEW YEAR FESTIVAL. The goddess named most often as the consort of Marduk was Zarpanit, or Zarbanit (She of the City Zarpan).

Marduk's star was JUPITER, and his sacred animals were horses, dogs, and especially a dragon with forked tongue, representations of which adorn his city's walls. On the oldest monuments Marduk is represented holding a spade or hoe. He is also pictured walking, or in his war chariot.

MĀRGA \ˈmār-gə\ (Sanskrit: "path"), in Indian religions, path, or way, of reaching salvation. HINDUISM articulates the following meanings: *jñāna-mārga*, the way of knowledge (study of philosophic texts and contemplation); *karma-mārga*, the way of action (proper performance of one's religious and ethical duties); and *bhakti-mārga*, the way of de-

votion and self-surrender to God. In the BHAGAVAD GĪTĀ the god KRISHNA praises all three means but favors *bhakti-mārga*, which was accessible to members of any class or CASTE.

In BUDDHISM the Eightfold Path (Sanskrit *Aṣṭāṅgika-mārga*, Pāli *Aṭṭhaṅgika-magga*), a doctrine taught by the BUDDHA GOTAMA in his first sermon, is a fundamental element of Buddhist teaching. It is also called the Middle Path, as it steers a course between the sensual pleasures of the materialists and the self-mortification of the ascetics. Those who follow the Eightfold Path are said to be freed from suffering that is an essential part of human existence and are led ultimately to NIRVANA, or Enlightenment.

The Eightfold Path consists of (1) right understanding—faith in the Buddhist view of the nature of existence in terms of the Four Noble Truths; (2) right thought—the resolve to practice the faith; (3) right speech—avoidance of falsehoods, slander, or abusive speech; (4) right action—abstention from taking life, stealing, and improper sexual behavior; (5) right livelihood—rejection of occupations not in keeping with Buddhist principles; (6) right effort—avoidance of bad and development of good mental states; (7) right mindfulness—awareness of the body, feelings, and thought; and (8) right concentration—meditation.

MARIA LEGIO \mə-ˈrē-ə-ˈlā-gē-ō\, also called Legio Maria, or Legion of Mary Church, largest African independent church with a ROMAN CATHOLIC background. It should not be confused with a less successful predecessor in Kenya, the Dini ya Mariam (Religion of MARY) of the 1950s.

Maria Legio originated with two Catholics of the Luo group, Simeon Ondeto and Gaudentia Aoko, who claimed to have received prophetic inspiration that directed them to reject traditional magic and divine healers and to form an all-African church to be named Maria Legio (after the Catholic Legion of Mary), which offered free healing by prayer and EXORCISM of evil spirits. The first year (1963) an estimated 90,000 Catholics and non-Christians, mostly Luo, joined the church; by 1970 membership had dropped to about 50,000.

Catholic worship, symbols, and hierarchy have been added to pentecostal features. The sect rejects Western and traditional medicines, alcohol, tobacco, and dancing but accepts polygamy and is strongly nationalistic. Internal tensions and difficulties with the Kenyan government have rendered the future of the church uncertain.

MA'RIFA \ˈmä-ri-fə\ (Arabic: "interior knowledge"), in ISLAM, the mystical knowledge of God or the "higher realities" that is the ultimate goal of followers of SUFISM. Sufi mystics came to *ma'rifa* by following a spiritual path that later Sufi thinkers categorized into a series of "stations" that were followed by another series of steps, the "states," through which the Sufi would come to union with God. The acquisition of *ma'rifa* was not the result of learnedness but was a type of gnosis in which the mystic received illumination through the GRACE of God. The finest expressions of *ma'rifa* can be found in the poetry of the Sufis JALĀL AL-DĪN AL-RŪMĪ (1207–73) and IBN AL-ARABĪ (1165–1240). Although the pursuit of *ma'rifa* is most commonly associated with the Sufis, the search for *ma'rifa*—known also by the term *hikma*—became part of SHĪ'ITE ideology.

MARIOLOGY \ˌmar-ē-ˈä-lə-jē\, in Christian, especially ROMAN CATHOLIC, theology, the study of doctrines concerning MARY, the mother of Jesus; the term also refers to the content of these doctrines.

MARK (THE EVANGELIST), SAINT \ˈmärk\ (fl. 1st century CE; b. Jerusalem?—d. traditionally Alexandria, Egypt; Western feast day April 25, Eastern feast day September 23), traditional author of the second Synoptic Gospel. Data on his life found in the NEW TESTAMENT is fragmentary, and its historicity has been questioned. The only unquestionably reliable information is in Philemon 24, where a certain Mark is mentioned as one of ST. PAUL's fellow workers who sends greetings from Rome to the Christians of Colossae (near modern Denizli, Turkey), but the identity of this person is not indicated. That Mark was St. Barnabas' cousin in Colossians 4:10 may also be authentic.

Except for being referred to as John in Acts (12:25; 13:5, 13; and 15:37), elsewhere in the New Testament he is consistently called by his Latin surname Mark. According to Acts, his mother's house in Jerusalem was a center of Christian life (12:12), and he accompanied Barnabas and Paul to Antioch (12:25) (now Antakya, Turkey), where he became their assistant on a MISSION journey (13:5). When they arrived at Perga (near modern İhsaniye, Turkey), Mark left them and returned to Jerusalem (13:13). Subsequently, he sailed to Cyprus with Barnabas, never to be mentioned again in Acts. The dependability of the Acts account is questionable, for its author is particularly interested in explaining the breach between Paul and Barnabas, probably introducing Mark for this reason. In this, he contradicts Paul's account of their breach in Galatians 2:11–14.

Later tradition assumes that Mark was one of the 72 disciples appointed by JESUS (Luke 10:1) and identifies him with the young man fleeing naked at Jesus' arrest (Mark 14:51–52). The Egyptian church claims Mark as its founder, and, from the 4th century CE, the see of Alexandria has been called *cathedra Marci* ("the chair of Mark"). Mark is also claimed by the Italian cities of Aquileia and Venice, of which he is the patron saint. His symbol is the lion.

MARONITE CHURCH \ˈmar-ə-nīt\, one of the largest Eastern-rite communities of the ROMAN CATHOLIC church, prominent especially in modern Lebanon; it is the only Eastern-rite church that has no non-Catholic or Orthodox counterpart. The Maronites trace their origins to St. Maron, or Maro (Arabic Mārūn), a Syrian HERMIT of the late 4th and early 5th centuries, and St. John Maron, or Joannes Maro (Arabic, Yūḥanna Mārūn), PATRIARCH of Antioch in 685–707, under whose leadership the invading Byzantine armies of Justinian II were routed in 684, making the Maronites a fully independent people.

There is evidence that for centuries the Maronites were Monothelites (those who maintained a HERESY that Christ had only one will). According to the medieval bishop William of Tyre, the Maronite patriarch sought union with the Latin patriarch of Antioch in 1182. A definitive consolidation of the union, however, did not come until the 16th century, brought about largely through the work of the JESUIT John Eliano. In 1584 Pope Gregory XIII founded the Maronite College in Rome, which flourished under Jesuit administration into the 20th century.

Hardy, martial mountaineers, the Maronites preserved their liberty and folkways. The Muslim caliphate (632–1258) could not absorb them, and two CALIPHS of the Umayyad dynasty (661–750) paid them tribute. Under the rule of the Ottoman Turks, the Maronites maintained their religion and customs under the protection of France, largely because of their geographic isolation. In the 19th century the Maronites achieved formal autonomy within the Ottoman Empire. Since the establishment of a fully indepen-

dent Lebanon in 1943, they have constituted one of the two major religious groups in the country.

The immediate spiritual head of the Maronite church after the POPE is the "patriarch of Antioch and all the East," residing in Bkirkī, near Beirut. The church retains the ancient West Syrian liturgy, even though the vernacular tongue of the Maronites is Arabic. Contact with Rome has been close and cordial, but it was not until after the SECOND VATICAN COUNCIL that papal efforts to Latinize their rite ceased. Maronites are also found in southern Europe and North and South America, having emigrated in the 19th century under the pressure of persecutions.

MARPA \ˈmär-pä\, also called Mar-Pa of Lhobrag, or Dvags-Po Lha-Rje \ˈdäk-bō-ˈhlä-jä, ˈtäk-\ ("Physician of Dvags-po") (b. 1012, Lhobrag, Tibet—d. 1096, Tibet), one of the foremost Tibetan translators of Indian VAJRAYĀNA (or Tantric) Buddhist texts, a significant figure in the revival of BUDDHISM in Tibet.

The chief source of information on the life of Marpa is a 14th-century biography written by the "Mad Yogin of Tsang." According to it, Marpa was born of wealthy parents. He had a violent nature and was sent to a Tibetan monastery to study Buddhism. Eventually he went to India, where he studied for 10 years under the Indian yogi Nārōpa. Returning to Tibet, he married, began to teach, and assumed the life of a wealthy farmer. He undertook another period of study with Nārōpa, this time for six years. When he returned to Tibet, he gathered disciples, among them Milarepa, who later played a critical role along with Marpa in founding the Bka'-brgyud-pa sect. After a third stay in India, Marpa spent the remainder of his life in Tibet.

Among Marpa's notable translations are several works included in the *Bka'-gyur* and the *Bstan-gyur*. He also introduced to Tibet the mystical songs (*dohās*) of the Indian Tantric tradition (see TANTRIC HINDUISM), later used with great skill by Mi-la ras-pa and his followers.

MARS \ˈmärz\, ancient Roman deity, in importance second only to JUPITER. Little is known of his original character, but by historical times he had developed into a god of war, and in Roman literature he was protector of Rome.

Mars's festivals at Rome occurred in the spring and the fall—the beginning and the end of both the agricultural and the military seasons. The month of March was especially filled with festivals wholly or partially in his honor; the members of the PRIESTHOOD of the SALII, who were particularly associated with Jupiter, Mars, and QUIRINUS, came out several times during the month to dance their ceremonial war dance in old-fashioned armor and chant a hymn to the gods. At the festival of the October Horse on October 15, a two-horse chariot race was held in the Campus Martius, and on October 19 the Armilustrum marked the purification of the arms of war and their storage for the winter. The god was invoked in the ancient hymn of the ARVAL BROTHERS, whose religious duties had as their object to keep off enemies of all kinds from crops and herds.

Until the time of Augustus, Mars had only two TEMPLES at Rome, one in the Campus Martius, the exercise ground of the army, the other outside the Porta Capena. Within the city he had a *sacrarium* ("shrine," or "sanctuary") in the *regia*, originally the king's house, in which his sacred spears were kept; upon the outbreak of war the consul had to shake the spears saying, "*Mars vigila*" ("Mars, wake up!").

Under Augustus, as Mars Ultor ("Mars the Avenger"), he became the personal guardian of the emperor in his role as

avenger of Caesar. About 250 CE Mars became the most prominent of the *di militares* ("military gods") worshiped by the legions. In literature and art he is hardly distinguished from the Greek ARES.

MARSYAS \ˈmār-sē-əs\, mythological Greek figure of Anatolian origin. Marsyas found the oboe that the goddess ATHENA had invented and, after becoming skilled in playing it, challenged APOLLO to a contest with his lyre. When King MIDAS of Phrygia, who had been appointed judge, declared in favor of Marsyas, Apollo punished Midas by changing his ears into ass's ears. In another version the MUSES were the judges, and they awarded the victory to Apollo, who tied Marsyas to a tree and flayed him. In Rome a statue of Marsyas stood in the Forum; this was imitated by Roman colonies and came to be considered a symbol of autonomy.

MARTIN OF TOURS, SAINT \ˈmār-tən, mār-ˈtaː . . . ˈtūr\ (b. 316 CE, Sabaria, Pannonia [now Szombathely, Hung.]—d. Nov. 8, 397, Candes, Gaul [France]; Western feast day November 11; Eastern feast day November 12), patron saint of France, father of MONASTICISM in Gaul, and the first great leader of Western monasticism. After 360 he founded a community of HERMITS at Ligugé, the first monastery in Gaul. In 371 he was made bishop of Tours, and outside that city he founded another monastery, Marmoutier, which he made into a great monastic complex to which European ascetics were attracted and from which apostles spread CHRISTIANITY throughout Gaul. During his lifetime, Martin acquired a reputation as a miracle worker, and he was one of the first nonmartyrs to be publicly venerated as a saint.

MARTYR, in the strictest sense, one who voluntarily suffers death rather than deny his or her religion by words or deeds; such action is afforded special, institutionalized recognition in most major religions of the world. Contemporary usage of the term has come to include one who has died for his or her RELIGIOUS BELIEFS.

Judaism. The ideal of martyrdom in Judaism begins with ABRAHAM, who according to legend was cast into a lime kiln and saved from the fire by divine GRACE. The tradition was continued by ISAAC, who consented to be sacrificed by his father, and by Daniel, whose example—*i.e.*, of being thrown into a den of lions for refusing to obey an edict which forbade prayer—compelled the popular imagination. Readiness for martyrdom became a collective Jewish ideal during the Antiochene persecution and the MACCABEE'S rebellion of the 2nd century BCE; the best-known episode was that of the mother and her seven sons (2 Maccabees 7). In Hadrian's time, pious Jews risked death to circumcise their sons, and RABBI AKIBA BEN JOSEPH embraced martyrdom to assert the right to teach the Law publicly. The TALMUD cites the majority opinion that one should pre-

fer martyrdom to three transgressions—idolatry, sexual immorality, and murder.

The MIDRASH on Lamentations 2:2 contains what is probably the oldest Jewish martyrology, the list of the Ten Martyrs. It was repeated in later *midrashim* and formed the theme of several liturgical elegies, including the *Eleh Ezkerah*, found in the YOM KIPPUR service. During the European persecutions of the later Middle Ages, chronological registers of martyrs were drawn up for use in SYNAGOGUE commemorative services. In 1296 Isaac ben Samuel of Meiningen began to collect these in the *Memorbuch* (published in 1898), covering the years 1096–1349. Martyrs are honored as *kedoshim* ("the holy ones"). Rabbi Shneur Zalman of Lyady, founder of HABAD Hasidism, considered the spirit of martyrdom (*mesirut nefesh*) to be the distinguishing quality of the Jewish people.

Christianity. The original meaning of the Greek word *martyrs* was "witness"; in this sense it is often used in the NEW TESTAMENT. Since the most striking witness that Christians could bear to their faith was to die rather than deny it, the word soon began to be used in reference to one who was not only a witness but specifically a witness unto death. This usage is present, at least implicitly, in Acts 22:20 and Revelation 2:13.

The first Christian martyrs were St. Stephen and ST. JAMES. Of the apostles the most important martyrs were PETER and PAUL, both put to death at Rome. Early in the 2nd century, Ignatius of Antioch described his own prospective martyrdom as a way of "attaining to God" and urged the Roman Christians not to make any effort to have him spared. In the sporadic persecutions of the first two centuries, martyrdoms were not especially frequent, but the martyrs were highly regarded by Christians. With the passage of time and with a fresh emphasis on martyrdom (often regarded as a substitute for BAPTISM) in the persecutions under Decius (250 CE) and Diocletian (303–311 CE), the authentic acts of the early martyrs were often replaced by legendary accounts (for instance, none of the versions of the death of Ignatius is genuine). The earliest surviving Christian martyrologies are the Syrian *Breviarium Syriacum* (411 CE) and the Hieronymian (mid-5th century), which purports to be by St. Jerome.

Islam. The Islamic designation *shahīd* (Arabic: "witness") is equivalent to and in a sense derivative of the Judeo-Christian concept of martyr. The full sense of "witness unto death" does not appear in the QUR'AN but receives explicit treatment in the subsequent HADITH literature, in which it is stated that martyrs, among the host of heaven, stand nearest the throne of God.

While details of the status accorded by martyrdom (*e.g.*, whether or not a martyr is exempt from certain rituals of burial) have been debated, it is generally agreed that the rank of *shahīd* comprises two groups of the faithful: those killed in JIHAD, or HOLY WAR, and those killed unjustly. The term is used informally to venerate anyone who dies in a pitiable manner (*e.g.*, in childbirth, in a strange land). Among the Shī'ite branch, the martyr most revered is HUSAYN IBN 'ALĪ (c. 629–680), whose death at the hands of the rival SUNNI faction under Yazīd is commemorated every year during the first 10 days of the month of Muḥarram.

Buddhism. While distinctly lacking a history of violent conflict with other faiths, BUDDHISM does recognize among its adherents a venerable class of martyrs. The JĀTAKA commentary on the former lives of the BUDDHA GOTAMA is in a sense a martyrology of the BODHISATTVA (“buddha-to-be”) and his disciples, recounting their continual self-sacrifice and repeated deaths. In MAHĀYĀNA Buddhism, the decision by one destined to become a buddha in this or another life to postpone his own enlightenment to alleviate the suffering of others is regarded as martyrdom.

MARY \ˈmer-ē, ˈmar-ē, ˈmā-rē\, also called Saint Mary, or Virgin Mary (fl. beginning of the Christian Era), the mother of JESUS, venerated in the Christian church since the apostolic age, and a favorite subject in art, music, and literature.

The first mention of Mary is the story of the ANNUNCIATION, which reports that she was living in Nazareth and was betrothed to JOSEPH (Luke 1:26 ff.); the last mention of her (Acts 1:14) includes her in the company of those who devoted themselves to prayer after the ASCENSION of Jesus into heaven. She appears in the following incidents in the Gospels: the Annunciation; the visit with Elizabeth, her kinswoman and the mother of John the BAPTIST (Luke 1:39 ff.); the birth of Jesus and his presentation in the Temple (Luke 2:1 ff.); the coming of the MAGI and the flight to Egypt (Matthew 2:1 ff.); the PASSOVER visit to Jerusalem (Luke 2:41 ff.); the marriage at Cana in Galilee (John 2:1 ff.); the attempt to see Jesus while he was teaching (Mark 3:31 ff.); and at the cross (John 19:26 ff.).

Probably the earliest allusion to Mary in Christian literature is the phrase “born of woman” in Galatians 4:4, which was written before any of the Gospels. The phrase is a Hebrew way of speaking about the essential humanity of a person. When applied to Jesus, therefore, “born of woman” asserted that he was a real man, in opposition to the attempt to deny that he had had a completely human life. Her role as mother takes precedence over any of the other roles assigned to her in devotion and in dogma. Those who defend the doctrine of the VIRGIN BIRTH usually maintain that Jesus’ true humanity was made possible when Mary accepted her commission as the guarantee of the INCARNATION (Luke 1:38). This is the original source of the title Co-Redemptrix—indicating some participation with Christ in the redemption of mankind—assigned to Mary in ROMAN CATHOLIC theology, though the term has come to connote a more active role whose precise nature is still debated.

By far the most voluminous narratives about Mary in the NEW TESTAMENT are the infancy stories in the Gospels of Matthew and Luke. In their present form, both accounts

make a point of asserting that Jesus was conceived in the womb of Mary without any human agency (Matthew 1:18 ff.; Luke 1:34 ff.); yet the many textual variants in Matthew 1:16, some of them with the words “Joseph begat Jesus,” raises the question of whether such an assertion was part of Matthew’s original account. The passages in Matthew and in Luke seem to be the only references to the matter in the New Testament. The apostle Paul nowhere mentions it; the Gospel According to Mark begins with Jesus as an adult; and the Gospel According to John does not allude to the virgin birth. It was the teaching of all the orthodox Fathers of the Church that Mary conceived Jesus with her virginity intact, a teaching enshrined in the early Christian creeds and concurred in by most Protestant churches and believers since the REFORMATION.

Various corollaries could be deduced from the assertion of Mary’s virginity in the conception of Jesus, including the doctrine that she had remained a virgin in the course of his birth (the *virginitas in partu*) and the doctrine that she had remained a virgin until the end of her life (the *virginitas post partum*). The APOSTLES’ CREED appears to teach at least the *virginitas in partu* when it says “born of the Virgin Mary.” On a similar level, most theologians came to accept the view that Mary never did anything sinful. THOMAS AQUINAS taught that God suppressed and ultimately extinguished ORIGINAL SIN in her, apparently before she was born. This position, however, was opposed by the doctrine of the IMMACULATE CONCEPTION, systematized by DUNS SCOTUS and finally defined as Roman Catholic dogma by Pope PIUS IX in 1854. According to this dogma, Mary was not only pure in her life and in her birth, but “at the first instant of her conception was preserved immaculate from all stain of original sin” through the GRACE of God.

No account of the place and circumstances of Mary’s death was universally accepted in the church, no burial place was acknowledged, and no miracles were credited to relics of her body. In 1950 Pope PIUS XII declared that “the Immaculate Mother of God, the ever Virgin Mary, when the course of her earthly life was run, was assumed in body and soul to heavenly glory.”

MARY MAGDALENE, SAINT \ˈmag-də-ˌlēn, -lɪn; ˌmag-də-ˈlē-nē\, also called Mary of Magdala (fl. 1st century CE, Palestine; feast day July 22), one of JESUS’ most celebrated disciples, according to Mark 16:9–10 and John 20:14–17, the first person to see the resurrected Christ.

She is first mentioned when Jesus cleanses her of seven DEMONS (Luke 8:2 and Mark 16:9), probably implying that he cured her of a physical disorder. She was one of the women who accompanied and aided Jesus in Galilee (Luke 8:1–2), and all four canonical GOSPELS attest that she witnessed Jesus’ CRUCIFIXION and burial; John 19:25–26 further notes that she stood by the cross. Having seen where Jesus was buried (Mark 15:47), she went with two other women on EASTER morning to the tomb to anoint the corpse. Finding the tomb empty, Mary ran to the disciples. She returned with ST. PETER, who, astonished, left her. Christ then appeared to Mary and, according to John 20:17, instructed her to tell the APOSTLES that he was ascending to God.

Anderson—Alinari from Art Resource

ORIGEN and other early interpreters usually viewed her as distinct from the Mary of Bethany, who anointed Jesus' feet and wiped them with her hair (John 12:3–7), and from the penitent woman whose SINS Jesus pardoned for anointing him in a like fashion (Luke 7:37–48). The Eastern church also distinguishes between the three, but after they were identified as one and the same by Pope Gregory I, Mary Magdalene's cult flourished in the West. Modern scholars feel that the three women are distinct.

Gnostics regarded her as a medium of secret revelation, so described in their *Gospel of Mary*, *Gospel of Philip*, and *Pistis Sophia*. According to Eastern tradition, she accompanied ST. JOHN THE EVANGELIST to Ephesus (near modern Selçuk, Turkey), where she died and was buried. French tradition claims that she evangelized Provence (now south-eastern France) and spent her last 30 years in an Alpine cavern. Medieval legend relates that she was John's wife.

MASHHAD \ˈmāsh-hād, mə-ˈshad\, also spelled Meshed \mə-ˈshed\, or Mashad (Arabic: “Martyr’s Place”), city, northeastern Iran, lying 3,231 feet up in the valley of the Kashaf River. It is an important political and religious center, visited annually by more than 100,000 pilgrims.

The city is an offshoot of the ancient city of Tūs and owes its historical importance to the burial place and shrine of the CALIPH Hārūn al-Rashīd (d. 809 CE) and that of ‘ALĪ AL-RIDĀ (d. 818), the eighth IMAM of the Twelver SHĪ‘ITE sect of ISLAM. Although Mashhad was severely damaged in a Mongol attack in 1220, the sacred buildings were partially spared, and traces of the earlier structures remain. Shah Rokh, the son of the conqueror Tīmūr (Tamerlane), did much to beautify Mashhad, and his wife erected a mosque that is one of the finest architectural achievements of Iran. In the 16th and 17th centuries, Mashhad was sacked by Turkmen and Uzbeks. It was restored by ‘Abbās I (reigned 1588–1629), who encouraged the PILGRIMAGE and beautified the city. Nādir Shah (reigned 1736–47) made it his capital and made several additions to its buildings. After Nādir's death, Mashhad became the capital of a small state controlled by his grandson. In 1975 Muhammad Rezā Shah demolished many of the city's religious colleges (MADRASAS) as part of an urban development plan. This contributed to the unrest that brought about the downfall of his government in 1979.

MASHRIQ AL-ADHKĀR \ˈmāsh-rik-āl-āth-ˈkār\ (Arabic: “place where the uttering of the names of God arises at dawn”), temple or house of worship in the BAHĀ’Ī FAITH. The *mashriq* is characterized by a nine-sided construction, in keeping with the Baha’i belief in the mystical properties of the number nine. Free of ritual and clergy, the *mashriq* is open to adherents of all religions and offers a simple service of readings from the sacred Bahā’i writings and the holy books of other faiths. The Bahā’i faithful envision a *mashriq* in every sizeable community, serving as the focal point of a social center that would include a hospital, orphanage, dispensary, and school. The first *mashriq* was completed in 1907 in ‘Ishqābād, modern Turkmenistan.

MASK, type of disguise, commonly an object worn over or in front of the face to hide the identity of the wearer. The features of the mask not only conceal those of the wearer

but also project the image of another personality or being. This dual function is a basic characteristic of masks.

Cultures have made and used masks imbued with symbolism and ascribed spiritual power since the Stone Age. The greatest range of mask forms and functions occurs in Africa and in Oceania. Since the end of the 19th century masks have been exhibited and collected as art objects in their own right and as cultural artifacts.

In indigenous societies, masks are frequently associated with the ritual of SECRET SOCIETIES or with the high priest or MEDICINE MAN. Totemic practices, whereby a natural object such as an animal or bird is adopted as the emblem of a family line, has led to the evolution of totem masks such as those of the Native Americans of the northwestern coast of the United States and also of some African cultures.

Funerary masks and death masks in ancient Egypt were associated with the return of the spirit to the body. Such masks were generalized portraits and, in the case of nobility, were made of precious metals. Gold death masks also occur in Asia and in the INCA civilization. From Roman times onward, death masks were sometimes kept as portraits of the dead person. Masks as theatrical devices, to represent characters, evolved from religious traditions of ancient Greek civilization.

MASORETIC TEXT \,ma-sə-ˈre-tik\ (from Hebrew: *māsōreth*, “tradition”), traditional text of the Hebrew BIBLE, meticulously assembled and supplied with diacritical marks to enable correct pronunciation. This monumental work was begun around the 6th century CE and completed in the 10th by scholars at Talmudic academies in Babylonia and Palestine, in an effort to reproduce, as far as possible, the original text of the Hebrew OLD TESTAMENT.

In Hebrew or Aramaic, they called attention to strange spellings and unusual grammar and noted discrepancies in various texts.

Since texts traditionally omitted vowels in writing, the Masoretes introduced vowel signs to guarantee correct pronunciation. Among the various systems of vocalization that were invented, the one fashioned in the city of Tiberias, Galilee, eventually gained ascendancy. In addition, signs for stress and pause were added to the text to facilitate public reading of the SCRIPTURES in the SYNAGOGUE.

When the final codification of each section was complete, the Masoretes counted and noted down the total number of verses, words, and letters in the text and further indicated which verse, which word, and which letter marked the text's center, so that any future emendation could be detected. The rigorous care given the Masoretic text in its preparation is credited for the remarkable consistency found in Old Testament Hebrew texts since that

time. The Masoretic text is universally accepted as the authentic Hebrew Bible.

MASS, the celebration of the EUCHARIST in the ROMAN CATHOLIC church. The term mass is derived from the rite's Latin formula of dismissal, *Ite, missa est* ("Go, it is ended"). According to Roman Catholic teaching, the mass is a memorial in which the death and RESURRECTION of JESUS CHRIST are sacramentally reenacted; it is a sacrifice in which the body and blood of Jesus, under the appearances of bread and wine, are offered to God; and it is a sacred meal in which the community symbolically expresses its unity and its dependence upon God. The mass consists of two parts: the liturgy of the Word, which includes readings from SCRIPTURE and the homily (sermon), and the liturgy of the EUCHARIST, which includes the offertory, the eucharistic prayer (canon), and the communion. The rite was changed greatly after the SECOND VATICAN COUNCIL (1962–65), most conspicuously in the use of vernacular languages in place of Latin.

MAŠSEBA \mət-sā-'vā\, also spelled mazzevah, or matzeva (Hebrew: "tombstone," "monument"), plural maššebet, mazzevoth, or matzevot, stone pillar erected on elevated ground beside a sacrificial altar. It was considered sacred to the god it symbolized and had a wooden pole (*ashera*) nearby to signify a goddess. After conquering the Canaanites, early Israelites appropriated these symbols until their use was outlawed as idolatrous (e.g., Deuteronomy 16:21).

In the OLD TESTAMENT (Genesis 28:18–22; 2 Samuel 18:18; Joshua 4:20–23) *mašseba* is used to designate a stone memorial, or monument, or, more specifically, a tombstone resting upright on a grave (Genesis 35:20). This latter meaning is retained in modern Hebrew.

MATH \mäth\, in the Welsh collection of stories known as the MABINOGION, king of Gwynedd in the North. He is also the brother of DŌN, the Welsh counterpart of the Irish goddess DANU. Whenever at peace, it was necessary for Math to have his feet upon a virgin's lap. The virgin who held Math's feet was raped by one of his nephews, Gilfaethwy, and both he and his brother GWYDION were punished for the act by Math. Later, Math's niece Arianrhod tried for the position of footholder, but during the test of her virginity she gave birth to two children, one of whom was LLEU. With Gwydion, Math was responsible for the introduction of pigs into North Wales—supposedly from the otherworld—an aspect that points to his role as a fertility figure.

MATHA \mə-tə\, any Hindu monastic establishment of world renunciators or *sannyasins*. The first *mathas* were founded by the teacher of ADVAITA Vedanta, ŚAMKARA, in the 8th century CE. Śamkara was said to have established four such *mathas* at the strategic corners of India as bulwarks for Hindu missionary activity and as centers for the 10 religious orders of his group. A fifth *matha*, the Saradapitha in Kancipuram near Madras, arose somewhat later.

Each *matha* is ruled by a spiritual

leader, or teacher, called a Śamkaracarya. The head of the Sringeri Matha is regarded by this sect as the *jagadguru* or spiritual master of the whole world. The Śamkaracaryas, who trace their spiritual lineage back to the great Śamkara, are almost universally respected in HINDUISM for their heritage, for their tradition of Sanskrit learning, and for their role as defenders of and spokesmen for the faith.

Other Hindu sects also have formed *mathas*. The Vaiṣṇava group called the ŚRĪ VAIṢṆAVAS established their own monastic centers in Srirangam, Melkote, and elsewhere from the time of the founder of their sect, Ramanuja. DVAITA, another Vaiṣṇava order with *mathas* throughout South India, traces its lineage back to the teacher MADHVA, an opponent of monistic Vedanta. In the 20th century the Ramakrishna Mission Society, a religiously inclusivistic reform group originally organized under the leadership of its founder Ramakrishna and his disciple VIVEKANANDA, also established *mathas* to house its monks and to act as centers for learning and the propagation of its teachings.

MATHER, COTTON \mə-ṭhər, -tər\ (b. Feb. 12, 1663, Boston, Massachusetts Bay Colony [U.S.]—d. Feb. 13, 1728, Boston), American Congregational minister and author, supporter of the old order of the ruling clergy, who became the most celebrated of all New England Puritans.

The son of INCREASE MATHER and the grandson of John Cotton and Richard Mather, Cotton lived all his life in Boston. He entered Harvard at the age of 12. At 18 he received his M.A. degree from the hands of his father, who was president of the college.

Mather once noted that his life was "a continual conversation with heaven," but he spent agonizing hours convinced that he was damned and equal time in ecstasies that he was not. For a while, he feared he could not enter the ministry because of a speech impediment. Returning to religious studies, he preached his first sermon in his father's church in August 1680 and in October another from his grandfather John Cotton's pulpit. He was formally ordained in 1685 and became his father's colleague.

He joined his father in cautioning judges against the use of

"specter evidence" (testimony of a victim of WITCHCRAFT that he had been attacked by a specter bearing the appearance of someone he knew) in the witchcraft trials and in working for the ouster of Sir Edmund Andros as governor of Massachusetts. He was also a leader in the fight for inoculation against smallpox, incurring popular disapproval. When Cotton inoculated his own son, who almost died from it, the whole community was wrathful, and a bomb was thrown through his chamber window. Various members of his family became ill, and some died.

Mather's interest in science and particularly in various American phenomena—published in his *Curiosa Americana* (1712–24)—won him membership in the Royal Society of London. His *Christian Philosopher* (1721) recognizes God in the wonders of the earth and the universe beyond; it is both philosophical and scientific and, ironically, anticipates 18th-century DEISM, despite his conservatism.

Cotton Mather, portrait by Peter Pelham

By courtesy of the American Antiquarian Society, Worcester, Mass.

Cotton Mather wrote and published more than 400 works. His magnum opus was *Magnalia Christi Americana* (1702), an ecclesiastical history of America from the founding of New England to his own time. His *Manuductio ad Ministerium* (1726) was a handbook of advice for young graduates to the ministry: on doing good, on college love affairs, on poetry and music, and on style. His ambitious 20-year work on biblical learning was interrupted by his death.

MATHER, INCREASE (b. June 21, 1639, Dorchester, Massachusetts Bay Colony [U.S.]—d. Aug. 23, 1723, Boston), prominent Boston Congregational minister, author, and educator (*see* CONGREGATIONALISM).

Mather entered Harvard at the age of 12 and received his bachelor's degree at 17. At graduation, his attack on Aristotelian logic, basic to the Harvard curriculum, shocked the faculty and nearly resulted in his dismissal. On his 18th birthday he preached his first sermon in a village near his home and another in his father's church in Dorchester. Soon he left for Dublin, where he entered Trinity College and received a master's degree the following June. Chosen a fellow at Trinity, he refused the post. He preached at various posts in England and was at Guernsey when the Puritan Commonwealth ended and Charles II was proclaimed king. On the appointment of a new governor for Guernsey, unsympathetic to NONCONFORMISTS, Increase left a comfortable living and soon sailed for Boston, where he became minister of North Church in 1661.

In 1683 Charles informed the Massachusetts colonists that he would revoke their charter if they did not show absolute obedience to the king. Before an assembly of freemen, Mather proclaimed that an affirmative vote would be a SIN against God, for only to him should one give absolute obedience. The colonists refused submission, and the charter was revoked in 1686.

While James II was king, in 1688, Mather was sent as the representative of the colonists to thank him for his declaration of liberty to all faiths. He remained in England for several years, and, on the accession of William and Mary in 1689, he obtained from them the removal of the hated governor of Massachusetts, Sir Edmund Andros, and his replacement by Sir William Phipps. Mather's petition for the restoration of the old charter proved unsuccessful, but he was able to get a new charter in 1691. Both the new governor and the new charter, however, turned out to be unpopular. In 1685 Mather became president of Harvard, but he resigned in 1701, partly because of opposition to the new charter.

Among his books is *An Essay for the Recording of Illustrious Providences* (1684), a compilation of stories showing divine providence rescuing people from natural and supernatural disasters. Some historians suggest that this book conditioned the minds of the populace for the WITCHCRAFT hysteria of Salem in 1692. Increase and his son COTTON MATHER believed in witches—as did most of the world at the time—but they suspected that evidence could be faulty and justice might miscarry. One case against a suspected witch rested on testimony that the victim had been attacked by a specter bearing the appearance of someone he knew, which the Mathers distrusted. When this evidence was thrown out of court at the insistence of the Mathers and other ministers, the case was dismissed.

MATHURA, formerly Muttra, city, western Uttar Pradesh state, northern India, on the Yamuna River, northwest of Āgra. The site was inhabited before the 1st century AD. In the 2nd century the city was a stronghold of Buddhists and

Jains. In 1017–18, Maḥmūd of Ghazna pillaged Mathura, and between 1500 and 1757 it was sacked four times. The city came under British rule in 1804.

Situated at a major junction of roads and rail lines, it is an agricultural trade center with some industry. Several colleges are located in the city. Mathura is the traditional birthplace of the god KRISHNA and is one of the seven sacred cities of HINDUISM. There are a number of temples and ghats, or bathing stairs, along the river.

MATRONALIA \ˌmɑ-trə-ˈnā-lē-ə\, also called *Matronales Feriae*, in ROMAN RELIGION, ancient festival of JUNO, the birth goddess, celebrated annually by Roman matrons on March 1, the day on which a temple was dedicated to Juno. According to tradition, the cult was established by Titus Tatius, king of the Sabines. The Matronalia symbolized the sacredness of marriage and was mythically tied to the peace that followed the first marriages between Romans and Sabine women. The festival consisted of a procession of married women to the temple, where they made offerings to Juno. At home, offerings were supplemented by prayers for marital felicity. Wives received gifts from their husbands and gave a feast for their female slaves.

MATSURI \ˈmät-sü-rē\ (Japanese: “festival”), in general, any of a wide variety of civil and religious ceremonies in Japan; more particularly, the shrine festivals of SHINTŌ. *Matsuri* vary according to the shrine, the deity or sacred power (KAMI) worshiped, and the purpose and occasion of the ceremony. A *matsuri* generally falls into two parts: the solemn ritual of worship, followed by a joyous celebration.

The participants first purify themselves (*see* HARAI) by periods of abstinence, which may vary from hours to days, and by bathing (*misogi*), preferably in salt water. The *kami* is then requested to descend into its symbol or object of residence (SHINTAI) in a rite that consists of opening the inner doors of the shrine, beating a drum or ringing bells, and calling the *kami* to descend. Next the food offerings (*shinsen*) are presented and on occasion other offerings, *heihaku* (literally, “cloth,” but including also paper, jewels, weapons, money, and utensils). Prayers (NORITO) are recited

Matsuri procession at the Shintō shrine Heian Jingu, Kyōto, Japan

Photo Researchers

by the priests. Individual worshipers offer branches of a sacred tree (*tamagushi*), and ceremonial music and dancing (*gagaku* and *bugaku*) are performed. The offerings are then withdrawn and the *kami* requested to retire.

The celebrations usually include a feast (*naorai*), in which the consecrated offerings of food and drink are consumed by priests and laymen, dancing, theatrical performances, DIVINATION, and athletic contests. The *kami* is frequently taken out in a procession in a portable shrine (*mikoshi*); thus, its presence blesses the locations along its route. Accompanying it in the procession are priests of the temple in full ceremonial dress; delegations of parishioners, musicians, and dancers dressed in ancient costumes; and floats (*dashi*). The floats are decorated cars shaped like mountains, shrines, or perhaps boats, either drawn by men or oxen or carried on men's shoulders.

MATSYENDRANĀTH \məts-yen-drə-'nä-tə\, also called *Mīnanātha* (fl. 10th century?, India), first human GURU of the NĀTHA cult.

Matsyendranāth's name appears on both the lists of the 9 *nāthas* ("masters") and the 84 *mahāsiddhas* ("great accomplished ones") common to HINDUISM and BUDDHISM. He was given semidivine status by his followers and identified with Avalokiteśvara-Padmapāni (a BODHISATTVA) by his Buddhist followers in Nepal and with the god SHIVA by his Hindu devotees. In Tibet he was known as Lui-pa. The name *Mīna-nātha* ("Fish-Lord") refers either to his receipt of spiritual instruction from Shiva while in the form of a fish or to his rescue of a sacred text from the belly of a fish.

Though an ascetic he succumbed, according to tradition, to the charms of two queens of Ceylon and had two sons, Pārosenāth and Nīmnāth, who were leaders of JAINISM. His leading disciple, GORAKHNĀTH, is commonly regarded as the founder of the Kānpḥaṭṭa Yogis, an order of religious ascetics who stress the practice of HAṬṬHA YOGA.

MATTHEW (THE EVANGELIST), SAINT \ˈmæθ-yü\, also called *Levi* \ˈlē-vī\ (fl. 1st century CE, Palestine; Western feast day September 21, Eastern feast day November 16), one of the Twelve Apostles, traditional author of the first Synoptic Gospel. The Gospel According to Matthew was certainly written for a Jewish-Christian church in a strongly Jewish environment, but that this Matthew is definitely the synoptic author is seriously doubted. Tradition notes his ministry in Judaea, after which he supposedly missioned to the East, suggesting Ethiopia and Persia. Legend differs as to the scene of his MISSIONS and as to whether he died a martyr's death. Matthew's relics were reputedly discovered in Salerno (Italy) in 1080. His symbol is an ANGEL.

MĀTURĪDĪYA \mä-tür-ē-'dē-ə\, Muslim orthodox school of theology named after its founder, Abū Maṣṣūḥ Muḥammad al-Māturīdī (d. 944). The Māturīdīya is similar in outlook to the school of AL-ASH'ARĪ (d. 935), the Ash'arīya, that has received more attention and praise as the champion of the true faith. The Māturīdīya is more popular in its home region, known historically as Transoxania (Central Asia).

The Māturīdī school is characterized by its reliance on the QUR'AN without reasoning or free interpretation. Its members argued that since MUHAMMAD himself had not used reason in this respect, it is an innovation (BID'A) to do so, and every innovation is a HERESY according to a well-known prophetic saying. The later Māturīdīya, however, acknowledged the possibility of problems for which there is no precedent in either the Qur'an or HADITH, and modified

this rule, allowing for rational inferences when necessary.

The Māturīdīya entered the discussion of "compulsion" and "free will," which was at its peak in theological circles at the time of its founding. They followed a doctrine similar to that of the Ash'arīya, emphasizing the absolute omnipotence of God and at the same time allowing humans a minimum of freedom to act so that they may be justly punished or rewarded. In the later stages of its development, however, the Māturīdīya took an independent course and stated unequivocally that humans have the utmost freedom to act, a point of view derived directly from many verses in the Qur'an and the Hadith.

The Māturīdīya differed also from the Ash'arīya on the question of the "assurance of salvation." They held that a Muslim who sincerely performed his religious duties as prescribed by God in the Qur'an, and as explained and taught by his Prophet, is assured of a place in heaven. The Ash'arīya maintained that one is not saved unless God wills him to be saved, and that no one knows whether he is a believer or not, for only God can make such a decision.

MATZAH \ˈmät-sə\, unleavened bread eaten by Jews during the holiday of PASSOVER (Pesah) in commemoration of their exodus from Egypt, when the rapid departure did not allow for the fermentation of dough. The Passover ritual requires that Jews eat matzahs at least on the first night of the celebration and that they eat no leavened bread throughout the entire holiday of Passover.

MAUNDY THURSDAY, also called *Holy Thursday*, the Thursday before EASTER, observed in commemoration of JESUS CHRIST's institution of the EUCHARIST. The English name is taken (via medieval French) from an anthem sung in ROMAN CATHOLIC churches on that day: "Mandatum novum do vobis" ("A new commandment I give to you"; John 13:34). In the early Christian church the day was celebrated with a general communion of clergy and people. At a special MASS the bishop consecrated the holy oils in preparation for the anointing of the neophytes at the BAPTISM on Easter night. Since 1956 Maundy Thursday has been celebrated in Roman Catholic churches with a morning liturgy for the consecration of the holy oils for the coming year and an evening liturgy in commemoration of the institution of the Eucharist, with a general communion. During the evening liturgy the hosts are consecrated for the communion on GOOD FRIDAY, and the celebrant ceremonially washes the feet of 12 men in memory of Christ's washing the feet of his disciples. Eastern Orthodox churches also have a ceremony of foot washing and blessing of oil on this day.

MAURICE, (JOHN) FREDERICK DENISON \ˈmôr-is, mô-rēs\ (b. Aug. 29, 1805, Normanston, Suffolk, Eng.—d. April 1, 1872, London), major English theologian of 19th-century Anglicanism and prolific author, remembered chiefly as a founder of CHRISTIAN SOCIALISM.

Prevented from graduation in law at Cambridge by his refusal to subscribe to the THIRTY-NINE ARTICLES, the Anglican CONFESSION OF FAITH, Maurice reversed his position by 1830 and attended Oxford. In the interim he had worked in London as a writer and an editor for literary journals and in 1834 published his only novel, *Eustace Conway*. That same year he was ordained and soon afterward became CHAPLAIN at Guy's Hospital in London. Elected professor of English literature and modern history at King's College, Cambridge, in 1840, he became professor of divinity and accepted the chaplaincy at Lincoln's Inn, a London academy of

law, six years later. His reputation as a theologian was enhanced with the publication of his book *The Kingdom of Christ* (1838), in which he held the church to be a united body that transcended the diversity and partiality of individual men, factions, and sects. That view—subsequently regarded as presaging the 20th-century ecumenical movement—aroused the suspicions of orthodox Anglicans. Their misgivings were intensified in 1848, when he joined the moderate Anglicans Charles Kingsley, John Malcolm Ludlow, and others to found the Christian Socialist movement.

Opposition to Maurice grew after his *Theological Essays* of 1853 revealed his disbelief in the eternity of hell, and that year he was dismissed from his King's College post. Maurice planned and became the first principal of the Working Men's College (1854). In 1860 Maurice left the chaplaincy at Lincoln's Inn for St. Peter's Church. Elected to the Knightsbridge professorship of moral philosophy at Cambridge in 1866, he lectured on ethical subjects and wrote his celebrated *Social Morality* (1869). To this position, which he held until his death, he added the chaplaincy of St. Edward's Church at Cambridge in 1870.

MAUSS, MARCEL \ˈmɒs\ (b. May 10, 1872, Épinal, France—d. Feb. 10, 1950, Paris), French sociologist and anthropologist whose contributions include a highly original comparative study of the relation between forms of exchange and social structure. His views on the theory and method of ethnology are thought to have influenced Claude Lévi-Strauss, A.R. Radcliffe-Brown, E.E. Evans-Pritchard, and Melville J. Herskovits, among others.

Mauss was the nephew of sociologist ÉMILE DURKHEIM, who contributed much to his intellectual formation. Mauss succeeded Durkheim as editor of the journal *L'Année Sociologique* ("The Sociological Year"). In 1902 he began his career as professor of primitive religion at the École Pratique des Hautes Études ("Practical School of Higher Studies"), Paris. He was a founder of the Ethnology Institute of the University of Paris (1925) and also taught at the Collège de France (1931–39). A political activist for many years, he supported Alfred Dreyfus in his famed court battle, aligned himself with the socialist leader Jean Jaurès, and assisted in founding the socialist daily *L'Humanité* (1904).

Among his earliest works was "Essai sur la nature et la fonction du sacrifice" (written with Henri Hubert, 1899; *Sacrifice: Its Nature and Function*). His most influential work is thought to be "Essai sur le don" (1925; *The Gift*). Concentrating on the forms of exchange and contract in Melanesia, Polynesia, and northwestern North America, the work explores the religious, legal, economic, mythological, and other aspects of giving, receiving, and repaying; it displays Mauss' concern with studying a limited segment of social phenomena viewed in its systematic entirety. Mauss also wrote on magic, the concept of self, mourning rites, and other topics. *Sociologie et anthropologie* (1950) is a collection of essays he published between 1904 and 1938.

MAWDŪDĪ, ABŪ'L-A'ĻĀ \maü-ˈdü-dē\ (b. Sept. 25, 1903, Aurangābād, Hyderabad state [India]—d. Sept. 22, 1979, Buffalo, N.Y., U.S.), journalist and fundamentalist Muslim theologian who played a major role in Pakistani politics.

The son of a lawyer, Mawdūdī was given a traditional Islamic education at home in order to shield him from Western influences. In his adult years he became convinced that Muslim thinkers must be freed from the hold that Western civilization had over them, in favor of a code of life, culture, and political and economic system unique to ISLAM.

When Pakistan split off from India in 1947, his efforts were instrumental in guiding the new nation away from the SECULARISM of Western governments, and toward the formation of an Islamic state. Persistently Mawdūdī found himself in opposition to the Pakistani government. He was imprisoned from 1948 to 1950 and again from 1953 to 1955 and was under a sentence of death for a period in 1953.

Mawdūdī wrote on a very broad range of topics, including philosophy, Muslim jurisprudence, history, economics, sociology, and theology. He is best known for the thesis that God alone is sovereign, not human rulers, nations, or customs. Political power in this world exists in order to put the divinely ordained principles of the SHARĪ'A (the Islamic legal and moral code) into effect. Since Islam is a universal code for human life, moreover, the state must be all-embracing and must be left in the hands of Muslims, though non-believers should be allowed to live within the state as non-Muslim citizens (see DHIMMA). Since all Muslims share the same relationship to God, this state must be what Mawdūdī called a "theo-democracy," in which the whole community is called upon to interpret the divine law.

MAWLĀ: see MULLĀ.

MAWLAWĪYA \,maü-lə-ˈwē-ə\, *Turkish* Mevleviya, fraternity of Sufi mystics founded in Konya (Qonya), Anatolia, by the Persian Sufi poet JALĀL AL-DĪN AL-RŪMĪ (d. 1273), whose popular title *mawlānā* (Arabic: "our master") gave the order its name (see SUFISM). The order, propagated throughout Anatolia, controlled Konya and environs by the 15th century and in the 17th century appeared in Constantinople (Istanbul). European travelers identified the Mawlawīya as dancing (or whirling) DERVISHES, based on their observations of the order's ritual prayer (DHIKR), performed spinning on the right foot to musical accompaniment.

After the dissolution of all Sufi brotherhoods in Turkey in 1925, the Mawlawīya survived in a few monasteries in Aleppo, Syria, and small towns in the Middle East. Special permission granted by the Turkish government in 1954 allowed the Mawlawī dervishes of Konya to perform their ritual dances for tourists during two weeks of every year. Despite opposition from the Turkish government, the order continued to exist as a religious body into the late 20th century. The tomb of al-Rūmī at Konya, although officially a museum, attracted a steady stream of devotees. In recent years branches of this order have been established in Europe and the Americas, and in 1996 an international Mevlevi foundation was inaugurated at the request of the order's leader, Celālettin Celebi (d. 1996), to organize international meetings and publishing activities.

MAWLID \ˈmaü-lid\, also spelled *mawlūd*, or *mīlād*, in ISLAM, the birthday of a holy figure, especially the birthday of the Prophet MUHAMMAD (Mawlid al-Nabī).

Muhammad's birthday, fixed by tradition as the 12th day of the month of Rabī' I, *i.e.*, the day of Muhammad's death, was not widely celebrated until about the 13th century. At the end of the 11th century in Egypt, the ruling Shi'ite Fātīmids (descendants of 'ALĪ, the fourth CALIPH, through his wife FĀTIMA, Muhammad's daughter) observed four *mawlid*s, those of Muhammad, 'Alī, Fātimah, and the ruling caliph. The festivals were simple PROCESSIONS of court officials, held in daylight, that culminated in the recitation of three sermons (KHUTBAS) in the presence of the caliph.

SUNNIS regard a *mawlid* celebration held in 1207 as the first *mawlid* festival. That occasion was organized by Muz-

MAXIMUS THE CONFESSOR, SAINT

affar al-Dīn Gökburī, brother-in-law of the Egyptian SULTAN Saladin, at Irbīl, near Mosul (Iraq). It closely parallels the modern *mawlid* in form. The day of Muhammad's birth was preceded by a month of merrymaking. Musicians, jugglers, and assorted entertainers attracted people from as far away as Baghdad and Nişībīn (modern Nusaybin, Turkey); and Muslim scholars, jurists, mystics, and poets began arriving as much as two months in advance. Two days before the formal *mawlid* a large number of camels, sheep, and oxen were sacrificed, and on the eve of *mawlid* a torchlight procession passed through the town. On the morning of the *mawlid*, the faithful and the soldiery assembled to hear the sermon. The religious dignitaries were then honored with special robes, and all feasted at the prince's expense.

The *mawlid* festival quickly spread throughout the Muslim world, partly because of a contemporary corresponding enthusiasm for SUFISM, by which Islam became a personal experience. Many Muslim theologians could not accept the new festivities, branding them BID'AS, innovations possibly leading to SIN. The *mawlid*, indeed, betrayed a Christian influence; Christians in Muslim lands observed CHRISTMAS in similar ways, and Muslims often participated in the celebration. Modern revivalist Muslims such as the Wahhābiya still view the *mawlid* festivities as idolatrous.

*Mawlid*s, however, continue to be celebrated and have been extended to popular saints and the founders of Sufi brotherhoods. The *mawlid* poems, which relate Muhammad's life and virtues, are also widely popular outside the times of regular feasts. *Mawlid*s are also recited in commemoration of deceased relatives.

MAXIMUS THE CONFESSOR, SAINT \ˈmak-si-məs\ (b. c. 580, Constantinople—d. Aug. 13, 662, Lazica), the most important Byzantine theologian of the 7th century, whose commentaries on Pseudo-DIONYSIUS THE AREOPAGITE and on the Greek church fathers considerably influenced the theology and MYSTICISM of the Middle Ages.

A court secretary of the Eastern Roman emperor Heraclius I, Maximus became a monk c. 613 at a monastery near Chrysopolis in Bithynia. Fleeing to North Africa because of the Persian invasion of 626, he took part at Carthage (near modern Tunis) in the Monothelite controversy. Arguing that JESUS CHRIST had two wills as he had two natures, the divine and the human, Maximus was called to Rome, where he supported the condemnation of Monothelitism by a regional church council under Pope Martin I in 649. Maximus and Martin were arrested by the emperor Constans II in an intricate theological-political tactic, and, after imprisonment from 653 to 655, Maximus was tortured and exiled; he died in the wilderness near the Black Sea.

Throughout his approximately 90 major works Maximus developed a Christocentric theology and mysticism. His *Opuscula theologica et polemica* ("Short Theological and Polemical Treatises"), *Ambigua* ("Ambiguities" in the works of GREGORY OF NAZIANZUS), and *Scholia* (on Pseudo-Dionysius the Areopagite), mostly authentic, express Maximus' teaching on the transcendental, nonpredicable nature of the divinity, his intrinsic Trinitarian existence, and his definitive communication in Christ. In his *400 Capita de caritate* ("Four Hundred Chapters on Charity"), Maximus counseled a Christian humanism, integrating ASCETICISM with ordinary life and active CHARITY.

MAXIMUS THE GREEK, also called Maximus the Hagiortite (b. 1480, Árta, Greece—d. 1556, near Moscow), Greek Orthodox monk, humanist scholar, and linguist, whose

principal role in the translation of the SCRIPTURES and philosophical-theological literature into the Russian Church Slavic made possible the dissemination of Byzantine culture throughout Russia.

Maximus was educated in Paris, Venice, and Florence. When the Russian church requested from the patriarchate of Constantinople an expert to correct church texts that were used in Russia, Maximus was chosen for the mission. In Moscow, with the assistance of Russian secretaries, he translated original Greek canonical, liturgical, and theological texts into Church Slavic. The great literary output inspired a Slavic cultural movement and laid the groundwork for later Russian theology.

While in Moscow Maximus became involved in the factional controversy between the Nonpossessors (or Transvolgans), who believed that monasteries should not own property and who had liberal political views, and the Possessors (or Josephites), who held opposite opinions. The Nonpossessors came to be led by Maximus and Nil Sorsky, the Possessors by Joseph of Volokolamsk. Maximus took part in the preparation of a corrected and critical edition of the *Kormchaya kniga*, a Slavic version of the Byzantine ecclesiastical laws collected as the *Nomocanon*. In this work, he supported the ideas of the Nonpossessors, holding that the Church should practice poverty and desist from feudal exploitation of the peasantry. In 1525 Maximus was arrested on the charge of HERESY by Daniel, METROPOLITAN of Moscow and a Possessor. After a series of trials, he was condemned in 1531 and imprisoned for 20 years in the monastery of Volokolamsk, near Moscow, of which Joseph was ABBOT. While in detention, Maximus continued to produce theological works. When he emerged in 1551, his personal prestige was immense, but his political views were suppressed. During the last five years of his life, he retired to the Troitse-Sergiyeva Monastery, where he was buried and was subsequently venerated as a saint.

Among the works credited to him are commentaries on the Psalms and on THE ACTS OF THE APOSTLES and an anti-Latin church treatise entitled *Eulogy for the Holy Apostles Peter and Paul*. The *Eulogy* includes a criticism of Western CHRISTIANITY for fostering the doctrine of PURGATORY.

MĀYĀ \ˈmä-yä\ (Sanskrit: "illusion"), fundamental concept in HINDUISM, notably in the ADVAITA (Nondualist) school of the orthodox system of VEDĀNTA. *Māyā* originally denoted the power with which a god can make humans believe in an illusion; by extension it later came to mean the force that creates the cosmic illusion that the phenomenal world is real. For the Nondualists, *māyā* is the cosmic force that manifests the infinite BRAHMAN (the supreme being) as the finite phenomenal world. *Māyā* is reflected on the individual level by human ignorance (*ajñāna*) of the real nature of the self, which is mistaken for the empirical ego but which is in reality identical with Brahman.

MAYA \ˈmī-ə\ see PRE-COLUMBIAN MESO-AMERICAN RELIGIONS.

MAYA CODICES \ˈmī-ə-ˈkō-də-sēz, -ˈkā-\, richly illustrated pre-Columbian Mayan hieroglyphic writings, only a few of which survived burning by the Spanish clergy during the 16th century. The texts are known today as the Madrid, Paris, Dresden, and Grolier codices.

The Madrid Codex (Latin Codex Tro-Cortesianus) is believed to be a product of the late Mayan period (c. 1400 CE), possibly a post-Classic copy of Classic Mayan scholarship. The Madrid Codex consists of 56 pages, inscribed on both

sides, formed by folding and doubling a sheet made from the bark of a fig tree. Containing a wealth of information on ASTROLOGY and on DIVINATION, this codex has been of particular value in identifying the various Mayan gods and reconstructing the rites that ushered in new years. Also illustrated are Mayan crafts such as pottery and weaving and activities such as hunting. Found in two unequal sections (called the *Troano* and the *Cortesianus*) in two locations in Spain in the 1860s, the Codex is now housed in the Museum of America in Madrid.

The Paris Codex's Latin name, *Codex Peresianus*, comes from the name Perez, which was written on the torn wrappings of the manuscript when it was discovered in 1859 in the Bibliothèque Nationale in Paris. It is devoted almost entirely to Mayan ritual and ceremony. It is fragmentary and is composed of paper made from tree bark, fashioned in a long strip and folded like a screen. The 11 leaves provide 22 pages of columns of glyphs and pictures of the gods. It has been dated to between the Classic and Conquest periods of Mayan history.

The Dresden Codex (Latin Codex Dresdensis) contains astronomical calculations—eclipse-prediction tables, the synodical period of Venus—of exceptional accuracy. The Maya's reputation as astronomers is based largely on these figures. The codex was acquired by the Saxon State Library, Dresden, Saxony, and was published by Edward King, Viscount Kingsborough, in *Antiquities of Mexico* (1830–48). King erroneously attributed the codex to the Aztecs.

The Grolier Codex, possibly the oldest of the codices (it has been dated to the 13th century BCE), gets its name from the Grolier Club in New York, where it was first exhibited after its discovery in 1971. It contains portions of a table charting the movements of Venus. Initially treated with some skepticism, most authorities today accept its authenticity. Its current whereabouts are unknown.

MAZDAKISM \ˈmɑz-də-ki-zəm\, dualistic religion that rose to prominence in the late 5th century in Iran from obscure origins. According to some scholars, Mazdakism was a reform movement seeking an optimistic interpretation of the Manichaean DUALISM. Its founder appears to have been one Zaradust-e Khuragan; a connection has been sought between him and a Persian, Bundos, who preached a divergent MANICHAISM in Rome under Diocletian at the end of the 3rd century. Other scholars see it as an internal development within Iranian religion. After the 5th century the religion came generally to be called after Mazdak (fl. late 5th century CE, Persia), its major Persian proponent. No Mazdakite books survive. Knowledge of the movement comes from brief mentions in Syrian, Persian, Arabic, and Greek sources.

According to Mazdakism, there exist two original principles, Good (or Light) and Evil (or Darkness). Light acts by

Drawing from the Madrid Codex showing the corn god (left) and the rain god, Chac

By courtesy of the Museo de America, Madrid

FREE WILL and design; Darkness, blindly and by chance. By accident the two became mixed, producing the world. There are three Light elements: water, fire, and earth. By their actions humans should seek to release the Light in the world; this is accomplished through moral conduct and ascetic life. They may not kill or eat flesh. They are to be gentle, kind, hospitable, and clement to foes. To encourage brotherly helpfulness and reduce causes of greed and strife, Mazdak sought to make property and women common. He converted to his faith the Sāsānid king Kavadh I (488–496 and 499–531), who introduced social reforms inspired by his tenets. These appear to have involved some liberalizing of marriage laws and of measures concerning property. These actions aroused the hostility of the nobles and the Zoroastrian clergy and led to the eventual suppression of Mazdakism. Nevertheless, the religion survived in secret into Islamic times (the 8th century).

MCPHERSON, AIMEE SEMPLE \mæk-ˈfər-sən\ (b. Oct. 9, 1890, near Ingersoll, Ont., Can.—d. Sept. 27, 1944, Oakland, Calif., U.S.), controversial U.S. Pentecostal evangelist and early radio preacher whose International Church of the Foursquare Gospel brought her wealth, notoriety, and a following numbering in the tens of thousands. Known as “Sister Aimee,” she was a dynamic and attractive woman and retained the loyalty of her followers despite a third marriage that ended in divorce, a sensational five-week disappearance in 1926, and various grave but unproved charges against her. Her career reached its height in the late 1930s. She died from an overdose of barbiturates.

MECCA \ˈme-kə\, Arabic Makka, formally Makka al-Mukarrama (“Ennobled Mecca”), ancient Bakka, or Mac-oraba, city, western Saudi Arabia. Mecca is the most holy city of ISLAM; it was the birthplace of MUHAMMAD and is a religious center to which Muslims attempt a pilgrimage, or HAJJ, during their lifetime.

Mecca is located in the Širāt Mountains, 45 miles inland from the Red Sea port of Jidda. The city centers upon the Al-Ḥaram Mosque and the sacred well of Zamzam, located inside. In the mosque's central courtyard is the KA'BA, the holiest shrine of Islam, which has been destroyed and rebuilt several times. Other holy sites in and near Mecca include the hills of Safa and Marwa next to the Al-Ḥaram Mosque, where pilgrims reenact Hajar's (Hagar's) search for water for her son Isma'il (Ishmael); the town of Mina, where pilgrims stone three pillars during the hajj rites; the plain of 'Arafat, where they assemble for midday prayers; and Mt. Hira, where Muhammad received his first revelations. During the month of pilgrimage (the Islamic month of Dhū al-Ḥijja), Mecca's population swells with the addition of about two million pilgrims. Only Muslims are permitted to reside in the city.

MEDB \ˈmāv, ˈm^yethv\, also spelled Medhbh, legendary queen of Connaught (Connacht) in Ireland. In the Irish epic tale *Táin Bó Cúailnge* ("The Cattle Raid at Cooley") she led her forces against those of Ulster and fought in the battle herself. Originally Medb appears not to have been a historical queen but a fierce goddess with an insatiable sexual appetite. The list of her mates is impressive; at the time of the battle against Ulster, the king Ailill was her mate, but she also had an affair with the mighty hero FERGUS, distinguished for his prodigious virility. The name *Medb*, which is variously interpreted as: "the drunken one" or "she who intoxicates," is most likely a derivative of a Celtic adjective meaning "strong, intoxicating" (Middle Irish *medb*) or "drunken" (Welsh *meddw*).

MEDEA \mə-ˈdē-ə\, in Greek mythology, enchantress who helped JASON, leader of the ARGONAUTS, to obtain the Golden Fleece from her father, King Aetes of Colchis. She had the gift of PROPHECY, and the character was perhaps the remnant of an early goddess. Her aid was invaluable to Jason in his quest, and she later married him.

The *Medea* of Euripides takes up the story at a later stage, after Jason and Medea had fled Colchis with the fleece and had been driven out of Iolcos because of the vengeance taken by Medea on King PELIAS of Iolcos (who had sent Jason to fetch the fleece). The play is set during the time that the pair lived in Corinth, when Jason deserted Medea for the daughter of King Creon of Corinth; in revenge, Medea murdered Creon, his daughter, and her own two sons by Jason and took refuge with King Aegeus of Athens. The Greek historian Herodotus related that from Athens Medea went to the region of Asia subsequently called Media, whose inhabitants thereupon changed their name to Medes.

MEDICINE MAN, member of a nonliterate society who is knowledgeable about the magic potencies of various substances (medicines) and skilled in the rituals in which they are administered, particularly for healing. The term has been used most widely in the context of indigenous American cultures.

Some medicine men (or women in some societies) undergo rigorous initiation to gain supernormal powers, while others are essentially learned experts. The medicine man commonly carries a kit of objects—such as feathers of valued birds, bones, suggestively shaped or marked stones, or hallucinogenic plants—that have magical associations; in some cases, the stones are considered to have been embedded in the body of the medicine man at his initiation.

MEDINA \mə-ˈdē-nə\, Arabic Al-Madīna, formally Al-Madīna Al-Munawwara ("The Luminous City"), or Madīnat Rasūl Allāh ("City of the Messenger of God [*i.e.*, Muhammad]"), ancient Yathrib, one of two most sacred cities of ISLAM, in Saudi Arabia some 278 miles from MECCA.

In 622 MUHAMMAD arrived at Medina from Mecca. This flight, known as the HĪJRA, marks the beginning of the Muslim calendar. Soon afterward Muhammad drove out the Jews who had controlled the oasis. Thereafter known as Medina, the city prospered as the administrative capital of the steadily expanding Islamic state, a position it maintained until 661, when it was superseded in that role by Damascus. The city was sacked in 683 by the CALIPHS for its fractiousness.

The Ottomans, following their conquest of Egypt, held Medina from 1517 until the WAHHĀBĪS, a militant Islamic re-

vivalist group, took the city in 1804. An Ottoman-Egyptian force retook it in 1812, and the Ottomans remained in effective control until 1912 with the resurgence of the Wahhābī movement under Ibn Saʿūd. Ottoman rule ceased during World War I, when the sharif Ḥusayn ibn ʿAlī, ruler of Mecca, revolted. Ḥusayn later came into conflict with Ibn Saʿūd, and in 1925 Medina fell to the Saʿūdī dynasty.

Medina is second only to Mecca as the holiest place of Muslim pilgrimage; the tomb of Muhammad in the Prophet's Mosque is among the most sacred shrines in the Islamic world. The first two SUNNĪ caliphs, Abū Bakr and ʿUmār, are also believed to be buried there, as are FĀṬĪMA and several of the Shiʿite IMAMS. Other religious features of the oasis include the mosque of Qubā, the first in Islamic history, from which the Prophet was vouchsafed a view of Mecca; the Mosque of the Two Qiblahs at al-Rimāh, commemorating the change of the prayer direction from Jerusalem to Mecca; the tomb of Ḥamza, uncle of the Prophet, and of his companions who fell in the Battle of Uḥud (625), in which the Prophet was wounded; and the cave in the flank of Uḥud, in which the Prophet took refuge on that occasion. Other mosques commemorate where he donned his armor for that battle; where he rested on the way there; where he unfurled his standard for the Battle of the Ditch; and the ditch itself, dug around Medina by Muhammad. All these spots are the object of pious visitation by all Muslims visiting Medina; they are forbidden to non-Muslims. In addition the city is also the site of the Islamic University, established in 1961.

MEDINA, CONSTITUTION OF, document based upon two agreements concluded between the clans of MEDINA and the Prophet MUHAMMAD soon after the HĪJRA, or emigration to Medina in 622 CE. The agreements established the *muhājirūn*, *i.e.*, the early Muslims from MECCA who followed Muhammad, on a par with the eight clans of Medina (called the ANSAR, or "helpers"); collectively, the nine tribes formed the first Muslim community. The agreements also regulated the relations of the Muslims with the Jews who at that time inhabited Medina.

MEDITATION, mental exercise consisting in techniques of concentration, contemplation, and abstraction, regarded as conducive to heightened awareness or somatic calm.

Meditation in some form has been systematized in most great religions of the world. The Hindu philosophical school of YOGA prescribes an elaborate process for the purification of body, mind, and soul. In numerous religions, spiritual purification may be sought through the verbal or mental repetition of a prescribed efficacious syllable, word, or text (*e.g.*, the Hindu and Buddhist mantra; Islamic DHĪKR; Christian Jesus prayer). The focusing of attention upon a visual image is a common technique; Tantric Buddhists of Tibet, for example, regard the MANDALA (Sanskrit: "circle") diagram as a collection point of universal forces, accessible to humans by meditation. Tactile and mechanical devices, such as the ROSARY and the PRAYER WHEEL, play a highly ritualized role in many contemplative traditions.

BUDDHISM places perhaps the greatest focus on meditation of any major religion. In that tradition, the practice of meditation—that is, mental concentration leading through a succession of stages—can lead to the final goal of spiritual freedom, NIRVANA. Meditation occupies a central place in Buddhism and combines, in its highest stages, the discipline of increased introversion with the insight brought about by wisdom, or *prajñā*.

Monks performing zazen, a type of meditation in Zen Buddhism
Paolo Koch—Photo Researchers

The object of concentration (the *kammaṭṭhāna*) may vary according to individual and situation. One Pāli text lists 40 *kammaṭṭhānas*, including devices (such as a color or a light), repulsive things (such as a corpse), and recollections (as of the Buddha).

Four stages of concentration (called in Sanskrit *dhyānas*) are distinguished: (1) detachment from the external world and a consciousness of joy and ease; (2) concentration, with suppression of reasoning and investigation; (3) the passing away of joy, with the sense of ease remaining; and (4) the passing away of ease also, bringing about a state of pure self-possession and equanimity. The *dhyānas* are followed by four further exercises, the *samāpattis* ("attainments"). They are described as (1) consciousness of infinity of space; (2) consciousness of the infinity of cognition; (3) concern with the unreality of things; and (4) consciousness of unreality as the object of thought.

The stages of Buddhist meditation show many similarities with Hindu Yoga, reflecting a common tradition in ancient India. The Buddhists, however, describe the culminating trancelike state as transient; final Nirvana requires the insight of wisdom. The various exercises and visualizations that are meant to develop wisdom focus on penetrating through to the true nature of reality, or to the discernment of the conditioned and unconditioned dharmas (elements) that make up all phenomena. Although meditation is important in all schools of Buddhism, it has developed characteristic variations within different traditions, and some schools, such as Zen, place more emphasis upon meditation. See also TRANSCENDENTAL MEDITATION.

MEDIUM, in OCCULTISM, person reputedly able to make contact with the world of spirits, especially while in a state of trance. A medium is the central figure during a SÉANCE and sometimes requires the assistance of an invisible go-between, or control. During a séance, disembodied voices are said to speak, either directly or through the medium.

MEDUSA \mə-'dü-sə, -'dyü-, -zə\, in Greek mythology, the most famous of the GORGONS. She was usually represented as a winged female creature whose hair consisted of snakes. Medusa was the only Gorgon who was mortal; hence PERSEUS was able to kill her by cutting off her head. From her

neck sprang Chrysaor and PEGASUS, her two sons by POSEIDON. The severed head, which had the power of turning into stone all who looked upon it, was given to ATHENA, who placed it in her shield; according to another account, Perseus buried it in the marketplace of Argos.

HERACLES is said to have obtained a lock of Medusa's hair (which possessed the same powers as the head) from Athena and to have given it to Stepe, the daughter of Cepheus, as a protection for the town of Tegea against attack; when exposed to view, the lock was supposed to bring on a storm, causing the enemy to flee.

MEGALITH \ 'me-gə-'lith \, huge, often undressed stone used in various types of Neolithic and Early Bronze Age monuments.

In Spain, Portugal, and the Mediterranean coast the most ancient of the cyclopean stone tombs was probably the DOLMEN, which consisted of several upright supports and a flat roofing slab, all covered by a protective mound of earth. In northern and western Europe, two principal plans developed from the dolmen: one, the passage grave, was formed by the addition of a long stone-roofed entrance passage to the dolmen itself; and the other, the long, coffinlike CIST or covered GALLERY GRAVE, consisted of a long, rectangular burial chamber with no distinct passageway. Many round and long barrows also were found to contain megalithic burial chambers.

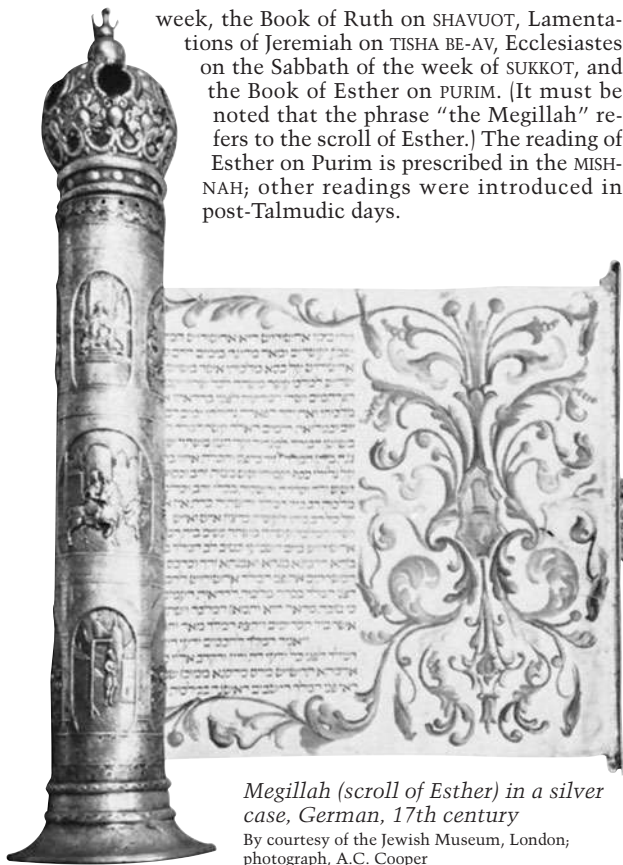

Another form of megalithic monument was the menhir (from Breton *men*, "stone," and *hir*, "long"). Menhirs were simple upright stones, sometimes of great size, and were erected most frequently in western Europe, especially Brittany. Often they were placed together, forming circles, semicircles, or vast ellipses. Many were built in England, the best-known sites being STONEHENGE and Avebury in Wiltshire. Megalithic menhirs were also placed in parallel rows, called alignments. The most famous are the alignments at Carnnac, France, which include 2,935 menhirs. The alignments were probably used for ritual PROCESSIONS, and often a circle or semicircle of megaliths stood at one end.

MEGILLAH \mə-'gi-lə\ (Hebrew: "Scroll"), any of five sacred books of the KETUBIM, in scroll form, that are read in the course of certain festivals. The Song of Solomon (Song of Songs) is read on the SABBATH OF PASSOVER

Megalith at Avebury stone circle, Wiltshire, Eng.

MEHER BABA \ˈmā-hər-ˈbä-bä\, also called *The Awakener*, original name Merwan Sheriar Irani (b. Feb. 25, 1894, Poona, India—d. Jan. 31, 1969, Ahmednagar), spiritual master in western India with a sizable following both in that country and abroad. Beginning on July 10, 1925, he observed silence for the last 44 years of his life, communicating with his disciples at first through an alphabet board but increasingly with gestures.

He was born into a ZOROASTRIAN family of Persian descent. At age 19 he met an aged Muslim woman, Hazrat Babajan, the first of five “perfect masters” (spiritually enlightened, or “God-realized,” persons) who over the next seven years helped him find his own spiritual identity. That identity was as the AVATAR of this age, by which he meant the periodic incarnation of God in human form. He placed himself among such universal religious figures as ZOROASTER, RĀMA, KRISHNA, BUDDHA GOTAMA, JESUS, and MUHAMMAD, declaring that all major religions are revelations of “the One Reality which is God.”

In Meher Baba’s COSMOLOGY the goal of all life is to realize the absolute oneness of God, from whom the universe emanated as a result of the whim of unconscious divinity to know itself as conscious divinity. In pursuit of consciousness, evolution of forms occurs in seven stages: stone or metal, vegetable, worm, fish, bird, animal, and human. Every individualized soul must experience all of these forms in order to gain full consciousness. Once consciousness is attained, the burden of impressions accumulated in these

forms prevents the soul from realizing its identity with God. To gain this realization the individual must traverse an inward spiritual path, eliminating all false impressions of individuality and eventuating in the knowledge of the “real self” as God.

Meher Baba saw his work as awakening the world through love to a new consciousness of the oneness of all life. To that end he lived a life of service that included extensive work with the poor, the physically and mentally ill, and many others.

Between 1931 and 1958 he made many visits to the United States and Europe. On one trip to the United States, in 1952, he established the Meher Spiritual Center in Myrtle Beach, S.C. A similar center, Avatar’s Abode, was created at Woomby, Queensland, Australia, in 1958.

Meher Baba never sought to form a sect or proclaim a dogma; he attracted and welcomed followers of many faiths and every social class with a message emphasizing love and compassion, the elimination of the selfish ego, and the potential of realizing God within themselves. After his death his followers heeded his wish that they not form an organization, but continued to gather informally. His tomb at Meherabad, near Ahmednagar, has become a place of PILGRIMAGE for his followers throughout the world. His books include *Discourses* (5 vol., 1938–43; the earliest dictated on an alphabet board, the others by gesture), *God Speaks: The Theme of Creation and Its Purposes* (1955), and *The Everything and the Nothing* (1963).

MEİR \mä-ir\ (Hebrew: “the Enlightener”), important rabbinic authority of the second century CE and a leader in the period following the BAR KOKHBA revolt. He was a student of ISHMAEL BEN ELISHA and, later, AKIBA BEN JOSEPH. Meir resided primarily in Tiberias but died in Asia. He is one of the most frequently cited RABBIS in the MISHNAH.

Later sources hold that Meir was descended from proselytes and that his given name was Nehorai (Talmud Bavli Eruvin 13b). He reportedly was one of the five scholars ordained by Judah ben Bava during the persecutions following the Bar Kokhba revolt, though discussions of his ORDINATION by Akiba also are extant. After the persecution, he was a major figure in the newly convened academy at Usha, where he held a position of leadership over the SANHEDRIN.

Meir’s centrality in the formulation of the Mishnah is indicated by the Talmudic statement that anonymous Mishnaic rules represent Meir’s views based upon Akiba’s teaching. While this statement is not literally true (the Mishnah reports numerous anonymous rules that disagree with statements of Meir), it indicates Meir’s importance and the respect in which later authorities held him.

Talmudic stories report a number of tragedies in Meir’s life. His wife Beruryah was the daughter of the martyr Hananiah ben Teradyon. After the Bar Kokhba revolt, her sister was enslaved in a brothel, from which Meir rescued her. Beruryah was known for her erudition and intelligence but reportedly was seduced by one of Meir’s students.

MEIR OF ROTHENBURG \mä-ir . . . ˈrō-tən-bürk\, original name Meir Ben Baruch (b. c. 1215, Worms, Franconia [Germany]—d. May 2, 1293, Ensisheim Fortress, Alsace), great rabbinical authority of 13th-century German JUDAISM and one of the last great *tosaphists* (writers of notes and commentary; see TOSEFTA) of Rashi’s authoritative commentary on the TALMUD.

Meir studied in Germany and later in France, where he witnessed, in 1242 or 1244, the public burning of 24 cart-

loads of Talmudic manuscripts, a disaster that inspired him to write a moving poem. On returning to Germany, he was RABBI in many communities but probably spent the longest time in Rothenburg, where he opened a Talmudic school. He became famous as an authority on rabbinic law and for nearly half a century acted as the supreme court of appeals for Jews of Germany and surrounding countries. In practice he was a strict Talmudist.

In 1286 Emperor Rudolph I attempted to abrogate Jews' political freedom by making them *servi camerae* ("serfs of the treasury"). While attempting to escape with his family and a group of followers, Rabbi Meir was apprehended and imprisoned for the rest of his life in an Alsatian fortress. Although the Jews raised a large ransom, it is generally believed that Meir refused it for fear of encouraging the government to imprison more rabbis for ransom. Fourteen years after his death, upon payment of a large ransom, his body was finally delivered for burial.

Although Meir wrote no single major work, his 1,500 or so extant *RESPONSA* (authoritative answers to questions regarding Jewish law and ritual) are rich with information about the community organization and social customs of medieval German Judaism. He also wrote many erudite Talmudic *tosaphoth* (notes). His main teachings, however, were included in numerous literary compositions by his disciples, such as the famous codifier ASHER BEN JEHIEL. These compositions became classical textbooks of law and ritual for ASHKENAZIC Jews of all subsequent generations.

MEKHILTA ATTRIBUTED TO RABBI ISHMAEL \mə-'kīl-tə... 'ish-mā-əl, -mē-əl\, TANNA commentary on the book of EXODUS, usually dated to c. 300 CE. (Some scholars believe the text dates only as long ago as medieval times, which, if true, would take it well out of the era of the *tannaim*.) *Mekhilta* presents a composite of three kinds of materials concerning the book of Exodus. The first material is composed of ad hoc and episodic exegeses of some passages of SCRIPTURE. The second material is a group of propositional and argumentative essays in exegetical form, in which theological principles are set forth and demonstrated. The third material consists of topical articles, some of them sustained and many of them well crafted, about important subjects of the JUDAISM of the dual TORAH. (Within Jewish tradition, God revealed the Torah to MOSES in two media, writing and memory. The former is recorded in the PENTATEUCH. The latter is subsequently set down in documents from the MISHNAH through the TALMUD of Babylonia—thus, dual Torah.) The document forms a sustained address to the book of Exodus.

MELAMPUS \mə-'lam-pəs\, in Greek mythology, seer who as a child received the understanding of the language of birds after two young snakes, whose lives he had saved, licked his ears when he was asleep. He later helped his brother Bias to marry Pero, daughter of King Neleus of Pylos. According to another tradition, Melampus cured the insanity of the daughters of PROETUS, prince of Tiryns; he and Bias then married two of the daughters. According to Pausanias (2nd century CE), there was a shrine to Melampus at Aegosthena (Megarid) and an annual festival.

MELANCHTHON, PHILIPP \mə-'lanj-thən, *German* mā-'länk-tön\, *original name* Philipp Schwartzerd (b. Feb. 15, 1497, Bretten, Palatinate [Germany]—d. April 19, 1560, probably Wittenberg, Saxony [Germany]), author of the AUGSBURG CONFESSION OF LUTHERANISM (1530), humanist, Reformer, theologian, and educator.

Melanchthon inherited from his parents a deep sense of piety, though he was also a firm believer in ASTROLOGY and demonology. Philipp's first tutor instilled in him a lifelong love of Latin and classical literature, and, at the Pforzheim Latin school, he had his name changed from Schwartzerd to its Greek equivalent, Melanchthon.

While at the universities of Heidelberg and Tübingen, Melanchthon explored scholastic thought, the rhetoric of the Dutch humanist Rudolf Agricola, and the nominalism of the English philosopher WILLIAM OF OCKHAM, in addition to SCRIPTURE and classical works. He then lectured on the classics and soon had six books to his credit, including "Rudiments of the Greek Language" (1518), a grammar that was to go through many editions. In 1518 he accepted an invitation to become the University of Wittenberg's first professor of Greek. Only four days after his arrival, he addressed the university on "The Improvement of Studies," boldly setting forth a humanistic program and calling for a return to classical and Christian sources in order to rejuvenate both theology and society.

Luther and Melanchthon responded to each other enthusiastically, and a deep friendship developed. Melanchthon committed himself wholeheartedly to the new evangelical cause, initiated when Luther circulated his NINETY-FIVE THESES. By the end of 1519 he had already defended scriptural authority against Luther's opponent JOHANN ECK, rejected (before Luther did) TRANSUBSTANTIATION, and made JUSTIFICATION

by faith the keystone of his theology. He had also published seven more small books and had earned a theology degree at Wittenberg.

In spite of the fact that an imperial decree of death to those who supported Luther had been issued, in 1521 Melanchthon made sharp reply to the Sorbonne's condemnation of 104 of Luther's statements with "Against the Furious Decree of the Parisian Theologasters." His "Passion of Christ and Anti-christ," in the same year, utilized woodcuts by Lucas Cranach (1472–1553) in a scathing criticism of the lifestyle of the pope. When Melanchthon hesitated to publish his lectures on Corinthians, Luther stole a copy and published them in 1521; in 1523 he did the

same with Melanchthon's notes on John.

At the Diet of Augsburg (1530) Melanchthon was the leading representative of the REFORMATION, because Luther was in exile at Coburg Castle, and it was he who prepared the Augsburg Confession, which influenced every subsequent major credal statement in PROTESTANTISM. In the Confession he sought to be as inoffensive to ROMAN CATHOLICS

Philipp Melanchthon, engraving by Albrecht Dürer, 1526

By courtesy of the Staatliche Museen Kuperstichkabinett, Berlin

as possible but forcefully stated the evangelical stance. In the ensuing negotiations over adoption of the confessional statement, he seemed to compromise, but the vigor of his *Apology of the Confession of Augsburg* (1531) belied any change. The *Apology and Confession* quickly became authoritative Lutheran statements of faith, as did his "Appendix on the Papacy," which was an addition to the *Schmalckald Articles* of 1536–37. In the "Appendix," Melanchthon refuted historically and theologically any papal primacy by divine right but accepted papal jurisdiction as a human right for the sake of peace, if the Gospel were permitted.

The year after Luther's death an attempt was made to unite the evangelicals and Roman Catholics in the provisional agreements of the Augsburg Interim. Melanchthon refused to accept the Interim until justification by faith was ensured as a fundamental doctrine. Then, for the sake of order and peace, he declared that those principles which did not violate justification by faith might be observed as *adiaphora*, or nonessentials. He allowed the necessity of good works to salvation, but not in the old sense of meriting righteousness; and he accepted the seven SACRAMENTS, but only as rites that had no inherent efficacy to salvation. His later years were occupied with controversies within the evangelical church and fruitless conferences with his Roman Catholic adversaries.

MELCHIZEDEK \mel-'ki-zə-,dek\, also spelled Melchisedech, in the OLD TESTAMENT, figure of importance in biblical tradition because he was both king and priest, was connected with Jerusalem, and was revered by ABRAHAM. He appears as a person only in an interpolated vignette (GENESIS 14:18–20) of the story of Abraham rescuing his kidnapped nephew, Lot, by defeating a coalition of Mesopotamian kings under Chedorlaomer.

In the episode, Melchizedek meets Abraham on his return from battle, gives him bread and wine (which has been interpreted by some Christian scholars as a precursor of the EUCHARIST, so that Melchizedek's name entered the canon of the Roman MASS), and blesses Abraham in the name of "God Most High" (in Hebrew El 'Elyon). In return, Abraham gives him a tithe of the booty.

Melchizedek is an old Canaanite name meaning "My King is [the god] Sedek" or "My King is Righteousness" (the meaning of the similar Hebrew cognate). Salem, of which he is said to be king, is very probably Jerusalem. Psalm 76:2 refers to Salem in a way that implies that it is synonymous with Jerusalem, and the reference in Genesis 14:17 to "the King's Valley" further confirms this identification. The god whom Melchizedek serves as priest is El 'Elyon, again a name of Canaanite origin, probably designating the high god of their pantheon.

For Abraham to recognize the authority and authenticity of a Canaanite priest-king is startling and has no parallel in biblical literature. This story may have reached its final formulation in the days of King David, serving as an apology for David's making Jerusalem his headquarters and setting up the PRIESTHOOD there. Abraham's paying tribute to a Jerusalem priest-king then would anticipate the time when Abraham's descendants would bring tithes to the priests of Jerusalem ministering in the SANCTUARY at the Davidic capital. The story may also relate to the conflict between the LEVITE priests descended from Abraham and the Zadokite priests of Jerusalem, who later changed their allegiance to YAHWEH, the Hebrew god. The Zadokites monopolized the Jerusalem priesthood until forcibly taken away to Babylon, at which time Levite priests asserted their own hegemony;

the Melchizedek episode could reveal the reascendancy of Zadokite power.

The biblical account also poses textual problems. Abraham paying a tithe to Melchizedek is an interpretation, though a likely one, of the original biblical text, in which the matter is ambiguous; it seems incongruous that Abraham gives a tenth of the booty to Melchizedek and then refuses to take any of it for himself (Genesis 14:20–23). Again, some scholars have asserted that it would be unusual for an author of Davidic times to construct a narrative with a Canaanite protagonist.

Psalm 110, in referring to a future MESSIAH of the Davidic line, alludes to the priest-king Melchizedek as a prototype of this messiah. This allusion led the author of the Letter to the Hebrews in the NEW TESTAMENT to translate the name Melchizedek as "king of righteousness" and Salem as "peace," so that Melchizedek is made to foreshadow Christ, stated to be the true king of righteousness and peace. According to the analogy, just as Abraham, the ancestor of the Levites, paid tithes to Melchizedek and was therefore his inferior, so the Melchizedek-like priesthood of Christ is superior to that of the Levites. Furthermore, just as the Old Testament assigns no birth or death date to Melchizedek, so is the priesthood of Christ eternal.

MELCHIZEDEK PRIESTHOOD, in the Mormon church (CHURCH OF JESUS CHRIST OF LATTER-DAY SAINTS), higher of two PRIESTHOODS, concerned with spiritual rather than secular matters. See also MELCHIZEDEK.

MELEAGER \,me-lē-'ā-jər\, in Greek mythology, leader of the Calydonian boar hunt. The *Iliad* relates how Meleager's father, King OENEUS of Calydon, had omitted to sacrifice to ARTEMIS, who sent a wild boar to ravage the country. Meleager collected a band of heroes to drive it away and eventually killed it himself. The Calydonians and the Curetes (neighboring warriors who aided in the hunt) then quarreled over the spoils, and war broke out between them. At one point the Curetes besieged Calydon and were ready to take it when Meleager repulsed them. One tradition relates that Meleager's mother, Althea, had a vision that foretold that Meleager would live as long as a log that was on the fire; she snatched the log from the fire but later caused his death by burning it.

MELPOMENE \mel-'pä-mə-nē\, in GREEK RELIGION, one of nine MUSES, patron of tragedy and lyre playing. In Greek art her attributes were the tragic mask and the club of HERACLES. According to some traditions, the SIRENS were born from the union of Melpomene with the river god Achelous.

MELQART \'mel-kärt\, also spelled Melkart, or Melkarth, Phoenician god, chief deity of Tyre and of two of its colonies, Carthage and Gadir (Cádiz, Spain). He was also called the Tyrian BAAL (Lord). Under the name Malku he was equated with the Babylonian NERGAL, god of the Underworld and death. Melqart was usually depicted as a bearded figure, wearing a kilt and holding an Egyptian ANKH, symbol of life, and, as a symbol of death, a fenestrated ax. His SANCTUARY in Tyre, described by Herodotus (who called the temple that of HERACLES), was the scene of annual winter and spring festivals and is believed to have been the model for Solomon's temple in Jerusalem.

Melqart was probably equated with the sun, and Baal Hammon (Baal Amon), "Lord of the Incense Altar," was perhaps his title in that capacity. Baal Hammon was also

the name of the chief god of Carthage, consort of the goddess TANIT.

MEMNON \ˈmem-nən\, in Greek mythology, son of TITHONUS (son of LAOMEDON, king of Troy) and EOS and king of the Ethiopians. He was a hero, who, after the death of the Trojan warrior HECTOR, went to assist his uncle PRIAM, the last king of Troy, against the Greeks. He performed prodigies of valor but was slain by the Greek hero ACHILLES. According to tradition, ZEUS was moved by the tears of Eos and bestowed immortality upon Memnon. His companions were changed into birds, called Memnonides, that came every year to fight and lament over his grave. The combat between Achilles and Memnon was often represented by Greek artists, and the story of Memnon was the subject of the lost *Aethiopsis* of Arctinus of Miletus (fl. c. 650 BCE).

In Egypt the name of Memnon was connected with the colossal (70-foot) stone statues of Amenhotep III near Thebes, two of which still remain. The more northerly of these was partly destroyed by an earthquake in 27 BCE, resulting in a curious phenomenon. Every morning, when the rays of the rising sun touched the statue, it gave forth musical sounds like the twang of a harp string. This was supposed to be the voice of Memnon responding to the greeting of his mother, Eos (goddess of dawn). After the restoration of the statue by the Roman emperor Septimius Severus (170 CE) the sounds ceased; they were attributed to the passage of air through the pores of the stone, caused chiefly by the change of temperature at sunrise.

MENAHM \ˈme-nə-ˌhem, me-ˈnä-kəm\, also spelled Manahem (fl. mid-8th century BCE), king of Israel whose 10-year reign was distinguished for its cruelty. Events of his rule are related in 2 Kings 15:14–22. About 746 BCE, Shallum ben Jabesh assassinated Zechariah, king of Israel, and established his throne in the region of Samaria. One month later Menahem advanced from Tirzah, the old royal city, against Shallum and killed him. Menahem assumed power but was not accepted by the district around the city of Tappuah; in revenge he slaughtered the city's inhabitants.

Toward the end of Menahem's reign, the Assyrian king Tiglath-pileser III (identified in the BIBLE as King Pul) advanced against Israel; he was deterred only by a large bribe, which Menahem extorted from his wealthy subjects. Israel remained subjugated to Assyria under Menahem's son and successor, Pekahiah, who was forced to continue tribute.

MENAT \ˈme-nät\, in EGYPTIAN RELIGION, protective AMULET, usually hung at the back of the neck as a counterpoise to the necklace worn in the front. Frequently made of glazed ware and often found buried with the dead, it was a symbol of divine protection. Among women it fostered fruitfulness and health, while for men it signified virility.

MENCIUS \ˈmen-chē-əs, -chəs\ (Latin), Chinese (Wade-Giles) Meng-tzu \ˈməŋ-dzə\, or (Pinyin) Mengzi, original name (Wade-Giles) Meng K'o \-ˈkə\, posthumous name Tsou-kung \ˈdzō-ˈgūŋ\, or Duke of Tsou (b. c. 372 BCE, ancient state of Tsou, China—d. c. 289, China), early Chinese philosopher whose development of orthodox CONFUCIANISM earned him the title “second sage.”

Of noble origin, the Meng family settled in the state of Tsou, a minor state in the present province of Shantung. Tsou and Lu (the state of Confucius' origin) were adjacent states. Like CONFUCIUS, Mencius was only three when he lost his father. Mencius' mother paid special attention to

the upbringing of her young son. A traditional story tells of her moving their home near a school, so that the boy should have the right kind of environmental influence, and of her encouraging her son to persevere in his studies. In China she has been for ages upheld as the model mother.

Mencius had for his mentor a pupil of TZU-SSU, who was himself the grandson of Confucius. In due time Mencius became a teacher himself and for a brief period served as an official in the state of Ch'i. He spent much time traveling, offering his advice and counsel to the various princes on government by JEN (“humaneness”).

The Chou dynasty (c. 1111–256/255 BCE) was founded on the feudalistic principle of a sociopolitical hierarchy, with clearly defined prerogatives and obligations between those of high and low status. As time went on, however, ambition and intrigue resulted in usurpations and impositions, bringing on a condition of political and moral disorder. The age in which Mencius lived is known in Chinese history as the period of Warring States (475–221 BCE). Under such conditions, Mencius' lectures to the princes on virtuous personal conduct and humane government fell on deaf ears; yet he continued to speak his mind.

According to Mencius, the ruler was to provide for the welfare of the people in two respects: material conditions for their livelihood and moral and educational guidance for their edification. Mencius had worked out a definite program, recorded in the book of *Mencius*, to attain economic sufficiency for the common people. He also advocated light taxes, free trade, conservation of natural resources, welfare measures for the old and disadvantaged, and more nearly equal sharing of wealth. It was his fundamental belief that “only when the people had a steady livelihood would they have a steady heart.”

Mencius also emphatically reminded the princes of the responsibility that came to them with T'EN MING (the mandate of heaven) to govern for the good of the people: “The people are the most important element in a nation; the spirits of the land and grain come next; the sovereign counts for the least.” He also quoted from the SHU-CHING (“Classic of History”), one of the FIVE CLASSICS of Confucianism, the saying “Heaven sees as the people see; Heaven hears as the people hear.” The outspoken sympathies of Mencius made him a champion of the common people and an advocate of democratic principles in government.

Mencius' sojourn covered several states, but nowhere did he find a prince willing to put his lofty principles of government into practice. His sense of disappointment grew with the years and finally brought him back to his native state of Tsou, where he devoted the remaining years of his life to the instruction of his pupils. The work *Mencius* is a collection of the records of the doings and sayings of the master by his disciples.

Mencius

By courtesy of the National Palace Museum, Taipei, Taiwan, Republic of China

Confucius taught the concept of *jen* as the basic virtue of humanity. Mencius made the original goodness of human nature the keynote to his system. That the four beginnings, or “four principles” (*ssu-tuan*)—the feeling of commiseration, the feeling of shame, the feeling of courtesy, and the feeling of right and wrong—are all inborn in humans was a self-evident truth to Mencius; and the “four beginnings,” when properly cultivated, will develop into the four cardinal virtues of *jen*, righteousness, decorum, and wisdom. This doctrine of the goodness of human nature on the part of Mencius has become an enduring topic for debate among the Chinese thinkers throughout the ages.

Mencius went further and taught that humans possess intuitive knowledge and intuitive ability and that personal cultivation consisted in developing one’s mind. Mencius said: “He who has developed his mind to the utmost, knows his nature. Knowing his nature, he knows Heaven.” Hence, all people could become like the great sage-kings YAO and SHUN, the legendary heroes of the archaic past.

While Mencius has always been regarded as a major philosopher, special importance was attributed to him and his work by the Neo-Confucianists of the Sung dynasty (960–1279 CE). For the last 1,000 years, Mencius has been revered among the Chinese people as the cofounder of Confucianism, second only to Confucius himself.

MENCIUS \ˈmen-chē-əs, -chəs\ (Latin), *Chinese* (Wade-Giles) Meng-tzu \ˈmən-dzə\ (Pinyin) Mengzi, Chinese Confucian text, named for its author, that earned for the 4th-century-BCE philosopher Mencius the title *ya-sheng* (“second sage”). When CHU HSI published the *Mencius* together with three other Confucian texts (1190), he created the classic known as *Ssu-shu* (“FOUR BOOKS”).

The book concerns government and maintains that the welfare of the common people comes before every other consideration. When a ruler no longer practices benevolence (JEN) and righteousness (*i*), the mandate of heaven (T’IEN MING) has been withdrawn, and he should be removed. Mencius also declared filial piety (HSIAO) to be the foundation stone of Chinese society. For him, the greatest act of *hsiao* was to honor parents; the greatest lack of *hsiao* was to have no offspring (so that ancestral rites are not perpetuated).

Mencius advances the doctrine that because humans are endowed by heaven, their nature tends toward good as naturally as water flows downhill. As proof, Mencius cited the natural love of children for their parents, the universal sense of right and wrong, and the spontaneous alarm one experiences when one sees a small child in danger. This doctrine of natural human goodness was attacked in the 3rd century BCE by HSÜN-TZU. Mencius’s position, however, has long been accepted as an orthodox interpretation of CONFUCIANISM.

MENDELSSOHN, MOSES \ˈmen-dəl-sən, *German* -zōn\ (b. Sept. 26, 1729, Dessau, Anhalt [Germany]—d. Jan. 4, 1786, Berlin, Prussia), German-Jewish philosopher, critic of German literature, and BIBLE translator and commentator who greatly contributed to the efforts of Jews to assimilate to the German bourgeoisie. He was the grandfather of the composer Felix Mendelssohn.

Mendelssohn endeavored to combine JUDAISM with the RATIONALISM of the Enlightenment. He was one of the initiators of the HASKALAH or “Jewish Enlightenment.” Through his advocacy of religious toleration and through the prestige of his own intellectual accomplishments, Men-

delssohn worked to emancipate German Jews from prevailing social, cultural, political, and economic restrictions.

Born Moses ben Menachem to an impoverished TORAH scribe, Menachem Mendel Dessau, he took the name Mendelssohn from the Hebrew *ben Mendel* (“the son of Mendel”). He studied the thought of John Locke, Gottfried von Leibniz, and Christian von Wolff in Berlin, and was versed in Hebrew, Latin, Greek, English, French, and Italian. His own works on aesthetics influenced the thought of Schiller, Goethe, Kant, and the playwright Lessing.

Mendelssohn published his first two books in 1755: *Philosophische Gespräche* (“Philosophical Speeches”) and *Briefe über die Empfindungen* (“Letters on the Emotions”). In *Briefe* and in his later *Philosophische Schriften* (1761; “Philosophical Writings”) he began his formulation of a new psychological theory that stressed the autonomy of aesthetics, logic, and ethics relative to each other. Mendelssohn’s PHILOSOPHY OF RELIGION continued the classical rationalist tradition of the Enlightenment, emphasizing reason as the medium through which knowledge is fulfilled, and stressing that humanity is endowed with certain innate knowledge: its own goodness, the immortality of the soul, and the existence of God. He held that eternal truths are differentiated from historical or temporal truths: the former are self-evident, the latter require the verification of sense-perception. Mendelssohn’s main philosophical work, *Phädon, oder über die Unsterblichkeit der Seele* (1767; “Phaedo, or on the Immortality of the Soul”), carries forth his argument for the immortality of the soul. Following Leibniz, Mendelssohn says that the soul by nature is imperishable, though its continued consciousness is not innate but granted by the goodness and justice of God. God’s existence, Mendelssohn believed, was proven by a modified version of the ontological argument: humans are born knowing that God exists, knowledge that cannot come through sense perception or experience. Also, the concept of perfection necessitates existence, since a thing that does not exist is by definition incomplete and imperfect.

In 1770 Mendelssohn reluctantly engaged in a public dispute with the Swiss theologian J.C. Lavater over the right of Judaism to exist independently as a religion alongside CHRISTIANITY. Mendelssohn was tolerant of Christianity and appreciated its moral value, though he believed that it was based on irrational precepts contrary to natural law, which Judaism was not. Later, after working on a translation of the Psalms in 1774 and a German version of the PENTATEUCH written in Hebrew characters (1780–83), he embarked on a controversy regarding the separation of CHURCH AND STATE. In his *Jerusalem, oder über religiöse Macht und Judentum* (1783; “Jerusalem, or on Religious Power and Judaism”), he argued that both church and state seek the same end, a good and just society. Only the state, however, must retain the powers of force in order to control people’s actions; the church must care for people’s souls by attending to their relationship with God.

MENDICANT, member of any of several ROMAN CATHOLIC religious orders who assumes a vow of poverty and supports himself or herself by work and charitable contributions. The mendicant orders surviving today are the DOMINICANS, FRANCISCANS, AUGUSTINIANS (Augustinian hermits), CARMELITES, Trinitarians, Mercedarians, Servites, Hospitallers of St. John of God, and the Teutonic Order.

ST. DOMINIC founded the Dominican order in 1216, and ST. FRANCIS OF ASSISI founded the Franciscan order in 1210. Within a generation of their deaths, their institutes had

spread throughout Europe and into Asia. In the great cities of western Europe friaries were established, and in the universities theological chairs were held by Dominicans and Franciscans. Later in the 13th century they were joined by the Carmelites, Augustinian Hermits, and Servites.

Poverty was St. Francis' root idea, and there is little doubt that it was borrowed from him by St. Dominic and the other mendicant founders. St. Francis intended his FRIARS to live by the work of their hands and to have recourse to alms only when they could not earn their livelihood. But, as the friars soon came to be devoted to spiritual ministrations and as the communities grew larger, it became increasingly difficult for them to support themselves by personal work; and so begging came to play a greater role.

Francis' idea was that his friars should have no lands, no funded property, and no fixed sources of income. This ideal proved unworkable in practice. In the Dominican order and the others that started as mendicant it has been mitigated or even abrogated. Among the Franciscans it was the occasion of endless strife and was kept alive only by dint of successive reforms and fresh starts, each successful for a time but ultimately doomed. The Capuchins, a Franciscan offshoot, made the most permanently successful effort to maintain St. Francis' ideal; but even among them mitigations have had to be admitted.

MENELAUS \ˈme-nə-ˈlā-əs\, in Greek mythology, king of Sparta and younger son of ATREUS, king of Mycenae; the abduction of his wife, HELEN, led to the Trojan War. During the war Menelaus served under his elder brother AGAMEMNON. After the fall of Troy, Menelaus recovered Helen and brought her home. Menelaus was a prominent figure in the *Iliad* and the *Odyssey*; in the latter text he was promised a place in ELYSIUM after his death because he was married to a daughter of ZEUS.

MĒNESS \ˈme-nes\ (Latvian), *Lithuanian* Mėnuo \ˈmʲān-wò\, in BALTIC RELIGION, the moon, whose monthly renewal of strength is imparted to all growing things. The "young," or "new," moon, sometimes called Dievaitis (Lithuanian: "Little God," or "Prince"), is especially receptive to human prayers and is honored by farmers.

MENNONITE, member of a Protestant church rising out of the ANABAPTISTS and named for MENNO SIMONSZ., a Dutch priest.

Among the various Anabaptist groups, the Mennonites trace their origin particularly to the so-called Swiss Brethren, who formed their first congregation on Jan. 21, 1525. Persecution by the state church soon scattered the Swiss Brethren across Europe; their doctrinal views found quick response among many people. Menno Simonsz., a Dutch priest who joined the Anabaptist movement in 1536, gathered the scattered Anabaptists of northern Europe into congregations that were soon called by his name.

Mennonites found political freedom first in the Netherlands and northern Poland. By 1700 there were 160,000 baptized members in the Mennonite churches of the Netherlands, but membership declined to about 15,300 in 1837. Persecutions that continued in Switzerland into the 18th century drove many Mennonites to southern Germany, Alsace, the Netherlands, and the United States. A major SCHISM occurred (1693–97) when the Swiss Mennonite bishop left the Mennonites to form the AMISH Church in an attempt to preserve biblical discipline among the members. From the 17th to the 20th centuries, most Mennonites in

Switzerland, southern Germany, and Alsace lived in semi-closed rural communities with a simple agrarian economy. Religiously, they were influenced by PIETISM. Starting in 1663, Mennonites immigrated to North America.

In 1788 the first of a long stream of Mennonites left northern Poland to settle in the Ukraine, where they acquired land and escaped military conscription. By 1835 about 1,600 families had settled in 72 villages. In 1860 a small group within the Mennonite community in Russia underwent a religious awakening and demanded stricter discipline for church members. They founded the Mennonite Brethren Church, some of whose members joined an exodus of Mennonites from Russia in the 1870s that was provoked by the loss of their exemption from military service. Many of these immigrants settled in the Middle West of the United States and in Manitoba, Can. By World War I the Mennonite settlements in Russia included more than 120,000 members. All Mennonite communities in Russia were either destroyed during World War II or dissolved by the Soviets soon after 1945. Mennonites today live scattered among the Russian population.

Until the late 19th century, most Mennonites in North America lived in rural communities and engaged in farming. They retained their German language, partly as a religious symbol and partly as insulation against their environment. In 1783 Mennonites in Lancaster county, Pa., were accused of treason for feeding destitute British soldiers. During the American Civil War, rather than fight, some hired substitutes or paid an exemption fee of \$300 in the North and \$500 in the South. Those who fought in the armed forces were usually excommunicated for doing so.

After 1850 the transition from the German language to English and the adoption of such institutions and practices as Sunday schools and evangelistic services led to a number of divisions among the Mennonites; some branches were also imported from Europe. The largest single body is the (Old) Mennonite Church; following are the General Conference Mennonite Church, the Mennonite Brethren, and the Old Order Amish. Most extreme are the Hutterian Brethren, who still live communally and practice community of goods; this relatively small group is concentrated in the upper Great Plains region of North America.

Mennonites believe in the doctrine of the TRINITY, affirm the SCRIPTURES (especially the NEW TESTAMENT) as their final authority for faith and life, and appeal to the pattern of the early church as their congregational model. They stress BAPTISM on CONFESSION OF FAITH and a symbolic understanding of the Lord's Supper. Some practice foot washing, a practice based on an act of Jesus with his disciples. The doctrines of nonconformity to the world, nonswearing of OATHS, nonresistance in lieu of military service, and church discipline are generally affirmed but not practiced universally. Mennonite worship services are sermon-centered. A simple liturgy surrounds the Gospel proclamation. In the late 20th century, however, there were many signs of experiment in worship similar to those found in other denominations.

Most Mennonite congregations are joined together into numerous conferences, seven of which are in North America, though some conservative Mennonites do not form conferences. Since 1925 there has been a Mennonite World Conference that meets every five years for fellowship, study, and inspiration but does not make decisions binding on its member bodies.

MENNO SIMONSZ. \ˈme-nō-ˈsī-mənz, -ˈsē-móns\, in full Menno Simonszoon, Simonsz. also spelled Simons (b.

MENORAH

1496, Witmarsum, Friesland—d. Jan. 31, 1561, near Lübeck, Holstein), Dutch priest, an early leader of the peaceful wing of Dutch Anabaptism, whose followers formed the MENNONITE church.

Born into a peasant family, he was enrolled in a monastic school, possibly at the FRANCISCAN monastery in Bolsward, to prepare for the PRIESTHOOD. In 1524 he was ordained and assigned to the PARISH at Pingjum. In 1531 he became the priest in his home parish at Witmarsum.

During his first year as priest Menno began to question the real presence of Christ in the bread and wine of the EUCHARIST. Antisacramental ideas, derived from the humanism of ERASMUS and the ethical concerns of the BRETHREN OF THE COMMON LIFE, were prevalent in the Netherlands at this time. These doubts led Menno to read the BIBLE and the works of MARTIN LUTHER. He agreed with Luther and the Swiss reformer HULDRYCH ZWINGLI that biblical authority should be primary in the life of the believer and in the church.

Menno's readings of the NEW TESTAMENT led him to believe that only persons who had acknowledged JESUS and had counted the cost of following him could be eligible for membership in the church and baptized. The GRACE of Christ was sufficient for children until they reached the age of accountability and made a conscious choice. The conversion experience became central to all of Menno's life and theology.

On April 7, 1535, the Olde Klooster near Bolsward, which had been occupied by revolutionary ANABAPTISTS, fell to the state militia. Members of Menno's congregation and Peter Simons, who may have been his brother, were killed. This prompted Menno to preach against the errors of the revolutionaries. In doing so he articulated what he believed to be the true nature of a believers' church: pure doctrine, scriptural use of SACRAMENTS, ethical obedience, love of neighbor, open witness to the faith, and a willingness to suffer. This outspoken ministry jeopardized his safety, and in January 1536 he went into hiding.

In late 1536 or early 1537 he received believer's BAPTISM, was called to lead the peaceful Anabaptist group founded in 1534 by Obbe Philips, and was ordained by Obbe. In 1542 the Holy Roman emperor Charles V issued an edict against him, promising a reward of 100 guilders for his arrest.

From 1543 to 1544 Menno worked in East Friesland. He spent the next two years in the Rhineland, after which he traveled from his new base in Holstein until his death in 1561. At Holstein he wrote extensively and established a

Menno Simonsz., engraving by Christopher van Sichem, 1605–08

printing press to circulate Anabaptist writings. He was not the founder of the Mennonite Church nor the most articulate spokesman of early Anabaptist theology. His greatness lay rather in the leadership he gave to northern Anabaptism during its first generation.

MENORAH \mə-'nōr-ə\, in JUDAISM, multibranch candelabrum used in rites during the festival of HANUKKAH. Its essential feature has always been eight receptacles for oil or candles (one lit the first day, two the second, etc.) and a further receptacle for the *sham-mash* ("servant") light, which is set apart and used for kindling the other lights.

This menorah is an imitation of the seven-branched golden candelabrum of the TABERNACLE, which signified, among other things, the seven days of creation. The cup atop the central shaft, which is somewhat elevated to signify the SABBATH, was flanked by three lights on each side. The seven-branched menorah is mentioned in the TALMUD, and it has for centuries been used in art as an iconographic symbol signifying Judaism.

MEN-SHEN \'mən-'shən\, *Pinyin* Menshen, in Chinese mythology, two door gods whose images are posted on the front door of homes to protect against evil spirits. Tradition reports that two T'ang dynasty generals stood guard against evil spirits during a serious illness of T'ai-tsung (reigned 626–649 CE).

Their presence was so effective that the emperor ordered their pictures to be posted on the imperial gates. At a later date another Menshen was added and given custody of the rear door. During the New Year celebration, the images are refurbished in brilliant colors.

MENSTRUATION, periodic discharge from the vagina of blood, secretions, and disintegrating tissue lining the uterus, a process that takes place if the ovum (egg) released by the ovary has not been fertilized. It has been the focus of ritual prohibitions and mythic systems that focus on distinctions between the genders.

In parts of New Guinea and Melanesia, male-female relationships were polarized. In New Guinea, men's cult secrecy, ritualized male homosexuality, men's initiation rituals, and the celebration of warfare were accompanied by a belief in dangers emanating from women's bodies. These peoples were preoccupied with substances that are agents of reproduction (*e.g.*, menstrual blood, semen, vaginal fluids), all being regarded as sources of power and danger. In the Highlands this belief system was associated with

ritualized nose- or penis-bleeding, ostensibly in imitation of menstruation, and there were myths of an ancient female power that fell into the hands of men.

Among certain Native American cultures, a girl who had her first menstruation was secluded in a menstrual lodge set apart from the village. Her hair was bound up in rolls, and she was allowed to touch it only with a small comb. Her face was painted red or yellow, and she wore undecorated clothing. She was not allowed to drink directly from a well but had to use a drinking tube, and she cleansed herself after the flow in a sweathouse. After one or several months, she finished her seclusion with prayers. Then she returned to the village a full-grown woman.

MER \ˈmer\, among the Cheremis and Udmurts (also called Votyaks), district where people would gather periodically to hold religious festivals and perform sacrifices.

MERCURY \ˈmər-kyə-rē\, *Latin* Mercurius \mər-ˈkyūr-ē-əs\, in ROMAN RELIGION, god of merchandise and merchants, commonly identified with the Greek HERMES, the fleet-footed messenger of the gods. His temple on the Aventine Hill in Rome was dedicated in 495 BCE. There he was associated with the goddess Maia, who became identified as his mother through her association with the Greek Maia, mother of Hermes. Both Mercury and Maia were honored in a festival on May 15, the dedication day of Mercury's temple on the Aventine. Mercury is sometimes represented as holding a purse, symbolic of his business functions. Usually artists borrow the attributes of Hermes and portray him wearing winged sandals or a winged cap and carrying a CADUCEUS (staff).

MERKABAH MYSTICISM AND HEKHALOT WRITINGS \,mer-kä-ˈvā . . . ,he-kä-ˈlōt\, Jewish mystical tradition of the early centuries CE that claims to afford knowledge of the hidden world of heaven, the GARDEN OF EDEN, GEHENNA, ANGELS and spirits, and the fate of the souls in the hidden world. Merkabah also provides revelations of the Throne (*Merkabah*) of God's Glory.

Focused on Ezekiel 1, with its vision of God on the throne of his chariot, Merkabah mysticism was taught only to sages. Hekhalot literature continues the Merkabah tradition. Its texts are *Kehkhalot Rabbati*, attributed to Rabbi Ishmael; *Heikhalot Zutrat*, attributed to Rabbi Akiba; and *Sefer Keihkalot*, published as the *Third Book of Enoch* or the *Hebrew Enoch*. These documents provide descriptions of the world of the Chariot, the ecstatic ascent to that world, and the techniques used by mystics to make the ascent. One who wishes to ascend must first adopt an ascetic character. To achieve the mystic state, an individual self-induces hypnosis and recites ecstatic hymns from *Kehkhalot Rabbati*. Among them are songs concerning the holy creatures who bear the throne of God; the songs conclude with the sanctification language of Isaiah 6:3. In this

mystical doctrine, God is holy king, residing within walls of majesty, fear, and awe in palaces of silence; his traits are sovereignty, majesty, and holiness—a God who is far off and removed from human comprehension.

MERTON, THOMAS \ˈmɔrt-ən\, *original name of* Father M. Louis (b. Jan. 31, 1915, Prades, France—d. Dec. 10, 1968, Bangkok, Thailand), American ROMAN CATHOLIC monk, poet, and writer on spiritual and social themes.

Merton received his early education in England and France. After a year at the University of Cambridge, he entered Columbia University in New York City, where he earned degrees in 1938 and 1939. After teaching English at Columbia (1938–39) and at St. Bonaventure University (1939–41) near Olean, N.Y., he entered the Trappist Abbey of Gethsemani near Louisville, Ky. He was ordained in 1949. Merton's first published works were collections of poems. The publication in 1948 of his spiritual autobiography, *Seven Storey Mountain*, earned him international fame. Although his early works were strictly spiritual, in the early 1960s his writing tended toward social criticism. His later works reveal an unusually deep insight into Asian philosophy and MYSTICISM.

MERU, MOUNT \ˈmā-rü\, in Hindu mythology, golden mountain that stands in the center of the universe and is the axis of the world and the abode of the gods. Its foothills are the Himalayas. Mount Meru reaches down below the ground as far as it extends into the heavens. All of the principal deities have their own celestial kingdoms on or near it, where their devotees reside with them after death while awaiting their next REINCARNATION.

MESHED, also spelled Mashhad, city, northeastern Iran, lying at an elevation of 3,231 feet in the valley of the Kashaf River. It is an important political and religious center, visited annually by more than 100,000 Islamic pilgrims. Meshed serves a rich agricultural region and is the center of the northern wool trade, manufacturing carpets for export.

The city is an offshoot of the ancient city of Tūs and owes its historical importance to the burial place and shrine of the CALIPH Hārūn ar-Rashīd (d. AD 809) and that of 'Alī ar-Riḍā (d. 818), the eighth imam of the Twelver Shi'ite sect of ISLAM. Meshed was damaged in a Mongol attack in 1220, but the sacred buildings were partially spared. Shāh Rokh, the son of Timur (Tamerlane), beautified Meshed, and his wife erected a mosque that is one of the finest architectural achievements of Iran. In the 16th and 17th centuries, Meshed was sacked by Turkmen and Uzbeks. It was restored by 'Abbās I (reigned 1588–1629), who encouraged the pilgrimage. Nāder Shāh (reigned 1736–47) made it his capital. After Nāder's death, Meshed became the capital of a state controlled by his grandson.

MESOPOTAMIAN RELIGIONS

R ELIGIOUS

BELIEFS and practices included in the category Mesopotamian are those of the Sumerians and Akkadians, who inhabited ancient Mesopotamia (modern Iraq) in the millennia before the Christian era. Their beliefs and practices form a single stream of tradition. Sumerian in origin, the tradition was added to and subtly modified by the Akkadians (Semites who emigrated into Mesopotamia from the west at the end of the 4th millennium BCE), whose own beliefs were in large measure assimilated to and integrated with those of their new environment.

BACKGROUND

Human occupation of Mesopotamia—"the land between the rivers" (*i.e.*, the Tigris and the Euphrates)—seems to reach back farthest in time in the north (Assyria), where the earliest settlers built their small villages some time about 6000 BCE. In the south (the area that was later called Sumer) the earliest settlements appear to have been founded about 5000 BCE. An early division of the country into small, independent city-states that formed a loosely organized league was followed by a unification by force under King Lugalzagesi (*c.* 2375–2350 BCE) of Uruk just before the Akkadian period. The unification was maintained by Lugalzagesi's successors, the kings of Akkad, who built it into an empire, and—after a brief interruption by Gutian invaders—by Utuhegal (*c.* 2116–*c.* 2110) of Uruk and the rulers of the 3rd dynasty of Ur (*c.* 2112–*c.* 2004 BCE). When Ur fell, about 2000 BCE, the country again divided into smaller units, with the cities Isin and Larsa vying for hegemony. Eventually Babylon established a lasting national state in the south, while ASHUR dominated a similar rival state, Assyria, in the north. From the middle of the 1st millennium onward, Assyria built an empire comprising, for a short time, all of the ancient Middle East. This political and administrative achievement remained essentially intact under the subsequent Neo-Babylonian and Persian kings down to Alexander the Great's conquest of the region (331 BCE).

MYTHS

The genre of myths in ancient Mesopotamian literature centers on praise that recounts and celebrates great deeds. The doers of the deeds (creative or otherwise

The demon Huwawa (Humbaba): the Gilgamesh epic relates how Gilgamesh and Enkidu cut off Huwawa's head; terra-cotta, 20th–16th century BCE, in the Louvre, Paris

Erich Lessing—Art Resource

decisive acts), and thus the subjects of the praise, are the gods. An example of such myths is "Dumuzi's Death," which relates how Dumuzi (the Akkadian TAMMUZ, "Producer of Sound Offspring"), the power in the fertility of spring, dreamed of his own death at the hands of a group of deputies from the netherworld and how he tried to hide himself but was betrayed by his friend after his sister had resisted all attempts to make her reveal where he was.

A similar myth, "Inanna's Descent," relates how the goddess INANNA ("Lady of the Date Clusters") set her heart on ruling the netherworld and tried to depose her older sister, the queen of the netherworld, ERESHKIGAL ("Lady of the Greater Earth"). Her attempt failed, and she was killed and changed into a piece of rotting meat in the netherworld. Enki (the Akkadian, EA, "Lord of Sweet Waters in the Earth") brought Inanna back to life, but she was released only on condition that she furnish a substitute to take her place. On her return, finding her young husband Dumuzi feasting instead of mourning for her, Inanna was seized with jealousy and designated him as that substitute. Dumuzi tried to flee the posse of deputies who had accompanied Inanna, and with the help of the sun god Utu, who changed Dumuzi's shape, he managed to escape, was recaptured, escaped again, and so on, until he was finally taken to the netherworld. His sister Geshtinanna then went in search of him. The myth ends with Inanna decreeing that Dumuzi and his sister could alternate as her substitute, each of them spending half a year in the netherworld, the other half above with the living.

A third myth built over the motif of journeying to the netherworld is "The Engendering of the Moongod and his Brothers," which tells how ENLIL ("Lord Wind"), came upon Ninlil (the goddess of grain) as she was bathing in a canal. He lay with her and thus engendered the moon god Suen. For this offense Enlil was banished from Nippur and took the road to the netherworld. Ninlil, carrying his child, followed him. On the way Enlil took the shape first of the Nippur gatekeeper, then of the man of the river of the netherworld, and lastly of the ferryman of the river of the netherworld. In each such disguise Enlil persuaded Ninlil to let him lie with her to engender a son who might take Suen's place in the netherworld and leave him free for the world above. Thus, three further deities, all Underworld figures, were engendered: Meslamtaea ("He Who Comes Out of the Meslam Temple"), NINAZU ("Water Sprinkler" [?]), and Ennugi ("The God Who Returns Not").

In the myth "Enki and Ninhursag," Enki lay with NINHURSAG ("Lady of the Stony Ground") on the island of Dilmun (modern Bahrain), the territory which had been allotted to them. There Enki provided water for the future city of Dilmun, lay with Ninhursag, and left her. She gave birth to a daughter, Ninshar ("Lady Herb"), on whom Enki in turn engendered the spider Uttu, goddess of spinning and weaving. Ninhursag warned Uttu against Enki, but he, proffering marriage gifts, persuaded her to open the door to him. After Enki had abandoned Uttu, Ninhursag found her and removed Enki's semen from her body. From the semen seven plants sprouted forth. These plants Enki later saw and ate and thereby became pregnant from his own semen. Unable as a male to give birth, he fell fatally ill, until Ninhursag relented and—in her role as a birth goddess—placed him in her vulva and helped him to give birth to seven daughters, whom Enki then married off to various gods.

The creation of humans is also treated in the myths. The myth "Enki and Ninmah" relates how the gods originally had to toil for their food, dig irrigation canals, and perform other menial tasks until, in their distress, they complained to Enki's mother, Nammu, who took the complaints to Enki. Enki took the engendering clay of the Apsu, and, with the help of the womb goddesses and eight midwife goddesses led by Ninmah (another name for Ninhursag), he had his mother become pregnant with and give birth to humans so that they could relieve the gods of their toil. At the celebration of the birth, however, Enki and Ninmah both drank too much beer and began to quarrel. Ninmah boasted that she could impair human shape at will, and Enki countered that he could temper even the worst that she might do. So she made seven freaks, for each of which Enki found a place in society and a living. He then challenged her to alleviate the mischief he could

do, but the creature he fashioned—a prematurely aborted fetus—was beyond help. The moral drawn by Enki was that both male and female contribute to the birth of a happy child. The aborted fetus lacked the contribution of the birth goddess in the womb.

Another myth, called from its opening word Lugal-e (“O King”), concerns Enlil’s son, the rain god NINURTA. This myth begins with a description of the young king, Ninurta, sitting at home in Nippur when, through his general, reports reach him of a new power that has arisen in the mountains to challenge him—*i.e.*, Azag, son of ANU (“Sky”) and Ki (“Earth”), who has been chosen king by the plants and is raiding the cities with his warriors, the stones. Ninurta sets out in his boat to give battle, and a fierce engagement ensues, in which Azag is killed. Afterward Ninurta reorganizes his newly won territory, builds a stone barrier—the near mountain ranges or foothills (the *hursag*)—and gathers the waters that used to go up into the mountains and directs them into the Tigris to flood it and provide plentiful irrigation water. The *hursag* he presents as a gift to his mother, who has come to visit him, naming her Ninhursag (“Lady of the *hursag*”). Lastly he sits in judgment on the stones who had formed the Azag’s army. Some of them, who had shown special ill will toward him, he curses, and others he trusts and gives high office in his administration. These judgments give the stones their present characteristics so that, for example, the flint is condemned to break before the much softer horn, as it indeed does when the horn is pressed against it to flake it. Noteworthy also is the way in which order in the universe (*i.e.*, the yearly flood and other seasonal events) is seen—consonantly with Ninurta’s role as “king” and leader in war—as relating to a reorganization of conquered territories.

AKKADIAN LITERATURE

The first centuries of the 2nd millennium BCE witnessed the demise of Sumerian as a spoken language and its replacement by Akkadian, which was not without its own literary tradition. Writing, to judge from Akkadian orthographic peculiarities, was very early borrowed from the Sumerians. By Old Babylonian times (*c.* 19th century BCE), the literature in Akkadian, partly under the influence of Sumerian models and Sumerian literary themes, had developed myths and epics of its own, among them the superb Old Babylonian GILGAMESH epic (dealing with the problem of death) as well as hymns, disputation texts (evaluations of elements of the cosmos and society), penitential psalms, and other genres. The quick rise of Sargon, the founder of the dynasty of Akkad (*c.* 2334–*c.* 2154 BCE), from obscurity to fame and his victory over Lugalzagesi of Uruk form the theme of several epic tales. The sudden eclipse of the Akkadian empire long after Naram-Sin, which was attributed to that ruler’s pride and the gods’ retaliation, is the theme of “The Fall of Akkad.”

Other Akkadian epics include the ETANA EPIC, which tells how Etana, the first king, was carried up to heaven on the back of an eagle to obtain the plant of birth so that his son could be born. Also important are the epic tales about Sargon of Akkad, one of which, the birth legend, tells of his abandonment in a casket on the river by his mother (*compare* MOSES) and his discovery by an orchardman, who raised him as his son. Naram-Sin is the central figure in another tale dealing with that king’s pride and also relating the destructive invasions by barbarous foes.

COSMOGONY AND COSMOLOGY

The Sumerian myths have relatively little to say about creation. A story about Gilgamesh refers in its introductory lines to the times “after heaven had been moved away from earth, after earth had been separated from heaven.” The same notion that heaven and earth were once close together occurs also in a bilingual Sumerian-Akkadian text from Ashur about the creation of humans. The actual act of separating them is credited to the storm

Pendant with archaic signs and the emblem of the goddess Inanna; in the Louvre, Paris

Marduk, the chief god of Babylon, c. 1500 BCE
Corbis—Bettmann

god Enlil of Nippur in the introduction to a third tale that deals with the creation of the first hoe.

A fully elaborated cosmogonic and cosmological myth does not actually appear until Old Babylonian times. The *Enuma elish* tells of a beginning when all was a watery CHAOS and there was nothing but the sea, TIAMAT, and the sweet waters under ground, Apsu, who mingled their waters together. In their midst the gods were born. The first pair, LAHMU AND LAHAMU, represented the powers in silt; the next, ANSHAR AND KISHAR, those in the horizon. Anshar and Kishar engendered the god of heaven, Anu, and he in turn the god of the flowing sweet waters, Ea.

This tradition is known in a more complete form from an ancient list of gods called *An: Anum*. There, after a different beginning, Lahmu and Lahamu give rise to Duri and Dari, "the time-cycle"; and these in turn give rise to Enshar and Ninshar, "Lord and Lady Circle." Enshar and Ninshar engender the concrete circle of the horizon, Anshar and Kishar, probably conceived as silt deposited along the edge of the universe. Next was the horizon of the greater heaven and earth, and then—omitting an intrusive line—heaven and earth, probably conceived as two juxtaposed flat disks formed from silt deposited inward from the horizons.

The later generations of gods were dynamic creatures who contrast strikingly with the more sedate older generation. This contrast leads to a series of conflicts in which first Apsu is killed by Ea; then Tiamat, who was roused later to attack the gods, is killed by Ea's son MARDUK. It is Marduk, the hero of the story, who creates the extant universe out of the body of Tiamat. He cuts her in two, making half of her into heaven—to which she appoints sun, moon, and stars to execute their prescribed motions—and half into the earth. He pierces her eyes to let the Tigris and Euphrates flow forth, and then, heaping mountains on her body in the east, he makes the various

tributaries of the Tigris flow out from her breasts. The remainder of the story deals with Marduk's organization of the cosmos, his creation of humans, and his assigning to the gods their various cosmic offices and tasks. The cosmos is seen to be structured and to function as a benevolent absolute monarchy.

GODS AND DEMONS

The gods were, as mentioned previously, organized in a polity of a primitive democratic cast. They constituted, as it were, a landed nobility, each god owning and working an estate—his temple and its lands—and controlling the city in which it was located. They also attended the general assembly of the gods, which was the highest authority in the cosmos, to vote on matters of collective import. The major gods also served as officers having charge of cosmic offices. Thus, for example, Utu, the sun god, was the judge of the gods, in charge of justice and righteousness generally.

Highest in the pantheon—and presiding in the divine assembly—ranked An (Akkadian: Anu), god of heaven, who was responsible for the calendar and the seasons as they were indicated by their appropriate stars. Next came Enlil of Nippur, god of winds and of agriculture and creator of the hoe. Enlil executed the verdicts of the divine assembly. Equal in rank to An and Enlil was the goddess Ninhursag (also known as Nintur and Ninmah), the goddess of stony ground; *i.e.*, the near mountain ranges in the east and the stony desert with its wildlife—wild asses, gazelles, and wild goats—in the west. She was also the goddess of birth. With these gods was joined—seemingly secondarily—Enki, god of the sweet waters of rivers

and marshes; he was the cleverest of the gods, often appealed to by both gods and humans. Enlil's sons were the moon god, NANNA, or Sin; the god of thunderstorms, floods, and the plough, Ninurta; and the underworld figures Meslamtaea, Ninazu, and Ennugi. Sin's progeny were the sun god and judge of the gods, Utu (the Akkadian SHAMASH); the rain god ISHKUR (the Akkadian ADAD); and his daughter, the goddess of war, love, and the morning and evening star, Inanna (the Akkadian ISHTAR). Inanna's husband was the herder god Dumuzi. The netherworld was ruled by the goddess Ereshkigal and her husband NERGAL, a figure closely related to Meslamtaea and Ninurta. Earlier tradition mentions Ninazu as her husband.

DEMONS played little or no role in the myths or lists of the Mesopotamian pantheon. Their domain was that of incantations. Mostly, they were depicted as outlaws; the demoness LAMASHTU, for instance, was hurled from heaven by her father An because of her wickedness. The demons attacked humans by causing all kinds of diseases and were, as a rule, viewed as wind and storm beings. It was possible for a person to go to the law courts against the demons—*i.e.*, to seek recourse before Utu and obtain judgments against them. Various rituals for such procedures are known.

HUMAN ORIGIN, NATURE, AND DESTINY

Two different notions about human origin seem to have been current in ancient Mesopotamian religions. In the Sumerian "Myth of the Creation of the Hoe," Enlil removed heaven from earth in order to make room for seeds to come up. After he had created the hoe he used it to break the hard crust of earth in Uzumua ("the flesh-grower"), a place in the Temple of Inanna in Nippur. Here, out of the hole made by Enlil's hoe, humans grew forth. The other notion presented the view that humans were created from select "ingredients" by Enki, or by Enki and his mother Nammu, or by Enki and the birth goddess called, variously, Ninhursag, Nintur, and Ninmah. One Akkadian tradition, as represented by the "Myth of Atrahasis," had Enki advise that a god—presumably a rebel—be killed and that the birth goddess Nintur mix his flesh and blood with clay. This was done, after which 14 womb goddesses gestated the mixture and gave birth to 7 human pairs. The *etemmu* (ghost) of the slain god was left in human flesh. It is this originally divine part of humanity, the *etemmu*, that was believed to survive after death and pass into a shadowy afterlife in the netherworld.

CULTIC PRACTICES

In the cultic practices, humans fulfilled their destiny: to take care of the gods' material needs. They therefore provided the gods with houses (the temples) that were richly supplied with lands, which people cultivated for them. In the temple the god was present in—but not bounded by—a statue made of precious wood overlaid with gold. For this statue the temple kitchen staff prepared daily meals from victuals grown or raised on the temple's fields, in its orchards, in its sheepfolds, cattle pens, and game preserves, brought in by its fishermen, or delivered by farmers owing it as a temple tax. The statue was also clad in costly raiment, bathed, and escorted to bed in the bedchamber of the god, often on top of the temple tower, or ZIGGURAT.

At irregular intervals there were occasions for audiences with the god in which the king or other worshipers presented their petitions and prayers accompanied by appropriate offerings. These were mostly edibles, but they were often offered in costly containers. Appropriate gifts other than edibles were also acceptable—among them were cylinder seals for the god's use, superhuman in size, and equally oversized weapons.

Little is known concerning burial ritual. In late Early Dynastic times in Girsu two modes of burial were current. One was ordinary burial in a cemetery; the other, called laying the body "in the reeds of Enki," is not understood. It may have denoted the floating of the body down the river into the canebrakes. Elegists and other funerary personnel were in attendance and conducted laments seeking to give full expression to the grief of the bereaved and to propitiate the spirit of the dead. Later burial in a family vault under the dwelling house was common.

SACRED TIMES

During most of the 2nd millennium each major city had its own calendar. The months were named from local religious festivals celebrated in the month in question. Only by the 2nd millennium did the Nippur calendar attain general acceptance throughout the region. The nature of the festivals in these various sacred calendars sometimes reflected the cycle of agricultural activities, such as celebrating the ritual hitching up of the plows and, later in the year, their unhitching, or rites of sowing, harvesting, and other activities. During some of these festival periods the queen presented funerary offerings of barley, malt, and other agricultural products to the gods and to the spirits of deceased human administrators.

The cycles of festivals celebrating the marriage and early death of Dumuzi and similar figures in the spring were structured according to the backgrounds of the various communities of farmers, herders, or date growers. The sacred marriage (HIEROS GAMOS)—sometimes a fertility rite, sometimes a harvest festival with overtones of thanksgiving—was performed as a drama: the ruler and a high priestess took on the identity of the two deities and so ensured that their highly desirable union actually took place. In many communities the lament for the dead god took the form of a procession out into the desert to find the slain god, a PILGRIMAGE to the accompaniment of harps and heart-rending laments for the god.

Of major importance in later times was the NEW YEAR FESTIVAL, or Akitu, celebrated in a special temple out in the fields. Originally an agricultural festival con-

Major archaeological sites of Mesopotamia

nected with sowing and harvest, it became the proper occasion for the crowning and investiture of a new king. In Babylon it came to celebrate Marduk's victory over Tiamat (*see above*, Cosmogony and Cosmology). Besides the yearly festivals there were also monthly festivals at new moon, the 7th, the 15th, and the 28th of the month. The last—when the moon was invisible and thought to be dead—had a distinctly funereal character.

Supreme responsibility for carrying out the cults was entrusted to the rulers. In certain periods the king was deified. All the rulers of the 3rd dynasty of Ur (c. 2112–c. 2004 BCE) and most of the rulers of the dynasty of Isin (c. 2020–c. 1800 BCE) were treated as embodiments of the dying god DAMU and invoked in the ritual laments for him. As a vessel of sacred power the king was surrounded by strict ritual to protect that power, and he was required to undergo elaborate rituals of purification if the power became threatened.

The individual temples were usually administered by officials called *sangas*, who headed staffs of accountants, overseers of agricultural and industrial works on the temple estate, and priests (*gudus*), who looked after the god as house servants. Among the priestesses the highest-ranking was termed *en* (Akkadian: *entu*). They were usually princesses of royal blood and were considered the human spouses of the gods they served, participating as brides in the rites of the sacred marriage. Other ranks of priestesses are known, most of which are considered orders of nuns. The best known are the votaries of the sun god, who lived in a cloister (*gagûm*) in Sippar.

SACRED PLACES

Mesopotamians worshiped in open-air sanctuaries, in chapels in private houses, or in small separate chapels located in the residential quarters of town, but the primary sacred place was the temple. Archaeology has traced the temple back to the earliest periods of settlement, and it is clear that from the Early Dynastic period onward the temple was considered the god's house or dwelling. In its more elaborate form such a temple would be built on a series of irregular artificial platforms, one on top of the other; by the 3rd dynasty of Ur, near the end of the 3rd millennium, these became squared off to form ziggurats. On the lowest of these platforms a heavy wall enclosed storerooms, the temple kitchen, workshops, and other such rooms. On the highest level, approached by a stairway, were the god's living quarters, centered in the cella, a rectangular room with an entrance door in the long wall near one corner. The god's place was on a podium in a niche at the short wall farthest from the entrance; benches with statues of worshipers ran along both long walls, and a hearth in the middle of the floor served for heating. Low pillars in front of the god's seat seem to have served as stoppers for a hanging that shielded him from profane eyes. Here, or in a connecting room, were the god's table, bed, and bathtub.

DIVINATION AND ASTROLOGY

There were many forms of DIVINATION in Mesopotamia. The forms most frequently used seem to have been incubation—sleeping in the temple in the hope that the god would send an enlightening dream—and hepatoscopy—examining the entrails, particularly the liver, of a lamb or kid sacrificed for a divinatory purpose, to read what the god had “written” there by interpreting variations in form and shape. In the 2nd and 1st millennia large and detailed handbooks in hepatoscopy were composed for consultation by the diviners. Apparently divination was an attempt to read the future from “symptoms” in the present, much as a physician recognizes the onset of a disease.

Related to the observation of unusual happenings in society or nature, but far more systematized, was ASTROLOGY. The movements and appearance of the sun, the moon, and the planets were believed to yield information about future events affecting the nation or, in some cases, the fate of individuals. HOROSCOPES, predicting the character and fate of a person on the basis of the constellation of the stars at his birth, are known to have been constructed in the late 1st millennium, but the art may conceivably be older.

MESSIAH \mə-ˈsī-ə\ (from Hebrew *mashiah*, “anointed”), in JUDAISM, the eschatological redeemer of ISRAEL. It is widely supposed that Judaism is a messianic religion and that hope for the Messiah’s appearance is the major focus of, and driving force behind, Jewish RELIGIOUS BELIEF and behavior. Indeed, two commonplace beliefs of western history are that, in 1st-century Palestine, enhanced Jewish anticipation of the Messiah’s arrival was the backdrop for the emergence of CHRISTIANITY, and that it was the conflicting opinions about the Messiah’s appearance, identity, activity, and implications that caused the division between Judaism and Christianity.

These assumptions, however, need qualification. Judaism’s SCRIPTURE, the Hebrew BIBLE, contains no doctrine of an eschatological redeemer and does not use the term *messiah* to refer to one. Postbiblical Jewish texts—including the APOCRYPHA, PSEUDEPIGRAPHA, DEAD SEA SCROLLS, and the writings of PHILO and JOSEPHUS—use the term *messiah* infrequently and inconsistently. Based upon these texts there is no reason to think that the Jews of 1st-century Palestine were anticipating a messiah. Additionally, the idea of the Messiah is barely present in the MISHNAH, the foundation document of RABBINIC JUDAISM. A key reason for the unclarity about the Messiah in these texts is that the temple-centered religion practiced in Jerusalem and described in scripture, which dominated ancient Judaism and is the basis of all other forms of Judaism, provides no religious role for a savior. God alone is Israel’s—and therefore humanity’s—redeemer. In this religion, living according to God’s design both ethically and ritually maintains Israel’s relationship with God, which includes the forgiveness of SIN. “Levitical religion,” as we might call it, offers no religious function for a messiah that is not already covered in some other way.

Of all the Jewish writings of the Second Temple period and the period immediately following the destruction of that temple, only the NEW TESTAMENT—which became Christianity’s scripture—offers the rudiments of a coherent doctrine of the Messiah. Early Christian teaching about Jesus (though perhaps not Jesus’ own teaching about himself) ultimately shifted the focus of redemption from God to the Messiah. Making the Messiah the medium of humanity’s salvation altered the nascent religion’s Judaic structure and produced a new religion.

Ancient and medieval rabbinic writings—as well as the SYNAGOGUE liturgy—contain the category of “messiah,” but, as in earlier writings, the pictures in these varied literatures are not consistent. In the TALMUDS “the Messiah” is not an autonomous conception. Rather, it is a secondary category, subordinate to the generative and more central components of the rabbinic religious system. In this sense, for most forms of Judaism, the Messiah is present in, but not essential to, the workings of the Jewish religion. (An exception must be made for certain heretical Judaisms such as Shabbetaianism. See SHABBETAÏ, TZEVI).

Jewish religion is grounded in the experience of exile. For most of its history, Judaism has existed without a native center. Its scripture, theology, liturgy, practices, and most of its writings assume that Judaism’s adherents are living as aliens, away from their native territory. Ancient Jews—certain that they were God’s people always—drew creatively on their Israelite culture and heritage to develop two major responses to the twin challenges of national dislocation and chronic political oppression, particularly the loss of the Davidic dynasty and of Israel’s political autonomy. The first was the hope for an ideal national leader—often, but not always, from the royal Davidic dynasty—whose work could

range from leading the people home to an ideal kingdom to the establishment of a new cosmic order. The idea of “the Messiah,” an individual savior or redeemer of Israel, derives from this conception. The messiah theme, therefore, is inextricably bound up with the notion of exile, and the Jews’ recovery of the land they regard as theirs inevitably has messianic overtones. By realizing the ancient promise of restoration, the establishment of a Jewish polity in the Land of Israel raises unprecedented questions about the religious meaning of return from exile in terms of classic Jewish ideas of the Messiah. See ZIONISM.

The second response was the establishment of “Levitical religion,” a system of ethics and piety that both maintained and manifested the distinctive relationship between Israel and God. Although initially centered around the Temple and its cult, Levitical religion—particularly as adapted by rabbinic Judaism—could be performed anywhere.

These two responses are not mutually exclusive, but they are systemically independent of one another. Judaism is an extension of Levitical religion. The idea of an individual messiah existed alongside, but was never fully integrated into, the Levitical system of ethics and piety that constituted the core of rabbinic Judaism. Structurally, Judaism does not require a messiah to justify fulfilling the commandments. Indeed, a persistent strain of rabbinic teaching holds that the commandments will apply after the Messiah appears. Despite references to a restored Jerusalem and future heir of David, the synagogue liturgy celebrates God, not the Messiah, as Israel’s redeemer and looks forward to the restoration of the Temple cult.

Because the category of the Messiah is extrinsic to the system of Jewish religious practice, it is subject to speculation. In the varied forms Judaism has taken over time, there was and remains a wide range of opinions about what the Messiah will be and do. These opinions in themselves do not constitute grounds for separation from Judaism. The figure of the Messiah surely is present in Jewish religious imagination, but hope for the Messiah’s arrival is not the driving force of Jewish religious life.

For messianic figures in non-Judaic religions, see JESUS CHRIST; THE MAHDI; and MAITREYA BUDDHA.

METHODISM, movement founded by JOHN WESLEY in the 18th century, which survives in the form of the modern Methodist churches worldwide. In the early 21st century there were some 15 million Methodists worldwide.

In 1738 Wesley, an Anglican clergyman, attended a religious meeting where he experienced an inward assurance of salvation he had not known before. Soon he was preaching among those who felt neglected by the Church of England.

The Methodists formed a “society” within the Church of England. Wesley never wished them to leave the Anglican church, but after years of strained relations, the formal break came in 1795, four years after Wesley’s death. In America the Methodist Episcopal Church was constituted as an autonomous body in 1784 under the guidance of Francis Asbury and Thomas Coke. Although the first Methodist itinerants did not arrive in America until shortly before the Revolution, by the middle of the 19th century the Methodists had more members than any other American denomination. This growth occurred especially on the frontier.

Methodists were organized locally into “classes” that enforced discipline, while a hierarchical structure with a strong central authority efficiently organized and supervised the itinerant preachers. The Methodist advance was temporarily halted in 1844 by the church’s division into

Northern and Southern branches over the issue of slavery. After the Civil War both branches continued their rapid increase in numbers and in material resources. As Methodism gradually became assimilated to the general pattern of middle-class American PROTESTANTISM, a “holiness” movement emerged out of Methodism and then separated from it in the late 19th century. The Northern and Southern branches reunited in 1939, and further mergers took place later in the 20th century, but the independent holiness and pentecostal denominations that grew out of the HOLINESS

MOVEMENT still exist. The African-American Methodist churches, which had been merged into a new central jurisdiction in 1939 (forming a separate but equal jurisdiction within the United Methodist Church), gradually became integrated after 1968. By 1974 all districts based on race had been abolished.

Despite wide variations in belief, practice, and status, all Methodists accept the doctrines of historic CHRISTIANITY, without insistence on doctrinal conformity. They share an emphasis on doctrines that indicate the power of the HOLY SPIRIT to confirm the faith of the believer and to transform one’s personal life (especially the teaching about assurance and Christian perfection that is asso-

ciated with John Wesley); a system of government by which all ministers are “in connection” with the central authority of the church; and an allegiance to John Wesley.

METHUSELAH *mə-ˈtū-zə-lə*, also spelled Methushael, OLD TESTAMENT PATRIARCH whose life span as recorded in GENESIS (5:27) was 969 years; he has survived in legend and tradition as the longest-lived human. Genesis tells nothing about Methuselah beyond sparse genealogical details: he was the great-great-great-great-grandson of SETH, the child of ADAM AND EVE (Genesis 5:6–21). He was the father of Lamech and the grandfather of NOAH (Genesis 5:25–32). All his forebears lived for between 895 and 962 years except for his father, Enoch, who lived to be 365. In 1 Chronicles 1:3 he is cited in the lineage of SAUL. In the Gospel of LUKE (3:23–38) the lineage of JOSEPH, the husband of MARY, is traced back 75 generations, through DAVID, Saul, ABRAHAM, ISAAC, and JACOB, to Methuselah, thence to Seth and Adam.

METROPOLITAN, in the ROMAN CATHOLIC, EASTERN ORTHODOX, and churches of the ANGLICAN COMMUNION, the head of an ecclesiastical province. Originally, a metropolitan was a bishop who resided in the chief city, or metropolis, of a civil province of the Roman Empire and administered a territorial area coextensive with a civil province. The first known use of the title in church conciliar documents was at the COUNCIL OF NICAIA in 325.

Following the pattern of civil government, the expanding church created ecclesiastical provinces, each headed by a

metropolitan, who was assisted by his suffragan bishops, each of whom headed a DIOCESE within the province. This system has continued substantially unchanged. The metropolitan convokes and presides at provincial SYNODS, and he takes the chief part in the consecration of bishops. In Western medieval Roman Catholicism, especially since the 9th century, the rights of the metropolitans gradually disappeared in the framework of papal centralization.

In Slavic-speaking Orthodox churches the title metropolitan is used to designate those heads of autocephalous churches who do not carry the title “patriarch” and of a few important episcopal sees; in Greek-speaking Orthodox churches it may be given to all diocesan bishops, as distinct from their auxiliaries.

MICHAEL CERULARIUS *ˈmī-kəl-ser-yə-ˈlar-ē-əs* \ [b. c. 1000, Constantinople [now Istanbul, Turkey]—d. Jan. 21, 1059, Madytus, near Constantinople], Greek Orthodox PATRIARCH of Constantinople who figured prominently in the events leading to the SCHISM of 1054.

Although Cerularius was educated for the civil service rather than for an ecclesiastical career, he was named patriarch in 1043 by the Byzantine emperor Constantine IX Monomachus. Cerularius’ political ambition, coupled with his inflexible belief in the autonomy of the Eastern church, led him to thwart Constantine’s attempts to ally the Byzantine and Roman empires in defense against the Normans. In 1052, partly in response to concessions that Constantine made to Pope Leo IX, Cerularius required the Latin churches in his DIOCESE to use the Greek language and liturgical practices; when they refused, he ordered them closed.

In 1054, when Pope Leo sent three legates to Constantinople to negotiate an alliance with the Byzantine Empire, Cerularius again obstructed Constantine’s and Leo’s efforts by refusing to meet with the legates. In the midst of these negotiations, however, Pope Leo died, and one of his legates, the French CARDINAL Humbert of Silva Candida, took advantage of the papal vacancy to retaliate against Cerularius. On July 16, 1054, Humbert entered Constantinople’s cathedral, HAGIA SOPHIA, and excommunicated Cerularius and his clergy. In response, Cerularius convened a Holy SYNOD and excommunicated all the legates. Constantine’s efforts to effect a reconciliation failed, and the schism between Rome and Constantinople was final.

Cerularius ultimately constrained Constantine to support the schism. He had less control, however, over Constantine’s successor, Emperor Isaac I Comnenus, who de-throned Cerularius in 1058 and drove him into exile.

MICTLANTECUHTLI *ˌmēk-tlän-ˈtā-küt-lē*, Aztec god of the dead, usually portrayed with a skull face. With his wife, Mictcacihuatl, he ruled Mictlan, the UNDERWORLD. The souls of those whose manner of death failed to call them to various paradises made a four-year journey, fraught with trials, through the nine hells of Mictlan. In the last, where Mictlantecuhtli dwelt, they suffered the horrors of the Underworld.

MIDAS *ˈmī-dəs*, in Greek and Roman myth, king known for his foolishness and greed. The stories of Midas were first elaborated in the Athenian satyr plays. The tales are familiar to modern readers through the late classical versions, such as those in Ovid’s *Metamorphoses*.

According to the myth, Midas captured Silenus, the satyr and companion of the god DIONYSUS. For his kind treatment of Silenus, Midas was rewarded by Dionysus with a wish.

The king wished that all he touched might turn to gold, but when his food became gold and he nearly starved to death as a result, he realized his error. Dionysus then granted him release by having him bathe in the Pactolus River (near Sardis in modern Turkey), an action to which the presence of alluvial gold in that stream is attributed.

In another story the king was asked to judge a musical contest between APOLLO and the satyr MARSYAS. When Midas decided against Apollo, the god changed his ears into those of an ass. Midas concealed them under a turban and made his barber swear to tell no living soul. The barber, bursting with his secret, whispered it into a hole in the ground. He filled in the hole, but reeds grew from the spot and broadcast the secret—"Midas has ass's ears"—when the wind blew through them.

MIDDLE WAY, Sanskrit Madhyama-Pratipadā, Pāli Majjhima-Patipadā, in BUDDHISM, practices that are said to facilitate Enlightenment by avoiding the extremes of self-gratification and self-mortification. The term also refers to philosophical views that avoid the extremes of nihilism and eternalism. See MĀDHYAMIKA; EIGHTFOLD PATH.

MIDDOT \mē-'dōt\ (Hebrew: "measure," or "norms"), in Jewish HERMENEUTICS or biblical interpretation, methods or principles used to explicate the meaning of biblical words or passages to meet the exigencies of new situations. Though the rules, or norms, were probably developing in early Hellenistic JUDAISM, the first known *middot* were compiled by RABBI HILLEL in the 1st century BCE. Following the 7 norms compiled by Hillel were the 13 rules of Rabbi ISHMAEL BEN ELISHA (c. 100 CE) and the 32 rules of Rabbi Eliezer ben Yose the Galileean (c. 150 CE). These *middot* remained normative in Judaism for more than 1,000 years.

MIDGARD \ˈmɪd-ˌɡɑːrd\, Old Norse Midgardr \ˈmēθ-ˌgār-θər\ ("Middle Abode"), also called Manna-Heim \ˈmæn-nā-ˌhām\ ("Home of Man"), in Norse mythology, the Middle Earth, the abode of mankind, made from the body of the first created being, the GIANT YMIR (Aurgelmir). According to legend, the gods killed Ymir, rolled his body into the central void of the universe, and began fashioning the Midgard. Ymir's flesh became the land, his blood the oceans, his bones the mountains, his teeth the cliffs, his hair the trees, and his brains became the clouds. Ymir's skull was held up by four dwarfs, Nordri, Sudri, Austri, and Vestri (the four points of the compass), and became the dome of the heavens. The sun, moon, and stars were made of scattered sparks that were caught in the skull.

MIDIANITE \ˈmi-dē-ə-ˌnīt\, also called Ishmaelite \ˈɪʃ-mā-ə-ˌlīt, -mē-\, in the OLD TESTAMENT, member of a group of nomadic tribes related to the Israelites and most likely living in the northwestern regions of the Arabian Desert. According to the Book of Judges, the Israelite chieftain GIDEON drove the Midianites into western Palestine, after which they largely disappear from the biblical narrative.

According to the Book of GENESIS, the Midianites were descended from Midian, who was the son of ABRAHAM by his second wife, Keturah (Genesis 25:1–4). JETHRO, priest-leader of the Midianite subtribe known as the KENITES (Judges 1:16), and his daughter Zipporah (a wife of MOSES, Exodus 2:21), influenced early Hebrew thought: it was YAHWEH, the lord of the Midianites, who was revealed to Moses as the God of the Hebrews (Exodus 3:14). CIRCUMCISION was practiced by the Midianites before the Israelites (Exodus 4:25).

MIDRASH \mē-'drāsh, 'mi-'drāsh\ (Hebrew: "exposition," or "investigation"), in JUDAISM, an inquiry into the meaning of SCRIPTURE. The word has three related uses, referring (1) to the process of biblical interpretation and to the particular hermeneutical methods being applied ("doing midrash"), (2) to an interpretation of a specific passage of Scripture ("a midrash on GENESIS 1:1 suggests that God created many worlds prior to this one"), or (3) to a literary compendium of such interpretations presented in the form of a book (e.g., SIFRA to Leviticus). The unique significance of midrashic interpretation emerges from the way in which it mediates scriptural teachings to Jews of successive generations, showing how Scripture speaks to the particular circumstance and needs of Jews in each age. By assuring the continued relevance of Scripture, midrash allows the inherited values of Judaism, revised according to the needs of each age, to continue to have importance and meaning.

Midrashic texts traditionally are classified as either Halakhic, concerning the legal sections of Scripture, or Haggadic, on the nonlegal portions. See HALAKHAH AND HAGGADAH. A better division is attentive to the particular interpretative method at play in each midrash compilation. The major compilations of the Talmudic period reveal three distinct approaches: verse-by-verse analyses, discursive treatment of specific biblical laws or stories, and elaborate theological essays based upon the exegetical reading of biblical texts. The first type, focused on the legal sections of the PENTATEUCH, was produced between c. 200 and 400 CE. It includes Sifra to Leviticus, Sifre to Numbers, Sifre to Deuteronomy, and MEKHILTA ATTRIBUTED TO RABBI ISHMAEL ON EXODUS. The second type, of the late 4th and 5th centuries, includes GENESIS RABBAH, LEVITICUS RABBAH, and Pesiqta (Peskita) deRab Kahana on the LECTIONARY calendar of SYNAGOGUE TORAH readings. The third type is the product of the 6th and 7th centuries and includes Lamentations Rabbah, Song of Songs Rabbah, Esther Rabbah, and Ruth Rabbah.

MIHNA \ˈmih-nə\, any of the Islamic courts of inquiry established about 833 CE by the 'Abbāsid CALIPH al-Ma'mūn (reigned 813–833) to impose the Mu'tazilite doctrine of a created QUR'AN on his subjects.

The Mu'tazilites, a Muslim theological school influenced by the rationalist methods of Hellenistic philosophy, taught that God was an absolute unity admitting of no parts. Consequently, because the Word is God and not a part of him, the Qur'an, as a verbal expression and thus a material thing removed from God, had to be created by God in order to be accessible to humans. In contrast, the traditionalist view held that the Qur'an was uncreated and external, essentially, that it had existed along with God since the beginning of time.

Al-Ma'mūn adopted the Mu'tazilite view and demanded that all judges and legal scholars in the empire submit to questioning to determine the soundness of their positions. Most acquiesced, utilizing the principle of *taqiya* (concealment of one's beliefs under duress) to avoid imprisonment. When al-Ma'mūn died, the two succeeding caliphs continued his policies, until about 848, when al-Mutawakkil (reigned 847–861) made the profession of the Mu'tazilite view of a created Qur'an punishable by death.

MIKVEH \mēk-'və\, also spelled mikvah, or miqwe \ˈmik-və\ ("collection [of water]"), in JUDAISM, pool of natural water in which one bathes for the restoration of ritual purity. The Mishnah describes the requirements for ritually proper water and the quantity of water required for ritual cleans-

ing before entering the temple. Converts are required by Halakhah (legal tradition) to undergo a RITUAL BATH. Males bathe each Friday and before major festivals, while women use the *mikveh* before their weddings, after childbirth, and following MENSTRUATION.

MILAN, EDICT OF \mi-'lan, mē-'län\, proclamation that established religious toleration for CHRISTIANITY within the Roman Empire. It was the outcome of a political agreement concluded in Milan between the Roman emperors CONSTANTINE I and Licinius in February 313. The proclamation, made for the East by Licinius in June 313, granted all persons freedom to worship whatever deity they pleased, and assured Christians of legal rights.

MILAREPA \mē-'lä-'rā-bä\ (b. 1040—d. 1123), one of the most famous and beloved of Tibetan Buddhist masters (SID-DHA). His life and accomplishments are commemorated in two main literary works.

The first is a biography by the “Mad Yogin of Tsang” that chronicles the major events in his life from birth, to Enlightenment, to death. According to this work, Milarepa studied black magic in his younger years in an attempt to gain revenge on a wicked uncle who had stripped his mother and sister of all their property, after having previously promised to look after them when Milarepa’s father died. After a series of successful acts of destruction and revenge against his uncle and other family members, Milarepa is said to have undergone a crisis of conscience. Soon afterward, he sought out various Tibetan Buddhist masters, finally gaining acceptance as a full-fledged disciple under the guidance of the Tibetan master MARPA, founder of the Bka’-brgyud-pa sect. The lengthy relationship between Marpa and Milarepa is a significant element in the biography, since it emphasizes the necessity of, and intimate trust that develops in the student-disciple relationship in VAJRAYĀNA BUDDHISM. After his years of study with Marpa were completed, Milarepa sought out remote, isolated mountain retreats in which he practiced rigorous meditation, only occasionally would he visit Marpa. Milarepa continued the Bka’-brgyud-pa line, converting and teaching many disciples.

The second work of commemoration is a collection of Tantric songs entitled *The Hundred Thousand Songs of Milarepa*, which express the nature of Buddhist teaching. They also expand upon the climate and conditions of Milarepa’s mountain ascetic retreats as well as the intense labors and ultimate joys of the ascetic life.

MILESIAINS \mi-'lē-zhənz, -shənz\, in Irish mythical history, name for the people who drove the race of gods, the TUATHA DÉ DANANN, below ground. The Milesians are thus the ancestors of the Celtic population of Ireland and it is stressed that they had an ancient right to the island when they came. According to the Medieval Irish historians the gods were driven from the surface and into the old BURIAL MOUNDS, where they were supposed to live on. The word for burial mound is “side,” pronounced “shee,” and this word is used for the otherworld in Irish tales up to the present. Thus, a banshee means a “woman from the burial mound.”

MILINDA-PAÑHA: *see* QUESTIONS OF MILINDA.

MILK-OCEAN, CHURNING OF THE, one of the central events in the ever-continuing struggle between the DEVAS (gods) and the ASURAS (demons, or titans), and a major aspect of Hindu COSMOGONY.

The gods, who had become weakened as a result of a curse by the irascible sage, Durvāsas, invited the *asuras* to help them recover the elixir of immortality, the *amṛta*, from the depths of the cosmic ocean. Mt. Mandara, a spur of the world axis, Mt. Meru, was torn out to use as a churning stick and was steadied at the bottom of the ocean by VISHNU in his aspect as the tortoise Kūrma. The *asuras* held the head of the NĀGA (serpent) Vāsuki, who was procured for a churning rope, and the gods held his tail. When Vāsuki’s head hit the rocks and he vomited forth poison that threatened to fall into the ocean and contaminate the *amṛta*, the god Śiva took it and held it in his throat, a feat that turned his throat blue.

When the *amṛta* appeared, the gods and the *asuras* fought over its possession. After many adventures, it was finally consumed by the gods, who were thus restored in strength.

The Hindu myth of the churning of the milk-ocean

Victoria and Albert Museum, London—Art Resource

MILLENNIALISM

L

iterally, millennialism is the belief, expressed in the biblical Book of REVELATION TO JOHN, that Christ will establish a one-thousand year reign of the saints on earth before the LAST JUDGMENT (*compare* MILLENNIUM). More broadly defined, millennialists expect a time of supernatural peace and abundance here on earth. Millennialism offers a concrete vision of the fundamental eschatological belief that at the “end of time” God will judge the living and the (resurrected) dead. This belief in an ultimate divine justice has provided a solution to the problem of THEODICY in the face of suffering and oppression for countless generations of believers—Jews, Christians, Muslims, and Buddhists. It has, therefore, had immense appeal in every age. Whereas the name comes from the 1,000-year period, the key factor concerns not time but rather the earthly nature of the coming “new world”: whether it is of a duration of 40 years or of 4,000, the transformation necessarily means an end to the current institutions of power and, therefore, gives all millennial beliefs a revolutionary quality that has made them unwelcome to those in positions of authority.

MILLENNIALISM AND SOCIETY

The key issue regarding millennialism’s impact on society, however, is the matter of timing. As long as the day of redemption is not yet come, millennial hopes console the suffering and inspire patience (Revelation 13:10) and political quiescence; thus, they have a profoundly conservative influence. But driven by a sense of imminence (*see* apocalypticism), believers can become disruptive, even engaging in revolutionary efforts to overthrow an unjust sociopolitical order in an attempt to bring about the kingdom of “peace” for the meek and the defenseless. Thus, apocalyptic millennialism constitutes a powerful and volatile mixture, fascinating the hearts and minds of people throughout the ages. No matter how often the apocalyptic beliefs have been proven wrong (as has always been the case through the present), no matter how often the millennial efforts to establish God’s kingdom on earth have led to disastrous results, apocalyptic expectations repeatedly revive. From the Jewish revolts against Rome that led to hundreds of thousands of deaths (in 3 and 66–73 or 74 CE and again in 132–135 CE) to the TAI-

The Sixth Trumpet: Army of Horsemen, illustrating a passage in Revelation to John 9:13–21; from a Spanish illuminated manuscript, 1220
The Granger Collection

PING REBELLION that led to the death of some 20–35 million people, such movements have a tendency to self-destruct in a most spectacular fashion. And yet, for all the costly failures, the appeal remains, and generation after generation finds devotees in search of the chimerical kingdom.

Apocalyptic millennialism, for all its dangers, offers immense rewards: believers find themselves at the center of the ultimate universal drama, where their every act has cosmic significance. Apocalyptic believers become semiotically aroused, finding cosmic messages in the smallest incident, in every coincidence. They can almost taste the fulfillment of their burning desire to see justice done—the good lavishly rewarded, the evil savagely punished. Finally, the approach of the end of time and the promise of the new world liberates believers from all earthly inhibitions: the fear of future punishment by those who now hold power vanishes, and a wide range of repressed feelings—sexual, emotional, psychological—bursts forth. Such a combination proves irresistible to many.

From their earliest manifestations, millennial beliefs bifurcated into imperial, hierarchical visions of the world to come—a kingdom ruled over by a just, if authoritarian, imperial figure who would conquer the forces of chaos and establish the true order of society—and a demotic vision of a world of holy anarchy, where there would be an end to dominion over man. Many world conquerors used millennial “savior” imagery to bolster their rule (notably, but by no means limited to, Cyrus the Great, Alexander the Great, Caesar Augustus, and Constantine the Great), and especially in the Muslim and Christian Middle Ages these imperial uses of millennial imagery proliferated. The demotic millennial vision, however, was marked by a profoundly anti-imperial, even anti-authoritarian, thrust. Indeed, one of the major strains of Hebrew messianic imagery foresaw a time when men shall beat the instruments of war and domination into instruments of peace and prosperity, each sitting under his own tree, enjoying the fruits of honest labor undisturbed (Isaiah 2:1–3, Micah 4:1–4). This millennialism foresaw the end of the rapacious aristocracy (the lion will lie down with the lamb) and the peace of the commoner and the manual laborer. Perhaps no idea in the ancient world, where aristocratic empires ruled over almost every area of cultivated land, held more subversive connotations.

Apostolic CHRISTIANITY demonstrates many of the key traits of apocalyptic millenarian groups of this second, demotic type: the rhetoric of the meek overcoming the powerful and arrogant to inherit the earth; the imminence of the Lord’s Day of wrath and the coming Kingdom of Heaven; a leader and a following among common, working people; rituals of initiation into a group preparing for and awaiting the End; fervent spirituality and radical restructuring of community bonds; enthusiastic crowds; the prominence of women visionaries; and the shift from a disappointed messianic hope (CRUCIFIXION) to a revised expectation (SECOND COMING, or Parousia).

The only missing element, at that time prominent in several strains of Jewish millennialism (*e.g.*, the ZEALOTS), is violence; apparently this was subsumed (or sublimated) in the passion for martyrdom. Not for centuries would violence become a notable part of Christian millennialism (*e.g.*, the Circumcelliones of 4th-century North Africa).

The fundamental problem for early Christianity, as for all apocalyptic movements, was the passage of time which brought with it growing and eventually profound disappointment and humiliation. Those who did not abandon the movement (*e.g.*, by returning to observant JUDAISM) handled the delay of the Parousia by organizing communities and rituals that brought, proleptically, a foretaste of the coming world—for example, the EUCHARIST or the reading of Revelation. But above all, the passing of time called for a new temporal horizon. The End would come, but not now, not even soon, rather in the fullness of time, once the tasks assigned to the initiate by God—especially the spreading of the Gospels to the four corners of the world—were completed.

As Christianity evolved from a charismatic cult on the fringes of society into a self-perpetuating institution eager to live in harmony with Rome, the hopes of apocalyptic millenarianism embarrassed church leaders, who emphasized to Ro-

man authorities that Jesus' kingdom was "not of this world." Whereas almost every prominent Christian writer from the movement's 1st century assumed a literal millennialism, by the late 2nd century ecclesiastical writers, striving to eliminate subversive millennialism from church doctrine, began an assault on millenarian texts (especially Revelation, the only text in the NEW TESTAMENT to speak explicitly of an earthly kingdom). ORIGEN, an early 3rd-century theologian, argued that the millennium was to be interpreted allegorically, not carnally; others attempted (successfully in the Eastern church) to eliminate Revelation from the canon altogether. With the advent of imperial Christianity, millenarianism was pushed to the very margins of acceptable Christian thought.

CALCULATING THE MILLENNIUM

Despite these efforts by the church hierarchy to remove millennialism from formal theology, apocalyptic fears and millennial hopes remained powerful among Christians high and low. Indeed, the very texts that anti-millenarian writers like JEROME wrote served as the basis for new forms of millennialism, such as the "Refreshment of Saints." (The Refreshment of Saints was seen as a brief period of respite [45 days] during which the saints who had survived the tribulations of the endtime would enjoy peace on this earth. Initially an exegetical problem [a "loose" 45 days unaccounted for], this concept became the basis of a whole range of millennial speculation about a period of earthly perfection.) Above all, charismatic prophets using apocalyptic calculations drawn from Daniel and Revelation continued to excite the faithful. Perhaps in recognition of this perennial appeal, church leaders compromised when dealing with those who remained deeply attached to hopes for a real millennium. As a result, as early as the 2nd century, two of the principal themes of medieval millennialism had already emerged: (1) the use of an anti-apocalyptic chronology to postpone the date of the End, thus encouraging patience; and (2) the transformation of the Roman Empire into a positive eschatological force.

To delay the end and reap the calming benefits of non-apocalyptic millennialism, theologians placed great weight on the idea of a "sabbatical millennium." This idea, by combining GENESIS 2:2–3 (six days of travail, SABBATH rest), with Psalm 90 (1,000 years is a day in the sight of the Lord), promised the thousand-year kingdom after 6,000 years. About 200 CE the first Christian chronology placed the INCARNATION of Christ in 5500 *Annus Mundi* (*Annus Mundi*, or AM, meaning the "the year of the world"; thus Christ was said to have been born 5,500 years after the creation of the earth). This marked the year 500 CE as the year 6000 and provided a buffer of some 300 years. As a result, when apocalyptic prophets announced the imminent End, conservative clerics could counter with the argument that centuries yet remained until the millennium. Documentary evidence for this chronological argument provides an indicator of the presence of popular apocalyptic rumors, which were countered by theologians trying to calm the panics such rumors incited. From our modern perspective, of course, such chronological temporizing merely postponed, indeed aggravated, apocalyptic millennialism. In the early 3rd century, another 300 years probably seemed like an immensely long time, but eventually the 6,000 years would be fulfilled.

At the same time as theologians tried to postpone millennial hopes, they also tried to remove Christian millennial hostility to the Roman empire. Thus, theologians took Paul's discussion of the timing of the End (2 Thessalonians 2:3) and interpreted his reference to an "obstacle" to the advent of the "man of iniquity" as meaning that as long as the Roman empire endured, the ANTICHRIST could not come. This pro-Roman ESCHATOLOGY would, after Christianity became imperial, produce the myth of the Last Emperor, a superhuman figure who would unite all of Christendom and rule in peace and justice for 120 years before abdicating his throne, thus removing the "obstacle" and bringing on the brief rule of the Antichrist (this myth is found in both the Tiburtine Sybil and Pseudo-Methodius). This imperial millennialism, which probably already influenced Constantine—the first "Last Emperor"—offered a powerful antidote to the subversive elements of popular millennialism. Its cosmic struggle was not the demotic holy anarchy

opposing the evil empire of early Christianity but the authoritarian holy empire fighting anarchic chaos; instead of the aniconic monotheistic political ideal of “no king but God,” it offered the iconic one of “one God, one king.” Not surprisingly, this form of “top-down” millennialism found much favor among subsequent Christian theologians.

But both these approaches, however creative and successful among theologians, merely delayed the problem. Despite pre-Christian and Christian belief in *Roma eterna*, the empire (especially in the West) was vulnerable; and no matter how far away 6000 AM (500 CE) seemed from 5700 (200), it did not seem so far away in the 5900s (400s). Indeed, the western Roman empire faltered just as the year 6000 approached, turning both these anti-apocalyptic exegeses—the sabbatical chronology and the imperial “obstacle” to the Antichrist—into profoundly apocalyptic ones. At the beginning of the 5th century Jerome and AUGUSTINE, perceiving the danger posed by two such unstable eschatological “teachings,” developed more stringent forms of opposition to millennialism. They reoriented Latin thought in two ways. Jerome, translating the work of the great imperialist, anti-millenarian theologian and chronographer, EUSEBIUS OF CAESAREA, introduced a new set of calculations that placed the Incarnation in 5199 AM (II), thus delaying the year 6000 AM another three centuries. He thereby made it possible for Latin chronographers to ignore the year 6000 AM I, since by his calculations it was really only 5701 AM II. At the same time he heaped ridicule and contempt on millennialists, believers in foolish tales of earthly delights, gluttony, and sexual promiscuity.

Augustine went still further, arguing that no historical event or chronology can be interpreted apocalyptically and that the millennium was not a future event but already in progress, already set in motion by Christ. To explain why the evils of war, hatred, injustice and poverty continued unabated, Augustine used the notion of the two cities. There was a “heavenly city,” the celestial Jerusalem, where the millennium was already manifest, and a terrestrial Babylon, the time-bound city of violence and oppression in which the millennium was not visible. These two cities would coexist as a *corpus permixtum* (a mixed body) in every man (even saints) and in every society (even the church) until the eschaton (the consummation of history). Thus, Christian Rome and even the earthly church could not represent the perfection of eschatological fulfillment, and their historical fate had nothing to do with God’s plans for human salvation. This teaching radically reoriented Christian eschatology: rather than await the coming kingdom on earth, one should await it at the very end of time. Augustine basically banned millennialism, or the belief in a coming KINGDOM OF GOD on earth, from Christian theology.

POPULAR AND UNDERGROUND MILLENNIALISM

This ban on millennial thought so dominated the official theological writings of the early Middle Ages that most modern historians think it disappeared entirely from Latin Christendom. Indeed, standard treatments of millennialism, unaware of the idea of the sabbatical millennium and the popular millennial discourse it opposed, tend to skip from Augustine (5th century) to JOACHIM OF FIORE (12th century), when the first formal theology that looked forward to the millennium reemerged. There are signs of millennialism, however, both in the activity of anti-ecclesiastical prophets like the “false” Christ of Bourges described in the 6th century by Gregory of Tours in his *History of the Franks* and in the anti-apocalyptic uses of chronology to oppose them. Gregory, for example, published his chronology for “those who despair at the coming end of the world.” The implicit message was clear: Gregory wrote in the late 5700s, and, when arguing with the “saints” who emerged after the assassination of the false Christ and “gained quite an influence over the common people,” Gregory and his colleagues could argue that there were more than two centuries to wait. But, of course, even this more remote date eventually drew near, and in the 8th century—the 5900s—the Anglo-Saxon monk BEDE THE VENERABLE and his Carolingian followers did for AM II what Jerome had done for AM I: they shifted the dating system again, this time to AD (*anno Domini*). Hence the year 6000 AM II, like the year 6000 AM I, passed unnoticed by sources that spoke instead of AD 801.

And yet the relative silence in our documentation does not mean that there was no further discussion of the approaching 6000 AM II. Indeed, as in 6000 AM I (500 AD), the approach of 6000 brought an acute political crisis, with the occupation of the Byzantine throne by a woman (Irene). The “obstacle” of 2 Thessalonians had been removed. Charlemagne’s response, to hold his imperial coronation on the first day of the year 6000 AM II (AD 801), unquestionably held millennial significance, despite the reluctance of the written sources to elaborate. The coronation was, in this sense, like the “Emperor’s New Clothes”: everyone in the court knew of the date AM, but no chronicler mentioned it. Ignorant of this tension, modern historians have analyzed this pivotal moment in Western history without any awareness of its millennial background, speaking only of the coronation of the year 800. (For the Carolingians, the new year began on Christmas Day, not on January 1, thus historians now give the year of Charlemagne’s coronation as 800, whereas, at that time, it was considered the first day of 801.)

Charlemagne’s coronation contributed two essential elements to subsequent European millennialism. First, it meant the “transfer” of the empire, with all its apocalyptic and millennial freight, including the notion of the last emperor, to the West. Numerous European kings claimed this messianic status, but the German emperors above all proved fascinated by the idea (e.g., Otto III, Frederick I, and Frederick II). Second, the Carolingians shifted chronological hopes for the APOCALYPSE from 6000 AM to the year AD 1000, a date at once millennial (the end of the sixth age, dawn of the sabbatical era) and Augustinian (the end of the millennium since Christ). And, unlike the previous cases of a millennial date’s advent, chronographers this time were unable to shift the chronology and avoid mentioning the apocalyptic date.

Germany and France of 1000 illustrate the two dynamics of millennial symbolism: Germany incarnates the “top-down” imperial version, while France displays a remarkable array of “bottom-up” populist expressions. Emperor Otto III manipulated every aspect of the imperial variety: he insisted on the *renovatio imperii Romani* (renewal of the empire of Rome, the “obstacle” to Antichrist); on PENTECOST of 1000 he opened Charlemagne’s tomb (emperor of 6000); and he urged rulers throughout the Eastern regions (Poland, Hungary, and Scandinavia) to convert to Christianity. In contrast, King Robert II of France, the second ruler of a new and still uncertain dynasty and under ANATHEMA in 1000, presided over a kingdom marked by the social turmoil of a castellan revolution that neither the king nor most of the high aristocracy were capable of controlling. Here apocalyptic and millennial symbols were generated from below, especially in the earliest popular religious movement of the Middle Ages: the Peace of God. This conciliar movement, which mobilized huge crowds at open-air revivalist gatherings in the collective pursuit of God’s peace on earth, may have been the earliest sustained millenarian movement that joined all levels of society together. It thus displays two key and consequential aspects of subsequent millennialism in the West: the vast revivalist gatherings and the sense of a social covenant. It appeared in two waves, in the decades before the millennia of the Incarnation (1000) and of the Passion (1033), respectively, first south of the Loire, then throughout France.

Of course, the two waves passed and, despite vast social covenants followed by years of jubilee-like abundance and peace, there was still no Parousia, still no millennium. A failure as a messianic voluntary movement, the Peace of God became the enforced “King’s Peace,” as the social covenant that had been based on an oral commitment and trust became a contract, a legal commitment enforced by written law. Yet apocalyptic expectations did not disappear in Western Europe; on the contrary, there was a sea change in millennial hopes. Instead of the pre-

Bede the Venerable

Art Resource

some ways more surprising, aspect of medieval millennialism was its use by lay and ecclesiastical elites to buttress their own authority. Starting with the GREGORIAN REFORM, papal reformers used apocalyptic imagery both to attack their enemies as the Antichrist and to wrap their own efforts in messianic promises. Similarly, royal and even comital courts used eschatological prophecy as propaganda. Dynastic publicists often painted their patrons in the imagery of the Last Emperor; William I of Normandy consciously used themes from Revelation—his crown, his Domesday Book—to buttress his conquest of England. Supporters of Thierry of Alsace, count of Flanders, responded to the seemingly apocalyptic civil war of 1127–28 by disseminating prophecies claiming that his dynasty was the last barrier to the Antichrist. At the time of the Second Crusade a French prophet evoked the Tiburtine SIBYL to predict that Louis VII was to conquer the Orient in the fashion of Cyrus the Great of Persia. Similarly, Richard I of England and the German king Frederick I embarked on the Third Crusade inspired by apocalyptic prophecies.

MILLENNIALISM REVIVED

Millennial hopes and ambitions reached new levels as a result of the work of Joachim of Fiore (late 12th century). Joachim postulated that, by analogy with the TRINITY, there were to be three great states (*status*) of history: (1) that of the Father, which had been characterized by the vesting of righteousness in married persons; (2) that of the Son, during which an order of unmarried clerics served as the guardians of righteousness; and (3) that of the HOLY SPIRIT, the period of the “Refreshment of the Saints” after the Antichrist, in which the order of monks would bring an era of earthly peace and spiritual contemplation. Joachim was the first theologian to reject Augustine and return to the notion of a millennium to come, and his influence on subsequent millennial thought was immense.

The earliest historians of millennialism thought of Joachim as the first millen-

dominantly passive expectation of the earlier period, the passing of 1000 seems to have introduced, via the peace movement, a new and more aggressive form which sought to prepare the world for the End. Here we see the earliest forms of what Christian theologians today call “postmillennialism,” or the notion that Christ will come after a millennial kingdom wrought and presided over by the saints, a kingdom toward which believers can and should work. While popular “messiahs” continued to appear (e.g., Eon de l’Etoile and Tanchelm), the period after the year 1000 saw much vaster movements, often approved (at least initially) by ecclesiastical authorities—the popular crusades, the Capuchins, the FRANCISCANS, the flagellants. Some of these movements were popularly based, militant, and extremely hostile to ecclesiastical authority, the wealthy, Jews, intellectuals, etc., displaying the anger, paranoia, and violence that would dominate an entire strain of anti-modern Christian millennialism from the crusading pogroms to the Nazis.

nial thinker since the days when Augustine banned such ideas. He now appears to be the first formal thinker to articulate his millennialism in a way that could survive legitimately in writing. Had Augustine been present when the papal council declared Joachim's works acceptable, he would have denounced the decision loudly. Instead of a lone millenarian presence, then, Joachim's work is the literate articulation of a widespread oral discussion of millennialism at the turn of 1200, an oral discourse that had never ceased, despite its sudden ups and long downs, since well before Augustine. The spectacular success of the movements that could fuel themselves with Joachimite "age of the spirit" rhetoric illustrates the broad social stratum and the liveliness of the millennial religiosity.

Joachim revitalized every aspect of medieval millennialism: within decades of his death in 1202 prophecies attributed to him began to circulate that people identified (in profoundly un-Augustinian fashion) with current events. Franciscans and DOMINICANS, Holy Roman emperors and popes all became figures in vast and ever-shifting predictions of imminent apocalypse. Chronological calculations fixed on 1250, then on 1260, as the beginning of the new Age, producing new and fearsome forms of spirituality, like FLAGELLATION. The Franciscan order split over interpretations of Joachimite prophecy, one branch (the Community) becoming inquisitors, the other (the Spirituals), revolutionary millenarians. Angelic popes and messianic emperors vied among lay and clerical constituencies for a following. By the end of the 13th century millennialism had reached a fevered pitch, especially among Spiritual Franciscans and their lay spin-offs, the Apostolic Brethren, as well as among the more mystical elements of the BEGUINES (for example, Marguerite Porete) and the Beghards. The execution, in 1300, of some of the Apostolic Brethren, including their founder Gerard Segarelli, by Pope BONIFACE VIII set the stage for a particularly violent round of paranoid millennialism under the leadership of Fra Dolcino in the early 14th century.

In France the imagery of millennialism continued to influence political discourse throughout the remainder of the Middle Ages. The terrible catastrophes of the 14th century—the Hundred Years' War and the Black Death—renewed fervor for the final, divine intervention, including new and radical forms of flagellants. Writing immediately after the humiliating rout of the French knighthood and capture of the French king at Poitiers in 1356, the Franciscan John of Rupescissa prophesied that plagues would cut down the populace like the harvest in the fields, the poor would rise up against tyrants and the rich, the church would be stripped of its wealth, and Antichrists would arise in Rome and Jerusalem. At least one contemporary, the court historian Jean Froissart (d. 1400/01), seemed to think that Roquetaillade's prophecies inspired the Jacquerie (the insurrection of peasants against the nobility in northeastern France in 1358—so named from the nobles' habit of referring contemptuously to any peasant as Jacques, or Jacques Bonhomme). However, Rupescissa prophesied, the agony of the world would end by 1367, for a great reforming pope would come to power, and the king of France would again be elected Holy Roman emperor. Fulfilling his glorious role as a second Charlemagne, this worthy king would conquer the entire world and establish a millennial reign of peace and prosperity. Indeed, French kings bearing the name Charles were the subjects of particularly intense millennial prophecies throughout the late Middle Ages. A prophecy of 1380 pertaining to Charles VI was subsequently applied to Charles VII and Charles VIII and even (much later) to England's Charles II while he was in exile in France.

Despite such fundamentally conservative applications of millennial prophecies, the hopes and expectations aroused by the prospect of the Christian Apocalypse still offered the outlines of a powerful, if fundamentally impractical and hence ultimately suicidal, ideology of social revolution to the peasants and the urban poor of the late Middle Ages. The thousands of shepherds, or Pastoureaux, who swept through the French countryside in 1251 and again in 1320 were convinced that they were God's chosen instrument to free the Holy Land and thereby bring about the Parousia. While none of them ever reached the Holy Land, they traveled in bands about the kingdom, amazing some with their piety, but all the while slaughtering clerics, Jews, and university intellectuals. Similar apocalyptic

ideas regarding the election of the poor to usher in God's kingdom, either by participating in a crusade of the poor or by rescuing the king in his hour of need, motivated other popular insurrections.

Modern historians, limited by the nature of the documentation, tend to emphasize in their analyses the kinds of "political," or imperial, millennialism that find expression in the sources. Popular and revolutionary millennialism, rarely reported except by hostile clerical sources or by later spokesmen eager to downplay millenarian origins, are more difficult to assess. If one limits oneself to only explicitly millenarian groups, the numbers are few until the period of the printing press; if one identifies such groups by their patterns, rather than by their own or others' claims about them, they are far more numerous than documentation indicates.

The Taborites were perhaps the most important millennial movement of the late Middle Ages and represent a transition to the new age of millennial movements in the Renaissance and the REFORMATION. Taking themes from the English reformer JOHN WYCLIFFE, Czech preachers began to rally the faithful to a program of radical, antipapal reform. JAN HUS, the most prominent of these men, was burned at the stake at the COUNCIL OF CONSTANCE (1415), strengthening the hand of the most radical, indeed millennial, of the Taborites, who targeted 1420 as the date of the End. For the next two decades the region was plagued with millennial wars that brought out the social and revolutionary elements of millennialism and ended in a national church, the HUSSITE Church, centered in Prague.

The approach of the year 7000 AM I (AD 1492/1500) brought with it a number of millennial currents. The fall of Constantinople in 1453 not only put an end to the last remnant of the Roman Empire from antiquity; it also provoked the appearance of a large number of books like the *Corpus Hermeticum*, purporting to convey "secret knowledge," to the West, thus reinvigorating the Joachimite tradition with Gnostic elements of an apolitical elitism that sought, through esoteric knowledge, to transform the world. One enthusiast of the proliferation of prophecy and knowledge was the explorer Christopher Columbus. At this point, especially with the assistance of the printing press, various strains of millennial prophecy proliferated throughout Europe. These new strains, linked to the Gnostic search for knowledge that could transform nature, had important implications for the emergence of modern science. In a sense, the Renaissance, with its belief in a new world in the making and its eagerness to embrace any new form of thinking, Christian or otherwise, may represent the first "New Age" movement, the first secular millennial movement on record.

From the Renaissance onward, European culture developed an ever-more-secular strain of millennialism. The longer God tarried, the more humans took over his job of bringing about the perfect kingdom. Here we find the utopian and scientific traditions and the radical democratic movements that gave us the French Revolution, radical socialism, and Marxist communism, as well as Nazism and,

Sketch of Jan Hus tied to the stake

in a modified form, ZIONISM. Totalitarianism may be seen as the result of millennial movements that seize power and, in the failure of their millennial hopes, find themselves “forcing” the perfection of man.

PROTESTANT MILLENNIALISM

Popular millennial movements, however, returned in strength with the Protestant Reformation. Luther himself was not a millennial thinker (he was, after all, trained as an AUGUSTINIAN hermit), but he used powerful apocalyptic rhetoric, making the pope as Antichrist a staple of Protestant discourse. In so doing, he unleashed a wave of millennialism that covered the gamut from THOMAS MÜNTZER’S revolutionary Peasants’ Revolt in Thuringia (1524–25), to the ANABAPTISTS who gathered in Münster in 1534 to see the heavenly Jerusalem descend to earth, to the HUTTERITES and MENNONITES. But the most powerful form of millennialism to emerge came from the British Isles after Henry VIII introduced PROTESTANTISM as the official religion in 1534. PURITANISM in both England and Scotland had strong millennial elements that eventually burst forth during the English Civil Wars (1642–51), unleashing a whole panoply of new millennial movements—Levelers, Diggers, Ranters, QUAKERS, and Muggletonians. Nor was the 17th century limited to Christian millennialism: 1666 saw the climax of the most widespread millennial movement in the history of Judaism, with the career of SHABBETAI TZEVI, whose messianic message ignited Jewish communities in both Muslim and Christian lands. Although RABBINIC JUDAISM has, like Catholicism, strong barriers against apocalyptic outbreaks, evidence of messianic activity can be found in almost every generation, and today, especially among religious Zionists, there are strong millennial currents.

The Puritan millennial strain came to America with the pilgrims and has, essentially, marked American religiosity ever since. The GREAT AWAKENING (1720–40s) and the Second Great Awakening (1795–1835) were both inspired by a form of millennial fervor derived from the teachings of Congregational pastor JONATHAN EDWARDS. Both the theological underpinnings and the emphasis on collective penitence, public weeping, and large crowds singing HYMNS reflect the characteristics of millennial moments from the times of the peace assemblies in Europe. According to some historians, the enthusiasm of the Great Awakening was redirected into the militant patriotism of the American Revolution, whose religious rhetoric was steeped in millennial themes. In addition to the more mainstream millennialism of the Great Awakenings, American millennialism gave birth to a wide range of new religious movements like the MORMONS, the SEVENTH-DAY ADVENTISTS, and the JEHOVAH’S WITNESSES. At the present time, these represent some of the most active religions in the world.

American Protestant millennialism split into two streams: the premillennialists (who believe that Jesus will come before the millennium and inaugurate it),

St. John's visions of the sixth angel (top) and seventh angel (bottom), from an English manuscript illumination of Revelation to John, c. 1250

The Granger Collection

and the postmillennialists (who believe that Jesus will come after the millennium inaugurated by an inspired mankind). The former tends to be catastrophic (the seven years before the advent of Jesus, known as the Tribulation, preceded by the Rapture of the saints, are marked by terrible catastrophes and by the coming of the Antichrist); whereas the latter tends to be progressive and gradualist. The former tends to be apolitical (only personal repentance and purification can prepare); the latter, politically active (through reform we can bring about the kingdom). In the late 19th century premillennialism gained the upper hand in much American millennial thinking, only to cede to postmillennialism reformism in the early decades of the 20th. The evangelical and fundamentalist reaction that developed in the 1910s and '20s was premillennial dispensationalist in nature; it was inspired by the work of John Nelson Darby (1800–82) and the Scofield Bible (1909), and it was committed to reversing the secularizing tendencies of reformist postmillennialism.

Premillennial Dispensationalism became extremely popular in Protestant circles in America, starting in the 1970s with the publication of Hal Lindsey's *The Late Great Planet Earth* (1972) and the "Rapture" film *A Thief in the Night* (1972). In the 1980s Edgar C. Whisenant published the pamphlet *88 Reasons Why the Rapture Will Happen in 1988*, starting off a range of Rapture predictions that have dotted the 1990s. The Y2K computer bug, set to go off on Jan. 1, 2000, triggered a whole new wave of apocalyptic thinking among premillennial preachers like Chuck Missler, Jack Van Impe, and Jerry Falwell and had the potential to be the great ecumenical apocalyptic prophecy of the age.

MILLENNIALISM OUTSIDE CHRISTIANITY

Finally, millennialism has an important non-Western component. ISLAM, as a religion of revelation, began as an apocalyptic movement anticipating a Day of Judgment, and it retains apocalyptic and millennial elements to this day, especially in SHI'ITE theology but also in many of the forms of popular religiosity that have emerged within it. In particular the Mujaddid tradition, which foresees a "renewer" at every century turn of the Muslim calendar (AH), appears to constitute—before the century has turned—a form of apocalyptic messianic expectation in the coming of the hidden MAHDI. Many indigenous movements, often anti-imperialist in nature, take on the full range of characteristics of millennialism. In the Western hemisphere, for example, native populations produced a wide range of millennial movements, from the HANDSOME LAKE MOVEMENT (c. 1800) to the GHOST DANCE cult of the prophet WOVOKA in the 1890s. Among some Pacific islanders the arrival of cargo-laden airplanes during World War II led to the emergence of CARGO CULTS and the belief that the proper rituals would bring precious "cargo" from the great bird in the sky. Modern UFO cults, many of which have strong millennial elements, represent a kind of postmodern cargo cult.

By far the most powerful non-Western millennial tradition is found in BUDDHISM, with the PURE LAND traditions and the expectation of MAITREYA, a kind of messianic final incarnation of the Buddha. Especially strong in China, but evident as well in Korea, Japan, Vietnam, and Myanmar (Burma), millennial strains of Buddhism have given birth to secret societies (*i.e.*, WHITE LOTUS) and some powerful popular movements, one of which toppled the Yüan dynasty in China in the 14th century, and another of which, the TAIPING REBELLION, almost toppled the Qing (Ch'ing) dynasty in the mid-19th century. By the time this last movement, itself a mixture of native Buddhist and imported Christian millennialism, was finally suppressed in 1864, some 20 million people were dead. The Boxer Rebellion of 1900 again demonstrated the power of millennial beliefs, especially the characteristic belief, shared by members of the Ghost Dance cult of North America and the Kartelite Cults of Africa, that certain incantations could render the believer invulnerable to bullets.

Millennial studies is still a young field. First launched by anthropologists who studied cargo cults after World War II, developed by medievalists like Norman Cohn and Marjorie Reeves, and refined theoretically by sociologists like Leon Festinger, it has become an international field of research. Because of the dynamics

Marshall Applewhite, the leader of the apocalyptic movement Heaven's Gate. Applewhite was among the 39 members of the cult who committed suicide at a house in Rancho Santa Fe, Calif., U.S., in 1997. The mass suicide was linked to the arrival of the Hale-Bopp comet in that year

of millennial manifestations—their brief intensity, their seemingly irrational passions, their range of responses to apocalyptic disappointment—they often demand counterintuitive thinking and call for a multidisciplinary approach that engages a wide range of fields and specialties. At the approach of the 3rd millennium the field proliferated not only among scholars but also among policy makers.

We are, however, not yet in a position to judge just how significant millennialism is as a historical factor. It unquestionably plays an important role in various forms of antimodern and anti-Western protests, but it also has played a key role in generating modernity. With its images of a perfected mankind, its emphasis on social egalitarianism and the dignity of manual labor, its undermining of monarchical authority, its spread of a sense of popular empowerment, millennialism has, even in failure, left a legacy of social transformation. Indeed, millennial movements may play an important role in the diffusion of new technology: in their initial stages they make widespread and innovative use of communications technology, as early Protestants made use of print and new religious movements take advantage of the World Wide Web. In later stages they often integrate new technology into the lifestyle of a community as it adjusts to the return of “normal time” and finds more durable, more economically viable, forms. Ironically, some of the most antimodern groups can, by the end of their apocalyptic journey, end up at the cutting edge of modernity.

For all its socially creative force, however, millennialism also has powerfully destructive tendencies. In some primarily antimodern forms, millennial movements can become highly authoritarian, suffused with conspiracist thinking, implacably opposed to imagined enemies (Jews, independent women, denominational opponents), and capable of staggering acts of violence and self-destruction. The Nazis, with their racist *tausendjähriges Reich*, represent the ultimate expression of this tendency. It is one of the main tasks of millennial studies to understand which factors indicate whether, in the period of disappointment, a group will turn peaceful or violent. In the meantime millennialism, with its power to fire the imagination and elicit passions, to move great numbers to extraordinary self-sacrifice, social creativity, and destructiveness, may be one of the most protean social and religious forces in the history of civilization.

MILLENNIUM, in Christian theology, the 1,000-year period when JESUS CHRIST will return and establish his kingdom on earth. Among early Christians the idea of MILLENNIALISM, or millenarianism, derived chiefly from Jewish eschatological expectations and usually implied the nearness of the triumph of Christians over the world.

The doctrine of the millennium is clearly present in the NEW TESTAMENT only in Revelation 20. According to the account of the vision there, SATAN was bound and thrown into a pit for 1,000 years. Martyrs were resurrected and reigned with Christ for the millennium. At the end of the period, Satan was loosed for a time to deceive the nations, but he was subsequently defeated. All the dead were then gathered for the final judgment.

Many different interpretations of the millennium have been given. Those Christians who believe that the SECOND COMING of Christ will begin the 1,000-year period of righteousness in the world have been called premillennialists. Others, known as postmillennialists, believe that eventually CHRISTIANITY will be accepted throughout the world, and a 1,000-year period of Christian righteousness will be climaxed by the return of Christ, the RESURRECTION of the dead, and the final judgment.

The more general use of the term to include expectations of material benefits to be enjoyed on earth in the near future means that a number of early Christian writers, especially those close to Jewish Christianity, can be called millenarians. Among such writers are the author of the Epistle of Barnabas, Papias, Justin, IRENAEUS, and the Jewish-Christian Gnostic CERINTHUS. The Montanists believed that the heavenly Jerusalem would soon be manifested in Phrygia and that their leader was the Paraclete promised in the Gospel of John. At the same time, more orthodox teachers continued to share a similar hope; Hippolytus tells of bishops in Syria and Pontus who led their flocks out into the desert to await Christ's coming.

By the time of the triumph of the church in the reign of CONSTANTINE such hopes were on the wane. The great Western theologian AUGUSTINE was a millenarian early in his career, but he later changed his views. At the Council of Ephesus (431) millenarian views were not condemned, but they were mentioned only to be ignored. In later times they arose sporadically when they could be used against the authority of the church; thus they flourished among spiritual enthusiasts during the Middle Ages and particularly at the time of the REFORMATION, when social and religious ferment worked together, especially among the various groups loosely denominated ANABAPTIST. The more conservative Reformers shared the Catholic view of the coming of Christ as primarily past rather than future, thus identifying the KINGDOM OF GOD on earth with the church, even though such an identification was hardly ever regarded as complete.

Throughout later Western history, the appeal of millennialism has tended to resurge in times of great social change or crisis. Sects arising out of the industrialization of the West include the SEVENTH-DAY ADVENTISTS, JEHOVAH'S WITNESSES, and the Latter-day Saints (MORMONS).

MILLER, WILLIAM \ˈmi-lər\ (b. Feb. 15, 1782, Pittsfield, Mass., U.S.—d. Dec. 20, 1849, Low Hampton, N.Y.), American religious enthusiast, leader of a movement called Millerism that sought to revive belief that the bodily arrival ("advent") of Christ was imminent.

Miller was a farmer, but he also held such offices as deputy sheriff and justice of the peace, and served as captain in

the War of 1812. After years of BIBLE study he began to preach in 1831 that the present world would end "about the year 1843," his belief based primarily on a passage in the Book of Daniel (8:13–14). Miller estimated that between 50,000 and 100,000 believed in his views. When 1843 passed, some of his associates set Oct. 22, 1844, as the date of the SECOND COMING. This date brought the movement to a sharp climax. The last general conference met at Albany, N.Y., April 1845. Belief in the imminence of the Advent was restated, but no date was set and no church organization created.

There are two principal ADVENTIST bodies today—the Advent Christian Church, organized in 1861, and the much larger body of SEVENTH-DAY ADVENTISTS, organized in 1863—and several small Adventist bodies.

MILLET \ˈmi-lət, -lət\ (Turkish: "religious community," "people," "nation," from Arabic: *milla*, "religion," "religious community"), according to the QUR'AN, the religion professed by ABRAHAM and other ancient prophets. In medieval Islamic states, the word was applied to certain non-Muslim minorities, mainly Christians and Jews. In the heterogeneous Ottoman Empire (c. 1300–1923), a *millet* was an autonomous self-governing religious community, organized under its own laws and headed by a religious leader. Each *millet* assumed responsibility for social and administrative functions not provided by the state, conducting affairs through a communal council (*meclisimilli*). From 1856 on, a series of imperial reform edicts introduced secular law codes for all citizens, and much of the *millet*'s administrative autonomy was lost. Subsequently, *millet*s were infused with European ideas of nationalism; thus, the word means "nation" in modern Turkish.

MĪMĀMSĀ \mē-ˈmām-sā, -ˈmān-sā\ (Sanskrit: "Reflection," or "Critical Investigation"), probably the earliest of the six orthodox systems (*darśanas*) of Indian philosophy.

The aim of Mīmāṃsā is to give rules for the interpretation of the VEDAS and to provide a philosophical justification for the observance of Vedic ritual. Because Mīmāṃsā is concerned with the earlier parts of the Vedas (called the Karmakāṇḍa), it is also referred to as Pūrva-Mīmāṃsā ("Prior Study"), or Karma-Mīmāṃsā ("Study of the Acts").

The earliest work of the system is the *Mīmāṃsā Sūtra* of Jaimini (c. 4th century BCE). A major commentary was written by Śābarasvāmī (1st century BCE?), whose most notable successors were Kumārila Bhaṭṭa and Prabhākara (7th/8th century CE). The goal of Mīmāṃsā is to provide enlightenment on DHARMA, which in this school is understood as the set of ritual obligations and prerogatives that, if properly performed, maintains the harmony of the world and furthers the personal goals of the performer. One must depend on revelation in the Veda, which is considered eternal, authorless, and absolutely infallible. If the Vedic command is implicit, one must judge from parallels; if a text fails to detail how a priest proceeds with an action, this detail must be provided from other texts. This concern with precise statement necessitates meticulous examination of the structure of a sentence conveying a command.

Although it was purely practical in origin, Mīmāṃsā became a powerful intellectual force. It has contributed to the direction, method, and content of Hindu erudition, and is traditionally credited with the defeat of BUDDHISM in India.

MIMIR \ˈmē-mir\, *Old Norse* Mímir, in GERMANIC RELIGION, the wisest of the gods of the tribe AESIR. Mimir was

sent by the Aesir as a hostage to the rival gods (the VANIR), but he was decapitated and his head was returned to the Aesir. The god ODIN preserved the head in herbs, made it speak, and gained knowledge from it. According to another story, Mimir resided by a well that stood beneath one of the roots of YGGDRASILL, the WORLD TREE. That well, sometimes called Mímisbrunnr, contained one of Odin's eyes, which Odin had pledged in order to drink from the waters and receive wisdom. Another myth features a different Mimir, a smith who taught the hero SIEGFRIED his craft.

MIN \ˈmɪn\, in ancient EGYPTIAN RELIGION, god of fertility and harvest, embodiment of the masculine principle; he was also worshiped as the Lord of the Eastern Desert. His cult originated in predynastic times (4th millennium BCE). Min was represented with phallus erect and a flail in his raised right hand. His cult was strongest in Coptos and Akhmīm (Panopolis), where great festivals were held celebrating his "coming forth" with a public procession and presentation of offerings. The lettuce was his sacred plant.

MINARET \ˌmɪ-nə-ˈret, ˈmɪ-nə-ˌ\ (Arabic: "beacon"), tower from which the Muslim faithful are called to prayer five times each day by a MUEZZIN, or crier. With some notable exceptions in medieval Central Asia, Iran, and Iraq, such a tower is always connected with a mosque and has one or more balconies or open galleries. At the time of MUHAMMAD, the call to prayer was made from the highest roof in the vicinity of the mosque. The earliest minarets were former Greek watchtowers and the towers of Christian churches. The oldest minaret in North Africa is at al-Qayrawān, Tunisia. It was built between 724 and 727.

The upper parts of the minaret are usually richly decorated with carving. The number of minarets per mosque varies from one to as many as six. These towers were built to be visible from afar and to stamp a site with Islamic character.

MINERVA \mɪ-ˈnɜr-və\, in ROMAN RELIGION, goddess of handicrafts, the professions, the arts, and, later, war; she was identified with the Greek ATHENA. She was one of the Capitoline triad, in association with JUPITER and JUNO. Her shrine on the Aventine in Rome was a meeting place for guilds of craftsmen, including at one time dramatic poets and actors.

Her worship as a goddess of war encroached upon that of MARS. Pompey erected a temple to her out of the spoils of his Eastern conquests in recognition of her identification with the Greek Athena NIKE, bestower of victory. Under the emperor Domitian, who claimed her special protection, the worship of Minerva attained its greatest vogue in Rome.

MINISTRY, in CHRISTIANITY, office held by persons who are set apart by ecclesiastical authority to be ministers in the church or whose call to special vocational service in a church is afforded some measure of general recognition. The type of ministry varies in the different churches. That which developed in the early church and is retained by the ROMAN CATHOLIC, EASTERN

ORTHODOX, OLD CATHOLIC, ANGLICAN, and some other churches is episcopal and is based on the three orders, or offices, of bishop, priest, and deacon.

Throughout much of the history of the church, the episcopal ministry was taken for granted, but the Protestant REFORMATION challenged the authority of the PAPACY and with it the authority of the episcopal ministry. MARTIN LUTHER introduced the concept of the PRIESTHOOD of all believers, which denied any special authority to the offices of the episcopacy, but he also retained the ordained ministry. Ministers were encouraged to marry and were not considered a separate order in the church. Lutheran churches developed a variety of ministries, some retaining a modified episcopal form and others adopting congregational and PRESBYTERIAN forms.

The presbyterian form of ministry, developed by JOHN CALVIN, is used in most Presbyterian and Reformed churches. Ministers are teaching elders and share with lay elders and collegial regional bodies (presbyteries) the governance of the church. Congregational church government, adopted by BAPTISTS, the United Church of Christ in the United States, and various others, accepted much of the Reformed theology but emphasized the authority of the congregation rather than any central or regional authority. Although historical METHODISM rejected episcopacy, in the United States a modified form was developed, retaining the office of bishop and strengthening congregational influence. Pentecostal and evangelical groups consider charismatic gifts more important than ORDINATION or any office as such. Some churches (e.g., the SOCIETY OF FRIENDS) do not have an ordained ministry.

MINOS \ˈmɪ-nəs, -näs\, mythical ruler of Crete; he was the son of ZEUS and EUROPA. Minos obtained the Cretan throne by the aid of the god POSEIDON, and from Knossos (or Gortyn) he gained control over the Aegean islands, colonizing many of them and ridding the sea of pirates. He married Pasiphaë, the daughter of HELIOS, who bore him, among others, Androgeos, ARIADNE, and Phaedra, and who was also the mother of the MINOTAUR. Sir Arthur Evans used his name to refer to the Bronze Age civilization of Crete, the Minoans.

Minos fought successfully against Athens and Megara to obtain redress after his son Androgeos was killed by the Athenians. In Athenian drama and legend Minos became the tyrannical exactor of the tribute of children to feed the Minotaur. Minos was killed in Sicily by the daughters of King Cocalus, who poured boiling water over him as he was taking a bath. After his death he became a judge in HADES.

MINOTAUR \ˈmɪ-nə-tôr, ˈmɪ-ˌ\, Greek Minotauros ("Minos' Bull"), in Greek mythology, monster of Crete that had the body of a man and

the head of a bull. It was the offspring of Pasiphaë, the wife of MINOS, and a snow-white bull sent to Minos by the god POSEIDON for sacrifice. Minos, instead of sacrificing it, kept it alive; Poseidon as a punishment made Pasiphaë fall in

love with it. Her child by the bull was shut up in the Labyrinth created for Minos by DAEDALUS.

According to Athenian tradition, a son of Minos, Androgeos, was killed by the Athenians; to avenge his death, Minos demanded that seven Athenian boys and seven girls should be sent every ninth year (or, according to another version, every year) to be devoured by the Minotaur. When the third time of sacrifice came, the Athenian hero THESEUS volunteered to go, and, with the help of ARIADNE, daughter of Minos and Pasiphaë, he killed the monster.

MĪRĀBĀĪ \ˈmē-rā-ˈbā-ē\ (b. 1450?, Kudaki, India—d. 1547?, Dwārākā, Gujarāt), Hindu mystic and poet whose lyrical songs of devotion to the god KRISHNA are widely popular in northern India.

Mīrābāī was a Rājput princess, the only child of Ratan Singh, younger brother of the ruler of Merta. An image of Krishna given to her during childhood by a holy man began a lifetime of devotion to Krishna, whom she worshiped as her divine lover.

Legend tells that after the death of her husband (Bhoj Rāj, crown prince of Mewar) in 1521, Mīrābāī spent most of her days in her private temple dedicated to Krishna, receiving *sādhus* (holy men) and pilgrims and composing songs of devotion. She was something of a rebel, and her religious pursuits did not fit the established pattern for a Rājput princess and widow. At least two attempts made on her life are alluded to in her poems, both foiled by miraculous means. Finally, Mīrābāī set out on a series of PILGRIMAGES, eventually settling in Dwārākā. In 1546 a delegation of BRAHMINS came to bring her back to Mewar. Reluctant, she asked permission to spend the night at the temple of Ranchorji (Krishna) and the next morning was found to have disappeared. According to popular belief, she miraculously merged with the image of Ranchorji.

Mīrābāī belonged to a strong tradition of BHAKTI (devotional) poets in medieval India who expressed their love of God through the analogy of human relations—a mother's love for her child, a friend for a friend, or a woman for her beloved. The immense popularity and charm of her lyrics lies in her use of everyday images and in the sweetness and directness of her emotional expression.

MIRACLE, extraordinary and astonishing happening that is attributed to the presence and action of a supernatural or divine power. Belief in miraculous happenings occurs in all cultures and is a feature of practically all religions.

Not all cultures oppose the natural world with some notion of the supernatural, yet extraordinary events, forces, and operations which conventionally are accepted as normal, though uncommon, features of the world's operations are recognized by these cultures as well. Similarly the religions of the ancient world had few formal miracles, precisely because certain kinds of divine action or cosmic operation (e.g., oracles) were largely accepted as part of the normal order of things.

Ancient Indian MYTHOLOGY abounds in fantastic accounts of the doings of the gods, but the UPANISHADS and BRĀHMAṆAS evince an increasing indifference to miracles. Like other expressions of higher MYSTICISM, they consider the spiritual experience of religious insight and transformation as the only "miracle" worth talking about. Nevertheless Hindu popular religion sets no bounds to the miraculous powers of yogis, and India has been the classic land of wonders.

There is little room for the miraculous element in CONFUCIANISM, but TAOISM has produced a rich crop of thau-

maturgy and magic on all levels of Chinese folk religion. Miracles are taken for granted throughout the OLD TESTAMENT: God "does wondrous things" especially in the history of his people Israel (e.g., the ten plagues of Egypt). In the Greco-Roman world miracles were not uncommon; there were miraculous cures (e.g., at the SANCTUARY of ASCLEPIUS in Epidaurus), moving statues of gods, RESURRECTIONS of the dead, VIRGIN BIRTHS, and the like, though Cicero in the *De divinatione* denied the possibility of miracles.

According to the earliest Buddhist accounts, the BUDDHA GOTAMA deprecated the miraculous powers that he possessed as a matter of course, being "the greatest of all yogis," as utterly devoid of spiritual significance. Nevertheless, miraculous accounts of his birth and life (and those of later Buddhist saints), as well as miracles in connection with his relics, proliferated as time went on, particularly in the MAHĀYĀNA tradition.

The Christian NEW TESTAMENT records various miracles of healing and of providing abundantly for specific human needs performed by JESUS CHRIST, and miracles form part of the career, in life as well as after death, of the Christian saints, and their occurrence continues (e.g., LOURDES); duly established miracles are among the requirements for a process of CANONIZATION.

MUHAMMAD was the only great founder who renounced miracles and miraculous powers as a matter of principle—the QUR'AN was the great miracle—but subsequent HADIOGRAPHY invested his life with miraculous details. Muslim popular religion, particularly under Sufi influence, abounds in miracles and PILGRIMAGES to the tombs of wonder-working saints.

MI'RĀJ \mi-ˈrāj\, in Islamic tradition, ascension of the Prophet MUHAMMAD into heaven. As alluded to in the QUR'AN (17:1), a journey was made by a servant of God, in a single night, from the "sacred place of worship" (*al-masjid al-ḥarām*) to the "further place of worship" (*al-masjid al-aqṣā*). Muhammad is prepared for his meeting with God by the archangels JIBRĪL (Gabriel) and MĪKĀL one evening while he is asleep in the KA'BA, the sacred shrine of MECCA. They open up his body and purify his heart by removing all traces of error, doubt, IDOLATRY, and paganism and by filling it with wisdom and belief.

In the original version of the *mī'rāj*, the prophet is then transported by Jibrīl directly to the lowest heaven. But early in Muslim history the story of the ascension came to be associated with the story of Muhammad's night journey (ISRĀ'), which also originated in Mecca, the "sacred place of worship" and proceeded to the "further place of worship" (initially interpreted as heaven). In the period of the Umayyad caliphate (661–750), the "further place of worship" came to be read as Jerusalem, and the two versions were reconciled by regarding the *isrā'* simply as the night journey and relocating the point of Muhammad's ascension from Mecca to Jerusalem to avoid confusion.

The *isrā'* story, greatly elaborated by tradition, relates that Muhammad made the journey astride BURĀQ, a mythical winged creature, in the company of the archangel Jibrīl. Muhammad and Jibrīl enter the first heaven and proceed through all seven levels until they reach the throne of God. Along the way they meet the prophets Adam, Yaḥyā (JOHN), ʿĪsā (JESUS), Yūsuf (JOSEPH), IDRĪS, Hārūn (AARON), Mūsā (MOSES), and Ibrāhīm (ABRAHAM) and visit hell and paradise. Mūsā says that Muhammad is more highly regarded by God than himself and that Muhammad's following outnumbered his own. Once Muhammad appears before God he is told to

perform the *ṣalat* (ritual prayer) 50 times each day. Mūsā, however, advises Muhammad to plead for a reduction of the number as being too difficult for believers, and the obligation is eventually reduced to five prayers each day.

Parallels have been drawn between the *mī'rāj* and the manner in which a dead man's soul will progress to judgment at God's throne; and the Sufi mystics claim it describes the soul's leap into mystic knowledge. The ascension is celebrated with readings of the legend on the 27th day of Rajab, called *Laylat al-Mī'rāj* ("Night of the Ascension").

MĪR DĀMĀD \ˈmēr-dä-'mäd\, *original name* Muhammad Bāqir ibn al-Dāmād (d. 1631/32, near Najaf, Iraq), philosopher, teacher, and leader in the cultural renaissance of Iran during the Ṣafavid dynasty.

A descendant of a well-known SHĪ'ITE family, Mīr Dāmād spent most of his life in Isfahan as a student and teacher. His major contribution to Islamic philosophy was his concept of time and nature. Within a major controversy as to whether the universe was created or eternal, Mīr Dāmād was the first to advance the notion of *huḏuth-e dāhri* ("eternal origination") as an explanation of creation. He argued that, with the exception of God, all things, including the Earth and other heavenly bodies, are of both eternal and temporal origin. He influenced the revival of *al-falsafa al-yamanī* ("philosophy of Yemen"), a philosophy based on revelation and the sayings of prophets rather than the RATIONALISM of the Greeks, and he is widely recognized as the founder of the School of Isfahan, which embraced a theosophical outlook known as *ḥikmat-i ilāhī* ("divine wisdom").
